

# What's going to landfill in Aberdeenshire?

Householders present

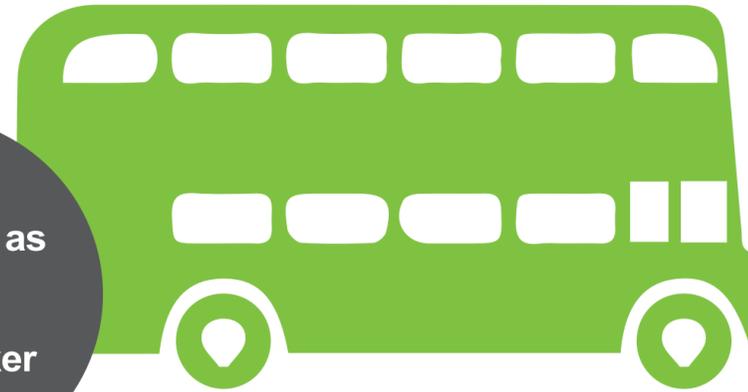

Over **60%** of waste put in landfill bins could have been recycled.

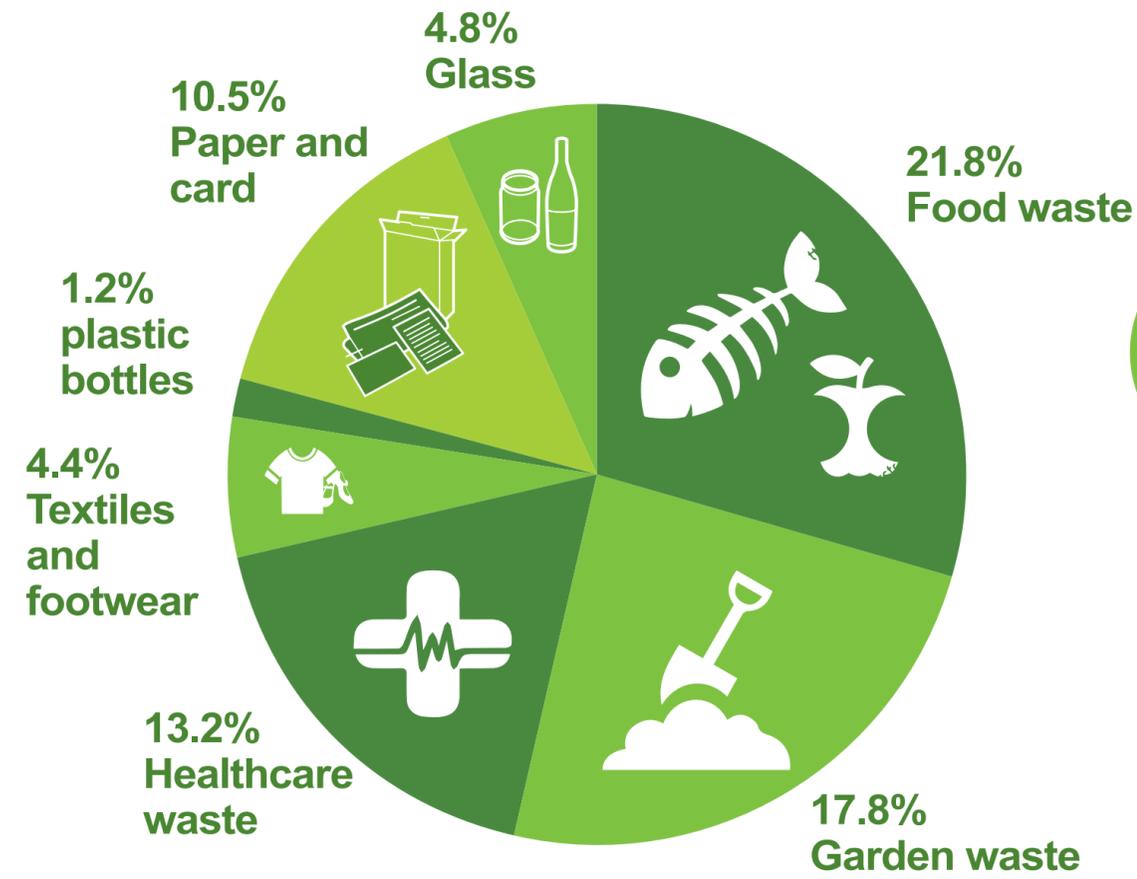

Last year we sent

**82,000**  
tonnes to landfill

That's the same weight as **6500** double decker buses.

## What kind of waste is being sent to landfill?

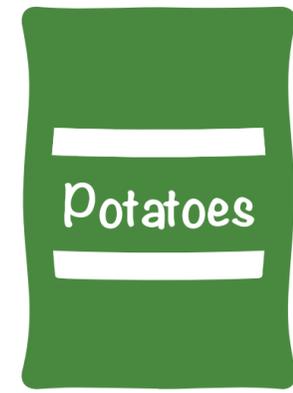

Over **30%** of this could have been recycled at the kerbside.

Recycling Centre

Almost **28%** of this could have been recycled using Household Waste Recycling Centres situated across Aberdeenshire.

Over 1/5 of waste going to landfill was food waste, 9.5% still in its packaging.

Food waste could be recycled and turned into fertiliser to support local farming.

For more information, including why we don't collect garden waste and glass, visit: [bit.ly/ShireRecycling](http://bit.ly/ShireRecycling)
