Our ref: LDP-110-3

22 June 2022

Dear Mr Blaxter

**PROPOSED ABERDEENSHIRE LOCAL DEVELOPMENT PLAN 2020
THE TOWN AND COUNTRY PLANNING (DEVELOPMENT PLANNING) (SCOTLAND)
REGULATIONS 2008**

SUBMISSION OF THE REPORT OF THE EXAMINATION

We refer to our appointment by the Scottish Ministers to conduct the examination of the above proposed plan. Having satisfied ourselves that the planning authority's consultation and engagement exercises conformed with their participation statement our examination of the proposed plan commenced on 28 June 2021. We have completed the examination and now submit our report.

In our examination we considered all 58 issues arising from unresolved representations identified by yourselves to the Proposed Local Development Plan. In each case we have taken account of the original representations, as well as your summaries of the representations and your responses to such, and we have set out our conclusions and recommendations in relation to each issue in our report.

A large proportion of the recommended modifications were suggested by the council, in the form of what you referred to as 'non-notifiable modifications'. Where the suggested 'non-notifiable modifications' arise from representations made to the proposed plan, they require to be considered in the examination. We therefore address these matters in our conclusions and include them in our recommendations, as considered appropriate.

In the Schedule 4s for Issue 2, Issue 5 and various settlements, we recommend modifications to Appendix 6 Housing Land Allocations. In the interest of clarity, a revised version of Appendix 6, incorporating the recommended modifications is provided at the end of our report.

In the Schedule 4 for Issue 12, we recommend a modification that requires the council to prepare statutory Supplementary Guidance on Developer Obligations and Affordable Housing. A copy of the Supplementary Guidance, which the council wishes to adopt, is to be submitted to Scottish Ministers within 12 months from the date the local development plan is adopted.

Although no unsolicited correspondence has been received on the draft NPF4, we are aware of its publication. Our view in this examination and at this point in the proceedings,

is that NPF4 is a consultative draft with corresponding potential for subsequent changes which may prove substantive. Scottish Planning Policy and NPF3 remain extant in setting the national policy context for this local development plan.

The examination process also included a comprehensive series of unaccompanied site inspections and, for some issues we requested additional information from the authority and other parties.

We did not require to hold any hearing or inquiry sessions.

Subject to the limited exceptions as set out in Section 19 of the Town and Country Planning (Scotland) Act 1997 (as amended) and in the Town and Country Planning (Grounds for Declining to Follow Recommendations) (Scotland) Regulations 2009, you are now required to make the modifications to the plan as set out in our recommendations.

You should also make any consequential modifications to the text or maps which arise from these modifications. Separately, you will require to make any necessary adjustments to the final environmental report and to the report on the appropriate assessment of the plan.

All those who submitted representations will be informed that the examination has been completed and that the report has been submitted to yourselves. We will advise them that the report is now available to view at the DPEA website at:

<https://www.dpea.scotland.gov.uk/CaseDetails.aspx?id=121481>

A copy of the report will also be posted on the planning authority's website at:

<https://aberdeenshire.gov.uk/planning/plans-and-policies/pldp-2020/>

The documents relating to the examination should be retained on your website for a period of six weeks following the adoption of the plan by yourselves.

It would also be helpful to know when the plan has been adopted and we would appreciate being sent confirmation of this in due course.

Examination of Conformity with the Participation Statement

Introduction

1. Section 19(4) of the Town and Country Planning (Scotland) Act 1997 (as amended) requires the person who has been appointed by the Scottish Ministers to examine the plan: “firstly to examine...the extent to which the planning authority’s actings with regard to consultation and the involvement of the public at large as respects the proposed plan have conformed with (or have been beyond the requirements of) the participation statement of the authority which was current when the proposed plan was published under Section 18(1)(a).”

2. Section 20B of the Act requires each planning authority to prepare a development plan scheme at least annually. The scheme should set out the authority’s programme for preparing and reviewing its development plan, and must include a participation statement. This publication should state when, how and with whom consultation on the plan will take place and the authority’s proposals for public involvement in the plan preparation process.

Participation statement

3. Aberdeenshire’s Proposed Local Development Plan was published in April 2020. The version of Aberdeenshire’s participation statement, which was current at the time, is contained in Aberdeenshire Council’s Development Plan Scheme May 2020. This was revised and republished to reflect the impact of social distancing measures and changes introduced through the emergency Coronavirus (Scotland) Act 2020.

4. The Development Plan Scheme sets out Aberdeenshire Council’s commitment to engagement as follows:

“Ultimately engagement and consultation remain a key part of the Plan-making process. As a place-based document that is designed to meet local planning needs and aspirations, the Aberdeenshire Local Development Plan reflects the land use changes that people would wish to see in their communities.”

“Aberdeenshire Council has adopted the principles of the updated National Standards for Community Engagement. These seven Standards provide a best practice approach to achieving influential community participation, ensuring that any barriers to engagement in the process are overcome, based on the needs and available resources of those groups. Engagement methods will be fit for purpose and will enable participants to engage efficiently and effectively as far as it is practical to do so. We will ensure that those with an interest in the Local Development Plan understand the issues we are concerned with and are consulting on. We will encourage them to work effectively with other consultees to provide useful feedback to us. Particular emphasis will be placed on engagement through the education system. At the end of the process, we will feedback how we have dealt with the information they have provided.”

5. A timetable for preparing and reviewing the local development plan is included. The following summarises the key stages up to the point of submission of the plan for examination.

Pre-Main Issues (Autumn 2017 - January 2019)

- Early community consultation and stakeholder engagement
- Publication of the 'Call for sites' process
- Communication and awareness

Main Issues Report (MIR)

- Publish MIR - 14 January 2019
- Consultation on MIR - 14 January to 8 April 2019 (12 weeks)

Proposed Local Development Plan

- Approval of Proposed Local Development Plan – 5 March 2020
- Consultation on Proposed Local Development Plan – 25 May to 17 July 2020 (8 weeks)

6. The participation statement sets out a variety of consultation methods that the council intends to use to ensure its six main user groups have a voice in the preparation of the plan. These six groups comprise: Community Councils and other community groups; developers, landowners and agents; Key Agencies; special interest groups; other individuals with a specific issue; and the wider council, Transport Scotland, Scottish Water and NHS Grampian.

7. At the **proposed plan** stage, the consultation methods referred to include the following:

- Publish statutory notices in the local press
- Provide appropriate updates to the council's e-newsletter and use a range of social media to keep people informed
- Place a copy of the plan on the council's website (downloadable pdf and interactive online versions)
- Place a response pro-forma on the website and distribute hard copy response forms upon request
- Upload to the website short films about the proposed plan and how to submit a representation
- Undertake engagement with stakeholders, including Community Councils, via electronic means (virtual drop-ins/webinars)
- Write to all Community Councils to provide formal notice of the publication of the proposed plan and how to make representations
- Notify all those who engaged on the MIR of the publication of the proposed plan and how to make representations
- Notify in writing, the owners, lessees or occupiers of land neighbouring (i.e. within 20 metres of) proposed allocations identified in proposed plan
- Notify all statutory undertakers including the Scottish Government and adjoining local authorities of the publication of the proposed plan and how to make representations
- Liaise with community planners and representatives of 'hard to reach' groups to identify engagement methods suitable for these particular groups

- Refer to the Children’s Charter in order to link with young people and write to all schools in Aberdeenshire of the publication of the proposed plan and how pupils can make representations.

8. The council refers to its local development plan e-newsletter as a key vehicle that will be used to keep people engaged in the preparation of the local development plan. This is a self-subscribing electronic document published approximately every four weeks and with a disclosure check in April of each year. The council advises that there have been over 500 subscribers to this facility.

Statement of conformity with the participation statement

9. The council’s statement of conformity with the participation statement was submitted with the proposed plan in accordance with Section 18(4)(a)(i) of the Act. It refers to innovative techniques and activities identified to ensure the fullest and most effective engagement could be tailored to each stage of the plan-making process and the issues being dealt with.

10. The statement acknowledges Scottish Government advice and the provisions within the Covid-19 emergency legislation which allowed the council to undertake public consultation without the need to make physical documents available for inspection, for example in libraries or planning offices. Formal consultation due to commence on 27 April 2020 was postponed and face-to-face ‘drop-in’ events previously programmed for May and early June 2020 could not take place. The engagement strategy progressed largely using an electronic means of engagement, including a virtual drop-in ‘room’ as a like for like replacement for the traditional drop-in format. The council also pursued a traditional means of engagement to provide an overall digital and non-digital consultation ‘package’.

11. The approach and methods carried out to secure the engagement of interested parties specifically in respect of the **proposed plan** are highlighted as follows:

Distinctive branding

- Use of strong visual graphics with a continuous theme and use of pictorial symbols in the plan to visually connect the vision and policies.

Keep people informed

- Pre-consultation information / updates with Community Councils (9 March 2020), public media update (31 March 2020) and e-newsletter bulletin (April 2020).
- Press release (1 May 2020) on council website setting out revised consultation dates 25 May to 17 July 2020.

Publication of statutory notices

- Notices placed within first available editions of regional and local press (various publications 26, 28 and 29 May 2020) allowing 8 weeks for responses.
- The period of consultation was subsequently extended to 10 weeks ending on 31 July, with a further extension of 2 weeks allowed on request.

Informed all stakeholders

- Formal notice (25 May 2020) to stakeholders advising of publication of the plan, directing them to the online documents, response pro-forma and supporting documents, and advising that hard copies were available on request.
- The above notice was issued to neighbouring local authorities, Community Councils, local councillors, all those who engaged on the MIR, key agencies and all other stakeholders in the local development plan database.

Neighbour notification

- Prior to the start of the consultation, the council issued neighbour notification letters to all owners, lessees and occupiers of land within 20 metres of proposed allocations.

Provide clear communication and ensure the process is understandable

- Prior to the start of the consultation, the council issued letters to bid proposers who had a proposal altered from their original bid, or where there had been a change to the proposal since the MIR.

Keep people informed via e-newsletter updates and social media

- Regular social media entries were posted via Twitter (29 tweets) and Facebook (23 posts) to promote the consultation and direct people to the virtual drop-in and website.

Broad publicity / electronic engagement

- Promotion material (posters, leaflet and images) was disseminated through local contact networks and community planning e-bulletins using social media.
- Frequent bulletins of the local development plan e-newsletter were issued, with bi-monthly editions in May and July 2020.
- 'Live Life Aberdeenshire' online/virtual library resource was used to promote the consultation.
- Radio interviews were undertaken with BBC Scotland and Mearns FM.
- Publicity was channelled through Community Council's own communication / bulletins, Aberdeenshire Council Policy bulletins and Sustainable Aberdeenshire newsletter.

Dedicated webpage

- The plan was published on the council website (25 May 2020) containing information on the local development plan programme and key stages, links to relevant documents, 'How to respond' weblink, three short films, an interactive online version of the proposed plan, posters, FAQs and a promotional leaflet.

Undertake stakeholder engagement via electronic means

- A virtual drop-in room went live 25 May 2020 which enabled the user to 'walk' through a summary of the proposed plan around a virtual room, including 'project' folders on tables, screens showing three short films, a live chat function, FAQs, a poster explaining how to make a response, and a downloadable response form.
- Skype meetings were held with Community Council forums, with open question and answer sessions.

Liaise with 'hard to reach' groups

- The consultation was promoted (via the Liaison Officer) to the Gypsy/Traveller community (20 families) through social media and email contacts.
- Material was produced using large text and a 'read out loud' facility to aid those with a visual impairment

Engagement with schools

- All schools and parent councils were emailed with a promotional poster and leaflet.
- Interactive tools were used to encourage young people to participate.

12. Evidence in the form of copies of public notices, extracts from webpages and social media posts are contained within the council's statement of conformity. The council kept a log of all queries received during the consultation (350 in total) which were typically answered within a day. Analysis was also undertaken of visits to the virtual drop-in 'room' with 3,279 individual visitors recorded, many linking in from social media posts.

Representations on the participation process

13. The council identifies 109 representations that refer in some way to engagement processes undertaken in preparing the proposed local development plan. Of these, 83 specifically relate to engagement undertaken with respect to the proposed sites at Potterton. A summary of the points raised is provided within the statement of conformity.

14. With regard to the proposed plan, the representations consider the consultation missed an opportunity to 'sense check' the plan against the changed economic outlook. The representations also question the holding of the consultation during the Covid-19 lockdown as discussion of proposals will have been hampered by the restrictions. It is requested that the plan should be put on hold until public meetings can be held.

15. With regard to Potterton, representations indicate the lack of, and inadequate, engagement and communication in relation to proposals (sites OP1 and OP2) and changes to the green belt and proposals for a community hall. In particular, the representations cite that there has been no opportunity for a public meeting to discuss the proposals, no opportunity for an officer to attend a Community Council meeting (virtually), and that not all residents were neighbour notified.

16. Elsewhere, criticism is made of the neighbour notification process with regard to:

- Site OP1 Huntly – insufficient information provided and letter not sent to all affected residents.
- Site OP1 Findon – limited notification to householders.

- Site OP1 (bid site GR067) Old Rayne – not dealt with properly through the process and the impartiality is questioned owing to land ownership.
- Proposed link road in Newburgh – no contact with property owners.
- Site OP2 Auchnagatt – questioned why notification taking place and that information is missing from the letter.
- Site R2 Inverurie – landowner not consulted.

Council response to the representations on the participation process

17. The council maintains that it took appropriate and legal action by continuing with the consultation, as endorsed by the Coronavirus (Scotland) Act 2020, and a letter issued by the Chief Planner on 3 April 2020 encouraging planning authorities to continue progress on delivering local development plans.

18. The more limited opportunities for the public to engage in the process was realised by the council and a revised engagement strategy developed. The council asserts that its consultation was fully publicised. It highlights the positive feedback received in relation to the consultation format, including the virtual drop-in 'room', at a time when traditional means of engagement were impractical. Although the primary method of engagement was digital, more traditional means of communication (by phone or post) was possible with hard copy extracts of the plan and response forms available on request.

19. Notification was made to all Community Councils of publication of the plan. Virtual officer attendance was offered to all Community Councils but the council advises that Belhelvie Community Council did not wish to take up the offer.

20. The council advises that all the requirements in terms of neighbour notification were undertaken in accordance with statutory requirements and were consistent with Regulation 14 of the Town and Country Planning (Development Planning) (Scotland) Regulations 2008. All properties within a 20 metre radius of a proposal within the plan were duly notified. The notification letter, based on Schedule 2 of the regulations, contained all the key information to enable the recipient to find out more. The council acknowledges that the neighbour notification letters could have exceeded the regulations and provided further clarity and information about the proposed site. However it also considers it impracticable to meet everyone's specific informational requirements.

21. The council refers to 1,390 representations submitted on the proposed plan, a significantly higher figure than received to the Aberdeenshire Local Development Plan 2015 and a positive reflection of the progress made since. This is considered to be evidence of how proactive the council has been in raising awareness, and that it has helped enable communities and stakeholders to engage in the plan-making process.

The reporter's conclusions

22. In response to the representations submitted on the participation process, I am restricted to considering only the activities of the planning authority with regard to participation on the proposed plan, and not any other stages before this.

23. While I note the concerns raised in the representations, the restrictions on public gatherings and need for physical distancing resulting from the coronavirus pandemic could not have been foreseen by the council. The circumstances were unprecedented.

24. The letter of the Scottish Government Chief Planner and the guidance issued in May 2020 recognised that it was not possible for events to take place in person. Planning authorities were asked to consider allowing longer timescales and more flexible arrangements for engagement in development planning. Authorities were encouraged to make progress with plans where possible and to take a cautious but pragmatic approach. They were expected to enhance their use of digital communication but with other non-digital communication, to enable all parts of the community to contribute to the plan, also required. Placing articles in local newspapers, expanding contact with Community Councils or sending letters to householders where there are significant proposals for change, were some suggestions within the guidance.

25. It is clear from the council's submission that it quickly adapted its engagement strategy in response to the rapidly changing situation. The council introduced more online publications, and online facilities and social media. Opportunities for more traditional methods of communication (by phone and by post) were made available coupled with an extended period for consultation (up to 12 weeks). Regional and local newspaper articles, direct mailing and radio broadcasts were issued. These approaches enabled a variety of routes for those interested to become aware and make comments on the plan. Overall, I consider the council's approach in engaging all those with an interest was reasonable and proportionate, consistent with the Scottish Government guidance in place at the time.

26. With regard to neighbour notification, I have no detailed information before me that corroborates the suggestion that the council's approach did not conform to the regulations, and I have no reason to doubt the council's evidence in this regard. While it may have been helpful to have included additional information about individual sites it was not necessary to do so.

27. Having considered all the evidence, I consider that the above information submitted by the council in its statement of conformity demonstrates that its actions with regard to consultation and the involvement of the public and planning stakeholders as respects the proposed local development plan, have been generally in conformity with those set out in the participation statement of the authority, published in May 2020, which was current when the plan was published.

28. Based on the above findings, I am satisfied that it is not necessary for me to submit a report to Scottish Ministers under subsection (1)(b) of Section 19A of the Act. I will therefore proceed with the examination of the proposed local development plan.

Provision of the development plan to which the issue relates:

Foreword
 How to use the Local Development Plan
 Influences on the Local Development Plan
 The Local Development Plan vision and its purpose
 The purpose of the Local Development Plan and outcomes designed to aid delivery of the vision of the Plan

Planning authority’s summary of the representation(s):

Foreword

Reference to “biodiversity loss” should be included within the second paragraph and the word “should” changed to “must”. The importance of tackling this problem has been recognised at a national level with Scottish Planning Policy (SPP) stating that this duty must be reflected in development plans and development management decisions (PP1263).

Representees request that reference to exceptional circumstance in the fourth paragraph be removed or replaced to align with section 25(1) of the Town and Country Planning (Scotland) Act 1997, on that basis that the proposed text is misleading and even unlawful (PP1125, PP1200, PP1238, PP1246 and PP1306). Representees have included an Appendix (RD0195.A and RD0259.A) in their representation which provides further detail to support their position (PP1125 and PP1306).

Section 1 – How to use this Plan

The Newtonhill, Muchalls and Cammachmore Community Council has commented that that the PLDP 2020 is well written, and the overall layout is a considerable improvement on the current adopted Plan. The Proposed Local Development Plan (PLDP) is easy to read as a series of documents and covers most aspects of planning that the Newtonhill, Muchalls and Cammachmore Community Council would refer to when considering planning applications. No modification sought (PP0556).

The Scottish Environment Protection Agency (SEPA) has confirmed that they have no issues with Section 1 of the PLDP (RD0214.A). No modification sought (PP1219).

The LDP should cover a 5-year period rather than a 10-year period (PP0742 and PP1418).

Section 2 – Influences on the Plan

The economic impact of Covid-19 is likely to be significant, yet the PLDP was developed before the pandemic. As such, representees, including Banchory Community Council believe that the PLDP should be reviewed to reflect how local priorities have changed as a result of Covid-19 (PP0022, PP0455, PP0769 and PP0881).

Nestrans has welcomed that the PLDP takes account of the Strategic Development Plan, Regional Transport Strategy (RTS), Regional Economic Strategy, and the City Region Deal. Nestrans has highlighted that the RTS is undergoing review with formal adoption anticipated in early 2021 (RD0227.A). No modification sought (PP1241). In contrast, another representee raises concern that the PLDP predates the new RTS and the LDP needs to reflect the current and future demands for safe sustainable active travel routes. A greater priority should be given to active travel as a primary means of access and interconnectivity within and between communities, employment and recreation land uses (PP0881). The PLDP needs to be seen in the wider policy context and include reference to a number of different transport and active travel strategies including the National Transport Strategy (NTS), National Walking Strategy, Cycling Action Plan for Scotland and Long-term Vision for Active Travel in Scotland (PP0659). The Council's Planning School Places Policy (PSPS) needs to be considered as an influence on the Plan (PP0139).

SEPA has requested that the 7th bullet point of paragraph 2.3 is amended to reflect that there are now two Flood Risk Management Plans in place covering the Aberdeenshire LDP area, and to say it is in line with an "emerging Plan" is inaccurate (RD0214.A) (PP1219).

Section 3 – Vision for the Plan and its Purpose

Introduction (paragraph 3.1)

Words such as ‘vision’ and ‘aspirations’ conflict with the policies of the PLDP (PP0001).

The National Vision (paragraph 3.3-3.7), Regional Vision (paragraph 3.8) and Local Vision (paragraph 3.6-3.13)

A representee welcomes the reference made to the National Performance Framework (NPF) and SPP. Support was also expressed for the intention to deliver sustainable low carbon places, promoting sustainable development – less reliance on private cars and more promotion of active travel and recognising the benefits of local green spaces and networks. No modification sought (PP0659). Another representee has indicated that they fully endorse some of the ambitions set out including the Vision that, “by 2040 that Plan identifies the area as an even more attractive, prosperous, resilient, and sustainable European City Region, that is an excellent place to live, visit and do business” as outlined in paragraph 3.8. The representee has included an Appendix (RD0259.A) in their representation which provides further detail to support their position. No modification sought (PP1306).

NHS Grampian has supported the strategy in the PLDP and the recognition and importance of providing good health and social care facilities, ensuring that adequate provision is made for healthcare facilities to serve new developments. However, they believe that this needs to be strengthened. They note that Section 3 does not make any reference to health. More emphasis should be placed on health within the Vision, especially in relation to healthier living and physical and mental wellbeing. NHS Grampian has included an Appendix (RD0216.A) in their representation which provides further detail to support their position (PP1222).

The reference in the PLDP to the general vision for the planning system as set out in the NPF and SPP is welcomed in terms of aspirations to meeting net-zero targets including the cross reference to nationally important policies as this high-level aspiration is a shared goal. However, the representee would like extra weight and acknowledgement of the need to deliver national developments which are critical to reaching net-zero targets (PP0822).

It is noted by representees that there is no mention in the Vision of the Scottish Government’s declared climate emergency or the net-zero greenhouse gas emissions target by 2045. The LDP must reflect these national commitments and provide a supportive local policy context to help achieve these objectives. The PLDP should give greater recognition to these issues (PP0420, PP0462, PP0588, PP0597, PP0608 and PP0639). In order to address the dual nature of the climate and nature emergencies additional text should be added to the end of paragraph 3.2 (PP0876). Representees have included an Appendix (RD0086.A, RD0092.A and RD0159.A) in their representation which provides further detail to support their position (PP0588, PP0597 and PP0876).

Concern is raised that much of the PLDP is a ‘roll forward’ of the current adopted LDP and key developments and policy ambition that have been announced by Scottish Government since adoption of the LDP 2017 do not feature in the PLDP (PP0420 and PP0462), such as climate change (PP0597). A representee has included an Appendix (RD0092.A) in their representation which provides further detail to support their position (PP0597).

One representee believes that the protection of the environment should be seen as a

higher priority than developing housing (PP0135). The Parish of Newmachar Community Council has suggested that the PLDP should identify a policy framework whereby further housing is postponed until the employment opportunities are significantly increased (PP0309). Whereas another representee suggests that the Vision needs to refer specifically to housebuilding to meet housing need and gain the economic advantages that come with that (PP1247).

Nestrans has requested that a full account is made of the NTS, published in February 2020 by Transport Scotland, with its aims to provide a transport system that reduces inequalities, takes climate action, helps delivery inclusive economic growth, and improves our health and wellbeing (RD0227.A) (PP1241).

For objectives relying on sustainable transport and improved rail connections to be realised, policy and guidance must ensure the impacts of proposals on rail infrastructure are clearly assessed and that delivery, including funding, responsibilities are clear. No modification sought (PP0444).

NatureScot has requested inclusion of the word “natural” in paragraph 3.7 to align the vision more accurately with the wording of the planning outcomes as set out in NPF and SPP, to help improve the quality of place-making delivered by the Plan and will provide a wealth of benefits including those arising from enjoyment by the public (PP1300).

A representee does not consider that the PLDP sufficiently promotes safe and convenient active travel opportunities within paragraph 3.13. The LDP must identify, protect and promote the development of potential active travel routes (PP0881). There is a lack of specific examples of footpaths and cycleways on the ground as well as policies for their promotion, leads to a significant mismatch between the Plan on the ground and the laudable aims, vision and aspirations which underly the LDP (PP0884).

SEPA has welcomed the adoption of reference to green-blue networks throughout the Plan, but for consistency recommends this term is added in paragraph 3.13 on local green spaces (RD0214.A) (PP1219).

Section 4 – The Purpose of the Local Development Plan

Support has been received for the LDPs policy outcomes and the focus on promoting Aberdeenshire as a high-quality place to live, supporting sustainable development, an area where natural and cultural heritage is promoted and enhanced and the commitment to making best use of existing transport infrastructure whilst promoting active means. No modification sought (PP0778).

Support has been received for the intention to promote the creation of green-blue networks between settlements. No modification sought (PP0659).

A representee repeats concern raised under Section 3 in relation to climate emergency or the net-zero greenhouse gas emissions target by 2045. It is suggested that paragraph 4.1 be amended to reflect national commitments to the climate emergency and net-zero emissions target by 2045 and provide a supportive local policy context to achieve these objectives (PP0462).

Amendment is sought to paragraphs 4.1 and/or 4.7 of Section 4 in order to prevent

contradiction and provide consistency so that a planning judgment can be made to decide what relative weight is given to individual policies so that development can be consistent with the LDP as a whole while taking into account other material considerations (PP1175, PP1202 and PP1306). A representee has included an Appendix (RD0259.A) in their representation which provides further detail to support their position (PP1306).

A representee requests paragraph 4.2 explicitly references green infrastructure to reflect sections 4.12 and 4.17 in the NPF3 (PP0879).

NHS Grampian believe that it is imperative that health and social care provision is recognised as essential infrastructure within a community, similar to water, pipes, schools and roads to meet the requirement laid out in paragraph 4.2. It is requested that the third sentence of paragraph 4.2 is amended to state “A design process is put in place to make sure that land use planning takes place early and over the long term to provide infrastructure, such as water, pipes, schools, healthcare and roads, which will be needed.” (PP1222).

NHS Grampian has expressed support for the encouragement of active travel, through integrated walks and cycleways stated in paragraph 4.3 (PP1222). No modification sought. In contrast another representee believes more emphasis should be placed on active transport such as cycling (PP0135).

A representee requests that instead of just mentioning climate change, mention should be made to both the climate and nature emergencies in paragraph 4.3 (PP0876).

Clarification is sought on how the PLDP will balance economic growth and development with the need to protect and improve how the environment will work in practice (PP0659).

A representee has requested that paragraph 4.4 includes clearer wording so that the built heritage is not improved at the expense of the natural environment, which is supported by NPF3 paragraph 4.12 (PP0879).

There is a need to have more of a focus on measures to stimulate sustainable economic recovery for post pandemic recovery (PP0769). The economic impact and challenging environment for the oil and gas industry underline the importance of re-focusing the development plans for the north-east to reflect the post-March 2020 economic and societal environment. A greater emphasis should be put on encouraging more locally sustained economic activity, with an increase in green tourism serving local and national markets rather than international markets (PP0881).

NHS Grampian has requested that amendment is made to the the first sentence in paragraph 4.6 to read “...and on the edge of our villages and towns can provide a range of social, ecological, health and economic benefits.” (PP1222).

Two representees have requested that paragraph 4.6 (green-blue networks) includes stronger wording and commit to "no further loss or damage" rather than "but is unable to promote anything other than aspiration" (PP0879 and PP1189). SEPA recommends amending the last sentence in paragraph 4.6 to reinforce the benefits of green-blue networks and give a more positive and optimistic approach to the purpose and outcome of the Plan (RD0214.A) (PP1219). Likewise, NatureScot requests removing, “but is unable to promote anything other than aspiration.” from the final sentence of paragraph 4.6, as

the meaning is not clear and does not align with SPP paragraphs 220 and 221, which state that planning should protect, enhance and promote green infrastructure, which includes open space and green networks (PP1300).

The purpose of the LDP must recognise the importance housebuilding makes to the economy and people's lives. It is vital that the PLDP does not limit opportunities for the retention of and growth of the sector (PP1125, PP1247 and PP1306). Representees have included an Appendix (RD0195.A and RD0259.A) in their representation which provides further detail to support their position (PP1125 and PP1306).

It is believed by representees that the PLDP does little to address employment growth opportunities (PP0660 and PP0661).

Nestrans has highlighted that regardless of the type of fuel used for private vehicles, congestion is likely to remain an issue, and in some future scenarios, it could become more of a risk. There is now a well-established sustainable travel hierarchy which is relevant in the context of paragraph 4.7, which is included in the NTS and draft RTS, which prioritises walking and wheeling, cycling, public transport, taxis and shared transport, and lastly private car (RD0227.A). No modification sought. (PP1241). Another representee has requested that the travel hierarchy included in the NTS should be referenced in the PLDP (PP0659).

It is believed that Designing Streets is outdated and does not reflect the NTS or post-pandemic means that promote active travel routes (PP0659).

Modifications sought by those submitting representations:

Foreword

Modify the PLDP to amend the final sentence of the Foreword paragraph 2 to read, "What we do and how we live today should not leave our children unable to achieve a similar quality of life in the future and must take into account the important issues of climate change, biodiversity loss and reducing carbon use." (PP1263).

Modify the PLDP to amend the final sentence of the Foreword paragraph 4 to accord with the Town and Country Planning (Scotland) Act 1997 (PP1125, PP1200, PP1238, PP1246 and PP1306).

Section 1 – How to use this Plan

Modify the PLDP to make it clear that the LDP will cover a 5-year period rather than a 10-year period (PP0742 and PP1418).

Section 2 – Influences on the Plan

Modify the PLDP to include analysis on how local priorities have changed as a result of Covid-19 (PP0022, PP0455, PP0769 and PP0881).

Modify the PLDP to reflect the current and future demands for safe sustainable active travel routes (PP0881).

Modify the PLDP to include at, paragraph 2.3, reflect that the National Transport Strategy, the National Walking Strategy, the Cycling Action Plan for Scotland and the Long-term Vision for Active Travel in Scotland are influences on the LDP (PP0659).

Modify the PLDP to reflect that the Council's PSPS is an influence on the LDP at paragraph 2.3 (PP0139).

Modify the PLDP to replace at the 7th bullet point of paragraph 2.3, "the emerging Flood Risk Management Plan" with "the North East Flood Risk Management Plan and the Tay Estuary and Montrose Flood Risk Management Plan." (PP1219).

Section 3 – Vision for the Plan and its Purpose

Introduction

Modify the PLDP to ensure the Vision does not conflict with policies (PP0001).

The National, Regional and Local Vision

Modify the PLDP to make reference to the importance of health and wellbeing, in relation to delivering healthier living along with physical and mental wellbeing in the Vision (PP1222).

Modify the PLDP to further acknowledge the importance of national developments through the reinforcement and continued development of the electricity transmission network in the Vision (PP0822).

Modify the PLDP to reflect national commitments to the climate emergency and net-zero emissions target by 2045 in the Vision (PP0420, PP0462, PP0588, PP0597, PP0608 and PP0639).

Modify the PLDP to read at paragraph 3.2 (a) of the Vision, "contributes to sustainable development for people and nature." (PP0876).

Modify the PLDP to better reflect the Scottish Government's ambitions with regard to climate change and giving stronger support for the further development of large-scale renewable energy developments in the Vision (PP0420, PP0462 and PP0597).

Modify the PLDP to give higher priority to protection of the environment than developing housing in the Vision (PP0135).

Modify the PLDP to identify a policy framework whereby further housing is postponed until the employment opportunities are significantly increased in the Vision (PP0309).

Modify the PLDP to specifically reference the economic benefits associated with the housebuilding industry in the Vision (PP1247).

Modify the PLDP to fully account for the NTS published in February 2020 in the Vision (PP1241).

Modify the PLDP to read at paragraph 3.7 of the Vision, "Policies and development land

allocations must deliver successful, sustainable, low-carbon, better connected, natural and resilient places, linked by accessible and natural spaces.” (PP1300).

Modify the PLDP to alter paragraph 3.13 of the Vision to identify, protect and promote the development of potential active travel routes (PP0881 and PP0884).

Modify the PLDP to amend paragraph 3.13 of the Vision, last bullet point to read, “An area ... local green spaces and green-blue networks as an ...” (PP1219).

Section 4 – The Purpose of the Local Development Plan

Modify the PLDP to amend paragraph 4.1 to reflect national commitments to the climate emergency and net-zero emissions target by 2045 and provide a supportive local policy context to achieve these objectives (PP0462).

Modify the PLDP to amend paragraphs 4.1 and/or 4.7 to prevent contradiction (PP1175, PP1202 and PP1306).

Modify the PLDP to amend paragraph 4.2 to refer to green infrastructure (PP0879).

Modify the PLDP to amend the third sentence of paragraph 4.2 to read, “A design process is put in place to make sure that land use planning takes place early and over the long term to provide infrastructure, such as water, pipes, schools, healthcare and roads, which will be needed.” (PP1222).

Modify the PLDP to have paragraph 4.3 make reference to both the climate and nature emergencies (PP0876).

Modify the PLDP to clarify how the last sentence of paragraph 4.3 will work in practice (PP659).

Modify the PLDP to ensure paragraph 4.4 includes clearer wording so that the built heritage is not improved at the expense of the natural environment (PP0879).

Modify the PLDP to have greater focus on supporting post-pandemic economic recovery (PP0769).

Modify the PLDP to have greater emphasis on encouraging more locally sustained economic activity, with an increase in green tourism serving local and national markets rather than international markets (PP0881).

Modify the PLDP to amend the first sentence in paragraph 4.6 to read, “... and on the edge of our villages and towns can provide a range of social, ecological, health and economic benefits.” (PP1222).

Modify the PLDP to amend paragraph 4.6 (green-blue networks) to include stronger wording and a commit to "no further loss or damage" rather than "but is unable to promote anything other than aspiration.” (PP0879 and PP1189).

Modify the PLDP to amend the paragraph 4.6 to read, “... The Local Development Plan will protect and promote green-blue networks. Green-blue networks can have multiple

benefits for nature and wellbeing especially in a Placemaking context.” (PP1219).

Modify the PLDP to amend the last sentence in paragraph 4.6 to remove, “but is unable to promote anything other than aspiration.” (PP1300).

Modify the PLDP to specifically reference the economic benefits associated with the housebuilding industry (PP1125, PP1247 and PP1306).

Modify the PLDP to consider employment growth opportunities within the policies (PP0660 and PP0661).

Modify the PLDP to reference the travel hierarchy referenced in NTS (PP0659).

Modify the PLDP to remove reference to Designing Streets (PP0659).

Summary of responses (including reasons) by planning authority:

Foreword

Reference to climate change and reducing carbon use in paragraph 2 is not intended to be an exhaustive list of important issues. The Council recognise that reducing biodiversity loss is also an important issue, along with many others. If the Reporter is minded, to make an amendment, then the Council recommend that the final sentence of paragraph 2 could be modified to read, “What we do and how we live today should not leave our children unable to achieve a similar quality of life in the future and must take into account the important issues such as climate change, biodiversity loss and reducing carbon use”.

The Council agree that the text used in paragraph 4 could be clearer and reworded to accord with the Town and Country Planning (Scotland) Act 1997. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Section 1 – How to use this Plan

Comments made by Newtonhill, Muchalls and Cammachmore Community Council are welcomed. Confirmation from SEPA that they have no issues with this section of the PLDP is also noted. No change is required.

The LDP identifies land use allocations (opportunity sites) for a 10-year period as per the Aberdeen City and Shire Strategic Development Plan 2020. This is reflected in paragraph 1.4 of the PLDP. In accordance with existing planning legislation, it is projected that LDP 2021 will be replaced within 5-years of the date on which the next LDP is adopted. No change is required.

Section 2 – Influences on the Plan

In October 2020 Aberdeenshire Council agreed a new Council Plan for the period 2020-2022 (AD0108.A and AD0109). The impact of Covid-19 on Aberdeenshire Council and the communities it serves necessitated bringing forward a new set of Council Priorities to ensure the organisation is able to maximise service delivery and associated resources to those areas most in need at this challenging time. Notwithstanding, it is believed that the

PLDP, as approved by Aberdeenshire Council on 5 March 2020, continues to contribute towards achieving the Council's priorities, as amended. The significance of the LDP has been further heightened as a means from which the Council's priorities can be achieved as the Council area recovers from the detrimental impact that Covid-19 has had on the economy and society as a whole. No change is required.

The Council note that Nestrans are undertaking a review of the RTS. The Council confirm that we have reviewed the draft RTS as published for consultation in autumn 2020 and provided feedback as part of the wider response provided by Aberdeenshire Council. No change is required.

The documents referenced in paragraph 2.3 are not intended to be an exhaustive list of documents that have influenced preparation of the PLDP. Absence from the list such as the NTS, National Walking Strategy, Cycling Action Plan for Scotland, the Long-term Vision for Active Travel in Scotland and the Council's PDPS does not necessarily mean that they were not considered in preparing the PLDP. The Council do not believe it necessary to list every document that had a bearing on the preparation of the PLDP, hence we have listed a small number of 'important' documents deemed to have had a significant influence on the emerging LDP. No change is required.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Section 3 – Vision for the Plan and its Purpose

Introduction

The Council acknowledge that there may be rare occasions where the merits of a proposal conflict with policies. Paragraph 3.1 outlines that in such circumstances the Vision should be used to provide balance. The Council have further sought to address this issue through the introduction of the symbols throughout the PLDP to assist in weighing up the differing policy outcomes and the delivery of policy. No change is required.

The National, Regional and Local Vision

The Council welcome comments received in support of the Vision section.

Section 2 recognises the Health and Social Care Strategic Plan as an important influence on the LDP (see PLDP, page 10) and this is reflected throughout the PLDP. Whilst the Council believe this to be sufficient, if the Reporter is minded to make an amendment, then the Council recommend that the first bullet point of paragraph 3.1 could be modified to read, "An area with a high quality of life and distinctive places, and where new developments are designed as effectively as possible to improve this and help deliver sustainable, low carbon places and contributing positively towards the health and wellbeing of its residents."

The PLDP continues to recognise national developments identified in NPF3. It is not considered necessary to repeat this fact in the PLDP Vision. No change is required.

In September 2019 Aberdeenshire Council agreed not to declare a "climate emergency"

but did agree to support COSLA and the Sustainable Scotland Network in their approach to the Scottish Government to seek direction and resources to support a national approach to the declared Climate Emergency for Scotland (AD0123 and AD0124). Given the position of Aberdeenshire Council it would not be appropriate to amend the PLDP to use the phrase 'climate emergency'. The Council believe that sufficient weight has been given to address the challenges posed by climate change and that the policies within the PLDP support development proposals seeking to contribute towards tackling climate change and thus contributing towards the national target net-zero emissions target by 2045. No change is required.

Policies outlined in the PLDP allow for appropriate developments to be delivered that will contribute towards meeting the target of achieving net-zero emissions by 2045. No change is required.

The Council do not believe that sustainable development should be restricted to its impacts on people or the natural environment. To do so could be perceived as limiting the Vision of the PLDP. No change is required.

Paragraph 3.10 recognises the role the LDP has to play in tackling climate change. This is carried forward throughout the policies and land use allocations made in the PLDP. Addressing the challenge of climate change will not solely be achieved through promotion of large-scale renewable energy developments. Indeed, not all parts of Aberdeenshire will be suitable for such developments. This is a matter that is best addressed on a case-by-case basis where the merits of individual proposals can be determined against all relevant policies of the LDP. No change is required.

As seen through the representations received, there are differing views on which priorities that should take precedence in drawing up the LDP. The Council seek to take a balanced approach, bearing in mind the National and Regional outcomes. The Council believe that the Vision, as outlined in the PLDP is clear as to how places in Aberdeenshire should be shaped during the Plan period. No change is required.

The Council do not believe that development of housing should be postponed until employment opportunities are significantly increased. The housebuilding industry itself provides employment opportunities and contributes towards economic activity. Policies and proposals contained within the PLDP promote opportunities for economic growth and employment proposals to come forward. No change is required.

The Council do not agree with the assertion made that the PLDP does not recognise the contribution made by the housebuilding industry or that it does little to address employment growth opportunities. The Vision, Objectives and Outcomes of the PLDP clearly indicate support for development that creates new homes in the area and employment opportunities. This is echoed through the policies and proposals contained in the PLDP, in accordance with the principle of locating the right development in the right place. No change is required.

The Council note that the NTS was published after the PLDP was drafted for consideration by Aberdeenshire Council in March 2020. Notwithstanding this the Council believe that the PLDP takes cognisance of the key themes included within the NTS. No change is required.

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Promotion of active travel is seen throughout the PLDP. Paragraph 3.13 of the Vision outlines that the LDP helps promote Aberdeenshire as "an area that promotes sustainable development that reduces the need to travel, reduces reliance on private cars and promotes safe and convenient active travel opportunities." Likewise, paragraph 4.3 of PLDP confirms that the Council has taken active travel in to account in identifying development sites in the PLDP and indeed "to make efficient use of the transport network, reduce the need to travel and promote walking, cycling, and public transport" forms an objective of the PLDP. It is considered that this statement provides sufficient emphasis on the importance of active travel alongside policies such as Policy P1 Layout, Siting and Design and Policy RD1 Providing Suitable Services. No change is required.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Section 4 – The Purpose of the Local Development Plan

Support received for the LDPs policy outcomes is noted. No change is required.

As discussed above, the Council has agreed not to formally declare a "climate emergency". The Council believe that sufficient weight has been given to the importance of tackling climate change through the policies and proposals outlined in the PLDP. No change is required.

The Council agree that the text should be amended to avoid confusion and any misinterpretation between paragraphs 4.1 and 4.7. If the Reporter is minded, to make an amendment, then the Council recommend that the final sentence of paragraph 4.7 is removed.

The Council believe that sufficient reference has been given to green and blue infrastructure (termed "green-blue infrastructure" in the PLDP). There is no need to give further reference to this in paragraph 4.2.

The Council see merit in the modification sought by NHS Grampian. If the Reporter is minded, to make an amendment, then the Council recommend amending the third sentence of paragraph 4.2 to read, "A design process is put in place to make sure that land use planning takes place early and over the long term to provide infrastructure, such as water, pipes, schools, healthcare and roads, which will be needed."

The matter of climate emergency is already discussed above. The Council has not been asked to consider the presence of nor formally declare a "nature emergency". Therefore, it would be inappropriate for this term to be used in the LDP. No change is required.

All planning applications require to be determined in accordance with the development plan, of which the LDP is part, unless material considerations indicate otherwise. Each planning application is considered on its own merit and the weight that should be applied to each particular policy will depend on the nature of the proposal put forward. The role of the LDP is to strike balance and it is acknowledged in Sections 3 and 4 of the PLDP. To help with applying the policies of the LDP, on occasions where conflict between the aims of the policy apply, weight can be given to the Vision of the LDP to assist in balancing

competing aims. The Council believe the PLDP to be clear enough in this regard. No change is required.

In order to provide clarity, the Council would support amendment being made to the final sentence of paragraph 4.3. If the Reporter is minded, to make an amendment, then the Council recommend amending the final sentence of paragraph 4.2 to read, "These policies recognise the need to balance economic growth and development with the need to protect and enhance our natural and historic environment."

As noted above, the Council recognise that whilst the PLDP was prepared prior to the Covid-19 pandemic, we firmly believe that the aims and principles set out remain entirely valid. Indeed, it can be said that the emerging PLDP, once adopted, will be well timed to be at the forefront to support economic recovery post-pandemic. There is sufficient flexibility within the PLDP policies to promote economic development in accordance with the principle of locating the right development in the right place. No change is required.

The Council see merit in the modification sought by NHS Grampian. If the Reporter is minded, to make an amendment, then the Council recommend amending paragraph 4.6 to read, "...and on the edge of our villages and towns can provide a range of social, ecological, health and economic benefits".

The Council agree with representees, including SEPA and NatureScot, that the final sentence of paragraph 4.6 should be changed to reflect a more position standpoint. If the Reporter is minded, to make an amendment, then the Council recommend paragraph 4.6 to read, "The Local Development Plan will seek to protect and promote the creation and/or enhancement of green-blue networks".

As discussed above, the Council do not agree with the assertion made that the PLDP does not recognise the contribution made by the housebuilding industry or that it does little to address employment growth opportunities. The Vision, Objectives and Outcomes of the PLDP clearly indicate support for development that creates new homes in the area and employment opportunities. This is echoed through the policies and proposals contained in the PLDP, in accordance with the principle of locating the right development in the right place. No change is required.

The Council note Nestrans' point that regardless of the type of fuel used for private vehicles, congestion is likely to remain an issue, and in some future scenarios, it could become more of a risk. The Council acknowledge that there is now a well-established sustainable travel hierarchy which is relevant in the context of paragraph 4.7 and welcomes alignment of the PLDP with the NTS and draft RTS. No change is required.

As noted below the NTS was published after drafting of the PLDP was completed. Whilst the Council do not believe it necessary to refer to the travel hierarchy, however given this term is likely to become more common phrase it may be appropriate to refer to this term in paragraph 4.7. If the Reporter is minded, to make an amendment, then the Council recommend amending paragraph 4.7 to read, "We promote the principles of the Sustainable Transport Hierarchy and those included..."

The Council do not agree that reference to Designing Streets should be removed. Whilst it is noted that this policy is now 10-years old, it remains a Scottish Government policy document that the Council are expected to take cognisance of in preparing the LDP. No

change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” in relation to matters covered in Issue 1. However, where such matters arise from representations made to the proposed plan, they require to be considered in the examination. I therefore address these as appropriate below.

Foreword

3. RSPB Scotland seeks changes to the last sentence in paragraph 2 of the foreword to make reference to biodiversity loss. Paragraph 195 in Scottish Planning Policy (2014) highlights that “planning authorities, and all public bodies, have a duty under the Nature Conservation (Scotland) Act 2004 to further the conservation of biodiversity.” An explanation of how the plan seeks to address this duty and protect and enhance the natural environment is set out in the introductory paragraphs of section 10 of the proposed plan (Natural Heritage and Landscape).

4. Whilst I agree that biodiversity loss is an important issue, it is one of many important issues to be addressed in the plan. I do not consider a specific reference to biodiversity loss in the foreword to be necessary.

5. I do not consider that changing the word “should” to “must” would be justified, within the context of this particular sentence. It is a generic statement about the actions of people and how they live rather than a specific requirement of the plan. No modification is recommended.

6. The council has suggested that the last sentence in the fourth paragraph of the foreword be replaced with, “Planning applications will be determined in accordance with the policies and land allocations in this Plan, unless material considerations indicate otherwise.” I agree that this wording would more accurately reflect the provisions of the Town and Country Planning (Scotland) Act 1997 and therefore recommend a modification to the proposed plan.

Section 1 – How to use this plan

7. A 10 year period for the local development plan is necessary to meet the requirements of the approved Aberdeen City and Shire Strategic Development Plan. These requirements would not be met if the period of the local development plan was reduced to five years. However, the council has indicated its intention to review the plan and replace it within five years of the adoption date. No modification is recommended.

Section 2 – Influences on the plan

8. The monitoring report for the proposed plan was published in November 2019, which was before the start of the first Covid-19 lockdown period in March 2020. Whilst I agree that the economic effects of the Covid-19 pandemic are likely to be significant, the nature and extent of these effects over the plan period are not yet known. Paragraph 1.1 in the council's monitoring report refers to continual annual monitoring. This would provide the opportunity to identify and monitor any relevant effects of the Covid-19 pandemic for consideration through the preparation of the next local development plan.

9. The council has referred me to the revised set of priorities included in its new corporate plan 2020 - 2022, which was agreed in October 2020. It concludes that the proposed plan aligns with these amended priorities.

10. On this basis, I do not consider that delaying progress on this local development plan to address the effects of the Covid-19 pandemic would be justified. No modification is recommended.

11. Paragraph 2.3 in the proposed plan includes a list of national and regional strategies which have had an influence on the plan. The use of the term 'such as', indicates that this list is not exhaustive. I do not consider it necessary or reasonable to list every document which has informed the preparation of the local development plan. It is for the council to identify which documents have had a significant influence on the proposed plan. No modification is required.

12. National Transport Strategy 2 was published in February 2020, after the proposed plan was finalised. Whilst I agree with representees that its vision for transport in Scotland is of relevance, the document was not available in time to directly influence the preparation of the proposed plan. There is no statutory requirement for local development plans to accord with the National Transport Strategy. No modification is required.

13. I have addressed the comments made by Meldrum Paths Group on the need for greater priority to be given to active travel routes in section 3 below.

14. I agree with the Scottish Environment Protection Agency (SEPA) and the council that the seventh bullet point of paragraph 2.3 should refer to the two Flood Risk Management Plans which cover Aberdeenshire. A modification to this effect is recommended.

Section 3 – Vision for the plan and its purpose

15. The comments made by Sarah Ward in relation to the use of the words 'vision' and 'aspiration' refer to specific matters in the New Deer Settlement Statement. These are addressed in Issue 21.

16. Whilst health and well-being are not specifically mentioned in the regional vision set out in the approved Strategic Development Plan, the national vision shared by National Planning Framework 3 and Scottish Planning Policy (2014) refers to "narrowing disparities in well-being". There are also a number of other references to health and well-being in Scottish Planning Policy (2014). For example, in paragraph 29 "improving health and well-being by offering social interaction and physical activity" is identified as one of the principles of sustainable development. Paragraph 15 recognises that well-designed

sustainable places promote well-being and encourage healthier lifestyles.

17. The council indicates that the influence of the Health and Social Care Strategic Plan is reflected throughout the plan. I note that a number of policies and proposals relate to the health and well-being of residents, in particular section 9 Shaping Places and the provision of open space, active travel routes and health and care facilities. I therefore consider it would be appropriate to include reference to health and well-being in the local vision. The council has suggested that an additional clause, be added to the first bullet point in paragraph 3.13 which I agree with, subject to minor edits. A modification to the proposed plan is recommended.

18. Scottish Hydro Electric Transmission plc is seeking further acknowledgement of the importance of national developments, in particular the high voltage energy transmission network, which is identified as a national development in National Planning Framework 3. Paragraph 5.18 in the proposed plan provides support for national developments and these are also covered in relevant policies and settlement statements. I agree with the council that reference to particular national developments does not require to be included within the vision for the plan. Furthermore, National Planning Framework 4 may make changes to the list of national development in this local development plan area. No modification is required.

19. Section 13 in the proposed plan deals specifically with climate change matters and states that “climate change is possibly the greatest challenge facing the world today”. There is considerable overlap between the representations seeking changes to the plan’s vision and the introductory paragraphs in section 13. I agree with representees that the importance of tackling climate change is not sufficiently clear in the plan’s vision. Whilst I acknowledge that the details in national policies may change through the lifetime of the plan, I consider that the vision for the plan should make reference to the climate emergency and net-zero emissions targets aspirations. A modification to paragraph 3.7 is recommended.

20. The text in paragraph 3.2 relates to the purpose of planning and is taken from section 3ZA of the Planning (Scotland) Act 2019. It would not be appropriate to amend this definition by adding the words “for people and nature”.

21. Section 16 (6) of the Town and Country Planning (Act) 1997 requires the local development plan to be consistent with the Aberdeen City and Shire Strategic Development Plan. The need to meet the housing land requirements set out in the strategic development plan would prevent the identification of a policy framework where housing is postponed until employment opportunities are increased.

22. With the exception of my recommended modification in relation to climate change, I consider the vision set out in paragraph 3.13 of the plan is consistent with the strategic development plan’s vision and the vision and outcomes set out in Scottish Planning Policy (2014). I recognise that different representees will wish to see their particular interest given greater emphasis in the vision of the plan. However, there is no justification for additional weight to be given to housing development, environmental protection or active travel routes in the vision.

23. I have addressed the implications of the recently published National Transport Strategy for the plan in section 2, above. Nestrans has drawn attention to the aims of the

National Transport Strategy “to provide a transport system that reduces inequalities, takes climate action, helps deliver inclusive economic growth, and improves our health and wellbeing”. I agree with the council that the vision of the plan is consistent with the aims of the National Transport Strategy.

24. The minor change to paragraph 3.7 sought by NatureScot would better align with outcome 3 (a natural, resilient place) in Scottish Planning Policy. I agree with the council that the last sentence in paragraph 3.7 should be modified to refer to “natural and resilient places”. I also agree that the minor change to paragraph 3.13 sought by the Scottish Environment Protection Agency to refer to “green-blue” networks would be consistent with the use of this terminology elsewhere in the plan. Modifications on these matters are recommended.

Section 4 – The purpose of the local development plan

25. I consider the recommended modifications to paragraph 3.7 and section 13 are sufficient in providing reference to the climate change emergency. I do not consider it necessary to amend paragraph 4.1 in the proposed plan as well.

26. Representees have highlighted an inconsistency between paragraphs 4.1 and 4.7 in terms of the approach to be taken where conflict arises between policies. Paragraph 4.1 directs users of the plan to consider the overall vision, in the circumstances where applying one policy would be at the expense of the other. Whereas the final sentence in paragraph 4.7 indicates that the need for sustainable transport infrastructure may justify other policies being disregarded. I consider that the wording of paragraph 4.7 is misleading, as the relative weight to be given to individual policies in the determination of application can only be decided when assessed against all relevant provisions of the development plan and other material considerations are taken into account. A modification to delete the final sentence in paragraph 4.7 is recommended.

27. Representees state that section 4 of the plan should include reference to housebuilding in terms of meeting housing needs and employment benefits. Paragraph 36 in Scottish Planning Policy (2014) states that “Planning’s purpose is to create better places.” and that “the outcome should be sustainable, well-designed place and homes which meet people’s needs”.

28. Given that an important role of the local development plan is to promote the delivery of homes to meet housing needs in accordance with the strategic development plan, I find the limited reference to housing in section 4 somewhat surprising. I consider that paragraph 4.2 should be amended to refer to the provision of homes alongside infrastructure, within the context of promoting sustainable mixed communities.

29. Paragraph 4.2 promotes sustainable mixed communities with the highest standards of design. As paragraph 4.6 relates specifically to green-blue networks, I do not consider it necessary to include a reference to green infrastructure in paragraph 4.2. The inclusion of healthcare as an additional example of the infrastructure needed in sustainable mixed communities would be consistent with the requirements set out in the proposed plan’s settlement statements (appendices 7A – 7F). I recommend that paragraph 4.2 be modified to address these matters.

30. Paragraph 4.3 refers to the challenges of sustainable development and climate change. The Woodland Trust Scotland has requested that reference also be made to

nature emergencies. There is no mention of a nature emergency in Scottish Planning Policy or the Strategic Development Plan, nor any declaration of a nature emergency by the Scottish Parliament. I agree with the council that it would be inappropriate to introduce this term into the plan.

31. Paths for All has asked for an explanation of how the plan will balance economic growth and development with the need to protect and improve the environment, which the council has provided in its response above. I have nothing further add to this explanation and agree with the council that no modification to the proposed plan is necessary in response to this representation.

32. The council has suggested a modification to the final sentence of paragraph 4.3 in the interest of clarity. However as there is no unresolved representation seeking such a change, I have no remit to include this amendment.

33 The Woodland Trust Scotland is seeking clearer wording in paragraph 4.4 to ensure improvements to the built heritage are not at the expense of the natural environment. I consider the plan's approach to addressing conflict between policies is adequately addressed in paragraph 4.1. There is no justification to highlight one particular example of potential conflict.

34. Paragraph 4.5 covers a range of employment opportunities across Aberdeenshire and refers to increasing and diversifying the economy. I consider that this intended outcome of the plan covers the matters raised in representations in relation to post Covid-19 economic recovery, and encouraging local sustained economic activity. I do not consider there is any justification to specifically highlight the employment benefits associated with housebuilding. No modifications are needed.

35. Representees consider that the wording of paragraph 4.6 in relation to green-blue networks should be strengthened. Paragraph 220 in Scottish Planning Policy (2014) states that "planning should protect, enhance and promote green infrastructure, including open space and green networks". The glossary definition of "green infrastructure" and "green networks" includes "blue" (water environment) features.

36. The settlements statements in appendices 7A – 7F of the proposed plan include requirements to protect, enhance and promote green-blue networks. I consider that the title in bold of paragraph 4.6 should be amended to read "To protect, enhance and promote green-blue networks within and between settlements" to more accurately reflect the provisions of the plan and strengthen this intended outcome, in accordance with Scottish Planning Policy. In the interests of consistency, the last sentence of paragraph 4.6 should be amended to refer to the enhancement of the green-blue network. The council has suggested a form of words which I consider to be acceptable.

37. A number of representees sought clarification on the meaning of the last clause of paragraph 4.6, which states that the local development plan "is unable to promote anything other than aspiration". I too find this clause to be confusing and at odds with the vision of the plan and Scottish Planning Policy. Whilst the council has not provided any explanation, its suggested amendment removes this clause.

38. SEPA seeks the inclusion of an additional sentence in paragraph 4.6 on the benefits of green-blue networks. I do not consider this to be necessary, as a range of benefits are

already mentioned in the first sentence of this paragraph. However consistent with my recommended modification in relation to paragraph 3.13, I agree with NHS Grampian that the first sentence in paragraph 4.6 should be amended to include reference to health benefits. Taking account of all relevant representations, I recommend a modification to replace the wording of paragraph 4.6 in the proposed plan.

39. The National Transport Strategy (on page 42) states that “we will embed the Sustainable Travel Hierarchy in decision making by promoting walking, wheeling, cycling, public transport and shared transport options in preference to single occupancy private car use for the movement of people”. I consider that the wording of paragraph 4.7 is generally consistent with the sustainable transport hierarchy and specific reference to this term is not necessary. Designing Streets” is a current government policy document and I can find no reason why the reference to it should be removed from paragraph 4.7. However, in response to comments made by Meldrum Paths Group in relation to inclusivity and equality of access, I recommend the word “wheeling” is added to the title of paragraph 4.7.

Reporter’s recommendations:

Modify the local development plan by:

1. Replacing the last sentence in paragraph 4 of the foreword on page 8 with:
“Planning applications will be determined in accordance with the policies and land allocations in this Plan, unless material considerations indicate otherwise.”
2. Replacing “the emerging Flood Risk Management Plan” in the list of bullet points in paragraph 2.3 on page 10 with “the North East Flood Risk Management Plan and the Tay Estuary and Montrose Flood Risk Management Plan;”
3. Adding the following new second sentence to paragraph 3.7 on page 12:
“It has been prepared within the context of the Scottish Government’s declaration of a Climate Emergency and the enactment of the Climate Change (Emissions Reduction Targets) (Scotland) Act 2019.”
4. Replacing the last sentence in paragraph 3.7 on page 12 with:
“Policies and development land allocations must deliver successful, sustainable, low carbon, better connected, natural and resilient places, linked by accessible and natural spaces.”
5. Replacing the first bullet point in paragraph 3.13 on page 13 with:
“An area with a high quality of life and distinctive places, and where new developments are designed as effectively as possible to improve this, help deliver sustainable, low carbon places and contribute positively towards the health and wellbeing of its residents.”
6. Inserting “green-blue” before “networks” in the third bullet point in paragraph 3.13 on page 13.
7. Replacing the third sentence in paragraph 4.2 on page 14 with:
“A design process is put in place to make sure that land use planning takes place early and over the long term to provide the homes and infrastructure, such as water, pipes, schools, healthcare and roads, which will be needed.”

8. Replacing paragraph 4.6 on page 15 with:

“To protect, enhance and promote green-blue networks within and between settlements

Connected areas of green and blue space and habitats such as parks, paths and woodlands (green-blue networks) within and on the edge of our villages and towns can provide a range of social, ecological, health and economic benefits. Developments must help to provide these important green links between development sites, the wider countryside and our urban areas. The Local Development Plan will seek to protect and promote the creation and/ or enhancement of green-blue networks.”

9. Inserting “wheeling,” before “cycling” in the title of paragraph 4.7 on page 15.

10. Deleting the final sentence of paragraph 4.7 on page 15.

**Provision of the
development plan**

to which the issue relates:	The Spatial Strategy
Planning authority's summary of the representation(s):	
<p>Introduction</p> <p>The Scottish Environment Protection Agency (SEPA) has no comments on Section 5, the Spatial Strategy (PP1219).</p> <p>A representee has sought clarity regarding what the Spatial Strategy is and where it is to be found (PP1392).</p> <p>There needs to be a firm commitment in the Local Development Plan (LDP) to significantly increase the area of Scotland's native woodlands that are accessible and welcoming to people, as per Scottish Planning Policy (SPP) paragraphs 194, 216, 217 and 218 specific reference should be made to ancient woodland in Section 5, the Spatial Strategy (PP0877).</p> <p>NHS Grampian supports the removal of the six different administrative areas in Aberdeenshire and instead, the introduction of a wider context to the Settlement Strategy. However, it must be noted that considerable investment is required in health and social care facilities in order to maintain high levels of service to support Aberdeenshire's growing and ageing population (PP1222).</p> <p>A representee has requested that additional text is added to paragraph 5.1 on conserving a green belt buffer between Aberdeen City and Aberdeenshire, as new developments on the administrative boundary with Aberdeen could result in further encroachment into the green belt, damage to the setting of Aberdeen and views from Aberdeen and affect the development of established development areas such as Chapelton (PP1170).</p> <p>Housing and Employment Land</p> <p>A representee has agreed with the Council that the LDP should be planned to be consistent with the Aberdeen City and Shire Strategic Development Plan (SDP) 2020 (RD0259.A) (PP1306).</p> <p>Unused allocations block alternative local development and the concept of "use it or lose it" should be adopted in the LDP (PP0040).</p> <p>The whole planning process is based on developing housing and an economy supporting profit for building companies, not for the protection of the environment (PP0135). The PLDP should reflect national policies on sustainability in matters of site selection (PP0309). In identifying land for housing, a model where new housing is based on renovating existing buildings to reduce resource use or building on brownfield land should be adopted (PP0541). Redevelopment of brownfield sites is at the core of the UK Sustainable Development Strategy, however within the PLDP only 1 of the 60 proposed sites are brownfield sites (PP0138, PP0660 and PP0661). The Scottish Government believe that the last sentence of paragraph 5.10 should be deleted as the statement weakens the national policy position to promote the re-use or re-development of brownfield land, in accordance with SPP paragraph 40. Greenfield sites should not be</p>	

allocated due to a cost difference between developing on greenfield and brownfield development (PP0578).

The information used in preparation of the PLDP does not take account of long-term trends that can be anticipated for Aberdeen City and Aberdeenshire and the implications this will have on the need for housing and employment land (PP0057 and PP0658). Likewise, issues such as Covid-19 and the latest slump in crude oil price will result in an impact on the local economy and suppress the need for new housing (PP0084, PP0648 PP0658 and PP0733). Additional development within the commuting area of Aberdeen further devalues properties creating an even more depressed housing market and exacerbating people's equity problems in a buyer's market (PP1155).

The new SDP has not been adopted and therefore there is a risk to using new SDP housing figures to base housing allocations in the PLDP. Table 1 and Appendix 6 do not accurately represent the housing land position in Aberdeenshire and there is a shortfall in land supply across both Housing Market Areas (HMAs). Should the PLDP be adopted Aberdeenshire Council will fail to allocate sufficient land for its housing requirements. (PP1248). The SDP has not recognised a revised calculation method proposed, but this is of no consequence as the SDP has not yet been approved by Scottish Ministers and, in any regard, will cease to be a constituent part of the development plan in early course (PP1103).

The Scottish Government has asked for greater clarity on the Housing Land Supply target, the percentage used to provide generosity over that target, and the Housing Land Supply Target, all to meet the requirements of paragraphs 113, 115, 116 and 128 of SPP. They are not clear how the housing land allocation figures have been informed by the Housing Need and Demand Assessment (future housing requirement) or the Local Housing Strategy (housing supply target). It is not clear if the PLDP includes generosity as required by SPP (PP0578).

A representee has requested that the Spatial Strategy section should be amended to place much greater focus on deliverability and include additional allocations in the places of greatest need, particularly in the area around Aberdeen City (RD0259.A) (PP1306). Many of the new allocations are not in marketable locations around the City but rather in tertiary market locations (PP0693).

In addition, the numerical basis of the housing allocations is included within the body of the text of the PLDP (PP1306). This last point is echoed by another representee (PP1276). Many of the allocations are not in marketable locations around the City but rather in tertiary market locations. Reliance on more peripheral locations within the Aberdeen Housing Market Area (AHMA) does give the confidence that enough homes will be delivered (PP0693).

The Plan should introduce "Strategic Reserve" or "Future Opportunity Sites" for development in the period post 2032 (PP0499 and PP0501). Bringing sites forward before an interim review of the LDP would accord with SDP paragraph 4.15, which also allows for the identification of Strategic Reserve Housing land. Identification of the long-term growth strategy for settlements is more crucial as the next LDP will be adopted for a period of 10 years. Ensuring a 5-year land supply at all times could prove to be more difficult within a 10-year cycle, particularly in the latter stages of the LDP. Strategic Reserve Land/Future Opportunity Sites provide the Authority with flexibility to review the delivery of allocations

and draw down strategic reserve sites following an interim review of the LDP, should there be an undersupply. Applications for permission to develop Strategic Reserve land would remain contrary to the Plan until that time (PP0501). Future Opportunity Sites should be reintroduced to identify future growth directions for settlements and to provide certainty for communities. A longer-term growth strategy for settlements is important and Future Opportunity Sites would provide flexibility to review the delivery and provisions of housing land supply (PP0926).

The numerical adequacy of the allowances must be demonstrably robust with a residual effective land supply of no less than the 5-year requirement on the 31 December 2032. Allowances should be based on that assumption and provide a credible base residual supply for later Plan periods. The SDP fails to recognise this and will cease to be part of the development plan in early course, with the LDP having responsibility to deliver and maintain the strategic target through sufficient allocations in accordance with SPP. Calculations are provided, based on annualised completions and extrapolation of effective units, which show there is a substantial deficit in the Rural Housing Market Area (RHMA) in the period to 2020-2032 due to the consideration of sites that are marketability constrained. A revised "Table 3 Local Development Plan Housing allowances" is provided to provide the information for a revised Table 1 SDP Housing and Employment Land Figures on page 16 of the PLDP (RD0190.A) (PP1074). Section 5 should be amended to address the shortfall in housing land supply to provide sites that are deliverable as per the requirements of Planning Circular 6/2013. The representee has included an Appendix in their representation (RD0199.A) which provides further detail to support their position (PP1133).

A number of representees have suggested that there is a shortfall in the SDP housing allowances of:

- 1,084 homes to ensure compliance with the Housing Needs and Demands Assessment (PP0772).
- 939 homes to fully align the PLDP with the SDP. Representees have included Appendices in their representation which provides further detail to support their position (RD0089.A) (PP0591), (RD141.A) (PP0837), (RD0213.A) (PP1198), (RD0231.A) (PP1251) and (RD0241.A) (PP1286).
- 939 homes to address over optimism on housing delivery and a need for a greater supply and range of housing sites. The representee has included an Appendix (RD0239.A) in their representation which provides further detail to support their position (PP1283).
- 1,700 homes to resolve a deficit in the AHMA. The representee has included an Appendix (RD0240.A) in their representation which provides further detail to support their position (PP1285).
- 452 additional homes in the AHMA and 1,123 homes in the RHMA to incorporate extrapolated programming of the housing land supply to be built out to 2032. The representee has included an Appendix (RD0130.E) in their representation which provides further detail to support their position (PP0753).
- approximately 850 homes due to the sites not being effective or increases in density (PP0944).
- 1,400 homes in the Aberdeen to Laurencekirk SGA to reflect under-delivery. The representee has included an Appendix (RD0089.A) in their representation which provides further detail to support their position (PP0591).
- 1,700 homes across the Local Plan area as a result of increases in site density and

inaccurate assessment of effectiveness. The representee has included a number of Appendices (RD0259.A) in their representation which provide further detail to support their position (PP1306).

- 1,992 homes due using a less than up-to date supply side calculation, the approach taken to delay some of the housing need and demand from that which occurred in the early part of the plan, and lack of need and demand in the RHMA (PP1197).
- 6,774 homes for 2020 - 2032 period for the Aberdeenshire part of the AHMA, 1,614 for the 2033 - 2035 period and 3,432 for the 2036 - 2040 period in order to demonstrate a residual effective land supply no less than the five-year requirement up to 31 December 2032. The representee has included an Appendix in their representation (RD0194.A) which provides further detail to support their position (PP1103).

Further representees have challenged the housing allowances in Table 1, citing a shortfall in the allocations necessary to satisfy SPP but do not estimate how it should change. Reasons for the shortfall are identified as: excessive site capacity estimates and residual site capacity (PP0892, PP1046, PP1073 and PP1197); use of constrained sites to calculate the total (PP0892, PP1048, PP1055, PP1062, PP1083, PP1089, PP1102 and PP1197).

An additional sentence should be added that reflects the decision made by the Strategic Development Planning Authority that not all need identified in the Housing Need and Demand Assessment will be met (RD0240.A) (PP1176, PP1203 and PP1285).

There is no basis for allocating constrained sites or constrained site extensions, a position reflected in PLDP paragraph 5.4 (PP1197).

The distribution of effective land supply for housing has moved away from the SDP strategy for large allocations in areas of strategic infrastructure. The representee has included an Appendix in their representation (RD0199.A) which provides further detail to support their position (PP1133).

Housing land should not just be concentrated on main settlements but should also reflect the historical settlement pattern. Working from home and remote access to essential services has proven to be effective. The representee has included an Appendix (RD0231.A) in their representation which provides further detail to support their position (PP1251).

Not enough of the new allocations in the AHMA are focused on the SGAs, where the market is strongest and the location generally more likely to be sustainable. The representee has included an Appendix (RD0234.A) in their representation which provides further detail to support their position. (PP1276).

Larger sites should remain part of the housing strategy, but more realistic delivery rates should be adopted. The representee has included an Appendix (RD0591.A) in their representation which provides further detail to support their position (PP0591).

The amount of land available for commercial or industrial activities should be increased (PP0309).

Major developments should be required to be self-sufficient by providing supporting

infrastructure such as shops and community centres, however there is uncertainty as to whether shops will be developed due to the economic climate (PP0733).

Consistency with the Strategic Development Plan

Nestrans has supported the focus of development on the established SGAs as identified at paragraph 5.7, particularly due to the recent transport infrastructure improvements delivered and planned along these corridors. At paragraph 5.8 they agree that the capacity of the Aberdeen Western Peripheral Route should not be negatively affected by development but highlight that the most critical elements are likely to be the junctions along the route and the road network immediately surrounding these junctions (PP1241).

Opportunity for active travel should be included in the core criteria identified in paragraph 5.8 (PP0881).

At paragraph 5.9 clarity is sought as to why a Strategic Environmental Assessment (SEA) and Habitat Regulations Appraisal (HRA) is required. The current wording suggests that SEA and HRA are required to ensure compliance with the National Performance Framework as the reason these specific procedures are required. This is not the case (PP1265).

Aberdeen to Huntly Strategic Growth Area

Clarity is required on where the previous allocations at Huntly are to be reallocated, which has resulted in a reduction of 568 homes from the settlement. These should be reallocated to the SGA and Westhill. The representee has included an Appendix (RD0196.A) in their representation which provides further detail to support their position (PP1125).

There is concern over the lack of a future growth direction for Inverurie due to concerns over the A96 dualling route. (PP1126). The delay in Transport Scotland identifying a route for the proposed dualling of the A96 should not be an indefinite constraint to the growth of Inverurie. The necessary masterplanning exercise can safeguard and propose appropriate design solutions to account for this, in discussion with Transport Scotland. The representee has included an Appendix (RD1296.A) in their representation which provides further detail to support their position (PP1296). Nestrans has recognised that there is still no clarity on this issue and that it is a key requirement for future regional and local infrastructure and development planning (PP1241).

Westhill should be afforded SGA status due to its contribution to the regional economy, its thriving business and employment sector, continued demand for housing and good transport links. A review of the SGAs, as identified in paragraph 8.7 of the SDP, should take place within 5 years of the adoption of the LDP (PP1274).

Aberdeen to Laurencekirk Strategic Growth Area

The Plan needs to take a more positive approach in respect of its own spatial vision for this growth corridor and what the Spatial Strategy has achieved since the Local Development Plan 2017. It should articulate the reasons for Chapelton's slower than anticipated delivery over this timescale (PP0751). One respondent queries the need for more housing, particularly in the Aberdeen to Laurencekirk SGA, and advocates a

cautious and more conservative approach to housing development in this growth corridor (PP0136).

A shortfall of 300 homes exists in the Portlethen to Laurencekirk SGA allocations, and there is no evidence that the Council has made up this deficit. The representees have included Appendices in their representations (RD0113.B and RD0115.A) which provide further detail to support their position (PP0684 and PP0693).

Chapelton and sites in Laurencekirk, Newtonhill and Stonehaven are not delivering at a pace required to meet housing land requirements for the area, nor delivering the necessary affordable housing. This has led to a significant shortfall in delivery of over 1,100 expected homes. The ineffectiveness of current allocations with significantly slow rates of delivery, increased housing requirement as set out in the SDP, and removal of sites by Committees of Aberdeenshire Council, justifies additional housing land release in the SGA. The representee has included an Appendix (RD0213.A) in their representation which provides further detail to support their position (PP1198).

There is an over reliance on what the Council consider to be existing 'effective' housing land supply in this SGA, as a 64% of this is tied up at Chapelton. Chapelton has not delivered the number of homes envisaged in previous Plans and will not deliver the predicted 2,861 homes by the end of the LDP. There is little prospect of addressing this over the 10-year lifecycle of the LDP. This shortfall could be delivered in the short-term on an alternative site (PP0928).

Under-delivery of homes at Chapelton impacts on other allocations in the SGA (PP0944). Delivery of new homes at Chapelton has been slow and this should not be a barrier to the allocation of additional land. It is completely unreasonable to present Chapelton as the only option to homebuyers. Additional housing should be allocated within the SGA to address a lack of affordable housing. The representee has included an Appendix (RD0196.A) in their representation which provides further detail to support their position (PP1125). There is no evidence which would suggest that delivery of other sites in this corridor would be constrained through continued development at Chapelton. The LDP needs new allocations to deliver further options for development locations within this corridor (PP1125). The representee has included an Appendix (RD0195.A) in their representation which provides further detail to support their position (PP1125).

In contrast, a representee disagrees with statement made in paragraph 5.13. There is no evidence that development is or will be constrained at Chapelton by development in the SGA. The LDP needs to deliver options for development and subsequently new allocations in the SGA corridor (PP1225).

Any proposed new settlement within the green belt should be rejected to ensure the continued development of the new settlement at Chapelton (PP1170).

The LDP needs to take a more positive approach in respect of its own spatial vision and proposes an amendment to paragraph 5.13 Aberdeen to Laurencekirk SGA that reflects what the Spatial Strategy has achieved since the LDP 2017 and articulates the reasons for Chapelton's slower than anticipated delivery over this timescale (PP0751).

Nestrans continues to support the work of Transport Scotland in the delivery of the Laurencekirk junction improvement scheme. Nestrans has also indicated that they are investigating the potential for additional local railway stations along this strategic corridor,

although this work is currently at an early stage. The representee has included an Appendix (RD0227.A) in their representation which provides further detail to support their position (PP1241).

Aberdeen to Peterhead Strategic Growth Area

Potterton is not within the Energetica Corridor (PP0515, PP0695, PP0824, PP0850, PP0853, PP0856, PP0860 and PP1155). Inclusion in paragraph 5.14 implies that it is within, or that it is somehow linked to, the SGA for the purposes of the LDP (PP0515 and PP0553). There is no housing (PP0904 and PP1167) or employment land allocation in Potterton so it cannot be used to promote the Energetica Corridor (PP0857 and PP0904). Potterton is not identified on the www.Energetica.co.uk website interactive map and as such the reference should be removed. Energetica cannot be used as a justification to allocate houses in the settlement (PP0858). Potterton is not a business destination, it is a farming community (PP0904).

Clarification is required as to whether Potterton is within the SGA (PP0671). Potterton was identified as being outwith the Aberdeen to Peterhead SGA at the Examination of the existing LDP (PP0965 and PP1135) and historically it has not been within the SGA (PP0638, PP0781, PP0788, PP1167 and PP1190) and this is confirmed by the Settlement Statement in Appendix 7 (PP0781, PP0886, PP0887, PP0930, PP0932, PP1135, PP1167, PP1190 and PP1401). Appendix 6 wrongly identifies Potterton as within the SGA (PP0781, PP0638, PP1167 and PP1190). Potterton is outwith the Aberdeen to Peterhead SGA (PP0607, PP0610, PP0824, PP0845, PP0855, PP0859, PP0860, PP0886, PP0887, PP0932 and PP0904) and it is therefore within a Local Growth and Diversification Area (PP0781, PP0654, PP0788, PP0797, PP0798, PP799, PP0800, PP0801, PP0802, PP0850, PP0853, PP0854, PP0932, PP0965 and PP1135). Potterton's lack of public infrastructure like roads and public transport are not suitable to support the strategy of what a growth area is supposed to function as and what it represents (PP0860, PP0904 and PP1135). Potterton should be removed from the SGA, (PP0870). No housing completions are shown in the Housing Land Audit 2019 in the period from 2020 to 2030 (PP1401). The housing allocations should be reviewed to reflect the reality of post Covid-19 impacts on this development corridor (PP1155). In contrast however a representee supports recognition in paragraph 5.14 that allocations in Potterton, and more widely within the corridor, have been made to address a shortfall of housing land in the Strategic Growth Area (PP0599).

No modifications were proposed to the specific extent and boundary of an extended or new SGA by the Reporter at the Examination of the Proposed Aberdeen City and Shire SDP 2018, Issue 4, paragraph 11 page 60 where the Reporter advised it would be "unreasonable for this Examination to determine the specific extent and draw a boundary of an extended or new SGA without the opportunity for landowners, the community and other interested parties to be involved." References are also made to statements on page 93, where the Strategic Development Planning Authority conclude that, "No modifications to the Proposed Strategic Development Plan are considered necessary as a result of these representations." (PP0874).

Potterton is outwith the "maps" presented to the Proposed SDP Examination and reported on at page 96 paragraph 6 in the Report to Aberdeen City and Shire Strategic Development Plan Authority on the Proposed Aberdeen City and Shire Strategic Development Plan Examination. It is also outwith the boundary of the SGA identified on

the Spatial Strategy map on PLDP page 21 (PP0874).

The first paragraph of the Vision section within the Potterton Settlement Statement incorrectly states that Potterton lies outside the Aberdeen to Peterhead SGA (SGA); Potterton does sit within the Aberdeen to Peterhead SGA (PP1018).

In paragraph 5.14 it states that, “Peterhead...requires early decisions regarding sustainable transport options.”, but this section of the document does not set out any detail on the nature of these decisions (PP1241).

Other Locations in Aberdeenshire

Westhill has capacity for additional development in the short-term and additional deliverable opportunity sites for housing are required. Westhill has capacity for at least 481 more homes and is a deliverable, marketable, and sustainable edge of City location (PP0675).

The obligation to undertake a review of the Spatial Strategy contained within the SDP should be reflected more strongly in the proposed LDP. Only sweeping reference is made to this in paragraph 5.15 and this should be reinforced, thereby allowing further growth in Westhill. The representee has included an Appendix (RD0196.A) in their representation which provides further detail to support their position (PP1125).

Paragraph 5.15 suggests a moratorium on development in Westhill due to the requirement for traffic impacts to be undertaken over the next few years. It does not recognise that there remains capacity for relatively small-scale development in the town (PP1177). Nestrans has noted that there are ongoing development opportunities and a new allocation of 110 homes proposed in Westhill and that the draft Regional Transport Strategy (RTS) does not identify a specific solution which would allow further development in Westhill (PP1241).

Additional sites should be allocated in Deeside to address affordability issues. The representee has included an Appendix (RD0089.A) in their representation which provides further detail to support their position (PP0591).

National Developments

It should be clarified that Special Areas of Conservation (SACs) are international designations rather than national (PP1264 and PP1300). The representee has included an Appendix (RD0255.B) in their representation which provides further detail to support their position (PP1300). Even after Brexit, SACs and Special Protection Areas (SPAs) will still be of international/European importance but will not be part of the wider Natura network. All our Natura sites (or European sites as they are more likely to be called) will be transferred to the Bern Convention’s Emerald Network, which is an international network. The representee has included an Appendix (RD0255.B) in their representation which provides further detail to support their position (PP1300).

Nature designations should be separated from National Developments identified in NPF3. Carbon rich soils are not “designated” (PP1264).

The Spatial Strategy Policy Map

The Spatial Strategy Map, page 21, is not clear as the circles do not clearly show the allocations made and also would appear to include historical allocations which in some cases are constrained (PP0693).

There is a change in the policy from AHMA/ RHMA to accessible/ remote areas. This has a significant change for Banchory. However, the only map of this is in the Spatial Strategy and it is not clear where the boundary sits. Looking at the Scottish Government guidance the whole west side of Banchory is a remote rural area and it is said that the Plan adopts this. It would be useful for this to be shown at a larger scale, both on the Proposals Maps in the LDP and in Section 7. The representee has included an Appendix (RD0141.A) in their representation which provides further detail to support their position (PP0790).

Modifications sought by those submitting representations:

Introduction

Modify the PLDP to add a Specific reference to ancient woodland in the Spatial Strategy (PP0877).

Modify the PLDP to add the following text to paragraph 5.1, "As well as accommodating the immediate needs of the City and its growth, we need to consider the conservation of our built and natural heritage, including the setting of the City and the green belt zone belt." (PP1170).

Housing and Employment Land

Modify the PLDP to introduce the concept of "use it or lose it" to housing sites (PP0040).

Modify the PLDP to prioritise protection of the environment over developing more houses (PP0135).

Modify the PLDP to reflect national policies on sustainability in matters of site selection (PP309).

Modify the PLDP to prioritise brownfield sites for allocations (PP0660 and PP0661).

Modify the PLDP to delete Paragraph 5.10 (PP0578).

Modify the PLDP to use more up to date information to inform the long-term future of the city and Aberdeenshire in terms of housing need and demand (PP0135).

Modify the PLDP to consider the present impact of the deterioration of the oil industry and also the potential results of Brexit upon the Aberdeen and Aberdeenshire economic climate (PP0658 and PP0733).

Modify the PLDP to clarify the need for housing (PP0084).

Modify the PLDP in the Spatial Strategy to place much greater focus on deliverability and include additional allocations particularly in the area around Aberdeen City (PP1306 and PP0693).

Modify the PLDP to amend the distribution of housing to meet the housing allowances in the AHMA to ensure allocations are made in sustainable locations in proximity to Aberdeen City (PP0693).

Modify the PLDP to introduce future opportunity sites beyond the PLDP 10-year planned period, i.e., post 2031 (PP0499 and PP0501).

Modify the PLDP to ensure the associated Settlement Statement Maps identify both the immediate and future allocations (PP0926).

Modify the PLDP to clarify the housing figures from the Strategic Development Plan, with regard to the Spatial Strategy and/or Housing section of the proposed Plan, specifically the Plan should include the Housing Supply Target (separated into affordable and market sector), the generosity percentage and the Housing Land Requirement for the LDP area (PP0578).

Modify the PLDP to provide further information to establish if the LDP is consistent with the SDP. If there is a shortfall in the allocation of effective sites, then additional sites will need to be allocated. (PP0772)

Modify the PLDP to account for the SDP increased requirement of 939 homes and allocate additional housing land. Include an allowance to account for the HLA evidence of under-delivery and therefore a predicted delivery shortfall – possibly up to 1,700 homes over the Plan's first 5 years. This could be in the form of additional allocations and future reserved housing sites with an appropriate draw-down mechanism; and an equivalent of the sites removed from the MIR stages (min. 400) are replaced with new allocations across a range of locations (PP0837).

Modify the PLDP to include additional housing land allocations, in Section 5 - The Spatial Strategy - Paragraph 5.13 - Aberdeen to Laurencekirk SGA (PP1198).

Modify the PLDP to allocate additional housing land as per the requirements of the SDP Reporter's findings, to reflect the evidence of under-delivery and to make up for the proposed scale of allocations removed at the MIR stage of the PLDP to ensure that they have an appropriate housing land supply to meet requirements (PP1125).

Modify the PLDP to adopt a reserved land approach to ensure that housing land supply can be supplemented should allocated sites fail to deliver (PP1285).

Modify the PLDP to delete Table 1 Summary of Housing Land Allocations from Appendix 6 Housing Land Allocations and Insert a new Table 1 Summary of Housing Land Allocations as provided (PP0753).

Modify the PLDP to delete the proposed contribution to the Allowance for the AHMA of 222 Homes (PP1197).

Modify the PLDP to identify additional allocations in the Formartine part of the AHMA (PP1046 and PP1048).

Modify the PLDP to remove undeliverable sites consistently after a period of time in the RHMA and identify new alternative allocations in the RHMA, or if marketability

constrained, within the adjacent AHMA (PP1050).

Modify the PLDP to amend site capacities to reflect the base date of the emerging LDP and not count existing effective allocations as contributing to the allowances (PP1052).

Modify the PLDP to allocate alternative effective sites (PP1055 and PP1083).

Modify the PLDP to identify additional effective allocations in the Blackdog - Ellon SGA (PP1062).

Modify the PLDP to remove long-term constrained sites (PP1089).

Modify the PLDP to remove contributions to the allowances from sites constrained at the base date of the Plan (PP1102).

Modify the PLDP to reflect residual capacity to allocations carried forward (PP1073).

Modify the PLDP to address the identified shortfall in the housing land supply identified by Homes for Scotland, in section 5 of the PLDP. Aberdeenshire Council should allocate a range of sites to help address this, as required by SPP (PP1248).

Modify the PLDP to delete and replace Table 1 Summary of Land Allocations with the revised table provided (PP0753).

Modify the PLDP to amend the housing allowances for the Aberdeenshire part of the AHMA to 6774 for 2020 - 2032 period, 1614 for the 2033 - 2035 period and 3,432 for the 2036 - 2040 period (PP1103).

Modify the PLDP to add an additional 3153 homes to the 2020-2032 period within the RHMA in table 1 "Strategic Development Plan Housing and Employment Land figures". 682 homes should be removed from the 2033-2035 period in table 1 "Strategic Development Plan Housing and Employment Land figures. 531 homes should be added to the 2036-2040 period in table 1 "Strategic Development Plan Housing and Employment Land figures (PP1074).

Modify the PLDP to address the shortfall in housing land supply in the Spatial Strategy for Section 5 (PP1133).

Modify the PLDP to amend Paragraph 5.3 to read, "A policy decision has been taken through the Strategic Development Plan that Housing Need and Demand will not be fully provided for in the period 2020 – 2032 and is instead deferred until after 2032. To ensure that meeting housing needs is not further eroded, it is particularly important than the allocations made for the period 2020 – 2032 are deliverable." (PP1176 and PP1203).

Modify the PLDP to make more allocations on deliverable sites supported by strategic infrastructure (PP1133).

Modify the PLDP to provide new allocations across a range of locations including rural settlements (PP1251).

Modify the PLDP to increase the amount of land identified for commercial or industrial

activities (PP0309).

Consistency with the Strategic Development Plan

Modify the PLDP to amend paragraph 5.8 to include, “Core criteria have been used to govern where development should be allowed, including future capacity of schools, capacity of unclassified roads and the need to ensure the capacity of the Aberdeen Western Peripheral Route and its junctions are not negatively affected by development (PP1241).

Modify the PLDP to reduce the reliance on the private car, the core criteria at paragraph 5.8 should include the opportunity for active travel (PP0881).

Modify the PLDP to amend paragraph 5.9 to read, “Each development site has been tested through a Strategic Environmental Assessment exercise and subjected to appraisal under the Habitats Regulations to ensure that the LDP complies with environmental legislation. In addition, they have been assessed to ensure that the objectives of the National Performance Framework have been met.” (PP1265),

Aberdeen to Huntly Strategic Growth Area

Modify the PLDP to amend Paragraph 5.12 to provide clarity on where the previous strategic allocations at Huntly, which have been removed from the PLDP are to be reallocated. These should be redistributed to settlements identified for strategic growth or which demonstrate a significant demand for new housing, such as Westhill, rather than within the wider RHMA where demand is more limited (PP1125).

Modify the PLDP to amend Paragraph 5.12 to read, “Within the Aberdeen Housing Market Area the area identified for future strategic development options by the Strategic Development Plan, there is uncertainty in the Aberdeen/Inverurie/Huntly SGAs regarding the proposed dualling of the A96. Whilst currently we do not know when this is likely to be, either at Inverurie or Huntly, development of existing and expanded opportunity sites and, where available, brownfield land remains the best solution to meet housing demand in the short-term with longer-term opportunities created when the dualling has completed. Where development proposals come forward in advance of the identification of a preferred route, they should safeguard the line of any proposed route.” (PP1125).

Modify the PLDP to amend Paragraph 5.12 to read, “Within the Aberdeen Housing Market Area the area identified for future strategic development options by the Strategic Development Plan, there is uncertainty in the Aberdeen/Inverurie/Huntly SGAs regarding the proposed dualling of the A96. Whilst currently we do not know when this is likely to be, either at Inverurie or Huntly, development of existing and expanded opportunity sites and, where available, brownfield land remains the best solution to meet housing demand in the short-term with longer-term opportunities created when the dualling has completed. Where development proposals come forward in advance of the identification of a preferred route, they should safeguard the line of any proposed route.” (PP1296).

Modify the PLDP to make a strong commitment to undertake studies to inform a review of the SDA’s within the first 5 years of the new LDP (PP1274).

Aberdeen to Laurencekirk Strategic Growth Area

Lower housing allocation in the Aberdeen to Laurencekirk SGA (PP0136).

Modify the PLDP to identify and allocate more housing land within the Aberdeen to Laurencekirk SGA (PP0684).

Modify the PLDP to the Portlethen Settlement Statement to add approximately 400 homes, land for education use, and local retail use (PP0684).

Modify the PLDP to include additional housing land allocations in the Aberdeen to Laurencekirk SGA in the Plan (PP1198).

Modify the PLDP to include additional land at Stonehaven for housing, a supermarket, and a primary school (PP1306).

Modify the PLDP to identify future allocations for the period beyond the lifetime of the next LDP (2033 – 2040) (PP0928).

Modify the PLDP to add additional sites in the Stonehaven to Laurencekirk SGA to reflect more realistic build out rates from large allocations, based on past and future Housing Land Audit Projections (PP0928).

Modify the PLDP to identify a substantial portion of the identified effective supply (c.2000 homes) as Strategic Reserve, to facilitate further allocations within the AHMA part of the Aberdeen to Laurencekirk SGA (Portlethen - Stonehaven corridor) (PP0928).

Modify the PLDP to amend the third sentence in paragraph 5.13 of the Aberdeen to Laurencekirk SGA to, "The rate of growth in Chapelton has been unexpectedly slow in line with the wider housing market and the local aspiration for a model sustainable new community." (PP0751).

Modify the PLDP to amend Paragraph 5.13 to read, "...The rate of growth in Chapelton has been unexpectedly slow, therefore substantial new allocations should be made to augment the supply of effective housing land within the corridor..." (PP1125).

Modify the PLDP to amend paragraph 5.13 (PP1204 and PP1225).

Modify the PLDP to amend page 19, paragraph 5.13, to read, "...The rate of growth in Chapelton has been unexpectedly slow and the local aspiration for a model town here is likely to be constrained unless significant new development land elsewhere in the corridor is restricted, and new settlement proposals rejected at this time especially those adjacent to the City boundary on green belt land." (PP1170).

Modify the PLDP to amend Paragraph 5.13 to read, "... The rate of growth in Chapelton has been slow in line with the wider housing market and the local aspiration for a model sustainable new community town here, including stimulating demand for infrastructure and services, is likely to be constrained if significant new development land elsewhere in the corridor was to come forward and dissipate demand for the same infrastructure and services ..." (PP0751).

Aberdeen to Peterhead Strategic Growth Area

Modify the PLDP to remove Potterton from the statement in paragraph 5.14 (PP0515, PP0553, PP0607, PP0610, PP0788, PP0797, PP0857, PP0858, PP0859, PP0874, PP0886, PP0887, PP0904, PP0932, PP0932, PP1167, PP1190 and PP1401) and include a statement that it is not in the SGA (PP0553, PP0638, PP0654, PP0781, PP0788, PP0797, PP0798, PP799, PP0800, PP0801, PP802, PP0850 PP0853, PP0854, PP0855, PP0856, PP0870 and PP0965). Remove Potterton from the SGA column on in Appendix 6 “Housing Land Allocations” (PP1167).

Modify the PLDP to remove Potterton from references to the Energetica Corridor (PP0695 and PP0860).

Modify the PLDP to amend the Spatial Strategy map to exclude Potterton from the SGA (PP0824, PP0854 and PP0860).

Modify the PLDP to allocate land at Potterton (for housing) (PP1018).

Modify the PLDP to remove the sentence, “Additional smaller developments in Newburgh, Foveran, Bellhelvie and Potterton are included to promote the Energetica Corridor.” from paragraph 5.14 (PP1155).

Other Locations in Aberdeenshire

Modify the PLDP to amend paragraph 5.15 to read, “Further Development in Westhill shall be considered as part of a review of the Spatial Strategy within the first 5 years of the Plan, per the commitment set out within the Strategic Development Plan. Accordingly, transport assessments shall be undertaken to inform the Regional Transport Strategy and identify the nature of a solution that may be required to allow further substantial development to take place in the town following an interim review of the Plan.” (PP1125)

Modify the PLDP to remove the phrase “large scale” from paragraph 5.15 (PP1177).

Modify the PLDP to rephrase paragraph 5.15 to, “Development in Westhill remains stalled, curtailed until transport assessments are undertaken over the next few years and the Regional Transport Strategy regional partners identifies identify and consider the nature of a solution potential options, their costs and their wider impacts that maybe required to allow further development to take place in the town.” (PP1241).

National Developments

Modify the PLDP to amend the wording within National Developments paragraph 5.18 to, “The Local Development Plan continues to recognise National Developments, as identified in the National Planning Framework. and both national designated sites. In addition, it recognises the importance of internationally and nationally designated sites such as Special Areas of Conservation, and Sites of Special Scientific Interest and natural resources and habitats such as carbon rich soils, to help conserve the best of the Aberdeenshire environment.” (PP1264).

Modify the PLDP to amend paragraph 5.18 as follows, “The Local Development Plan continues to recognise national developments, as identified in the National Planning Framework, and both national and internationally designated sites such as Special Areas of Conservation, nationally designated Sites of Special Scientific Interest and carbon rich

soils, to help conserve the best of the Aberdeenshire environment. Existing local designations such as the Special Landscape Areas, Local Nature Conservation Sites, and Coastal Zones have been retained from the previous Plan and are also presented as Appendices.” (PP1300).

The Spatial Strategy Policy Map

Modify the PLDP to only show new Housing allocation numbers should be shown on the Spatial Strategy Policy Map (PP0693).

Modify the PLDP to provide clarification for the boundary of the accessible/remote boundary and for this to be detailed in Section 7 and the Proposals Maps (PP0790).

Summary of responses (including reasons) by planning authority:

Introduction

The Spatial Strategy is the outcome of a set of principles applied to the geographic location of potential development proposals. In its widest sense the Spatial Strategy is set by the SDP (2020), but this is refined in detail by consideration of demand, need, infrastructure capacity, reducing the need to travel and other considerations as detailed in the Aberdeenshire Council Bid Assessment Template (AD0097) used to evaluate submissions for inclusion in the LDP. This also addresses the passing comment from NHS Grampian regarding the need for investment in infrastructure to support needed growth. No change is required.

A commitment from a range of partners is given to increasing woodland cover within the Aberdeenshire Council Forest and Woodland Strategy (AD0102, page 2) referred to, at paragraph E3.3 on page 60 of the PLDP. It would be inappropriate to increase the profile of this topic within the Spatial Strategy when this matter is covered adequately elsewhere. Native woodlands are a subset of all woodlands and while the Council agree with the value of creating native woodland, our emphasis is generally on any type of woodland, unless being planted to meet the obligations within the LDP towards providing for biodiversity in developments. No change is required.

Housing and Employment Land

There are significant correlations between comments made on this topic and those made on Appendix 6 (Schedule 4 Issue 5: Section 8 – Shaping Homes and Housing – Housing Land Supply, Policy H1 Housing Land and Appendix 6 Housing Land Allocations). This Schedule 4 document deals with strategic housing and employment land issues and queries on the allowances made by the SDP 2020, the Housing Supply Targets, and Aberdeenshire wide issues. It does not address issues of how those allowances have been met, as this is a debate on the competence of the analysis that has been undertaken on the individual sites listed in Appendix 6.

The Council are pleased that Homes for Scotland agrees with us that the LDP should be planned to be consistent with the SDP.

In developing the Plan, the “use it or lose it” principle has been applied to allocations from previous LDPs which have seen little or no development interest since they were

allocated. "Stalled" sites have been removed, with the exception of those sites in settlements where there is no alternative site (and no prospect of another alternative site coming forward), or where the only constraint is "marketability" and there is no reason to suspect that any alternative site would not immediately fall into the constrained land supply, not due to lack of need, but due to low levels of commercial demand. This matter is explored further in Schedule 4 Issue 5. No change is required.

The Council are content that appropriate consideration of protection of the environment and of sustainability issues was taken in the development of the Plan and the analysis of potential development sites. In the Main Issues Report it was acknowledged that "climate change continues to have a direct and noticeable effect on the local area." Our commitment on this topic is evidenced by the inclusion of Section 4 "The purpose of the Local Development Plan and its outcomes", the Aberdeenshire Council Bid Assessment Guidance (AD0098) used to evaluate submissions for inclusion in the Local Development Plan and the Strategic Environmental Assessment - Environmental Report of the Proposed Local Development Plan (AD0045.A, Appendix 8.6 and 8.7). To take on the challenges of sustainable development and climate change (PLDP page 14, paragraph 4.3) is a key element of the Vision and is cross referenced throughout the Plan by the "umbrella" policy symbol. All development is required to demonstrate measures to enhance biodiversity in proportion to the opportunities available and the scale of the development opportunity (Policy P1.7), provide open space (Policy P2.1) and protect and create access routes (Policy P2.6) to result in net environmental benefits from development.

Brownfield sites were considered as a primary source for development land. The Scottish Vacant and Derelict Land Survey 2019 only identifies seventy-six such sites within Aberdeenshire (AD0172 pages 29 and 49). Of these, thirty are identified as OP (Opportunity) or BUS (sites Safeguarded for Business Uses) sites in the PLDP, twenty-seven are relatively small urban brownfield sites which could be developed through the use of Policy P3 Infill Developments within Settlements and Householder Developments, three are wholly rural sites, six are thought to be undevelopable due to flooding or other issues, and four are currently the subject of live applications or active use. None of the twenty-seven urban brownfield sites have any known interest from the landowner in promoting development and so cannot contribute to meeting either the housing or employment land targets. The statement at paragraph 5.10 reflects the findings of a study conducted by Brownfield Urban Capacity Study of Banff, Macduff, Fraserburgh and Peterhead which showed that "the vast majority of sites in the four settlements are financially unviable and are essentially locked out of traditional forms of development finance streams as funds grow increasingly risk-adverse" (AD0122, page 4). This was associated with high development cost and low land values. This could be addressed by adding text to the paragraph, but the Council are of the view that this is clear that it is in the "peripheral areas" where viability becomes an acute problem. For clarity the Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications, to remove the general statement regarding the cost differences between developing brownfield and greenfield land, as the issue is one of overall development viability rather than just cost. There is no justification to delete the whole paragraph.

While the Council acknowledge that some predictions for the future state of the economy in the north east are gloomy, these risks were identified in the Main Issues Report. The LDP supports the vision of the Aberdeen City and Shire Strategic Development Plan

(AD0016, page 6) that endeavours to present a strategy that is robust in a period of significant economic change. In addition, the Council have cognisance of the Economic Strategy (AD0027), in which Opportunity North East (ONE) sets out a course which is designed to ensure future long-term prosperity. Even in the light of pessimistic predictions the Council are obliged to accord with the SDP and accommodate the levels of growth that it has set. Economic downturns may impact on the rate of population increase that occurs and may slow down the rate of uptake of land for development, but the PLDP requires to take an optimistic approach to avoid artificially constraining development should such predictions not come to pass. No change is required.

The Council does not agree that additional housing in the area around Aberdeen will devalue properties to such an extent that it will cause widespread equity issues, on the contrary constraining the housing market may have the effect of increasing house prices to such an extent that affordability becomes even more serious a problem in the area. No change is required.

The SDP was approved by Scottish Ministers on 12 August 2020, and it is an up-to-date statement on the scale of the housing land allocations required by the LDPs in the area. The Council accept the comment by the Scottish Government that greater clarity could be provided by including tables of the Housing Supply Target (separated into affordable and market sector), the generosity percentage and the Housing Land Requirement for the Plan area, even though SPP on page 30 identifies that this is necessary only for LDPs outwith city regions and this information has already been published in the SDP in Tables 1 and 2 (Page 19) and the flexibility element is discussed at paragraph 4.11. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Housing land allocation figures have been set by the SDP and detailed discussion of the relationship between these figures, the Housing Need and Demand Assessment, and elements of generosity were debated at the SDP Examination and the housing allowances have been provided by Scottish Ministers in approving that document in 2020. There is no further need to consider the scale of those allowances, or of the need for further generosity over and above that set in the SDP.

All necessary housing land information is within the LDP. That some of this detailed information is in Appendix 6 does not belittle or devalue its inclusion. In terms of decision-making Appendix 6 has very little material value, and its inclusion is made to demonstrate how the policy content in the Spatial Strategy and Appendix 7 Settlement Statements has been delivered. Reference to the Shaping Homes and Housing figure on page 44 graphically demonstrates the scale and concentration of development around Aberdeen City, and in accordance with the SGAs of the SDP. Consistently allocations around Aberdeen City have been made on the basis of the availability of infrastructure and the size of allocations that would be appropriate to retain the character and individual sense of place of the individual settlements. No change is required.

In relation to requests for the Spatial Strategy to be amended to concentrate more development around Aberdeen City, the Council note that the SDP makes allowances that accommodate 27,456 homes in the AHMA, 17,846 of which are within the Aberdeen City Council boundary. The Council also note that Scottish Ministers did not agree with Homes for Scotland in the course of the SDP Examination that the balance between AHMA and the RHMA should change by a further 5%. This reflects our understanding of the stronger

market around the City. Reference to the Shaping Homes and Housing figure on page 44 graphically demonstrates the scale and concentration of development around Aberdeen City, and in accordance with the SGA of the SDP. Consistently allocations around Aberdeen City have been made on the basis of the availability of infrastructure and the size of allocations that would be appropriate to retain the character and individual sense of place of the individual settlements. No change is required.

The PLDP is set out as a thirteen-year Plan in accordance with the allowances in the SDP for the period to 2032, and in reaction to the provisions of the Planning (Scotland) Act 2019. Although, it is noted that the provision related to the lifespan of an LDP is still to come into effect. To this point it was our intention to undertake a review of the LDP in 2026, at which time an evaluation of new sites could be undertaken to roll forward the housing allocations. Part of the reason for this approach was to provide as great as possible opportunity for development to occur by making a full allocation for the period to 2032. All too frequently sites the Council are assured as immediately deliverable have become delayed by matters outwith the Planning Authority's control. By allocating a full thirteen-years of housing land the market can progress far more new sites than are needed to meet the five-year effective land supply, and deliver these faster, or slower, as market demand requires. With such a large pool of available housing land, and with a review to recruit new sites to populate the period 2032-37 (and available to be developed "early" in the period 2026-2032) the Council can see no need for Strategic Reserve land. It has been our experience that trying to assess the deliverability of land for development ten to fifteen years into the future is a perilous process, and that it creates uncertainty for communities and compromises any ability to accommodate significant changes in policy direction (as is evidenced by the major changes to place based planning, and climate change that have occurred over the past decade). Not having Strategic Reserve land for a period over ten years in the future does not compromise the strategy and approach set out in the PLDP. No change is required.

There is no reason to promote change from Table 1 Strategic Development Plan Housing and Employment Land Figures. The approved Aberdeen City and Shire Strategic Development Plan 2020 confirms the LDP housing allowances and Table 1 in PLDP is a statement of fact, not policy. It is not possible to turn back the clock and rehearse methodological matters that will have been considered in the SDP Examination, and a resolution made by Scottish Ministers. The SDP formed a significant part of the Indicative Regional Spatial Strategy produced by Aberdeen City Council and Aberdeenshire Council and there is no reason to suspect, at this time, that the National Planning Framework 4 will come to an alternative conclusion. That being the case, early revision of the LDP for this unknown circumstance will have to take place. The SDP remains a valid expression of the consensus between the two Councils on strategic spatial planning matters. Compliance with the terms of Table 1 is a matter for the allocations detailed in Appendix 6 considering the deliverability of individual sites, not for the Spatial Strategy itself. No change is required.

The argument that a full five-year effective land supply has to be identified for the period following 31 December 2032 is flawed as it does not take into account the need to undertake a review during the first period of the LDP to populate the land allocations for the following thirteen-year plan, as a rolling programme. The respondent dismisses the inconsistency of his best-case scenario with the allowances in the SDP and does not recognise that the LDP, currently has to be consistent with that Plan. The method the representee promotes is based on assumptions and extrapolations and is based on an

argument that all development land must be effective and not “capable of becoming effective”, as it is allocated in the Plan. No change is required.

The Council are not clear what representees refer to when they say a policy decision has been taken through the SDP that Housing Need and Demand will not be fully provided for in the period 2020 – 2032. There is no evidence of the need to consider this further at a local level, and SDP paragraph 4.11 identifies an additional flexibility of 20% for the period to 2020 to 2032. The Council are not convinced that any perceived deficiencies recognised by the SDP can be rectified by concentration on the deliverability of sites. This is a matter that is fundamental to all allocated sites in the LDP. No change is required.

Paragraph 5.4 is robust and sets out that the Council have removed many long-term constrained sites from the Plan. The status of individual sites and the nature of any remaining constraints is set out in the discussion of Appendix 6 under Schedule 4 Issue 5: Section 8 – Shaping Homes and Housing – Housing Land Supply, Policy H1 Housing Land and Appendix 6 Housing Land Allocations. No change is required.

Allocations detailed in Appendix 7, and the Policies R1 and R2 relating to rural development demonstrate that appropriate allocations and a policy response have been made to support smaller rural settlements. Historic pattern is not a valid reason for making land use allocations when patterns of need and infrastructure capacity may have changed over time. No change is required.

In relation to employment land, Appendix 1 details the allocations that the Council have made and shows that the Council have already exceeded the Employment Land Allocations identified to us from the Aberdeen City and Shire Strategic Development Plan. The Council are not aware of any regional shortfalls in employment land provision given the distribution and take up rates indicated through the Aberdeen City and Shire Employment Land Audit 2019 process (AD0018, section 4).

Paragraph H1.2 of the PLDP allows community uses linked to homes to be built.

Consistency with the Strategic Development Plan

The support from Nestrans for promoting development in the SGAs is welcomed.

The Council accept that a minor modification should be introduced to recognise that it is not the capacity of the Aberdeen Western Peripheral Route which could have been negatively affected by the distribution of development, but specifically the junctions and the road network immediately surrounding the junctions. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council does not believe that restating that “opportunity for active travel” should be included in the core criteria identified in PLDP paragraph 5.8. The Aberdeenshire Council Bid Assessment Guidance details the wide range of criteria that were used to evaluate potential sites for inclusion in the PLDP and active travel is one of the many measures that paragraph 5.8 refers to when it states that the measures listed “include” the matters referred to (AD0098, page 5). No change is required.

The Council agrees that the language used in paragraph 5.9 may be misleading but do not

agree that this is the place to rehearse the need for the PLDP to comply with environmental legislation associated with Environmental Assessment and Habitats Regulations Assessment. The Council agrees that cross reference to the National Performance Framework is a separate issue, and while SEA, EIA and HRA all assist us in ensuring the Plan contributes to the environment topics within the National Outcomes contained in the National Planning Framework 3 (AD0004, page 2) (the key outcome that the LDP helps to deliver) it also contributes to other topics through the way the Plan is developed and the actions it promotes. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Aberdeen to Huntly Strategic Growth Area

Revised allocations in Huntly demonstrate how sites which the Council perceive to be incapable of becoming effective have been removed from the LDP. The SDP makes no obligations regarding the distribution of housing in each SGA and, while the Council have to adhere to the expectation in paragraph 3.8 of the SDP, there is no allocation prescribed for any of the SGA's or any settlement. Development could be reallocated to any settlement in the RHMA to ensure the Housing Supply Targets of the SDP are met. There is no formula that would describe how development proposals removed from the LDP in one area is prescribed to another. No change is required.

While the issues associated with the dualling of the A96 will have more of an effect on the discussion of the Inverurie Settlement Statement (Schedule 4 Issue 34: Inverurie and Port Elphinstone) it is worth rehearsing here that the final line of the A96 re-routing will have a profound impact on the geography of the settlement and the Council continue to feel that it is appropriate not to second guess the Scottish Government's decisions on the best route to follow by making allocations, potentially, in places that cannot efficiently access this major new infrastructure. The Council are also aware that significant infrastructure to accommodate new development may be required to address the new pattern of traffic flows in the settlement, but the Council can give no advice on the scope or cost of these to the development industry until a design solution for the A96 is delivered. The Council anticipate that the future development patterns around Inverurie will be a major theme in the mid-term review of the LDP and discussion on this matter will be most appropriately debated once there is certainty with regard to the route and delivery of the project. This is a view that Nestrans would seem to support. No change is required.

The status of Westhill was debated at the SDP Examination and a conclusion reached by Scottish Ministers. The Council can give no assurances that the necessary evaluation work for Westhill and a "West Aberdeenshire" SGA will be completed in time for a mid-term review, or whether it would justify the inclusion of Westhill itself. No change is required.

Aberdeen to Laurencekirk

The Council does not agree that a more cautious and conservative approach should be adopted for the LDP, the strategy is based on sound planning to capitalise on strategic infrastructure in the SGA. It will provide for needs within that area. No change is required.

As discussed in the section Aberdeen to Huntly SGA above there is no metric to identify a "shortfall" derived from making allocations in one part of the HMA, as opposed to another.

The shortfall of 300 houses in the corridor does not, and cannot exist, as there is no allocation prescribed for any of the SGA's or any settlement. No change is required.

The Council does not agree that Chapelton will not provide effective housing land to the extent identified in the PLDP. Already an implemented consent exists for 4,045 homes, and, despite the differing views of other developers, completion rates of 60 to 80 homes per year have been agreed through the Housing Land Audit process up to 2026. The Council anticipate that build rates will increase as we move through the decade and as critical programmed elements of infrastructure are provided to deliver character, convenience, and place-making to make it a successful town. The Council believe that development at Chapelton will continue to contribute to the effective supply and be capable of contributing to the effective land supply even for the period five years beyond 2032. No additional allocations are required in the corridor (such as Stonehaven) to compensate. There is no need to rehearse why this site has not performed as might be expected as the conditions that have inhibited growth are common across many other major sites. No Change is required.

Aberdeen to Peterhead Strategic Growth Area

The Map 17 in the Supplementary Guidance – Energetica published with the LDP 2017 clearly shows that Potterton is within the Energetica Corridor (AD0034.I, page 20). There is no correlation between the settlement being in the Energetica Corridor, and its inclusion in the SGA; the first does not lead automatically to the second. The Energetica interactive map on the www.energetica.co.uk website is dated 2015 and cannot be expected to show the decided content of the current SDP. The area of the Energetica Corridor has been decided by a partnership approach including Aberdeen City Council and ONE and it is not within the gift of the PLDP to make a change. In any event early discussions with Aberdeen City took place between Officers of the three constituent partners and a decision was taken, based on a number of options suggested, that no change to the boundary should be promoted at this time. The character of Potterton is clearly not one of an agricultural community, such are common in less pressured areas of Aberdeenshire, and the Council would accept that it is not currently a “business location”, although there are a number of business premises on the B666. However, given the scale of business development proposed at Blackdog, the scale of new housing allocations that are required to be identified to 2032 and the limited opportunities where this can be accommodated, the Council believe that it is appropriate to continue the development of Potterton as an edge of city settlement. No change is required.

Paragraph 3.9 of the SDP (AD0016) identifies that “the Strategic Growth Areas outwith Aberdeen City are relatively narrow, up to 5 kilometres wide, and that the Local Development Plans will take the final view on which settlements and sites are within a Strategic Growth Area”. It is correct that historically a decision was taken by the Formartine Area Committee that Potterton should be specifically excluded from the SGA. However, with improvements to the A90 and the Aberdeen Western Peripheral Route completion, connectivity along the Aberdeen to Peterhead SGA has evolved since this decision. The SGA has not been amended to include additional settlements, but sites allocated still fall within this area. This is reflected in the column Allocations for 2020-2032, SGA Blackdog – Ellon of Table 2 of Appendix 6 of the PLDP.

The SDP Examination Report confirms that the illustrations in the LDP are illustrative (AD0017, page 115). This neither confirms nor denies any argument that Potterton is

within an SGA, although the SDP notes that SGAs are up to 5 kilometres wide. The existing settlement boundary of Potterton is, by road 2,220m from the A90/Aberdeen Western Peripheral Route junction, site OP1 Potterton is approximately 1,050m from this junction. The Council can appreciate there may be merit to a review of the settlements within the SGA and whether Potterton will contribute to this, but the Council do not believe this is a matter that will be resolved at this stage of the process. Should the strategic allocations in Potterton be approved, and come forward for development, then the settlement could reasonably be considered to be part of the SGA in a future Plan. No change is required.

Arguments that suggest that Potterton's lack of public infrastructure demonstrates that it is unsuitable as a settlement within the SGA could be applied to almost every other settlement in the Aberdeenshire part of the AHMA where sustained and rapid growth has resulted in strained infrastructure, and facilities which are insufficient. At the current time additional development is the only mechanism that allows for these constraints to be resolved, and the Council have prepared the PLDP on that basis. No change is required.

It is not to be unexpected that no new homes are shown to be completed in Potterton over the period to 2032, as the Housing Land Audit only considers sites which are already part of the established land supply, not those that are being considered to be added to that sum. It is anticipated that sites newly allocated in the PLDP will appear in the Housing Land Audit the year following adoption of the next LDP. No change is required.

With respect to the recommendations made by the Reporter at the SDP Examination that the boundaries of the SGA should remain unchanged this is immaterial as the description provided by the SDP would not need to change to include Potterton. The SDP neither defines settlements, not sites to be accounted for as being within the SGA. No change is required.

The Council accept that paragraph 5.14 is vague as to the "sustainable transport options" that are required to allow it to grow. This is a specific reference to the need for safe active travel routes over the A90 from the allocated site OP1, Inverugie Meadows, Peterhead, which represents the next major growth area of the town. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Other Locations in Aberdeenshire

Only Westhill has been identified as an area of concern by representees. The Council would echo the points made by Nestrans that there are still ongoing development opportunities in Westhill and agree that the phrase "Development in Westhill is stalled" is misrepresentative. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications. As the Council do not know what interventions may be required to allow significant more growth, it is misleading to say that additional small-scale development, or even development of up to 481 homes, would be deliverable. The Council will not know what the minimum interventions might be to allow significant new development in Westhill until delivery of a joint study by strategic partners that will commence following the Autumn 2021 completion of modelling studies. No other change is required.

National Developments

The clarification provided by NatureScot on the continuing international status of SAC and SPA designations is welcome. However, within this paragraph the term national is used to distinguish those designations that operate at a national level and those that operate at a local level. To provide clarification the Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications. Carbon rich soils may not be a formal designation but are identified by NatureScot and as such are designated by them.

The Spatial Strategy Policy Map

As detailed above the Spatial Policy Map is a conceptual illustration and is not intended to provide any other information other than a broad strategic overview of the implications of the spatial strategy. Detailed accounting of the established land supply is provided in Appendix 6 of the PLDP, and to include it here would provide no added value. No change is required.

The same argument can be made for the extent of the accessible and remote rural areas, the Spatial Strategy Policy map is not intended as the source of this information. The information is represented in the Development in the Countryside policy map on page 37 of the plan and a scale-able version of this map is available on the dedicated interactive web-based copy of the Local Development Plan. These latter copies do not have the west of Banchory occluded by a graphic. The Housing market area is an administrative boundary used to ensure compliance with the SDP and is not used anywhere else in the PLDP. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.
2. The council has indicated that it intends to make what it refers to as "non-notifiable modifications" in relation to section 5 (The Spatial Strategy). However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Introduction

3. The spatial strategy is set out in section 5 of the proposed plan and illustrated on a map on page 21. It is described by the council as "the outcome of a set of principles applied to the geographic location of potential development proposals". Two representees consider that particular issues, namely woodland coverage and protection of the green belt, should be specifically mentioned in the spatial strategy. Whilst I agree that these are relevant matters for the local development plan, I consider that they are adequately addressed in other chapters and do not justify being given greater prominence in the spatial strategy. No change is required.

Housing and Employment Land

4. A number of representations in relation to housing and employment land refer to the strategic development plan, which I note was not approved at the time the representations were submitted. Some of the comments which relate to the status of the strategic development plan at that time are no longer relevant.

5. Planning legislation (section 16(6) of the Town and Country Planning (Scotland) Act 1997) requires that the local development plan is consistent with the strategic development plan. Paragraph 118 in Scottish Planning Policy states that strategic development plans should identify the amount and broad locations of land which should be allocated in local development plans to meet the housing land requirement up to year 12 from the expected year of plan approval. Whilst strategic development plans will not form part of the planning system under the Planning (Scotland) Act 2019, this does not alter the current development plan status of the approved Aberdeen City and Shire Strategic Development Plan.

6. Table 1 on page 16 of the proposed plan sets out the housing allowances from the Aberdeen City and Shire Strategic Development Plan for the Aberdeenshire part of the Aberdeen Housing Market Area and the Rural Housing Market area in the periods 2020 - 2032, 2033 - 2035 and 2036 – 2040. Whilst the proposed plan predates the approval of the strategic development plan, the figures included in table 1 on page 16 are the same as those contained in the approved strategic development plan. Paragraph 5.3 states that allocations for the 2020 - 2032 period will be made through this local development plan.

7. A number of representations seek increases to the strategic development plan allowances and have submitted supporting information to explain their reasoning. I have reviewed these submissions as part of my consideration of unresolved representations. However, matters relating to the overall housing allowances, their relationship with the housing need and demand assessment and housing supply targets, applied generosity and distribution of these allowances between the two housing market areas were considered through the examination into the proposed strategic development plan. Now that the strategic development plan has been approved, the housing allowances are confirmed and there is no scope to amend these figures through this examination. Representations which relate to the sites identified by the council to meet the strategic development plan allowances are addressed under Issue 5.

8. The Scottish Government has requested clearer information be provided in the plan on the housing figures from the strategic development plan, including the housing supply target (separated into affordable and market sections), the generosity percentage and the housing land requirement. The council has suggested the inclusion of a table derived from tables 1 and 2 in the approved strategic development plan which shows the housing supply targets and housing land requirement by housing market area and tenure for the periods 2016 to 2019; 2020 to 2032; and 2033 to 2040.

9. Table 1 in the strategic development plan sets out the housing supply targets by housing market area, local authority and tenure mix. From these figures, it is also possible to identify the housing supply target figure for the Aberdeenshire part of the Aberdeen Housing Market Area.

10. Table 2 in the strategic development plan sets out the equivalent housing land requirements. These were calculated by applying a 10% generosity figure to the housing supply targets for the periods 2016 to 2019 and 2033 to 2040, and a 20% generosity figure to the housing supply targets for the period 2020 to 2032.

11. I find the table suggested by the council to be overly complicated and, in particular, I do not consider it necessary to include a detailed breakdown of the figures for the period beyond 2032. Instead, I recommend that paragraph 5.2 of the proposed plan is amended to provide a more detailed explanation of the housing figures from the strategic development plan, and summary tables setting out the housing land supply targets and housing land requirements for the Aberdeenshire area up to 2032 be included in Appendix 6. Modifications to this effect are set out below.

12. Representees are concerned that the information on which the housing and employment land allocations is based on is out of date, and doesn't take account of the implications of the Covid-19 pandemic or the slump in oil prices. Concern has also been raised regarding the implications of housing allocations on property values. As indicated above, the local development plan is required to be consistent with the strategic development plan in terms of its housing and employment allocations. However, the council has also explained that risks to the economy in the northeast and the economic strategy were taken into account in the preparation of the proposed plan. There will be an opportunity to take account of the implications of the covid-19 pandemic in the preparation of future plans. No change to the plan is required in this regard.

13. In response to the representation on "the use it or lose it principle", the council has explained how some sites where development has not come forward, have not been included as housing allocations in the proposed plan. Consideration of the deliverability of the sites identified to meet the strategic development plan allowances is set out under Issue 5 (Shaping Homes and Housing). No modification is required in relation to the spatial strategy.

14. I note that matters relating to the protection of the environment and sustainability issues are addressed in various chapters in the proposed plan. The council has explained how these considerations were taken into account in the assessment of bid sites and the strategic environmental assessment of the proposed plan. I am satisfied that the challenges of balancing the need for development with the need to protect the environment and tackle climate change are addressed in section 4 of the proposed plan and have informed the spatial strategy. No change is required.

15. I have no evidence before me to indicate that a policy decision has been taken in the strategic development plan that housing need and demand will not be fully provided for. Given that the strategic development plan requires the allocations made for the period 2020 to 2032 to be deliverable, no further text is needed.

16. A number of representees object to sites, which are identified as constrained in the 2019 housing land audit, contributing towards the strategic development plan allowances. Paragraph 4.18 of the strategic development plan states that new allocations should "attempt to utilise the current 'constrained' supply in the first instance". I therefore consider that the principle of including constrained sites is consistent with the strategic development plan. The council has explained that constrained sites have only been

included where a bid submission indicates that the site can come forward within the plan period. It also states that a number of long term constrained sites have not been included in the plan because the council does not have confidence these will be delivered. I note that there are some existing constrained sites included as housing allocations, but not identified as contributing towards the strategic development plan allowances. The council has explained that these have been retained where there are no existing or potential alternative sites in a settlement. I accept that there may be various reasons why a site should be included as a housing allocation, even if it is not certain that it can be delivered by 2032.

17. Overall, I consider the principle of the council's approach to constrained sites to be justified. Matters relating to the contribution that particular constrained sites make towards meeting the strategic development plan allowances are addressed in Issue 5 and in the schedule 4 for the relevant settlement. The implications of any recommended modifications in terms of the allocations identified to meet the strategic development plan allowances are explained in Issue 5. However, I do not consider any change is necessary in relation to the spatial strategy section of the proposed plan. No modification is required.

18. Paragraph 4.20 in the strategic development plan states that "local development plans may choose to make provision for additional strategic reserves for housing for the period 2033 to 2040 in line with Table 3, but this is not a requirement". The term "strategic reserve" is defined in the strategic development plan glossary as "areas of land identified in a local development plan for possible future development". A number of representees have called for the identification of a strategic reserve of housing allocations or future opportunity sites which could be brought forward if required, for example, if there is a shortfall in the five year effective land supply.

19. I note that the Main Issues Report 2019 sought views on preferred housing sites (those that can be made available on adoption of the plan) and reserved sites (those identified as possible future opportunity sites). However, the Issues and Actions Paper indicates that the council is concerned that "strategic reserve" housing sites may be drawn down prematurely and that this will undermine the delivery of existing allocated sites. The council has also highlighted the difficulty in making accurate predictions on the deliverability of sites in future years.

20. The council decided not to make provision for additional strategic reserves for housing for the period beyond 2032 in the proposed plan. Instead it intends to review the plan in five years which will provide the opportunity to identify further housing sites, if required.

21. There is no requirement to identify a strategic reserve or future allocations in the strategic development plan or Scottish Planning Policy. I am aware that there are a number of allocations in the proposed plan which are expected to contribute to a continuing pipeline of housing opportunities beyond the plan period. These include large allocations which are likely to have remaining capacity at the end of 2032 and constrained sites which are not expected to become effective until after 2032. I agree with the council that, should anticipated circumstances changes, additional housing could potentially come forward on these sites in the period up to 2032. I conclude that the housing land requirements in the strategic development plan include a flexibility allowance and there are existing allocations within the plan which have the potential to provide further flexibility

if necessary. No modification is required.

22. A number of representees, including Homes for Scotland, have raised concerns about the marketability of allocations within the Rural Housing Market Area and more peripheral parts of the Aberdeen Housing Market Area. Matters relating to the marketability and deliverability of individual sites are addressed under Issue 5 and the schedule 4s for the relevant settlements.

23. Evidence suggests that there are parts of the local development plan area where market demand is weaker than others, particularly in the Rural Housing Market Area. However, I consider that the local development plan requires to achieve a balance between allocating sites which are marketable and the need to “ensure appropriate levels of growth can be provided across the (rest of the) city region” (paragraph 4.18 in the strategic development plan). I agree with the council that allocating alternative or additional sites in similar locations to those with marketability constraints would not address the problem, as these sites are also likely to be constrained. Simply removing allocations with a marketability constraint from the proposed plan and replacing them with sites in marketable locations would not be consistent with the spatial strategy in the strategic development plan or the proposed plan. Furthermore, the allocation of additional housing land may further weaken market demand for existing sites in some areas.

24. I asked the council, in a further information request (FIR008), to explain any measures it has in place (or which it intends to introduce) to help overcome marketability constraints in the Rural Housing Market Area. It indicated that local marketability issues can be multifarious, complex, and are often interlinked with other problems associated with physical delivery of sites. The council is working with others involved in delivering housing in the Rural Housing Market Area to bring forward innovative and practical solutions. Examples include publication of a housing site prospectus, the Aberdeenshire Regeneration Strategy, investment in new schools, supporting Tarland Community Housing Group and delivering affordable housing projects.

25. Whilst I recognise the importance of marketability and deliverability in relation to the implementation of the spatial strategy, I do not consider that any modifications are required to this section of the proposed plan. The additional information provided by the council indicates a range of measures already in place or being considered to address marketability constraints.

26. I consider that the comments made by Parish of Newmachar Community Council on the selection of housing sites and the amount of land identified for commercial and industrial activities are more appropriately addressed in relation to its objections to sites OP1 and OP2 under Issue 36 (Newmachar).

Consistency with the Strategic Development Plan

27. The tables in Appendix 6 in the proposed plan include information on the housing sites identified to meet the strategic development plan allowances for the period 2020 to 2032. I agree with the council that there is no reason to amend the plan to include this information in one of the main sections of the plan rather than an appendix.

28. Modifications relating to the format of the tables, explanatory text and detailed figures in Appendix 6 are recommended under Issue 5. However, no changes to the spatial strategy section are required.

29. A number of representees consider that there is a need to identify additional housing sites because the allocations in the proposed plan do not meet the strategic development plan allowances. There are also representations seeking changes in terms of the geographical distribution of housing allocations. Whilst matters relating to the contribution that specific sites make to these allowances are covered in Issue 5, the outcome of these considerations overlaps with the spatial strategy.

30. The distribution of the allowances between the Rural and Aberdeen Housing Market Areas is set in the strategic development plan. There is no scope to redistribute some of the rural allowance to the Aberdeen Housing Market Area as suggested by some representees.

31. The distribution of allocations within each of the housing market areas is a matter for the local development plan, albeit the strategic development plan provides some guidance. Paragraph 4.18 states that “these allocations should be focused within the strategic growth areas, but ensure appropriate levels of local growth can be provided across the rest of city region, with a specific focus on those towns named by this Plan as regeneration priority areas (Banff, Macduff, Fraserburgh and Peterhead)”.

32. Table 2 in Appendix 6 in the proposed plan indicates that sites within a strategic growth area would contribute 1,913 homes towards meeting the strategic development plan allowance for the Aberdeen Housing Market Area. This represents just over 60% of the total allocations. Not surprisingly, the equivalent percentage within the Rural Housing Market Area from Table 3 in the proposed plan is only 11%. The proposed plan includes new and existing allocations in the regeneration priority areas identified in the strategic development plan.

33. I acknowledge that the recommended modifications elsewhere in this report will have implications for these figures. However, given that the majority of allocations within the Aberdeen city part of the Aberdeen Housing Market Area would be expected to be located within a strategic growth area, I am satisfied that the expectations of the strategic development plan are met, in terms of the geographical distribution of allocations to meet the allowances.

34. I disagree with the comment that the distribution of housing sites has moved away from the strategic development plan strategy for large allocations in areas of strategic infrastructure. Paragraph 3.8 of the strategic development plan indicates that “the strategic growth areas will be the main focus for development in the area up to 2040, accommodating at least 75% of all homes built and employment land developed in this period. A number of large housing allocations in strategic growth areas have been rolled forward from the previous local development plan, with development expected to continue beyond 2032. Whilst new housing allocations are also identified within the strategic growth areas, the strategic development plan is clear that these “should not inhibit the delivery of current strategic allocations”.

35. The proposed plan highlights the need to ensure that the capacity of the Aberdeen Western Peripheral Route is not negatively affected by development. Nestrans agrees with this statement. However, it has requested that paragraph 5.8 of the proposed plan be modified to indicate that development is also likely to impact on junctions along the route of the Aberdeen Western Peripheral Route and the road network immediately surrounding

these junctions. I agree that it would be appropriate to refer to the impact that development may have on the junctions and road network in the vicinity of the Aberdeen Western Peripheral Route. The modification suggested by the council would remove the reference to the capacity of the Aberdeen Western Peripheral Route itself. I therefore recommend an alternative modification which retains the reference to capacity and also refers to the peripheral route, junctions and surrounding road network.

36. Paragraph 5.8 explains the factors which have influenced decisions regarding the location of development. I note that the bid assessment guidance provides further details of the criteria used to evaluate sites, including active travel opportunities. However, “opportunity for active travel” does not appear to be one of the core criteria and therefore it would be misleading to add this to paragraph 5.8. No change is required on this matter.

37. I find that the wording of paragraph 5.9 in the proposed plan is confusing and a modification is required to better explain the matters taken into account in the assessment of development sites. I consider the wording suggested by RSPB Scotland, as set out in the “Modifications sought by those submitting representations” section above to be appropriate and recommend a modification based on this.

38. A number of representees consider that more of the housing allocations should be on brownfield sites. The Scottish Government is concerned that the last two sentences in paragraph 5.10 on page 18 in relation to brownfield sites would not accord with Scottish Planning Policy.

39. Paragraph 40 in Scottish Planning Policy states that spatial strategies in development plans should consider “the re-use or redevelopment of brownfield land before new development takes place on greenfield sites”. Paragraph 4.18 in the strategic development plan also states that “new allocations should consider opportunities to reuse brownfield land”.

40. The council explains that an assessment of the development potential of brownfield sites was undertaken. This included reference to a brownfield urban capacity study of Banff, Macduff, Fraserburgh and Peterhead in March 2013, which was used to inform the 2012 local development plan. From the council’s response, it would appear that there are a number of reasons why a limited number of development allocations are on brownfield sites, including availability, ownership and development viability.

41. I am satisfied that the council has considered the potential for brownfield sites to contribute to the housing allowances, in line with Scottish Planning Policy and the strategic development plan. I agree that uncertainty regarding deliverability means that brownfield land may not meet the requirement for sites identified to meet the strategic development allowances to be deliverable by 2032. However, suitable brownfield sites can still come forward as windfall development, subject to assessment against relevant local development policies.

42. I consider that the second last sentence in paragraph 5.10 should be removed as the wording does not reflect the range of reasons why the majority of allocations in the proposed plan are greenfield. In accordance with paragraph 40 in Scottish Planning Policy and paragraph 4.18 of the strategic development plan, I suggest the insertion of the following sentence in its place, “In identifying sites to meet the strategic development plan allowances, consideration has been given to the development potential of brownfield

sites". With the addition of the word "However", I consider that the last sentence of paragraph 5.10 is relevant within the context of the rest of the paragraph. My recommended modification to paragraph 5.10 is set out in full below.

Aberdeen to Huntly Strategic Growth Area

43. Sites OP1 to OP5 shown on the Huntly key map in the existing local development plan have not been included in the proposed plan. These sites are identified as constrained in the 2019 housing land audit and do not form part of the existing housing supply for the Rural Housing Market Area (column 1 of Table 3 in the approved strategic development plan). The proposed plan does not rely on these sites to meet the housing land requirement and there is no need to "replace" them.

44. The strategic development plan allowance of 2,042 homes in the period 2020 - 2032 is for the Rural Housing Market Area as a whole. There is no specific housing requirement for Huntly or the Aberdeen to Huntly strategic growth area. No change is required. Matters relating to the implications of the A96 dualling project for Inverurie are addressed under Issue 34 (Inverurie and Port Elphinstone).

45. Paragraph 8.7 of the strategic development plan indicates that the extent of existing strategic growth areas or the need for new locations for growth should be kept under review. Reference is made to a range of studies to be undertaken over the next five years, including on the impact of the Aberdeen Western Peripheral Route on travel patterns. Representations seeking the inclusion of Westhill within a strategic growth area were considered through issue 4 of the strategic development plan examination. I note, from the examination report, that the reporter concluded "that it would not be appropriate or reasonable to define an extended, or new strategic growth area to cover Westhill and its surroundings at this time".

46. The council has indicated that it cannot commit to undertaking the studies to inform a review of strategic growth areas within a five year period. On this basis, I consider that paragraph 8.7 in the strategic development plan adequately covers this matter. No modification is required.

Aberdeen to Laurencekirk Strategic Growth Area

47. One representee wishes to see less housing in this strategic growth area. However, a number of representees support an increase in the overall number of housing allocations and are promoting specific bid sites. Matters relating to sites which are allocated in the proposed plan and bid sites which have not been allocated are covered in the schedule 4 forms for the relevant settlements.

48. I note that the Aberdeen to Laurencekirk strategic growth area covers both the Aberdeen and Rural Housing Market Areas. I agree with the council that, as the strategic development plan does not set a housing allowance for the Aberdeen to Laurencekirk strategic growth area, it is not possible to identify a specific shortfall or surplus of allocations on this geographic basis. The agreed 2019 housing land audit forms the base supply for the strategic development plan and the proposed plan. Consideration was given to past and future anticipated completions rates from existing sites in the strategic development plan examination. I am satisfied that matters relating to the rate of delivery of existing sites have been taken into count in the setting of the strategic development plan allowances. No modification is required.

49. Paragraph 5.13 in the proposed plan highlights the council's concern that the delivery of homes to create a model town at Chapelton is likely to be constrained, if significant new development is allowed elsewhere in this strategic growth area. A number of representees object to this aspect of the spatial strategy.

50. I consider that the council's cautious approach in relation to the delivery of Chapelton is supported by the strategic development plan. Chapter 3 of the strategic development plan explains that its long term spatial strategy was developed in the 2009 structure plan and has been carried forward into subsequent strategic development plans. It focuses growth on a limited number of places, where public and private investment in infrastructure can be delivered. Paragraph 4.19 of the strategic development plan specifically states that "allocations should be of a scale which would not inhibit the delivery of current strategic allocations". This does not prevent the local development plan from allocating new sites in the Aberdeen to Laurencekirk strategic growth area, but requires consideration of the potential impact on the delivery of allocations at Chapelton.

51. The proposed plan identifies land for 662 homes in this strategic growth area to meet the strategic development plan allowances; 523 in the Aberdeen Housing Market Area and 192 in the Rural Housing Market Area. These allocations include a range of sites in Stonehaven, Portlethen and Laurencekirk, consistent with the expectations of Scottish Planning Policy. In setting the strategic development allowances, extrapolated completion rates for sites programmed beyond 2026 (including Chapelton) were taken into account. I consider that the allocations in the Aberdeen to Laurencekirk strategic growth area represent an appropriate balance between supporting the delivery of the new settlement at Chapelton and providing a range of additional sites in other locations. Representations in relation to individual sites are addressed in the schedule 4s for the relevant settlement statements. However, any suggested modifications would not require changes to the spatial strategy section.

52. I agree with the council that there is no reason to provide an explanation for slower than expected growth rates in Chapelton in the plan. No modification is required.

Aberdeen to Peterhead Strategic Growth Area

53. The majority of representations to this section of the proposed plan relate to whether or not Potterton lies within the Aberdeen to Peterhead strategic growth area. I note that Map 17 in the Energetica supplementary guidance shows Potterton as being located within the Energetica Corridor. However, I agree with the council that this has no bearing on whether or not Potterton lies within the strategic growth area

54. The extent of the Aberdeen to Peterhead strategic growth area is shown indicatively by a pink dashed oblong on Figure 3 (page 17) in the strategic development plan. Taking account of the geographical location of Potterton in relation to Balmedie, Newmachar, and the junction between the A90(T) and the Aberdeen Western Peripheral Route, I consider that Figure 3 suggests that Potterton could be viewed as being within the strategic growth area.

55. However, I note that paragraph 3.9 in the strategic development plan states that "local development plans will take the final view on which settlements and sites are within a strategic growth area". The term "strategic growth area" is defined in the glossary of the

proposed plan as “the main focus for development as defined in the Aberdeen City and Shire Strategic Development Plan”. The extent of the strategic growth areas is shown indicatively in the proposed plan by a red shading on the spatial strategy map (page 21) and by a red dashed boundary on the shaping homes and housing map (page 44). I do not consider that either of these maps provide a definitive answer as to whether Potterton lies within the strategic growth area.

56. The council has indicated that a decision was taken historically to exclude Potterton from the strategic growth area and that it has not made any amendments in the proposed plan to include additional settlements. This matter was considered at the examination for the existing local development plan and modifications were made to make clear that Potterton was excluded from the strategic growth area.

57. I find that there are a number of inconsistent statements on this matter in the proposed plan. Paragraph 5.14 in the proposed plan relates to the Aberdeen to Peterhead strategic growth area and, in my view, the reference to Potterton in this paragraph suggests that the settlement is located within the strategic growth area. Turning to Appendix 6 in the proposed plan, the new housing allocations in Potterton are clearly listed as being within the strategic growth area. However, the settlement statement for Potterton states that it is outwith the strategic growth area.

58. I consider the council’s explanation that the new housing allocations at Potterton are located within the Aberdeen to Peterhead Strategic Growth Area, but the settlement itself is not, to be somewhat unsatisfactory. Given that parts of the existing settlement lie to the north, south, east and west of the new allocations, I consider that it would be illogical to define the boundary of the strategic growth area on the basis suggested by the council.

59. I agree with the council that, including Potterton within the strategic growth area at this stage in the local development plan process would not be appropriate, as interested parties have not been given the opportunity to comment. I therefore consider that the plan should make clear that Potterton, including its new housing allocations, is not located within the strategic growth area.

60. In order to provide the clarification sought by representees, I consider that modifications are required to address the inconsistencies in the proposed plan. I recommend that the reference to new development in Potterton is removed from paragraph 5.14 and included instead in paragraph 5.15 (Other Locations in Aberdeenshire). The necessary changes to Tables 2 and 3 in Appendix 6 are covered in Issue 5.

61. The council has suggested a change to the last sentence in paragraph 5.14 to address the comments from Nestrans that no details had been provided on the decisions required in relation to sustainable transport options in Peterhead. I agree that this paragraph should be modified to explain that early implementation of active travel connections across the A90 road at Peterhead are required.

Other Locations in Aberdeenshire

62. Consideration of representations promoting additional housing sites in Westhill is included under Issue 37. Paragraph 8.7 in the strategic development plan identifies the need to review the spatial strategy, including “consideration of whether changes to the extent of the existing Strategic Growth Areas are required, or if any new locations for

growth should be designated in the future, for example in the corridor west of Aberdeen". It refers to a range of studies being undertaken over the next five years, but does not commit to a review of the spatial strategy in this time period.

63. The modification sought by Barratt North Scotland seeks a commitment from the council on the studies required to support future development in Westhill. The council has indicated that it is not able to confirm when the necessary evaluation work for Westhill will be completed. In the absence of any certainty on this matter, it would be misleading to pre-empt the outcome of future studies. No modification is required to the spatial strategy. However this matter is also considered under Issue 37 Westhill.

64. The representation from Nestrans provides useful information on the transport issues currently constraining development in Westhill and the work being undertaken by regional partners to develop and test alternative strategic transport interventions. The council has suggested a minor modification to clarify that development in Westhill is "limited" rather than "stalled", until transport modelling and assessments are undertaken. I consider this change would be consistent with the Westhill settlement statement, which includes some development allocations and covers the matters raised by Nestrans. A modification to this effect is provided below.

65. There is no justification to allocate additional housing in Deeside to address affordability issues. Deeside is not defined as a separate geographical area in the strategic development plan or the proposed plan and I have no means of identifying any potential shortfall on this basis. Matters relating to affordable housing policy are covered under Issue 6. No modification is required.

National Developments

66. Paragraph 5.18 includes reference to national developments and national and local designations. Carbon rich soils are identified on NatureScot's Carbon and Peatland Map 2016. As such, I agree with the council that these can reasonably be described as "nationally designated".

67. I find that the clarification provided by NatureScot that Special Areas of Conservation are international designations is factually correct and consistent with the terminology used in policy E1 Natural Heritage in section 10 of the proposed plan. The council has suggested a modification which describes Special Areas of Conservation, Sites of Special Scientific Interest and carbon rich soils as "designations determined by national bodies". However, this would not reflect the international status of Special Areas of Conservation. A modification based on the wording put forward by NatureScot is recommended.

The Spatial Strategy Map

68. The Spatial Strategy map on page 21 of the proposed plan provides an illustrative visual overview of the geographical implications of the plan's strategy. In order to show the whole of the local development plan area on one A4 page, it is understandable that this is a small scale map providing indicative information only.

69. The yellow circles provide an indication of the size of existing settlements, with the red circles showing the extent of proposed development relative to the number of existing homes. The red circles do not distinguish between the established housing land supply

and new housing allocations. I agree with the council that this information is more appropriately provided in Appendix 6.

70. The council has explained that the boundaries between the accessible and remote rural areas are also shown indicatively on the Development in the Countryside map on page 37 of the proposed plan. I note that the boundary to the west of Banchory is not obscured by other symbols on this map and that the boundaries between the two areas can be viewed in greater detail on the interactive online version of the local development plan. However, we would encourage the council in the preparation of the adopted plan to use a map, or maps, that show the boundaries more clearly.

71. No modifications to the content of the spatial strategy map are required.

Reporter's recommendations:

Modify the local development plan by:

1. Replacing paragraph 5.2 on page 16 with the following two paragraphs and renumber the remaining paragraphs accordingly:

“5.2 The Aberdeen City and Shire Strategic Development Plan identifies that sufficient land is required within Aberdeenshire to maintain a housing supply over the period 2020 to the end of 2032 (insert footnote as in proposed plan) and that 60 hectares of employment land needs to be available at all times within Strategic Growth Areas (insert footnote as in proposed plan). The Strategic Development Plan sets housing supply targets by housing market area, local authority and tenure mix for the periods 2016-2019; 2020-2032 and 2033-2044 (add footnote see Table 1 in the Strategic Development Plan). By applying a 10% generosity to the targets for the periods 2016-2019 and 2033-2044 and a 20% generosity to the targets for 2020-2030, the housing land requirement was calculated, by housing market area, local authority and tenure mix (add footnote see Table 2 in the Strategic Development Plan). The housing supply target and housing land requirement figures relevant to this local development plan are set out in detail in Tables 1 and 2 in Appendix 6.

5.3 Allowances for 5,107 additional homes are be identified in this local development plan (3,065 in the Aberdeenshire part of the Aberdeen Housing Market Area and 2,042 in the Rural Housing Market Area) to help meet the housing land requirement to the year 2032 identified in the Strategic Development Plan (add footnote as in proposed plan). These figures are derived from an 80% / 20% division of allowances between the Aberdeen Housing Market Area and 50% / 50% divide between Aberdeen City Council area and Aberdeenshire Council area. The Strategic Development Plan housing allowances and employment land allocations up to the year 2040 are set out in Table 1 below.”

2. Inserting the following paragraph and two tables at the start of Appendix 6 Housing Land Allocations on page 167:

“Tables 1 and 2 provide an overview of the housing supply target and housing land requirement figures up to 2032 for the Local Development Plan Area as a whole, the Rural Housing Market Area and the Aberdeenshire part of the Aberdeen Housing Market Area. The information in these tables is taken from Tables 1 and 2 in the Strategic Development Plan.

Table 1: Housing Supply Targets by Housing Market Area and Tenure

	2016 - 2019			2020 - 2032			2016 - 2032
	Affordable	Market	total	Affordable	Market	total	Total
Aberdeenshire part of the Aberdeen Housing Market Area*	685	1265	1950	3003	5577	8580	10530
Rural Housing Market Area	680	1270	1950	2002	3718	5720	7670
Aberdeenshire Local Development Plan Area	1365	2535	3900	5005	9295	14300	18200

Table 2: Housing Land Requirement by Housing Market Area and Tenure Mix

	2016 – 2019**			2020 – 2032***			2016 - 2032
	Affordable	Market	total	Affordable	Market	total	Total
Aberdeenshire part of part of the Aberdeen Housing Market Area*	754	1392	2146	3604	6692	10296	12442
Rural Housing Market Area	748	1396	2144	2402	4462	6864	9008
Aberdeenshire Local Development Plan Area	1502	2788	4290	6006	11154	17160	21450

* The figures for the Aberdeenshire part of the Aberdeen Housing Market Area are the difference between the figures for the Rural Housing Market Area and Aberdeenshire Council.

** The housing land requirements for the period 2016 -2019 have been calculated by applying a 10% generosity allowance to the equivalent housing supply target figures.

*** The housing land requirements for the period 2020 - 2032 have been calculated by applying a 20% generosity allowance to the equivalent housing supply target figures.”

(Note - A revised version of Appendix 6 incorporating the recommended modifications from Issues 2 and 5 is provided at the end of this report.)

3. Replacing the third sentence in paragraph 5.8 on page 18 with:

“Core criteria have been used to govern where development should be allowed, including future capacity of schools, capacity of unclassified roads and the need to ensure the capacity of the Aberdeen Western Peripheral Route, its junctions and the road network immediately surrounding these junctions are not negatively affected by development.”

4. Replacing paragraph 5.9 on page 18 with:

“Each development site has been tested through a Strategic Environmental Assessment exercise and subjected to appraisal under the Habitats Regulations to ensure compliance with environmental legislation. In addition, they have been assessed to ensure that the objectives of the National Performance Framework have been met.”

5. Replacing the last two sentences of paragraph 5.10 on page 18 with:

“In identifying sites to meet the strategic development plan allowances, consideration has been given to the development potential of brownfield sites. However, development to meet needs would not come forward if it were restricted to brownfield land.”

6. Removing ‘Potterton’ from the penultimate sentence in paragraph 5.14 on page 19.

7. Replacing the last sentence of paragraph 5.14 on page 19 with:

“Peterhead is a very successful town but requires early implementation of active travel connections across the A90 to allow that growth to flourish.”

8. Adding the following new third sentence to paragraph 5.15 on page 19, after the word “likely”:

“Additional developments in Potterton are included to promote the Energetica Corridor.”

9. Amending the last sentence of paragraph 5.15 on page 19 to read:

“Development in Westhill is limited until transport modelling and assessments are undertaken over the next few years to identify the nature of a solution that may be required to allow further significant development to take place in the town.”

10. Amending the first sentence of paragraph 5.18 on page 20 to read:

“The Local Development Plan continues to recognise national developments, as identified in the National Planning Framework, internationally designated sites such as Special Areas of Conservation, nationally designated Sites of Special Scientific Interest and carbon rich soils, to help conserve the best of the Aberdeenshire environment.”

Provision of the development plan to which the issue relates:	Policies relating to business development
Planning authority's summary of the representation(s):	
<p>Policy Introduction</p> <p>A representee has predicted that over 80,000 jobs will be lost between 2020-2035 due to the lack of demand or retirement. It is unclear the direction that jobs and industry will turn after the oil and gas industry diminishes (PP1130).</p> <p>Policy B1 Town Centre Development</p> <p>A representee has raised concerns regarding the approach that has been taken on Retail Impact Assessments (RIA); applying this assessment for only major retail proposals would not cover the impact on existing centres. A small retail proposal can have a significant negative impact on the existing town centre therefore, the assessment criteria should be lowered to a threshold of 400sqm (gross) floor area and this would ensure that adequate assessment is carried out as set out in Scottish Planning Policy (SPP) (PP0558). In contrast, another representee has sought justification for seeking an RIA to be clarified. The representee highlighted that the policy did not reflect the 2,500m² threshold to meet paragraph 71 of SPP. Paragraph 71 of the SPP states that a retail impact analysis should be undertaken when the proposed retail and leisure development has a gross floorspace over 2,500m² and it is proposed to be located outwith a town centre. This statement could be added in paragraph B1.1 within the sentence that focused on major retail development.</p> <p>Major developments are defined in The Town and Country Planning (Hierarchy of Developments) (Scotland) Regulations 2009, which include a Schedule that sets out classes of development and corresponding thresholds. Retail use class may fall under paragraph 9 of the Schedule 'Other Development' for which the threshold is 5,000m² gross floorspace or sites over 2ha. It is unclear if that threshold for major developments is intended to be used in relation to the requirement for RIAs. In that case, it could mean that some retail proposals, which could be significant in terms of their impact on town centres, would not have to carry out the retail impact analysis expected by SPP. However, if they do not meet the major threshold, it could have negative impacts for town centres (PP0578).</p> <p>The Scottish Government has indicated that paragraph B1.1 covers retail and services that are used on a regular basis which is covered in the 'other town centre uses' as set out in SPP (paragraph 68). However, concern has been expressed regarding the definition</p>	

provided for 'sequential approach' in the footnote of page 25, i.e. referring to "sites on the periphery of the town centre", rather than the 'edge of the town centre'. The Proposed Local Development Plan (PLDP) does not cover 'commercial centres' and the sequential order in which they come. This should be revised to reflect the sequential approach as set out in SPP, paragraph 60 and 68, covering the range of uses (use class order), the sequential order of locations and accessibility via different modes of transport (PP0578).

A representee objects to any further expansion of out-of-town development and a redefinition/repurpose for town centres needs to be identified. A survey by 'Paths for All' found that 64% of people would walk to their local shops and seeks exploration on improvement on walking (PP0659).

A representee felt that the sentence in paragraph B1.1 "Town centre sites must be conveniently accessible by modes other than the private car..." is deemed unsuitable and restrictive because Aberdeenshire is a rural constituency where many people's only sustainable travel option is by private car (PP0716).

NHS Grampian has supported the reference the policy made on healthcare facilities in paragraph B1.1. NHS Grampian has indicated that where health centres are located in town centres, support should be given to their continued presence and scope for expansion, however, many town centres are overly developed, therefore, unable to extend due to the constrained nature of town centre sites. In instances where health centres require to be located outwith the town centre, they should be in locations preferably accessible by foot, cycling and public transport. If any site becomes redundant after the relocation of a health centre from a town centre, the site should be identified as an opportunity site for development. The town centres should have the ability to accommodate current health and social care requirements and provide 50% expansion in the future should it be required (PP1222).

A representee has indicated that the term 'footpath' is an inadequate and outdated term used in paragraph B1.2. It does not meet the requirement to have a multi-use active travel route available for citizens to travel safely. The LDP requires to explicitly state that any new development must be linked by full specification active travel links that are separate from vehicular access and as such provide a safe means of travelling to and from the development by walking, wheeling and cycling (PP0881). NatureScot has suggested an amendment to paragraph B1.2 to using the phrase "paths and/or active travel routes", instead of "footpaths" because this covers a broader spectrum, including segregated cycle lanes on or off road or even quieter roads as active travel routes (PP1300).

Scottish Environment Protection Agency (SEPA) has requested reference to Policy C4 Flooding in relation to redevelopment/change of use proposals due to certain business development that has the potential to introduce increased vulnerability uses to a site, for example, ancillary uses to business sites such as day care nurseries. SEPA has also indicated that they object to Policy B1 Town Centre Development if their suggested rewording of Policy C4 Flooding regarding redevelopment of existing buildings and their potential vulnerability to flood risk is not undertaken, or no reference is made on this issue in Policy B1 to ensure that these proposals are in accordance with the SEPA Flood Risk and Land Use Vulnerability Guidance, as referenced by SPP and SEPA (RD0214.A) (PP1219).

Policy B2 Employment/Business Land

A representee has indicated support that the policy includes provisions to protect the local community and ensures that the alternative use is compatible with adjoining uses. No modification sought (PP0502).

Two representees have expressed support for the general concept/ambition of the policy (PP1178 and PP1205). This policy should provide information on how the Employment Land Audit ensures that the allocated sites meet the current needs and market expectations as referred to in SPP paragraphs 101, 102 and 103. The representee has stated that policy should follow the requirements laid out in paragraph 101, 102 and 103 of SPP (PP0578).

A representee has requested that Policy B2 should highlight the need for the availability of different modes of transport to access all sites, in a similar manner highlighted in Policy B1, paragraph B1.1. The policy needs to be reviewed and reflect the National Transport Strategy (NTS2), 'sustainable transport hierarchy' (PP0881).

A representee has raised a question regarding the reason behind refusing to approve non-employment uses on sites allocated for employment in paragraph B2.1. It should be encouraged to deliver mixed-use development on non-industrial sites to reduce the need for commuting, etc. (PP0716). It has been requested to deliver further guidance on the evidence landowners will be required to present to demonstrate the constraint and the degree to which it precludes employment generating uses on the site in paragraph B2.2. This approach would provide some protection to the more marginal and viable BUS sites (PP0502).

The representee finds the words in paragraph B2.2 are too onerous. They request that this is amended to "unless there is a constraint on the site whereby there is no reasonable prospect of it ever becoming marketable for business development or it is poorly located employment use" (PP1178 and PP1205). Another representee has sought amendment to the second half of the first sentence in paragraph B2.2 so that the length of time for an existing business site needs to be marketed before it is redeveloped is reduced to the Plan period. The sentence, "whereby there is no reasonable prospect of it ever becoming marketable", is too onerous (PP1237).

SEPA has requested that Policy B2 Employment/Business Land references their amended Policy C4 Flooding regarding redevelopment/change of use proposals, as certain business development has the potential to introduce increased vulnerability uses to a site, for example, ancillary uses to business sites such as day care nurseries. SEPA has also indicated that they would object to Policy B2 Employment/Business Land if their requested rewording of Policy C4 Flooding regarding redevelopment of existing buildings and their potential vulnerability to flood risk is not undertaken, or no reference is made on this issue in Policy B2 to ensure that these proposals are in accordance with the SEPA Flood Risk and Land Use Vulnerability Guidance, as referenced by SPP. SEPA has argued that certain business developments have the potential to introduce increased vulnerability uses to a site, for example, ancillary uses to business sites such as day care nurseries, so a need to reference this issue is necessary (RD0214.A) (PP1219).

Policy B3 Tourist Facilities

A representee has claimed that Policy B3 does not fully cover the promotion of

development of sustainable tourist initiatives. Encouraging the development of tourism ventures and the infrastructure that supports it, to introduce and promote the establishment of green tourism activities to areas outside the Cairngorms National Park that have traditionally been more reliant upon fishing, farming and the oil and gas industry for employment should be a key priority of the LDP. This is necessary to secure a more sustainable, diverse and therefore resilient economy that would support communities and their local retail, services, hospitality and leisure businesses across the whole of Aberdeenshire (PP0881).

A representee expects that sustainable accessibility should be focused as a key consideration in paragraph B3.1 in respect of any major high value tourist developments (PP1241). Another representee has requested that text requires to be added to paragraph B3.1 to ensure that there is no further loss of ancient woodlands (PP0877).

The representee highlighted that the wording, “We will protect existing tourist sites from being converted to other uses unless ...” in paragraph B3.2 is overly restrictive when there is a clear need for flexibility to build resilience in the context of the recovery from Covid-19 (PP0716).

Retail in the countryside is likely to have a greater impact on the natural environment. Although the use of brownfield land is welcomed, it should be noted that brownfield sites can be much richer for wildlife. Clarity in the wording should be provided outlining that the impacts on the environment and biodiversity will be an important consideration. The wording gives the presumption in favour of retail development in the countryside. It is suggested that the wording recognises that other policies are also important (PP1266).

SEPA has requested that Policy B3 references their amended Policy C4 Flooding regarding redevelopment/change of use proposals, as certain business development has the potential to introduce increased vulnerability uses to a site, for example, tourist facilities that provide overnight accommodation, particularly tents or caravans. SEPA has also indicated that they would object to Policy B3 if their requested rewording of Policy C4 Flooding regarding redevelopment of existing buildings and their potential vulnerability to flood risk is not undertaken, or no reference is made on this issue in Policy B3 to ensure that these proposals are in accordance with the SEPA Flood Risk and Land Use Vulnerability Guidance, as referenced by SPP. SEPA argues that certain business development has the potential to introduce increased vulnerability uses to a site, for example, tourist facilities that provide overnight accommodation, particularly tents or caravans, so a need to reference this issue is necessary (RD0214.A) (PP1219).

Policy B4 Special Development Areas

There are a number of planning applications approved within the Energetica Corridor of which many have not been delivered. This situation should be reviewed and any new development within the Energetica Corridor may be considered as part of a commuting settlement (PP1155).

SEPA has requested that Policy B4 references their amended Policy C4 Flooding regarding redevelopment/change of use proposals, as certain business development has the potential to introduce increased vulnerability uses to a site, and a significant proportion of the Regeneration Priority Areas lie within Potentially Vulnerable Areas (areas where significant flood risk exists now or is likely to occur in the future) that have been identified

in the National Flood Risk Assessment. SEPA has also indicated that they would object to Policy B4 if their requested rewording of Policy C4 Flooding regarding redevelopment of existing buildings and their potential vulnerability to flood risk is not undertaken, or no reference is made on this issue in Policy B4 to ensure that these proposals are in accordance with the SEPA Flood Risk and Land Use Vulnerability Guidance, as referenced by SPP. SEPA further argue that certain business development has the potential to introduce increased vulnerability uses to a site, and a significant proportion of the Regeneration Priority Areas lie within Potentially Vulnerable Areas (areas where significant flood risk exists now or is likely to occur in the future) that have been identified in the National Flood Risk Assessment (RD0214.A) (PP1219).

Appendix 1 Employment Land Allocations

SEPA has no comments on Appendix 1 (RD0214.A). No modification sought (PP1219).

Appendix 2 Retail Centres

SEPA has confirmed that they have no comments on Appendix 2 (RD0214.A). No modification sought (PP1219).

The Scottish Government has referred to page 105 of the PLDP, in the box for 'Other Town Centres' where the final column, indicates that that the Town Centre First Principle does not apply to five of Aberdeenshire's towns (Insch, Kintore, Macduff, Newmachar and Portsoy), the words 'No' should be changed to 'Yes', or ideally that column should be removed as it should be explicit that the Town Centre First Principle applies to all towns (PP0578).

The Scottish Government outlines that Appendix 2 sets out the network of centres 'Other Town Centres', are identified as towns which have "a minimum of one Academy or represent a local service centre for a wider area". The Scottish Government has expressed concern that in the final column, it indicates that the Town Centre First Principle does not apply to five such towns (Insch, Kintore, Macduff, Newmachar and Portsoy), and that these are to be treated differently from the other 'Other Town Centres'. Whilst SPP policy allows scope for flexibility of the sequential test, it is Scottish Government's expectation that this is done on a case-by-case basis, and not that LDPs exclude whole towns from the Town Centre First Principle (PP0578).

It is requested that Blackdog town centre is recognised as a Principal Town Centre within the PLDP on the basis that Blackdog is a sustainable new community with its own town centre and the proposed uses meets the definition. Planning Permission in Principle (PPP) was granted for the mixed-use development at Blackdog in December 2017, including for a new town centre and the PLDP should reflect this planning permission in the retail hierarchy in Appendix 2 in accordance with paragraph 60 of the SPP because the paragraph states that new centres can be included in the "network of centres" even if the town centre is yet to be developed. This town centre should also be considered for the application of the Town Centre First Policy. The permission included 11,500sqm of retail floorspace, an 850-seat cinema and up to 2,000sqm of class 3 use. This makes Blackdog 6th in the ranking for retail floor space when compared with retail floor space for town centres identified as Principal Town Centres. The uses within the granted PPP meet the definition of Principal Town Centres in PLDP Appendix 2. It is highlighted that by not recognising the status of Blackdog Town Centre, Blackdog will not form part of any

sequential assessment required in accordance with Policy B1 and it will not be afforded protection against developments in non-town centre locations. Also, there are comparable settlements included within the Appendix. The representees have included Appendices (RD0269.A and RD0269.B) in their representation which provides further detail to support their position (PP1399).

Appendix 3 Regeneration Priority Areas

A representee has expressed support for Appendix 3 reference to Banff, Fraserburgh, Macduff and Peterhead. The requirement for development proposals to be located within 200m of the settlement boundary will ensure good accessibility to town centre facilities, including health care provision, located there. The representee supports that the PLDP seeks to promote networks of walking and cycling routes as this will improve accessibility as well as improving the health of users. However, although this is specifically noted in relation to Banff and Macduff, it should be included for all regeneration priority areas. It is therefore requested that the text for Fraserburgh and Peterhead also includes this requirement (PP1222).

SEPA has requested that if their proposed rewording of Policy C4 Flooding is not accepted, then Appendix 3 includes a cross-reference to Policy C4 to ensure development will only be acceptable where there is no increase in vulnerability to flood risk, highlighting that any conversion or new development must be in accordance with SEPA Flood Risk and Land Use Vulnerability Guidance as referenced by SPP. SEPA has argued that while they welcome the restoration of/conversion of existing buildings, this has the potential to introduce increased vulnerable uses to a site at risk from flooding, particularly in terms of overnight accommodation (RD0214.A) (PP1219).

Shaping Business Development Policy Map

The map entitled Shaping Business Development shows the 'Other Town Centre' (TC) icon just above Newtonhill, but it should be moved to Portlethen, as this settlement is listed in Appendix 2, Retail Centres (PP0556).

Modifications sought by those submitting representations:

Policy Introduction

Modify the PLDP to reflect the future of the economy of Aberdeenshire (PP1130).

Policy B1 Town Centre Development

Modify the PLDP and amend Policy B1 to show the threshold for Retail Impact Assessments is set at a lower level at 400sqm gross (PP0558).

Modify the PLDP to revise footnote 6 to fully reflect the sequential approach as set out in Scottish Planning Policy, paragraph 68 (PP0578).

Modify the PLDP to clarify the requirements/guidance for Retail Impact Assessments (PP0578).

Modify the PLDP to reflect the 2,500sqm threshold and the terms of paragraph 71 of SPP

(PP0578).

Modify the PLDP to state that new out of town development should not be developed. A repurpose of town centres is required (PP0659).

Modify the PLDP to remove reference to the requirement that town centre sites must be conveniently accessible by modes other than the private car from Policy B1 (PP0716). Modify the PLDP to explicit that any new development must be linked by full specification active travel links that are separate from vehicular access and as such provide a safe means of travelling to and from the development by walking, wheeling and cycling (PP0881).

Modify the PLDP to amend Policy B1 on the need for sustainable and alternative modes of transport to access health centres if the health centre is located within the town centre (PP1222).

Modify the PLDP to add a sentence to state that any disused health centres in the town centre can become an opportunity site for development (PP1222). Furthermore, the policy should also include a statement stating that grounds should be available for expansion adjacent to any health centre and should be allocated as a Protected site (PP1222).

Modify the PLDP to amend paragraph B1.2 to read, "Retail and commercial facilities must be appropriate to the scale and function of the settlement and support an appropriate mix of uses within the town centre. Any new development adjacent to the town centre, or adjacent to paths and/or active travel routes footpaths leading to the town centre, should be connected via a path and/or active travel route footpath." (PP1300).

Modify the PLDP to amend Policy B1 Town Centre Development to include a sentence/footnote that requires redevelopment/change of use proposals to comply with SEPA's 'Flood Risk and Land Use Vulnerability Guidance, as referenced by Scottish Planning Policy, unless Policy C4 Flooding is amended as per SEPA's request on this issue (PP1219).

Policy B2 Employment / Business Land

Modify the PLDP to amend Policy B2, paragraph B2.2, to amend the first sentence include text to read, "Require a professionally qualified person, such as a land surveyor, to demonstrate the lack of take up is as a result of the constraint." (PP0502).

Modify the PLDP to amend paragraph B2.1 and provide justification as to why non-employment uses would not be approved on allocated employment land (PP0716).

Modify the PLDP to amend Policy B2, in paragraph B2.2 to read, "... unless there is a constraint on the site whereby there is no reasonable prospect of it becoming marketable in the Plan period or it is poorly located for employment use." (PP1178, PP1205 and PP1237).

Modify the PLDP to make it clear how the business land audit ensures allocated sites meet current needs and market expectations as referred to in SPP 101a, 102 and 103 (PP0578).

Modify the PLDP to ensure Policy B2 reflects the National Transport Strategy (NTS2) sustainable transport hierarchy (PP0881).

Modify the PLDP to amend Policy B2 to include a sentence/footnote that requires redevelopment/change of use proposals to comply with SEPA's 'Flood Risk and Land Use Vulnerability Guidance', as referenced by Scottish Planning Policy, unless Policy C4 Flooding is amended as per SEPA's request on this issue (PP1219).

Policy B3 Tourist Facilities

Modify the PLDP to include text that supports the development of tourism ventures and associated infrastructure in areas outside the Cairngorms National Park (PP0881).

Modify the PLDP to amend Policy B3, paragraph B3.1, to add 'existing natural environment' to the list in the second sentence (PP0877).

Modify the PLDP to amend the 4th sentence in B3.1 to read, "Proposals must take account of the potential cumulative impact of similar developments in close proximity, and address any issues related to sustainable access." (PP1241).

Modify the PLDP to amend paragraph B3.2 to make the policy more flexible (PP0716).

Modify the PLDP to amend paragraph B3.3 to read, "We will also support shops which will act as a new tourist destination or are built as an ancillary use to the tourist development. We will also support shops that play a role in supporting the existing tourist destination and make a contribution to the development of the area. The expansion or intensification of existing retail uses in the countryside, including established farm shops, will be supported as long as the increased scale of development is appropriate to the rural character of the area and the proposal complies with other relevant policies in the PLDP, including those which protect the natural environment and biodiversity. In any of these cases, the applicant will need to demonstrate that there will be no significant negative effect on existing town centres by submitting a retail impact analysis. Such development is encouraged on brownfield land where possible." (PP1266).

Modify the PLDP to amend Policy B3 to include a sentence/footnote that requires redevelopment/change of use proposals to comply with SEPA's 'Flood Risk and Land Use Vulnerability Guidance', as referenced by Scottish Planning Policy, unless Policy C4 Flooding is amended as per SEPA's request on this issue (PP1219).

Policy B4 Special Development Areas

The Planning Authority should agree on a 'development timescale' at the masterplanning stage for developments within the Energetica Corridor (PP1155).

Modify the PLDP to amend Policy B4 to include a sentence/footnote that requires redevelopment/change of use proposals to comply with SEPA's 'Flood Risk and Land Use Vulnerability Guidance', as referenced by Scottish Planning Policy, unless Policy C4 Flooding is amended as per SEPA's request on this matter (PP1219).

Appendix 2 Retail Centres

Modify the PLDP and amend Appendix 2 on page 105 in 'Other Town Centres' where the final column indicates that the Town Centre First Principle does not apply to five of Aberdeenshire's towns (Insch, Kintore, Macduff, Newmachar and Portsoy), the words 'No' should be changed to 'Yes', or the column should be removed.

Modify the PLDP to include Blackdog as a Principal Town Centre in Appendix 2 (PP1399).

Appendix 3 Regeneration Priority Areas

Modify the PLDP to amend Appendix 3 to include a cross-reference to Policy C4 Flooding and text to ensure that development will only be acceptable where there is no increase in vulnerability to flood risk, and that any conversion or new development must be in accordance with SEPA Flood Risk and Land Use Vulnerability Guidance as referenced by Scottish Planning Policy, unless Policy C4 Flooding is amended as per SEPA's request on this matter (PP1219).

Modify the PLDP in the table of Appendix 3 to insert the following sentence within the paragraph Regeneration Priority Areas, "Regeneration priority areas should promote networks of walking and cycling routes as this will improve accessibility as well as improving the health of users." (PP1222).

Shaping Business Development Policy Map

Modify the PLDP to amend the policy map to move 'TC' from above Newtonhill to Portlethen.

Summary of responses (including reasons) by planning authority:

Policy Introduction

The business policy does not focus particularly on oil and gas and this allows the opportunity to diversify and cover different sectors. It reflects the business opportunities and economy in Aberdeenshire today and the future. No change is required.

Policy B1 Town Centre Development

An RIA is an aid to decision-making to a planning application and all relevant developments must adhere to Policy B1 and other relevant policies contained within the PLDP. An RIA is required when a proposed development is of a scale sufficient to be likely to have a significant impact on the trade of existing or committed retail centres and the surrounding area (Planning Advice 1 /2004 Retail Impact Assessment (AD0046)). It is mentioned in the Planning Advice that this approach can be adopted to any retail/commercial development where the gross floorspace is under 2500m². It is noted that SPP confirms that a 'major retail development' is where the gross area is 2500m² or more. Therefore, the Council confirms that it intends to address Scottish Government Planning and Architecture Division's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications, to introduce a footnote after the "Retail Impact Assessment" in paragraph B1.1.

Furthermore, the Planning and Environment Services recommends adding “see Planning Advice 1 /2004 Retail Impact Assessment – see Glossary” on the same footnote proposed by Scottish Government Planning and Architecture Division. Therefore, if the Reporter is minded, to make an amendment, then the Council recommends to add, “Advice 1/2004 Retail Impact Assessment – see Glossary” in addition to the footnote.

Paragraph 71 of SPP (AD0012) states that, “For smaller retail and leisure proposals which may have a significant impact on vitality and viability, Planning Authorities should advise when retail impact analysis is necessary”. Therefore, this justifies the right to seek an RIA for a retail development with a gross floor space of less than 2500m². Reference has been made to the Town and Country Planning (Hierarchy of Developments) (Scotland) Regulations 2009 (AD0015), where ‘retail’ would be likely to fall under paragraph 9 of the Schedule ‘Other Development’ for which the threshold is 5,000m² gross floorspace or sites over 2ha. There is no reference made in SPP towards seeking an RIA for retail development where the gross floor area is 5000m² or more, therefore, this shall not be reflected in Policy B1. No change is required.

The sequential approach is applied for retail and office developments to ensure that the site can be accessed through different modes of transport. It is not necessary to outline the requirements of a sequential approach in the LDP because guidance is laid out in SPP (AD0012, paragraph 68). SPP also highlights (AD0012, paragraph 69) that an individual “should be flexible and realistic in applying the sequential approach, to ensure that different uses are developed in the most appropriate locations”. This means that the approach taken to apply the sequential approach can be flexible. All developments are assessed and judged based on their own merit, therefore, judgements must be made based on knowledge and the economic situation within the town centre when assessing a planning application. The fact that all the retail centres/commercial centres are not covered in the PLDP, along with the sequential order, is due to the volume and the unnecessary precedent of providing information. Policy RD1 Providing Suitable Services of the PLDP (AD0041.A, pages 89-92) ensures that good transport links are achieved. The sentence “Town centre sites must be conveniently accessible by modes other than the private car”. Policy B1 (AD0041.A, pages 25-26) ensures that town centres are accessible via alternative modes of transport in addition to cars. No change is required.

In recent times, with small retail units going out of fashion, larger units are more in demand. The retail units found within town centres are generally small units, hence do not meet the requirement of the modern retail businesses. However, the larger units can only be provided outwith the town centre boundary unless it is available within town centre or units can be combined to provide a larger unit, which is not always feasible. Sequential approach can be applied if the desirable retail premise is not available in the town centre. New out of town shopping complexes should be connected to nearby residential developments via footpath/paths/green network through policy P2 Open Space and Access in New Development, in particular, paragraph P2.6, as outlined in the PLDP (AD0041.A, page 50). No change is required.

Aberdeenshire Council promotes the purpose of town centre via the Town Centre First Principle therefore, a new purpose of the town centre is not necessary. All town centres are served by active travel routes, offering various modes of transport into the town centres from various locations both within and outwith the town. In addition, Planning Advice 10/2015 Outdoor Access and Development (AD0048) provides more information on achieving access links within and between communities and places. No change is

required.

Town centres provide the opportunity for a mixed-use, allowing homes and employment side by side within an established town centre boundary, although it must be stressed that it is not always favoured to allow new homes because the main focus of a town centre is to promote shops and services. The element of mixed-use allows the users access to the town centre without the need to travel a far distance, making it a sustainable development. No change is required.

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications. With regard to SEPA's objection to Policy B1 unless Policy C4 is amended by including a statement that "development should not increase flood risk vulnerability", it is considered this is unfounded since paragraph C4.2 refers to "increased severity of flood risk elsewhere". Likewise, the introduction of the term "re-development" is unnecessary as in planning terms re-development will constitute a form of development. There are no inconsistencies or omissions and therefore, no change is required.

Health centres such as a GP surgery and hospital are considered to be a service under Class 2. Therefore, if a health centre is located within a town centre, then no additional statement is required to identify the need for sustainable and alternative modes of transport to access a health centre. This is because paragraph B1.1 covers the need for different modes of transport via the sentence "Town centre sites must be conveniently accessible by modes other than the private car to the projected catchment of the facility." No change is required.

Any disused or redundant site within a town centre that has been empty or vacant for a prolonged period of time, can be permitted to change its use under Policy P3 Infill Developments within Settlements and Householder Developments (including home and work proposals). No change is required.

It is accepted that a health centre requires additional land for expansion in the future and land should be protected for the same. NHS Grampian submitted a number of bids in response to the Council's call for sites in 2018 for a new or extensions to health centres in numerous settlements and they were assessed during the MIR stage and consulted on as part of the MIR 2019. Sufficient opportunity has been provided during the MIR and PLDP stages to identify sites that could be included in the LDP for the purpose of new or extended health centres. Any sites that were identified prior to the publication of the PLDP were included in the PLDP, given no other constraints were identified within the site. No change is required.

Policy B2 Employment/Business Land

The support expressed for Policy B2 is noted. The Employment Land Audit 2019 (AD0018) provides information on the status of individual opportunity sites and these opportunity sites are outlined in the LDP. The LDP is led by the Regional Economic Strategy (AD0027) and current economic market trends, to ensure that there are no impediments to servicing within five years. The Aberdeen City and Shire Strategic Development Plan 2020 (SDP) (AD0016) requires 149ha of land to be allocated within the Strategic Growth Area (SGA) during its Plan period and the LDP must adhere to this requirement. Any business opportunity sites outwith the SGA were subject to an

assessment to ensure they were in suitable locations where demand could be expected and where infrastructure capacity was available. Any existing business sites that are underused or vacant may be permitted to alter its use subject to meeting the tests within paragraph B2.2. No change is required.

With regard to SEPA's objection to Policy B2 unless Policy C4 is amended by including a statement that "development should not increase flood risk vulnerability", it is considered this is unfounded since paragraph C4.2 refers to "increased severity of flood risk elsewhere". Likewise, the introduction of the term "re-development" is unnecessary as in planning terms re-development will constitute a form of development. There are no inconsistencies or omissions, and no change is required.

Policy B2, paragraph B2.1 aims to secure new employment sites for use Classes 4, 5 and 6. Exceptionally, and as a departure to the Plan, some ancillary developments may be permitted, particularly when these alternative uses are an appropriate addition to the mix of uses in the immediate area (such as a childcare facility). Non-employment uses are discouraged on sites allocated for new employment use because this would disperse employment uses and introduce the prospect for the landowner to realise higher land values at the expense of creating employment opportunities. New employment uses would not persist if policy effectively made these "white" land on which other uses were acceptable. Once an area of business land is established, safety concerns such as movement of heavy lorries, noise and other technical constraints can have a negative impact on other uses in the area, it can, therefore, be concluded that a policy that would allow non-employment uses on sites allocated for employment are not in the best interest of the wider environment and public interest, hence, no change is required.

Aberdeenshire Council does not agree with the modification that suggests that the test for whether a site will become marketable is reduced through the removal of the phrase "it ever" and adding "in the Plan period" to the policy. The existing phrase has been used to reflect changes in the surrounding context of the site that now make it unsuitable for employment or business uses. An alternative form of development could have a profound impact on the established uses and could lead to the area becoming an unfavourable location for those businesses to continue to operate. Incremental erosion of the employment land base should be avoided. The term "whereby there is no reasonable prospect of it ever becoming marketable" gives a degree of flexibility to assess whether the existing business site has become obsolete. In this context throughout the development of the Plan careful consideration has been made of the merits of retaining existing BUS sites for business and employment uses, particularly where such sites are small, reflect a historic development pattern that no longer exists, or where a specific bid was received for redevelopment. No change is required.

While an appropriately qualified person, such as a land surveyor, would have a role to play in demonstrating that a development site was currently unmarketable, Aberdeenshire Council believes that the assessment of the constraints on the site are a planning judgement, based on wider issues than just the ability of the landowner to market the site. However, we do not preclude proposals for exceptions to the general policy, provided a justification was provided on the marketability of the site to balance the planning judgements required. No change is required.

Policy B3 Tourist Facilities

The Policy B3 aims to encourage the tourist industry to flourish, based on meeting certain criteria, such as being linked to a settlement. The reason for being linked to a settlement is to achieve active travel modes and the facilities would be located in sustainable locations. Sustainable tourism initiative would be highly welcomed however, it is not required to be delivered through this policy because the Plan focuses on sustainable development and sustainable economic growth, in line with SPP. This policy covers all the areas under the authority of Aberdeenshire Council therefore, this requires to be as broad and as flexible as possible. The Cairngorms National Park Authority is responsible for preparing a LDP for the part of Aberdeenshire lying within the Park boundary. No change is required.

Policy B3 encourages tourism ventures and in addition, ensures that the policy does not overly restrict any tourist development to go forward, subject to meeting certain criteria. Furthermore, it is important to ensure that the existing tourist facilities within close proximity are not negatively impacted upon due to the introduction of the new facilities which can be observed in the sentence in paragraph B3.2 “we will protect existing tourist sites from being converted to other uses...”. Existing tourist facilities should be preserved as long as they remain viable and any new tourist development should be brought forward as part of long-term business investments. However, concern has been raised regarding the future of the existing tourist facilities post Covid-19, however, any existing tourist facility that requires a change of use due to closure for a prolonged period of time would require to meet paragraph B3.2. Policy RD1 ensures that appropriate infrastructure is in place for any new development, this includes development for tourism, therefore, no change is required.

All developments highlight the importance of sustainability, following the guidance of SPP (AD0012) “Sustainable Economic Growth”, therefore, it is not required to introduce “sustainable tourist initiatives” into the LDP. The LDP is supportive of delivering facilities in locations which reduce the need to travel and are in sustainable locations and aims to deliver “sustainable developments in sustainable locations”. No change is required.

The LDP has introduced paragraph P1.7, in Policy P1 Layout, Siting and Design, to ensure that measures are identified to enhance biodiversity. The policy allows off-site contributions to secure and enhance biodiversity and wildlife if the development is not practical to meet the net gain (AD0041.A, page 48). This policy would ensure that any brownfield development for retail in the countryside would not have any negative impact on biodiversity. Policy P1 Layout, Siting and Design and all other relevant policies are given equal importance for any development therefore, no change is required.

With regard to SEPA’s objection to Policy B2 unless Policy C4 is amended by including a statement that “development should not increase flood risk vulnerability”, it is considered this is unfounded since paragraph C4.2 refers to “increased severity of flood risk elsewhere”. Likewise, the introduction of the term “re-development” is unnecessary as in planning terms re-development will constitute a form of development. There are no inconsistencies or omissions, and no change is required.

Policy B4 Special Development Areas

It is noted that there are a number of approved planning applications within the Energetica Corridor that have not been delivered. The Planning and Environment Service has a “masterplanning” process where after a masterplan is approved, the plan remains active

for 5 years. The applicant needs to reapply after 5 years unless development has commenced on site. No change is required.

With regard to SEPA's objection to Policy B2 unless Policy C4 is amended by including a statement that "development should not increase flood risk vulnerability", it is considered this is unfounded since paragraph C4.2 refers to "increased severity of flood risk elsewhere". Likewise, the introduction of the term "re-development" is unnecessary as in planning terms re-development will constitute a form of development. There are no inconsistencies or omissions and therefore, no change is required.

Appendix 1 Employment Land Allocations

Comment from SEPA is noted. No change is required.

Appendix 2 Retail Centres

Comment from SEPA is noted. No change is required.

The Town Centre First Principle is adopted and monitored by the Economic Development Service. The criteria followed by the Economics and Development Service, for the Town Centre First Principle, is to have a secondary school within the town. However, the criteria set by the Planning and Environment Service does not require that there be a secondary school within the town. However, there are certain criteria that are required to be met which includes services, collective shops, a focal point and community facilities. For example, Inch has a number of shops/restaurants, a library, etc on High Street and its surrounding streets, however, does not have a secondary school. The settlement has a population of approximately 2700 which is relative in comparison to many other settlements, such as Mintlaw (Aberdeenshire Settlements Population 2016, AD0115) in Aberdeenshire, therefore, justifies the designation of "Insch" as "Other Town Centres". This is backed by paragraph 60 of the SPP, which states, "town centres should be flexible and proactive, enabling a wide range of uses which bring people into town centres" and "town centres should enable a wide range of uses which bring people into town centres". It is important to note that all the settlements that have been identified under the "Town Centre First Principle" have been added in "Appendix 2 Retail Centres", either in the 'Principle Town Centres' or 'Other Town Centres'. The Economic Development Service would treat the five settlements (Insch, Kintore, Portsoy, Macduff and Newmachar) differently, however, it would not affect the Planning and Environment Service when determining a planning application or any other planning related issues, including the Local Development Plan. No change is required.

Blackdog is proposed to undergo a vast change as the site OP1 is allocated for 600 homes and 4ha employment land for this Plan period. Planning Permission in Principle (APP/2016/0766) was approved in December 2017 for Mixed Use Development Comprising Town Centre Including Regional Food Hall, Retail, Leisure and Class 3 Uses; Business and Industrial Uses (Classes 4, 5 and 6) on part of the OP1. It is argued that in paragraph 61 of the SPP, it states that new centres can be included in the "network of centres" even if the town centre is yet to be developed. However, the development on this site is yet to commence and this is backed by the decision made in the Issues and Actions Paper (AD0040.A, Issue 1 MIR Process and Other Issues). No change is required.

In considering Appendix 2, the Council notes that Mintlaw is listed as "other town centre".

However, the 'TC' designation has been omitted from the Mintlaw Settlement Statement. In order to avoid any ambiguity, if the Reporter is minded, then the Council recommends that amendments be made to the Mintlaw Settlement Statement to reflect Appendix 2 by:

- Adding a new row in the "Settlement Features" section, under 'other designations' to state "TC Mintlaw Town Centre"; and
- Showing the town centre boundary as a red dashed line in the Mintlaw Keymap and Mintlaw Map 2.

Appendix 3 Regeneration Priority Areas

Support for Appendix 3 has been noted. However, the restriction of development within 200m of the settlement boundary is ideal because it would meet a sustainable development criterion, however, may restrict development due to financial cost. This policy aims to be as flexible as possible to help boost the economy in these towns. No change is required.

The Council confirms that it intends to address comment from NHS through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

With regard to SEPA's objection to Policy B2 unless Policy C4 is amended by including a statement that "development should not increase flood risk vulnerability", it is considered this is unfounded since paragraph C4.2 refers to "increased severity of flood risk elsewhere". Likewise, the introduction of the term "re-development" is unnecessary as in planning terms re-development will constitute a form of development. There are no inconsistencies or omissions, and no change is required.

Shaping Business Development Policy Map

The Council confirms that it intends to address Newtonhill, Muchalls & Cammachmore Community Council's comment through a non-notifiable modification, as set out in as set out in the List of Non-Notifiable Modifications.

Reporter's conclusions:

Preliminary matters

1. My examination of the proposed plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the provisions of the proposed plan, or which simply make comments that do not seek modifications to the proposed plan. Therefore, unless these relate to an issue which is unresolved, they are not addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as "non-notifiable modifications" in relation to matters covered in Issue 3. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Policy introduction

3. The comments of Mr Pia in respect of business development are made in general

terms. In essence, Mr Pia argues that the proposed plan has failed to take into account the current economic climate in allocating land for development; notably the decline of the region's oil and gas industry. As the council explains in response to Mr Pia's representation, the business policy of the proposed plan does not focus specifically on the oil and gas industry; its application is intended to cover all sectors of the economy and allow for diversification as opportunities arise. I have considered this matter with reference to; the stated ambitions of the Regional Economic Strategy (2015); the objectives of the Aberdeen City and Shire Strategic Development Plan (2020); and, the site of interest to Mr Pia and agree with the council's position. No modification is required.

Policy B1: Town Centre Development

4. The proposed plan does not specify the threshold at which a major retail proposal requires to be supported by a retail impact assessment; or other circumstances in which an assessment may be required. There is also uncertainty as to whether the definition of 'major development' contained in the glossary would apply to retail development. In addition, the description of the 'sequential approach' in the footnote to paragraph B1.1 is inconsistent with that described in Scottish Planning Policy 2014, paragraph 68. The council proposes to address these matters through non-notifiable modifications to the proposed plan.

5. I agree that the addition of a footnote along the lines proposed by the council would go some way to providing clarity on the matters raised in representations. However, I consider that it would be more appropriate to describe the circumstances in which a retail impact assessment is required in the main text of Section 6 rather than a footnote. In this regard, I recommend below additional text consistent with Scottish Planning Policy 2014, paragraph 71, be added to paragraph B1.1.

6. Despite the requirements of the sequential approach being outlined in Scottish Planning Policy 2014, it is the provisions of the development plan against which planning applications will be assessed. For this reason, I agree that the proposed plan should fully reflect the sequential approach; both in terms of the range of uses to which the approach should be applied and the order of locations. The modification recommended below also includes terminology consistent with that used in Scottish Planning Policy.

7. In line with Scottish Planning Policy 2014, the proposed plan promotes a 'town centre first' approach and identifies the preferred order of locations that should be considered for uses which would generate significant footfall; with out-of-centre the least preferred location. In this context, and subject to the modification below, the proposed plan offers qualified support for new development in out-of-centre locations, and only where it can be made easily accessible by a choice of transport modes. As such, it would be inappropriate, and at odds with Scottish Planning Policy, to modify the proposed plan as sought by 'Paths for All'. No modification is required.

8. With regard to the need to redefine and/or repurpose town centres, it is not clear whether 'Paths for All' is seeking a modification to the proposed plan; its representation simply states that around two thirds of Scottish adults would be prepared to walk to their local shop or public transport facilities. In this regard, the policies of the proposed plan promote a 'town centre first' approach and, as is made clear in paragraph B1.1, the council will allow retail and other frequently visited uses only in defined town centres, unless a sequential assessment shows that another site is clearly more appropriate. No modification is required.

9. The proposed plan requires development sites in town centre locations to be conveniently accessible by modes other than the private car. As clarified by the council, this requirement seeks to ensure that sites are accessible by a choice of means of transport which offer alternatives to the car; it does not seek to restrict access by private car. The representee appears to have misinterpreted this aspect of paragraph B1.1. No modification to the proposed plan is required.

10. NHS Grampian states that, where it is necessary for healthcare facilities to be located outwith town centres, they should be accessible by foot, cycling and public transport. In this regard, paragraph 4.7 of the proposed plan notes the council's commitment to supporting development in sustainable locations and promoting the efficient use of transport, particularly public transport, and active travel routes; a commitment which is reflected in Policy B1.1. No modification to the proposed plan is required.

11. A representation seeks the replacement of the word 'footpath' with a term that better describes safe multi-use active travel routes. Another representation suggests that the phrase 'paths and/or active travel routes' should be used, which the council agrees with. I note that the term 'active travel' is defined in the glossary of the proposed plan and that one of the plan's intended outcomes is to promote walking, cycling and (subject to a recommended modification in Issue 1) wheeling. In this context, I consider that the wording of paragraph B1.2 should be amended to include reference to active travel routes. I therefore recommend that the proposed plan is modified as described below.

12. SEPA supports the wording of policies B1 to B4, subject to a number of modifications to Policy C4 (flooding) to ensure that the proposed plan is compliant with its Flood Risk and Land Use Vulnerability Guidance. The modifications sought by SEPA are considered in detail in Issue 11 (climate change), where we recommend that paragraph C4.1 is modified to reflect its representation. Further modifications are also recommended to paragraphs C4.3, C4.4 and accompanying explanatory footnotes. We also recommend the inclusion of a new paragraph regarding the de-culverting of watercourses. On this basis, I consider that it is not necessary to modify policies B1 to B4 to make reference to flooding issues. Consequently, neither do I consider it necessary to include a cross-reference to policy C4 elsewhere in Section 6 or Appendix 3 (regeneration priority areas). No modifications are required.

Policy B2: Employment/ Business Land

13. The requirements of Scottish Planning Policy 2014 in respect of business and employment are not expressly set out in the proposed plan; it does, however, fulfil its requirements by allocating a range of business sites informed by an economic strategy and employment land audit. A brief commentary on the findings of the Employment Land Audit 2017-18 is provided at paragraph 5.5. The proposed plan also includes an appendix to demonstrate how the requirements of the Aberdeen City and Shire Strategic Development Plan (2020) have been met. Despite meeting the requirements of Scottish Planning Policy, I consider that it would be helpful to the reader to understand the context within which the proposed business allocations have been made. Accordingly, the proposed plan should be modified as set out below.

14. The Meldrum Paths Group suggests that Policy B2 should be modified to reflect the sustainable travel hierarchy set out in the National Transport Strategy (NTS2), that is; promoting walking and wheeling; cycling; public transport and shared transport options, in

preference to single occupancy private car use. Although the council has not responded directly to this suggestion, paragraph 4.7 of the proposed plan rehearses the council's commitment to making efficient use of the transport network, reducing the need to travel and promoting walking, cycling and public transport. It is recommended in Issue 1 that paragraph 4.7 be amended to include the word 'wheeling', in line with the NTS2. Furthermore, at paragraph RD1.7, the proposed plan states that where development requires the formation of new accesses, these should, among other things, be convenient for cyclists, pedestrians and public transport. In this context, and on the basis that the proposed plan should be read as a whole, I do not consider it necessary to modify policy B2 in response to the Meldrum Paths Group's representation.

15. The proposed plan establishes a general presumption against the loss of business land to non-employment uses. Contrary to the comments of Scottish Land & Estates and Scottish Enterprise, policy B2 sets out the exceptional circumstances in which the council could support non-employment uses on such land; development must be of benefit to the local community and not prejudice the strategic employment land resource. Policy B2 also offers support to home/work proposals on land identified for mixed-use development, subject to criteria listed in policy P3 being satisfied.

16. I agree with representees that the requirement placed upon prospective developers to demonstrate that a site is constrained to such an extent that there is no reasonable prospect of it ever (my emphasis) becoming marketable for business development is too onerous and potentially impossible to demonstrate. I consider the provisions of paragraph B2.2 to be sufficiently robust without the word 'ever' to resist the introduction of uses that could undermine the operation of nearby established business uses and protect amenity. However, I consider that it would be unreasonable to confine an assessment of marketability to a single cycle of plan-making; it could take longer than 5 years to resolve a constraint, for example, vehicular access. I recommend a modification below that removes the word 'ever'.

17. In the context of a local development plan, the consideration of marketability and the acceptability of alternative uses is ultimately a matter for a planning authority, although decisions may be informed by the advice of a chartered surveyor. No modification to the proposed plan is required in this regard.

Policy B3: Tourist facilities

18. Insofar as it is able, the proposed plan supports sustainable tourism through its support for new tourist facilities and accommodation in locations well-related to settlements and where they are able to deliver net economic and social benefits. More broadly, the proposed plan promotes the efficient use of transport, particularly public transport, and the creation of active travel routes, thus providing sustainable travel options for tourists. Other aspects of sustainable tourism, for example, the procurement of goods and services and the behaviours of those using the countryside, lie beyond the scope of the local development plan. No modification to the proposed plan is required in this regard.

19. With regard to major high value tourist proposals, however, I agree that reference should be made to the protection of the natural environment and the provision of sustainable access; these are important considerations and should be referred to in paragraph B3.1. I recommend modifications below, as suggested by The Woodland Trust and Nestrans.

20. It is argued that the provisions of paragraph B3.2 are overly restrictive, particularly in the current economic climate. While I accept that some flexibility in the assessment of proposals to convert tourist sites to alternatives uses may exceptionally be justified on a case by case basis, the purpose of the proposed plan is to manage the development and use of land in the long-term public interest. For this reason, I consider that it would be inappropriate to modify the proposed plan to remove the general requirements set out in paragraph B3.2.

21. The Royal Society for the Protection of Birds seeks a modification to paragraph B3.3 to clarify that the impacts of new tourism-related retail development on the environment and biodiversity will be important considerations in the assessment of planning applications. I agree that these may be relevant and important considerations in relation to proposals for tourism-related retail development. However, these matters are covered in other plan policies and, as explained in paragraph 1.5 of the proposed plan, all policies in the plan can apply. It would not be appropriate to highlight one or two environmental considerations, when other matters may also be of importance. No modification is recommended.

Policy B4: Special Development Areas

22. The council appears to have misunderstood the nature of Mr Mathieson concerns, which relate to the location of new housing to support the development of the Energetica Corridor in the Aberdeen to Peterhead Strategic Growth Area. No change is sought to the terms of policy B4. Matters raised in his representation are addressed in issue 2 (spatial strategy).

Appendix 2: Retail Centres

23. I agree with the Scottish Government that the proposed plan should apply the town centre first policy consistently and that this should be explicit; the 'other town centres' table presented on page 105 of the proposed plan suggests otherwise. As the Scottish Government notes, whilst Scottish Planning Policy 2014 allows scope for flexibility in the application of the sequential test, the expectation is that it will be done on a case-by-case basis; a local development plan should not exclude whole towns from the application of the town centre first principle. I recommend below a modification that requires the column entitled 'Town Centre First Principle Applies' to be deleted from the tables on pages 105 and 106 of the proposed plan and a note added to the appendix that states that the town centre first principles apply to all defined town centres.

24. A representee seeks a modification to the proposed plan to designate Blackdog as a 'principal town centre' and for it to be shown as such in Appendix 2: Retail Centres. The modification is one of a number sought to the Blackdog settlement statement to reflect the terms of mixed-use development, which received planning permission in principle in December 2017. This and other matters relating to Blackdog are considered in detail in Issue 28, where we conclude that the Blackdog centre as described in the planning permission in principle would meet the definition of a principal town centre given in Appendix 2. For this reason, I conclude that Blackdog should be listed in Appendix 2 as a principal town centre. I recommend a modification below.

25. The council has drawn to my attention to the fact that, while it has identified Mintlaw as an 'other town centre' in Appendix 2, it has failed to reflect its status as such in the

settlement statement tables and maps in Appendix 7b. Accordingly, the council invites me to recommend modifications to correct this mistake. However, this error is not one that I can resolve through the examination, as it has not raised in a representation to the proposed plan. It would be for the council to consider whether it can deal with this matter as a non-notifiable modification.

Appendix 3: Regeneration Priority Areas

26. NHS Grampian seeks the inclusion of a reference to an improved network of walking and cycling routes in the sections for Fraserburgh and Peterhead. Rather than adding a general statement under the 'Regeneration Priority Areas', as suggested by the council, I consider that it would be better to add a sentence to the paragraphs relating specifically to Fraserburgh and Peterhead; as is the case for Banff and Macduff. I recommend modifications below.

Shaping Business Development Policy Map

27. The Shaping Business Development Map in the proposed plan shows Newtonhill as an 'other town centre', but it is not listed as a town centre in Appendix 2. Portlethen is listed as an 'other town centre', but is not shown as such on the Shaping Business Development map. In order to correct this mapping error, the 'tc' should be moved from Newtonhill to Portlethen. A modification is recommended.

Reporter's recommendations:

Modify the local development plan by:

1. Replacing the fifth sentence of paragraph B1.1 on page 25 with the following sentences:

"Where new retail and leisure development with a gross floorspace over 2,500m² is proposed outwith a town centre, contrary to the development plan, a retail impact assessment will be required. The assessment will be required to demonstrate that the proposed development would not have a significant adverse effect on the vitality and viability of existing town centres and would not result in any issue identified by a Town Centre Health Check or Town Centre Strategy being made worse. A retail impact assessment may also be required for retail and leisure proposals with a gross floorspace below 2,500m² which may threaten the vitality and viability of an existing centre."

2. Replacing footnote 6 on page 25 with the following:

"When planning for uses that generate significant footfall, including retail and commercial leisure uses, offices, community and cultural facilities, and where appropriate, other public buildings, such as libraries, education and healthcare facilities, a sequential approach should be adopted. A sequential approach requires that locations are considered in the following order of preference: town centres; edge of town centres; other commercial centres identified in the local development plan; and out-of-centre locations that are, or can be, made easily accessible by a choice of transport modes."

3. Replacing the second sentence of paragraph B1.2 on page 26 with the following:

"New development adjacent to a town centre, or adjacent to paths and/or active travel routes leading to a town centre, should be connected via a path and/or active travel route."

4. Replacing the third paragraph of the introductory section on page 25 with:
“The business land allocations are listed in Appendix 1: Employment Land Allocations. The allocations have been informed by the Regional Economic Strategy and an employment land audit and meet the requirements of the Strategic Development Plan.”
5. Amending the first sentence of paragraph B2.2 on page 26 to remove the word ‘ever’.
6. Replacing the second sentence of paragraph B3.1 on page 27 with:
“Generally these must be well related to settlements and the existing natural environment and deliver net economic and social benefits.”
7. Adding the words ‘*and address any issues related to sustainable access.*’ to the end of the third sentence of paragraph B3.1 on page 27.
8. Delete the column entitled ‘Town Centre First Principle Applies’ from the tables shown in Appendix 2: Retail Centres on pages 105 and 106 and add an introductory sentence to read:
“The Town Centre First Principle applies to all ‘principal’ and ‘other’ towns centres identified in the tables below.”
9. Adding Blackdog to the list of Principal Town Centres in the first table shown in Appendix 2: Retail Centres on page 105.
10. Adding the following new second sentence to the second paragraph of the Fraserburgh section in Appendix 3: Regeneration Priority Areas on page 110:
“The Local Partnership also seeks to promote an improved network of walking and cycling routes to improve accessibility, motivate frequent use and improve the health of users.”
11. Adding the following new second sentence to the second paragraph of the Peterhead (and Boddam) section in Appendix 3: Regeneration Priority Areas on page 110:
“The Local Partnership also seeks to promote an improved network of walking and cycling routes to improve accessibility, motivate frequent use and improve the health of users.”
12. On the Shaping Business Development map on page 28, move the ‘tc’ from Newtonhill to Portlethen.

Provision of the development plan to which the issue relates:

Policies relating to development in the countryside

Planning authority's summary of the representation(s):

Shaping Development in the Countryside Introduction

Bennachie Community Council (BCC) has expressed support for replacement of the terms 'pressured' and 'intermediate' with the terms 'accessible' and 'remote' as used in the Scottish Government's 6-fold Urban/Rural Classification. No modification sought (PP0863).

A representee believes that the introduction of Section 7 of the Proposed Local Development Plan (PLDP) needs to be more explicit in recognising the locational need for renewable energy in the countryside as a prelude to discussing special rural areas. Concern raised that policies in Section 7, if read in isolation, suggest that renewable energy is not supported in such areas (PP0603).

A representee has highlighted that Section 7 of the PLDP does not mention footpaths, cycleways and active travel networks (PP0884).

General

A number of representees have indicated that they do not believe policies R1 and R2 support development of renewable energies. Representees have requested that these policies should be amended to permit renewable energy development, including in the green belt and coastal zone (PP0421, PP0463, PP0589, PP0597, PP0640, PP0736 and PP1188). Representees have included an Appendix (RD0087.A, RD0092.A and RD0212.A) in their representation which provides further detail to support their position (PP0589, PP0597 and PP1188).

BCC has requested that policies R1 and R2 do not permit development on prime agricultural land (PAL) as Policy PR1 Protecting Important Resources is either omitted or misinterpreted in planning applications and protecting PAL would be strengthened by including this change in countryside development policies (PP0863).

NHS Grampian has stated that any development in the countryside should be easily accessible by public transport and linked to health centres. Any rural development that is not accessible by public transport and remote from health care provision has a detrimental impact on households locating there. It places an additional, unnecessary burden on health and social care services. The cumulative impact of rural development must be considered ensuring it does not adversely affect health and social care services. The representee has included an Appendix (RD0216.A) in their representation which provides further detail to support their position (PP1222).

Policy R1 Special Rural Areas

A representee has suggested that Policy R1 should be amended to meet the housing needs of smaller communities where development may have been historically constrained. Enabling appropriate scale development will actively contribute to sustainable development objectives (PP1249).

Policy R1 should be amended to support small-scale home building. There is a need for a more positive approach to supporting windfall developments, including on greenfield sites. This change could provide important opportunities for SME home builders while ensuring the Council retains control over what is developed through its landscape, amenity and design policies. The representee has included an Appendix (RD0259.A) in their representation which provides further detail to support their position (PP1306).

A representee has queried the purpose of the designation of the green belt, particularly if its protection is removed so easily. No modification sought (PP0281, PP1158 and PP1160).

Paragraph R1.1

A representee has welcomed the change introduced to paragraph R1.1 to include the term 'development'. However, for clarity, the representee has requested that a text be further modified to remove the term "small-scale" from the first line of paragraph R1.1 (PP0603).

Representees, including Echt and Skene Community Council, have requested that amendment is made to the first sentence of paragraph R1.1 as without this change it could be inferred that small-scale development is restricted to the types set out in R1.2 but larger-scale development is not, which is not believed to be the intent (PP0886, PP0887,

PP0942, PP1024 and PP1191).

Representees have suggested that wording from the LDP 2017 that has been omitted in the PLDP 2020 is essential for the policy to effectively control development in the green belt (PP0886, PP0887, PP0942 and PP1191).

A representee has suggested that paragraph R1.1 should be amended to introduce more positive wording to promote the multiple benefits of the green belt rather than framing it predominantly in terms of negative restrictions (PP0607).

Paragraph R1.2

A representee has requested that paragraph R1.2 includes the same strong wording as paragraph R1.3 but for woodlands. The representee has included an Appendix (RD0162.A) in their representation which provides further detail to support their position (PP0879).

A representee has requested that 'permitted' is replaced by the word 'supported' in the first line of paragraph R1.2 and that text is added to development will be supported subject to other relevant policies (PP01267).

A representee has requested that 'associated with' in the first bullet point is replaced with 'that is required for' to ensure that developments that could be damaging to the green belt are not permitted (PP1267).

A representee has requested that Policy R1 is amended to allow the development of multiple huts, even when not part of a tourism proposal. Reference is made to Scottish Planning Policy (SPP) which suggests that Local Development Plans (LDPs) should set out a spatial strategy which includes policies and proposals for leisure accommodation such as huts. The proposal to include single huts that are not part of a tourism application is welcomed but consideration to this should be expanded to include multiple huts. Given the potential increase in demand for 'staycations' and self-contained self-catering holiday, clear supportive policies should be set out to facilitate the development of a variety of hut developments in Aberdeenshire (PP0716).

A representee has indicated that paragraph R1.2 is unclear in terms of whether 'need' is to be derived from National Planning Framework (NPF) or from other policy documents or strategies. The policy text should be amended to reference renewable energy developments (PP0603).

Clarity is sought on whether the 'national priority' referenced in the third bullet point of paragraph R1.2 includes national developments outlined in NPF3 and subsequent NPFs (PP0822).

BCC has sought clarity regarding what is meant by a 'suitable scale' as referred to in the fourth bullet point in Policy R1. BCC has suggested that the non-domestic nature of development referenced needs to be stated in the policy text rather than as a footnote (PP0863).

Echt and Skene Community Council has requested that amendment is made to include the word "small" in the fourth bullet point of paragraph R1.2 as without it, it is unclear what

scale of development would be deemed suitable. Inclusion of the word would be consistent with the intent of Policy R1.1 (PP1024).

Policy R1.2, bullet point 5 should be removed. If local business opportunities and the population of rural areas is to be revived as is the ambition of the Scottish Government, it will be necessary not to be overly prescriptive about what type of business this might be. Diversification will be important. This change could provide important opportunities for SME home builders while ensuring the Council retains control over what is developed through its landscape, amenity and design policies. The representee has included an Appendix (RD0259.A) in their representation which provides further detail to support their position (PP1306).

A representee has sought the addition of wording that allows infrastructure interventions in the green belt. As currently proposed, it is unclear whether this would be allowed under bullet point 1 in paragraph R1.2. This addition is necessary to align with SPP paragraph 52 which lists essential infrastructure as an acceptable use in the green belt. The representee has included an Appendix (RD0128.A) in their representation which provides further detail to support their position (PP0751).

Paragraph R1.3

A representee has requested inclusion of the word 'environmental' within paragraph R1.3 (PP0603).

Paragraph R1.5

A representee has suggested adding a new paragraph to Policy R1 to address development for renewable energies in the green belt (PP0603).

SEPA has indicated that they object to paragraph R1.5 if their requested rewording of Policy C4 Flooding regarding redevelopment of existing buildings and their potential vulnerability to flood risk is not undertaken, or paragraph R1.5 is not modified to ensure that development will only be acceptable where there is no increase in vulnerability to flood risk, and that any conversion or new development must be in line and in accordance with SEPA Flood Risk and Land Use Vulnerability Guidance as referenced by SPP. Restoration of/conversion of existing buildings has the potential to introduce increased vulnerable uses to a site particularly in terms of overnight accommodation, so a need to reference this issue is necessary (RD0214.A) (PP1219).

Appendix 4 Boundaries of the Green Belt

SEPA has confirmed that they have no issues with Appendix 4 (RD0214.A). No modification sought (PP1219).

Consideration should be given to widening the green belt in key locations to provide more robust protection from development (PP0607).

A significant number of representees have sought the removal of sites OP1 and OP2 as identified in the Potterton Settlement Statement and reinstatement of the green belt designation at this location. (Note: given the scale of matters related to the proposed OP1 and OP2 sites at Potterton, including consideration of the green belt, representee

comments have been addressed through Schedule 4 Issue 26: Potterton).

A representee has requested that the green belt is extended towards Belhelvie (PP0886 and PP0887).

Westhill and Elrick Community Council has noted that green belt boundary fails to protect large areas of Westhill both to the west and the north. If the green belt were extended around Westhill it would make sure that any future developments would be directed to the most appropriate location and also protect Westhill, Kirkton of Skene, Garlogie and Wester Ord as distinct and discrete communities (PP0523).

A representee has requested that land subject to bid site KN057 be excluded from the green belt. The representee has included Appendices (RD0113.A and RD0113.B) in their representation which provides further detail to support their position (PP0684).

A representee has requested that land subject to bid site KN082 be excluded from the green belt. The representee has included Appendices (RD0108.A, RD0108.B and RD0108.C) in their representation which provides further detail to support their position (PP0679).

A representee has requested that land subject to bid site KN101 be excluded from the green belt. The representee has included Appendices (RD0234.A and RD0234.B) in their representation which provides further detail to support their position (PP1276).

A representee has requested that land subject to bid site KN124 be excluded from the green belt (PP0956).

A representee has requested that the green belt boundary be amended to exclude land north of Greenlaw Road beyond Chapelton's eastern boundary. The representee has included an Appendix (RD0128.A) in their representation which provides further detail to support their position (PP0751).

A change in the boundary to include a small area of land west of Drum Garden Centre would equate to a more logical and defensible boundary than the current boundary. Changing the boundary to include this land would have no impact on the underlying rationale for the existing green belt. The representees have included a number of Appendices (RD0077.A, RD0077.B, RD0077.C, RD0077.D, RD0077.E, RD0084.A, RD0084.B, RD0084.C, RD0084.D and RD0084.E) in their representation which provides further detail to support their position (PP0478 and PP0557).

Appendix 5 Coastal Zone

SEPA has confirmed that they have no issues with Appendix 5 (RD0214.A). No modification sought (PP1219).

A representee has indicated that the planned review of the coastal zone in 2022 is too far off, and as a result restricting development in the short term in remote and regeneration areas where development should not be constrained in uncertain times. There is a need for greater flexibility within the coastal zone. Coastal zone maps have a simplistic definition of boundaries, from the coastline to the nearest major public road and should be more prescribed due to its restrictions. Countryside policies should be permitted over

these areas for flexibility (PP0765).

A representee has requested that the Waterside Hotel, Peterhead should be excluded from the coastal zone. The representee has included an Appendix (RD0134.A) in their representation which provides further detail to support their position (PP0764).

A representee has requested that the west boundary of the coastal zone be returned to the boundary line in the LDP 2017 in the area north of Balmedie adjacent to Menie. It is also noted that the coastal zone excludes the area of Menie Estate and part of the area of Blairton Farm, however there is no clear reason for this change and as such clarity is sought (PP0871).

A representee requests that land at Burn of Daff, Downies is removed from the coastal zone to allow for new allocation of 10 homes. The representee has included an Appendix (RD0071.A) in their representation which provides further detail to support their position (PP0454).

Map 33 is out of sequence and needs to be placed in its correct geographical position relative to Map 30 (PP1314).

Policy R2 Development Proposals Elsewhere in the Countryside

General

SEPA has confirmed that they have no issues with Policy R2 (RD0214.A). No modification sought (PP1219).

A representee welcomes revision made to the title of Policy R2. No modification sought (PP0603). However, another believes that the tone of the text describing the majority of rural areas as 'Elsewhere' implies that these areas are of lesser worth. The importance of transport infrastructure to these areas and community amenities as hubs of community life should be given more weight in the Plan (PP0720).

Policy R2 is overly restrictive and imposes unreasonable requirements with very little evidence to support the justification (PP1249 and PP1306). Paragraph R2.1 to R2.3 implies that development in the countryside is to be assessed against the requirements and implications as if it were green belt and/or a special landscape area, therefore setting an exceptionally high barrier to new development. This approach essentially limits growth in areas that could potentially accommodate new development, subject to detailed policy considerations (PP1249).

The wording of the policy should be amended so that it affords much greater scope for small-scale development to take place subject to compliance with other policies. Paragraph R2.2 applies the same tests to new development anywhere in the countryside as it would in either the green belt or coastal zone. The extent of restriction in this policy means it functions as a de facto green belt policy. Small-scale development in the countryside is an important source of business for SME builders and also helps support smaller settlements. This blanket restriction on development in the countryside runs counter to the Scottish Government's focus on rural repopulation. It will deny much needed opportunities to SME homebuilders which are facing an already difficult time. It could be argued that an "overly protective and relatively static approach to planning for

rural areas across much of rural Scotland” has been created. The wording of the policy should be amended so that it affords much greater scope for small-scale development to take place subject to compliance with other policies. The representee has included an Appendix (RD0259.A) in their representation which provides further detail to support their position (PP1306).

A representee has requested the addition of a new policy titled “Sustainable self-build houses” to allow more self-build homes within 500 metres of settlements. This would be in line with Section 8 of the PLDP, which says they will be promoted, and supports Garioch Area Committee agreement on 3 September 2019 that the LDP would encourage this. In addition, self-build homes can go beyond the requirements of Policy C1 Using Resources in Buildings and would encourage the delivery of housing that meets the highest possible standards in terms of sustainability, well-being and design in line with the PLDP’s vision of promoting Aberdeenshire as “an area with a high quality of life ... and help deliver sustainable, low carbon places.” (PP0052).

A representee has requested the addition of a new policy titled “Special needs and age exclusive retirement housing”. The representee states that there is a lack of suitable age exclusive retirement housing in Aberdeenshire to meet the needs of an increasing ageing population. There are some examples of retirement living developments in Aberdeenshire, but these are limited and do not meet underlying need. The importance of easily accessible single storey housing for elderly people close to services was identified as well as Scottish Government reports identifying the importance of elderly people leading independent lives in specialist housing. The representee has included an Appendix (RD0149.A) in their representation which provides further detail to support their position (PP0812).

Redevelopment of Rural Brownfield Sites

Three representees have suggested that the definition of brownfield does not accord with that of SPP and the definition provided in the PLDP is too constraining (PP0722, PP0790 and PP0821). The representees have included an Appendix (RD0141.A and RD0151.A) in their representation which provides further detail to support their position (PP0790 and PP0821).

Echt and Skene Community Council has raised concern that the meaning of brownfield could be misconstrued at present with the potential for a developer to argue that a disused agricultural hardstanding is not subject to the exclusion. They suggest removing the word “being” from the 9th line to clarify that land used for storage purposes is not considered brownfield, whether or not it is still in use (PP1024).

Paragraph R2.4

BCC has welcomed protection for long-term naturalised brownfield sites but believe that the policy requires significant change to make it workable (PP0863).

The promotion of brownfield land is welcomed and in accordance with sustainability principles but many of the additions to the policy are actually contrary to sustainability principles. Any brownfield development will bring environmental improvement and the additional requirement for the improvement to be significant is both subjective and superfluous in paragraph R2.4. The representee has included an Appendix (RD0141.A) in

their representation which provides further detail to support their position (PP0790).

Whilst there is a balance to be struck in allowing biodiversity and helping combat climate change, the proposed approach seems overly restrictive and potentially counter-intuitive to the brownfield first approach. It would be better to consider a naturalised site for development if it could be demonstrated there would be more of a 'biodiversity net gain' when compared to the option for a new site (PP0716).

BCC has suggested that paragraph R2.4 should note that a brownfield site may have wall remnants that could provide valuable habitat for invertebrates, lichens, etc. and should merit, being described as 'naturalised' (PP0863).

BCC has also suggested that the term 'significant use' in footnote 4 for paragraph R2.4 should be defined (PP0863).

BCC has suggested that paragraph R2.4 should be revised to be less subjective and vulnerable to challenge as there are various stages of naturalisation and not all sites will be of significant nature conservation value. BCC add that naturalised brownfield sites are at risk from clearance from developers prior to a planning application because the habitat/biodiversity is not protected by a designation (PP0863).

Paragraph R2.6

Echt and Skene Community Council has suggested including the words 'of brownfield sites' into paragraph R2.6 as without this change the paragraph could be used out of context to justify redevelopment of modern farm buildings or other non-domestic buildings that are specifically excluded from the definition of brownfield in the glossary (PP1024).

BCC has suggested that there is a risk of developers extending the area of a brownfield site onto adjacent land and this scenario could bring the proposed development into conflict with other LDP policies. Revised wording has been provided (PP0863).

Paragraph R2.7

It is believed that paragraph R2.7 is potentially too restrictive. Given the cost of delivery, particularly in challenging times, this approach may be prohibitive. It might be better to suggest that where development is brought forward individually, it should not detract from the collective environment (PP0716).

Echt and Skene Community Council has suggested adding text to clarify that employment proposals for larger brownfield sites should be promoted through an allocation in the LDP (PP1024).

Paragraph R2.8 to R2.9

BCC has suggested that the number of homes allowed under paragraphs R2.8 and R2.9 should be limited to three in all rural locations, otherwise developers will apply for the maximum number of units for a development site, and in remote locations this will encourage the use of private cars which has implications for climate change and safety issues for other road users (PP0863).

A representee has indicated that the policy is excessively onerous considering that development of brownfield sites and rural population are key government aims. The wording of the policy test is unreasonable and should be amended. Proof 'beyond reasonable doubt' is not a phrase which is suited to planning, it is the burden of proof used in criminal law. It is incompatible with the presumption in favour of sustainable development and Scotland's flexible planning system which gives due weight to net economic benefit (SPP, paragraph 29). The reference to "where the Planning Authority is satisfied" leaves too much unsaid. The LDP needs to explain clearly what will satisfy the Planning Authority so communities and prospective applicants have that clarity. Deferring the decision on what is satisfactory until the determination of planning applications is not consistent with a Plan led approach. The PLDP should clearly set out its policy requirements. The risk of suburbanisation does not seem particularly relevant to a policy which in specific circumstances only allows development of up to 7 homes on brownfield sites. The representee has included an Appendix (RD0259.A) in their representation which provides further detail to support their position (PP1306).

A representee has objected to the 7-home cap. If brownfield sites, which are sustainable become available over the Plan period they should not be required to wait until the next LDP to be considered for development. Long periods of vacancy can add further to the costs of redevelopment and planning policy should avoid inadvertently contributing to this. The representee has included an Appendix (RD0259.A) in their representation which provides further detail to support their position (PP1306).

Paragraph R2.10

In paragraph R2.10 the clarification of what must be evident on inspection is welcomed but could benefit from expansion. The presence of building work such as foundations, and floor slabs are equally significant. The representees have included an Appendix (RD0141.A and RD0151.A) in their representation which provides further detail to support their position (PP0790 and PP0821).

The introduction of development not requiring to, replicate the same footprint is welcomed in paragraph R2.10. However, the requirement that the development needs to be contained within a defined curtilage is vague and confusing. There needs to be better clarification on what the policy intends. The representees have included an Appendix (RD0141.A and RD0151.A) in their representation which provides further detail to support their position (PP0790 and PP0821).

Paragraph R2.11 to R2.14 (Organic Growth of Settlements)

A representee has suggested that the policy text should be revised to accord with the recommendation set out in the Issues and Actions Paper, that a criteria-based approach should be taken to small-scale organic growth, rather than limiting to a list of settlements outlined in Planning Advice (PP0035).

A representee has requested removal of the first sentence of paragraph R2.11 (PP1306). Another representee has suggested that the addition of 5 homes should be permitted during any Plan period (PP0663). Representees have included an Appendix (RD0102.A and RD0259.A) in their representation which provides further detail to support their position (PP0663 and PP1306).

A representee has indicated that they believe paragraphs R2.11 to R2.14 are overly restrictive and not compatible with the presumption in favour of sustainable development. It should not be the sole responsibility of the Planning Authority to identify a need, an applicant may be capable of demonstrating this need and therefore it can be assessed on that basis (PP1249).

Two representees have requested removal of the phrase 'beyond all reasonable doubt' from paragraph R2.11 (PP1249 and PP1306). One representee has suggested amended wording to give more balanced meaning (PP1249). Another has indicated that the term is not suited to the planning system and is unclear and unworkable (PP1306). The representee has included an Appendix (RD0259.A) in their representation which provides further detail to support their position (PP1306).

Other representees have also sought clarity. Paragraph R2.12 talks generally about only settlements without an opportunity site being considered under this policy. To simplify the policy, it should state that organic growth is acceptable in all settlements on a site within 200m of the edge of the settlement and no more than 20% growth in the Plan period. The representees have included an Appendix (RD0141.A and RD0151.A) in their representation which provides further detail to support their position (PP0790 and PP0821).

The term 'footpath' to be an inadequate and outdated term, which does not meet the requirement to have a multi-use active travel route available for citizens to travel safely. The LDP requires to be explicit that any new development must be linked by full specification active travel links that are separate from vehicular access and as such provide a safe means of travelling to and from the development by walking, wheeling and cycling (PP0881).

NatureScot has suggested amending the last sentence in paragraph R2.13 to using the phrase "paths and/or active travel routes", rather than only 'footpaths' as that covers a broader spectrum, including segregated cycle lanes on or off road or even quieter roads as active travel routes. The word 'footpath' is not the best choice of word within the Plan as it could be perceived as implying restricted use, although note some Councils use the term "footway" as this is a roads definition for pavements associated directly with a road (RD0255.B) (PP1300).

A representee has sought clarity with regard to the list of settlements where this policy will apply (PP0437). The Plan should identify more settlements where either allocated or organic growth could occur (PP1286). The representee has included an Appendix (RD0241.A) in their representation which provides further detail to support their position (PP1286).

A representee has requested that Bridge of Canny be identified as a settlement suitable for small-scale organic growth. The representee has included an Appendix (RD0141.A) in their representation which provides further detail to support their position (PP0790).

A representee has requested that Birsemore be identified as a settlement suitable for small-scale organic growth. The representee has included Appendices (RD0166.A, RD0166.B, RD0166.C and RD0166.D) in their representation which provides further detail to support their position (PP0900).

A representee has requested that Cluny be identified as a settlement suitable for small-scale organic growth (PP0034).

A representee has requested that Crathes be identified as a settlement suitable for small-scale organic growth. The representee has included an Appendix (RD0141.A) in their representation which provides further detail to support their position (PP0790).

A representee has requested that Inchmarlo be identified as a settlement suitable for small-scale organic growth. The representee has included an Appendix (RD0141.A) in their representation which provides further detail to support their position (PP0790).

A representee has requested that Hirn be identified as a settlement suitable for small-scale organic growth. The representee has included an Appendix (RD0141.A) in their representation which provides further detail to support their position (PP0790).

A representee has requested that Lethenty be identified as a settlement suitable for small-scale organic growth. The representee has included an Appendix (RD0241.A) in their representation which provides further detail to support their position (PP1286).

A representee has requested that Lyne of Skene be identified as a settlement suitable for small-scale organic growth. The representee has included an Appendix (RD0102.A) in their representation which provides further detail to support their position (PP0663).

A representee has requested that Tillybirloch be as a settlement suitable for small-scale organic growth (PP0612).

A representee has requested that Tillyfourie be as a settlement suitable for small-scale organic growth. The representee has included Appendices (RD0121.A, RD0121.B, RD0121.C and RD0121.D) in their representation which provides further detail to support their position (PP0723).

A representee has requested that Wester Beltie be identified as a settlement suitable for small-scale organic growth. The representee has included Appendices (RD0096.A, RD0096.B and RD0096.C) in their representation which provides further detail to support their position (PP0601).

A representee has requested that Wester Ord be identified as a settlement suitable for small scale organic growth. The representee has included an Appendix (RD0151.A) in their representation which provides further detail to support their position (PP0821).

A representee has requested that Woodlands of Durriss not be identified as a settlement suitable for small-scale organic growth. The representee has included Appendices (RD0167.A, RD0167.B and RD0167.C) in their representation which provides further detail to support their position (PP0901).

Paragraph R2.15 (Single Homes Associated with Retirement Succession of an Agricultural Holding)

In paragraph R2.15 it is not understood why this policy is restricted to family succession; many farmers do not have the ability to do that. It is also not appreciated why the retirement house needs to be within or in the immediate vicinity of the main farm hub. This

may not always be the best location in terms of siting and having regards to factors such as servicing, connectivity and environmental impacts. The representee has included an Appendix (RD0141.A) in their representation which provides further detail to support their position (PP0790).

Paragraph R2.16 to R2.17 (Extensions to Clusters/Housing Groups)

BCC believes the term 'cluster' is more firmly defined in terms of cohesiveness of the layout. BCC has suggested this could possibly be achieved using supplementary guidance (PP0863).

The boundary between the Remote Rural Area and Accessible Rural Area should be revised to the current LDP boundary line based on the Housing Market Areas, or alternatively a separate clause allowing more restricted extensions to clusters within the Accessible Rural Area i.e., a maximum of 1 additional house per Plan period to clusters of 5-10 houses or similar (PP0436).

A representee has suggested that the policy provision should be applicable in both the accessible and remote rural areas (PP0790 and PP0821). Another representee has requested that the cluster policy be extended across a wider area and provide a criteria-based policy that identifies where such growth could be considered appropriate (PP1286). The representees have included an Appendix (RD0141.A, RD0151.A and RD0241.A) in their representation which provides further detail to support their position (PP0790, PP0821 and PP1286).

Text defining what is an acceptable cluster is too constraining as it rules out infill development. A cluster might be a group of up to 10 houses whereas a settlement would be any group comprising more than 10 homes. If accepted there is no need for text in R2.17. The representees have included an Appendix (RD0141.A and RD0151.A) in their representation which provides further detail to support their position (PP0790 and PP0821).

Concern has been expressed regarding proposed policy changes which are more permissive than in the LDP 2017. Expanding clusters have an adverse impact on rural settings, in particular if prominent and if have an urban influence. The Alford area should be exempt from the application of the clusters policy, particularly around the Little Endovie cluster (PP0619).

Text should be added to the policy to require that extensions to clusters should not erode the setting of a listed building (PP0619).

In paragraph R2.16 replace 'the extension of' with 'addition of individual houses to' as the actual extension of the group/cluster should not be encouraged. Rather infill should very much be the justification on almost every occasion and not simply 'in most cases' (PP0891).

In paragraph R2.16 replace 'Clusters' with 'Houses in clusters'. The existing wording refers to relationships between groups rather than what is required to constitute a cluster or group (PP0891).

Reduce the scale of development permissible from 3 to 2 homes. A potential 60%

increase to the size of a small group of houses is not justifiable (PP0891).

BCC has suggested that paragraph R2.17 should specify a maximum of one additional home to an existing road frontage during the Plan period, with other cluster/group additions permitted on infill plots. BCC has raised concern that allowing extensions to clusters/housing groups risks contributing to future ribbon development and suggesting revisiting the policy to prevent ribbon development (PP0863).

In paragraph R2.17 delete 'to' between 'not' and 'exceed' for grammatical purposes (PP0891).

In paragraph R2.17 insert, "(which may comprise two or three clusters in close proximity rather than a single larger cluster)" after 'groups' in the third sentence. The policy should prohibit artificial separation of clusters which may not all relate well to each other, but which nonetheless make up a large group to which further additions should not be made. Particularly in the situation where it was arbitrarily determined that my own house and my immediate neighbours were closely related to houses at the far side of two fields but not to a closer group of houses, simply to allow additions to be made to it (PP0891).

In paragraph R2.17 insert ", unless special justification can be provided," as the actual extension of the group/cluster should not be encouraged: rather infill should very much be the justification on almost every occasion and not simply 'in most cases' (PP0891).

In paragraph R2.17 insert at the end of the last sentence, "and the amenity of the existing houses therein". Development should respect the fact that the group is in a supposedly remote country area (PP0891).

Paragraph R2.18 and R2.19 (Employment Proposals)

The limit placed on employment proposals in the accessible area to be on brownfield sites only seems overly restrictive. It is suggested that the constraints in paragraph R2.19 give sufficient flexibility to determine whether employment proposals would be acceptable in both the accessible and remote rural areas (PP0716 and PP0790). The representee has included an Appendix (RD0141.A) in their representation which provides further detail to support their position (PP0790).

In relation to Policy R2.19 the focus here on public transport for remote rural employment proposals is unrealistic (PP0716).

Echt and Skene Community Council has suggested amending the structure of paragraph R2.19 to ensure that the requirements for employment sites to be in keeping with surroundings, demonstrate there are no other suitable sites and be accessible by foot, bicycle and/or public transport should apply in all rural areas outwith settlements, rather than only remote rural areas as it currently suggests (PP1024).

Policy R3 Minerals

General

SEPA has confirmed that they have no issues with Policy R3 (RD0214.A). No modification sought (PP1219).

The requirements should not apply in circumstances where a borrow pit to supply aggregate is proposed as an integral part of another development e.g., wind farm (PP0421, PP0463, PP0589, PP0597, PP0640 and PP0736). Representees have included an Appendix (RD0087.A and RD0092.A) in their representation which provides further detail to support their position (PP0589 and PP0597).

The Scottish Government has indicated that Policy R3 should contain a statement around the maintenance of a minerals landbank, outlining that the Plan has identified at least 10 years of construction aggregate to accord with SPP paragraph 238 (PP0578).

Paragraph R3.1

A representee has requested inclusion of an additional bullet point regarding environmental statements to make it clear that this is part of the minimum requirement to support an application, without it there is ambiguity. Requirement to provide a carbon impact assessment is also required to understand how developments comply with sustainable development goals. Policy should make it clear that there is a presumption against peat extraction – the sentence proposed would give clarity for commercial developers and the public that such developments would not be supported (PP1268).

Paragraph R3.2

A number of representees, including NatureScot (RD0255.B), have suggested amending the first sentence in paragraph R3.2 to align the terminology with the changes effected by The Town and Country Planning (Environmental Impact Assessment) (Scotland) Regulations 2017, noting that the term used is now Environmental Impact Assessment report rather than Environmental Statement (PP0463, PP0640 and PP1300).

The requirement for an environmental statement (now termed an EIA Report) may identify significant environmental effects. However, a significant effect that a renewable energy development may have, does not make the proposal unacceptable in land use or policy terms. Paragraph R3.2 should be amended to allow for renewable energy developments to be acceptable even if there is a significant environmental effect (PP0421, PP0463, PP0597 and PP0640). The representee has included an Appendix (RD0092.A) in their representation which provides further detail to support their position (PP0597).

NatureScot has suggested amending footnote 10 in paragraph R3.2, which relates to “disturbance of carbon rich soils” to reflect the correct definition of carbon rich soils in the Carbon rich soils, deep peat and priority peatland habitat mapping: Consultation analysis report published by Scottish Natural Heritage in 2016 (RD0255.B) (PP1300).

NatureScot has queried whether the Council wishes to reflect the same focus upon Classes 1 and 2 in paragraph R3.2 (i.e., in the bullet point) or retain the wider scope, noting the Council’s policy at C3.1. NatureScot has stated that the 2016 SNH map does not provide information on the significance of any possible impacts on development but was to enable Planning Authorities to map carbon rich soils, deep peat and priority peatland habitat in a consistent manner for the preparation of spatial frameworks for onshore wind farms – and meet the requirements of Table 1 in SPP (RD0255.B) (PP1300).

Nestrans has noted that it is expected that transport impacts would require to be fully assessed within any environmental statement. They request that “transport impacts” is added to the bullet point list (RD0227.A) (PP1241).

Paragraph R3.2 should add that the loss of ancient woodland is unacceptable as it is an irreplaceable habitat and the loss of it cannot be mitigated against. The representee has included an Appendix (RD0160.A) in their representation which provides further detail to support their position (PP0877).

Paragraph R3.4

Additional text is required to be added to paragraph R3.4 to clarify that development will not be permitted if it negatively impacts on ancient woodland which is part of the natural heritage and environment. The representee has included an Appendix (RD0160.A) in their representation which provides further detail to support their position (PP0877).

Paragraph R3.5

A representee has noted that in all cases financial guarantees will be required to ensure that the agreed mitigation, site restoration or habitat enhancement is delivered, and the cost does not fall on public authorities. It is suggested that “where appropriate” is removed from the policy text (PP1269).

Policy R4 Hill Tracks

A representee has indicated that they only support development involving hill tracks if it can be justified and satisfactorily integrated in the landscape respecting existing and historic pathways. No modification sought (PP0659).

A representee believes that the current wording does not make it clear if the policy relates to hill tracks or development involving hill tracks. It should be made clear that it is the need for the hill track itself which needs to be justified, rather than wider aspects of a development which may be acceptable. It is suggested that reference to species should be included in the last sentence to emphasise the need to minimise impacts on both habitat and particular species. The Mitigation Hierarchy – to avoid, minimise and as a last resort compensate for the impacts of development – needs to be followed, and this includes avoiding and minimising impacts on species (PP1270).

A typographical error is noted in paragraph R4.1 which should read, “carbon rich soils” rather than “carbon risk soils” (RD0214.A) (PP1219 and PP1270).

Onshore wind farms can involve extensive networks of tracks associated with construction and maintenance. Clarity is required to state that Policy R4 does not apply to renewable energy proposals (PP0421, PP0463, PP0589, PP0597, PP0640 and PP0736). Representees have included an Appendix (RD0087.A and RD0092.A) in their representation which provides further detail to support their position (PP0589 and PP0597).

Shaping Development in the Countryside Policy Map

The boundary between the remote and accessible rural areas in the policy map is not

clear. The representees have included an Appendix (RD0023.A, RD0023.B, RD0141.A and RD0151.A) in their representation which provides further detail to support their position (PP0189, PP0790 and PP0821).

Modifications sought by those submitting representations:

Shaping Development in the Countryside Introduction

Modify the PLDP to add a new paragraph in the policy introduction to read, “In addition to housing and business, the countryside is an essential host to renewable energy developments to tackle climate change and deliver rural diversification. While specialist policies later in this Plan detail how any such proposals should be considered, the overall principle of renewable energy is supported in the countryside, subject to meeting site-specific qualifying criteria.” (PP0603).

Modify the PLDP to place a greater emphasis on promoting footpaths, cycleways and active travel networks both within communities and their vicinities and between adjacent communities (PP0884).

General

Modify the PLDP to amend policies R1 and R2 to permit renewable energy development in the green belt and coastal zone (PP0421, PP0463, PP0589, PP0597, PP0640, PP0736 and PP1188).

Modify the PLDP to amend policies R1 and R2 to indicated that development proposal on PAL will not be permitted (PP0863).

Modify the PLDP to amend Policy R2 to highlight the need for development in rural areas to be easily accessible by public transport and linked to health centres (PP1222).

Policy R1 Special Rural Areas

Modify the PLDP to amend Policy R1 to include a criteria that allows consideration for development that contributes to meeting a shortfall in the housing land supply and that can meet the needs of smaller communities where development and economic growth may have been historically constrained (PP1249).

Modify the PLDP to amend Policy R1 to promote a positive approach towards small-scale development (PP1306).

Paragraph R1.1

Modify the PLDP to amend paragraph R1.1 to read, “Opportunities for development will be restricted in the green belt and coastal zone to reflect the special nature of these areas.” (PP0603).

Modify the PLDP to amend paragraph R1.1 to read, “Opportunities for development will be restricted in the green belt and coastal zone to small-scale development which reflects the special nature of these areas.” (PP0886, PP0887, PP0942, PP1024 and PP1191).

Modify the PLDP to add text to paragraph R1.1 to read, “We will only allow development if it is essential and cannot be located elsewhere.” (PP0886, PP0887, PP0942 and PP1191).

Modify the PLDP to amend paragraph R1.1 to promote the positive benefits of the green belt (PP0607).

Paragraph R1.2

Modify the PLDP to amend paragraph R1.2 to include strong wording in relation to woodlands, similar to that included in paragraph R1.3 (PP0879).

Modify the PLDP to amend paragraph R1.2 to read, “In the green belt the following developments are supported, provided they comply with other relevant policies and do not have an adverse impact on biodiversity and the natural environment.” (PP1267).

Modify the PLDP to amend the first bullet point of paragraph R1.2 to read, “development that is required for agriculture...” (PP1267).

Modify the PLDP to allow the development of multiple huts without the need to be part of a tourism proposal (PP0716).

Modify the PLDP to amend the third bullet point of paragraph R1.2 to read, “development identified as a national priority in the National Planning Framework or serving an established need (such as appropriately sited renewable energy installations), where no other suitable site is available.” (PP0603).

Modify the PLDP to amend the third bullet point of paragraph R1.2 to clarify that “national priority” is intended to include national developments outlined in NPF3 (PP0822).

Modify the PLDP to remove footnote 2 and amend the fourth bullet point of paragraph R1.2 to read, “intensification of an established non-domestic use subject to the new development being of a suitable form and of a scale that may be contained entirely within the existing curtilage.” (PP0863).

Modify the PLDP to amend the fourth bullet point of paragraph R1.2 to read, “intensification of an established use subject to the new development being of a suitable small-scale and form.” (PP1024).

Modify the PLDP to remove the fifth bullet point of paragraph R1.2 (PP1306).

Modify the PLDP to add a new bullet point to read, “infrastructure, landscape, drainage and other ancillary works essential to the delivery of adjoining development.” (PP0751).

Paragraph R1.3

Modify the PLDP to amend paragraph R1.3 to read, “In the coastal zone development must require a coastal location or there must be clear social, economic, environmental or community benefits arising.” (PP0603).

Paragraph R1.5

Modify the PLDP to add a new bullet point under paragraph R1.5 to read, “non-permanent renewable energy development such as ground mounted solar PV schemes, where it can be designed in such a way that biodiversity will be enhanced, and the landscape impact is minimal or can be mitigated. A statement may be required setting out the reasons why a green belt location is optimal for the project. Any such proposal will also need to demonstrate that it accords with the overriding objectives of the green belt.” (PP0603).

Modify the PLDP to amend paragraph R1.5 to outline that development will only be acceptable where there is no increase in vulnerability to flood risk, and that any conversion or new development must be in line accordance with SEPA Flood Risk and Land Use Vulnerability Guidance as referenced by SPP (PP1219).

Appendix 4 Boundaries of the Green Belt

Modify the PLDP to widen the green belt in key locations (PP0607).

Modify the PLDP to reinstate the green belt designation on land subject to proposed sites OP1 and OP2 at Potterton (see Schedule 4 Issue 26: Potterton).

Modify the PLDP to extend the green belt towards Belhelvie (PP0886 and PP0887).

Modify the PLDP to extend the green belt to protect Westhill, Kirkton of Skene, Garlogie and Wester Ord (PP0523).

Modify the PLDP to exclude land subject to bid site KN057 from the green belt (PP0684).

Modify the PLDP to exclude land subject to bid site KN082 from the green belt (PP0679).

Modify the PLDP to exclude land subject to bid site KN101 from the green belt (PP1276).

Modify the PLDP to exclude land subject to bid site KN124 from the green belt (PP0956).

Modify the PLDP to exclude land to the north of Greenlaw Road, Chapelton from the green belt (PP0751).

Modify the PLDP to exclude land west of the Mains of Drum Garden Centre from the green belt (PP0478 and PP0557).

Appendix 5 Coastal Zone

Modify the PLDP to undertake a review of the coastal zone prior to adoption of the Plan (PP0765).

Modify the PLDP to remove land at the Waterside Hotel, Peterhead from the coastal zone (PP0764).

Modify the PLDP to reinstate the coastal zone designation at Blairton Farm (PP0871).

Modify the PLDP to remove land at Burn of Daff, Downies from the coastal zone (PP0454).

Modify the PLDP to move Map 33 to its correct geographical position and follow Map 30 (PP1314).

Policy R2 Development Proposals Elsewhere in the Countryside

General

Modify the PLDP to replace the title of Policy R2 to replace the word “elsewhere” to a term that gives value to rural areas (PP0720).

Modify the PLDP to amend paragraphs R2.1 to R2.3 to consider development that meets an identified need and does not assess it against the same policy restrictions as it would green belt and/or special landscape areas (PP1249).

Modify the PLDP to amend Policy R2 so that it affords much greater scope for small-scale development to take place subject to compliance with other policies (PP1306).

Modify the PLDP to amend Policy R2 to add the following paragraph, “Sustainable self-build houses – In order to promote self-build houses, and also to encourage the delivery of housing that meets the highest possible standards in terms of sustainability, well-being and design, we will support the development of self-build opportunities close to settlements (within 500m of a settlement boundary) where these demonstrate exemplary design or sustainability credentials, for example through meeting the passivhaus standard, the WELL standard, or achieving a BREAM rating of excellence or above.” (PP0052).

Modify the PLDP to amend Policy R2 to add the following paragraph, “Special needs and age exclusive retirement housing – The development of new homes, in order to meet defined housing needs not presently being met on allocated sites or elsewhere in settlements may be supported in accessible locations within the defined countryside subject to the need for the development being established, the scale/nature of the development being compatible with both the subject site and the surrounding area, and required infrastructure/services being available/able to be made available. Provision for age exclusive retirement housing (60+), with or without additional support services, may be supported but only where the form of the housing proposed is specifically designed for retirement living and the age exclusive restriction is binding for future occupation.” (PP0812).

Redevelopment of Rural Brownfield Sites

Modify the PLDP to align the glossary definition of brownfield development/land/sites with SPP (PP0722, PP0790 and PP0821).

Modify the PLDP to remove “being” from the 9th line of the glossary definition of brownfield development/land/sites (PP1024).

Paragraph R2.4

Modify the PLDP to remove the word “significant” from paragraph R2.4 (PP0790).

Modify the PLDP to amend paragraph R2.4 to state that a naturalised site will not be

available for redevelopment where the biodiversity net gain is higher in its naturalised state, than can be derived from being redeveloped (PP0716).

Modify the PLDP to extend the definition of “naturalised” to include wall remnants (PP0863).

Modify the PLDP to define what is meant by “significant” in the footnote associated with paragraph R2.4 (PP0863).

Modify the PLDP to make paragraph R2.4 less subjective and vulnerable to challenge (PP0863).

Paragraph R2.6

Modify the PLDP to amend paragraph R2.6 to read, “We will permit small-scale development of brownfield sites that involves the conversion or replacement of redundant or derelict non-domestic building(s) or the redevelopment of vacant land.” (PP1024).

Modify the PLDP to add text at the end of paragraph R2.6 to read, “Development permitted under this policy should not extend beyond any part of the original curtilage boundary.” (PP0863).

Paragraph R2.7

Modify the PLDP to make paragraph R2.7 less restrictive (PP0716).

Modify the PLDP to add text at the end of paragraph R2.7 to read, “Employment proposals for larger brownfield sites should be promoted through allocation of an opportunity site in the Local Development Plan.” (PP1024).

Paragraph R2.8 to R2.9

Modify the PLDP to remove paragraphs R2.8 and R2.9 (PP0863).

Modify the PLDP to amend paragraph R2.8 to read, “Proposals for more than three new homes on larger rural brownfield sites will only be permitted where a larger development can be accommodated on the site where the scale of development proposed will not cause adverse social or environmental impacts.” (PP1306).

Modify the PLDP to amend paragraph R2.9 to read, “It is anticipated this policy will be primarily apply to smaller windfall sites of less than 12 homes. Sites capable of accommodating 8 or more homes should be promoted through allocation of an opportunity site in the Local Development Plan. However, we recognise that in some cases larger brownfield sites may become available for development in between reviews of the LDP, these will be considered on their own merits.” (PP1306).

Paragraph R2.10

Modify the PLDP to expand what should be visible upon inspection e.g., presence of building work such as foundations, and floor slabs are equally significant (PP0790).

Modify the PLDP to clarify what is intended by a “defined curtilage” (PP0790 and PP0821).

Paragraph R2.11 to R2.14 (Organic Growth of Settlements)

Modify the PLDP to amend paragraphs R2.11 to R2.14 to clarify that a criteria-based approach is to be taken to the small-scale organic growth of settlements in rural areas outwith the green belt and coastal zone (PP0035).

Modify the PLDP to remove the first sentence of paragraph R2.11 (PP1306).

Modify the PLDP to allow 5 homes to be permitted as organic growth during the Plan period (PP0663).

Modify the PLDP to amend paragraph R2.11 to read, "...a particular need for development has been established by the Planning Authority and/or applicant." (PP1249).

Modify the PLDP amend paragraph R2.11 to read, "Proposals should be considered against development plan policies and adverse impacts balanced with benefits to establish the suitability of development, allowing for organic growth." (PP1249).

Modify the PLDP to remove the term "beyond all reasonable doubt" from paragraph R2.11 (PP1306).

Modify the PLDP to amend paragraph R2.12 to permit organic growth in all settlements, not just those without an opportunity site for housing (PP0790 and PP0821).

Modify the PLDP to amend paragraph R2.13 to refer to "active travel links" rather than "footpath connections" (PP0881).

Modify the PLDP to amend paragraph R2.13 to refer to "path and/or active travel route" rather than "footpath" (PP1300).

Modify the PLDP to include a list of settlements where this policy will apply (PP0437).

Modify the PLDP to identify more settlements where either allocated or organic growth could occur (PP1286).

Modify the PLDP to include Bridge of Canny as a settlement suitable for small-scale organic growth (PP0790).

Modify the PLDP to include Birsemore as a settlement suitable for small-scale organic growth (PP0900).

Modify the PLDP to include Cluny as a settlement suitable for small-scale organic growth (PP0034).

Modify the PLDP to include Crathes as a settlement suitable for small-scale organic growth (PP0790).

Modify the PLDP to include Inchmarlo as a settlement suitable for small-scale organic growth (PP0790).

Modify the PLDP to include Hirn as a settlement suitable for small-scale organic growth (PP0790).

Modify the PLDP to include Lethenty as a settlement suitable for small-scale organic growth (PP1286).

Modify the PLDP to include Lyne of Skene as a settlement suitable for small-scale organic growth (PP0663).

Modify the PLDP to include Tillybirloch as a settlement suitable for small-scale organic growth (PP0612).

Modify the PLDP to include Tillyfourie as a settlement suitable for small scale organic growth (PP0723).

Modify the PLDP to include Wester Beltie as a settlement suitable for small-scale organic growth (PP0601).

Modify the PLDP to include Wester Ord as a settlement suitable for small scale organic growth (PP0821).

Modify the PLDP to ensure Woodlands of Durriss is not identified as a settlement suitable for small-scale organic growth (PP0901).

Paragraph R2.15 (Single Homes Associated with Retirement Succession of an Agricultural Holding)

Modify the PLDP to remove the restriction that houses permitted under this policy are not restricted to a family member (PP0790).

Modify the PLDP to remove the requirement for houses permitted under this policy does not need to be sited within or in the immediate vicinity of the main farm hub (PP0790).

Paragraph R2.16 to R2.17 (Extensions to Clusters/Housing Groups)

Modify the PLDP to more firmly define the term “cluster” in regard to cohesiveness (PP0863).

Modify the PLDP to align the Remote/Accessible Rural Area boundary with the current LDP boundary line or allow a more restricted cluster extension within the Accessible Rural Area e.g., 1 additional house per Plan period (PP0436).

Modify the PLDP to amend the PLDP to allow extensions to clusters in the accessible rural areas (PP0790 and PP0821).

Modify the PLDP to amend the PLDP to extend the area where the clusters policy will apply (PP1286).

Modify the PLDP to amend the PLDP to amend the definition of a cluster to a group of up to 10 homes (PP0790 and PP0821).

- Modify the PLDP to exclude application of the clusters policy in the Alford area (PP0619).
- Modify the PLDP to add text to explicitly state that extension to clusters should not erode the setting of a listed building (PP0619).
- Modify the PLDP to amend paragraph R2.16 to substitute replace “the extension of” with “addition of individual houses to” (PP0891).
- Modify the PLDP to amend paragraph R2.16 to replace “Clusters” with “Houses in clusters” (PP0891).
- Modify the PLDP to amend paragraph R2.17 to reduce the ~~saeeel~~ scale of development permissible from 3 to 2 homes (PP0891).
- Modify the PLDP to revise paragraph R2.17 to prevent future ribbon development by specifying a maximum of one additional home to an existing road frontage during the Plan period, with other cluster/group additions permitted only on infill plots (PP0863).
- Modify the PLDP to amend paragraph R2.17 delete “to” between “not” and “exceed” (PP0891).
- Modify the PLDP to amend R2.17 to add, “(which may comprise two or three clusters in close proximity rather than a single larger cluster)” after “groups” in the third sentence (PP0891).
- Modify the PLDP to amend paragraph R2.17 to add, “unless special justification can be provided.” (PP0891).
- Modify the PLDP to amend paragraph R2.17 to insert at the end of the last sentence, “and the amenity of the existing houses therein.” (PP0891).
- Paragraph R2.18 and R2.19 (Employment Proposals)
- Modify the PLDP to amend paragraph R2.18 to remove the restriction that development should take place on brownfield sites (PP0716 and PP0790).
- Modify the PLDP to amend paragraph R2.19 to remove the requirement in respect of public transport (PP0716).
- Modify the PLDP to insert a paragraph break following the first sentence of paragraph R2.19 (PP1024).
- Policy R3 Minerals**
- General
- Modify the PLDP to clarify that Policy R3 would not apply in circumstances where a borrow pit to supply aggregate is proposed as an integral part of another development e.g., wind farm (PP0421, PP0463, PP0589, PP0597, PP0640 and PP0736).
- Modify the PLDP to ensure that Policy R3 contains a statement around the maintenance

of a minerals landbank, outlining that the Plan has identified at least 10 years of construction aggregate (PP0578).

Paragraph R3.1

Modify the PLDP to include an additional bullet point to state that an environmental statement [Environmental Impact Assessment] is required to support a planning application (PP1268).

Modify the PLDP to include an additional bullet point to state that a carbon impact assessment is required to support a planning application (PP1268).

Modify the PLDP to state there is a presumption against peat extraction (PP1268).

Paragraph R3.2

Modify the PLDP to replace the term “Environmental Statement” with Environmental Impact Assessment Report” (PP0463, PP0640 and PP1300).

Modify the PLDP to amend paragraph R3.2 to allow for renewable energy developments to be acceptable even if there is a significant environmental effect (PP0421, PP0463, PP0597 and PP0640).

Modify the PLDP to amend footnote 10 in paragraph R3.2 to read “Carbon rich soil is any soil with a surface organic layer (the O horizon as defined in the Scottish soil classification). In this context, it includes surface layers often referred to as peaty soil and peat soil.” (PP1300).

Modify the PLDP to consider whether “disturbance of carbon rich soils” should focus on Class 1 and 2 peat or retain the current wider scope on SPP, soils (PP1300).

Modify the PLDP to add “transport impacts” to the bullet point list in paragraph R3.2 (PP1241).

Modify the PLDP to add to paragraph R3.2 to recognise that the loss of ancient woodland is unacceptable as an irreplaceable habitat and as such its loss cannot be mitigated against (PP0877).

Paragraph R3.4

Modify the PLDP to add to paragraph R3.4 to clarify that development will not be permitted if it negatively impacts on ancient woodland (PP0877).

Paragraph R3.5

Modify the PLDP to remove “where appropriate” from the opening of paragraph R3.5 (PP1269).

Policy R4 Hill Tracks

Modify the PLDP to amend paragraph R4.1 to read, “We will only allow hill track

development if the need for the track can be justified, satisfactorily integrated in the landscape and it respects existing and historic pathways. Hill tracks will only be permitted if they minimise environmental impacts, such as soil erosion, impacts on habitats and species, water bodies, and on carbon rich soils and a satisfactory maintenance programme has been agreed with the Planning Authority.” (PP1270).

Modify the PLDP to correct a typographical error paragraph R4.1 which should read, “carbon rich soils” rather than “carbon risk soils” (PP1219 and PP1270).

Modify the PLDP to clarify that Policy R4 does not apply to renewable energy proposals (PP0421, PP0463, PP0589, PP0597, PP0640 and PP0736).

Shaping Development in the Countryside Policy Map

Modify the PLDP to clearly identify the boundary between the remote and accessible rural areas (PP0189), perhaps through a larger scale map (PP0790 and PP0821).

Summary of responses (including reasons) by planning authority:

Shaping Development in the Countryside Introduction

The Council welcome comment made by BCC. No change is required.

The Council does not agree with the inclusion of additional text as proposed by a representee. All policies of the Plan apply in the determination of planning applications, where relevant. The primary policy against which proposals involving renewable energy technologies will be determined is Policy C2 Renewable Energy. The Council do not see a need to include policy text referring to renewable energy proposals in Section 7. No change is required.

Section 4 of the PLDP identifies that, “To make efficient use of the transport network, reduce the need to travel and promote walking, cycling, and public transport” is a key objective of the Plan (AD0041.A, page 15, paragraph 4.7). In addition, proposed Policy P1 Layout, Siting and Design requires development designs to be “well connected” promoting active travel (AD0041.A, page 48, paragraph P1.5). The Council do not see a need to repeat this in Section 7. No change is required.

General

As noted above, the primary policy against which proposals involving renewable energy technologies will be determined is Policy C2 Renewable Energy. Proposed paragraph R1.2 is written to accord with paragraph 52 and paragraphs 88 to 91 of SPP (AD0012). SPP does not indicate that onshore renewable energy projects should be permitted in the green belt or coastal zone. Each planning application is determined on its own merits including those proposing renewable energy developments in the coastal zone or green belt. No change is required.

The Council does not agree with BCC that additional text is required in policies R1 and R2 to state that development on PAL will not be permitted. All policies of the Plan apply in the determination of planning applications. Development proposed on land identified as being PAL, will require to be determined against Policy PR1 Protecting Important Resources,

namely paragraph PR1.5 which outlines the circumstances whereby the loss of PAL will be accepted (AD0041.A). The Council do not see a need to repeat this in Section 7. No change is required.

The Council fully acknowledges the comment made by NHS Grampian in terms of the impact that development in the countryside has on health and social care services. As outlined in our response to similar comments made in response to the MIR, the Council appreciates that not all rural areas outwith settlements across Aberdeenshire are readily accessible by public transport. The Council has significant concerns that adding such a requirement as sought by NHS Grampian would reduce the opportunities for housing proposals to come forward in much of rural Aberdeenshire and be counter to SPP. Given the geographical context of Aberdeenshire, balancing this with the aim of supporting rural communities, and the fact that much of Aberdeenshire's public transport relies on privately operated services, it would not be considered appropriate to impose such a requirement on rural development proposals (AD0040.A, page 61). No change is required.

SPP outlines that the purpose of the green belt is to ensure that development is directed to the right locations. For most settlements a green belt is not necessary. Green belts can be designated to support a Plan's spatial strategy by directing development to the most appropriate locations, as mentioned above, and supporting regeneration; protecting and enhancing the character, landscape setting and identity of the settlement; and protecting and providing access to open space (paragraph 49). Amendments to the green belt boundary have rarely been made since the current boundary was identified in preparing the 2012 LDP. Minor amendments have been proposed to account for the spatial strategy and recommendations coming through the MIR Issues and Actions papers in relation to settlements as agreed by Area Committees and ISC in Autumn 2019. The Council has committed to undertaking a full review of the green belt in 2022 to inform a mid-term review of the LDP. This was agreed by Area Committees and ISC (AD0040.A, pages 68 and 70 to 72). No change is required.

Policy R1 Special Rural Areas

The Council does not agree that additional text should be added to allow for development that contributes to meeting a shortfall in the housing land supply. For clarity, the Council confirm that the 5-year effective housing land supply requirement can be met (see Schedule 4 Issue 5: Section 8 – Shaping Homes and Housing – Policy H1 Housing Land and Appendix 6 Housing Land Allocations). No change is required.

The introduction to Section 7 outlines that the Council wish to create a welcoming approach to development in the countryside. By its very nature, Policy R1 is a protective policy, however it is positive in its approach to the types of development that could take place in the green belt and coastal zone, in keeping with paragraph 52 and paragraphs 88 to 91 of SPP (AD0012). No change is required.

Paragraph R1.1

The Council disagrees with the removal of 'small-scale' from the policy text. The MIR (AD0038.A, pages 13 and 14) recognised that the wording used in the LDP 2017 omitted reference to the scale of development that is deemed appropriate in the green belt and coastal zone. The MIR also confirmed that the definition of 'small-scale' would be reviewed (AD0038.A, page 15). These changes were agreed by Area Committees during

Special Meetings conducted in August and September 2019 (AD0040.A). No change is required.

The Council agrees with the suggested amendment provided by Echt and Skene Community Council and others. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council does not agree that additional text should be added to state that development in the green belt and coastal zone will only be permitted where it is essential and cannot be located elsewhere. The Council believe that the provisions set out in the policy make it entirely clear what types of development will be permitted in these areas. No change is required.

By its very nature, Policy R1 is a protective policy and as such development in the green belt is restricted. Paragraphs R1.1. and R1.2 have been written in accordance with paragraph 52 and paragraphs 88 to 91 of SPP (AD0012). The reasons to designate a green belt are outlined in paragraph 49 of SPP (AD0012). The Council do not see a need to repeat this in the policy text. No change is required.

Paragraph R1.2

The Council are unclear exactly what the representee is seeking in terms of strengthening paragraph R1.2 in relation to woodlands. Both paragraphs R1.2 and R1.3 have been written in accordance with paragraph 52 and paragraphs 88 to 91 of SPP (AD0012). Notwithstanding this, all policies of the Plan apply in the determination of planning applications, including Policy PR1 Protecting Important Resources, paragraphs P1.7 and PR1.8. No change is required.

The Council does not agree with replacing the word 'permitted' with 'supported'. The word 'permitted' is used frequently throughout the PLDP to indicate which development proposals would and would not be supported in policy terms. The Council do not see a distinction in policy terms between the meaning of both words however for consistency the Council would rather retain use of the word 'permitted'. No change is required.

As outlined in Section 1 (paragraph 1.5) of the PLDP, and as already noted above, all policies of the Plan apply in the determination of planning applications (AD0041.A). This includes policies contained within Policy E1 Natural Heritage. The Council do not see a need to repeat this in paragraph R1.2. No change is required.

The Council does not agree with replacing the words 'associated with' with 'that is required for' on the basis that the term 'associated with' is consistent with the wording used in SPP (AD0012, paragraph 52). No change is required.

The Council notes that there was limited response on the matter of hutting to the MIR. The only comment made in respect to the development of huts in Aberdeenshire, expressed support for the Council's view that Aberdeenshire has no significant association with hutting (AD0040.A, page 164). This position was reflected in the recommendations made by Officers that were subsequently considered by Area Committees and the Council's Infrastructure Services Committee. No change is required.

The term 'national priority' has been used in policy relating to green belt and coastal zone

in previous LDPs (2012 and 2017) without any significant misinterpretation. However, the Council recognises that this is not a term specifically referenced in NPF3 with any regularity. 'National priority' is used once in NPF3 in relation to the Central Scotland Green Network which is not of relevance to the Aberdeenshire LDP (AD0004, page 64). Notwithstanding this, NPF3 clearly sets out a number of priorities and actions throughout the document. In addition, the Council notes that SPP paragraph 52 uses the term 'national requirement' (AD0012). For clarity and consistency, if the Reporter is minded, to make an amendment, then the Council recommend that the third bullet point could be modified to read, "development identified as a national requirement, such as a national development or a priority as outlined in the National Planning Framework..."

The Council do not agree that there is a need to remove footnote 2 in favour of elaborating on the text used in the fourth bullet point. The purpose of the footnote is to provide additional information that aids in the interpretation of the policy text and directs users to further guidance, for example. The wording used in the fourth bullet point is consistent with that used in SPP (AD0012, paragraph 52). No change is required.

The Council does not agree that the term 'small-scale' requires to be added to the fourth bullet point. The scale of development permitted under Policy R1 is already clearly stated under paragraph R1.1. There is no need to repeat this in paragraph R1.2. No change is required.

The Council does not agree that the fifth bullet point should be removed. Flexibility, beyond what is outlined in SPP is provided by the fifth bullet point to meet a specific need that has been identified in the Aberdeenshire area. To remove this statement would mean that accommodation for a worker in a primary industry could not be permitted. The Council wish to retain the flexibility afforded by this statement. No change is required.

The Council does not agree that there is a need to include an additional bullet point as suggested by a representee. It is not clear what value the inclusion of this text would provide to the policy text. The Council does, however, agree that paragraph R1.2 omits reference to essential infrastructure being permitted in the green belt as per SPP (AD0012, paragraph 52). If the Reporter is minded, to make an amendment, then the Council recommend that paragraph R1.2 could be modified to include a new bullet point between bullet points three and four to read, "essential infrastructure such as digital communications infrastructure and electricity grid connections".

Paragraph R1.3

The Council agrees with the representee's comment and sees merit in adding 'environmental' to the policy text. The Council confirms that it intends to address the representee's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Paragraph R1.5

The Council does not agree that additional text should be added to refer to non-permanent renewable energy developments. The PLDP includes a policy, Policy C2 Renewable Energy, that already applies to development proposals involving renewable energy technologies. This level of duplication is not required in paragraph R1.5. No change is required.

The matter raised by SEPA is acknowledged and responded to in Schedule 4 Issue 11: Section 13 – Climate Change. No change is required.

Appendix 4 Boundaries of the Green Belt

Comments from SEPA are noted. No change is required.

The Council acknowledges that several respondents seek amendments to either include or exclude land from the green belt. The green belt was a main issue in the MIR. The MIR indicated that as part of pre-MIR engagement with stakeholders, that there was a general feeling that the green belt may need to be reviewed, particularly to account for completion of the Aberdeen Western Peripheral Route. The Issues and Actions papers resulting from the MIR consultation, recognised a need for a review to be undertaken but that resources were not available to undertake a comprehensive review of the green belt prior to publication of the PLDP. Delaying a review of the green belt was not considered to be detrimental to the Spatial Strategy of the PLDP, nor was the existing extent of the green belt considered to fail to align with the objectives of SPP as demonstrated through the Report of Examination for the PLDP 2016 (AD0040.A, page 62 and AD0036, page 59, paragraph 8).

The MIR Issues and Actions papers outlines that only minor changes to the green belt boundary should be made ahead of publication of the PLDP. This was intended to account for any recommendations arising from Issues and Actions papers related to settlements that required amendment to settlement green belt boundaries to be made. This included amendment made to the green belt to account for proposed opportunity sites (OP1 and OP2) at Potterton. This was agreed by Area Committees and ISC (AD0040.A, pages 68 and 70 to 72). Matters related to the proposed OP1 and OP2 sites at Potterton are addressed through Schedule 4 Issue 26: Potterton. The green belt should only be reinstated at this location should the Reporter be minded to, recommend amendment or removal of the proposed sites as a consequence of examining Schedule 4 Issue 26: Potterton.

Through the Issues and Actions papers, commitment was also given to reviewing the green belt in 2022 to inform a mid-term review of the LDP. This was agreed by Area Committees and ISC (AD0040.A, pages 68 and 70 to 72).

Consideration of the need to widen the green belt in key locations and extend the green belt at Belhelvie, Westhill, Kirkton of Skene, Garlogie and Wester Ord will all be addressed through the wider green belt review the Council have committed to undertaking as noted above.

Likewise, areas currently identified as green belt that representees would like to see removed including land subject to development bids in the Kincardine and Mearns area as well as land around Chapelton and Mains of Drum Garden Centre.

The Council believes that the most appropriate time to undertake a full review of the green belt is following publication of NPF4.

In conclusion, no change is required to the boundaries of the green belt.

Appendix 5 Coastal Zone

Comments from SEPA are noted. No change is required.

The Council acknowledges that several respondents seek amendments to either include or exclude land from the coastal zone. The coastal zone was a main issue in the MIR which recognised that a review of its boundary was now overdue (AD0038.A, page 14). The Issues and Actions paper outlined that the existing extent of the coastal zone remains robust and that there had been no material changes since the examination of the current LDP 2017 to alter this position. In making recommendations, the Council have committed to undertaking a full review of the coastal zone. This was agreed by Area Committees (with the exception of the Banff and Buchan Area Committee) and subsequently considered by ISC who agreed with the Officer's recommendation (AD040.A, pages 68 and 70 to 72). The Council believe that the most appropriate time to undertake a full review of the green belt is following publication of NPF4. No change is required.

The Council does not believe there are any errors in the mapping of the coastal zone. The key map is consistent with the detailed maps, including map 30 to 33. The order of the maps does not affect the user's ability to view the boundary or interpret the policy text. No change is required.

Policy R2 Development Proposals Elsewhere in the Countryside

Comments from SEPA are noted. No change is required

The term 'elsewhere' is used in the title of Policy R2 is to indicate that the policy applies to areas outwith the 'special rural areas' i.e., the green belt and coastal zone. It is not intended to suggest that the area outwith the green belt and coastal zone are of lesser worth, but that a more flexible approach to development can be promoted in the parts of Aberdeenshire not identified as green belt or coastal zone. The Council does not believe that the title requires to be amended. No change is required.

The Council believes that paragraphs R2.1 to R2.3 are clear as to the forms of development considered to be appropriate in the countryside. As per the existing LDP policy, the types of development identified as being appropriate in the green belt are also permitted in the wider rural area. The wording of paragraph R2.1 avoids unnecessary duplication of proposed paragraph R1.2. Paragraph R2.3 indicates the Council's measured approach to development in the countryside by introducing a number of other types of development that could be permitted. Policy R2 is supportive of the vision of NPF3 seeking to create a successful, sustainable place through promoting opportunities in rural areas (AD0004, page 1). Policy R2 is supportive of the principles of SPP. SPP has notably moved from advocating a 'positive approach' (AD0077, paragraph 92) to development in the countryside to a position that encourages appropriate development to reflect the sense of place associated with our rural communities and to address specific challenges these places can face (AD0012, paragraph 75, bullet point 2). No change is required.

The Council believes it is appropriate to promote development that is of a small-scale nature in rural areas in order to prevent suburbanisation of the countryside. There are specific circumstances, that are outlined in the PLDP where development of a greater scale may be permitted. No change is required.

The Council does not agree with the suggestion that a specific policy promoting self-build should be included within the Policy R2. Self-build opportunities already exist within the context of the proposed policies. The representee is essentially seeking relaxation of the organic growth policy to allow development within 500m of all settlements rather than 200m of identified settlements. No change is required.

The Council does not agree with the suggestion that a specific policy promoting special needs and age exclusive retirement housing should be included within Policy R2. The PLDP already includes a policy that supports non-mainstream housing proposals for those with disabilities or specialise housing for the elderly (see Policy H3 Special Needs Housing). Paragraph H2.3 also outlines circumstances where self-contained continuing care retirement communities will be permitted. The Council believes that special needs and retirement housing should generally be situated within or in the immediate proximity to settlements, where services and facilities are readily available to support residents of such developments. No change is required.

Redevelopment of Rural Brownfield Sites

The definition of brownfield land in the SPP only states that “The term may cover vacant or derelict land...”, which allows for some flexibility in its interpretation (AD0012, page 71). The Aberdeen City and Shire Strategic Development Plan 2020 excludes “private or public gardens, sports pitches, woodlands or open spaces used for leisure and recreation purposes” and the “grounds of redundant institutions” from its definition of brownfield land (AD0016, page 50). Overall, the uses excluded from the PLDP’s definition of brownfield land are considered appropriate and allows for the right development in the right place. No change is required.

The Council confirms that it intends to address the Echt and Skene Community Council’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

In addition to matters raised by representees, the Council is aware that the Town and Country Planning (General Permitted Development and Use Classes) (Scotland) Amendment Order 2020 will, from 1 April 2021, introduce much wider permitted development rights in respect of the conversion of agricultural and forestry buildings to residential and commercial uses. Due to the timing of the publication of the Order and the submission of the PLDP to Scottish Ministers for examination, the Council has been unable to fully consider any potential implications resulting from the Order in respect of the published content of the PLDP, nor has this been raised directly in representations on the PLDP. If in examining matters raised under this policy provision, the Reporter is minded, to make an amendment to the PLDP as a result of the introduction of the new permitted development rights, then the Council would be happy to enter a dialogue in this regard.

Paragraph R2.4

The Council’s acknowledges BCC’s concern surrounding this policy section. Individual comments received by BCC are addressed in turn below.

The Council agrees with the representee’s comment and sees merit in removing ‘significant’ from the policy text. The Council confirms that it intends to address the

representee's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Paragraph R2.4 is clear that sites that have become naturalised will not be available for redevelopment as a brownfield site. There is no need to introduce any ambiguity to this position. No change is required.

The Council sees merit in the modification sought by BCC to provide clarity. If the Reporter is minded, to make an amendment, then the Council recommend that the Glossary definition of 'naturalised' could be modified to read, "Naturalised: Vacant or derelict land where there is no clear indication of what the previous use of the land was. The land, including any remnants of previous development, has reverted to a natural state or the site appears to have blended back through a degree of vegetation into the surrounding landscape...".

The Council does not agree that the term 'significant use' used in footnote 4 requires to be defined. As alluded to by BCC, naturalised sites provide valuable habitat for invertebrates, lichens, etc, for example. There is no need to elaborate on the contribution that naturalised land can have in nature conservation. No change is required.

The Council appreciates the sentiment behind BCC's comment however the Planning and Environment Service has no authority over any site clearance work undertaken by prospective applicants prior to the submission of a planning application, unless of course this constitutes unauthorised works that would otherwise require planning permission. This is not a matter that can be controlled via planning policy. No change is required.

Paragraph R2.6

The Council confirms that it intends to address Echt and Skene Community Council's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council does not agree with the change sought by BCC. Paragraph R2.10 already states that development must be contained within a defined curtilage. This applies to all brownfield proposals. No change is required.

Paragraph R2.7

The objective behind paragraph R2.7 is to make the redevelopment of larger brownfield sites less restrictive. The matter of rural brownfield development was a main issue in the MIR (AD0038.A, page 17, Issue 9). The preferred option promoted by Officers was to introduce an element of flexibility to the policy to allow larger brownfield sites to come forward in a planned approach, rather than the piecemeal approach that was being seen where sites were being divided up to come forward incrementally as small-scale development. There were mixed opinions received in response to the MIR, however, on balance it was believed that the preferred approach should be adopted, subject to addressing concerns raised at that time (AD0040.A). It is not anticipated that this policy will be used as a matter of course and only where development of up to 7 homes can be justified. No change is required.

The Council does not support the modification sought by Echt and Skene Community

Council. Employment proposals are promoted on brownfield sites, particularly in the accessible rural area. The scale of development that could be permitted on a larger brownfield site would be determined in accordance with relevant policies of the Plan. No change is required.

Paragraph R2.8 to R2.9

The concerns raised by BCC are recognised. However, this matter was discussed as part of the MIR, as discussed above, and it was agreed that an element of flexibility should be introduced to the policy to allow for a planned approach to be adopted for larger brownfield sites. As previously stated, it is expected that this policy will not be frequently used. Any potential for overdevelopment will be managed through application of Policy P1 Layout, Siting and Design. No change is required.

The Council sees some merit in the modification proposed to paragraph R2.8. However, it would wish to retain part of the original text. If the Reporter is minded, to make an amendment, then the Council recommend that paragraph R2.8 could be modified to include a new bullet point between bullet points three and four to read, "Proposals for more than three new homes on larger rural brownfield sites will only be permitted where a larger development can be accommodated and the scale of development proposed will not cause adverse social or environmental impacts, including suburbanisation of the countryside."

The Council does not agree with the proposed rewording of paragraph R2.9. The proposed wording of paragraph R2.9 makes it clear that sites will be capped at 7 homes and that sites capable of accommodating a greater scale of development should pursue a land allocation in the LDP. Caution has been exercised in preparing the policy text which is believed to strike a balance and provide certainty to communities living in the countryside over the scale of development that could come forward during the Plan period. No change is required.

Paragraph R2.10

The Council does not agree that paragraph R2.10 requires to be expanded upon. The text is clear that at a very minimum, there should be some evidence that a building occupied the site. This will be a matter for physical inspection and will be considered on a case-by-case basis. No change is required.

The PLDP Glossary contains a definition for the term 'curtilage'. The Council considers this to be sufficient. No change is required.

Paragraph R2.11 to R2.14 (Organic Growth of Settlements)

The Council confirms that a criteria-based approach is to be applied to identify settlements considered to be suitable for organic growth. This was the matter identified as a Main Issue in the MIR (AD0038.A, page 17, Issue 8). In considering comments received, Officers recommended moving towards a criteria-based approach for this policy provision. The criteria were agreed through consideration of the Issues and Actions papers (AD0040.A, pages 69-70). It was also agreed that Planning Advice would be prepared to aid interpretation and in which a list of "identified settlements" would be contained. Paragraphs R2.11 to R2.14 are in full alignment with the recommendation contained within

the Issues and Actions papers. No change is required.

The Council does not agree with increasing the scale of development that can be permitted as organic growth. Paragraph R2.13 outlines that the capacity for growth is limited to 20% of the size of the settlement, up to a maximum of 10 homes during the Plan period. This was agreed through consideration of the Issues and Actions Papers arising from the MIR consultation (AD0040.A, page 69). Proposals are restricted to up to 3 homes i.e., small-scale development to ensure that development comes forward in an incremental and organic way as is the intention of the policy. Landowners/ developers with aspirations to develop land adjacent to and in very close proximity to existing settlements should seek an allocation through the Plan-making process rather than using the organic growth policy as a means to achieve a larger scale development. No change is required.

The Council does not agree with amending paragraph R1.11 to state that need can be established by the Planning Authority and/or the applicant. As outlined, the Council intends to use a criteria-based approach to identify settlements suitable for organic growth. A list of settlements deemed to be suitable will be contained in Planning Advice, as alluded to in the PLDP. This Planning Advice will be subject to scrutiny and consultation. As such there is no need to introduce confusion to the policy or dilute the role of Planning Advice in this instance. No change is required.

The Council sees some merit in the modification proposed to paragraph R2.11 in so far as to make the last sentence more succinct. The Council disagrees with the suggestion that the principle of organic growth being permitted should take precedence over consideration of other relevant policies as the current wording provides clarity as the weight that should be given to relevant policies. If the Reporter is minded, to make an amendment, then the Council recommend that the final sentence of paragraph R2.11 could be modified to read, "Organic growth will not be permitted where development would cause an adverse impact that cannot be suitably mitigated [insert footnote to read, "Such as consideration of other relevant policies under Natural Heritage and Landscape and Protecting Resources"]." The Council believe that the suggested revision to text would also satisfy the changes sought by the other representee commenting on this section of the PLDP.

The Council does not believe that organic growth is necessarily appropriate in all settlements. There are many reasons why a settlement might not be suitable for this type of development proposal. This has been captured in the criteria that is to be applied to identify settlements where organic growth might be permitted (see Issues and Actions papers (AD0040.A, page 69-70)). Such an amendment would result in significant numbers of houses coming forward in an unplanned manner. No change is required.

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications. The Council believe that the revised text provided by NatureScot would also satisfy the change sought by the other representee commenting on this section of the PLDP.

In previous LDP's the Council has included an Appendix that lists settlements considered to be suitable for organic growth. The Appendix forming part of the LDP is fixed for the Plan period, even though it is possible that the capacity for growth may indeed be fulfilled. In order to provide clarity and to introduce a degree of flexibility during the Plan period, the Council has indicated in paragraph R2.14 of the PLDP, that the list of settlements will be

included as part of Planning Advice. Planning Advice is to be prepared by the Council in due course with a list of “identified settlements” to be created using the criteria agreed by the Elected Members in considering the Issues and Actions papers. Preparation of the Planning Advice will take into account all settlements in Aberdeenshire, including those identified by representees in response to the PLDP namely, Bridge of Canny, Birsemore, Cluny, Crathes, Inchmarlo, Hirn, Lethenty, Lyne of Skene, Tillybirloch, Tillyfourie, Wester Ord and Woodlands of Durris). No change is required.

Paragraph R2.15 (Single Homes Associated with Retirement Succession of an Agricultural Holding)

As outlined in the Issues and Actions papers (AD0040.A, page 66) legislation exists that outlines who can succeed to an agricultural holding in Scotland. It is noted that there is no explicit requirement stated in paragraph R2.15 that succession need to be by family members. However, in the interest of consistency with current legislation it is considered appropriate to restrict the policy to allow for the erection of a new house on a viable farm unit where the applicant is retiring and a successor (a ‘near relative’ as defined by the agricultural holdings Acts applicable to Scotland) is taking over the running of the farm enterprise. In terms of applying the policy, this criteria should be applied regardless of the farm being tenanted or owner-occupied. Proposals coming forward that seeks development of a single house where succession of the farm holding is not by a near relative, such proposals will be considered on their own merits. No change is required.

It is expected that houses approved under this policy will be situated within or in close proximity to the main farm hub. The reasons for this are twofold. The main reason is that the purpose of this policy is that the siting of the new house should be such that it maintains a presence on the farm unit. In most cases the new house will be located within walking distance of the main farm hub with siting of any new house remotely being discouraged. This also keeps the policy consistent with that of essential workers in a primary industry (see PLDP paragraph R1.2). The second reason is that SPP states that the use of occupancy restrictions should be avoided (AD0012, paragraph 81). By ensuring that proposals are situated in close proximity to the farm hub reduces, somewhat, the likelihood that houses approved under this policy provision will be sold on the open market, given its close connection with the farming hub. The policy provision is intended to be used where all other opportunities to provide for the accommodation needs of the retiring farmer on the farm should be explored and dismissed. Single homes are intended to be one per farm enterprise. This could be stipulated more clearly in the policy text. As such, if the Reporter is minded, to make an amendment, then the Council recommend that a footnote be inserted after “single homes” to state that “One house per farm enterprise will be permitted” under this policy provision.

Paragraph R2.16 to R2.17 (Extensions to Clusters/Housing Groups)

The Council believes that paragraph R2.16 is sufficiently clear as to what a cluster/ housing group should be for the purposes of applying the policy provision. We do not see a need to introduce Planning Advice for this policy. No change is required.

For the purposes of policies under the Shaping Development the Countryside policies, the Council has sought to use the Scottish Government’s 6-fold Urban/Rural Classification rather than the Housing Market Areas. This matter was discussed as a Main Issue in the MIR (AD0038.A, page 16, Issue 7). This change was generally supported by those

responding to the MIR (AD0040.A, page 55). In accordance with SPP, paragraph 83, the Council does not believe that extensions to clusters in the accessible rural area should be permitted, even at a reduced scale (AD0012). No change is required.

In order to distinguish between a cluster and a settlement, the Council does not believe that any change needs to be made to paragraph R.16 in respect to text detailing what the size of the existing cluster should be. No change is required.

Alford lies just within the remote rural area. The clusters policy would be applicable to housing groups to the north, south and west of the settlement, but not the settlement of Alford itself. Given the remote and accessible rural areas have been determined using an external data source i.e., the Scottish Government's 6-fold Urban/Rural Classification, we do not see a need to amend the boundary. No change is required.

All policies of the Plan apply in the determination of planning applications, where relevant. Any adverse impact arising from proposed development, such as impact on the setting of a listed building would be considered in terms of compliance of the proposal against Policy H1 Protecting Listed Buildings, Scheduled Monuments and Archaeological Sites (including other historic buildings) (paragraph HE1.1). The Council do not see a need to repeat this in paragraphs R2.16 or R2.17. No change is required.

The Council understands the reasoning behind the suggested amendments to R2.16 and believes that there would be merit in making a minor adjustment to this paragraph to provide clarity. If the Reporter is minded, to make an amendment, then the Council recommend that paragraph R2.16 could be modified to read, "In remote rural areas only we will also allow development associated with existing clusters or housing groups...Plan is adopted. The existing properties within the cluster or housing group should be well related to each other...cluster or group, or the development should contribute towards establishing cohesiveness of the existing group i.e., through infill development."

The Council does not believe that there is a need to reduce the scale of development from 3 homes to 1 or 2 homes during the Plan period. The PLDP text indicates that 3 homes are the maximum scale of development that could be permitted during the Plan period. In all cases, prospective applicants will have to demonstrate compliance with paragraphs R2.16 and R2.17, as well as, all other relevant policies including, but not limited to, Policy P1 Layout, Siting and Design, E2 Landscape and RD2 Providing Suitable Services. Each planning application is determined on its own merits. No change is required.

The Council agrees that paragraph R2.17 should be modified to read, "The size of a cluster must not exceed...". The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council sees some merit in amending the remaining sentences of paragraph R2.17, however, does not agree with all of the modifications sought by the representee to ensure that the policy provision does not become unworkable and too restrictive. If the Reporter is minded, to make an amendment, then the Council recommend that paragraph R2.17 could be modified to read, "...Larger clusters or housing groups of greater than 15 homes must not be sub-divided. This includes clusters/ housing groups that may comprise two or three individual clusters/ groups situated in close proximity i.e., sharing the same access road. All proposals must...".

Paragraph R2.18 and R2.19 (Employment Proposals)

Paragraph 40 of SPP outlines that to promote a sustainable pattern of development, that development should be situated within or adjacent to settlements (AD0012). Paragraph 40 also highlights that the re-use or re-development of brownfield land should be considered before new development takes place on greenfield sites. The Council believes that existing employment sites (BUS sites) or new sites identified as part of the Plan-making process (opportunity sites for employment uses) should be utilised. There are sufficient employment land opportunities in the accessible rural area associated with settlements without the need to promote further opportunities in the wider countryside. As such, employment uses in the accessible rural area have been restricted to brownfield sites. No change is required.

The Council believes that employment proposals in the remote rural areas should be accessible via different modes of transport in order to prevent unsustainable transport modes such as reliance on private car. No change is required.

The Council confirms that it intends to address Echt and Skene Community Council's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Policy R3 Minerals

General

All policies of the Plan apply in the determination of planning applications, where relevant. Policy R3 would be applicable in determining applications involving renewable energy technologies where borrow pits to provide aggregate are required to facilitate delivery the wider development proposal. No change is required.

The Council confirms that it intends to address Scottish Government's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Paragraph R3.1

Whilst it is stated in paragraph R3.2 that in all cases an Environmental Impact Assessment (previously referred to as an Environmental Statement) is required, but for the avoidance of doubt, the Council agrees that this requirement should be listed in paragraph R3.1. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

At this time, the Council does not believe it appropriate to introduce a requirement for applicants to provide a carbon impact assessment. This is a matter that should be further explored through a future Plan review and following publication of NPF4. No change is required.

Consideration of peat and other carbon rich soils are addressed in paragraph R2.3 and Policy PR1 Protecting Importance Resources. All policies of the Plan apply in the determination of planning applications, where relevant. There is no need to repeat this in paragraph R3.1. No change is required.

Paragraph R3.2

The Council confirms that it intends to address representees comments, including from NatureScot, through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council does not agree that as a matter of course renewable energy developments should be permitted where a significant environmental effect from development is established. Each planning application is determined on its own merits. In such circumstances it would be appropriate to look at other material considerations to establish whether the benefits associated with the proposal override the significant environmental effect as a departure to the LDP. In terms of the PLDP, no change is required.

The Council confirms that it intends to address representees NatureScot's comment, through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council confirms that it intends to address representees Nestrans comment, through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

All policies of the Plan apply in the determination of planning applications, where relevant, including Policy E1 Natural Heritage, paragraph E1.4, and Policy E3 Forestry and Woodland, paragraph E3.3, in respect to consideration of ancient woodland. There is no need to repeat this in paragraph R3.2. No change is required.

Paragraph R3.4

As noted above, all policies of the Plan apply in the determination of planning applications, where relevant, including Policy E1 Natural Heritage, paragraph E1.4, and Policy E3 Forestry and Woodland, paragraph E3.3, in respect to consideration of ancient woodland. There is no need to repeat this in paragraph R3.4. No change is required.

Paragraph R3.5

The Council does not agree that 'where appropriate' should be removed from the first sentence of paragraph R3.5. This wording provides flexibility for the Council to negotiate with relevant parties in agreeing what financial guarantees or legal agreement is appropriate to address sites restoration and aftercare. This will be considered on a case-by-case basis. No change is required.

Policy R4 Hill Tracks

The Council agrees with the minor changes sought by representees to clarify that the policy relates to the development of hill tracks, need to minimise impacts on species and address a typo in paragraph R4.1. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

All policies of the Plan apply in the determination of planning applications, where relevant. Policy R4 would be applicable in determining applications involving renewable energy technologies where the development of hill tracks is required to facilitate delivery of the wider development proposal e.g., to provide access for developments involving wind turbines. No change is required.

Shaping Development in the Countryside Policy Map

The Council acknowledges that the policy map at size A4 is not of sufficient scale to fully distinguish the boundary between the remote and accessible rural areas. The Council did not see a need to include detailed maps as part of the PLDP in the same way as the Council have showed the green belt and coastal zone, for example. Notwithstanding this, an interactive, map based, version of the PLDP, was also available for inspection via the Council's website. This facility enables users of the Plan to "zoom" into the maps to view the detailed boundaries of sites and areas identified such as the rural and accessible rural areas. The Council anticipates making such a resource available upon adoption of the next LDP. No change is required.

Reporter's conclusions:

Preliminary matters

1. Our examination of the proposed plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the provisions of the proposed plan, or which simply make comments that do not seek modifications to the proposed plan. Therefore, unless these relate to an issue which is unresolved, they are not addressed in our conclusions.
2. The examination of matters raised in representations in respect of renewable energy development in the countryside has been undertaken by a reporter who has had no recent involvement in applications for this type of development in Aberdeenshire. The relevant representations are; PP0421, PP0463, PP0589, PP0597, PP0603, PP0640, PP0736 and PP1188.
3. Site-specific matters raised in representations regarding the green belt boundary at Potterton are addressed in Issue 26 (Potterton). Conclusions on policy considerations in general are set out below.

Introduction to Section 7

4. With regard to the introductory paragraph, I consider that it would be helpful to the reader to know that how people travel to access employment, goods and services is an important consideration in the creation of sustainable communities. While the council points to other parts of the proposed plan that set out its aspirations and requirements in this regard, minor modifications to the introductory paragraph to highlight that development in the countryside must be well-connected and make efficient use of public transport and active travel routes, would satisfy the concern raised by the Formartine Rural Partnership. I recommend modifications below.
5. Section 7 of the proposed plan sets out the broad policy approach that is to apply within the countryside including the green belt and coastal zone. The terms of the policies are not directly intended for renewable energy proposals, however, the council has indicated that they would be applied in certain circumstances. For a renewable energy proposal located within the countryside, the green belt and the coastal zone, the policies within this section are intended to be read alongside other relevant policies of the plan, including policy C2: Renewable Energy.

6. A representee has raised a concern that policies in Section 7, if read in isolation, suggest that renewable energy is not supported in the green belt, coastal zone and countryside. In response to a further information request (FIR022), the council indicates that a direction to the climate change policies could be added to the introduction of Section 7. It suggests the following wording: "Some development proposals, such as extracting minerals, need a rural location or can have a significant effect on our landscape, and as such we design policies to tackle these concerns. We consider our policy on wind turbines under the 'Climate Change' section."

7. I conclude that the policies in section 7 are likely to be applicable to renewable energy developments, but alongside other relevant policies, in particular those in section 13 Climate Change. I agree with the council's suggestion to add some text to the introductory paragraph of section 7 as this would ensure users of the plan are aware of the relevant policies in section 13. I do not consider that more detail is required, as suggested in responses from others. I recommend a modification based on the council's wording, but with some minor changes, including to refer to 'renewable energy developments' rather than just 'wind turbines'.

General matters (Renewable Energy)

8. A general point is raised in the representations that policies R1 (Special Rural Areas) and R2 (Development Proposals Elsewhere in the Countryside), should be amended to specifically identify renewable energy proposals as acceptable land uses in these areas.

9. Policy R1 recognises the special nature of the green belt and coastal zone. The green belt is mainly designated around Aberdeen City and defined in the strategic development plan, as an area of countryside where strict planning controls are in place to protect landscape setting, maintain the identity of a place and provide land for recreation. Within the proposed plan, development is restricted in both of these areas to that which is small-scale and meets the types of developments described (in the green belt), or has a clear social, economic or community benefit or locational need (in the coastal zone).

10. Policy R2 allows for a wider range of development opportunities elsewhere in the countryside, providing they are small-scale and consistent with the types of developments listed as suitable in the green belt, or provide certain opportunities for housing and employment.

11. The council states that Scottish Planning Policy does not indicate that onshore renewable energy projects should be permitted in the green belt or coastal zone. I am not aware that Scottish Planning Policy indicates any specific types of locations where such developments should take place. Nevertheless, it allows plans to describe the types and scales of development which would be appropriate in the green belt (paragraph 52), and to identify areas of largely developed coast that are a major focus of economic or recreational activity that are likely to be suitable for further development; areas subject to significant constraints; and largely unspoiled areas of the coast that are generally unsuitable for development (paragraph 89).

12. In the context of the proposed policy framework described above, it is likely that any renewable energy proposal in the green belt would require to be assessed under policy R1. Due to the special characteristics that have led to the designation, the council concludes that there are no appropriate sites for renewable energy technologies in the

green belt. In support of its position, reference is made to Table 1: Spatial Frameworks in Scottish Planning Policy and the areas of significant protection up to two kilometres around identified settlements. Whilst I note the council's position, individual wind farm proposals may be appropriate in Group 2 'areas of significant protection', where any significant effects on the qualities of these areas can be substantially overcome by siting, design or other mitigation.

13. I acknowledge that there might be circumstances where certain renewable energy development could be consistent with the objectives of the green belt. However, the strict planning controls established by the strategic development plan apply equally to any ensuing local development plan policy. In paragraph R1.2, renewable energy is not listed as a type of development that would be permitted in the green belt. Modifications are recommended below (paragraph 18) which would ensure consistent terminology with paragraph 52 of Scottish Planning Policy. Other than this, I find that paragraph R1.2 is broadly consistent with Scottish Planning Policy. Given the strategic policy background set out above, I support the types and scales of development which the council considers would be appropriate within the green belt.

14. I note that paragraph 4.1 in the proposed plan states that 'one policy cannot be applied at the expense of another'. Given the terms of policy C2: Renewable Energy, the approval of wind energy development in the green belt would not be ruled out where consistent with the Spatial Framework for Wind Energy, and where it meets the other terms of the policy. Paragraph 4.1 of the proposed plan recognises that proposals may give rise to potentially conflicting policy considerations and advises that "the vision of the plan should be used to guide granting of planning permission where conflicts arise". Within this context, I do not consider that any specific cross referencing is necessary to establish the policy framework for this to happen.

15. With regard to coastal zones, the council accepts that an argument could be successfully made that a particular renewable energy development might require a coastal location or would provide clear community benefit, and thus meet the terms of policy R1. Given that these statements are already set out within paragraph R1.3, I see no need to amend Policy R1 to specifically refer to such potential. I note also the recommended addition of 'environmental' benefit (at paragraph 27 below) as a factor that could be put forward in the consideration of such development in coastal zones.

16. The council comments that paragraph R2.3 has no exception within it to prohibit other forms of development from being considered. I accept that it is not reasonable to expect all the potential uses in the countryside to be covered by policy R2, and that (according to paragraph R2.1) the primary consideration in the assessment of development proposals in the countryside would be siting and design, not location. Policy C2 would also be a consideration for renewable energy proposals. Again, within the context of paragraph 4.1 of the proposed plan, I see no need to amend policy R2 to address the potential for renewable energy development in the countryside.

Policy R1: Special Rural Areas

17. In response to representations, the council proposes a non-notifiable modification to the first sentence of paragraph R1.1 to clarify that development in the green belt and coastal zone will be restricted to that which is small-scale. A separate representation seeks the removal of the term 'small-scale', as it implies that only small-scale (rather than large-scale) development will be restricted in the green belt and coastal zones. On these

matters, I agree that the first sentence of the paragraph lacks clarity. I also agree that that term 'small-scale' should be removed from the sentence, as some forms of development referred to in policy R1 will be larger than small-scale, for example, certain types of essential infrastructure and/or development identified as a national requirement (as noted in footnote 1) on sites greater than 0.5 hectare. The criteria against which development in the green belt and coastal zone will be assessed, including considerations of scale and form, is set out where necessary in paragraphs R1.2 to R1.5 and accompanying footnotes. I recommend a modification to paragraph R1.1 below.

Paragraph R1.2: Green Belt

18. In terms of the green belt, I find that paragraph R1.2 is broadly consistent with Scottish Planning Policy, paragraph 52. As required, it describes the types and scales of development that would be appropriate within the green belt. However, as noted in representations, it fails to mention essential infrastructure and, in places, uses terminology inconsistent with that found in Scottish Planning Policy. I recommend modifications to address these matters below.

19. A number of representees suggest that the plan should retain the wording of the equivalent policy in the existing local development plan (also R1); believing it to exercise greater control over development in the green belt. However, apart from reference to community infrastructure, I find that the proposed plan addresses all matters considered by the existing plan, albeit they have been reordered and appear under different policy headings throughout Section 7. No modification is required.

20. Homes for Scotland and Gladman consider the terms of policy R1 too restrictive and seek modifications that would allow small-scale housing and housing to meet a shortfall in the effective housing land supply to be developed in the defined green belt and coastal zone, respectively. We have concluded in Issue 5 that there is no requirement for the plan to include a policy to address a shortfall in the housing land supply. While policy R1 does not in itself preclude development in the green belt or coastal zone, it sets out the types and scales of development permissible and the circumstances in which the council would support development. Subject to the recommended modifications below, I consider these to be consistent with Scottish Planning Policy. The criteria for assessing the acceptability of proposals on land other than that allocated for development is set out in policy R2 (Development Proposals Elsewhere in the Countryside) and Section 9 (Shaping Places) of the proposed plan. Accordingly, I do not consider Section 7 of the proposed plan should be modified in response to the representations.

21. In response to other matters, the preamble to Appendix 4 (green belt boundaries) adequately sets out the purpose of the green belt; essentially it is a means to direct development to the most appropriate locations. I do not agree that the policy requires to be modified to express the wider social and environmental benefits of green belt designation, as suggested by the Association for the Protection of Rural Scotland. The policy's support for development associated with woodland and forestry is also appropriately expressed and does not require to be modified, as suggested by The Woodland Trust Scotland. Nor do I consider that the words 'permitted' should be replaced with 'supported' or 'associated' replaced with 'required', as suggested by RSPB Scotland. The term 'permitted' is used throughout the proposed plan and is commonly used in other plans, and 'associated' is used in Scottish Planning Policy. On RSPB Scotland's wider point, as the council notes, the proposed plan requires to be read as a whole. As such, I do not consider it necessary to repeat other policy considerations

pertinent to the assessment of proposals located within the green belt.

22. The proposed plan's position on the development of huts for leisure accommodation in the green belt is clearly expressed in the second bullet point of paragraph R1.2; it prohibits the development of single huts not associated with a tourist proposal. In its representation, Scottish Land and Estates appears to have misread the statement as offering support for such development and urges the council to extend its support for development incorporating multiple huts. However, in the interests of avoiding sporadic unsupported development throughout the green belt, I consider the council's position entirely reasonable and do not agree that the proposed plan should be modified as sought. We deal with representations in respect of tourist facilities in Issue 3 (Shaping Business Development) of this report.

23. The suggestion by Elgin Energy EsCo to add a reference to 'appropriately sited renewable energy installations' is not supported by the council on the basis that if a proposal is a national priority or satisfies an established need to be in the green belt then it would meet the terms of the policy. I agree with this general premise (noting the recommended modifications to this bullet point addressed in paragraph 18 above) and do not consider that any modifications are necessary in response to this representation.

24. The fourth bullet point of paragraph R1.2 supports the intensification of established uses in the green belt, subject to development being of an appropriate scale and form. An accompanying footnote adds, such development will generally be an extension of an existing non-domestic building or ancillary use rather than its replacement. The footnote also directs the reader to relevant development management advice found elsewhere in the proposed plan. The Bennachie Community Council believes that the information contained in the footnote should be incorporated into the policy advice to more clearly define the type and form of development that would be acceptable in the green belt. I consider that such a modification would make the policy unnecessarily cumbersome, particularly as the relevant parts of the proposed plan to be considered are clearly noted in the footnote. No modifications are required.

25. As with other matters addressed in paragraph R1.2, I find that the policy provides high level advice on the types and scales of development considered appropriate in the green belt and directs the reader, where necessary, to more detailed advice found elsewhere in the plan. Furthermore, as noted by the council, the wording of the fourth bullet point is consistent with paragraph 52 in Scottish Planning Policy. With regard to the introduction of the word 'small', as suggested by the Echt and Skene Community Council and others, I do not consider it necessary to add a further qualification to the statement; the use of the phrase 'suitable scale and form' is sufficient to convey to the reader the position of the council.

26. A representation seeks the removal of the fifth bullet point from paragraph R1.2; believing it overly prescriptive about the type of businesses that might benefit from its support. It adds, the council would nevertheless retain control over what is developed through its landscape, amenity and design policies. Firstly on this matter, I find that should new residential accommodation be considered necessary to support an existing primary industry in the green belt, for example, agriculture, it would be supported by paragraph R1.2. However, the wording of the fifth bullet point provides further information on the particular circumstances in which the council considers that residential accommodation would be appropriate. I do not consider the removal of the fifth bullet

point would be justified on the basis that accommodation associated with other occupations should also be supported. No modification is required.

Paragraph R1.3

27. In response to a representation, the council proposes to add the word 'environmental' to the list of considerations that may justify development within the coastal zone as a non-notifiable modification. I agree that effects of development on the environment is an important consideration and recommend a modification below.

Paragraph R1.5

28. A representation seeks an additional bullet point which would allow non-permanent renewable energy development in the green belt and coastal zone. I agree with the council that this amendment is not necessary as any such development would be considered under the criteria in R1.2, paragraph R1.3 and policy C2 (Renewable Energy). As I have already indicated, the scenario in which a proposal is contrary to one policy but accords with another is addressed in paragraph 4.1 of the proposed plan. In the context provided by Circular 6/2013, I do not consider that the plan is insufficient or inappropriate in how it deals with this matter. No modification is required.

Appendix 4: Boundaries of the Green Belt

29. Representations seeking amendments to the boundaries of the green belt are addressed in the relevant settlement based issues elsewhere in this report, including issues 26 (Potterton); 37 (Westhill) 42 (Drumoak); 44 (Newtonhill); 45 (Portlethen and Portlethen Village); and 47 (Other settlements in Portlethen and Stonehaven Strategic Growth Area).

Appendix 5: Coastal Zone

30. Representations seeking amendments to the boundaries of the coastal zone are similarly addressed in the relevant settlement based issues elsewhere in this report, including issues 18 (Peterhead); 28 (Balmedie); and 47 (Other settlements in Portlethen and Stonehaven Strategic Growth Area).

31. A concern is expressed in a representation that a review of the coastal zone policy areas should have been undertaken as part of the preparation of the proposed plan. While no specific modification is sought, it is suggested that the policy requirements should be relaxed until a review is undertaken. I note that the council accepts that a review of the coastal zone policy areas is due. To this end, it has formally agreed to undertake a review, including a public consultation exercise, in time to inform a mid-term review of the plan. With regard to the application of the policy in the context of the existing plan, this is a matter for the council in its assessment of individual proposals. No modification is required.

32. A representation claims that the sequence of coastal zone maps from Inverbervie to the south is incorrect. I note that the maps are intended to be read from left to right, meaning that the numbering may appear out of step. However, the maps are correct geographically and annotated appropriately on the key map. No modification is required.

Policy R2: Development Proposals Elsewhere in the Countryside

General matters

33. NHS Grampian does not seek a specific modification to policy R2. As such, there is no requirement for me to address the matters raised concerning public transport and access to health and social services. However, the council has explained that the allocation of sites promoted for development in the proposed plan have been subject to formal strategic environmental assessment. It also describes the factors that have influenced its choices. Furthermore, in consultation with NHS Grampian, the settlement statements indicate, where necessary, the need for development proposals to be supported by new or improved health and social care facilities, including sites where developer contributions will be sought. On this basis, I am satisfied that the council has carefully considered this matter and addressed it appropriately.

34. Despite a suggestion that the term 'elsewhere' should be replaced in the title of policy R2 with one that conveys that rural areas that lie beyond the green belt and coastal zone are of value, I agree with the council that the policy is appropriately titled. The title simply indicates that without the need to exercise control over the location of some forms of development, the primary consideration will be to ensure that it is appropriately sited and designed. It does not suggest that the countryside beyond these areas is regarded as being less important. No modification is required.

35. A representation argues that the terms of paragraphs R2.1 to R2.3 are too restrictive and should be amended to consider development that meets an identified need rather than being assessed against the same considerations as apply in the green belt and/or special rural areas. To do so, it adds, sets an exceptionally high barrier to new development. I have considered the terms of policy R2 as a whole and agree with the council that for the following reasons, this is not the case. Firstly, while the policy does not rehearse the terms of policy R1 in full, it makes clear that development proposals which satisfy the requirements of policy R1 will also be acceptable in principle in the countryside beyond the defined green belt and coastal zone. Secondly, it indicates that the siting and design of new development will be the primary consideration in the assessment of proposals, not its location, subject to compliance with other relevant policies. Thirdly, from paragraph R2.3 onwards, it describes development types that may be allowed within prescribed circumstances, including the redevelopment of brownfield land and the small-scale, or organic growth, of settlements. In short, I find policy R2 to be broadly consistent with Scottish Planning Policy and principles that seek to promote rural development. I address modifications sought by others to aspects of policy R2 below.

Redevelopment of rural brownfield sites – paragraphs R2.4 – R2.10

36. I agree that it is for the council to define what it regards as brownfield land for the purposes of the plan. The glossary to the proposed plan notes that, outwith settlements, land and buildings that are vacant, redundant or derelict are considered to be brownfield land. It also lists land uses and types of buildings which are excluded from its definition of brownfield land, including that last used for storage purposes. In a rural context, this includes silage clamps, other specialised agricultural structures, hard-standings and agricultural buildings constructed using modern materials.

37. However, as noted in representations, the council's definition of brownfield land could be interpreted as excluding former non-agricultural storage and distribution uses located in the countryside. Such land, it is claimed, might reasonably be regarded as 'brownfield' and suitable for redevelopment, subject to compliance with other relevant

planning policies. I do not consider that recognising such land as 'brownfield' would undermine the council's approach to development in the countryside, particularly given the considerations set out in policies R1 (Special Rural Areas) and R2 (Development Proposals Elsewhere in the Countryside), including paragraphs R2.4 to R2.10. The development of such land could also deliver environmental and visual improvement in the countryside, as sought by the council. Accordingly, I recommend that the glossary definition of 'brownfield development' is modified to clarify that reference to the exclusion of land used for storage purposes relates to that once associated with agricultural operations.

38. In recommending that the brownfield land definition is modified, I also address the suggested change sought by the Echt and Skene Community Council, which seeks the removal of the word 'being' on the ninth line of text to clarify that land presently used for storage purposes is not considered 'brownfield'. I agree with the representee that land presently being used for storage purposes cannot be regarded as vacant, redundant or derelict and, as such, considered 'brownfield' land. A modification is recommended on this matter.

39. The proposed plan defines 'naturalised' land as being vacant or derelict where there is no indication of its former use. In such circumstances, the proposed plan makes clear that the land should not be regarded as 'brownfield' and available for development in principle. I note that a footnote and glossary definition seek to provide clarity on the meaning of the term. The council's policy position on this matter is considered overly restrictive by some and not restrictive enough by others.

40. I do not consider the council's position unreasonable on this matter; not every vacant site in the countryside is suitable for redevelopment, particularly those that have been vacant for a considerable period of time and mask former uses. Nor does every vacant site have nature conservation interest despite its rewilding. I do, however, agree that the phrase 'significant use in nature conservation' in the footnote is somewhat subjective and should be modified to note that the nature conservation interest of a site should be informed by an ecological survey. I also agree that the glossary definition of 'naturalised' should be modified to address Bennachie Community Council's observation that a naturalised site may nonetheless contain remnants of former buildings, which could provide valuable habitat for invertebrates. In the absence of ecological surveys, I do not agree that such sites should be covered by a nature conservation designations. I recommend modifications to the footnote on page 32 and glossary below in response to representations. It should be noted that the recommended modifications to the glossary set out below are in addition to those recommended in Issue 13 (Glossary).

41. In response to a representation seeking a definition of the term 'significant' in paragraph 2.4, the council proposes a modification to delete the word. As such, the plan would support appropriate development of brownfield land that would deliver environmental and visual improvements, rather than that which would only deliver 'significant' improvements. I agree that the use of the term 'significant' is subjective and unnecessary and I recommend a suitably worded modification below.

Paragraph R2.6

42. Echt and Skene Community Council is concerned that paragraph R2.6 could be read as offering support to the conversion of a wider range of buildings than intended. The council has suggested a modification to the text of paragraph R2.6 to clarify the

circumstances in which it will support the conversion of redundant or derelict buildings on brownfield sites to small-scale residential use. I agree that the additional clarification would be appropriate to explain the council's intentions and recommend a modification below.

43. Bennachie Community Council seeks a further modification to the text to ensure that land adjacent to a brownfield site is not included in a proposal in order to create a larger site that would attract support for small-scale residential development in the countryside. As the council notes, paragraph R2.10 makes clear that while a development proposal does not necessarily need to replicate the existing footprint of the building(s) that once occupied a site, it must be contained within a defined curtilage. Accordingly, I agree with the council that it is not necessary to further modify the text of the paragraph.

Paragraph R2.7

44. Paragraph R2.7 promotes a planned approach to rural brownfield development. As such, it requires comprehensive proposals to come forward for large brownfield sites (sites greater than 0.5 hectares). It advises against the sub-division of such sites and their incremental development. Despite concerns expressed in representations that such an approach is too restrictive and that the development of such sites should first be promoted through an allocation in the development plan, I consider the council's approach to be reasonable. Depending on the characteristics of a site, development proposals could take the form of phased development over time and be guided by a site brief and/or masterplan, which could be subject to public consultation. No modification is required.

Paragraph R2.8 and R2.9

45. Homes for Scotland considers that the policy tests set out in paragraphs R2.8 are unreasonable. It argues that the wording is inappropriate and incompatible with the presumption in favour of sustainable development, as described in Scottish Planning Policy. It also suggests wording that could replace the first sentence of the paragraph to address its concerns. I agree with Homes for Scotland on this matter; the sentence includes a phrase that is inappropriate in a planning context and incompatible with the policy principles set out in Scottish Planning Policy, paragraph 29. I note that the suggested alternative wording is acceptable to the council. I also find the replacement wording to be consistent with Scottish Planning Policy and that it succinctly describes the circumstances in which more than three houses may be acceptable on larger brownfield sites. I recommend a modification below.

46. Homes for Scotland objects to the cap of seven dwellings on larger brownfield sites, while Bennachie Community Council consider that the maximum number of dwellings should be three, as in other rural locations. On this matter, I consider that the imposition of a cap is somewhat arbitrary; if the principle of development is acceptable and would deliver environmental and visual improvements, the capacity of the site should be informed by site characteristics and assessed against relevant development plan/development management considerations. As the council notes, it is a policy that it does not expect to be cited frequently and the provisions of policy P1 (layout, siting and design) would prevent any potential for overdevelopment of a site. Accordingly, I consider that reference to a cap on the level of development should be removed. A modification to this effect is recommended.

47. While it is always open to landowners and developers to formally engage with the

local development plan preparation process to promote sites for development, I consider that it is unreasonable to state that the development of large brownfield sites capable of accommodating eight or more dwellings should only be considered through this process, as implied in paragraph R2.9. The time taken to prepare a local development plan can be lengthy and the council has at its disposal a suite of established policies to assess the acceptability of such proposals through a planning application. In addition, as Homes for Scotland notes, long periods of vacancy can add further costs to the remediation of sites. For these reasons, I consider that the paragraph R2.9 should be modified to acknowledge that sites may come forward outwith the plan process and will be considered on their individual merits.

Paragraph R2.10

48. Paragraph R2.10 provides a range of examples that might indicate that a building once occupied a site. A footnote and an entry in the glossary clearly define the meaning of 'curtilage'. As such, I do not consider that the list of examples requires to be expanded or the meaning of 'curtilage' further explained. No modification required.

Organic growth of settlements – general (paragraphs R2.11 to R2.14)

49. The proposed plan adopts a criteria-based approach to the small-scale, or organic, growth, of settlements. In the absence of a list that identifies settlements which could benefit from the policy, I consider this an entirely appropriate approach. However, as noted by Homes for Scotland and Gladman, the policy includes the clause 'where a particular need for development has been established by the planning authority' which does not appear to be based on any formal assessment of need. Furthermore, the representees add that an assessment of need is not solely a matter for the council. Without a clear explanation of how the planning authority, or any other party, would establish whether there is a need for development, I agree that the phrase should be removed from paragraph R2.11. Also, as I note above, I consider the phrase 'beyond all reasonable doubt' to be inappropriate in a planning context and should also be removed from the paragraph; the paragraph would lose none of its intent as a consequence. The council acknowledges that the wording of the paragraph could be clearer and more succinct. I recommend suitably worded modifications to address these matters below.

50. A considerable number of representations seek the inclusion of settlements in a yet to be prepared planning advice note; the benefit of inclusion being that the small-scale growth of identified settlements could attract the proposed plan's support in principle. A further representation considers that a list of suitable settlements should be included in the proposed plan itself, as is the case with the existing plan. While the council has yet to undertake an assessment, it has confirmed that all settlements in Aberdeenshire will be considered for inclusion in the preparation of the planning advice note, including those identified in representations, namely; Bridge of Canny, Birsemore, Cluny, Crathes, Inchmarlo, Hirn, Lethenty, Lyne of Skene, Tillybirloch, Wester Ord and Woodhouse of Durris. It also confirms that the list will be kept under review during the lifetime of the proposed plan. In light of the council's intention to prepare a planning advice note, no modification is required in response to representations on this matter.

51. It is claimed that the preparation of a list of settlements in which small-scale development would be acceptable in principle runs counter to the decision taken by the council's Infrastructure and Services Committee on this matter. I have reviewed the decision of the committee, as set out in Issues and Actions Paper, and note that the

elected members supported the criteria-based approach to the small-scale growth of settlements *and* the preparation of planning advice to aid the interpretation of the policy and list settlements where 'organic growth' would be acceptable in principle. The proposed plan has been prepared in accord with the decisions of the committee. No modification is required.

52. With regard to the criteria and the suggestion that the scale of development allowed under the policy should be increased, I note that the representation is made in respect of a particular site in Lyne of Skene and not to the policy itself. As such, there is no requirement for me to address this matter under this issue. However, I note that the provisions set out in paragraph R2.13 are more generous than those of the existing plan.

Paragraph R2.12

53. I agree that not all settlements will be able to grow organically, hence the preparation of criteria and planning advice to indicate those with potential to do so. Also, given the nature of organic growth, it cannot take place in settlements where land has been allocated for development. On this basis, I do not consider the terms of the policy overly restrictive nor inconsistent with policy principles of Scottish Planning Policy 2014. No modification is required.

Paragraph R2.13

54. NatureScot and others seek a modification to paragraph R2.13 to replace the phrase 'footpath connections' with "paths and/or active travel routes". The modification sought is the same as that requested in response to Issue 3 (Shaping Business Development). I agree that the suggested phrase is more inclusive and encapsulates a wider range of connections that might formed. I note that the council is content to make the requested change. I recommend a modification below.

Paragraph R2.15

55. A representee considers the terms of the policy too restrictive. However, should its application be broadened, as suggested, I agree with the council that its intent would be undermined and could result in sporadic development in the countryside. As the council notes, development other than that required to accommodate a retiring farmer on an agricultural holding could be considered on its own merits. To add clarity, the council suggests that a footnote could be added to page 34 to clarify that only one dwelling per farm enterprise would be allowed under the policy, which I consider would be helpful. I recommend a modification below.

Extensions to clusters/housing groups - general (paragraphs R2.16 and R2.17)

56. The council explains that the defined 'accessible rural' and 'remote rural area' shown on page 37 is based on the Scottish Government's 6-fold Urban/ Rural Classification (2016). A remote rural area is defined as an area with a population of less than 3,000 people and with a drive time of over 30 minutes to a settlement of 10,000 or more. I agree that use of the classification model ensures a consistent approach to the definition of 'accessible rural' and 'remote rural' areas in Aberdeenshire and is a reasonable basis on which to apply policy in these areas. Accordingly, I do not agree with the suggestion that the boundaries should be re-aligned to effectively remove the 'remote rural area' designation from the proposed plan. Neither do I agree that Alford should be excluded from the 'remote rural area' designation and considered as part of the 'accessible rural

area'; thus allowing for greater development opportunity. Furthermore, as the council notes, the application of a more restrictive approach to new housing development in accessible rural areas is consistent with paragraph 81 of Scottish Planning Policy.

57. I agree that the precise boundaries of the areas shown on the 'development in the countryside' map are difficult to distinguish and I would encourage the council in the preparation of the adopted plan to use a map, or maps, that show the boundaries more clearly. While I accept that an online version of the map exists that allows users to zoom-in to particular areas to establish actual boundaries, not everyone has access to the required technology or the know-how to be examine the proposed plan in this way.

58. The meaning of the terms 'clusters' and 'housing groups' are clearly set out in paragraph R2.16. Furthermore, the glossary contains a definition of 'settlement'. Read together, the distinction between a cluster of properties and a settlement for the purposes of policy application is readily apparent. No modification is required.

59. Paragraph R2.17 allows for a maximum of three houses to be built during the plan period. A footnote explains what this could mean for housing clusters or groups of different sizes. A representee seeks a modification to reduce this number to two, claiming that a potential 60% increase in the size of a small group houses is not justifiable. In effect, this could mean a group of five houses expanding to eight houses. I do not consider such an increase excessive, nor would it be inconsistent with the Scottish Planning Policy, paragraph 83. No modification is required.

60. The council comments that other policies in the plan cover the impact of development on the setting of a listed building. Whilst I agree that this is an important consideration, it would not be appropriate to refer to one particular environmental asset in paragraphs R2.16 and R2.17, when there are many others that could also potentially be affected. Paragraph P1.5 in the proposed plan makes clear that all policies in the plan can apply. No modification is required.

61. Representees suggest a range of changes to paragraphs R2.16 and R2.17, some of which the council is inclined to accept, subject to my consideration. The changes sought include clarification of the terms used, the number of dwellings permitted and the form that new development should take. Changes are also sought to improve the legibility of the paragraphs. The council has provided alternative text that might be incorporated into the proposed plan. Generally, I agree with the council's suggested alternative wording to address the concerns of representees. My recommended modifications below are based on the council's suggested wording, subject to minor grammatical changes.

Employment proposals

62. It is claimed that paragraph R2.18 is too restrictive, insofar as it only applies to brownfield sites in settlements located in accessible rural areas. Representees argue that its application should be broadened to take advantage of economic development opportunities on all sites as they arise, whilst giving priority to brownfield sites.

63. I find that the council's approach to this matter is consistent with Scottish Planning Policy; to encourage the re-use and development of sites within settlements for employment uses, it seeks to limit such development outwith settlements in the accessible rural area to brownfield sites (Scottish Planning Policy, paragraphs 40 and 81 refer). Furthermore, as the council notes, Appendix 1 (Employment Land Allocations), Table 2, indicates that a significant amount of employment land has been allocated to

meet local growth needs throughout Aberdeenshire. In this context, I do not support the suggestion that the application of paragraph R2.18 is broadened to include land other than brownfield sites outwith settlements. No modifications are required.

64. In remote rural areas, small-scale employment proposals are required to be accessible by footway/cycle infrastructure and/or public transport. This approach is consistent with Scottish Planning Policy, paragraph 83. Whilst such requirements could render some proposals unacceptable when assessed against the policies of the plan as a whole, I do not consider them unrealistic, as suggested. As the council notes, it is necessary to ensure that sites are accessible by a range of transport modes in order to reduce reliance on private cars. No modification is required.

65. Echt and Skene Community Council suggests that paragraph R2.19 should be modified to state that its provisions apply in all rural areas. It further suggests that this is best achieved by amending the first sentence and adding a new paragraph immediately after. I agree that the provisions of paragraph R2.19 should apply to all employment proposals promoted in rural areas outwith settlements. I recommend a modification below.

Policy R3 Minerals

General matters

66. I note the concerns raised in the representations that some aspects of Policy R3 may not be appropriate to renewable energy development. I also note, however, that the council expects Policy R3 to be applied (and this would include applying just relevant aspects), only when it is appropriate to do so. Paragraphs R3.1 to R3.5 outline the matters that are likely to be relevant to the consideration of all minerals development. Some of these matters could equally apply, for example, where borrow pits are required to supply aggregate in relation to a wind farm. Therefore I see no justification to modify the policy to specifically exclude borrow pits in these circumstances.

Paragraph 3.1

67. Paragraph R3.1 states that the council will only allow minerals development where sufficient information has been provided to enable the full likely effects of a development to be assessed. It also identifies the information that will be required as a minimum to support an application. Whilst the list is not exhaustive, RSPB Scotland would like to see the requirement for environmental and carbon impact statements added to the list. It also seeks the addition of a sentence to state that new commercial peat extraction sites will not be permitted.

68. I note that paragraph R3.2 states that in all cases an environmental statement will be required to support a minerals application. However, this requirement is not included in the list at paragraph R3.1. The council is content to modify paragraph R3.1 as suggested by adding 'environmental impact assessment' rather than 'environmental statement' to the list; which, as noted by NatureScot, is the term used in the Town and Country Planning (Environmental Impact Assessment) (Scotland) Regulations 2017. I agree that the requirement for an 'environmental impact assessment' should be added to the list, particularly given the range of environmental considerations such assessments generally address, including impacts on carbon rich soils. In the interests of consistency, I also agree that the term 'environmental statement' should be replaced with 'environmental

impact assessment'. I recommend modifications below.

69. The council considers that it would be inappropriate, however, to add 'carbon impact assessment' to the list and suggests that this is a matter best left until the National Planning Framework (NPF4) is published. Notwithstanding the publication date of NPF4, I note that paragraph R3.2 indicates that an environmental statement (modified to read environmental impact assessment) lodged in support of an application is required to consider disturbance of carbon rich soils, among other things. A footnote clarifies the definition of carbon-rich soils (see paragraph 70 below). On the basis that the potential for a minerals development to disturb carbon-rich soils would form part of an environmental impact assessment, I consider that the concerns of RSPB Scotland would be sufficiently addressed by the proposed plan, subject to the modifications recommended below. Accordingly, I agree with the council that it is not necessary to modify paragraph R3.1 further in this regard.

70. As I note above, NatureScot seeks a modification to footnote 10 to align the definition of carbon-rich soil with that used in its 2016 mapping exercise. The council is also content to modify the proposed plan in this regard. In the interests of accuracy and consistency, I agree that the definition should be modified as suggested.

Paragraphs R3.2 – R3.4

71. Paragraph 3.2 requires the environmental statement (environmental impact assessment) that accompanies a minerals development proposal to show acceptable environmental impacts by addressing a number of considerations. The representations highlight that a significant effect in environmental impact assessment terms does not make a proposal unacceptable in land use or policy terms; the decision maker will need to consider the effects as part of the wider planning balance. The council's response appears to agree with this position, acknowledging that in each case it would be appropriate to look at the benefits of a proposal alongside the significant environmental effects.

72. I consider that paragraph R3.2, as worded, does not allow for a balancing of planning considerations, as it requires that an environmental impact assessment demonstrates acceptable environmental impacts in all cases. The representations are not seeking, as a matter of course, that renewable energy developments should be permitted, but that in some circumstances it may be that development would have a significant environmental effect, but overall that this might be acceptable.

73. Modifications are recommended in paragraph 68 above to insert a new bullet point in paragraph R3.1 requiring environmental impact assessment to support applications for minerals development. This would negate the need for a reference to such in paragraph R3.2, and remove any suggestion that a proposal would routinely be regarded as unacceptable if significant environmental effects are concluded. Therefore, I recommend a modification to R3.2 to remove the first sentence.

74. Nestrans considers that the transport impacts of a minerals development also require to be assessed as part of environmental impact assessment and seeks a modification to the bulleted list at paragraph R3.2 to this effect. The council is agreeable to the suggested modification. I also consider that it is reasonable for an applicant to assess the transport impacts of its proposal in an environmental impact assessment. I recommend a

modification below.

75. Similarly, The Woodland Trust Scotland seeks a modification to paragraph R3.2 to indicate that the loss of high quality Ancient Woodland is unacceptable, as it cannot be replaced. In response, the council notes that a planning application would be assessed against the policies of the proposed plan as a whole, including policies E1 (Natural Heritage) and E3 (Forestry and Woodland). As such, it argues that it is not necessary to repeat relevant considerations of section 10 (Natural Heritage and Landscape). I agree with the council on this matter. In addition to the provisions of Section 10 of the proposed plan, the list of considerations that an environmental impact assessment would be required to address includes the effects of minerals development on natural heritage, habitat and biodiversity, landscape and visual impacts. Also, I note that the map on page 78 (safeguarding resources) of the proposed plan identifies areas of Ancient Woodland. I consider that such considerations address the concerns of The Woodland Trust Scotland. My conclusions on this matter apply equally to The Woodland Trust Scotland's comments in respect of paragraph R3.4, which relates to an entirely different matter. No modifications are required.

Paragraph 3.5

76. RSPB Scotland seeks a modification to remove the words 'where appropriate' from the beginning of paragraph R3.5. It adds, in all cases financial guarantees are required to ensure that agreed mitigation, site restoration and habitat enhancement is delivered. Without stated criteria to indicate when it would be appropriate or not to seek a financial guarantee, the council's position on this matter is unclear. The council argues that the proposed wording provides flexibility to address site restoration and aftercare issues on a case-by-case basis.

77. I agree with the council on this matter. The mechanisms promoted by applicants to guarantee the availability of funds to cover costs associated with site restoration and aftercare vary, as do the responses of councils to individual proposals. These are matters discussed in the context of individual planning applications. I consider that it would be inappropriate for the plan to prejudge how such matters should be addressed. It is sufficient for the proposed plan to indicate that financial guarantees may be required. No modification is required.

Paragraph R3.9

78. To accord with paragraph 238 of Scottish Planning Policy, the Scottish Government states that the policy R3 should contain a statement regarding the maintenance of a minerals landbank, indicating that the plan has identified at least ten years of construction aggregate. The council is content to modify the proposed plan in this regard and proposes a modification to paragraph R3.9. I agree that the proposed plan should be modified to accord with Scottish Planning Policy. A modification based on the council's suggested wording is set out below.

Policy R4 Hill tracks

79. Representations seek clarification that policy R4 would not apply to renewable energy developments. I note that onshore wind farms can involve extensive networks of tracks associated with construction and maintenance. As the impacts of such tracks would require to be considered in the assessment of wind farm or other renewable energy

proposals, there is no justification to modify policy R4 to exclude these types of development.

80. Representees seek modifications to paragraph R4.1 to clarify its intended application. The council has suggested changes, which I consider would provide the clarity sought by Paths for All, SEPA and the RSPB Scotland. I recommend a modification below.

Shaping Development in the Countryside Policy Map

81. I address the legibility of the map at paragraph 57 above.

82. The council proposes an amendment to the green belt boundary at Blairs. It intends to do so through a series of non-notifiable modifications to the Shaping Development in the Countryside Policy Map (page 37), Appendix 4 Key Map (page 116) and Appendix 4 Green Belt Map 7 (page 123); each of which show the same settlement/ site at different scales. The proposed amendment is required as a consequence of extending site OP1, Blairs College Estate (PP0445) to include plot 22 lying to the west of Burnside Cottages. This matter is address in Issue 49. In light of the recommendation to amend the boundary of site OP1 at Blairs, I agree that the green boundary should be amended accordingly. I recommend modifications below.

Reporter's recommendations:

Modify the local development plan by:

1. In the introductory paragraph to Section 7 on page 31, replacing the first sentence with: "We want to create a welcoming approach to development in the countryside that meets local needs, encourages prosperous well-connected sustainable communities and businesses, and is accessible by public transport and active travel routes, while protecting and improving the quality of the environment."

2. Adding the following sentences to the end of the introductory paragraph to section 7 on page 31:

"Some development proposals, such as extracting minerals, need a rural location or can have a significant effect on our landscape, and as such we design policies to tackle these concerns. We set out our policy on renewable energy developments under Section 13 Climate Change."

3. Replacing the first sentence of paragraph R1.1 on page 31 with:

"In order to safeguard the special nature of the green belt and coastal zone, development opportunities will be restricted and subject to the considerations set out in paragraphs R1.2 to R1.5."

4. Amending the third bullet of paragraph R1.2 on page 31 to read:

"• development meeting a national requirement or established need, if no other suitable site is available;"

5. Adding the following new sixth bullet point to paragraph R1.2 on page 31:

"• essential infrastructure such as digital communications infrastructure and electricity grid connections."

6. Adding 'environmental' to the first sentence of paragraph R1.3 on page 32 so that the

sentence reads:

“In the coastal zone development must require a coastal location or there must be clear social, economic, environmental or community benefits arising.”

7. Deleting the words ‘a significant’ from the first sentence of paragraph R2.4 on page 32 and adding the word ‘an’ so that the sentence reads:

“Appropriate development will be welcomed on brownfield sites that bring an environmental and visual improvement.”

8. Within the Glossary on page 1173, adding the word ‘agricultural’ and deleting the word ‘being’ from the third sentence (presently the ninth line of text) of the definition of Brownfield Development/ Land/ Sites (under Policy R2) so that the sentence reads:

“Excluded are private and public gardens, domestic garages, sports and recreational grounds, woodlands and amenity open space, agricultural buildings or land used for storage purposes e.g. silage clamps or other specialised agricultural structures, ...”

9. Amending footnote 4 at the bottom of page 32 to read:

“Naturalised land is that which has been previously developed but is no longer regarded as ‘vacant’ due to its nature conservation interests, as demonstrated in an ecology survey.”

10. Within the Glossary on page 1177, adding the words ‘including any remnants of previous development’ to the second sentence of the definition of ‘Naturalised Land’ so that the sentence reads:

“The land, including any remnants of previous development, has reverted to a natural state or the site appears to have blended back through a degree of vegetation into the surrounding landscape.”

11. Replacing paragraph R2.6 on page 32 with:

“We will permit the small-scale development of brownfield sites that involve the conversion or replacement of a redundant or derelict non-domestic building or the redevelopment of vacant land.”

12. Replacing the first sentence of paragraph R2.8 on page 33 with:

“Proposals for more than three new homes on larger rural brownfield sites will only be permitted where a larger development can be accommodated on the site and the scale of development proposed will not cause adverse social or environmental impacts.⁵”

13. Replacing paragraph R2.9 on page 33 with:

“Large brownfield sites capable of accommodating eight or more homes should be promoted through an allocation in the Local Development Plan. However, we recognise that in some cases development opportunities may come forward on large brownfield sites unexpectedly and between reviews of the Local Development Plan. In these circumstances, development proposals will be considered on their individual merits. Development approved under this policy in the remote rural area will be exempt from further development through the housing clusters and groups policy during the plan period.”

14. Replacing paragraph R2.11 on page 33 with:

“We will support small-scale organic growth in identified settlements, subject to criteria listed in paragraph R2.13 below. In all cases, careful consideration of development layout, siting and design will be the primary considerations in determining whether the

growth promoted is acceptable. Organic growth will not be permitted where the development proposed would cause an adverse impact that cannot be suitably mitigated.⁸

15. Adding the following footnote '8' to new paragraph R2.11 on page 33 (amending subsequent footnote numbers accordingly):

"Including considerations set out in other relevant policies in Section 8 (Natural Heritage and Landscape) and Section 10 (Protecting Resources)."

16. Replacing the words 'footpath connections' in the last sentence of paragraph R2.13 on page 34 with the phrase 'paths and/or active travel routes'.

17. With regard to paragraph R2.15, adding the following footnote to page 34 (amending subsequent footnote numbers accordingly):

"One house per farm enterprise will be permitted under this policy."

18. Replacing paragraphs R2.16 and R2.17 on page 34 with:

"R2.16 In remote rural areas only we will also allow development associated with existing clusters or housing groups consisting of 5-14 separate habitable or occupied homes on the date of the Plan's adoption. The existing properties within the cluster or housing group should relate well to each other through their design and layout, for example, by sharing curtilage boundaries. There should be a clear relationship between the cluster/group, or development should contribute towards establishing a cohesiveness among the group, for example, through infill development.

R2.17 Development of a maximum of three homes will be permitted during the plan period. The size of a cluster must not exceed 15 homes⁹. Clusters or housing groups greater than 15 homes must not be sub-divided. This includes clusters/housing groups that may comprise two or three individual clusters/groups situated in close proximity, that is, by sharing the same access road. All proposals must respect the character, layout and building pattern of the cluster or group."

19. Replacing paragraph R2.19 on page 34 with the following two paragraphs (R2.19 and R2.20):

"R2.19 In remote rural areas outwith settlements, small-scale employment proposals will be supported in principle."

"R2.20 Employment proposals outwith settlements in both accessible and remote rural areas should be in keeping with their surroundings and demonstrate that no other suitable site is available. The development must be located on a site that is safe to access via different modes of transport and demonstrate how it could be accessed via footway/ cycle infrastructure and/ or public transport."

20. Adding the following new first bullet point to paragraph R3.1 on page 35:
"environmental impact assessment;"

21. Deleting the first sentence of paragraph R3.2 on page 35 and adding "transport impacts" as an additional bullet point.

22. Replacing footnote 10 on page 35 with:

"Carbon-rich soil is any soil with a surface organic layer (the 'O' horizon as defined by the

Scottish Soil Classification'. In this context, it includes surface layers often referred to as peaty soil and peat soil."

23. Adding the following sentence to the end of paragraph R3.9 on page 36:

"We will seek to maintain a minerals landbank of permitted reserves for construction aggregates of at least 10 years during the plan period, in all market areas through the identification of areas of search."

24. Replacing paragraph R4.1 on page 36 with:

"We will only allow hill track development if the need for the track can be justified, satisfactorily integrated into the landscape and it respects existing and historic pathways. Hill tracks will only be permitted if they minimise environmental impacts, such as soil erosion, impacts on habitats and species, water bodies, and on carbon rich soils and a satisfactory maintenance programme has been agreed with the planning authority."

25. Amending the policy map shown on page 37 to remove plot 22 located to the west of Burnside Cottages, Blair College Estate from the green belt.

26. Amending the key map shown on page 116 of Appendix 4 to remove plot 22 located to the west of Burnside Cottages, Blair College Estate from the green belt.

27. Amending the green belt map 7 shown on page 123 of Appendix 4 to remove plot 22 located to the west of Burnside Cottages, Blair College Estate from the green belt.

Provision of the development plan to which the issue relates:

Policy H1 and adequacy of the housing land supply

Planning authority’s summary of the representation(s):

General

An additional sentence should be added to explain that it is important that housing is provided in locations where it is needed, and where people wish to live (PP1217 and PP1347).

New housing developments should take on board sustainability issues, as well as active travel and public transport to avoid new housing developments forcing car dependency (PP0659).

A representee has questioned why did Aberdeen City have the highest decrease in house prices in March 2020? An assessment of the housing demand model in the light of current issues associated with the economy and the economic viability of allocating additional land is required (PP1130).

The summary explanation of the housing numbers has been relegated to Appendix 6 but

should form part of the LDP within Section 8 due to its importance as a fundamental and instructive component of the Plan (PP0772, PP1197 and PP1306). The representee has included an Appendix (RD0259.A) in their representation which provides further detail to support their position.

Policy H1 Housing Land

Scottish Environment Protection Agency (SEPA) has no comments on Policy H1 and Appendix 6 (RD0214.A). No modification sought (PP1219).

The policy should be based on a model of renovating existing buildings, or building on previously developed land, to reduce resource use. The criteria for developing on greenfield land should be much tighter, such as if there is a human health need (PP0541).

Housing developments should be required to mitigate against impacts from existing businesses, particularly noise from service yard activity and 24-hour operations (PP0558).

Obsolete office and industrial spaces should be transformed into homes. Developers should be encouraged to consider buying existing housing stock with a view to refurbishing and reselling them (PP0105).

Modify the PLDP to ensure major developments provide services and facilities to support that community. The types of development permitted by paragraph H1.2 should include restaurants, cafes, and other developments providing services to the residents (PP0733).

There is no provision in the Proposed Local Development Plan (PLDP) to support housing suitable for older age groups in private sector housing to address a national problem. There are no specific allocations in the PLDP supporting the delivery of such homes and the private housing market is not delivering these in new development. New market housing in developments is not required to provide homes specifically to address the increasing needs of the growing elderly population. The representee has included an Appendix (RD0228.D) in their representation which provides further detail to support their position. (PP1244).

While there is support in the PLDP for self-build housing, there is no particular policy support or significant allocations for self-build housing in the PLDP and some sites would be appropriate for this kind of development (PP0580). Infrastructure costs will preclude self-build on some sites (PP1061 and PP1113). A representee has included an Appendix (RD00085.A) in their representation which provides further detail to support their position (PP0580).

There has been no assessment on the impact of new development on the existing housing stock, particularly on property values (PP0105). In some locations (Balmedie, Blackdog, Ellon, Inverurie, Chapelton, Banff, Fraserburgh, Banchory, Mintlaw, Peterhead, Turriff and Laurencekirk) there will be significant impacts on health care (PP1222).

The PLDP should give an indication of the circumstances when planning permission can be granted for housing on unallocated sites such as when there is a shortfall in the 5-year housing land supply (PP1209 and PP1348).

Appendix 6 Housing Land Allocations – General

Given the enormous changes in the underlying economy of Aberdeenshire and Aberdeen City that have taken place over the past 2-3 years, the basis of the PLDP is now obsolete, and that housing requirements should not be set for the period 2021-2032 until a proper revision is undertaken based on valid and current data. The numbers in Appendix 6, the Housing Land Allocations are now inappropriate and will result in an oversupply of housing (PP1022).

Windfall sites have been used in the calculation of the effective supply (PP1064 and PP1119).

Appendix 6 is not an accurate summary of supply as shortfalls exist in both Housing market Areas (PP1126). The addition of an additional column to reflect units built by January 2019 would provide a more accurate picture of the number of houses proposed from 2021 onwards. It currently gives a false impression of the scale of proposed development (PP1296, PP1297 and PP1298). There are inconsistencies in the way that completed units have been reported (PP1296). Representees have included an Appendix (RD0251.A, RD0252.A and RD0253.A) in their representation which provides further detail to support their position (PP1296, PP1297 and PP1298).

There are shortcomings in the evidence that the Council has presented in respect of the new housing supply proposed in the PLDP. Further information and justification is needed for all of the components of the housing land supply. It is essential that any sites identified are demonstrably deliverable. The representee has included an Appendix (RD0259.A) in their representation which provides further detail to support their position (PP1306).

Only sites promoted by developers should be promoted as these sites are more desirable and deliverable. The representee has included an Appendix (RD0198.A) in their representation which provides further detail to support their position (PP1132).

Potterton is not within the Strategic Growth Area (SGA) identified in the Aberdeenshire Local Development Plan (LDP) 2017 and inclusion of these sites within that settlement against the SGA allowances is erroneous (PP0695, PP0788, PP0853, PP0886, PP0887, PP1137 and PP1401).

Not enough housing land has been allocated in a range of locations or scales (PP1286 and PP1287). Representees have included an Appendix (RD0241.A and RD0242.A) in their representation which provides further detail to support their position (PP1286 and PP1287).

A large number of representees requested that additional housing sites should be identified and delivered during the Plan period. These vary from being very general in the location of additional allocations, to being site specific. Where representations have been made, with reference to specific sites or settlements, then the specific matters raised have been dealt with within the appropriate Settlement Statement. On a Plan-wide scale a range of reasons for adding housing land to the allocations in Appendix 6 have been given as follows.

Appendix 6 Housing Land Allocations – Differences between the Main Issues Report 2019 and the Proposed Local Development Plan 2020

A different housing allocation strategy was recommended in the Main Issues Report (MIR) with a greater set of housing allocations and sites were removed (PP0593, PP0837, PP1251 and PP1285). Evidence was not presented to show how supply or targets related to each other, and the PLDP shows a reduction of at least 360 homes compared to that proposed at the MIR (PP0591). The surplus in the PLDP is lower than the surplus in the Main Issues Report following the removal of 360 homes during preparation of the PLDP (PP1126 and PP1240). Representees have included an Appendix (RD0089.A, RD0091.A, RD0155.A, and RD0231.A) in their representation which provides further detail to support their position (PP0591, PP0593, PP0837, and PP1251).

The LDP is not fully aligned with the SDP's ambitions or requirements. The representee has included an Appendix (RD0155.A) in their representation which provides further detail to support their position (PP0837).

Some sites were not included in the Main Issues Report (PP1116).

Appendix 6 Housing Land Allocations – Increasing Site Density

The Council's approach to site capacities is inconsistent (PP1306). The Council have increased the site capacities to avoid underdevelopment (PP0694) and inflated the housing land supply (PP1198). This should not have been done (PP1282). The increase in densities used is illogical and inconsistent and is considered inflated to such a level that the allocations could not be delivered (PP0892 and PP1198). Representees have included an Appendix (RD0116.A, RD0213.A and RD0259) in their representation which provides further detail to support their position (PP0593, PP0694, PP1198, and PP1306).

Increases in density are observed to be greater than the bids submitted (PP0892) and without the request or evidence from the site proposer (PP0944), or market testing (PP0694 and PP1132). Infrastructure may constrain the delivery of more dense developments (PP1132). Representees have included an Appendix (RD0089.A and RD0198.A) in their representation which provides further detail to support their position (PP0694 and PP1132).

Evidence should be provided to indicate how sites have been assessed and evidence provided to justify the increase in density (PP0892 and PP1208). There does not seem to be a reliable evidential basis for the calculation of site capacities (PP1349).

The densities proposed will lead to a shortfall in the housing supply (PP1126). Density assumptions may result in sites not being able to be delivered due to conflicts with the Council's policies on ecological, environmental and landscape considerations. The representee has included an Appendix (RD0089.A) in their representation which provides further detail to support their position (PP0694).

New housing allocations should have been made rather than increasing the density of sites (PP1126 and PP1240).

Housing policy should ensure that any planning applications exceeding the approved number of units are rejected (PP0326).

Appendix 6 Housing Land Allocations – Effectiveness, Delivery, and Constrained Sites

The PLDP does not ensure that existing or newly allocated sites are effective and deliverable over the Plan period (PP1248 and PP1276). The principle of removing sites that have not been delivered should be applied consistently across the Rural Housing Market Area (RHMA) (PP1050). There has to be doubt about the effectiveness of some sites (PP0892). Information provided by developers on effectiveness has been taken on trust (PP1197). Long-term constrained sites should not contribute towards the allowance (PP1048, PP1031, PP1055, PP1062, PP1083, PP1102 and PP1120) and do not promote confidence in the area (PP1315). Constrained sites at the base date of the Plan should not count towards the allocations (PP1062, PP1125, PP1126 and PP1240). All identified allocations must be effective or capable of becoming effective within the relevant Plan period (PP1116). All sites have to be deliverable within the Plan period (PP1126). Representees have included an Appendix (RD0195.A, RD0234. and A RD0263.A) in their representation which provides further detail to support their position (PP1125, PP1276 and PP1315).

Evidence of the effectiveness of sites within the context of the tests contained in PAN 2/2010 (paragraph 55) is needed, particularly for those that are currently constrained (PP1306). Only remaining effective units should be allocated in the 2021 LDP (PP1297). Representees have included an Appendix (RD0252.A and RD0259.A) in their representation which provides further detail to support their position (PP1297 and PP1306).

All ineffective sites should be removed unless there is evidence to the contrary (PP1306 and PP1315). Effectiveness and delivery of identified sites has not been demonstrated (PP1306). It is not reliable or able to be scrutinised (PP1197). No programming of sites has been provided (PP1306). Representees have included an Appendix (RD0259.A and RD0264.A) in their representation which provides further detail to support their position (PP1306 and PP1315).

There are shortcomings in the information the Council has presented, which is needed to understand whether the Plan is providing a 5-year effective housing land supply. (PP1306). A clear understanding of how effectiveness has been assessed is required (PP1132). The assessment of effectiveness is inconsistent with the findings of the Strategic Environmental Assessment recording different assessments and conclusions on adjacent sites that exhibit many of the same characteristics and have the same potential impacts (PP0892). There is no justification or detailed information provided to explain why constrained sites are now considered to be effective, contrary to the position at the agreed 2019 HLA (PP1306). There is no justification given for the deliverability of sites or that sites will become effective (PP0892). Appendix 6 is not clear on the circumstances when existing constrained sites may count towards the allowances (PP1306). Representees have included an Appendix (RD0198.A and RD0259.A) in their representation which provides further detail to support their position (PP1132 and PP1306).

Many sites identified in the Plan are identified as constrained in the 2019 Housing Land Audit. The representee has included an Appendix (RD0259.A) in their representation which provides further detail to support their position (PP1306).

Marketability constraints are a feature of a number of sites (PP1030, PP1031, PP1033, PP1035, PP1036, PP1038, PP1040, PP1044, PP1047, PP1048, PP1054, PP1055, PP1056, PP1057, PP1070, PP1071, PP1078, PP1079, PP1080, PP1081, PP1084,

PP1086, PP1087, PP1088, PP1089, PP1099, PP1101, PP1102, PP1105, PP1106, PP1107, PP1109, PP1110, PP1112, PP1113, PP1115, PP1120, PP1306 and PP1412) particularly in the RHMA (PP1048 and PP1070). A representee has included an Appendix (RD0259.A) in their representation which provides further detail to support their position (PP1306).

Lack of developer interest is a constraint on a number of sites (PP1030, PP1031, PP1037, PP1038, PP1040, PP1055, PP1070, PP1077, PP1081 and PP1106).

Infrastructure constraints are a feature of a number of sites (PP1030, PP1031, PP1035, PP1038, PP1042, PP1043, PP1045, PP1046, PP1048, PP1051, PP1057, PP1061, PP1065, PP1070, PP1084, PP1085, PP1086, PP1090, PP1099, PP1104, PP1105, PP1110, PP1111 and PP1306). A representee has included an Appendix (RD0259.A) in their representation which provides further detail to support their position (PP1306).

Some sites are constrained due to inaction by the developer (PP1061) and low build out rates (PP1080, PP1081 and PP1306). A representee has included an Appendix (RD0259.A) in their representation which provides further detail to support their position (PP1306).

Some sites are constrained by the owner (PP1034, PP1055, PP1062, PP1069, PP1070, PP1082, PP1083, PP1084, PP1086, PP1090, PP1099, PP1101, PP1105, PP1107, PP1112 and PP1306). A representee has included an Appendix (RD0259.A) in their representation which provides further detail to support their position (PP1306).
Some sites are constrained by contamination issues (PP1082 and PP1120).

One site is constrained by market funding (PP1306).

The approach taken is not consistent with Scottish Planning Policy (SPP) or the Aberdeen City and Shire Strategic Development Plan (SDP) Report of Examination 2020. The representee has included an Appendix (RD0259.A) in their representation which provides further detail to support their position (PP1306).

The implicit assumption in Appendix 6 that constrained sites in the 2019 Housing Land Audit (HLA) are expected to be effective over the LDP period and can count towards allowances appears to be an attempt to revisit matters settled at the SDP Examination. The representee has included an Appendix (RD0259.A) in their representation which provides further detail to support their position (PP1306).

The inclusion of constrained sites is a unilateral approach which is inconsistent with para. 123 of SPP and para. 45 of PAN 2/2010 (PP1306). The Plan fails to comply with the SDP and SPP on matters of delivery (PP1276). Inclusion of constrained sites is inconsistent with paragraph 5.4 of the PLDP (PP1306). Representees have included an Appendix (RD0234.A and RD0259.A) in their representation which provides further detail to support their position (PP1306 and PP1276).

While constrained sites may become effective, effective sites can also become constrained. The representee has included an Appendix (RD0089) in their representation which provides further detail to support their position (PP0694).

Existing sites are under-delivering (PP0539 and PP0837) and its supporting statement

RD0155.A). Past delivery rates should be used to identify future housing delivery (PP0591). The Plan anticipates build out rates with a short lead in time which will be ambitious to deliver (PP0892). This issue is observed at Chapelton, which contains a significant proportion of the effective housing land supply within the Aberdeen Housing Market Area (AHMA) (PP0944) and has been consistently identified in housing land audits as delivering completions well in excess of actual performance (PP1081). There is over optimism on housing delivery (PP1198). Past delivery through the housing land audits should be used as an indicator to avoid reliance on unrealistic delivery rates (PP0591). Existing sites constrain new allocations (PP1133). Representees have included an Appendix (RD0089.A, RD0199.A, and RD0213.A) in their representation which provides further detail to support their position (PP0591, PP1133 and PP1198).

A review of all sites is necessary to ensure that all sites are effective (PP1248).

Appendix 6 Housing Land Allocations – Strategic Housing Sites

There is a history of under delivery on key strategic sites in the AHMA which puts the land supply in the AHMA at risk (PP0591 and its supporting statement RD0089.A). There is over-reliance on strategic sites as the main housing delivery mechanism (PP0593 and its supporting statement RD0089.A), (PP1248 and PP1251 and its Housing Land Review RD0231.A). Some strategic sites are not fully deliverable within the Plan period (PP0694). Additional land should be brought forward to compensate for big sites at Blackdog, Foveran and Ellon which have not come forward (PP0665). Representees have included an Appendix (RD0089.A and RD0231.A) in their representation which provides further detail to support their position (PP0591 and PP1251).

Large sites should remain a part of the housing strategy. The representee has included an Appendix (RD0089.A) in their representation which provides further detail to support their position (PP0591). Extensions to strategic sites needs to be considered in the context of the timing of earlier phases and, in some cases, they will not deliver within the Plan period (PP0694). The SDP counters overreliance on strategic sites at paragraph 4.15 by identifying the need for further allocations within the Plan period (PP1239).

Appendix 6 Housing Land Allocations – Rebasing of Existing Allocations

Existing effective allocations at the base date of the PLDP should not contribute to the allowances as this constitutes double counting (PP1052, PP1060, PP1066, PP1073 and PP1411).

Appendix 6 Housing Land Allocations – Strategic Reserve or Future Opportunity Sites

“Strategic Reserve” or “Future Opportunity Sites” should be added to the Plan (PP0451 and PP501). This would provide additional flexibility for the Plan (PP1125), particularly if allocated sites fail to deliver (PP0591, PP1251 and PP1285). Representees have included an Appendix (RD0089.A and RD0195.A) in their representation which provides further detail to support their position (PP0591 and PP1125).

Modifications sought by those submitting representations:

General

Modify the PLDP to ensure that new housing developments take on board sustainability issues, and active and public transport (PP0659).

Modify the PLDP to allocate additional sites (PP0772).

Modify the PLDP to make the following revision, "Providing land for housing development in the locations where it is needed and there is demand is a central way in which the Plan will contribute to Aberdeenshire being a successful sustainable place." (PP1217 and PP1347).

Modify the PLDP to reset the Aberdeenshire Council model for housing demand going forward as it clearly does not take into consideration the current economy by not including the decline in the Oil and Gas Industry (PP1130).

Modify the PLDP to reflect that there are serious shortcomings in the information the Council has presented. In order to establish the likely position in respect to the new housing supply proposed in the PLDP, it is essential that the Council provide further information and justification for all the components of that supply, including the following:

- Evidence on effectiveness for all "new" housing land based on the effectiveness criteria contained in PAN 2/2010.
- Evidence of the basis for increasing the density/capacity of existing sites.
- The annual programming of sites. This is necessary to understand whether the Plan is providing a 5-year housing land supply at all times and whether or not the total capacity of the site will deliver within the Plan period.
- The reasons why currently constrained sites are assumed to be capable of becoming effective (PP1306).

Modify the PLDP to make the substantial new allocations of effective land necessary to address the significant shortfalls we have identified in Table 1. These shortfalls could increase subject to review of any more detailed evidence the Council provides on effectiveness (PP1306).

Policy H1 Housing Land

Modify the PLDP to prioritise the development of brownfield sites over the release of greenfield sites (PP0105).

Modify the PLDP to rebase the policy which should be based on a model of renovating existing buildings or building on previously developed land with development on greenfield land restricted to elements, such as if there is a human health need (PP0541).

Modify the PLDP to acknowledge within Section 8 'Shaping Homes and Housing' and policy H1 that cognisance must be given to the Chief Planner's letter dated 16 February 2018 regarding the 'Agent of Change' principle to ensure that any proposed housing is designed to ensure that appropriate mitigation against any impacts from existing businesses (PP0558).

Modify Appendices 6 and 7 in the PLDP to allocate land for new homes serving the self and custom-build market (PP0580).

Modify the PLDP to change Policy H1.2. Housing land to, “We will not allow other types of development on designated housing land unless it is linked to the housing use” to “We will not allow other types of development on designated housing land, other than retail developments including restaurants, cafés, etc. providing services to the residents, unless it is linked to the housing use.” (PP0733).

Modify the Policy H.1 of PLDP to, “The Council, developers, service providers and other partners in housing provision should work together to ensure a continuing supply of effective land and to deliver housing, taking a flexible and realistic approach. If a shortfall in the 5-year effective housing supply emerges, the Council will consider granting planning permission for unallocated housing sites which can be demonstrated to be sustainable.” (PP1209 and PP1348).

Modify the PLDP to make allocations for a retirement (age exclusive) community (PP1244).

There are no relevant modifications on this topic for representations (PP1061, PP1113, PP1219 and PP1222).

Appendix 6 Housing Land Allocations – General

Modify the PLDP to remove Potterton from the Strategic Growth Area allocations as shown in the table (PP0695, PP0788, PP0853, PP0886, PP0887, PP1167 and PP1401).

Modify the PLDP to revise the overall allocations in Appendix 6 to take them substantially downward, taking into account the enormous change in strategic requirement since the publication of the 2014 Strategic Development Plan - the document on which the LDP 2021 is based (PP1022).

Modify the PLDP to remove an allocation and identify an alternative site that is either effective or capable of becoming effective in the Local Growth Area of the RHMA or, if marketability constraints preclude the identification of an alternative allocation, relocate allocation to the Local Growth Area of the adjacent Aberdeen HMA where marketability constraints are not an issue (PP1064).

Modify the PLDP to remove an allocation and identify an alternative allocation in the Local Growth Area of the RHMA or, if marketability constraints preclude the identification of an alternative allocation, in the Local Growth Area of the adjacent AHMA (PP1119).

Modify the PLDP to remove ineffective sites and make additional land allocations (PP1126).

Modify the PLDP to ensure that sufficient allocations have been made and the additional land allocation made to Appendix 6 Housing Land Allocations and the Proposed Plan, as a whole, is appropriate (PP1132).

Modify the PLDP to make an additional land allocation (PP1286 and PP1287).

Modify the Plan to make an additional allocation (PP1296).

Modify the PLDP to amend Appendix 6 (Housing Land Allocations - page 172) to include a new allocation and to remove units included in the LDP 2021 allocations which are already complete (PP1297 and PP1298).

Modify the PLDP to reflect that there are serious shortcomings in the information the Council has presented. In order to establish the likely position in respect to the new housing supply proposed in the PLDP, it is essential that the Council provide further information and justification for all the components of that supply, including the following:

- Evidence on effectiveness for all “new” housing land based on the effectiveness criteria contained in PAN 2/2010.
- Evidence of the basis for increasing the density/capacity of existing sites.
- The annual programming of sites. This is necessary to understand whether the plan is providing a 5-year housing land supply at all times and whether or not the total capacity of the site will deliver within the Plan period.
- The reasons why currently constrained sites are assumed to be capable of becoming effective (PP1306).

Modify the PLDP to make the substantial new allocations of effective land necessary to address the significant shortfalls we have identified in Table 1. These shortfalls could increase subject to review of any more detailed evidence the Council provides on effectiveness (PP1306).

Appendix 6 Housing Land Allocations – Differences between the Main Issues Report 2019 and the Proposed Local Development Plan 2020

Modify the PLDP to allocate additional housing land as per the requirements of the SDP Reporter’s findings, to reflect the evidence of under-delivery and to make up for the proposed scale of allocations removed at the MIR stage to ensure that they have an appropriate housing land supply to meet requirements (PP0591).

Modify the PLDP to increase the number of housing allocations (PP0593).

Modify the PLDP to account for the SDP increased requirement of 939 homes and allocate additional housing land; Include an allowance to account for the HLA evidence of under-delivery and therefore a predicted delivery shortfall – possibly up to 1,700 homes over the plan’s first 5 years. This could be in the form of additional allocations and future reserved housing sites with an appropriate a draw-down mechanism; and an equivalent of the sites removed from the MIR stages (min. 400) are replaced with new allocations across a range of locations (PP0837).

Modify the PLDP to remove ineffective sites and make additional land allocations (PP1126).

Modify the PLDP to make an additional land allocation (PP1240).

Modify the PLDP to allocate additional housing land as per the requirements of the SDP Reporter’s findings, to reflect the evidence of under-delivery and to make up for the proposed scale of allocations removed at the MIR stage to ensure that they have an appropriate housing land supply to meet requirements (PP1251).

Appendix 6 Housing Land Allocations – Increasing site density

No modification proposed (PP0326).

Modify the PLDP to make new allocations of effective land that will be necessary to make up a shortfall in land supply (PP0694).

Modify the PLDP to allocate additional land for residential development across the Plan area and to compensate for the anticipated shortfall in housing land to be created by the Plan, reassess the sites being proposed for residential development in order to establish which sites which were previously identified as constrained in the 2018 Housing Land Audit are now not considered to be constrained and are therefore counted against the effective housing land supply. The LDP should be updated as required to take account of any increase in housing numbers that would arise as a result of the above proposed modifications (PP0892).

Modify the PLDP to make additional of housing land allocations (PP0944).

Modify the PLDP to make additional housing land allocations (PP1126).

Modify the PLDP to ensure that Appendix 6 Housing Land Allocations and the Proposed Plan, as a whole, have sufficient allocations ensuring the allowances of the Strategic Development Plan are achieved and that these conform to the Spatial Strategy of the Strategic Development Plan Appendix 6 Housing Land Allocations and the Proposed Plan (PP1132).

Modify the PLDP to make additional housing land allocations (PP1198).

Modify Policy H1.3 of the PLDP unless Appendix 7 is evidence based (PP1208 and PP1349).

Modify the PLDP to make an additional land allocation (PP1240).

Modify the PLDP to make an additional land allocation (PP1282).

Modify the PLDP to reflect that there are serious shortcomings in the information the Council has presented. In order to establish the likely position in respect to the new housing supply proposed in the PLDP, it is essential that the Council provide further information and justification for all the components of that supply, including the following:

- Evidence on effectiveness for all “new” housing land based on the effectiveness criteria contained in PAN 2/2010.
- Evidence of the basis for increasing the density/capacity of existing sites.
- The annual programming of sites. This is necessary to understand whether the plan is providing a 5-year housing land supply at all times and whether or not the total capacity of the site will deliver within the Plan period.
- The reasons why currently constrained sites are assumed to be capable of becoming effective (PP1306).

Modify the PLDP to make the substantial new allocations of effective land necessary to address the significant shortfalls we have identified in Table 1. These shortfalls could increase subject to review of any more detailed evidence the Council provides on

effectiveness (PP1306).

Appendix 6 Housing Land Allocations – Effectiveness, Delivery, and Constrained Sites

Modify the Plan to remove a site (PP0539).

Modify the PLDP to allocate additional housing land as per the requirements of the SDP Reporter's findings, to reflect the evidence of under-delivery and to make up for the proposed scale of allocations removed at the MIR stage to ensure that they have an appropriate housing land supply to meet requirements (PP0591).

Modify the PLDP to make new allocations of effective land that will be necessary to make up a shortfall in land supply (PP0694).

Modify the PLDP to account for the SDP increased requirement of 939 homes and allocate additional housing land; Include an allowance to account for the HLA evidence of under-delivery and therefore a predicted delivery shortfall – possibly up to 1,700 homes over the plan's first 5 years. This could be in the form of additional allocations and future reserved housing sites with an appropriate draw-down mechanism; and an equivalent of the sites removed from the MIR stages (min. 400) are replaced with new allocations across a range of locations (PP0837).

Modify the PLDP to allocate additional land for residential development across the Plan area and to compensate for the anticipated shortfall in housing land to be created by the Plan, reassess the allocations being proposed for residential development in order to establish which allocations which were previously identified as constrained in the 2018 Housing Land Audit are now not considered to be constrained and are therefore counted against the effective housing land supply. The LDP should be updated as required to take account of any increase in housing numbers that would arise as a result of the above proposed modifications (PP0892).

Modify the PLDP to increase the number of housing allocations (PP0944).

Modify the PLDP to remove an allocation and make additional allocations in the Local Growth Area of the RHMA or, if marketability constraints preclude the identification of a suitable alternative, in the Local Growth Area of the adjacent Aberdeen Housing Market Area where there are no widespread marketability constraints (PP1030).

Modify the PLDP to remove an allocation and make additional allocations in the Local Growth Area of the RHMA or, if marketability constraints preclude the identification of a suitable alternative, in the Local Growth Area of the adjacent Aberdeen Housing Market Area where marketability constraints are not an issue (PP1031).

Modify the PLDP to remove a site and make additional site allocations in the Local Growth Area of the RHMA or, if marketability constraints preclude the identification of a suitable alternative, in the Local Growth Area of the adjacent Aberdeen Housing Market Area where marketability constraints are not an issue (PP1033).

Modify the PLDP to remove an allocation and make additional site allocations in the Local Growth Area of the RHMA or, if marketability constraints preclude the identification of a

suitable alternative, in the Local Growth Area of the adjacent Aberdeen Housing Market Area where marketability constraints are not an issue (PP1034).

Modify the PLDP to remove certain allocations (PP1035, PP1037, PP1047, PP1057, PP1065, PP1077, PP1079, PP1088 and PP1089, PP1099, PP1101, PP1105 and PP1107).

Modify the PLDP to remove an allocation and make additional site allocations in the Local Growth Area of the RHMA or, if marketability constraints preclude the identification of a suitable alternative, in the Hatton - Peterhead Strategic Growth Area or any other strategic growth area if marketability constraints are an issue (PP1036).

Modify the PLDP to remove an allocation and identify an alternative new effective allocation in the Huntly to Pitcaple Strategic Growth Area or in any other Strategic Growth Area if marketability constraints preclude that possibility (PP1038).

Modify the PLDP to remove an allocation and identify an alternative and effective allocation in the Local Growth Area of the Rural HMA or, if marketability constraints preclude the identification of such an allocation, in the Local Growth Area of the adjacent Aberdeen HMA where marketability constraints are not prevalent (PP1040).

Modify the Plan to remove an allocation and identify a new site within the Balmedie Primary School catchment area to meet the strategic allowances in the Blackdog to Ellon Strategic Growth Area (PP1042).

Modify the PLDP to remove an allocation and identify a new allocation within the Balmedie Primary School catchment area to meet the strategic allowances in the Blackdog to Ellon Strategic Growth Area (PP1043).

Modify the PLDP to remove an allocation and identify a new allocation for 35 houses in the Formartine part of the Local Growth Area – Aberdeen Housing Market Area (PP1044).

Modify the PLDP to remove an allocation and identify a new allocation with a capacity of 38 houses to meet the strategic allowance in the Formartine part of the Local Growth Area of the Aberdeen Housing Market Area (PP1045).

Modify the PLDP to reduce the capacity of an allocation and identify an additional allocation to meet the strategic allowances in the Formartine part of the Aberdeen HMA (PP1046).

Modify the PLDP to remove an allocation and identify an alternate new effective allocation in the Formartine part of the AHMA (PP1048).

Modify the PLDP to add an allocation and adjust housing allocations schedule accordingly (PP1050).

Modify the PLDP to remove an allocation and identify an alternative effective allocation in the Local Growth Area or, if marketability constraints preclude the identification of such an allocation, in the Local Growth Area of the adjacent Aberdeen HMA (PP1051).

Modify the PLDP to remove an allocation and identify an alternative site that is either

effective or capable of becoming effective in the Local Growth Area of the RHMA or, if marketability constraints preclude the identification of an alternative allocation, relocate allocation to the Local Growth Area of the adjacent Aberdeen HMA where marketability constraints are not an issue (PP1055).

Modify the PLDP to remove an allocation and identify an alternative site that is either effective or capable of becoming effective in the Local Growth Area of the RHMA or, if marketability constraints preclude the identification of an alternative allocation, relocate allocation to the Local Growth Area of the adjacent Aberdeen HMA where marketability constraints are not an issue (PP1056).

Modify the PLDP to reduce the capacity of an allocation and identify an alternative effective allocation in the Local Growth Area of the Rural HMA or, if marketability constraints preclude the identification of such an alternative allocation, in the Local Growth Area of the adjacent Aberdeen HMA where marketability constraints are not an issue (PP1061).

Modify the PLDP to remove an allocation and identify an alternative allocation, which is not known to be constrained in the Blackdog - Elion Strategic Growth Area (PP1062).

Modify the PLDP to remove an allocation and identify an alternative site that is either effective or capable of becoming effective locally, or in the Local Growth Area of the RHMA, or, if marketability constraints preclude the identification of an alternative allocation, relocate allocation to the Local Growth Area of the adjacent Aberdeen HMA where marketability constraints are not an issue (PP1069).

Modify the PLDP to remove an allocation and identify an alternative allocation that is either effective or capable of becoming effective in the Local Growth Area of the RHMA or, if marketability constraints preclude the identification of an alternative allocation, relocate allocation to the Local Growth Area of the adjacent Aberdeen HMA where marketability constraints are not an issue (PP1070).

Modify the PLDP to remove an allocation and identify an alternative and effective allocation in the Local Growth Area of the RHMA or, if marketability constraints preclude the identification of an alternative allocation, relocate allocation to the Local Growth Area of the adjacent Aberdeen HMA (PP1071).

Modify the PLDP to reduce the capacity of an allocation (PP1054, PP1079 and PP1080).

Modify the PLDP to reduce the entry for an allocation to accurately reflect the position detailed in the 2019 Housing Land Audit (PP1081).

Modify the PLDP to remove an allocation and identify an alternative effective allocation in the Strategic Growth Areas of the AHMA (PP1082).

Modify the PLDP to remove an allocation and identify a new alternative effective allocation in the Local Growth Area of the Aberdeen Housing Market Area (PP1083).

Modify the PLDP to remove an allocation and identify an alternative allocation that is either effective or capable of becoming effective in the Local Growth Area of the RHMA or, if marketability constraints preclude the identification of an alternative allocation, relocate

allocation to the Local Growth Area of the adjacent Aberdeen HMA where marketability constraints are not an issue (PP1084).

Modify the PLDP to remove an allocation and identify an alternative site that is either effective or capable of becoming effective in the Local Growth Area of the RHMA or, if marketability constraints preclude the identification of an alternative allocation, relocate the allocation to the Local Growth Area of the adjacent AHMA (PP1085).

Modify the PLDP to include an allocation (PP1087).

Modify the PLDP to remove an allocation and identify a replacement allocation in the Local Growth Area of the Rural HMA that is effective or capable of becoming effective within the Plan period. In the event that marketability issues preclude the identification of a suitable replacement allocation in the Rural HMA identify and allocate a suitable site in the Local Growth Area of the AHMA (PP1086).

Modify the PLDP to remove an allocation and identify an alternative site that is either effective or capable of becoming effective in the Local Growth Area of the RHMA or, if marketability constraints preclude the identification of an alternative allocation, relocate the allocation to the Local Growth Area of the adjacent AHMA (PP1090).

Modify the PLDP to remove an allocation and identify an alternative effective allocation in the AHMA to meet the strategic allowances (PP1102).

Modify the PLDP to remove an allocation and reallocate alternative site in the RHMA Local Growth Area or, if that proves impossible in the RHMA because of marketability issues, in the Local Growth Area of the adjacent AHMA where marketability constraints are not an issue (PP1104).

Modify the PLDP to remove an allocation and identify an alternative effective location in the Local Growth Area of the RHMA or, if marketability constraints preclude the identification of an alternative allocation, in the Local Growth Area of the adjacent AHMA (PP1106).

Modify the PLDP to remove two allocations, add an alternative allocation in the settlement (PP1109).

Modify the PLDP to remove an allocation and identify an alternative effective allocation in the Local Growth Area of the RHMA or, if marketability constraints preclude the identification of an alternative allocation, relocate allocation to the Local Growth Area of the adjacent Aberdeen HMA where no marketability issues exist (PP1110).

Modify the PLDP to reduce the entry for an allocation to accurately reflect the position detailed in the 2019 Housing Land Audit. (PP1111).

Modify the PLDP to remove an allocation and identify an alternative allocation in the Local Growth Area of the RHMA or, if marketability constraints preclude the identification of an alternative allocation, in the Local Growth Area of the adjacent AHMA (PP1112).

Modify the PLDP to remove an allocation and identify an alternative allocation in the Local Growth Area of the RHMA or, if marketability constraints preclude the identification of an alternative allocation, in the Local Growth Area of the adjacent AHMA where marketability

constraints are virtually unknown (PP1113).

Modify the PLDP to remove an allocation and identify an alternative allocation in the Local Growth Area of the RHMA or, if marketability constraints preclude the identification of an alternative allocation, in the Local Growth Area of the adjacent AHMA (PP1115).

Modify the PLDP to remove an allocation (PP1116).

Modify the PLDP to allocate additional sites following a substantial review of the Council's Housing Land Supply position, which are effective and can be delivered over the lifecycle of the next Plan (PP1125).

Modify the PLDP to ensure that sufficient allocations have been made to Appendix 6 Housing Land Allocations and the Proposed Plan, as a whole, ensuring allowances of the Strategic Development Plan are achieved and that these conform to the Spatial Strategy of the Strategic Development Plan (PP1132).

Modify the PLDP to make an allocation for housing, local retail, and business land. (PP1133).

Modify the PLDP to allocate additional effective sites should further information establish if there is a shortfall in the allocation of effective sites (PP1197).

Modify the PLDP to make additional housing land allocations (PP1198).

Modify the PLDP to make an additional housing land allocation (PP1240 and PP1276).

Modify the PLDP to address the clear shortfall in the housing land supply identified by Homes for Scotland and allocate a range of sites to help address this. There should be a detailed review of the housing sites within the land supply to ensure they are effective or capable of becoming effective. A range of effective smaller housing sites that can be delivered in the Plan period should be allocated, adjacent to settlements that contribute to sustainable development (PP1248).

Modify the PLDP to amend Appendix 6 (Housing Land Allocations - page 172) to include a new allocation and to remove units included in the LDP 2021 allocations which are already complete (PP1297).

Modify the PLDP to reflect that there are serious shortcomings in the information the Council has presented. In order to establish the likely position in respect to the new housing supply proposed in the PLDP, it is essential that the Council provide further information and justification for all the components of that supply, including the following:

- Evidence on effectiveness for all "new" housing land based on the effectiveness criteria contained in PAN 2/2010.
- Evidence of the basis for increasing the density/capacity of existing sites.
- The annual programming of sites. This is necessary to understand whether the plan is providing a 5-year housing land supply at all times and whether or not the total capacity of the site will deliver within the Plan period.
- The reasons why currently constrained sites are assumed to be capable of becoming effective (PP1306).

Modify the PLDP to make the substantial new allocations of effective land necessary to address the significant shortfalls we have identified in Table 1. These shortfalls could increase subject to review of any more detailed evidence the Council provides on effectiveness (PP1306).

Modify the PLDP to make substantial new allocations of effective land necessary to address the significant shortfalls identified (PP1306).

Modify the PLDP to make an additional housing land allocation (PP1315 and PP1316).

Modify the PLDP to remove an allocation and identify an alternative effective allocation elsewhere in the Local Growth Area of the Rural HMA or, if marketability issues preclude the identification of a replacement effective in the Rural HMA, in the adjacent Local Growth Area of the Aberdeen HMA (PP1412).

Appendix 6 Housing Land Allocations – Strategic Housing Sites

Modify the PLDP to allocate additional housing land as per the requirements of the SDP Reporter's findings, to reflect the evidence of under-delivery and to make up for the proposed scale of allocations removed at the MIR stage to ensure that they have an appropriate housing land supply to meet requirements (PP0591).

Modify the PLDP to increase the number of housing allocations (PP0593).

Modify the PLDP to make an additional land allocation (PP0665).

Modify the PLDP to make new allocations of effective land that will be necessary to make up a shortfall in land supply (PP0694).

Modify the PLDP to change the allocation of sites in Kemnay, from business use to an allocation suitable for houses (PP1239).

Modify the PLDP to address the clear shortfall in the housing land supply identified by Homes for Scotland and allocate a range of sites to help address this. There should be a detailed review of the housing sites within the land supply to ensure they are effective or capable of becoming effective. A range of effective smaller housing sites that can be delivered in the Plan period should be allocated, adjacent to settlements that contribute to sustainable development (PP1248).

Modify the PLDP to allocate additional housing land as per the requirements of the SDP Reporter's findings, to reflect the evidence of under-delivery and to make up for the proposed scale of allocations removed at the MIR stage to ensure that they have an appropriate housing land supply to meet requirements. Housing allocations should be made which support the historical settlement pattern and not just be concentrated on main settlements (PP1251).

Appendix 6 Housing Land Allocations – Rebasing of Existing Allocations

Modify the PLDP to correct the entries for an allocation to reflect actual capacity of the site rather than the notional capacity and reduce the allocation to reflect the position detailed in the 2019 Housing Land Audit (PP1052).

Modify the PLDP to amend an allocation (PP1060).

Modify the PLDP to reduce the capacity of an allocation to accurately reflect the position in the 2019 Housing Land Audit (PP1066).

Modify the PLDP to reduce the entry for an allocation to accurately reflect the position detailed in the 2019 Housing Land Audit (PP1073).

Modify the PLDP to reduce the entry for an allocation to accurately reflect the position detailed in the 2019 Housing Land Audit (PP1411).

Appendix 6 Housing Land Allocations – Strategic Housing Sites

Modify the PLDP to identify future housing allocations to be delivered subject to an interim review of the LDP regarding Appendix 6 – Housing Land Allocations. Associated Table 2: Housing Allocations in the Aberdeen Housing Market Area should be updated to include a future allocation at Dunecht (PP0451) and Echt (PP0501).

Modify the PLDP to allocate additional housing land as per the requirements of the SDP Reporter’s findings, to reflect the evidence of under-delivery and to make up for the proposed scale of allocations removed at the MIR stage to ensure that they have an appropriate housing land supply to meet requirements (PP0591).

Modify the PLDP to include further provision at paragraph H1.4 of Policy H1 for the identification of Strategic Reserve housing allocations, thereby allowing for the reintroduction of Future Opportunity ‘FOP’ Sites into the next Plan, as were originally planned for at the Main Issued Report (MIR) stage. The policy wording should highlight the identification of future allocations within Appendix 6 – Housing Land Allocations and Appendix 7 Settlement Statements for the post 2032 Plan Period. It should allow for an early draw down mechanism should there be any identified shortfall in the 5-year housing land supply or other circumstances, such as further stalling of allocated sites and subject to an interim review of the LDP (PP1125).

Modify the PLDP to allocate sites as future ‘reserved’ residential development. The Council should adopt a reserved land approach to ensure that housing land supply can be supplemented should allocated sites fail to deliver. This would provide a safety net for the Shire’s housing land supply, particularly as we enter into 10-year LDPs (PP1285).

Summary of responses (including reasons) by planning authority:

General

The Council does not agree that a statement reinforcing the need for housing allocations to reflect need should be included as it serves no purpose in the Plan. These are matters that were carefully considered in the identification of allocations and could be expected to have been paramount in the determination by developers of where they would wish bids to be approved. The Council remain confident that they have provided opportunities for housing proportionate to need across the region. No change is required.

The Council does not agree that changes are required to reflect sustainability matters

more strongly. The Council remain confident that there are sufficient checks in the Plan, particularly under the Section 9 Shaping Places, Section 12 Protecting Resources and Section 13 Climate Change to ensure that housing developments take on board sustainability issues. Section 14 "The Responsibilities of Developers" policy paragraphs RD1.4 and RD1.5 specifically address issues associated with sustainable travel, while the Spatial Strategy of the PLDP as a whole seeks to reduce the need to travel. No change is required.

The Council does not agree that a new model is needed for assessing housing demand. To adopt a new Housing Needs and Demands Assessment at this point in time would seriously delay the production of the Plan and would make it impossible to be consistent with the SDP. No change is required.

The Council does not agree that it is critical that the housing allocations are detailed in the main text of the Plan rather than in an Appendix, as all parts of the document apply equally. It is not the case that this information and its justification are of significant importance in any avenue other than in the Examination of the PLDP. Once the Plan is adopted there is no need for an explanation of the journey that took us to this point. No change is required.

Policy H1 Housing Land

The Council welcomes that SEPA have no specific comments on either Policy H1 or the content of Appendix 6 of the PLDP. The Council note that they have made comments on specific allocations within the context of the information presented in Appendix 7.

The Council believes that their approach to promoting previously used land is appropriate. As noted in our response to matters raised in Schedule 4 Issue 2: Section 5 – The Spatial Strategy, brownfield sites were considered as a primary source of development land, but this is relatively scarce. A policy based principally on renovating existing buildings and building on previously developed land would not meet the predicted need for housing. Proposed Policy P3 Infill Developments within Settlements and Householder Developments provides a wider framework for the development of vacant land, and the Council do not believe that restricting development on greenfield land only to those with a health need would be equitable. No change is required.

With regard to promoting the reuse of underused sites for housing development this has been addressed in the PLDP. As noted in the paragraph above, the Council have a strong policy on the reuse of vacant land within the PLDP. The Council has encouraged owners of obsolete office and industrial spaces to submit bids to assess whether the sites would be more usefully used for housing. This is the method promoted by Scottish Planning Policy (AD0012, paragraph 103) and the Council agree that in some cases reallocation to an alternative use may be appropriate, considering the potential impacts. No change is required.

The Council notes the request to refer to the need to safeguard the operation of existing developments from new housing developments. The "Agent of Change" principle is well established within development management practice, and the Council does not see a need to rehearse the need for good design adjacent to potentially noisy neighbours within the Local Development Plan. No change is required.

The Council notes the request to extend paragraph H1.2 to specified uses. The policy refers to other types of development being permitted on residential land “if it is linked to the housing use”. The Council believes that this could apply to community facilities, convenience shops, cafes, hairdressers, and hot food takeaways that serve the immediate neighbourhood, but generally only in the case of a large development where they are part of a neighbourhood centre. The Council does not believe that a restaurant fits the description of a “linked” facility given the need for a wider catchment and would seek to have such facilities located in a town centre wherever possible. It is anticipated that clarity on this matter will be provided in Planning Advice “Town Centre Impacts” to be developed before adoption of the Plan. No change is required. It would be improper to require community uses on housing sites as the scale of the development may not lend itself to sustaining such a use, and there could be issues generated by competition with town centres and other neighbourhood centres. This matter is best appraised as part of a masterplan and where appropriate supported by this policy.

The Council is fully aware of the increase in the ageing population and the need to meet their accommodation needs. However, the Council does not believe that there is a mandate to restrict the development of housing sites to just this sector of the population. All housing sites could be developed to house older age groups. Housebuilders themselves are aware of this potential market through the Housing Need and Demand Assessment 2017 (AD0025) and the Local Housing Strategy 2018-2023 (AD0155) and, in line with the need to provide social integration, the Council are already seeing development sites being brought forward where a component of the homes will be attractive in size and layout to this sector. In addition, paragraph P1.5 requires all new developments to be adaptable to the changing circumstances of occupants. The only exception to this approach is our support for bids for continuing care communities, where an element of personal care is provided by core facilities with occupants living in relative independence in supported accommodation. Finally, it is clear that some development sites may be inappropriate for accommodating an older household due to distance from key services or public transport links, making a universal obligation undesirable. No change is required.

In the same way as housing for older people, the Council believes that whether to promote self-build housing is a decision for the developer and does not require a restrictive designation. In some settlements self-build of properties in the wider countryside (under the Policy R2 in the LDP2017) is having a significant and detrimental impact on our ability to sustain small settlements, particularly in the areas classed as “Remote Rural Areas” or on the periphery of the “Accessible Area”. In some of these settlements the Council promote self-build as a means to help unlock the allocated sites identified in the settlements, and meet needs, in locations unattractive to volume house builders. The Housing Land Audit 2019 shows that developments of less than 5 homes are making a significant contribution to housing supply in the RHMA (AD0022, page 16 Table 9 Completions on Small Sites 2014-2018). The Council are aware of the infrastructure costs that might have to be met by the developer in enabling development on their allocated site within a settlement, even for self-build, but have been promoting it in rural communities as a long-term investment, where the plot value of a small number of homes may be able to fund the infrastructure to maximise profits on the remaining sites. No change is required.

The Council does not agree that preserving property values should be an aim of the housing section of the Plan. Preserving property values is not an outcome sought by SPP in pursuit of the Scottish Government Purpose, “To focus government and public services

on creating a more successful country, with opportunities for all to flourish, through increasing sustainable economic growth” (AD0012, Pages 5-8). Development can have the effect of raising property prices through the provision of additional facilities as well as depressing property values. One of the expectations that Ministers have of the Planning and Environment Service is that it should maximise benefits and balance competing interests and inevitably there will be those who benefit and those who do not. No change is required.

The Council acknowledges that health care impacts will result from the household growth planned. NHS Grampian have been closely involved in the preparation of the PLDP and are correct to say that there will be localised impacts on healthcare provision in a selected number of locations. Discussion has taken place, at length, with NHS Grampian as to whether there is a “low-impact” solution, but the scale of growth obliged by the SDP leads to the conclusion that impacts are going to be inevitable if the anticipated growth occurs. Already NHS Grampian are working with the Planning Authority to identify appropriate land for new healthcare facilities if, and when, they are required to serve many of the communities cited in the representation. No change is required.

The Council does not agree with the request for a mechanism in the Plan to justify granting of planning permission on unallocated sites should there be a failure in maintaining a five-year effective land supply. Given that within the PLDP the Council have made generous allocations over a thirteen-year period, to serve needs to 2032, we see no need to incorporate a mechanism to release additional land as insurance against a failure to meet the five-year housing land supply target. The following table justifies this position.

Table 1 Comparison of the total housing land supply against the 2020 SDP Housing Land Requirement

	Five-year effective supply 2019	Post five-year effective supply 2019	PLDP Allocations	Total Supply	Housing Land Requirement 2020-2032	Surplus
Source	1	2	3	4	5	6
Aberdeenshire part of the Aberdeen HMA	4,394	7,344	3,145	14,883	10,296	4,587
Rural HMA	3,507	3,163	2,619	9,289	6,864	2,425
Aberdeenshire Total	7,901	10,507	5,764	24,172	17,160	7,012

1. From Aberdeen City and Shire Housing Land Audit 2019 (AD0022, Table 7: Five Year Effective Housing Land Supply 2018 and 2019 and Table 9: Completions on Small Sites 2014-2018

2. From Aberdeen City and Shire Housing Land Audit 2019 (AD0022, Table 8: Effective Units Programmed Beyond Year 5 in 2018 and 2019)

3. PLDP Contribution to the Allowance within Appendix 6 Table 1

4. *Sum of Five Year Effective + Post Five Year Effective + PLDP Allocations*
5. *From Aberdeen City and Shire Strategic Development Plan 2020 (AD0016, page 19 Table 2: Housing Land Requirement by Housing Market Area, Local Authority and Tenure Mix)*
6. *Total Supply minus Housing Land Requirement*

Table 1 shows that the total supply is well in excess of the SDP Housing Land Requirement. for the period up to 2032 in both housing market areas.

While there is still some uncertainty over a legal obligation to review the Local Development Plan within a specific time frame, the need to move to a modernised Plan as quickly as possible after the publishing of the associated secondary legislation governing implementation of the Planning (Scotland) Act 2019 leads to a conclusion that a mid-term review of the Plan will be undertaken well before there is any risk to the current or post-five-years effective land supply. In addition, many development sites, both existing and proposed, are constrained by “marketability” constraints, and it could be expected that these sites will become effective if the housing land supply drops, or demand increases across the region. In the context of SPP they are also “expected to become effective” as there are no other over-riding reasons why development could not take place (AD0016 paragraph 119). No change is required.

Appendix 6 Housing Land Allocations – General

Comments are made to this section of the PLDP concerning the potentially fundamental changes that the economy is now going through, and the impact of this on the need for additional housing land is echoed within representations on Housing and Business land in Schedule 4 Issue 2: Section 5 – The Spatial Strategy. Again, the Council would suggest that we acknowledge these risks, and identified them in the MIR. As explained in our response to those comments, the Council has to accord with SDP strategy and have cognisance of the regional Economic Strategy’s endeavour for long-term prosperity. The PLDP seeks to present an optimistic approach to avoid constraining development in the context of an economic downturn. No change is required.

The Council does not agree that fundamental changes are required to this Appendix or that shortcomings in the information that we have presented are meaningful or significant. Appendix 6 represents a summary of the allocations made and detailed individually in Appendix 7 and information taken from the Housing Land Audit 2019. It is not designed to provide a detailed summary of total land supply as that is the function of the annual Housing Land Audit, which gives considerably more information, on a site-by-site basis on the status and programming of the Established Housing Land Supply. The use of the Housing Land Audit 2019 as a base for the PLDP, was agreed with the development industry and this is confirmed in the Minute of the Strategic Development Planning Authority meeting of 26 June 2020 (AD0026 Item 2, Minute of the Previous Meeting of 26 June 2020, Strategic Development Planning Authority, 23 September 2020). The tables in Appendix 6 already contain a column “built by 2019”, and further information on completions (i.e., What has been completed during 2019) was not agreed with the development industry until publication of the 2020 Housing Land Audit in December 2020. Appendix 6 in tables 1 and 2, within the columns headed “Allowances 2020-2032”, is clear on the scale of new allocations being made and what contributes towards meeting the allocations as agreed in the SDP. No change is required.

The Council does not agree that there is an obligation that the Local Development Plan has to demonstrate that all sites are deliverable. As has been stated in the PLDP at

paragraph 5.3, the power to make sites deliverable lies with the development industry, not the Planning Authority. The Council can seek bids from developers of the land they would wish to take forward and expect that these developers have accurately assessed deliverability for themselves before submitting the bid. Specific questions are asked on the Aberdeenshire Council Bid Assessment Template to confirm that there are no legal constraints, no ownership constraints, in what period the developer expects to build the homes, whether there are known infrastructure constraints, and finally whether the residual value of the site has been considered and the site is viable (AD0097). Where information is available it is verified in the Aberdeenshire Council Bid Assessment Guidance (AD0098). Residual value calculations are not requested from developers, as the Council has to trust our fellow professionals' judgements on this matter. Such information is likely to be highly confidential. No change is required.

Part of the bid process also asks if the site is under option to a developer, but the Council do not agree that this is the only measure that should be used. It is perfectly competent for a landowner to consider development of a site, and seek professional advice on constraints, deliverability, and likely residual value, without reference to a mainstream housebuilder. This is particularly relevant in the Rural Housing Market area where many sites are delivered by small contractors and developers rather than the volume housebuilders who are more dominant in the Aberdeen Housing Market Area. No change is required.

The argument that allocations in Potterton should not be within the Aberdeen to Peterhead SGA are fully outlined under Schedule 4 Issue 2: Section 5 – The Spatial Strategy. It is sufficient to repeat here that the identification of sites within the SGA's is a competent action for the Local Development Plan considering the description given in the SDP (AD0016, paragraph 3.9), and that, should the strategic allocations in the settlement be delivered, then redefinition of the settlement within the SGA may be appropriate. No change is required.

The Council has considered whether allocations made in the LDP2017 are constrained to an extent that they cannot be expected to become effective under the appropriate market conditions (and should therefore not be included in Appendix 7 Settlement Statements of the PLDP, and subsequently accounted for in Appendix 6 Housing land Allocations), within the analysis of individual bids for individual settlements. Arguments of site constraint are particular to the settlement in question and it would be inappropriate to consider those matters in a broad appendix. However, three reasons are collectively given that argue that, generally, the allocations made in the LDP are incompetent, and should be replaced by new allocations which are demonstrably deliverable. These are:

- Inconsistency with the MIR;
- Increasing the density of sites from a nominal 22 homes per hectare to 25 homes per hectare in the AHMA; and
- Effectiveness of sites, and in particular marketability, lack of developer interest; inaction by developers or low build out rates; infrastructure constraints, ownership constraints; contamination; and deficit funding.

Throughout these discussions there is a misunderstanding between the role of the Housing Land Audit to identify effective sites, and of the PLDP to record these and add sites which can be expected to be effective through allocation in the development plan.

Appendix 6 Housing Land Allocations – Differences between the Main Issues Report 2019 and the Proposed Local Development Plan 2020

There is no conflict with the MIR. The PLDP Housing Allowances had not been confirmed by the Examination into the SDP at the Main Issues Report stage. It was always expected that some of the sites preferred in the MIR Appendices would not be taken forward into the PLDP as a result of the consultation process. Identification of sites as an Officer's preference should not have been misunderstood as a guarantee that a site will subsequently be allocated in the Plan. This is a reasonable approach, and no change is required.

The inclusion of windfall sites in the effective land supply in the HLA is normal practice and is referred to in PAN 2/2010 – Affordable Housing and Housing Land Audits (AD0006, paragraph 51).

Some sites allocated in the PLDP were not identified in the MIR, but these were either sites which already had planning permission or resulted from the consultation on the MIR proposals. The content of the MIR and the results of that consultation cannot be taken as a reason to augment the housing land allocations. No change is required.

Appendix 6 Housing Land Allocations – Increasing site density

The Council does not agree that increasing the nominal density of sites from 25 homes per hectare compared to the previous standard of 22 homes per hectare is unreasonable, and that additional sites will need to be allocated due to the inability to deliver at this density. The Council do not agree that the change in density is illogical when it is specifically identified in SPP that there is a need to make efficient use of land (AD0012, paragraph 2), and we are seeking to move the planning agenda forward in Aberdeenshire by promoting forms of development that contribute to sustainable development. Making better use of our land is a key part of that debate. In identifying the contribution of allocations to the allowances the Council has not sought to reflect the higher target in SDP for 30 homes per hectare within SGA (AD0016, page 27). It is clear from the SDP that this is a general target that the Council have to take account of, but this density may not be appropriate for all settlements in the SGA's. Adopting this figure would result in larger allocations in the SGA's and substantial revision of the new housing land allocations. The increase to 25 homes per hectare reflects an approach that seeks greater efficiency in the use of land, and to be more realistic in reflecting what would actually be built on sites, a matter of great concern to a number of communities. No change is required.

Housing density was identified as Main Issue 10 in the Main Issues Report 2019 (AD0038.A, page 20). The Council remains of the view that these are not absolute capacities for individual allocations and that the development industry will be free to propose higher, or lower, numbers of homes according to the characteristics of the sites. The Council did not use the densities given by those promoting bids, on the basis that developers might promote the underdevelopment of sites to achieve allocations, only to raise the density to maximise return once the principle of development had been established. This is a relatively common observation and occurs even after planning permissions have been granted (for variations to sub-divide plots, for example). No change is required.

Inconsistencies observed in our approach to density are explained by our use of the

approved densities of sites where planning permission had been approved and development had started or were the subject of an agreed masterplan (as it would have been unreasonable to count these at a higher density when they were, in fact, being delivered). However, sites with planning permission, and on which development had not yet started were assumed to be either stalled sites, on which the existing consent would lapse soon after the LDP 2021 was approved, or on sites which no meaningful start had been made, and on which the developer still had an opportunity to seek modification to the consent to reflect the higher density. Not approaching this issue in this way could have resulted in sites being promoted that reflected a different position on the need for efficiency of land use. No change is required.

The Council does not agree with suggestions that a density increase of 3 homes per hectare is inflated to such a level that the allocations could not be delivered, or that infrastructure may constrain the delivery of more dense sites, and that there will be a shortfall in the Effective Land Supply. These arguments are not defensible. The scale of the increase of the allocations is not so great that it would result in significant deliverability issues and, in any case, there is flexibility in the system to allow a developer to build more, or less, homes to overcome any physical or infrastructure constraints that become apparent with such a small increase in density. No evidence has been furnished in the submissions that the small increase in density proposed in the allocations will prejudice other policy objectives. Increasing density to an additional 3 homes per hectare can be achieved by innovative design solutions that still protect the natural heritage and built heritage resources identified in the Plan. No change is required.

Density assessments of each site would not be appropriate given the variability in individual sites. To do so would be very difficult and improper, given that it will ultimately be the decision of the developer to determine the scale that they will wish to build to, and the style of development that they wish to create. The allocations made have a degree of flexibility and may increase or decrease as detailed investigations of each site are undertaken in preparation for the submission of a planning application. The allocation figures are nominal and do not bind the developer to build exactly that number of homes, and so the broad-brush approach used is reasonable. Use of the allocations as a ceiling would be inappropriate, provided the allocations adhere to the terms of the policies of the PLDP. No change is required.

Appendix 6 Housing Land Allocations – Effectiveness, Delivery, and Constrained Sites

The Council does not agree that all sites within the PLDP require to be effective on the date of adoption of the Plan. Clearly, looking 13 years into the future it is almost impossible to guarantee that every site considered is free from constraint for the whole of the Plan period, and can be delivered on the day the Plan is adopted. Sites within the Plan are, at least, “expected to become effective” in accordance with SPP (AD0012, paragraph 119). The Council agrees that constrained sites can become effective and that effective sites can become constrained, and this supports our approach to the Plan for the whole of the established housing land supply rather than just that element that is identified in the Housing Land Audit as effective on the 1 January 2019. The Council does not agree that a further review of all sites is necessary to ensure all sites are effective, as that is clearly not the obligation placed upon us by SPP. The Council notes that the SDP at paragraph 4.18 clearly identifies that allocations should consider using constrained supply in the first instance. The Council concludes from assessing the submissions on this topic

that no changes are required.

The Council is confident that their approach to effectiveness meets the expectations of the Scottish Government. There is no obligation within SPP to ensure that all sites are effective at the point of Plan adoption. PAN 2/2010 – Affordable Housing and Housing Land Audits sets out a set of criteria for use in calculating whether there is an effective five-year housing land supply in the context of the Housing Land Audit (AD0006., paragraphs 45-62), but the test for the LDP is less onerous. SPP identifies that “the planning system should identify a generous supply of land for each housing market area within the plan area to support the achievement of the housing land requirement across all tenures, maintaining at least a 5-year supply of effective housing land at all times”. It goes further, to state that “the housing land requirement can be met from a number of sources, most notably sites from the established supply which are effective or expected to become effective in the Plan period, sites with planning permission, proposed new land allocations, and in some cases a proportion of windfall development”. Finally, it states that “local development plans in city regions should allocate a range of sites which are effective or expected to become effective in the Plan period to meet the housing land requirement of the Strategic Development Plan up to year 10 from the expected year of adoption”. (AD0012 Paragraphs 110, 111 and 119). No change is required.

In relation to the effectiveness of allocations which have been in the Plan for a long time, the Council does not agree that they should be removed only for that reason. Proposals dating from previous Plans have been removed from the PLDP when it has been made clear that there are material matters that result in our having no confidence that they can be “expected to become effective”. The Council does not accept that this relates to marketability or ownership constraints, as these do not prevent sites from being delivered as needed and they would expect such sites to become effective in appropriate market conditions. Likewise, the Council has not removed any sites identified in the LDP 2017, as these sites are still very much “live” and could easily be promoted for development before the LDP 2021 is adopted. They are not “long-term” constrained sites. In some instances, historical development allocations have been retained as there is an identified need within the settlement, but there are very few opportunities surrounding the settlement where such allocations could be made. These sites represent the best locations for new development, in the absence of possible alternatives (for example, in Banff). These allocations are generally “marketability” constrained at the current time, but otherwise there is nothing stopping them from being developed, even if in a phased manner over the life of the Plan that reflects developer’s lack of confidence in the local housing market. Given the scale of the assumed marketability constraint in some parts of Aberdeenshire it is very difficult to see a position where alternative allocations in these settlements would not also immediately be added to the “marketability constrained” pool. Allocating alternative sites that are also constrained would not promote confidence in the area and removes the expectation from the community that the settlement will grow in a particular direction. No change is required.

The Council does not agree that constrained allocations should be removed from the Plan. Arguments made by respondents that constrained sites should be removed from the Plan depend largely on the nature of the constraints identified in the Aberdeen City and Shire Housing Land Audit 2019. The Council present no evidence on why sites which definitely cannot be delivered have been removed, because they now no longer feature in the Plan. All other sites are expected to become effective under appropriate market conditions, but the Council has to recognise that adding further allocations, leading to oversaturation of

the housing land supply market will have a significant impact on delivery as both housebuilders and infrastructure providers become spread too thin to aid in the opening of new sites. Information on how effectiveness has been assessed is included in the Housing Land Audit, on which the Plan is based, and does not need to be repeated in the PLDP. As noted above the agreed Aberdeen City and Shire Housing Land Audit 2019 already demonstrates that a five-year effective land supply can be maintained for the majority of the Plan period, even without additional allocations. In itself this addresses representation to the PLDP seeking evidence of the effectiveness of allocated sites. The Aberdeen City and Shire Housing Land Audit 2019 is the document where discussion and agreement is reached with the development industry on the effectiveness and delivery of identified sites, and where this information, and programming assumptions can be scrutinised to assess whether an effective five-year housing land supply is being maintained. Inclusion of sites in the PLDP does not mean that an existing constraint has been lifted, but that it is expected that the constraint will be removed in the life of the Plan, given appropriate market conditions. No change is required.

The Council notes the comments regarding inconsistencies between the assessment of site effectiveness and the ability to deliver across the Plan area with the contents of the Environmental Report of the Strategic Environmental Assessment. Unfortunately, no specific evidence has been provided of where this anomaly was identified, and so it is difficult for us to comment further. No change is required.

The constraint of “marketability” is cited extensively as a constraint that requires unspecified new allocations to be added to the Plan. One of those representees (PP1306) has identified marketability constraints as the reason why 21 (of 37) site allocations should be removed from the Plan. As argued above marketability is not an absolute constraint and, in essence, marketability constrained sites may, in part, reflect a lack of commercial interest, rather than a lack of need for the development to sustain the community and accommodate local growth. The Scottish Government consulted on changes to SPP in July 2020 and would appear to share this view, proposing that land that is technically suitable for housing could still form part of the 5-year effective land supply, regardless of changes to programming or subjective views on marketability in a changing context. Following consultation on this draft document they concluded in Scottish Planning Policy - Finalised Amendments: December 2020 that, “We were also concerned about the exclusion of sites on the basis of marketability, and its impact on the ability of Authorities to maintain a supply of effective housing land.” (AD0013, chapter 3, page 13, key points). Marketability cannot be considered to be an absolute reason why sites should not be included in the Plan, and no change is required.

The Council does not agree that impacts on effectiveness from lack of developer interest, inaction by a developer or low build out rates for a particular site are sound reasons why sites should be removed. Fundamentally this is an extension of the “marketability” constraint and requires to be considered within the same context. In a situation where there really was a shortage of effective housing land it could be expected that developers would have an interest in those sites currently being promoted by agents and landowners as willing sellers or would increase build out rates to meet market demand. No change is required.

Infrastructure constraints are identified in a number of submissions as to why sites should be removed. The Council does not agree that reconsideration of this constraint should be undertaken. These commonly relate to lack of waste water provision and local roads

matters. Infrastructure constraints are very closely linked to marketability. If the developer perceives there is sufficient market demand to make development profitable then most infrastructure constraints are easily overcome. Waste water infrastructure constraints are not to be unexpected given the scale of growth seen in Aberdeenshire in recent decades, but it is accepted practice that improvements to waste water treatment facilities to accommodate new development is an obligation placed on Scottish Water, but one they will only progress if a site is within the Local Development Plan and has planning permission. Both connection to a waste water system and local road improvements are costs which the development industry is expected to account for in assessing the likely residual value of their development, and before placing a bid to the Plan. The Aberdeenshire Council bid form specifically prompts developers to have these early discussions (as an example, AD0119, page 9). No change is required.

With regard to ownership constraints, the Council takes the submission of a bid for housing land to be a clear expression of a willingness of the submitter to develop the land. All sites allocated since LDP 2012 have been identified through a bid process. For those allocations that predate the LDP 2012 the Council contacted the owners of the land to confirm that they would still wish their sites to be considered for inclusion in the PLDP and identified to them that any changes they would like us to consider should be the subject to a new development bid. No change is required.

Contamination issues were specifically assessed in reviewing the bids and with reference to a dataset of historical information maintained by Aberdeenshire's Environmental Health Service. Bid sites known to be contaminated were dismissed and have not been included in the Plan. The few sites the Council identified where there was a risk of contamination have had this potential constraint identified, but as the contamination has not been proven to be present, they were not removed. No change is required.

The deficit funding constraint may be relevant to the housing land audit process and the calculation of an effective five-year effective land supply but is a constraint the Council can expect to be overcome as funding programmes are updated and confirmed, particularly when the site questioned is being taken forward by Aberdeenshire Council. No change is required.

The Council do not agree that the inclusion of constrained sites in the PLDP allocations is inconsistent with SPP (which in-fact provides no methodology for assessing deliverability) nor with the SDP Examination Report (which in itself is not a statement of policy but a report to the Scottish Ministers on representations received to the proposed Aberdeen City and Shire Strategic Development Plan). A representee (PP1306) quote references to deliverability contained in SPP, but misrepresents that document. The "Sharp focus" for delivery identified by SPP is within the context of "allocated sites embedded in action programmes" (AD0012 paragraph 110). In any case the SDP is clear at that the current constrained supply should be used in identifying new allocations. (AD0016, paragraph 4.18). No change is required.

The Council does not agree that the PLDP is inconsistent with SPP, or PAN 2/2010, or is internally inconsistent on matters of constraint. The SDP relates to working with housing and infrastructure providers to prepare an annual Housing Land Audit to manage the housing land supply within the context of maintaining a five-year effective land supply, and is not attributable to the development plan, which is dealt with in detail in the preceding section (AD0016 paragraphs 123 and then paragraphs 113 to 122). Likewise, PAN

2/2010 – Affordable Housing and Housing Land Audits is a general statement on the function of HLAs and emphasises the link between the two documents (AD0006, para 45). The housing land allocations are not incompetent due to following a unilateral approach; the Council has been clear of their intentions throughout the Plan making process and provided a clear indication of their preferred approach both before and within the MIR, and in line with the approved SDP. There is nothing in the Plan that is inconsistent with paragraph 5.4 of the PLDP. The Council has only included long-term constrained sites if they now have confidence in the sites coming forward because of the extensive constraint checking undertaken on-site bids, and early work undertaken to ensure that sites currently in the Plan were still in the hands of a willing owner. No change is required.

The Council does not agree that under-delivery of existing sites, whether on “strategic sites” or not, is a reason to augment the housing land supply. Delivery rates have a direct correlation with demand for housing, and are market driven. Adding additional allocations would not improve the delivery of existing sites. Criticising delivery rates associated with one development site cannot support the allocation of more land, especially when the development site is an effective site, and being built out. The Council do not agree that the whole period of the Plan only provides a short lead in time for new developments to come forward and contribute to the effective supply. Again, speed of delivery is a matter that is usually in the hands of the developer, not the Planning Authority. No change is required.

The Council does not agree that additional land should be allocated to compensate specifically for under-delivery on strategic sites. Aberdeen City and Shire Strategic Development Plan considers this issue prior to detailing the allocations to be made in the local plans (AD0016, paragraph 4.15). The Council has made allocations on a range of sites, bearing in mind that the SDP notes that allocations should not inhibit the delivery of current strategic sites (AD0016, paragraph 4.19). Calls for more land to be allocated would prejudice that principle. No change is required.

The Council does not agree that accounting for the whole of the established land supply derived from the Aberdeen City and Shire Housing Land Audit 2019 constitutes “double counting”. The Council fail to see how any particular allocation could be counted twice in the Tables in Appendix 6. Such an error would be immediately obvious. No change is required.

Appendix 6 Housing Land Allocations – Strategic Housing Sites

Under-delivery of key strategic sites can occur for a variety of reasons, but the Council’s approach has been governed by their status in the Aberdeen City and Shire Housing Land Audit 2019. These sites remain effective and should there be a shortage in the housing land supply there is no reason why they could not be delivered more quickly, or by multiple developers if the site is beyond the capacity of just one. Commercial sharing of large strategic sites has been a common feature in the past. No change is required.

Reliance on large sites is a matter of history. Previously, the strategy of the LDP 2012, and the LDP 2017, was based upon the delivery of a number of large sites (AD0031.A, Schedule 1: New Housing Land Allocations and AD0034.D). This was justified by the need for significant infrastructure investments and the economies of scale required to deliver them. This circumstance is not unusual or inappropriate and still applies for the PLDP. The requirements for infrastructure delivery to accommodate larger scale growth commonly necessitate a masterplanned approach and the provision of sufficient developer

contributions to address identified constraints. Larger sites by their nature may have longer lead-in times. Many of the allocations in the PLDP which now assist in delivering an effective five-year housing land supply relate to these previously allocated sites. At Paragraph 4.15 the SDP anticipated any risk to the housing land supply from the failure of strategic sites to come forward and did make additional allocations to safeguard against such an event, despite concluding that due to the scale of the housing land available it was possible that no further housing land allocations could be made. No change is required.

Large sites at Blackdog, Foveran and Ellon have been delayed by infrastructure constraints, which are likely to be overcome shortly. New sites identified to compensate for these are likely to experience similar delays. No change is required.

Appendix 6 Housing Land Allocations – Rebasing of Existing Allocations

The second paragraph of Appendix 6 Housing land allocations is clear on the source of those sites which contribute to the allowance within the PLDP. This shows that no existing effective sites identified in the HLA 2019 have been included in the contributions, except for circumstances where extensions to existing sites, or increases in density have resulted in an increase in numbers. There is no double counting. No change is required.

Appendix 6 Housing Land Allocations – Strategic Reserve or Future Opportunity Sites

The Council does not believe there is a need for Future Opportunity Sites to be identified in the Plan. Given that the SDP identifies that there is no requirement to include “Strategic Reserve” in the Local Development Plan Aberdeenshire Council has chosen not to do so (AD0016 paragraph 4.20). As argued in Schedule 4 Issue 2: Section 5 – The Spatial Strategy the large pool of housing land available, with the scope for a mid-term review of the Plan to populate the period up to 2037, significant questions over how the deliverability of land allocations 13 years in the future could realistically be assessed and tying Aberdeenshire Council into a situation where significant changes in policy direction cannot be made makes this a reasonable decision. No change is required.

Reporter’s conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

General

2. I agree with the council that there is no need to add a sentence specifically on suitable locations for housing development. This matter is already covered in the spatial strategy section of the proposed plan. Paragraph 30 of Scottish Planning Policy sets out a list of considerations which development plans should address in relation to sustainable development. The intended outcomes set out in section 4 of the proposed plan include

the promotion of sustainable mixed communities, walking, cycling and public transport. The strategic environmental assessment of new housing allocations also takes account of a range of environmental matters, including sustainable travel. No modification is required.

3. I have addressed matters relating to the effects of changes in economic conditions on housing demand in Issue 2 (spatial strategy). Furthermore, as the housing land allowances to be met in the plan are established in the strategic development plan, there is no scope to reset these or the model used to calculate housing demand through this examination. No modification is required.

Policy H1 Housing Land

4. The council has explained its approach to promoting previously used land. As indicated under issue 2, I am satisfied that the council has considered the potential for brownfield sites to contribute to the housing allowances, in line with Scottish Planning Policy and the strategic development plan. I have recommended a modification to paragraph 5.10 in the proposed plan to provide clarification. No modification to section 8 of the proposed plan is required.

5. I find that consideration of the need for mitigation of noise from adjacent business uses would be addressed through policy P1 (Layout Siting and Design), in particular paragraph 1.5 and in the successful placemaking design guidance in Appendix 8. No modification is required.

6. The representation seeking a change to paragraph H1.2 wishes an exception to be made for retail developments including restaurants, cafes etc. I note that some housing allocations include a requirement to provide neighbourhood shopping facilities. However, in general, proposals for retail and other frequently visited uses would require to be assessed in relation to policy B1 (Town Centre Development). Whilst small scale proposals may be acceptable in residential areas and consistent with the intended outcome of the proposed plan “to promote sustainable mixed communities”, it would not be appropriate to suggest such uses would always be acceptable. No change to paragraph H1.2 is required.

7. I agree with the council that the strategic development plan does not require sites to be specifically identified for a particular type of housing development, such as housing for older people or self/custom build properties. I am satisfied that the plan allocates a range of housing sites in terms of size, character and location which provides the opportunity for different types of housing development and delivery models. Representations in relation to specific proposals are addressed in the schedule 4 for the relevant settlement statement. No modifications are recommended.

8. I do not consider that the impact of development on property values is a relevant matter for the local development plan. No modification is required.

9. Some representees have suggested that the plan should include a policy to indicate the circumstances when planning permission can be granted on unallocated sites, such as to address any potential shortfall in the 5-year effective housing supply. The council is concerned that making specific provision for additional housing land to come forward, in the event of a shortfall, would lead to uncertainty and undermine the integrity of the

housing land audit process. The council is satisfied that this matter is sufficiently addressed in paragraphs 33 and 125 in Scottish Planning Policy.

10. Paragraph 125 of Scottish Planning Policy states “where a shortfall in the 5-year effective housing land supply emerges, development plan policies for the supply of housing land will not be considered up-to-date, and paragraphs 32-35 will be relevant.” Paragraph 33 indicates that in such circumstances, “the presumption in favour of development that contributes to sustainable development will be a significant material consideration”.

11. I am aware that some other local development plans across Scotland include a criteria based policy to be used when a five year effective land supply cannot be demonstrated. The council has not provided any evidence to back up its concerns that adopting such an approach would cause uncertainty or undermine the housing land audit process. I consider it more likely that the absence of a criteria based policy would result in uncertainty. Furthermore, the need to maintain a five year effective housing land supply exists, regardless of whether such a policy is provided in the local development plan. Its inclusion would therefore be unlikely to have any bearing on the audit process.

12. The council has prepared a table to compare the total housing supply against the strategic housing land requirement for the period 2020 to 2032. It indicates that there is a surplus of land for over 7,000 homes across the local development plan area. I sought the views of other relevant parties on this table through further information request FIR001. Homes for Scotland’s response highlights that not all of the “post five year effective supply” would contribute towards the strategic housing land requirement up to 2032. It has submitted a table which provides examples of sites which are identified as effective in 2019, but would still be under construction after 2032. I consider that the table provided by the council is misleading in this regard, as it does not take account of the expected completion rates from existing sites. Furthermore, this table does not provide any information on the programming of sites, relevant to the requirement to maintain a five year effective land supply.

13. I cover the issue of the methodology for calculating the five year effective land supply in the section below on effectiveness, delivery and constrained sites. However, in relation to the need for a policy to address a shortfall in the five year effective supply, I conclude that there is no basis within Scottish Planning Policy or the strategic development plan for me to require such an approach to be taken in this plan. The introductory text to section 8 on page 41 of the proposed plan demonstrates an awareness of the need “to make sure there is a continuing five-year effective housing land supply”. The proposed plan provides a range of allocations, some of which would be expected to contribute immediately to the five year effective supply and others, whilst currently constrained, would become effective during the plan period.

14. I agree with the council that current national policy, in the form of Scottish Planning Policy 2014, sets out the considerations to be taken into account, if there is a shortfall in the five year effective housing land supply. Whilst I am aware that national policy is under review through the preparation of National Planning Framework 4, it would be premature to take account of any draft changes at this time. I conclude that no modification is required on this matter.

Appendix 6 Housing Land Allocations – General

15. The context for the housing allocations in the proposed plan is provided by the approved strategic development plan. The Aberdeen City and Shire Strategic Development Plan 2020 identifies the housing land requirement for the period 2016 to 2040. It requires this local development plan to identify sufficient housing land for the period 2020 to 2032 to meet allowances of 3065 homes in the Aberdeenshire part of the Aberdeen Housing Market Area and 2042 homes in the Rural Housing Market Area.

16. The majority of representations to this section of the plan are seeking additional or alternative housing allocations. Homes for Scotland and other representees consider that further information is required to justify the sites identified to contribute to the strategic development plan housing allowances in the period up to 2032. A number of representations include tables setting out opinions and/or queries regarding the deliverability of individual allocations.

17. Paragraph 4.18 in the strategic development plan states that the local development plan “must identify allocations for the period 2020 to 2032 which are deliverable within the timeframe of this period”. Information on the allocations identified to meet the strategic development plan allowances is provided in Appendix 6 of the proposed plan.

18. I find that Appendix 6 in the proposed plan does not show clearly which allocations contribute to the strategic development allowances or provide sufficient explanation in relation to these allocations. I consider that a housing background paper would have been helpful to explain the council’s approach to the identification of sites to meet the strategic development allowances and the reasons why the council considers that each allocation would be deliverable within the timeframe 2020 to 2032. This could have helped provide the transparency and level of understanding sought by representees. However, from the various sources of information submitted to the examination, including the two further information requests on housing matters (FIR001 and FIR008), I am satisfied that I have sufficient evidence to address the matters raised in unresolved representations.

19. Table 1 in the proposed plan provides a summary of the housing land allocations which contribute to the strategic development plan allowances for the Aberdeen Housing Market Area and the Rural Housing Market Area. Table 2 (Housing Allocations in the Aberdeen Housing Market Area) and Table 3 (Housing Allocations in the Rural Housing Market Area) include the sites which contribute to the strategic development plan allowances. However, these are interspersed with existing sites, which makes it difficult for the reader to identify the sites which are contributing to the strategic development plan allowances. Whilst I accept that, differentiating between existing sites and sites which contribute towards the strategic development plan allowances will become less relevant once the plan is adopted, this information is necessary to demonstrate that the plan is meeting the requirements of the strategic development plan.

20. In response to further information request FIR008, the council has suggested that the information contained in tables 2 and 3 in Appendix 6 of the proposed plan is presented in four tables. This would allow the sites which are identified as contributing towards the strategic development plan allowances for the Aberdeen and Rural Housing Market Areas to be shown separately from other housing sites in each area. I agree that this would be helpful and recommend a modification based on the council’s suggestion. The wording of

the introductory paragraphs in Appendix 6 also requires to be amended to provide an explanation of the information provided in the revised tables. These changes are included in the revised version of Appendix 6, provided at the end of this report and referred to in the recommended modifications below.

21. It is apparent, from the representations made to the proposed plan that the information provided in the final column “LDP Total Housing Land Supply” of tables 1 - 3 is causing confusion. The figures equate to the anticipated number of homes to be delivered on housing allocations contained in the plan (taken from the final column in tables 2 and 3). These totals include homes that are expected to be built after 2032 and are therefore not directly comparable to the housing land requirements set out in the strategic development plan. Furthermore, I note that some of the totals for individual allocations include homes which were already built by January 2019 but others don't; an inconsistency which has been picked up by some representees.

22. In the absence of any explanation in the proposed plan, I find that the figures in the final columns of tables 1 - 3 provide a misleading representation of the housing land supply. I consider that a footnote is required to explain that these figures may include homes built before 2019 and/or homes that are not anticipated to be built until after 2032. Given that the figures in the final column of the tables do not always equate to the “remainder to be built” on the site, it is recommended that this clause is removed from the third paragraph of appendix 6. This change is included in the revised version of Appendix 6, provided at the end of this report and referred to in the recommended modifications below.

23. Representations in relation to the allocations included in these tables and whether the capacity provided in these sites is sufficient to meet the strategic development plan allowances are addressed in the sections below.

24. Consistent with my conclusions in issue 2, I consider that the housing allocations in Potterton should be moved from the ‘strategic growth area’ column to the ‘local growth AHMA’ column in the tables in the Appendix 6. This change is included in the revised version of Appendix 6, provided at the end of this report and referred to in the recommended modifications below.

25. Representations regarding the implications of changes to the economy for the strategic development plan housing requirements are also addressed in issue 2. No changes are required.

26. The council has indicated that the use of the 2019 housing land audit as the base for the proposed local development plan was agreed with the development industry. No representees have requested that the 2020 housing land audit (or the more recently published 2021 audit) be used instead.

27. The housing supply targets, housing land requirements and allowances are set in the strategic development plan and I do not consider there is any scope to revisit these through this examination. However, representations have raised a question regarding the need to address any shortfall in completions when compared with the housing land requirement for the period 2016 – 2019. I note that in setting the allowances shown in table 3 of the strategic development plan, completions in the period 2016 - 2018 were taken into account. I agree with the council that addressing any shortfall in completions in

these years would result in double-counting.

28. As the strategic development plan is based on the 2019 housing land audit, it was not able to reflect actual completions in 2019. Instead predicted completions for 2019 were taken into account. The 2019 housing land audit predicts 496 completions in the Aberdeenshire part of the Aberdeen Housing Market Area and 515 in the Rural Housing Market Area. The equivalent table in the 2020 audit shows that in 2019 there were 623 completions in the Aberdeenshire part of the Aberdeen Housing Market Area and 469 completions in the Rural Housing Market Area. I therefore conclude that there was no shortfall in completions in 2019 in the Aberdeenshire part of the Aberdeen Housing Market Area, but there was a shortfall of 46 completions in the Rural Housing Market Area compared to the predicted figures.

29. This comparison of predicted and actual completions for 2019 serves to demonstrate that fluctuations in future programming are likely. For 2019 more output than estimated was achieved in the Aberdeenshire part of the Aberdeen Housing Market Area, whilst slightly less was achieved in the Rural Housing Market Area. These fluctuations may even out over time and will be subject to future monitoring through the annual housing land audit. In any event, flexibility (generosity) is built into the land supply to address such issues, as explained in paragraph 4.11 of the strategic development plan. Furthermore, Table 1 in Appendix 6 in the proposed plan (and Table 3 in the revised version of Appendix 6) shows a surplus allocation in the Rural Housing Market Area. No modification is required to address this matter.

30. The agreed 2019 housing land audit forms the base supply for the strategic development plan and the proposed plan. Unless evidence has been submitted to suggest a material change in circumstances since the 2019 audit was agreed, I do not consider it necessary to question the contribution that effective sites make towards meeting the housing land requirement in the period up to 2032. Where such evidence has been presented, these matters are addressed in the schedule 4 for the site in question. I note that in setting the strategic development allowances, consideration has been given to the agreed and extrapolated completion rates for existing sites. Where more up to date information on the allocations which contribute to the strategic development allowances is available, from the 2020 housing land audit or other evidence submitted to the examination, I have taken this into account.

31. Appendix 6 in the proposed plan indicates that the sites identified as contributing towards the strategic development plan allowances fall into one of four categories. Representees have indicated that these definitions are unclear and have suggested alternative categories. Whilst I can see merit in the suggested alternatives, I am not persuaded that there is a need to change the categories identified by the council, as these descriptions do not directly affect the allocations or their ability to meet the strategic development plan allowances. No modification is required.

32. Representations in relation to the allocations and the implications of any recommended modifications in relation to the strategic development plan allowances are covered in the following sections

[Appendix 6 Housing Land Allocations – Differences between the Main Issues Report 2019 and the Proposed Local Development Plan 2020](#)

33. Some representations seek additional housing allocations on the basis that the strategy of the plan has changed since the Main Issues Report stage and/or has not addressed the increased housing requirement identified through the strategic development plan examination.

34. The Main Issues Report represents the formal consultation stage in the preparation of the plan and provides the opportunity to seek views on preferred options and potential alternatives. It does not represent the council's settled view and changes are to be expected following consideration of comments submitted at the Main Issues Report stage. This may include the allocation of housing sites not identified as officers' preferences in the Main Issues Report or the removal of preferred sites. I note that the Issues and Actions Paper provides an explanation of the council's reasoning on these matters. No modification is required.

35. The local development plan has to be consistent with the approved strategic development plan. There is no requirement to allocate additional housing land to specifically reflect changes made following the strategic development plan examination. Provided the strategic development plan allowances are met, the fact that the surplus is less than at Main Issues Report stage would not in itself justify additional allocations. No modification is required.

Appendix 6 Housing Land Allocations – Increasing site density

36. One of the methods used by the council to meet the strategic development plan allowances has been to increase the indicative capacity of some sites. Concerns have been raised in relation to the contribution that increased site densities make to the strategic development plan allowances and, in particular, the lack of evidence to justify these increases. The council has indicated that it has increased the indicative density of sites in the Aberdeen Housing Market Area from 22 homes per hectare to 25 homes per hectare. It has explained that the increased densities have only been applied to sites which do not have a planning permission which is likely to be implemented or an agreed master plan. For sites which are identified as effective in the 2019 housing land audit, only the additional capacity is counted towards meeting the strategic development plan allowances.

37. Paragraph H1.3 in the proposed plan makes clear that the capacities of sites shown in appendices 6 and 7 are indicative only. Some allocations may deliver more homes than predicted, others may deliver less. I find that the council's approach to increased densities is in line with paragraph 4.8 of the strategic development plan which states that "land brought forward for housing must be used efficiently". Whilst the figure used in the proposed plan is less than the strategic development plan target of 'no less than 30 dwellings per hectare' in strategic growth areas, the council has explained that a figure of 25 is considered to be a realistic means of achieving greater efficiency. I do not consider there is any justification to reduce the density further, unless there are particular site specific reasons indicated in representations to individual allocations.

38. A representee is concerned that the increased capacities may conflict with council policies on ecological, environmental and landscape considerations. However, the relevant sites (with the increased capacities) have been subject to strategic environmental assessment, prior to inclusion in the proposed plan. Furthermore, planning applications would require to be assessed in relation to the relevant policies in the plan, which would

allow more detailed consideration of any ecological, environmental or landscape impacts. I conclude that no modification is required to the general approach taken by the council in relation to increasing the site density of some allocations and identifying these increases as contributing towards the strategic development plan allowances

39. However, representations have raised particular questions regarding five of the allocations which fall into this category - Kintore OP1; Blackburn OP1; Oldmeldrum OP1; Oldmeldrum OP4; Stonehaven OP3. In order to address these matters, I required further information from the council and landowner/developer on some of the sites (FIR008).

40. Kintore OP1 (Kintore East) site is an existing allocation, with a capacity of 600 homes in the 2019 housing land audit. The proposal to increase the allocation by 400 would take the overall capacity of the site to 1000 homes. The 2020 audit shows the completion of 30 homes in 2022, followed by an annual completion rate of 60 homes. At this predicted rate, the existing allocation would not be completed until half way through 2032. This raises questions regarding delivery timescales for the additional 400 homes, which are identified as contributing towards the strategic development plan allowance.

41. However, the council and the Kintore Consortium have indicated that the average completion rate identified in the 2020 housing land audit for the Kintore East site is conservative and have provided examples of other multi developer sites which have achieved around 100 completions per year. The Kintore Consortium, which comprises three housebuilders, considers that a more realistic programming for this site would be 100 homes per year, assuming a start date and delivery of an initial 60 homes in 2023. It indicates that these figures were agreed at a meeting in relation to the 2021 housing land audit on 16 November 2021.

42. The council and developers are in agreement that the anticipated completion rates for Kintore East should be increased. I also consider that, with three developers on site, there is an increased likelihood that the site will be built-out faster. I recognise that there may well be fluctuations in completion rates over the plan period. However, based on the information before me, I consider it reasonable to conclude that the Kintore East site would be deliverable in the plan period. No modification is required.

43. Matters relating to the deliverability of allocations OP1 at Blackburn, OP1 and OP4 at Oldmeldrum and OP3 at Stonehaven are addressed in the schedule 4s for the relevant settlement and any recommended modifications noted in the table below.

Site (Number of homes contributing to allowances in proposed plan)	Comments	Recommendation
Kintore OP1 (400)	See above	No modification required.
Blackburn OP1 (190)	Addressed in Issue 32	No modification required.
Oldmeldrum OP1 (38)	Addressed in Issue 24	Remove the site from those which contribute to the strategic development plan allowance for the Aberdeen Housing Market Area. (-38).
Oldmeldrum OP4 (33)	Addressed in Issue 24	Reduce the contribution made to the strategic development

		plan allowance for the Aberdeen Housing Market Area from 33 to 27 (-6).
Stonehaven OP3 (48)	Addressed in Issue 46	Remove the site from those which contribute to the strategic development plan allowance for the Aberdeen Housing Market Area. (-48).

44. These changes are included in the revised version of Appendix 6, provided at the end of this report and referred to in my recommended modifications. The implications for the overall housing provision are addressed below. No other modifications are required in relation to sites with increased densities.

Appendix 6 Housing Land Allocations – Effectiveness, Delivery and Constrained Sites

Effectiveness and Delivery

45. As I have already indicated, paragraph 4.18 in the strategic development plan requires the plan to “identify allocations for the period 2020 to 2032 which are deliverable within the timeframe of this period”. I note that this wording is different from paragraph 119 in Scottish Planning Policy which states that “local development plans in city regions should allocate a range of sites which are effective or expected to become effective in the plan period to meet the housing land requirement of the strategic development plan up to year 10 from the expected year of adoption.” It goes on to say that “planning authorities should be confident that land can be brought forward for development within the plan period.”

46. I conclude from this slightly different wording that the strategic development plan puts emphasis on the 2020-2032 allowances to address concerns regarding slower phased delivery on the existing strategic allocations. There is no definition in the strategic development plan of the term “deliverable” or what constitutes a deliverable site. However, PAN 2/2010 provides guidance on the effectiveness of sites and programming considerations.

47. A number of representees have asked for evidence regarding the effectiveness and deliverability of the sites identified to meet the strategic development plan allowances. Whilst, there is no requirement for all identified sites to be effective at the start of the plan period or promoted by a developer, it is necessary to consider whether these sites are likely to become effective during the plan period. Furthermore, in order to meet the requirements of the strategic development plan, I consider that there should be a reasonable expectation that homes on the identified sites can be delivered by 2032. I therefore disagree with the council’s view that the local development plan is not required to demonstrate that the identified sites are deliverable.

48. In relation to the deliverability of the allocations identified to meet the strategic development plan allowances, matters relating to when a site is expected to become effective and anticipated programming are relevant considerations. For larger sites, or those which are not expected to be started until an existing site is completed or an infrastructure constraint is resolved, these matters may mean that all or part of the site would not be deliverable by 2032.

49. In addition to the housing allowances for the period 2020 – 2032, the strategic development plan also sets a target for local development plans to maintain a five year supply of effective land for housing at all times. This target is consistent with paragraph 119 of Scottish Planning Policy. Once the local development plan is adopted, it is the monitoring of the five year effective land supply which will be used to determine whether there are sufficient sites available to meet the housing land requirement.

50. The proposed plan states (on page 41) that the council “will monitor the maintenance of a five year effective land supply using the housing land audit”. Based on the figures in the 2020 housing land audit, the council indicates that there is a 7.1 years’ effective supply in the Aberdeen Housing Market Area, 5.4 years in the Rural Housing Market Area and 6.9 years across the Aberdeenshire area. However, these calculations are based on the figures from the 2014 strategic development plan and are therefore not directly relevant to the proposed plan.

51. A number of representees have expressed concern that insufficient land has been allocated to maintain an effective five year supply and that, in the absence of programming information for the additional allocations, it is not possible to properly assess whether the proposed plan is providing a five year effective supply.

52. Paragraph 123 of Scottish Planning Policy requires planning authorities to actively manage the housing land supply and prepare annual housing land audits. The annual audit provides a monitoring tool to demonstrate whether or not a five year effective land supply is being maintained. There is no requirement in Scottish Planning Policy or the strategic development plan to show a five year effective supply for the whole plan period up to 2032 at this time.

53. In line with Scottish Planning Policy, the focus of this local development plan is to ensure that there is sufficient land, which is effective or expected to become effective, to meet the housing land requirement up to year 10 from the year of adoption. However, I note from table 3 in the strategic development plan that existing housing sites already make provision for an ongoing supply post 2032. Furthermore, I am aware of the changing national planning context and the strong likelihood of a new local development plan process in the next five year period, which may have implications for how the effective housing land supply is measured.

54. However, in order to address matters raised in representations I consider it necessary to understand whether there is currently a five year supply of effective housing land. The 2019 and 2020 housing land audits do not provide programming information on the allocations identified to meet the strategic development plan allowances and the council has indicated that it cannot provide evidence to the examination on the programming of these allocations. Without this information, reaching a conclusion on whether there are sufficient housing allocations in the proposed plan to maintain an effective five year supply is potentially challenging.

55. There are a number of different methods of calculating the extent of the effective housing land supply - using the housing supply target or housing land requirement figures; and using what is commonly referred to as the ‘average method’ or the ‘residual method’. I sought the views of the council and relevant parties on this matter through two further information requests (FIR001 and FIR008). The council initially indicated that its preferred

approach is to use the ‘average method’ and the housing supply target figure, which is the methodology identified in the Heads of Planning Scotland “Planning Performance Framework”.

56. A number of representees disagree with this methodology and have indicated that an approach using the housing land requirement figure would be consistent with the Court of Session judgment in Gladman v Scottish Ministers [2020] CSIH 28 and the strategic development plan examination. In response to FIR008, the council agreed that the decision in the Gladman case is relevant to consideration of the adequacy of the land supply in the proposed plan and, as such, the land supply should be measured against the housing land requirement rather than the housing supply target.

57. On this basis, the following sections explain the implications of calculating the extent of the five year effective supply using the housing land requirement figures from table 2 in the strategic development plan and both the ‘residual method’ and ‘average method’.

58. A response to further information request FIR001 submitted by Ryden consultants calculates the extent of the effective land supply for various geographical areas using the ‘residual method’. The calculations are based on the effective supply figure from the 2020 housing land audit (7,413), the housing land requirement figures from table 2 in the 2020 strategic development plan, and take account of completions in the period 2016 - 2019. The effective supply figure includes contributions from windfall sites, which I agree with the council is consistent with Planning Advice Note 2/2010.

59. The 2020 strategic development plan does not require the local development plan to maintain a five year effective land supply for each housing market area. It is the extent of the five year effective land supply for the local development plan area as a whole that requires to be assessed. The table below demonstrates 5.55 years’ effective housing land supply for the local development plan area.

Residual Method using Housing Land Requirement

A	2016 - 2019 Housing Land Requirement	4290
B	2016 - 2019 Completions	4094
C	Surplus/Shortfall (B - A)	-196
D	2020 - 2032 Housing Land Requirement	17160
E	2020 - 32 Housing Land Requirement with shortfall added (D - C)	17356
F	Remaining years in Plan Period	13
G	5 Year Requirement E x (5/F)	6675
H	5 Year Supply	7413 (surplus of 738 homes)
I	Years' Supply 5 x (H/G)	5.55 years

60. The equivalent calculation, using the ‘average method’, is set out in the table below. It shows 5.9 years’ effective land supply.

Average Method using Housing Land Requirement

A	2016 - 2019 Housing Land Requirement	4290
B	2020 - 2032 Housing Land Requirement	17160

C	2016 – 2032 Housing Land Requirement (A+B)	21450
D	5 Year Requirement (C/17 x 5)	6308
E	5 Year Supply	7413 (surplus of 1,105 homes)
F	Years' Supply 5 x (E/D)	5.9 years

61. The above calculations demonstrate that, regardless of which method is used, the requirement for a five year effective land supply (based on the figures in the 2020 strategic development plan), is currently being met. Furthermore, these calculations take no account of the contribution from sites identified to meet the strategic development plan allowances or future windfall sites, which have the potential to increase the supply over the next five years and beyond. On the basis of the information before me, I conclude that there is no justification for the identification of additional allocations in the plan in order to maintain a five year effective supply. No modification is required

New sites

62. A number of new sites are allocated in the proposed plan to meet the strategic development plan allowances for the period 2020 – 2032. The recommended modifications to the format of the tables in Appendix 6 allow these new sites to be easily identified.

63. The majority of new sites identified to meet the strategic development plan allowances are for less than 100 houses. Where new sites of less than 100 homes are not the subject of specific representations in relation to deliverability, I consider it reasonable to expect these to be built in the period to 2032. No change is required in relation to these sites.

64. Site specific representations, which raise programming or deliverability concerns in relation to new sites of less than 100 homes, are addressed in the relevant schedule 4 for the settlement in question. In this regard, we recommend the deletion of allocation OP3 at Strichen. Furthermore, we recommend modifications to delete some new sites of under 100 homes, for reasons other than programming or deliverability. As a result, none of these sites would form part of the housing land provision which contribute towards meeting the strategic development plan allowances. The recommended changes are summarised in the table below.

Site (Issue number)	Housing Market Area	Deductions from housing land provision
Behelvie OP2 (28)	Aberdeen	- 41
Belhelvie OP3 (28)	Aberdeen	- 49
Methlick OP4 (29)	Aberdeen	- 63
Strichen OP3 (20)	Rural	- 49
Turriff OP3 (27)	Rural	- 40
St Katherines OP2 (31)	Rural	- 35

65. Larger new sites potentially raise more questions in terms of their deliverability by 2032, as they would normally be expected to take longer to develop and may have lengthier lead in periods, before development can commence. The list below shows the new allocations of 100 homes or more. All of these are within the Aberdeen Housing

Market Area and some are the subject of site specific representations in relation to deliverability, which are addressed in the relevant schedule 4. Our conclusions on the deliverability of these sites within the plan period are summarised in the table below.

Site (Number of homes in proposed plan)	Issue Number	Recommendation
Inchmarlo OP2 (120)	Addressed in Issue 55	No modification required.
Inverurie OP15 (130)	Addressed in Issue 34	No modification required.
Newburgh OP3 (160)	Addressed in Issue 23	No modification required.
Oldmeldrum OP5 (146)	Addressed in Issue 24	No modification required.
Pitmedden OP2 (219)	Addressed in Issue 25	Recommended modification to reduce the site area and indicative capacity of site to 100 homes (-119).
Portlethen OP1 (176)	Addressed in Issue 45	Recommended modification to reduce contribution to strategic development plan allowance to 100 homes (-76).
Potterton OP1 (172)	Addressed in Issue 26	No modification required.

66. All of the above changes are included in the revised version of Appendix 6, provided at the end of this report and referred to in the recommended modifications. The implications for the overall housing provision are addressed in subsequent paragraphs. No other modifications are required in relation to the contribution that new sites make towards the strategic development plan allowances.

Constrained Sites

67. A number of representees, including Homes for Scotland, object to sites which were identified as “constrained” in the 2019 housing land audit, counting towards the strategic development plan allowances. It is concluded in issue 2 that the principle of using constrained sites is consistent with paragraph 4.18 in the strategic development. However, I agree that it is necessary to understand the reasons why the council considers that a site which is constrained in 2019 can contribute towards meeting the strategic development plan allowances.

68. Sites which are currently constrained should be capable of becoming effective within the plan period. However, as I have already indicated, it is also necessary to consider whether the allocation would be deliverable within the plan period.

69. As with new sites, the council has indicated that it is unable to provide information on the anticipated programming of the constrained sites identified as contributing towards the strategic development plan allowances. It indicates that only those constrained sites, which were the subject of bid submissions sites, are identified in the proposed plan. Constrained sites, including some existing local development plan allocations, which the council does not consider to be deliverable in the period to 2032 have not been included in the proposed plan.

70. The bid assessment template used by the council provides a range of information relevant to the future development of potential housing allocations. Whilst a bid

submission gives the assurance that the landowner/developer intends to bring forward a site for housing development in the plan period, the information on overcoming potential constraints was provided in early 2018 and may be out of date. I agree with representees that further consideration of constrained sites is needed.

71. The 2019 housing land audit identifies the reason why each site was constrained at that time. Additional information on the constraints affecting a number of these sites is provided in the 2020 housing land audit, documents associated with the preparation of the Main Issues Report and proposed plan, representations and supporting documents, and the council's response to representations. Where there were gaps in my understanding of constrained sites, I asked for further information (FIR 008). From the responses provided, I am satisfied that I have sufficient information to address the matters raised in representations on the contribution of constrained sites to the strategic development plan allowances.

72. Those constrained sites which are the subject of specific representations have been considered in the relevant settlement statement and the outcome of those considerations are taken into account.

Aberdeen Housing Market Area

73. Only six constrained sites from the 2019 housing land audit have been identified as contributing towards the strategic development plan allowance for the Aberdeen Housing Market Area. These would provide 222 homes towards the required allowance of 3065 homes. In addition, site OP2 in Oldmeldrum which was effective in 2019, is shown as having a marketability constraint in the 2020 housing land audit. The table below summarises our assessment of the deliverability of each of these sites.

Site (Contribution to AHMA allowance in proposed plan)	Constraint	Comments	Recommendation
Balmedie OP1 (80)	Physical	Addressed in Issue 28	No modification required.
Banchory OP6 (40)	Contamination, Marketability, Other	Addressed in Issue 54	Recommended modification to exclude the site from those which contribute to the strategic development plan allowance (- 40).
Hatton of Fintray OP1 (16)	Marketability	Addressed in Issue 38.	No modification required.
Keithhall OP1 (36)	Ownership	Addressed in Issue 38.	No modification required.
Methlick OP1 (20)	Marketability, Infrastructure	Addressed in Issue 29.	No modification required.
Millbank OP1 (30)	Marketability Infrastructure	The council indicates that two possible	No modification required.

		solutions have been identified to resolve the waste water treatment constraint. It is reasonable to assume this allocation can be completed by 2032.	
Oldmeldrum OP2 (35)	Marketability	Addressed in Issue 24	No modification required.

74. The change in relation to Banchory OP6 is included in the revised version of the tables in Appendix 6, provided at the end of this report and referred to in the recommended modifications below. The implications for the overall housing provision are addressed in subsequent sections of this schedule 4.

Rural Housing Market Area

75. Two thirds of the sites allocated to meet the strategic development plan allowance for the Rural Housing Market Area are from existing sites, the majority of which are identified as constrained in the 2019 housing land audit. It is not possible through this examination to consider in detail how and when the constraints on each individual site would be overcome. However, I need to be reasonably confident that the allocations identified to meet the strategic development plan allowance are deliverable by 2032.

76. The 2019 housing land audit indicates that many of these sites are the subject of marketability constraints. In terms of marketability, Planning Advice Note 2/2010 requires consideration of whether a site can be developed in the period under consideration. I agree with representees that “marketability” is about more than a landowner being willing to sell a site. Unlike the other types of constraints identified in Planning Advice Note 2/2010, there is not a clearly identifiable course of action to remove the constraint, which the land use planning system can influence. Furthermore, whilst marketability is a constraint that may reasonably be applied to the five year effective supply assumptions, it does not necessarily follow that market conditions and confidence would remain static over the 10 year period.

77. Representations relating to marketability and deliverability within the context of the spatial strategy of the plan are addressed in issue 2. It acknowledges the challenges, particularly in the more remote rural areas, and notes the measures being used by the council to support the delivery of homes. No modifications are recommended in relation to this matter in the spatial strategy section of the plan.

78. In terms of individual allocations, I consider it reasonable to conclude that smaller sites (those under 50 homes), which are not the subject of specific representations and the only identified constraint is marketability, can be delivered by 2032. No evidence has been submitted to indicate otherwise, and assistance may be available through the various support measures outlined by the council in Issue 2. Site specific representations in relation to marketability constrained sites of under 50 homes in the Rural Housing Market Area are addressed in the relevant issue for the settlement in question. However, no modifications are recommended to remove or reduce the contribution from any of these sites.

79. For larger constrained sites in the Rural Housing Market Area and those subject to constraints other than or in addition to marketability, we have undertaken a more detailed assessment of their anticipated deliverability. In some cases, it was necessary to seek further information from the council and other parties through further information requests. The outcomes of our assessment, which for some sites reflect the consideration of representations covered in other issues, are set out in the table below.

Site (Contribution to RHMA allowance in proposed plan)	Constraint	Comments	Recommendation
Banff OP1 (306)	Marketability	Part of site is effective and due to be completed in 2022 (94 homes). If current rates of construction are maintained from 2023 onwards (around 30 homes per year), the remaining 306 homes would be completed by 2032. This is considered to be a reasonable assumption.	No modification required.
Banff OP2 (200)	Physical, Marketability and Infrastructure	Addressed in Issue 15.	Recommended modification to reduce the contribution to the strategic development plan allowance to 100 (-100).
Cairnblug/Inverallochy OP1 (85)	Marketability	Addressed in Issue 16	No modification required.
Memsie OP1 (15)	Ownership and Marketability	Addressed in Issue 16	No modification required.
Rosehearty OP1 (49)	Marketability	Addressed in Issue 16	No modification required.
Crudie OP1 (14)	Marketability and Infrastructure	Addressed in Issue 17.	No modification required.
Boddam OP1 (9)	Ownership	Addressed in Issue 19.	Recommended modification to exclude the site from those which contribute to the strategic development plan allowance

Proposed Aberdeenshire Local Development Plan 2020 Examination

			(-9).
Fetterangus OP2 (27)	Ownership	Addressed in Issue 21	No modification required
Mintlaw OP5 (50)	Marketability	Addressed in Issue 21.	Recommended modification to exclude the site from those which contribute to the strategic development plan allowance (- 50).
Old Deer OP1 (10)	Ownership	Additional information provided by the landowner indicates no secure tenancies and a willingness to sell.	No modification required.
St Fergus OP1 (13)	Ownership	Addressed in Issue 20.	No modification required
Turriff OP1 (442)	Marketability	Addressed in Issue 27.	Recommended modification to reduce the contribution towards the strategic development plan allowance to 200 (-242).
Old Rayne OP1 (10)	Physical and Marketability	Addressed in Issue 41.	Recommended modification to show OP1 as a new site not an existing site.
Fettercairn OP1 (60)	Marketability	Addressed in Issue 51.	No modification required.
Laurencekirk OP6 (100)	Infrastructure	Addressed in Issue 43.	No modification required.
Alford OP4 (85)	Physical and Marketability	Addressed in Issue 53.	No modification required.
Roadside of Kinneff OP1 (16)	Ownership	Addressed in Issue 50.	No modification required.
Tarland OP3 (36)	Financial and Marketability	Addressed in Issue 58.	No modification required.
Towie OP1 (5)	Ownership and Marketability	Addressed in Issue 57	No modification required.

80. These changes are included in the revised version of the tables in Appendix 6,

provided at the end of this report and referred to in the recommended modifications below. The implications for the overall housing provision are addressed in subsequent sections of this schedule 4.

Appendix 6 Housing Land Allocations – Strategic Housing Sites

81. A number of representees are concerned about the slow delivery of homes on existing strategic housing sites. The council has indicated that reliance on large sites comes from previous plans and is consistent with the spatial strategy in the approved strategic development plan. The potential risk of reliance on strategic sites was considered through the preparation of the strategic development plan. Paragraphs 4.14 and 4.15 indicate that the reason for the strategic development allowances in the period 2020 – 2032 is to maintain the housing land supply, should any of the strategic sites fail to come forward. On this basis, I consider that the concerns raised in these representations have already been addressed through the strategic development plan.

82. Furthermore, matters relating to the programming of strategic sites and extrapolated completion rates were considered in the strategic development plan examination. Whilst the full capacity of strategic sites such as Chapelton are shown in the allocations in the proposed plan, the council acknowledges that these are not expected to be delivered in full during the plan period.

83. I conclude that there is no justification to identify additional housing allocations for the period up to 2032 on the grounds of slow delivery of existing strategic sites. However, I consider that text should be added to the introductory paragraphs in Appendix 6 to make clear that some sites will not be completed until after 2032. I cover this in my recommended modifications below.

Appendix 6 Housing Land Allocations – Rebasing of Existing Allocations

84. I am clear from the information before me that the allocations which are identified as contributing towards the strategic development allowances do not form part of the 2019 effective land supply. The revised versions of the tables in Appendix 6, as set out in my recommended modifications, should help provide clarity on this matter. No other modifications are required.

Appendix 6 Housing Land Allocations – Strategic Reserve or Future Opportunity Sites

85. My consideration of representations seeking the identification of strategic reserve or future opportunity sites for housing is set out under Issue 2 – The Spatial Strategy. No modification is required.

Implications for meeting the strategic development plan allowances

86. In order to meet the housing land requirement up to 2032, the plan must identify allocations for 3,065 homes in the Aberdeenshire part of the Aberdeen Housing Market Area and 2,042 homes for the Rural Housing Market Area. The proposed plan includes allocations for 3,145 homes in the Aberdeen Housing Market Area and 2,619 homes in the Rural Housing Market Area. However, the recommended modifications outlined above have implications for these overall totals.

87. In the Aberdeen Housing Market Area, we recommend the deletion of three housing sites and a reduction in one site area. Other changes are recommended to the numerical contribution that some sites make to the allowance, taking account of anticipated delivery in the plan period. Furthermore, following the consideration of representations in Issue 36, it is recommended that the capacity of allocation OP2 Newmachar be increased from 95 to 130, which would contribute an additional 35 homes to the strategic development plan allowance. These adjustments are set out in the table below and included in the revised version of appendix 6 provided at the end of this report.

Allocations	Adjustments to Allocations contributing to the Aberdeen Housing Market Area allowance
Deleted Sites	
Belhelvie OP2	- 41
Belhelvie OP3	- 49
Methlick OP4	- 63
Reduction in Site Area	
Pitmedden OP2	- 119
Other Changes	
Oldmeldrum OP1	- 38
Oldmeldrum OP4	- 6
Banchory OP6	- 40
Portlethen OP1	- 76
Stonehaven OP3	- 48
Newmachar OP2	+ 35
Overall adjustment	- 445

88. As a result of the above adjustments, the allocations contributing towards the allowance for the Aberdeen Housing Market Area would provide land for 2,700 homes. This represents a shortfall of 365, when compared to the required strategic development plan allowance for the Aberdeen Housing Market Area (3,065 homes).

89. In a further information request (FIR008), I asked the council for its views on suitable mechanisms to address any shortfall in the housing allocations in the Aberdeen Housing Market Area. It suggested that, if additional allocations are required, these should be selected from the list of preferred sites identified in the Main Issues Report. Homes for Scotland disagrees with this suggestion and states that sites should be selected on their suitability and deliverability within the plan period. Other suggestions include the identification of strategic reserve sites or a policy mechanism to allow the release of further land, should the housing land supply fall below five years.

90. I do not consider that the identification of strategic reserve sites would be an appropriate solution, as the strategic development plan specifically requires sites to be deliverable in the period up to 2032. Furthermore, a policy to provide additional sites, if necessary, would not address the requirement for the local development plan to identify allocations to meet the allowances. I agree with Homes for Scotland that additional sites should be selected on their suitability and deliverability within the plan period. Whilst these may include sites identified as preferred options by the council in the Main Issues Report, I consider that all sites promoted through representations to the proposed plan, which have been the subject of public and stakeholder consultation and strategic environmental assessment), are potential options.

91. Following consideration of representations relating to housing bid sites in the Aberdeen Housing Market Area, we conclude that the following additional sites should be identified as housing allocations to contribute towards meeting the strategic development plan allowance for the Aberdeen Housing Market Area in the period up to 2032.

Allocation (Bid proposal)	Issue Number	Contribution towards strategic development plan allowance	Recommendations
Banchory OP7 (MR056 Land at Upper Arbeadie Road)	54	+42	Include Banchory OP7 in Table 4 in the revised version of Appendix 6 – add 42 to the second last column (Local Growth AHMA) and the final column (LDP 2022 allocation).
Kemnay OP3 (GR134 Land east of Stuart Crescent)	40	+65	Include Kemnay OP3 in Table 4 in the revised version of Appendix 6 – add 65 to the second last column (Local Growth AHMA) and the final column (LDP 2022 allocation).
Portlethen OP7 (KN027 Land north of Thistle Drive)	45	+300	Include Portlethen OP7 in Table 4 in the revised version of Appendix 6 – add 300 to the third last column (Strategic Growth Area) and the final column (LDP 2022 allocation).
Total		407	

92. Together, these sites would address the shortfall of land for 365 homes identified above. All three allocations are considered necessary, as the outcome of a flood risk assessment may reduce the overall indicative capacity of site OP7 at Portlethen. The allocations contributing towards the allowance for the Aberdeen Housing Market Area would now provide land for 3,107 homes. The recommended changes are included in the revised version of Appendix 6 provided at the end of this report and referred to in the recommended modifications below.

93. In the Rural Housing Market Area, we recommend the deletion of three housing sites. As indicated in the sections above, other changes are recommended to the numerical contribution that some sites make to the allowance, taking account of anticipated delivery in the plan period. Following consideration of site specific representations, we recommend that 25 homes from site OP1 at Gardenstown (Issue 16), 10 homes from site OP1 at St Katherines (Issue 31) and an additional site for 45 homes at Aberchirder (Issue 17) contribute to the strategic allowance for the Rural Housing Market Area. These adjustments are set out in the table below and included in the revised version of appendix 6 provided at the end of this report.

Allocations	Adjustments to Allocations contributing to the Rural Housing Market Area allowance
Deleted Sites	
Strichen OP3	- 49

Turriff OP3	- 40
St Katherines OP2	- 35
Additional Site	
Aberchirder OP1	+45
Other Changes	
Banff OP2	- 100
Boddam OP1	- 9
Mintlaw OP5	- 50
Turriff OP1	- 242
Gardenstown OP1	+25
St Katherines OP1	+10
Overall adjustment	- 445

94. As a result of the above amendments, the allocations contributing towards the allowance for the Rural Housing Market Area would provide land for 2,174 homes, which is more than the required strategic development plan allowance (2,042 homes). These housing allocations also provide sufficient surplus to address the identified shortfall in completions from 2019, referred to in some representations and addressed in paragraph 28 above. I conclude that no additional allocations are required in the Rural Housing Market Area for the period up to 2032.

Other Changes to Appendix 6

95. The representation from Homes for Scotland points out an error in relation to allocation OP3 at Maud in table 3 in Appendix 6. On comparing the totals with the allocations in the Maud settlement statement, I note that the figures for OP2 and OP3 have been mixed up. Allocation OP2 is for 30 homes and OP3 is for 10 in total, but only three still to be built. A modification is required to correct this error and is included in the revised version of Appendix 6. However, it has no implications for the overall housing numbers.

96. Some other changes are recommended in relation to specific housing allocations in the schedule 4s for the settlement statements. Whilst these are not directly relevant to the strategic development plan allowances, they have implications for the information provided in Appendix 6. In the interests of consistency, the following changes are included in the revised version of the tables in Appendix 6.

Allocation	Issue Number	Recommended modifications
Hatton OP2	19	Change the figure in the LDP Allocation column of the relevant table in Appendix 6 from 21 to 34.
Crimond OP1	20	Delete the allocation from the tables in Appendix 6

97. Table 1 in Appendix 6 in the proposed plan provides a breakdown of the housing land allocations and total local development plan housing land supply by strategic growth area and local growth area. These figures are not required in order to demonstrate compliance with the strategic development plan. With the exception of the allocations

contributing to the allowances by local growth area, I do not have sufficient information to update these figures in the revised version of Appendix 6. I have therefore identified these as “tbc” (to be confirmed) for the council to calculate as consequential modifications, should it wish to do so.

Conclusions

98. Paragraph 119 in Scottish Planning Policy indicates that local development plans in city regions should allocate a range of sites which are effective or expected to become effective in the plan period to meet the housing land requirement of the strategic development plan up to year 10 from the expected year of adoption. In order to meet this requirement, the strategic development plan requires this local development plan to identify allocations to meet the housing allowances for the period 2020 – 2032. Scottish Planning Policy and the strategic development plan also state that there should be a minimum of five years effective land supply at all time.

99. Subject to the modifications recommended below, I am satisfied that the housing provision in the local development plan would meet the requirements of the strategic development plan and accord with the relevant paragraphs in Scottish Planning Policy. I note that a 20% generosity allowance is already factored into the housing land requirements for the period 2020 – 2032 identified in the strategic development plan. Tables 4 and 6 in the revised version of Appendix 6 set out the allocations which meet the strategic development plan allowances for the Aberdeen and Rural Housing Market Areas. These allocations will be complemented by a significant number of existing effective sites (as identified in the 2019 housing land audit), which will also provide land for housing in the period up to 2032 and beyond. There is currently a five year effective housing land supply, which will be supplemented by new allocations following the adoption of the local development plan.

100. Whilst, this plan requires to be prepared within the context of the approved strategic development plan and Scottish Planning Policy 2014, I am aware of the changing national planning context and the strong likelihood of a new local development plan process in the next five year period. This will provide the opportunity to revisit the housing land requirements for the Aberdeenshire area and address any changes in housing need and demand and fluctuations in the anticipated delivery of homes on the allocated sites.

Reporter’s recommendations:

Modify the local development plan by:

1. Replacing the first three paragraphs in Appendix 6 Housing Land Allocations on page 167 with the following four paragraphs:

“Table 3 provides an overview of the housing land supply that contributes to the Strategic Development Plan’s “allowances” for the period 2020-2032 (as identified in Table 3 of the Strategic Development Plan).

Tables 4 – 7 show all allocated housing sites within the Local Development Plan and the indicative number of homes on each site. Table 4 lists the sites which have been identified to meet the Strategic Development Plan allowance for the Aberdeen Housing Market Area and Table 6 lists the sites which have been identified to meet the Strategic

Development Plan allowance for the Rural Housing Market Area. These sites fall into one of the following categories:

- New Allocations which were not in the Aberdeenshire Local Development Plan 2017
- Where there is a difference in the allocated site total and the Housing Land Audit total
- Extensions to existing sites or increased densities on existing effective sites resulting in an increase in numbers;
- Existing constrained sites where a bid has been submitted indicating that they will come forward within the Plan period.

Tables 5 and 7 show all other housing allocations in the Aberdeen Housing Market Area and the Rural Housing Market Area. The majority of these sites were included in the previous local development plan and form part of the effective housing land supply in 2019. Some of these sites will not be completed until after 2032.

The Settlement Statements in Appendix 7 provide details of the full housing provision for each of the identified towns and villages within Aberdeenshire.”

(Note - This text should follow the new introductory paragraph and Tables 1 and 2 set out in a recommended modification under Issue 2. A revised version of Appendix 6 incorporating the recommended modifications from Issues 2 and 5 is provided at the end of this report)

2. Replacing Table 1 in Appendix 6 with Table 3 shown in the revised version of Appendix 6 provided at the end of this report.

3. Replacing Tables 2 and 3 in Appendix 6 with Tables 4 - 7 shown in the revised version of Appendix 6 provided at the end of this report.

Provision of the development plan to which the issue relates:	Policies H2 – H5 and Policy Map relating to Shaping Homes and Housing	

Planning authority's summary of the representation(s):

Policy H2 Affordable Housing

The Scottish Environment Protection Agency (SEPA) has confirmed that they have no comments to make on this policy (RD0214.A). No modification sought (PP1219).

Support

Representees support Policy H2 setting the requirement for affordable housing at 25% (PP0617, PP0686, PP1125, PP1222 and PP1306) and encouragement of the provision of general market homes to support ongoing delivery of affordable homes (PP1306). Representees have included an Appendix (RD0195.A, RD0216.A and RD0259.A) in their representation which provides further detail to support their position (PP1125, PP1222 and PP1306).

General

NHS Grampian has noted the positive impact this policy has on vulnerable clients securing a home. However, the representee noted that as with any development, there would be an increased burden on health and social care services due to an increased demand for services, particularly in areas where there is a high proportion of vulnerable people. The representee has included an Appendix (RD0216.A) in their representation which provides further detail to support their position (PP1222).

Paragraph H2.2

The terminology used is clumsy and does not reflect the policy aspirations of Scottish Planning Policy (SPP) paragraph 29 which advises that, "the level of affordable housing required as a contribution within a market site should generally be no more than 25% of the total number of homes." Paragraph H2.2 should be amended to avoid confusion and provide clarity (PP0686).

The terminology in paragraph H2.2 does not strictly reflect SPP and places unnecessary emphasis on the requirement to justify less than the 25% benchmark. Policy H2 should be amended to provide sufficient flexibility for a reduction in exceptional circumstances (RD0195.A) (PP1125).

Footnote 3 on page 42 is not needed as it does not add to the policy or serve a policy purpose (PP0686 and PP1125). It is not up to the housebuilding industry by means of "concerted effort" or otherwise to deliver deficits beyond the policy requirements (PP0686). The representee has included an Appendix (RD0195.A) in their representation which provides further detail to support their position (PP1125).

Forms of Contribution and Threshold for Provision

Guidance on how commuted sums would be calculated would be welcomed (PP0438).

The provision of affordable housing relies too heavily on the delivery of mainstream housing from the development industry with the onus placed on landowners to make land available. If an unacceptable burden is placed on land values there would be reluctance

to release land for development and it can create funding concerns with uncertainty for Registered Social Landlords (RSL), which often restricts delivery progress. Greater flexibility in the approach to delivery is required and should be clearly articulated within the Proposed Local Development Plan (PLDP) (RD0195.A) (PP1125).

The finer details of the delivery mechanisms and circumstances whereby a lower contribution would be accepted should form part of the PLDP rather than in non-statutory Planning Advice. Sufficient flexibility and support for delivery across all mechanisms should be provided and not just the current over-reliance on developers meeting 25% delivery on-site. It is disappointing that further Planning Advice would set out these details given the extant LDP contains such information as adopted Supplementary Guidance. Review of the existing commuted sum figures and the low-cost home ownership benchmark should be undertaken in consultation with the development industry with the appropriate forum for that through the LDP process. Figures in planning advice should not be used for the duration of the Plan and not be subject to increases without consultation. Existing benchmark figures need to be reviewed to reflect the increased build cost, infrastructure contributions and developer obligations (RD0195.A) (PP1125).

The representee noted that determining the precise provision on each site requires consideration. There is a mismatch in the range of sizes, types and tenure of affordable housing requested by the Council's Housing Service and the actual need within the locality. This is a significant issue that needs to be resolved through more detailed research to accurately reflect the affordable need profile of eligible candidates in the qualifying area at the time of the planning application to make full use of the range of solutions in SPP. In cases where limited need is identified there should be greater use of commuted sums as, in some cases, requested provision is changed at a later date due to a lack of take up or other tenures being agreed post completion to allow development to be fully occupied (PP0617).

Affordable housing occupants would benefit the most if it is not in car dependent locations (PP1169).

The PLDP should be more proactive in the delivery of affordable housing as an alternative to the blanket 25% approach. The PLDP should place a greater emphasis on allocating specific sites and in particular the surplus Council owned land or buildings should be identified for affordable housing as advocated by Planning Advice Note 2/2010: Affordable Housing and Housing Land Audits (PAN 2/2010) (RD0195.A) (PP1125).

Brownfield sites in the countryside (outwith settlements) are not suited to affordable housing due to remote locations with limited access to public transport and nearby essential facilities. Owning and running a vehicle would be necessary and unlikely to be suitable for many people requiring affordable housing. Greater certainty is sought and assurance that developments would not be limited by this requirement of having to provide a unit which would be unlikely to be taken up (PP0438).

The threshold for providing affordable homes should be raised to support smaller builders and provide extra jobs. The representee highlighted Scottish small and medium sized (SME) home builders' recovery from recession has been slower and Covid-19 has compounded these problems. Homes for Scotland's work in considering how to assist small-scale home builders recommended this changed and the representee included a link to this Report. The representee has included an Appendix (RD0259.A) in their

representation which provides further detail to support their position (PP1306).

Policy H3 Special Needs Housing

SEPA has confirmed that they have no comments to make on this policy (RD0214.A). No modification sought (PP1219).

A representee welcomed continued support for continuing care retirement communities outwith settlements as it helps to address the challenge in delivering sufficient, suitable new accommodation for the growing elderly population. The representee has included an Appendix (RD0201.A) in their representation which provides further detail to support their position. No modification sought (PP1138).

NHS Grampian has welcomed support for special needs housing however engagement would be required to evidence the need, for housing for people with disabilities or care homes, exists. NHS Grampian and Aberdeenshire Health and Social Care Partnership (AHSCP) would need more information on the level of care proposed at these facilities before support can be given. A modification to Policy H3 is sought to account for this consultation need (RD0216.A) (PP1222).

Scottish Government has noted that paragraph H3.1 would benefit from clarification on what need has been identified in the HNDA and what policies the Plan intends to prepare to support the delivery of specialist provision housing, to meet the requirements of paragraph 132 of SPP (PP0578).

There is a lack of housing for older people or communities planned to accommodate the ageing population. Developers do not cater and plan for any such accommodation (PP0168).

A representee stated there is a lack of suitable homes in the existing market and in new development to meet the needs of an ageing population. There is a higher-than-average proportion of elderly residents in Aberdeenshire, an established need, demand and support for this type of development. This type of development is a policy focus at the national level, where measures are identified to enable independent living including the provision of new housing suited to needs. The public sector is unable to provide the range and quantity of housing to meet needs with many persons not qualifying for this provision. Despite this gap in the market, and the private market not delivering these homes through mainstream development, there is no provision in the LDP to support this housing need. The policy modifications sought would allow the potential for new development proposals to be supported to deliver well-located/designed development to meet this need. The representee has included an Appendix (RD0133.A) in their representation which provides further detail to support their position (PP0759).

Specialist housing for the elderly should not be sited alongside major roads as noise creates a particular problem for hearing among older people who cannot screen out background noise and open windows on major roads (PP0796).

Policy H4 Residential Caravans

SEPA has indicated that they would object to this policy unless additional wording is included that requires the siting of caravans to avoid areas of flood risk as caravans and

mobile homes are classed as a 'Most vulnerable use' in SEPA's Flood Risk and Land Use Vulnerability Guidance referenced by SPP. SEPA highlight that even a temporary period of use in an area of flood risk can pose a risk to a caravan and its occupants (RD0214.A) (PP1219).

Policy H5 Gypsy/Travellers

Future Gypsy/Traveller sites should be assessed on their individual merits and using a criteria based on LDP policies and other material considerations, with appropriate consultation. The representee has included an Appendix (RD0090.A) in their representation which provides further detail to support their position (PP0592).

The identification of Gypsy/Travellers sites within allocated sites contributes to meeting long-term need but this approach to delivery of sites is unlikely to meet need in the short to medium-term. There remains a need for more immediate provision of sites as set out in the Grampian Gypsy/Traveller Accommodation Needs Assessment 2017 (PP0866).

A representee noted that paragraph H5.1 states that Gypsy/Travellers sites have been identified but there have been no new sites added despite need identified by the Grampian Gypsy/Traveller Accommodation Needs Assessment 2017. Identified sites are not necessarily going to be permanent and there is not a satisfactory solution to accommodation needs, consistency and stability for the Gypsy/Traveller community (PP0866).

The second sentence of paragraph 3 Shaping Homes and Housing is unclear if Gypsy/Travellers sites are also promoted, particularly privately run sites. Private sites run by residents should be identified and promoted in the PLDP to manage the expectations of the local community when planning applications are submitted. The representee highlighted in their attached supporting document, 'Housing Issues 2040 for G/Ts', the problems Gypsy/Travellers face in finding suitable accommodation and suggested several solutions such as the Council purchasing land or using its vacant sites (RD0157.A) (PP0865).

Gaining planning approval for Gypsy/Travellers sites has not been straightforward for any site despite meeting policy requirements (PP0866). Planners should be more accommodating and supportive to such applications (PP0865). The provision of sites, in a mix, would contribute to 'the balance and mix of uses and the type and affordability of housing' (PP0865 and PP0866). The representee has included an Appendix (RD0157.A) in their representation which provides further detail to support their position (PP0865).

Facilities on sites could be of a higher specification particularly in light of the pandemic, health and safety considerations and concerns about shared access to water. Higher specification facilities may make transit and stopover sites more attractive, reducing the number of unauthorised encampments and contribute positively to the health, well-being and education outcomes of Gypsy/Travellers (PP0866).

NHS Grampian has noted that it is important to emphasise that proposals for gypsy/traveller development should also be easily accessible by public transport and linked to health and social care centres (RD0216.A) (PP1222).

SEPA has welcomed the addition of "subject to other policies" into the policy text but

object unless additional wording is included that requires the siting of caravans/mobile homes to avoid areas of flood risk as caravans and mobile homes are classed as a 'Most vulnerable use' in SEPA's Flood Risk and Land Use Vulnerability Guidance referenced by SPP. Otherwise, at a minimum include a foot note. SEPA highlighted that even a temporary period of use in an area of flood risk can pose a risk to a caravan/mobile home and its occupants (RD0214.A) (PP1219).

Shaping Homes and Housing Policy Map

Potterton should be removed as an Effective Housing Land Allocation on the map as it has unresolved constraints that cannot be overcome or would not be resolved within 5 years (PP0607, PP0788, PP0860 and PP0904).

Potterton housing land allocations should be removed from the map to protect endangered species as development will not be able to mitigate risk to Red List species (PP0873).

Potterton should be excluded from the map to confirm it is outwith the Strategic Growth Area (SGA) and within the Local Growth and Diversification Area (LGA) (PP0824 and PP0845).

Modifications sought by those submitting representations:

Policy H2 Affordable Housing

General

Modify the PLDP to take account of increased burden on health and social care service from increased demand from development (PP1222).

Paragraph H2.2

Modify the PLDP to amend paragraph H2.2 by replacing "must include 25% of the serviced plots for affordable housing" with "should include no more than 25% of the total houses for affordable housing." (PP0686).

Modify the PLDP to amend paragraph H2.2 by removing the term "must include" from the first sentence and "only" from the penultimate sentence (PP1125).

Modify the PLDP to amend paragraph H2.2 by replacing "25% of serviced plots" with "25% of the total number of houses." (PP1125).

Modify the PLDP by deleting footnote 3 on page 42 (PP0686 and PP1125).

Forms of Contribution and Threshold for Provision

Modify the PLDP to include guidance of commuted sum calculations for affordable housing (PP0438).

Modify the PLDP to include within Policy H2 flexibility of provision, detail of the delivery mechanisms and circumstances whereby lower affordable housing contributions would be accepted (PP1125).

Modify the PLDP to provide an accurate provision of affordable housing on each site (PP0617).

Modify the PLDP to provide affordable housing in locations that are not car dependent (PP1169).

Modify the PLDP to allocate specific sites for affordable housing, particularly on land or buildings owned by the Council (PP1125).

Modify the PLDP to add a clause for Policy R2 brownfield sites of up to 7 homes so that affordable housing would not be required to be provided but instead a commuted sum secured for nearby settlements (PP0438).

Modify the PLDP to revise the threshold for providing affordable homes to at least 12 (PP1306).

Policy H3 Special Needs Housing

Modify the PLDP to reference within Policy H3 “the need to consult NHS Grampian and Aberdeenshire Health and Social Care Partnership.” (PP1222).

Modify the PLDP to clarify the need identified as part of the HNDA and what policies the Plan intends to prepare to support the delivery of specialist provision housing within paragraph H3.1 (PP0578).

Modify the PLDP allocating land for housing for older people and the ageing population (PP0168).

Modify the PLDP policy to “Policy H3 Special Needs and Age Exclusive Retirement Housing” and to read, “H3.1 Where there is an established need which can be demonstrated, we will generally support non-mainstream housing proposals for people with disabilities, specialist housing for the elderly, and age exclusive retirement housing. In all cases, the houses and related development must be specifically designed for the end user group and be designed in a manner compatible with and sympathetic to the site and the surrounding area. If the developer demonstrates there are no suitable sites within a town centre in the first instance and, secondly elsewhere within the settlement, we will allow special needs and age exclusive retirement housing to be developed if:

- it is on the edge of a settlement or in an accessible rural location with other built development close-by and characteristic of the area;
- the site is compatible with neighbouring uses;
- there is easy access to public transport, local services and open space; and
- the site’s topography and access are appropriate for the end users.

Matters of specific design fall under Policy P1 Layout, siting and design.

H3.2 Self-contained continuing care retirement communities, which provide health care, and age exclusive retirement housing will be approved outwith edge of settlement sites providing the applicant demonstrates that the development will be self-sufficient in the provision of necessary facilities or would otherwise not have an adverse impact on the

existing facilities enjoyed by local residents.” (PP0759).

Modify the PLDP to ensure that specialist housing for the elderly is not sited alongside major roads (PP0796).

Policy H4 Residential Caravans

Modify the PLDP to amend paragraph H4.1, second sentence, to read, “In cases where a temporary need has been demonstrated by the applicant we will allow the temporary siting of a residential caravan providing the siting respects the character and amenity of the surrounding area, avoids areas of flood risk, and the caravan can be satisfactorily serviced.” (PP1219).

Policy H5 Gypsy/Travellers

Modify the PLDP to clarify the process for identifying Gypsy/Traveller sites (PP0592).

Modify the PLDP to strengthen the approach for delivery of sites in the short and medium-term (PP0866).

Modify the PLDP to identify new Gypsy/Traveller sites (PP0865 and PP0866) and, to identify and promote privately run Gypsy/Traveller sites (PP0865).

Modify the PLDP to amend paragraph H5.2 to ensure Gypsy/Travellers sites are assessed without undue prejudice (PP0866).

Modify the PLDP to amend paragraph H5.3 to ensure facilities on sites are of the highest specification, taking account of health and safety considerations (PP0866).

Modify the PLDP to include in Policy H5 that Gypsy/Traveller development should be easily accessible by public transport and linked to health and social care centres (PP1222).

Modify the PLDP to amend paragraph H5.3 to read, “Proposals must also avoid areas of flood risk, provide a secure environment and ...”. Otherwise, insert a footnote at paragraph H5.2 “subject to other policies” to read, “In particular sites must be in accordance with SEPA Flood Risk and Land Use Vulnerability Guidance.” (PP1219).

Shaping Homes and Housing Policy Map

Modify the PLDP to remove Potterton as an Effective Housing Land Allocation on the map (PP0607, PP0788, PP0860, PP0873 and PP0904).

Modify the PLDP to exclude Potterton from the SGA (PP0824 and PP0845).

Summary of responses (including reasons) by planning authority:

Policy H2 Affordable Housing

The comment from SEPA is noted. No change is required.

Support

The support for setting the 25% affordable housing requirement is welcomed.

General

The Council acknowledges that affordable housing, as like any residential development, would increase pressure on local services. Policy RD2 Developer Obligations and Appendix 7, Settlement Statements make provision for seeking contributions in this respect.

Paragraph H2.2

The Council does not agree with amending the policy text. The representees have requested the amendment to policy wording that was provided through the Examination of the LDP 2017 and carried forward into the PLDP 2020 (AD0036, page 121). This wording avoids any ambiguity on the level of affordable housing that could be sought and conforms with SPP paragraph 129 (AD0012).

The Housing Need and Demand Assessment 2017 (HNDA) estimates a need for around 48% of all new homes to be affordable (AD0025, page 77 and 80). This is an increase of 10% from the estimates in the HNDA 2011 as highlighted in Policy H2 Affordable Housing in the LDP 2017. The estimate of need ranges from around 22% in the RHMA to 78% in the AHMA. The “must include 25%” requirement is clearly based on evidence from the HNDA which identifies a level of need significantly in excess of this policy requirement. The acceptance of lower figures “only in exceptional circumstances” remains to be appropriate and wholly necessary as is clearly evidenced in the HNDA. No change is required.

SPP paragraph 129 states that, where an affordable housing contribution is required, “this should generally be for a specified proportion of the serviced land within a development site to be made available for affordable housing” (AD0012). The requirement set in paragraph H2.2 is expressed as a proportion of the serviced plots on new housing developments, and is, therefore consistent with this guidance. No change is required.

With regards to the inclusion of footnote 3, it is prudent to supplement the policy text to highlight the need for alternative affordable housing models of market housing. The latest Strategic Housing Investment Plan 2021 - 2026 (SHIP) paragraph 2.4 continues to project that around 70% of affordable homes will be obtained and delivered through the LDP affordable housing policy (AD0173). Despite this, there will continue to be a gap where need (at 48% in the HNDA) is not being met through either private or public means. Whilst the Scottish Government are supporting and funding affordable homes delivery, the grants are limited to a set cost per unit, and the high construction costs along with the high land values found in Aberdeenshire are problematic. The level of funding available is also dependent on the Government agenda therefore it is unknown how much funding will be available during the lifetime of the LDP. The Aberdeen City and Shire Strategic Development Plan 2020 (SDP) paragraph 4.6 notes that meeting the targets set in the SDP (35% of the Housing Supply Target is affordable) will need “considerable effort, coordination and creativity and for the public and private sectors to work together” (AD0016). This highlights a need for the development industry to play a role in delivering unsubsidised housing to form an element of affordable housing. No change is required.

Forms of Contribution and Threshold for Provision

Supplementary Guidance has been removed from the PLDP and replaced with Planning Advice in accordance with the provisions of the new Planning (Scotland) Act 2019 (AD0010, page 20, section 9). The policy wording directs readers to Planning Advice Developer Obligations and Affordable Housing that will be available. It states that Planning Advice supports the policy “by providing further detail on the forms that affordable housing contribution could take and, outlining the exceptional circumstances where a lower contribution or an alternative to onsite provision may be appropriate”. The Council do not agree that the policy is inflexible. Planning Advice will be required to be consistent with PAN 2/2010 and SPP, specifically SPP paragraph 129 which states that Planning Authorities should consider the level of affordable housing contribution which is likely to be deliverable in the current economic climate as part of a viable housing development (AD0012).

Planning Advice Developer Obligations and Affordable Housing will have public engagement targeted at a SP=EED Level 1, with targeted stakeholder engagement with agencies and stakeholder bodies, according to the subject under consideration. The mechanisms for providing the appropriate form of affordable housing contribution, including commuted sums, is an operational issue and not considered a policy matter – as such the Council do not consider it necessary to be included within the PLDP policy text. No change is required.

The representee acknowledges that the range of sizes, types and tenure of affordable housing is undertaken on a case-by-case basis at the time of a planning application. The Council in identifying the most appropriate provision for each development site, consider all relevant housing information available at the time including open market conditions, site circumstances including site development costs, existing affordable housing stock, relets and waiting list information. The Council acknowledge the difficulty in providing the provision to meet exact needs, given the fluctuating nature of this information and choice can also be a factor in the uptake of units. The Council do not agree however that there should be greater use of commuted sums. Paragraph 21 of PAN 2/2010 states that “exceptionally, a site may be unsuitable for affordable housing...” and that commuted sums “should only be used sparingly” (AD0006). The proposed policy approach of accepting commuted sums only in exceptional circumstances is considered appropriate and consistent with this guidance. No change is required.

The Council disagrees that affordable housing should be excluded from rural areas where car use may be more necessary. Affordable housing households are not precluded from owning their own transport. PAN 2/2010 paragraph 16 seeks to make affordable housing available in a range of locations (AD0006). There is a significant affordable housing need within Aberdeenshire and as set out above, the most appropriate provision for each development site will be determined on a case-by-case basis. No change is required.

In terms of allocating specifically affordable housing sites, SPP paragraph 129 states that the level of affordable housing required as a contribution “should generally be no more than 25%” (AD0012) therefore it is clear the Council cannot require the development industry to provide wholly affordable sites. The Council have a number of sites promoted as 100% affordable housing allocations in the PLDP although this is an exception, where the developer has identified this level of provision is to be delivered. The use of Local

Authority land for affordable housing continues to be explored when sites become available. A recent example of this includes the planning permission granted in December 2020 at the former Ellon Academy site in Ellon (planning application reference APP/2020/1422). Other avenues for identifying land for affordable housing development are also being proactively explored where appropriate. The Council's Housing Service sit on the Council's corporate Asset Disposal Group actively considering in the first instance if any potential land or asset for disposal would be appropriate for affordable housing. Nevertheless, the Council's Housing Service and its RSL partners do not have a large bank of land for development and the majority of future new affordable housing development will, therefore, come via contributions secured through the Local Development Plan's Affordable Housing Policy. Any potential additional sources of supply from Council owned land should, therefore, not be a substitute for the proposed policy approach. No change is required.

The Council does not agree that the four or more homes threshold should be raised. Increasing the thresholds would be contrary to delivering sustainable mixed communities, particularly within smaller rural communities where the general scale of development is smaller. This amendment would also be contrary to PAN 2/2010 paragraph 16 that seeks to make affordable housing available in a range of locations (AD0006). There is no case for removing the affordable housing requirement on the redevelopment of large brownfield sites or other small-scale sites as a matter of principle. To do so does not meet the full needs of the community and in any event the impact on development viability is accounted for in the case-by-case assessment undertaken for any proposal, as addressed above.

In respect of concerns regarding the threshold for on-site provision, it is acknowledged that paragraph 16 of PAN 2/2010 indicates that, as a general guide, Local Authorities and developers can normally expect on-site provision to be appropriate for developments of 20 or more units. However, it goes on to state that on-site provision will also often be possible for smaller developments. Significantly, it highlights that in rural areas, where the general scale of development is smaller, a lower threshold for on-site provision may be appropriate in order to make affordable housing available in a range of locations (AD0006, paragraph 16). For reasons of gaining greater assurance that a unit would be taken up, the form of contributions matter has been addressed above. No change is required.

Policy H3 Special Needs Housing

The comments from SEPA are noted and comments of support welcomed. No change is required.

In terms of consultation with NHS Grampian and AHSCP, the representee presents two reasons to be consulted – to confirm an unmet need exists and, to establish if and how much a proposal would impact on existing healthcare provision. It is acknowledged this policy allows for the provision of residential development on unallocated sites that would be in addition to those included in the Appendix 7 Settlement Statements. However, Policy RD2 Developer Obligations, specifically at paragraph RD2.14 would seek contributions for any proposal that would impact on primary healthcare facilities and as such would need to establish the extent of any impact development may have.

Looking at whether when an unmet need exists, the type of evidence to demonstrate "obvious need" is dependent on the proposed development. It would not be appropriate to undertake a blanket approach to consultation with NHS Grampian and AHSCP for all

proposals such as, for example, where a proposal is for an individual housing plot connected with a carers home. For proposed development of multiple special needs housing plots, evidence should take the form of scale of need in the community as well as why existing sites are unavailable. In this circumstance it could be considered appropriate to consult for this reason. The Council confirms that it intends to address NHS Grampian's comment by way of a footnote through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

In accordance with SPP paragraph 132, this policy acknowledges the need in supporting independent living including access for those with disabilities (AD0012). The HNDA 2017 paragraph 5.7.2 notes that there has been no significant change in the numbers of people with long-term activity-limiting health problems or disability. The HNDA also states in paragraph 5.15 that the general housing stock will continue to meet the needs of the vast majority of the older population (AD0025). The policy therefore meets the requirements of SPP to consider the need for provision and goes further, supporting unforeseen development of housing and care facilities where general market housing may not meet specific needs and recognising suitable housing is a key challenge presented by an ageing population. It should also be noted that through the SHIP (AD0173, page 4) "Aberdeenshire Council supports the Scottish Government recommendations to include Wheelchair accessible targets within the Local Housing Strategy (LHS) and accordingly have set a target of 10% of new affordable housing as fully wheelchair accessible within the affordable housing sector. Furthermore, the Council will encourage 10% of all new housing developments in the private sector on developments of 20 or more units." No change is required.

As stated above, this policy acknowledges the challenges and need in supporting independent living with an ageing population. Whilst the general housing stock continues to meet needs, Policy P1 Layout, Siting and Design and its Appendix 8 Successful Placemaking Design Guidance and Appendix 9 Building Design Guidance, require new developments to be adaptable. The adaptability to future needs, including flexibility to adapt to occupants change in circumstances, promotes housing provision that will maintain independent living. The PLDP also contains development opportunity for continuing care retirement communities.

The Council does not agree with the requested modification to the policy text, specifically in relation to age exclusive retirement housing where it does not need to form part of a self-contained community and the location extended to be acceptable within an accessible rural area. Again, the evidence in the HNDA on need does not support this approach. This could lead to considerable development in an unplanned manner should the representee's evidence base of a 60+ age criteria be used to establish need. Unless there is a specific need for special needs homes to be in a particular location at a distance from settlements, Section 7 Shaping Development in the Country policies should be used to provide housing in rural locations. No change is required.

Housing proposed under paragraph H3.1 is required to be easily accessible in support of independent living, providing residents connectivity to services and public transport. Specific concerns relating to noise impact on occupants would be considered through Policy P1 Layout, Siting and Design and either Appendix 8 or Appendix 9 tables under the "Safe and pleasant" section as "amenity". If necessary, a Noise Impact Assessment can be requested through the planning application process. No change is required.

Policy H4 Residential Caravans

The Council does not agree with the request for additional text on flood risk. Any development proposals including that for caravans would be subject to assessment against all relevant policies contained within the LDP. This includes Policy C4 Flooding which indicates the circumstances when a proposal may be sited in an area of flood risk. Policy C4 Flooding addresses circumstances where there is a heightened risk and a footnote within Policy C4 references SEPA's Flood Risk and Land Use Vulnerability Guidance. No change is required.

Policy H5 Gypsy/Travellers

Paragraph 133 of SPP requires development plans to address any identified need for sites for Gypsy/Travellers. It goes on to state that, where there is a need, LDPs should identify suitable sites for these communities. The Grampian Gypsy/Traveller Accommodation Needs Assessment 2017 (AD0146, page 22) identifies that there will likely continue to be a shortfall of provision of sites in Aberdeenshire. The HNDA 2017 paragraph 5.111 shows a continued significant number of unauthorised encampments and paragraph 5.114 notes the recommendations of the 2009 accommodation needs assessment are unchanged as a result (AD0025). The 2012 and 2017 LDPs, in response to this need, identified four gypsy/traveller sites. These have been continued into the PLDP and are located at Blackdog, Ellon, Inverurie, and Chapelton.

The Gypsy/Traveller Site Provision Strategy 2015 paragraph 5.1 states an objective to identify at least one area of land in north, central and south Aberdeenshire in addition to the existing provision at the time, at Greenbanks, Banff (AD0147). Since the publication of this strategy, a site at Aikey Brae, New Deer has also been delivered. The four PLDP sites are in line with this strategy to provide land in the remaining areas of Aberdeenshire. The areas that are identified within the PLDP are well related to existing or proposed settlements and will provide occupants with appropriate access to facilities and services in accordance with SPP guidance.

It should be noted that comments in relation to specific identified Gypsy/Traveller sites are included in the relevant settlement-based Schedule 4 documents.

The Council acknowledges the difficulty in provision of sites particularly to be delivered in the short/medium-term. The Council continually assess areas of land as potential sites and the Local Housing Strategy 2018-2023 (LHS) Action 3 (AD0155, page 31) commits to progressing identified sites and providing assistance to Gypsy/Travellers for developing private sites. No bids were sought for new Gypsy/Traveller sites that could supplement the existing sites identified in the LPD 2017 and assist in meeting short/medium term need. However, Policy H5 remains largely unchanged from the LDP 2017 where need is assumed for proposals submitted by Gypsy/Travellers for their own use. A number of private site developments have been approved through this existing approach as noted in the Grampian Gypsy/Traveller Accommodation Needs Assessment 2017 (AD0146, page 9) and SHIP (AD0173, paragraph 2.1). No change is required.

The policy is supportive of Gypsy/Traveller proposals but as with all development proposals, other policy tests remain in place such as assessing flood risk and impact on the environment. The Council is aware of its responsibilities under the Equalities Act 2010 (AD003, section 149) when formulating recommendations as part of any of its decision-

making. As the representee highlighted, issues in obtaining planning permission do not always stem from the policies within the LDP itself. Thereby, modification to the policy text would not resolve this comment. No modification is required.

The representee notes the introduction to Shaping Homes and Housing promotes specific models of housing provision but does not reference Gypsy/Traveller sites. The examples given in this introduction are where the policies in this chapter are not explicit about supporting particular forms of provision – Policy H5 provides a clear support for Gypsy/Traveller sites. No change is required.

In terms of the provision of appropriate facilities on sites, it would be expected with any publicly operated site for details on management to be provided at the time of a planning application. These are operational issues and not considered a policy matter – as such the Council do not consider it necessary to be included within the PLDP policy text. No change is required.

The policy is sufficiently detailed to address matters of appropriate location and siting of each development proposal. Whilst it would not be the role of policy to ensure developments were designated to particular health and social care centres, falling under “community infrastructure”, the policy addresses that reasonable access would be in place to such facilities. No change is required.

The Council does not agree with the request for additional text on flood risk. Any development proposals including that for caravans and mobile homes would be subject to assessment against all relevant policies contained within the LDP. This includes Policy C4 Flooding which indicates the circumstances when a proposal may be sited in an area of flood risk. Policy C4 Flooding addresses circumstances where there is a heightened risk and a footnote within this policy references SEPA’s Flood Risk and Land Use Vulnerability Guidance. No change is required.

Shaping Homes and Housing Policy Map

The policy map is representative of the Spatial Strategy in Section 5 of the PLDP, the effective housing allocations as set out in Appendix 6 Housing Land Allocations and detailed further within Appendix 7 Settlement Statements. Representees’ comments in relation to specific site constraints are summarised and responded to within Schedule 4 Issue 26: Potterton. Schedule 4 Issue 2: Section 5 – The Spatial Strategy covers matters of SGA and LGA boundaries. No change is required.

Reporter’s conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as a “non-notifiable modification” in relation to a matter covered in Issue 6. However, as this matter arises

from a representation made to the proposed plan it requires to be considered in the examination. I therefore address this below.

Policy H2 Affordable Housing

3. I consider that NHS Grampian's concern regarding an increased burden on health and social care services would apply to any form of housing development, not just affordable housing. I agree with the council that this matter is covered by policy RD2 Developer Obligations and the infrastructure requirements identified in the settlement statements in appendices 7A – 7F of the proposed plan. A recommended modification set out in Issue 12 requires the council to prepare Supplementary Guidance on developer obligations and affordable housing, which will provide further details on these matters. No modification to policy H2 is required in respect of this matter.

Paragraph H2.2

4. Two housebuilders consider that the requirement for “25% of serviced plots for affordable housing” does not accord with Scottish Planning Policy (2014). Paragraph 128 of Scottish Planning Policy states that where the Housing Need and Demand Assessment and local housing strategy identify a shortage of affordable housing, the plan should set out the role that planning will take in addressing this. Paragraph 129 indicates that “planning authorities should consider the level of affordable housing contribution which is likely to be deliverable in the current economic climate, as part of a viable housing development. The level of affordable housing required as a contribution within a market site should generally be no more than 25% of the total number of houses”.

5. I note that the Aberdeen City and Shire Housing Need and Demand Assessment 2017 has identified a need for around 48% of all new homes to be affordable. The council has indicated that this represents a 10% increase in the need for affordable housing from the estimates provided in the 2011 version of the Housing Need and Demand Assessment. I consider that the evidence provided in the Housing Need and Demand Assessment 2017 justifies setting the affordable housing requirement at 25%, in line with the maximum level supported by Scottish Planning Policy. This is equivalent to the level of affordable housing required in the existing local development plan. Comments on the forms of contributions and thresholds for provision, including the implications for land values, are addressed in the section below. Subject to the need for flexibility (the circumstances in which this would apply to be set out in the Supplementary Guidance on developer obligations and affordable housing), I do not consider there is any justification to reduce the affordable housing requirement contained in policy H2. No modification is required.

6. The reference in paragraph H2.2 to “serviced plots” rather than “total number of homes” (as suggested in a representation) is consistent with paragraph 129 in Scottish Planning Policy. I consider that the words “must include” and “only in exceptional circumstances” provide a clear policy statement and certainty for developers. No modification to policy H2 is required.

7. The proposed plan sets out its role in addressing the affordable housing need identified in the Housing Need and Demand Assessment (HNDA). However, it acknowledges that the requirement in full will not be met through the plan's allocations. The council has explained that the purpose of footnote 3 (which does not form part of the policy itself) is to highlight the anticipated gap in affordable housing provision and the

need for action by housebuilders and public agencies.

8. Paragraph 4.6 of the strategic development plan states that meeting its affordable housing targets “will need considerable effort, co-ordination and creativity, and for public and private sector to work together”. I consider the message contained in the footnote in the proposed plan is generally consistent with the strategic development plan and is helpful in highlighting that not all affordable housing need will be met through the implementation of policy H2. However, it implies that the burden of responsibility lies with the development industry, which I do not consider to be justified. I recommend that footnote 3 on page 42 of the proposed plan be amended to bring it more in line with the wording contained in paragraph 4.6 of the strategic development plan. A modification is recommended.

Forms of Contribution and Threshold for Provisions

9. Paragraph H2.2 states that planning advice on developer contributions and affordable housing will support policy H2 by “providing further detail on the forms that the affordable housing contribution could take and, outlining the exceptional circumstances where a lower contribution or an alternative to onsite provision may be appropriate”. A number of representations consider that these details should be provided in the local development plan.

10. I note that there is no requirement in the approved strategic development plan or Scottish Planning Policy for the mechanisms relating to the implementation of the affordable housing policy to be included in the local development plan. Paragraph 17 in Planning Advice Note 2/2010 “Affordable Housing and Housing Land Audits” states that “development plans should set out the scale and distribution of affordable housing required for an area and should outline what is expected from prospective developers”. Paragraph 18 indicates that Supplementary Guidance may cover issues such as how affordable housing should be delivered, developer contributions or methodologies for their calculation, design and management issues”.

11. The council has stated that it did not intend to prepare statutory supplementary guidance to accompany this local development plan, in line with the provisions of the Planning (Scotland) Act 2019. It proposed instead to issue planning advice on developer obligations and affordable housing. However, as I have indicated above, a recommended modification set out in Issue 12 requires the council to prepare Supplementary Guidance on developer obligations and affordable housing, rather than planning advice. Further information on the reasons for this recommended modification are set out in Issue 12.

12. The detailed content of the Supplementary Guidance is not a matter for the local development plan examination. However, I would anticipate that the matters which the council intended to cover in the planning advice note would be included. The procedures for preparing Supplementary Guidance are set out in legislation and include the requirement to publicise a draft version of the Supplementary Guidance and give people the opportunity to comment. A modification is recommended to amend the final sentence in paragraph H2.2 of the proposed plan to make reference to Supplementary Guidance rather than planning advice.

13. The comments made by Mr Chapman on directing affordable housing to a car dependant location relate specifically to an allocated site (OP3) in Inchmarlo. No

modification is sought or required to policy H2 (Affordable Housing) of the proposed plan to address these comments.

14. Caledonia Homes seeks a change to policy H2 to indicate that a commuted sum rather than onsite affordable housing provision should be required for development of up to seven houses on brownfield sites outwith settlements. Homes for Scotland considers that the affordable housing threshold should be increased to 12 to support smaller builders.

15. Policy H2 in the proposed plan applies to all new housing developments of four or more homes. I note that paragraph 16 in Planning Advice Note 2/10 states that on-site provision of affordable housing would normally be appropriate for developments of 20 or more units. However, it also states that, "in rural areas, where the general scale of development is smaller, a lower threshold for on-site provision may be appropriate in order to make affordable housing available in a range of locations".

16. I do not agree that people who meet the criteria for affordable housing are unlikely to have access to a car. Given the rural nature of much of Aberdeenshire and the contribution that small sites can make towards meeting housing need, I agree with the council that increasing the affordable housing threshold would be contrary to delivering mixed sustainable communities. However, I recognise that there may be practical difficulties in delivering and managing on-site affordable housing on small sites, including brownfield sites in the countryside. I would anticipate that consideration would be given to this matter, and any viability issues for small scale builders, in the preparation of the supplementary guidance. No modification is required to the plan itself.

17. I consider that the call for the local development plan to be more proactive in the delivery of affordable housing is supported by Scottish Planning Policy and Planning Advice Note 2/2010. Paragraph 130 in Scottish Planning Policy indicates that "in rural areas, where significant unmet local need for affordable housing has been shown, it may be appropriate to introduce a 'rural exceptions' policy which allows planning permission to be granted for affordable housing on small sites that would not normally be used for housing". Paragraph 15 in Planning Advice Note 2/2010 indicates that there may be circumstances where a higher percentage of affordable housing would be justified, for example on a site owned by the local authority or another public agency.

18. The council's response explains that it is being proactive in the delivery of affordable housing in a number of ways, both through the local development plan and other measures. Given the level of affordable housing need identified in the Housing Need and Demand Assessment, I consider these actions should be considered as additional to the 25% requirements set out in policy H2, not an alternative. No modification is recommended in relation to this matter

Policy H3 Special Needs Housing

19. The council has suggested a footnote be added to the first sentence of paragraph H3.1 to state that "proposals may require consultation with NHS Grampian and Aberdeenshire Health and Social Care Partnership to establish level of need". I consider this to be an appropriate response to the matter raised by NHS Grampian, which also recognises that not all proposals for special needs housing would require consultation with health and social care providers. A modification is recommended.

20. Paragraph 132 in Scottish Planning Policy states that “as part of the HNDA, local authorities are required to consider the need for specialist provision that covers accessible and adapted housing, wheelchair housing and supported accommodation, including care homes and sheltered housing”. It goes on to state that “where a need is identified, planning authorities should prepare policies to support the delivery of appropriate housing and consider allocating specific sites”.

21. The council has drawn my attention to particular extracts from the Housing Need and Demand Assessment 2017 to demonstrate how it has met the requirements of paragraph 132 in Scottish Planning Policy. I note that paragraph 5.17 states that “there is a limited range of housing options for older people other than sheltered housing or residential care”. Also, paragraph 5.18 indicates that “one of the Scottish Government key drivers in the integration of health and social care is ‘shifting the balance of care’ towards independent living in the community and reducing the use of institutional care settings”.

22. There is evidence to show that “the need for specialist housing that covers accessible and adapted housing, wheelchair housing and supported accommodation” has been considered in the Housing Need and Demand Assessment and that these needs are reflected in the forms of special needs housing supported by policy H3 in the proposed plan. Scottish Planning Policy does not require this evidence to be set out in the local development plan.

23. Paragraph 5.15 in the Housing Need and Demand Assessment states that “general housing stock will continue to meet the needs of the vast majority of the older population”. Rather than specifically identify sites for housing for older people, the proposed plan through policy P1 (layout, siting and design), Appendix 8 (successful placemaking design guidance) and Appendix 9 (building design guidance) promotes development which is adaptable to meet the changing circumstances of occupants. I consider that these policies, together with the specialist housing supported by policy H3, provide a reasonable approach to addressing the needs of older people identified in the Housing Need and Demand Assessment. No modification is required.

24. Glenisla Developments Limited seek changes to paragraph H3.1 to provide support for “age exclusive retirement housing” proposals similar to that for non-mainstream housing proposals for people with disabilities and specialist housing for the elderly. It also requests a change to paragraph H3.2 to include reference to “age exclusive retirement housing”. The supporting information provided indicates that “age exclusive retirement housing” is designed, built and let/sold exclusively to older people (typically 55+) and does not necessarily include care provision. The representee indicates that building single level properties is less cost efficient and less profitable than family sized homes and therefore not enough of these types of homes are being built to meet the needs of older people.

25. I note that the number of older people living in Aberdeenshire is projected to increase over the plan period. However as indicated previously, paragraph 5.15 in the Housing Need and Demand Assessment states that “general housing stock will continue to meet the needs of the vast majority of the older population”. The policies in the proposed plan would provide general support for “age exclusive retirement housing” on sites considered suitable for housing in general. I also note that there are two allocations

(OP1 and OP2) at Inchmarlo, to the west of Banchory, for a total of 180 retirement homes.

26. Based on the evidence before me, I do not consider that “age- exclusive retirement housing” should be described as “specialist”, within the context of paragraph 132 in Scottish Planning Policy (2014) or chapter 5 of the Housing Need and Demand Assessment. There is therefore no justification for the plan to provide specific policy support for this type of housing in edge of settlement and countryside locations. I agree with the concerns expressed by the council regarding the potential for unplanned development. Furthermore, the development of “age exclusive retirement housing” in locations which are remote from existing settlements would be inconsistent with the aim of the plan to promote sustainable mixed communities. No modification is required.

27. The concern that specialist housing for the elderly should not be located alongside major roads requires to be balanced with the benefits of good accessibility to public transport and local services. I agree with the council that any particular concerns relating to the effects of noise on elderly residents could be considered though policy P1 (layout, siting and design). No modification is required.

Policy H4 Residential Caravans

28. The glossary in Scottish Planning Policy includes a list of most vulnerable uses in the context of flood risk and drainage, which includes residential caravans. However, I have no reason to believe that residential caravans are any more vulnerable than the other uses mentioned and, as such, I do not consider this use would justify special treatment in the local development plan.

29. I agree with the council that, as matters relating to flood risk are addressed in policy C4 Flooding, there is no requirement for duplication in policy H4. Some modifications to the wording of policy C4 are recommended under Issue 11 in response to a representation from SEPA. No modification to policy H4 is necessary.

Policy H5 Gypsy/Travellers

30. Paragraph 4.5 in the strategic development plan states that “it is important that new development meets the needs of the whole community including the specific needs of the Gypsy Traveller Community”. However, there is no specific requirement or target provision identified in the strategic development plan. Paragraph 133 in Scottish Planning Policy (2014) states if there is a need, local development plans should identify suitable sites for Gypsy/Travellers and Travelling Showpeople and consider whether policies are required for small privately owned sites.

31. A representation on behalf of the Gypsy/Traveller Community has queried whether the second sentence of the third paragraph on page 41 promotes Gypsy/Travellers sites, particularly privately run sites. The council has indicated that this sentence covers other models of housing provision not specifically mentioned in the policies. I note that the first sentence in this paragraph refers to affordable housing and special housing, which are covered in the subsequent policies. Policy H5 in the proposed plan provides policy support for Gypsy/Traveller sites and land for this use is promoted in some settlement statements. In the interests of consistency, I consider that the first sentence of the third paragraph should be amended to include reference to land to meet Gypsy/Travellers’ needs. A modification is recommended

32. Paragraph H5.1 in the proposed plan states that Gypsy/Travellers sites have been identified in the settlements statements to meet an identified need. Through a further information request (FIR002), I asked the council to provide an explanation of the “identified need” for Gypsy/Traveller sites. From the information provided in the Housing Needs and Demand Assessment 2017 (pages 126 -128), the Grampian Gypsy/Traveller Accommodation Needs Assessment 2017 and the Gypsy/Traveller Site Provision Strategy 2015, I am satisfied that there is an identified need for Gypsy/Traveller sites in the local development plan area. I note that the Grampian Gypsy/Traveller Accommodation Needs Assessment 2017 recommends an additional 12 -15 pitches in Aberdeenshire. It recommended a mixture of permanent, temporary and seasonal sites across a range of locations to meet the varying needs of Gypsy/Travellers, by providing a variety of small, family orientated sites as well as larger sites. The council has indicated that a 0.2 hectare site could accommodate eight pitches and a 0.4 hectare site, 10 to 12 pitches.

33. A representation on behalf of the Gypsy/Traveller Community indicates that the sites identified in the proposed plan are unlikely to meet short/medium term needs. Their supporting statement explains some of the difficulties facing Gypsy/Traveller families trying to find sites to meet their needs and concludes that there are not enough sites provided by the local authority.

34. Matters raised in representations relating to the provision of specific Gypsy/Traveller sites in Inverurie, Chapelton, Ellon and Blackdog are addressed in the schedule 4 for the settlement in question.

35. I agree with the council that policy H5 provides a supportive policy framework to help meet short to medium terms needs. Whilst the plan itself cannot require the provision of additional local authority sites, I find that the wording of policy H5 should make it easier for private sites to come forward, as it is not necessary to demonstrate a specific need. This should also help address the stated preference for small sites to avoid different Gypsy/Traveller families having to live together. I also note that an Aberdeenshire Gypsy/Traveller Site Provision Strategy 2021-2026 is due to be published shortly, which seeks to meet the identified needs of Gypsy/Travellers.

36. In the absence of any additional bid proposals to meet short/medium term needs coming forward through the plan process, I consider the approach taken in the proposed plan to be appropriate and consistent with Scottish Planning Policy.

37. The council is required to determine any application in accordance with the development plan unless material considerations indicate otherwise. Matters relating to the council’s responsibilities under the Equalities Act 2010 and difficulties faced by Gypsy/Travellers in securing suitable sites may be material considerations to be taken into account in individual planning applications. However, I do not consider there is any justification to amend the wording of paragraph 5.2.

38. I agree with NHS Grampian that Gypsy/Traveller sites should preferably be in locations which are easily accessible by public transport and linked to health and social care centres. However, I also note the difficulties faced by Gypsy/Travellers in securing suitable sites which accord with relevant planning policies. I consider that the wording of paragraph 5.3 in the proposed plan, which requires “reasonable access to employment,

education and other community infrastructure, and the main road network” represents a balanced approach to meeting the needs of Gypsy/Travellers. No modification is required.

Shaping Homes and Housing Policy Map

39. Matters relating to housing allocations in Potterton are addressed in Issue 26. The shaping homes and housing map is only indicative and at too small a scale to clearly show Potterton as being within or outwith the strategic growth area. Representations on this matter have been addressed under Issue 2 Spatial Strategy, where we recommend a modification to clarify that Potterton is not within the strategic growth area. It would not be appropriate to remove Potterton from the map as there are housing allocations in this settlement.

Reporter’s recommendations:

Modify the local development plan by:

1. Replacing the first sentence in the third introductory paragraph on page 41 with:
“Land is also provided for affordable housing needs, special housing needs and Gypsy/Travellers’ needs”
2. Replacing footnote 3 on page 42 of the proposed plan with:
“Meeting affordable housing need in full will require considerable effort, coordination and creativity, and for the public and private sectors to work together.”
3. Replacing the words “Planning Advice” with “Supplementary Guidance on” in the final sentence of paragraph H2.2 on page 42
4. Adding a footnote after “demonstrated” in the first sentence of paragraph H3.1 on page 42 which states:
“Proposals may require consultation with NHS Grampian and Aberdeenshire Health and Social Care Partnership to establish level of need”.

Provision of the development plan to which the issue relates:

Policies relating to shaping places

Planning Authority's summary of the representation(s):

Policy P1 Layout, Siting and Design

General

It is suggested that the policy requires larger homes in city centres, which is common in France and Spain, given the trend towards larger settlements (PP0105).

It is suggested that the policy includes a reference to environmentally/climate friendly design and construction (PP0343).

Paragraph P1.1

Requirement for a Design Review Process for all applications over 50 homes lack clarity, is unjustified and will create unnecessary delays (PP0687, PP1125 and PP1210). It is not consistently applied by the Council, leading to uncertainty and delay on the processing of applications (PP1350). There have been issues with previous Design Review Panels resulting in delays (PP1306). One representee suggests it is considered on a case-by-case basis where material benefit can be secured (PP0687), while another claims the policy contains lack of detail on how the process would operate and Planning Officers should have the knowledge and skill set to assess major proposals against policies without reliance on third party assessment (PP1125). It is suggested that the requirement for a Design Review Panel should not be included as policy, and the paragraph reworded to provide flexibility and only allow a Design Review Panel if it does not hold up development (PP1306 and PP1350). Representees have included an additional paper (RD0195.A and RD0259.A) in their representation which provides further detail to support their position (PP1125 and PP1306).

Paragraph P1.2

It is requested that the threshold for requiring a development framework/masterplan is increased from 50 homes (2ha) to 200 homes (10ha) (PP0687, PP1125, PP1211 and PP1306). It is argued that the masterplan process is generally time consuming and a duplication of what is already necessary as part of pre-application (PP1125, PP1211, PP1306 and PP1350), it creates a two-step consent process (PP1211, PP1306 and PP1350) that has no basis in legislation (PP0687, PP1211, PP1306 and PP1351), is inconsistent with creating a streamlined planning system (PP1211, PP1306 and PP1351), it should be on a case-by-case basis, there is no legal or government basis (PP0687), and major applications already require a Design and Access Statement, which should be sufficient (PP0687 and PP1306). Committees seek more detail than should be expected, which results in additional work, costs, and delays (PP0687, PP1125, PP1211, PP1306 and PP1351) and there is no right of appeal (PP1125). However, accept that there may be a benefit in the approach for large strategic sites which will be delivered over multiple phases or by multiple owners (PP1211, PP1306, and PP1351). Representees have included an additional paper (RD0195.A and RD0259.A) in their representation which provides further detail to support their position (PP1125 and PP1306).

The phrase “deemed appropriate by the Planning Authority” is also an unreasonable catch all which creates unnecessary uncertainty (PP1125 and PP1306). Representees have included an additional paper (RD0195.A and RD0259.A) in their representation which provides further detail to support their position (PP1125 and PP1306).

The intention of the policy is good, but the meaning of once a development is

“implemented” is unclear, and a representee has suggested adding, “by the start of construction” to clarify its meaning (PP0733).

Footnote 1 on page 47 of the Proposed Local Development Plan (PLDP) 2020 does not appear to make any sense unless “or” is a typo, otherwise it should be omitted (RD0195.A) (PP1125).

Scottish Environment Protection Agency (SEPA) has requested that in the masterplanning process, all parties, including SEPA, should be included from the outset, as not all of the sites constraints and opportunities are provided in the Settlement Statements in Appendix 7, and they would welcome the opportunity to work with the Council on providing a more comprehensive masterplan/placemaking brief for each of the masterplan/design framework sites. They are also concerned that the masterplanning and placemaking process is being jeopardised by the submission of individual planning applications in isolation (RD0214.A) (PP1219).

NatureScot has stated that paragraph P1.2 is confusing, as the first part says a masterplan “must be prepared for all major housing and mixed-use developments...”, and the second bullet point following this can then be read as suggesting that there may be some exceptions to this requirement for some major developments i.e., if they keep to an agreed statement(s). They suggest that if this is the case, then it may be better to clearly identify this as an exception (RD0255.B) (PP1300).

NatureScot has suggested it would be helpful to provide further explanation of the types of agreed statements that are being envisaged, although the footnote appears to point to one example being agreed - Development Frameworks (RD0255.B) (PP1300).

Paragraph P1.5

Support the intention that development designs will only be approved when they demonstrate the six qualities of successful places, including well connected places (PP0659), developments being well connected, safe and pleasant, and the benefits this has on health and well-being (RD0216.A). No modifications sought (PP1222).

It is requested that this paragraph adds Green Infrastructure as part of the definition of amenity with regards to the qualities of "Safe and Pleasant" and "Well connected". It is also suggested that green infrastructure is consolidated and integrated as part of the six principles/qualities of successful places (RD0162.A) (PP0879).

The second half of “well connected” is not clear and should be amended (RD0227.A) (PP1241).

Nestrans has noted how important it is for developments to provide safe and attractive access arrangements, walking and cycling links, opportunities to safely and conveniently access public transport, as well as to facilitate safe trips to schools and other local amenities (RD0227.A) (PP1241).

Paragraph P1.6

SEPA has welcomed the reference to the new Appendix 8 Successful Placemaking Design Guidance and Appendix 9 Building Design Guidance in Policy P1 Layout, Siting and Design (RD0214.A). No modification sought (PP1219).

NatureScot has suggested amending paragraph P1.6 to reflect that the six qualities of successful places apply to all development, rather than just major developments and those that the Council considers appropriate, as Scottish Planning Policy (SPP) does not apply this restriction (RD0255.B) (PP1300).

NatureScot has also requested an additional sentence at the end of paragraph P1.6 to allow a 'hook' within the Plan for the Council to potentially produce further map-based guidance setting out the Council's vision for selected allocations. They state this illustrative information could help guide the shape of development (including masterplan development), and it could highlight the existing green infrastructure and active travel routes to be protected as well as any new green infrastructure required to support the development. They also noted that the Council has produced prospectuses for the majority of allocated sites (<http://publications.aberdeenshire.gov.uk/dataset/housing-site-prospectus>) and this may be a good place to include such information, as it would allow the Council to demonstrate more leadership in shaping developments, and could act as a basis for further discussion with developers. They add, it might primarily draw upon information contained in the Appendix 7 allocation summaries but could be informed by other material including for example local community plans. The Council could decide where to prioritise the production of such map-based guidance. This may be the larger allocations, or those that are large in relation to the receiving settlement, or those in more sensitive locations. Reports, there are good examples of graphic illustration of a Council vision for particular sites in the Perth and Kinross and the Moray LDPs (RD0255.B) (PP1300).

Paragraph P1.7

It is requested that this section recognises that the loss of high-quality ancient woodland cannot be mitigated, as it is irreplaceable (RD0160.A) (PP0877).

The policy is welcomed, but it should be strengthened by replacing the words "require to" with "must" to emphasis it is not an optional requirement. It is also requested that the responsibility for identifying the enhancements lie with the applicant. It is also noted that there may be opportunities to enhance outside the settlement boundary and therefore should include the addition of "near to the site" (PP1272).

It is suggested that the specific reference to "5/2015" in the Planning Advice in Footnote 5 is removed, as any update to planning advice will still be relevant (PP1272).

Footnote 5 refers to the glossary "see glossary" however, it is not clear what is being referred to. It is suggested this is removed as other terms within the glossary are not specifically identified (PP1272).

Paragraph P1.8

The Scottish Government has requested that paragraph P1.8 includes a sentence on encouraging remanufacturing and reprocessing of materials to reflect the requirements of paragraph 180 of SPP (PP0578).

Policy P2 Open Space and Access in New Development

Paragraph P2.1

Sportscotland has requested that the policy or appendices refer to the need to update and adopt the pitches strategy, which was drafted in 2018. They note it is referred to in Appendix 10, but there is a need to ensure the strategy is up to date to inform the planning and design of future developments (PP0235).

A representee has expressed their support for the requirement that all new developments have to be accompanied by adequate public open space (PP0659 and PP1222). With nutrition a fundamental source of health, local food growing opportunities are also welcomed (RD0216.A) (PP1222).

It is requested that "adequate public open space" is amended to "adequate public open and green space" (RD0162.A) (PP0879).

Woodland should be given greater recognition in delivering green infrastructure to enhance neighbourhoods and its fragmentation is avoided by connecting smaller pockets of wood. As such, it is requested that this section requires development to make significant contribution to green-blue networks, provide a clearer definition of "open" and "green" space, which includes woodland areas, and it includes woods in a list of green spaces that will not be granted planning permission (RD0162.A) (PP0879).

NatureScot has requested the inclusion of the phrase "rich in biodiversity" to paragraph P2.1, as the enhancement of biodiversity is consistently noted in the Table 1 Hierarchy of Open Space within Appendix 10, it would align with the overall vision of the Parks and Open Spaces Strategy which is to: "provide high quality multi-functional open space that is ... rich in biodiversity...", it will help address the crisis of biodiversity loss, for example benefitting pollinators, which is in keeping with the Pollinator Strategy for Scotland, it is vitally important for our health and wellbeing, and it makes places more attractive (RD0255.B) (PP1300).

NatureScot has requested the inclusion of the word "biodiverse" in the last sentence as this will help emphasise that this is a Council priority, and losing nature deprives us of these multiple benefits and so it is important the Plan promotes biodiverse open spaces (RD0255.B) (PP1300).

NatureScot has also requested a new sentence in paragraph P2.1 to state how open space should strive to integrate with active travel provision, as this will extend opportunities for incorporating biodiversity, and benefit those using the active travel routes (RD0255.B) (PP1300).

Paragraph P2.2

It has been requested that the requirement for open space should be reduced from 40% (PP0688 and PP1306). It is high compared with other Authorities (PP1306), excessive and not supported by clear evidence (PP0688 and PP1306). It is regarded as contradictory as the Council seeks higher density developments (PP0688), and it must be maintained by a factor resulting in more fees for homeowners as new areas of open space are not adopted by the Council (PP0688 and PP1306). Housing associations would also be required to make higher contributions for unnecessarily large areas of land which may be underutilised (PP1306). One representee has suggested using smaller meaningful

spaces than an unsubstantiated percentage of the site (PP0688). A representee has included an additional paper (RD0259.A) in their representation which provides further detail to support their position (PP1306).

It is requested that "40% good quality open space" is changed to "40% good quality open space, including 30% increase in native tree canopy cover", as explicit targets help ensure that good intentions are not 'negotiated down' during the development process. The Woodland Trust Scotland's 'Our Emergency Tree Plan' calls for Local Authorities to adopt canopy cover targets of at least 30% across all new developments (RD0162.A) (PP0879).

The requirement for 40% open space is overly onerous and should be removed (PP1125, PP1212 and PP1352). Specifying strict amounts contradicts a more flexible approach (PP1125, PP1212 and PP1352). It fails to consider the commercial basis of land and property development, and combined with other requirements, could render sites unviable (PP1125). It could prejudice the SDP target for density in SGA's and a blanket application for density is unrealistic and could present conflicts (PP1125). It is suggested that the overall provision of open space and final site densities is left to Masterplans, Design and Access Statements or Design Statements to dictate the final layout and densities of housing sites (PP1125). Another representee states this requirement is higher than many other Authorities and it does not appear to be supported by any clear evidence (PP1212 and PP1352). This level of open space provision would significantly increase factoring costs and homeowners/housing associations would be required to make higher contributions for unnecessarily large areas of land which may be underutilised (PP1212 and PP1352). A representee has included an Appendix (RD0195.A) in their representation which provides further detail to support their position (PP1125).

Paragraph P2.3

Several representees have objected to the requirement for 120m² open space for sites of less than 50 homes (PP1125, PP1212 and PP1352). Several have requested that this requirement is removed, and a more flexible requirement is adopted (PP1125 and PP1212) and one has requested it is reduced as it is excessive (PP1306). Another has stated it is overly onerous and lacks flexibility. A representee has argued that the current approach fails to take account of the commercial basis of land and property development and other developer obligations and has suggested that the overall provision of open space and final site densities should be left to Masterplans, Design and Access Statements or Design Statements to dictate the final layout and densities of housing sites (PP1125). Several representees state this figure is higher than many other Authorities and it does not appear to be supported by any clear evidence (PP1212, PP1306 and PP1352). It is also suggested that this level of open space provision would significantly increase factoring costs and homeowners/housing associations would be required to make higher contributions for unnecessarily large areas of land which may be underutilised (PP1212 and PP1306). Representees have included an additional paper (RD0195.A and RD0259.A) in their representation which provides further detail to support their position (PP1125 and PP1306).

Paragraph P2.4

SEPA welcomes the new reference to 'green-blue' infrastructure (RD0214.A) (PP1219).

It is requested that "temporary" is removed from the provision for green-blue networks

(RD0162.A) (PP0879).

Paragraph P2.5

To ensure green infrastructure is not considered as temporary, an additional sentence is requested to allow the green infrastructure to remain if it forms part of a future development proposal (PP1271).

Paragraph P2.6

The Scottish Government is concerned there is no reference to a walking or cycling friendly settlement in the Plan, and they would encourage the Council to develop at least one exemplar of a walking and cycling friendly settlement to align with National Planning Framework 3 (NPF3) (2014) paragraph 5.14 (PP0578).

A representee has expressed their support that existing and potential public access routes should be protected, and that new developments must include appropriate opportunities for informal recreation and promote walking or cycling as a means of transport (PP0659).

It is requested that footpath and access routes are included in both planning applications and masterplan/development frameworks to ensure their implementation (PP0733).

It is requested that this section refers to active community led management plans to ensure community involvement, as Local Authorities should set ambitious targets for woodland creation and aspire towards Woodland Trust Scotland's Woodland Access Standard. Therefore, this should be clearly stated and backed up by policy in the Local Development Plan (RD0162.A) (PP0879).

Greater definition of existing public access routes is requested as most rights of way are not recorded and the terms used should be widened (PP0881).

The policy should include appropriate opportunities to promote walking or cycling as a means of transport and needs to reflect National Transport Strategy 2 (NTS2) and the necessity of providing the facilities for citizens to travel by walking, wheeling (travelling by wheelchair), and cycling (PP0881).

Need for greater emphasis on promoting footpaths, cycleways, and active travel networks both within communities and their vicinities and between adjacent communities. The policy only applies to new developments (PP0884).

Settlement maps do not promote paths, as suggested in Community Action Plans (PP0884).

NatureScot has stated that the current wording of paragraph 2.6 implies a restriction to walking or cycling, and requests using the term "active travel", as this better covers the wider range of potential users and allows for the potential development of shared use paths. They also add, providing examples of these other uses will help remind developers to consider these (RD0255.B) (PP1300).

There is no acknowledgment in the PLDP of the Outdoor Access Strategy even though Objective 2.2 of the Council's "Outdoor Access Strategy 2018-2021" (at p11) includes

“Provide input to the Local Development Plan process” (RD0259.A) (PP1306).

The wording “Statements or plans detailing proposals” for access provision is woolly, and should be replaced by a more concise, widely used and understood term, “An Access Plan”, which sets outdoor access on a par with detailed plans required for other elements of infrastructure (PP1310).

Policy P3 Infill Development with Settlements and Householder Developments

SEPA will object to Policy P3 if their requested rewording of Policy C4 Flooding regarding change of use proposals and their potential vulnerability to flood risk is not undertaken, or Policy P3 is not modified to ensure that development will only be acceptable where there is no increase in vulnerability to flood risk, and that any conversion or new development must be in line accordance with SEPA Flood Risk and Land Use Vulnerability Guidance as referenced by Scottish Planning Policy. Argues more detail is required on acceptable change of uses in terms of flood risk and vulnerability (RD0214.A) (PP1219).

Policy P4 Hazardous and Potentially Polluting Developments and Contaminated Land

General

A representee is pleased to note that the references to the pipeline consultation zones and the need to accord with Policy P4 have been retained in the relevant Settlement Statements in Appendix 7, and fully support this approach. They also note there are very few new or amended development allocations that have the potential to adversely affect the existing pipelines (PP0714).

This policy is welcomed as it ensures that where development proposals are located within the consultation zones for pipelines, the Planning Authority will consult with both HSE and the pipeline owner/operator. It should be retained as proposed (PP0981).

It is requested that the pipeline consultation zones are shown in the proposal’s maps in Appendix 7, as it provides clear and unambiguous advice to developers, landowners, and other users of the LDP. In examining the Aberdeen City and Shire SDP the Reporter confirmed that LDPs should contain policies to safeguard pipelines from inappropriate development, and the matter of identifying and illustrating pipeline consultation zones is effectively “delegated” to the LDP. This approach would also be consistent with other Planning Authorities, including neighbouring Aberdeen City and Angus Councils who both identify and illustrate pipeline consultation zones on their proposal’s maps, and accord with SPP (PP0714).

In the event that any other settlement boundaries are to be reviewed as part of the Examination of the Proposed LDP, and in the event that any new or expanded development allocations are made, it is requested that full recognition is given to the existence of any pipeline consultation zones and development allocations are made in accordance with the relevant Health and Safety Executive advice and guidelines where relevant. Any new allocation must stress the need to ensure new development is undertaken in accordance with Policy P4 and the relevant Health and Safety Executive advice and guidelines (PP0714).

Paragraph P4.1

A representee is concerned that paragraphs P4.1 and P4.5 are contradictory and unclear as P4.1 will refuse development if there is a risk of significant pollution whilst P4.5 will require mitigation for air quality or noise, which is a form of pollution. They suggest if developments will be refused planning permission where they cause significant pollution, such as noise and air quality, the policy should state the exceptions, for example, through good design and mitigation. They also provide an example of another Local Authority's policy (PP0441).

SEPA has welcomed the rewording undertaken for paragraph P4.1 and have no further comments (RD0214.A) (PP1219).

Paragraph P4.2

It is requested that the wording of paragraph P4.2 reverts back to the wording set out in the Adopted LDP 2017, especially when the Main Issues Report (MIR) 2019 stated that the policy was sound, and no changes were proposed. Reintroducing this text will confirm the approach the Council will take in determining planning applications for development within the pipeline consultation zones. Maintaining the reference to the HSE Planning Advice Web App within the Policy is also supported and should be continued as this provides useful, informative advice to users of the LDP including developers and the public (PP0714).

SEPA has welcomed the rewording undertaken for paragraph P4.2 and have no further comments (RD0214.A) (PP1219).

Policy P5 Digital Infrastructure

A representee has expressed their support for this policy as it ensures digital infrastructure is in place to ensure that services are accessible to all and to deliver health care services in the future (RD0216.A) (PP1222).

It is requested that this policy considers the proximity of any proposed telecommunications masts to buildings where children regularly congregate: schools, out of school clubs, mother and baby toddler clubs, scouts, etc (PP0556).

SEPA has confirmed that they have no issues with Policy P5 (RD0214.A). No modification sought (PP1219).

Policy P6 Community Facilities and Public Amenities

General

While reference is made to the historic environment and community facilities, the Shaping Places section should make reference to the positive contribution of cultural and arts facilities to communities (PP0720).

A representee is seeking greater emphasis on promoting paths, cycleways, and active travel, and is concerned that footpaths and cycleways are not mentioned at all in this policy (PP0884).

SEPA has confirmed that they have no issues with Policy P6 (RD0214.A). No modification sought (PP1219).

Paragraph P6.1

The current wording is inappropriate for clarifying where new community facilities are required for large settlements. It is suggested changing the location text to “providing it is in accessible locations within settlements, is of a suitable scale, and it is available to the residents of the development and/or the target community.” (PP0733).

Paragraph P6.2

It is requested that this paragraph also refers to health care infrastructure within settlements that have become surplus to requirements. This change would provide clarity that this policy also applies to health care sites that have had to relocate in order to expand (RD0216.A) (PP1222).

Appendix 8 Successful Placemaking Design Guidance

It should be confirmed that car parking standards meet the national standards set out in SPP 2014 and if not, the reasons should be explained (PP0578).

A representee has welcomed the development of places and routes that provide a sense of safety ensuring they are overlooked and in well-used locations. They suggest lighting improvements and improvements of sightlines should be considered in existing developments (PP0778).

Would welcome developments that facilitate the safe and independent walking, cycling and wheeling for everyone, including an unaccompanied 12-year-old: ensuring access for all and equality of opportunity in public space (PP0778).

It is requested that all new developments and the routes that lead to them, should reflect the street user hierarchy, and prioritise the most vulnerable groups to provide choice in how people travel. Provision of cycle parking and storage and easy access to public transport enables people to choose to walk, cycle or wheel. The move to home working will increase the importance of facilitating short journeys and a 20-minute neighbourhood approach is likely where most basic services can be reached within a 20-minute walk of home (PP0778).

It is suggested that the management of environmental noise should be added to the six qualities listed that make a successful place and have suggested the use of noise mapping to allow the Council to recognise unacceptable levels of environmental noise e.g., traffic and major roads. They have noted the PLDP refers to noise issues from mineral extraction, hazardous and potentially polluting developments and wind turbines. As such, to achieve high quality places as noted in paragraph 5.8 of the PLDP the Council must reassess road and other environmental noise quality when new homes are built and when existing roads are altered, or traffic increased (PP0796).

Concern has been expressed on the use of ‘Viewing Points’ at elevated points, which could encroach on the privacy of existing residents. They suggest this should not be

allowed (PP1129).

Similarly, where proposed property on elevated ground lies next to existing properties these should be low level structures, i.e., bungalows (PP1129).

SEPA has welcomed the references to flooding and flood resilience in Appendix 8 but recommends the column on 'Safe and Pleasant' includes the following bullet point, "Connection to public water and waste water infrastructure" (RD0214.A) (PP1219).

SEPA has welcomed the references to flooding and flood resilience in Appendix 8 but recommends the column on Resource Efficient includes the following bullet point, "The use of water saving technologies (to support the 'Gold' standard required in Policy C1)." (RD0214.A) (PP1219).

SEPA has welcomed the references to flooding and flood resilience in Appendix 8 but recommends the column on Resource Efficient includes the following bullet point, "The installation of district heating (this could maybe be added to the Low carbon design box)." (RD0214.A) (PP1219).

SEPA has welcomed the references to flooding and flood resilience in Appendix 8 but recommends the column on Resource Efficient includes the following bullet point, "Use of renewable energies is emphasised." (RD0214.A) (PP1219).

SEPA has recommended that Appendix 8 includes a reference to the Building for Nature qualitative benchmark. They note that the benchmark requires the consideration of standards relating to water, wellbeing and wildlife in a spatial context in terms of what they contribute to that place and wider connectivity, that the benchmark is commonly applied in respect of residential, commercial and mixed development, it offers reassurance to Planning Authorities that comprehensive consideration has been given to these aspects of the development. They also report that developer feedback has indicated the Building with Nature significantly reduces planning uncertainty by facilitating them in achieving many of the place-led objectives Planning Authorities require of them, and that accreditation can be applied by Planning Authorities regarding policy making (West Dunbartonshire Local Development Plan 2) and by the development industry in respect of individual developments bringing obvious marketing benefits (RD0214.A) (PP1219).

Supports Appendix 8 detailed interpretation of the six qualities of successful place, but it is suggested that greater focus is given on designing homes to provide a "home for life" opportunity, as this would specifically allow persons as they age or are affected by illness/disability to remain in their home. Homes should be designed to provide access for wheelchairs and to have at least one bedroom designed of a size to accommodate hoists and a room adjacent to the bedroom that could be converted to an en-suite wet room (RD0216.A) (PP1222).

NatureScot has requested that Appendix 8 is applied to all developments and not just major developments and those that the Council considers appropriate, as SPP does not apply to this restriction (RD0255.B) (PP1300).

Paragraph 2 of Appendix 8 should be amended to remove the reference to all major proposals requiring to take part in the Design Review process, as this duplicates paragraph P1.1 and is not appropriate for inclusion as a policy (RD0259.A) (PP1306).

A representee has broadly supported reference to electric car charging points, as allowing adaptability is important as charging technology is evolving quickly and challenges with grid capacity mean a one size fits all approach is not optimal (RD0259.A) (PP1306).

Appendix 9 Building Design Guidance

The inclusion of the provision of safe and functional cycle parking and storage is welcomed, as one of the biggest barriers to getting people cycling is the lack of cycle storage facilities at work and home. Reference to well-connected core paths and public transport options is also welcomed (PP0778).

NHS Grampian has expressed support for Appendix 9 as it provides a detailed interpretation of the six qualities of successful place (RD0216.A) (PP1222).

Concern has been expressed on the use of 'Viewing Points' at elevated points, which could encroach on the privacy of existing residents. They suggest this should not be allowed (PP1129).

Where property is proposed on elevated ground next to existing properties these should be low level structures, i.e., bungalows (PP1129).

SEPA welcomes the reference to flood risk and flood resilience in Appendix 9, as all too often resilience is seen as an attempt to justify unacceptable building in flood risk areas, but they welcome that the wording in this Appendix counters that (RD0214.A) (PP1219).

SEPA has requested that in the table under 'Safe and Pleasant', the seventh bullet point also requires applicants to provide reasons for not being able to connect to a public water/sewer and adoption agreements or maintenance proposals. They argue that this will provide transparency to developers about what further information will be required to support any proposal for private drainage (RD0214.A) (PP1219).

SEPA has requested that a footnote is added to the table, in the seventh bullet point under 'Safe and Pleasant', which requires applicants proposing private drainage to be compliant with their 'Planning Advice on Waste Water Drainage' (Land Use Planning System Guidance Note 19), which is supported by Planning Advice Note (PAN) 79 Water and Drainage (RD0214.A) (PP1219).

Appendix 10 Standards for Open Space

Support is expressed for Appendix 10 as it promotes opportunities for healthy living and wellbeing activities, community play areas and community growing areas (RD0216.A) (PP1222).

It is suggested that under 'Neighbourhood streets' in Table 1, any on street parking should be prioritised for disabled users (PP0778).

With reference to 'Neighbourhood streets' in Table 1, it is suggested that the use of green infrastructure, such as street trees should be included in all new developments or fitted retrospectively as it provides several benefits (PP0778).

Green infrastructure should be developed to include climate change measures where

possible including SuDS (PP0778).

Projects must never negatively impact on biodiversity and a biodiversity net gain should be an objective of all development. (PP0778).

SEPA has welcomed Appendix 10, but they are concerned with the lack of reference to placemaking and have strongly recommended that in order to support one of the main aims of the Plan and Appendix 8, that Placemaking is referred to in Appendix 10, as the inclusion and design, and therefore the standards, of open space is integral to successful placemaking (RD0214.A) (PP1219).

SEPA has welcomed the reference to the range of benefits buffer strips provide and the inclusion of the footnote, but in Table 1 has requested amending the first bullet point in the note's column for 'Green-Blue Networks' to clarify that 6m is the minimum width and this may increase due to local factors. They are concerned that the current wording is not clear as most natural riverbanks are sloping, and it must be emphasised that buffer strips will need to be assessed on a site by site, watercourse by watercourse basis (RD0214.A) (PP1219).

SEPA has requested amending the last bullet point in Table 1 under the notes column for 'Green-Blue Networks' to include "river restoration", as this will help the Plan support the implementation of Scotland's River Basin Management Plan and restoration of other non-classified waterbodies to their natural state (RD0214.A) (PP1219).

SEPA has welcomed the inclusion of burial grounds as functional greenspace but has requested that Table 1 includes a reference to their ground testing guidance as a footnote, as cemeteries can have a detrimental impact on groundwater (RD0214.A) (PP1219).

Modifications sought by those submitting representations:

Policy 1 Layout, Siting and Design

General

Modify the PLDP to insert a statement on the requirement for larger homes in Policy P1 (PP0105).

Modify the PLDP to insert a reference on environmentally/climate friendly design and construction in Policy P1 (PP0343).

Paragraph P1.1

Modify the PLDP to amend paragraph P1.1 to be clearer that the design review process will be considered on a case-by-case basis where material benefit can be secured (PP0687).

Modify the PLDP to remove the requirement for major developments to participate in a Design Review Process in paragraph P1.1 (PP1125).

Modify the PLDP to replace the following in paragraph P1.1, "Residential proposals that fall within the category of a major development will be required to participate in a Design

Review Process. Other types of development, in terms of scale and nature, may be required to participate in a Design Review Process at the discretion of the Planning and Environment Service. Where possible these sites are specified in Appendix 7, Settlement Statements, or those that are likely to generate significant public interest.” with “Residential proposals that fall within the category of a major development may be required to participate in a Design Review Process if this can be arranged timeously by the Planning Authority. Other types of development, in terms of scale and nature, may be required to participate in a Design Review Process at the discretion of the Planning and Environment Service. Where possible these sites are specified in Appendix 7, Settlement Statements, or those that are likely to generate significant public interest.” (PP1210 and PP1350).

Modify the PLDP to replace the following in paragraph P1.1, “Residential proposals that fall within the category of a major development will be required to participate in a Design Review Process. Other types of development, in terms of scale and nature, may be required to participate in a Design Review Process at the discretion of the Planning and Environment Service. Where possible these sites are specified in Appendix 7, Settlement Statements, or those that are likely to generate significant public interest.” with “Residential proposals that fall within the category of a major development are likely to be asked to participate in a Design Review Process if this can be arranged timeously by the Planning Authority. Other types of development, in terms of scale and nature, may benefit from participating in a Design Review Process. Where possible these sites are specified in Appendix 7, Settlement Statements, or those that are likely to generate significant public interest. The Planning Authority intends that a meeting will be held within 4 weeks of the submission of valid documentation by the applicant with written feedback provided within 7 days of the meeting.” (PP1306).

Paragraph P1.2

Modify the PLDP to amend paragraph P1.2 to increase the threshold for a development framework/masterplan from the proposed 50 homes (2ha) to 200 homes (10ha) and will be considered on a case-by-case basis (PP0687).

Modify the PLDP to amend paragraph P1.2 to include after, “Once agreed, a masterplan shall remain valid for a period of 5 years, unless planning consent for the development has been granted and implemented” by adding “by the start of construction” (PP0733).

Modify the PLDP to amend paragraph P1.2 to increase the number of homes from more than 50 to ‘more than 200’ before it would merit a masterplan (PP1125).

Modify the PLDP to amend paragraph P1.2 by removing ‘deemed appropriate’. If required, the Design Review Process should tie in with the masterplanning process (PP1125).

Modify the PLDP to correct a typo in the footnote on page 47 to “For” or remove it (PP1125).

Modify the PLDP to amend paragraph P1.2 from, “A Masterplan that has been subject to public consultation, must be prepared for all major housing and mixed-use developments (more than 50 homes, and/or more than 2 hectares of employment or retail development) or other developments of a size and scale deemed appropriate by the Planning Authority

that merits the provision of a masterplan. We will support:

- new development on sites identified within Appendix 7, or other developments of a size and scale deemed appropriate by the Planning Authority, as requiring a development framework or masterplan, OR
- larger major developments (more than 50 homes, or more than 2 hectares of employment, retail or mixed-use development deemed appropriate as major development by the Planning Authority) ...”

to read, “A Masterplan that has been subject to public consultation, must be prepared for larger housing and mixed-use developments (more than 200 homes, and/or more than 10 hectares of employment or retail development) • larger developments (more than 200 homes, or more than 10 hectares of employment, retail or mixed-use development ...” (PP1211, PP1306 and PP1351). A representee has included an additional paper (RD0259.A) in their representation which provides further detail to support their position (PP1306).

Modify the PLDP to amend paragraph P1.2 to provide clarity on when there are exceptions on the need for a masterplan and what an agreed statement is (PP1300).

Paragraph P1.5

Modify the PLDP to amend paragraph P1.5 by inserting Green Infrastructure within part of the definition of amenity with regards to the qualities of "Safe and Pleasant" and "Well connected" (RD0162.A) (PP0879).

Modify the PLDP to amend the final bullet point of P1.5 from, “well connected – to create well connected places that require intermodal shifts and active travel.” to “well connected – to create well connected places that help make walking, cycling and public transport more attractive than private car use, particularly for short local trips.” (PP1241).

Modify the PLDP to amend paragraph P1.5 to ensure deliverability of sites extends to the provision of safe and attractive active travel arrangements, as well as facilitate safe trips to schools and other local amenities (PP1241).

Paragraph P1.6

Modify the PLDP to amend paragraph P1.6 from, “Further design guidance on how to meet these qualities are provided in sites allocated in Appendix 7, as requiring a Masterplan/Framework, Appendix 8, Successful Placemaking Design Guidance, which applies to major developments, and Appendix 9, Building Design Guidance, which applies to single buildings and small-scale developments. The Planning and Environment Service may apply Appendix 8 to other developments where they consider it appropriate.” to “Further design guidance on how to meet these qualities are provided for allocated sites in Appendix 7, Settlement Statements, Appendix 8, Successful Placemaking Design Guidance, which applies to single buildings and small-scale developments.” (PP1300).

Modify the PLDP to amend paragraph P1.6 by inserting a new sentence at the end of the paragraph: “The Council may also prepare further illustrative guidance for particular sites, expanding upon information already contained in the Appendix 7, Settlement Statements. Such map-based information would depict constraints and opportunities, helping set out a

vision of placemaking to inform further dialogue with developers.” (PP1300).

Paragraph P1.7

Modify the PLDP to amend paragraph P1.7 by including a clear statement recognising that the loss of high-quality ancient woodland cannot be mitigated (RD0160.A) (PP0877).

Modify the PLDP to amend paragraph 1.7 from, “Measures require to be identified to enhance biodiversity in proportion to the opportunities available and scale of the development opportunity opportunities available. In very rare circumstances, when it is not practical to meet biodiversity net gain within a development site, we may require off-site contributions towards biodiversity enhancement within the settlement. These obligations may be controlled by conditions.” to “Measures must be identified by the applicant to enhance biodiversity in proportion to the scale of the proposed development and taking account of opportunities available. In very rare circumstances, when it is not practical to meet biodiversity net gain within a development site, we may require off-site contributions towards biodiversity enhancement within the settlement or near to the site. These obligations may be controlled by conditions.” (PP1272).

Modify the PLDP to amend footnote 5 to read, “Footnote 5: See Planning Advice 5/2012, Opportunities for Biodiversity Enhancement in New Development.” (PP1272).

Paragraph P1.8

Modify the PLDP to amend paragraph P1.8 by inserting a new penultimate sentence: “In line with the waste hierarchy, particular attention should be given to encouraging opportunities for reuse, refurbishment, remanufacturing and reprocessing of high value materials and products.” (PP0578).

Policy P2 Open Space and Access in New Development

Paragraph P2.1

Modify the PLDP to amend paragraphs P2.1, P2.3 or Appendix 10 to state that the pitches strategy needs to be updated and adopted (PP0235).

Modify the PLDP to amend paragraph P2.1 by replacing "adequate public open space" with "adequate public open and green space." (PP0879).

Modify the PLDP to amend paragraph P2.1 by inserting "should make significant contribution to green-blue networks." (PP0879).

Modify the PLDP to amend paragraph P2.1 by including woodland areas in the definition of “open” and “green” space” (PP0879).

Modify the PLDP to amend paragraph P2.1 by including woods in a list of green spaces that will not be granted planning permission (PP0879).

Modify the PLDP to amend paragraph P2.1 by replacing the first sentence from: “All new developments must be... welcoming, distinctive, ...” to “All new developments must be ... welcoming, distinctive, rich in biodiversity...”. (PP1300).

Modify the PLDP to amend paragraph P2.1 by replacing the last sentence from: "... and low maintenance community woodlands and ..." to "... and biodiverse low maintenance community woodlands ..." (PP1300).

Modify the PLDP to amend paragraph P2.1 by inserting a new penultimate sentence, "It should also seek to connect to paths and active travel routes in the area." (PP1300).

Paragraph P2.2

Modify the PLDP to amend paragraph P2.2 by replacing, "40% good quality open space" with "40% good quality open space, including 30% increase in native tree canopy cover." (PP0879).

Modify the PLDP to amend paragraph P2.2 by replacing, "40%" with "a sufficient degree" (PP1125).

Modify the PLDP to amend paragraph P2.2 by replacing, "40%" with "an appropriate proportion" (PP1212 and PP1352).

Modify the PLDP to amend paragraph P2.2 to reduce the 40% requirement for major developments (PP1306).

Paragraph P2.3

Modify the PLDP to amend paragraph P2.3 by removing specific reference to, "at least 120m²" (PP1125).

Modify the PLDP to amend paragraph P2.3 to reduce the 120m² requirement for smaller scale residential developments (PP1306).

Paragraph P2.4

Modify the PLDP to amend paragraph P2.4 by removing "temporary" (PP0879).

Paragraph P2.5

Modify the PLDP to amend paragraph P2.5 by inserting at the end, "and if there is sufficient certainty that the green infrastructure will be retained and maintained in the long-term." (PP1271).

Paragraph P2.6

Modify the PLDP to amend paragraph P2.6 by replacing, "Statements or plans detailing proposals should be included in Design Frameworks or Masterplans or submitted with the planning application" with "Statements or plans detailing proposals should be included in Design Frameworks or Masterplans and submitted with the planning application." (PP0733).

Modify the PLDP to amend paragraph P2.6 by inserting, "... with a provision of active community led management plans." (PP0879).

Modify the PLDP to amend paragraph P2.6 by widening the terms used for existing access routes as “core paths, rights of way and existing paths established through access agreements or simply the exercise of public access rights and habitual use.” (PP0881).

Modify the PLDP to amend paragraph P2.6 by strengthening the provision of appropriate opportunities to promote walking or cycling as a means of transport by reflecting the NTS2 and the necessity of providing facilities for citizens to travel by walking, wheeling, and cycling (PP0881).

Modify the PLDP to amend paragraph P2.6 by providing greater emphasis on promoting footpaths, cycleways, and active travel networks both within communities and their vicinities and between adjacent communities so it not just applies to new developments (PP0884).

Modify the PLDP to amend paragraph P2.6 by ensuring settlement maps promote paths, as suggested in Community Action Plans (PP0884).

Modify the PLDP to amend paragraph P2.6 by replacing the first sentence, “Existing and potential public access routes (including core paths and other routes, such as public rights of way) should be protected and new developments must include appropriate opportunities for informal recreation and promote walking or cycling as a means of transport.” with “Existing and potential public access routes (including core paths and other routes, such as public rights of way) should be protected and new developments must include appropriate opportunities for informal recreation and safe active travel, including walking and cycling, wheeling, riding etc.” (PP1300).

Modify the PLDP to amend paragraph P2.6 by referring to the Outdoor Access Strategy (PP1310).

Modify the PLDP to amend paragraph P2.6 by replacing, “Statements or plans detailing proposals” with “An Access Plan” (PP1310).

Policy P3 Infill Development with Settlements and Householder Developments

Modify the PLDP to insert text/footnote to ensure that development will only be acceptable where there is no increase in vulnerability to flood risk, and that any conversion or new development must be in accordance with SEPA Flood Risk and Land Use Vulnerability Guidance as referenced by Scottish Planning Policy, unless Policy C4 Flooding is amended as per SEPA’s request on this issue in Policy P3 (PP1219).

Policy P4 Hazardous and Potentially Polluting Developments and Contaminated Land

General

Modify the PLDP to amend Appendix 7 to show pipeline consultation zones on all relevant proposal maps and insert a corresponding entry in the key (PP0714).

Modify the PLDP to amend Appendix 7 where settlement boundaries are amended and new allocations are inserted to give full recognition to the existence of any pipeline consultation zones, and text added to reflect the advice of the Health and Safety Executive

in accordance with their relevant advice and guidelines and Policy P4 (PP0714).

Paragraph P4.1

Modify the PLDP to amend paragraph P4.1, by merging it with P4.5, so that it begins by stating developments will be refused planning permission where they will cause significant pollution including noise and air quality, and ends by listing the exceptions (e.g., good design/mitigation) (PP0441).

Paragraph P4.2

Modify the PLDP to amend paragraph P4.2 by replacing, “We will consult with, and take full account of advice from, the Health and Safety Executive (HSE), the Competent Authority (in the case of Control of Major Accident Hazardous sites) and the facility’s owners and operators and will seek to ensure that any risk to public safety is not increased. Prospective applicants should check whether their proposed development is within the consultation zone of a major hazard site or a major accident hazard pipeline and should seek further advice if this is the case.” with “In determining planning applications for development within the consultation zones for hazardous installations (including oil and gas pipelines) we will consult with, and take full account of advice from, the Health and Safety Executive (HSE) and the facility’s owners and operators, and will seek to ensure that any risk to public safety is not increased. Prospective applicants should check whether their proposed development is within the consultation zone of a major hazard site or a major accident hazard pipeline and should seek further advice if this is the case. This confirmation and advice can be obtained from the HSE Planning Advice Web App at www.hse.gov.uk/landuseplanning/developers.htm or from the Council’s Development Management Team.” (PP0714).

Policy P5 Digital Infrastructure

Modify the PLDP to insert text, in Policy P5, that considers the proximity of any proposed telecommunications masts to buildings where children regularly congregate, e.g., schools, out of school clubs, mother and baby toddler clubs, scout halls (PP0556).

Policy P6 Community Facilities and Public Amenities

General

Modify the PLDP to include a specific reference to the positive contribution of cultural and arts facilities in the area and their importance in the creation of vibrant, diverse communities in the Shaping Places section (PP0720).

Modify the PLDP to promote paths, cycleways and active travel in Policy P6 (PP0884).

Paragraph P6.1

Modify the PLDP to amend paragraph P6.1 from, “... providing it is in accessible locations within settlements, is of a suitable scale, and it is available to all community residents.” to “... providing it is in accessible locations within settlements, is of a suitable scale, and it is available to the residents of the development and/or the target community.” (PP0733).

Paragraph P6.2

Modify the PLDP to amend paragraph P6.2 by inserting, “where existing community and health care infrastructure within settlements has become surplus to requirements...” (RD0216.A) (PP1222).

Appendix 8 Successful Placemaking Design Guidance

Modify the PLDP to confirm that car parking standards meet the national standards set out in SPP 2014 and if it not the reasons should be explained, in Appendix 8 (PP0578).

Modify the PLDP to include lighting improvements and improvements of sightlines in existing developments in Appendix 8 (PP0778).

Modify the PLDP to facilitate the safe and independent walking, cycling and wheeling for everyone, ensuring access for all and equality of opportunity in public space in Appendix 8.

Modify the PLDP to require all new developments and the routes that lead to them, reflect the street user hierarchy and prioritise the most vulnerable groups in Appendix 8 (PP0778).

Modify the PLDP to include the management of environmental noise and its effects in the table of Appendix 8 (PP0796).

Modify the PLDP to state ‘Viewing Points’ on elevated points are not permitted in the table of Appendix 8 (PP1129).

Modify the PLDP to only allow low level structures (i.e., bungalows) where a home(s) is proposed on elevated ground that is next to existing properties to protect their privacy in the table of Appendix 9 (PP1129).

Modify the PLDP to insert a bullet point in the column ‘Safe and Pleasant’, “Connection to public water and waste water infrastructure” in the table of Appendix 8 (PP1219).

Modify the PLDP to insert a bullet point in the column ‘Resource Efficient’, “The use of water saving technologies (to support the ‘Gold’ standard required in Policy C1)” in the table of Appendix 8 (PP1219).

Modify the PLDP to insert a bullet point in the column ‘Resource Efficient’, “The installation of district heating (this could maybe be added to the Low carbon design box)” in the table of Appendix 8 (PP1219).

Modify the PLDP to insert a bullet point in the column ‘Resource Efficient’, “Use of renewable energies is emphasised” in the table of Appendix 8 (PP1219).

Modify the PLDP to include a reference to the Building for Nature qualitative benchmark and include an accreditation in the table of Appendix 8 (PP1219).

Modify the PLDP to insert, “The design of homes should meet the requirements of need of different individuals and should provide a “home for life”. All homes should be designed

for wheelchair access and where necessary, appropriate design should be considered for individuals with disability.” in Appendix 8 (PP1222).

Modify the PLDP to remove the fourth sentence, “This relates to major developments or development on sites we have identified within the Settlement Statements requiring a masterplan/framework, or where the Planning and Environment Service consider appropriate to apply in the first paragraph of Appendix 8 (PP1300).

Modify the PLDP to remove the reference to all major proposals requiring taking part in the Design Review process in the second paragraph of Appendix 8 (PP1306).

Appendix 9 Building Design Guidance

Modify the PLDP to state ‘Viewing Points’ on elevated points are not permitted in the table of Appendix 9 (PP1129).

Modify the PLDP to only allow low level structures (i.e., bungalows) where a home(s) is proposed on elevated ground that is next to existing properties to protect their privacy in the table of Appendix 9 (PP1129).

Modify the PLDP to replace the second sentence in the seventh bullet point under ‘Safe and Pleasant’, from “Where a private water supply or drainage arrangement are required, all technical information should be provided.¹” to “Where a private water supply or drainage arrangement are proposed, all technical information and reasons for not connecting to a public water/sewer, as well as details of adoption agreements with Scottish Water or lifetime maintenance proposals should be provided.¹” in the table of Appendix 9 (PP1219).

Modify the PLDP to add a new footnote at the end of the seventh bullet point under ‘Safe and Pleasant’, “¹ Please refer to SEPAs ‘Planning Advice on Waste Water Drainage’ (Land Use Planning System Guidance Note 19) for guidance on technical information requirements.” in the table of Appendix 9 (PP1219).

Appendix 10 Standards for Open Space

Modify the PLDP to state on street parking should be prioritised for disabled users in Table 1 of Appendix 10 under ‘Neighbourhood streets’ (PP0778).

Modify the PLDP to state green infrastructure should be included in all new developments in Table 1 of Appendix 10 under ‘Neighbourhood streets’ (PP0778).

Modify the PLDP to state green infrastructure should be developed to include climate change measures where possible including SuDS in Table 1 of Appendix 10 (PP0778).

Modify the PLDP to state projects should never negatively impact on biodiversity and that a biodiversity net gain should be achieved in Table 1 of Appendix 10 (PP0778).

Modify the PLDP to insert before Table 1 “The inclusion and design of open space provides a key opportunity for Placemaking where people are at the heart of new and existing development and multiple outcomes are achieved e.g., biodiversity and wellbeing.” in Appendix 10 (PP1219).

Modify the PLDP to replace the first bullet point in the note's column for 'Green-Blue Networks', "Minimum 6m strip may be increased where banks are sloping." with "Widths may require to be wider as a result of local factors such as hydro-geomorphology, need for pollution control, native species habitats or active travel provision. They may be wider than 20m on major rivers or dynamic watercourses to allow them to follow their natural course." in Table 1 of Appendix 10 (PP1219).

Modify the PLDP to replace the last bullet point in the Note's column for 'Green-Blue Networks' from "Play an important role in mitigating flood risk and permitting access for long-term maintenance." to "Play an important role in mitigating flood risk and permitting access for long-term maintenance and river restoration." in Table 1 of Appendix 10 (PP1219).

Modify the PLDP to add a second footnote at the end of the second sentence in the note's column for 'Burial Grounds' ("...ground testing²") to read, "²Ground testing shall be in accordance with SEPAs Guidance on assessing the impacts of cemeteries on groundwater (LUPS GU32)." in Table 1 of Appendix 10 (PP1219).

Summary of responses (including reasons) by planning authority:

Policy 1 Layout, Siting and Design

General

The Council notes the concern raised regarding the need for larger sized homes in city centres, but there is no requirement to amend the policy. It already allows for a mix of house types and provides the flexibility for more larger or smaller homes depending on the location of the proposed development. No change is required.

The Council notes the request to provide a reference to environmentally/climate friendly design and construction, but no specific examples are provided, and deem it not necessary as this is adequately covered in the Building Standards Regulations, other PLDP policies (e.g., in paragraphs R2.10, P1.8, E3.2, E3.3, C4.2, RD1.16) and Appendices 8 and 9. No change is required.

Paragraph P1.1

The Council does not agree that the Design Review Process (DRP), lacks clarity, is unjustified and will create unnecessary delays. It is necessary to provide a hook in the policy to ensure that an appropriate DRP can be required under policy, with a view to improving the quality of the built environment within Aberdeenshire. The selection criteria in respect of the Design Review Process aims to reflect and capture the most sensitive developments, whether this be through the location of the proposal or scale. The decision to target developments above 50 homes seeks to tie into the National Hierarchy of Development and reflects the likelihood of these developments having a larger impact through scale. This also reflects the opportunity for major developments to significantly enhance the sense of place, through incorporating and expressly demonstrating the six principles of successful places at the core of their design. The criteria for developments other than those above 50 homes, remains open ended, as smaller developments may also benefit from review or be otherwise significant in a local context.

The terminology DRP has been deliberately chosen, as this may constitute a Design Panel, pre-application discussions or such other means as would be deemed appropriate by the Planning Authority. The decision as to which process to follow would be made on a case-by-case basis. Pre-application engagement between the applicant and the Planning and Environment Service would aid in frontloading this matter, with a view to resolving these issues ahead of a formal submission. This follows national guidance which encourages all forms of pre application activity.

The Council does not agree that the DRP has been inconsistently applied, as the exact nature of the design review process should be agreed during pre-application discussions, with said discussions potentially fulfilling this requirement. Outwith major categories of development, whilst pre-application discussions cannot be forced, they are to be strongly encouraged. Engagement is already required as part of the run up to a major application, in the form of the submission of a Proposal of Application Notice (POAN) or Environment Impact Assessment screening. Delays would only occur where no pre-application has been undertaken. The stating of this requirement within Policy provides transparency in respect of the expectations of the Planning and Environment Service.

The Council does not agree that the policy contains a lack of detail on how the process would operate. The use of Design Review Panels to provide an independent assessment of Design Quality is a well-established practice across Scotland and Planning Officers have the skill and knowledge to assess major proposals against Policy. The Design Review Process seeks to challenge all involved (Officer and Applicant) to consider placemaking and the six principles as a core element of each proposal, and to more clearly articulate how the six principles are expressed within a development. Third parties would be brought in under the umbrella of the Design Review Panel in limited circumstances, where a site is particularly sensitive or complex, or a deadlock in respect of design has arisen.

In relation to comments on the Design Review Panel and the need for flexibility, a conscious decision has been made to include a hook in Policy in respect of Design Review Processes. This has been included in the interests of transparency and allows the development industry to factor in the necessary discussions and work into perspective timelines. It is noted the requirement is for a Design Review Process, as not all applications are required to participate with a Design Review Panel. Targeted applications would be required to undertake a design review process, such as meaningful pre-application discussions, which may allow this matter to be reflected in a detailed Design and Access Statement and/or a Design Review Panel, depending upon the nature of the proposal. The policy seeks to emphasise the importance of pre-application discussion, as this would be the point at which the most meaningful impact can be made. Provided pre-application engagement is undertaken, there should be no significant change to the timescale for determination, in fact in many cases a successful pre application process facilitates quicker and more effective decision-making. It is noted that the majority of Local Authorities within Scotland successfully utilise Design Review Processes.

In conclusion, no change is required.

Paragraph P1.2

The Council does not agree with changing the threshold on when a development

framework/ masterplan is required or that it should be undertaken on a case-by-case basis. No justification has been provided by the representees as to why 200 homes is a reasonable figure, whereas 50 homes and 2 hectares are enshrined in legislation as being recognised as a major development. Furthermore, 50 homes onto a small settlement can have huge implications and needs a masterplan, whereas 200 homes in a large settlement may have very little impact. In either way, the magnitude and content of the masterplan will vary, as each masterplan will reflect the complexity and impacts of the proposed development. No change is required.

The need for a masterplan should be flexible, but the representee has not provided examples on what developments or sites would merit being subject to a masterplan on a case by case. Masterplans are integral to the pre-application process, where required, as they ensure community confidence in engagement and seeking the right development in the right location. The Council notes the benefit this approach has for large strategic sites that will be delivered over multiple phases or by multiple owners, but this would more reflect a framework rather than a masterplan, but there are similarities. No change is required.

The Council does not agree that it is a duplication of the process, time consuming, or inconsistent with creating a streamlined planning system, as having an agreed masterplan should make the formal application process more streamlined. Planning Advice is being prepared to ensure the need for a masterplan fits into the pre-application process seamlessly to deliver a more efficient and valuable process. Furthermore, the planning application process should be more efficient and streamlined if all elements of a proposal are discussed and appropriately planned right from the start, and that begins with early engagement on a masterplan. The Proposal of Application Notice requires community consultation, the earlier the better, and preparing a masterplan provides the appropriate means of engaging with communities. This Planning Advice should also alleviate the concerns raised by some representees that Committees seek more detail than expected. The expectation is that training will also be provided, to inform Councillors on what masterplans should include (i.e., to avoid the focus on detail at this stage). No change is required.

While this approach creates a two-stage consent process, good planning should allow front loading of detail and process and produce a well thought out masterplan prior to the submission of any planning application, whether this is at the Planning Permission in Principle or Full Planning Permission stage. Furthermore, a masterplan is not meant to be as detailed as a planning application to ensure flexibility when a planning application is submitted. A masterplan does require prior agreement as many masterplans cover several phases of development. The masterplan process also allows for early community engagement, which is of high importance to the Scottish Government. No change is required.

There is a legal requirement for taking masterplans to Committee under Part 2C paragraph 5.3 of the Scheme of Delegation (AD0170), "All Development Frameworks and Masterplans as required by the provisions of the Local Development Plan will be agreed by the Area Committee(s) relevant to where the development/site is located." The Council also notes that PAN 83: Masterplanning (AD0009, recognises on page 4 that the implementation of masterplans can fail due to insufficient skills, experience and client commitment, and result in an uncoordinated vision for a site). Requiring a masterplan to be agreed by the Council helps to reduce these issues. In addition, design is recognised

as a material consideration. No change is required.

While the Council's process has no right of appeal, the applicant can still submit a planning application and if it is refused, they can appeal to the Planning and Environmental Appeals Division. No change is required.

The Council does not agree that Design and Access Statements would be sufficient for major sites, as they perform different functions. The purpose of a masterplan is to inform the planning application, although there is scope to amalgamate Design and Access Statements into a masterplan. However, masterplans are essential to improving the design process and applications are developed within the framework of an agreed masterplan. No change is required.

The Council does not agree that the phrase "deemed appropriate by the Planning Authority" is an unreasonable catch all and will create uncertainty. While there is no minimum or maximum scale of development that would benefit from being masterplanned, there could be a benefit in the policy providing a footnote as an example. Furthermore, it is necessary for the PLDP to include this wording, otherwise there would be no policy hook for planners to request a masterplan, and the representees provided no alternative wording. If the Reporter is minded, to make an amendment, then the Council recommend that a new footnote is added at the end of the first bullet point in paragraph P1.2 to read, "1 For example, where the expansion of a small settlement would raise issues in relation to key infrastructure provision in the locale."

The Council does not agree with clarifying the meaning of "implemented", as section 27 of the Town and Country Planning (Scotland) Act 1997 states when a start on a site constitutes as implemented. No change is required.

There is a spelling error on footnote 1 on page 47, which should read "For" and not "or". The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council can confirm that SEPA and other consultees will be involved in the masterplan process. Statutory and other consultees play a crucial role in masterplanning.

The Council does not agree with NatureScot that paragraph P1.2 is confusing, as the first sentence relates to masterplans, i.e., when they must be prepared, and the bullet points refer to the proposed development, i.e., they must be in accordance with an agreed statement (e.g., masterplan). No change is required.

The Council does not believe any further explanation on the types of agreed statements is required, as they are listed in footnote 1 – development frameworks or masterplans. No change is required.

Paragraph P1.5

The Council welcomes the support of this paragraph on the six qualities of successful places.

The Council does not agree with amending this paragraph to include green infrastructure within the six principles/qualities of successful places, as they provide a basic design

framework, which is derived from Scottish Planning Policy and green infrastructure is just one of a number of considerations that can help deliver these design qualities. No change is required.

The Council notes the concerns expressed that the second half of “well connected” is not clear, but the term “intermodal shifts” is defined in the glossary as a change of how people travel, for example changing from the private car to public transport. Active travel is also defined in the glossary as an approach to travel that focusses on physical activity such as walking and cycling. However, if the Reporter is minded, to make an amendment, then the Council recommend that a footnote is added at the end of the last bullet point in paragraph 1.5 that states, “See glossary for meaning of intermodal shifts and active travel.”

Comments from Nestrans are welcomed and noted, but as safe and attractive access arrangements, links, accessible public transport, and safe trips to local amenities are more site-specific issues, these can be more appropriately addressed in the Settlement Statements in Appendix 7 or at the planning application stage. No change is required.

Paragraph P1.6

The Council welcomes SEPA’s support for this paragraph that references Appendix 8 and Appendix 9 Building Design Guidance. No change is required.

The Council notes NatureScot’s request for the Council’s guidance on the six qualities of successful places to apply in general to all developments and not just major developments and those it considers appropriate. However, to avoid being over prescriptive, as different types of developments will have different effects, the Council developed guidance for major developments and allocations requiring a Masterplan/ Framework, as set out in Appendix 8 and small-scale developments, as set out in Appendix 9. Applicants for all types of development will still need to meet the relevant six qualities of successful place in Policy P1, and the policy also allows the Planning and Environment Service to apply these appendices to a development if they deem it appropriate. No change is required.

However, in light of NatureScot’s suggested amendment, the Council propose a technical change to paragraph P1.6 to amend “Further design guidance... are provided in sites allocated in Appendix 7” to read, “...are provided for allocated sites in...”. The Council confirms that it intends to address this through a non-notifiable modification, as set out in as set out in the List of Non-Notifiable Modifications.

The Council does not support NatureScot’s request to produce further map-based guidance setting out the Council’s vision for selected allocations. While there is merit in this approach, any key issues should be raised in the LDP. The Aberdeenshire Council example has been produced by the Council’s Delivery Team to assist in moving these sites forward, as part of the Delivery Programme and Prospectus (AD0035, AD0042 and AD0103.A to AD0103.E). Such prospectuses could only be considered as Planning Advice and some form of public consultation would be required for them to have any weight as a material consideration. For larger sites, masterplans and development frameworks are required, which could include green infrastructure and active travel routes, if appropriate at that scale. No change is required.

Paragraph P1.7

The Council notes the concerns for ancient woodland loss, but it is not appropriate for this policy to specifically state their loss cannot be mitigated. This policy is about design of developments and the protection of resources is considered under Policy PR1 Protection Important Resources. No change is required.

The Council notes the request for this paragraph to state biodiversity enhancement measures are required, but some flexibility is necessary and SPP, para 94 states, “seek benefits for biodiversity from new development where possible”. The Council partially agree that the responsibility for identifying the enhancements lie with the applicant at the pre-application stage, but other consultees may also identify enhancement opportunities, and Footnote 5 sets out further information in our Planning Advice 5/2015 Opportunities for Biodiversity Enhancement (AD0047). While there may be opportunities for off-site enhancement measures, such as in connection to a Biodiversity Action Plan, the preference is to enhance the site in question to avoid any ambiguity. No change is required.

The Council will be reviewing all Planning Advice referred to in the footnotes and policies, but the advantage of unique reference number allows for ease of reference and version control. No change is required.

The term “see Glossary” that is mentioned in the footnotes refers to the definition of Planning Advice and it provides a weblink to where they can be found. No change is required.

Paragraph P1.8

The Scottish Government’s request to include a sentence on encouraging remanufacturing and reprocessing of materials is not supported as these processes are captured in the word “recycle”, which is used in this paragraph, but is not mentioned in paragraph 180 of SPP. No change is required.

Policy P2 Open Space and Access in New Development

Paragraph P2.1

The support for this policy is welcomed.

The Council does not agree that the policy should highlight the need to update and adopt the pitches strategy, which was drafted in 2018. The Council agrees that this work needs to be done, but it can be undertaken without instruction from the LDP. No change is required.

The Council does not support amending this paragraph to include green space as the glossary defines open space as green-blue infrastructure, which is also defined in the glossary. Reference to open space is therefore deemed sufficient. No change is required.

The Council notes the importance a representee has given to woodland in delivering green infrastructure and connecting smaller pockets of woodland areas, but Appendix 10 already sets out the standards for open space contribution, which includes green-blue networks. No change is required.

The glossary already provides a definition of open space and green infrastructure, which includes woodland areas. No change is required.

The Council does not support producing a list of green spaces that will not be granted planning permission. It is not a legal requirement and important green areas are identified as Protected Land in Appendix 7, which offers a level of protection against development. Woods are also considered under paragraphs E1.4, E3.1, E3.3, PR1.1, PR1.7, PR1.8, and C3.1. No change is required.

The Council does not support NatureScot's requests to include "rich in biodiversity" to paragraph P2.1, as the first sentence refers to the relevant qualities of successful places, as listed in SPP. Biodiversity is one of the contributing factors to delivering successful places, but it is not a topic in its own right. However, this paragraph could mention "rich in biodiversity" as it is mentioned in Appendix 10 and the Council has a duty to further the conservation of biodiversity. If the Reporter is minded, to make an amendment, then the Council recommend that the second sentence in paragraph 2.1 could be modified to read, "...natural in form, rich in biodiversity and has..."

The Council confirms that it intends to address NatureScot's other comments through two non-notifiable modifications, as set out in the List of Non-Notifiable Modifications.

Paragraph P2.2

The Council does not agree that the open space requirement for major developments should be reduced from 40%, removed altogether, or identified in a masterplan or other document. This figure, which has been used in the LDP 2012, Policy 8 (AD0031.A, page 12 and AD0031.B, page LSD 7, and LDP 2017 Policy P2, and AD0034.B, page 48) was derived from research undertaken during the preparation of the Aberdeenshire Parks and Open Spaces Strategy 2010 (AD0107, which summarises on page 4 that settlements had on average between 35-45% open space). As such, it is imperative that this figure remains, especially as open space is important for physical and mental health, biodiversity, climate resilience and active travel. The Council also disagrees that it will prejudice the Strategic Development Plan target for a density of 30 dwellings per hectare in the Strategic Growth Areas, reduce higher density developments or contradicts a more flexible approach, as we expect a mix of house types and tenure across a site, and most are greenfield sites, which allows for flexible design solutions. Furthermore, the adoption of open space is not a matter for the LDP and the use of private factors to maintain open space is a common process. Issues of increased fees and unused open space have not been supported by any evidence and is deemed speculative. The Council are not aware of a development being commercially unviable on grounds of open space provision, and there is some flexibility in the open space requirement, as Policy P2 states "We will generally expect 40%..." as each proposal will be considered on its merits. Regarding the use of smaller meaningful spaces, the representee has not defined what this could be and neither do the Council support it, as it is unlikely to contribute to active travel or green-blue networks. No change is required.

The Council commends the suggestion to include a 30% increase in native tree canopy cover as part of the 40% open space provision, as our open spaces standards in Appendix 10 refers to the provision of green-blue infrastructure. However, the Council is concerned that to apply a set figure would remove the flexibility this Appendix allows. Furthermore,

this figure is not supported in any Scottish Government policy, such as SPP. No change is required.

Paragraph P2.3

The Council notes the objections raised to the 120m² open space requirement for sites of less than 50 homes, but this figure has been carried forward from previous Local Development Plans to ensure a consistent and transparent approach is applied. No evidence has been provided that this requirement has prevented a development from going ahead, and Appendix 10 allows flexibility to be applied in terms of the types of open space provided. The use of private factors to maintain open space is a common process, and issues of increased fees and unused open space have not been supported by any evidence. No change is required.

Paragraph P2.4

The Council notes the request to remove "temporary" from the provision for green-blue infrastructure, but this section of the policy reflects SPP para 220, which states "Local development plans should encourage the temporary use of unused or underused land as green infrastructure..." No change is required.

Comments from SEPA are noted. No change is required.

Paragraph P2.5

The Council does not agree that there is a need to add to this paragraph, as the issue of maintenance is more appropriately considered at the planning application stage (or in a masterplan). No change is required.

Paragraph P2.6

The Council notes the Scottish Government's request for Aberdeenshire Council to develop at least one exemplar walking and cycling friendly settlement to align with NPF3 (2014) paragraph 5.14. Peterhead was used as a Cycle Demonstration Town Project, and following its success, Integrated Travel Town masterplans have been prepared for Huntly, Inverurie, Fraserburgh, Portlethen and Ellon to help support more sustainable and active travel in these settlements (<https://www.aberdeenshire.gov.uk/roads-and-travel/transportation/integrated-travel-towns/>). Aberdeenshire Council has also developed a series of walking and cycling routes, which can be found at <https://www.aberdeenshire.gov.uk/roads-and-travel/transportation/cycling/>. These are available for settlements across Aberdeenshire. No change is required.

Comments on developing new and protecting public access routes, and promoting walking and cycling are noted. No change is required.

The Council does not agree that footpath and access routes are included in both planning applications and masterplan/development frameworks as not all proposals will require a masterplan or development framework. No change is required.

The Council has considered various community action plans during its development, but it is not considered appropriate or necessary to single out these documents, none of which

the representee has provided as examples. Important routes are identified in the Core Paths Plan, the Council has engaged with Community Planning Officers and Community Councils during the Plan-making process, and Local Place Plans could provide an opportunity for the LDP to consider community aspirations. If targets for woodland creation are set out in National Planning Framework 4, this will be reflected in the next LDP. No change is required.

The Council does not consider it necessary to amend the wording in the policy to include more path types as suggested, as the paths listed in the policy are just examples. It is noted that SPP para 221, states, “including core paths and other important routes, within the context of statutory access rights under the Land Reform (Scotland) Act 2003.” And SPP para 228 refers to “access rights and core paths”. No change is required.

The representee is not clear on how this paragraph can be strengthened to reflect National Transport Strategy 2 (AD0005, which only refers to LDPs once on page 59 and that a Delivery Plan will be prepared (on page 60), although the Council is not aware that this has been produced). The PLDP already includes the following objective, “To make efficient use of the transport network, reduce the need to travel and promote walking, cycling, and public transport, (paragraph 4.7). Policy P2 already states in paragraph P2.6 “...development must include appropriate opportunities for informal recreation and promote walking or cycling as a means of transport.” and Policy P1, paragraph P1.6 considers how proposals are well connected. It is noted that Policy P2 does not refer to wheeling and if the Reporter is minded, to make an amendment, then the Council recommend that the first sentence in paragraph 2.6 could be modified to read, “...walking, wheeling (travelling by wheelchair) or cycling...”. Without specific national guidance, the PLDP cannot specify the types of facilities for citizens to travel by walking, wheeling, and cycling, as this would not be considered competent if part of a formal planning decision.

The PLDP is not a framework or tool to promote footpaths, cycleways, and active travel networks both within communities and between adjacent communities, as requested by the representee. The policy only applies to new developments and not paths on their own. No change is required.

The Council does not agree that the settlement maps should promote paths that are suggested in Community Action Plans. The Council considers paths should be promoted through the PLDP’s policies than in Settlement Statement maps, as promoted in SPP (e.g., para 46) as part of the six qualities of successful place, paragraph 221 to ensure there is easy access to them and paragraph 228 to safeguard paths and encouraged new links. Only Core Paths are identified in the Settlement Statement maps as SPP paragraph 228 requires their protection and enhancement. No change is required.

The Council agrees with NatureScot that the term “active travel” could be introduced to this paragraph, as this term is stated in paragraph P1.6 in reference to well-connected places. The Council also notes their request to include other users, such as riders, which may not be applicable in some areas, but we are not opposed to highlighting in the policy. If the Reporter is minded, to make an amendment, then the Council recommend that the first sentence in paragraph 2.6 could be modified to read, “...new developments must include appropriate opportunities for informal recreation and safe active travel, including walking and cycling, wheeling (travelling by wheelchair), riding etc.”

The Council does not agree with the request to include a reference to the Outdoor Access

Strategy (AD0105), as while several strategies and policies influence the PLDP, this Strategy focuses on work the Council will do to achieve its aims, objectives and priorities on outdoor access provision, which includes Officers providing input to the LDP process. No change is required.

The Council does not agree with the suggestion to replace “Statements or plans detailing proposals” with “An Access Plan” to be more concise. It is intentional that this sentence does not list all the different types of statements in order to keep the policy concise, allow flexibility and avoid confusion if an applicant wants to consider their access and design statement in a masterplan or on its own, or make a short reference to access in a Planning Statement. No change is required.

Policy P3 Infill Development within Settlements and Householder Developments

With regard to SEPA’s objection to Policy P3 unless Policy C4 is amended by including a statement that “development should not increase flood risk vulnerability”, it is considered this is unfounded since paragraph C4.2 refers to “increased severity of flood risk elsewhere”. Likewise, the introduction of the term “re-development” is unnecessary as in planning terms re-development will constitute a form of development. There are no inconsistencies or omissions, and no change is required.

Policy P4 Hazardous and Potentially Polluting Developments and Contaminated Land

General

Comments of support and observations are noted. No change is required.

As discussed in the Report of the Examination on the LDP 2017 (AD0036, page 145) the Reporter agreed with the Council not to include the pipeline consultation zones in the proposal’s maps in Appendix 7, as they are not a constraints map. However, where pipelines are present, a Settlement Statement includes a section on oil and gas pipelines. Nonetheless, the Council took the Reporter’s advice and produced maps of the consultation zones for pipelines and other hazardous development in Planning Advice 1/2017 Pipeline and Hazardous Development Consultation Zones (AD0049 to AD0055). However, it is noted that there is no reference to this Planning Advice in the PLDP and a footnote could be added. If the Reporter is minded, to make an amendment, then the Council recommend that a footnote could be added at the end of paragraph P4.2, “9 See Planning Advice Pipeline and Hazardous Development Consultation Zones – See Glossary” and amend the subsequent footnote numbers.

The request to have cognisance of pipeline consultation zones, Health and Safety Executive advice and guidelines and Policy P4 if settlement boundaries are amended or new allocations added is noted. If the Reporter is minded, to make an amendment to the settlement boundaries or introduce new allocations, then the Council recommend that an oil and gas section is added to the Settlement Statement, if not already present, which states, “Part of the settlement is within the Health and Safety Executive (HSE) consultation distance associated with one or more oil or gas pipelines in the vicinity. Developments within this distance must comply with Policy P4 Hazardous and Potentially Polluting Developments and Contaminated Land, and with the HSE “Land Use Planning Methodology” and the same wording is used for existing allocations in the PLDP,

“Development on this site must accord with Policy P4 (Hazardous and polluting developments and contaminated land) and the Health and Safety Executive “Planning Advice for Developments near Hazardous Installations”, owing to the presence of one or more oil or gas pipelines in the vicinity.”

Paragraph P4.1

Comments from SEPA are noted. No change is required.

The Council does not agree that paragraphs P4.1 and P4.5 are contradictory and unclear. Firstly, paragraph P4.1 states when development will be refused in its first sentence and mentions mitigation measures in its last sentence. Secondly, paragraph 4.1 refers to all types of pollution, whereas paragraph 4.5 specifically refers to mitigating air and noise pollution if issues have arisen as a result of a Noise Impact Assessment or Air Quality Assessment. No change is required.

Paragraph P4.2

Comments from SEPA are noted. No change is required.

The text referred to by the representee was removed in error when footnotes were being added and website addresses were being reviewed before submitting the PLDP to Full Council on 5 March 2020. If the Reporter is minded, to make these amendments, then the Council recommend that the first sentence in paragraph P4.2 could be modified to read, “In determining planning applications for development within the consultation zones for hazardous installations (including oil and gas pipelines) we will consult...”, a new final sentence could be added to read, “This confirmation and advice can be obtained from the HSE Planning Advice Web App at www.hse.gov.uk/landuseplanning/developers.htm or in Planning Advice, Pipeline and Hazardous Development Consultation Zones⁹”, a new footnote could be added to read, “⁹ See Planning Advice Pipeline and Hazardous Development Consultation Zones – See Glossary” and the subsequent footnote numbers amended.

Policy P5 Digital Infrastructure

Support for this policy is noted. No change is required.

Comments from SEPA are noted. No change is required.

The representee has not expressed why they are concerned about siting telecommunications masts near to buildings where children regularly congregate, but the Council assume it is to do with their health. Policy P5 considers the siting and design of equipment in paragraphs P5.2 and requires a declaration on public exposure to radiofrequency radiation in paragraph P5.3. Furthermore, while SPP para 299 states equipment should be sited as sensitively as possible, para 300 states emissions of radiofrequency radiation are controlled and regulated under other legislation and so is not a material consideration. No change is required.

Policy P6 Community Facilities and Public Amenities

General

The Council notes the positive contribution cultural and arts facilities make to communities, although the representee is not clear on which part of this section on 'Shaping Places' their concerns relate. The purpose of Policy P6 is to consider the appropriateness of new facilities (in paragraph P6.1) and the re-use or development of facilities surplus to requirement providing they meet other policies in the PLDP (in paragraph P6.2). The PLDP encourages cultural facilities in town centres under Policy B1 Town Centre Development, which will help to deliver the national outcomes mentioned in paragraphs 3.6 and 3.7. Cultural facilities are only referred to in SPP paras 60 and 68 in the context of town centres. No change is required.

The promotion of paths, cycleways and active travel are considered in policies P1, P2 and RD2 (paragraph RD2.9), as part of a proposed development, whereas Policy P6 relates specifically to community facilities and public amenities (i.e., buildings). A PLDP does not promote new paths like it does with new housing sites, for example, but rather facilitates their development as part of a new development. No change is required.

Comments from SEPA are noted. No change is required.

Paragraph P6.1

The Council does not agree with amending "to all community residents" to "is available to residents of the development and/or the target community", as the policy does not target where new community facilities are required but considers the appropriateness of the proposed development as part of a planning application. The policy relates to a specific community group and the representee has not given an example on how to measure the residents needs of a development. Furthermore, the policy applies to both large and small settlements. No change is required.

Paragraph P6.2

The Council does not support adding health care facilities to this policy, as the PLDP glossary includes health facilities within its definition of community facilities, which also includes education and sports facilities. No change is required.

Appendix 8 Successful Placemaking Design Guidance

The Council Parking standards (AD0106, pages 11 to 15) differ from parking and policy standards set out in SPP Annex B, as they have been derived from local operational experience, national policy guidance and best practice, and a review of parking accumulations experienced at comparable sites across Scotland and the UK. Although Annex B sets out the national parking standards, the second paragraph allows for local variations to support the viability of town centres, and the disabled standards are not mandatory. The Council's latest standards were adopted in 2019 after wide-ranging public consultation and were tested against the results obtained from a series of specially commissioned car park accumulation surveys that were undertaken at key sites across Aberdeenshire (see AD0106, paragraph 1.3). No change is required.

While the Council agrees that lighting and sightlines are important considerations in a development, the appendix only applies to new and not existing developments. It is not a policy framework for other projects, although it can be referred to as good practice. No

change is required.

The Council agrees that developments should allow for safe and independent access and open space, and in the Table under ‘Welcoming’, the Appendix refers to accommodating cyclists, inclusive networks and paths, and open space that is welcoming and encourages social interaction. Specific details, for example, on how safe a route is for a young person is a consideration for a masterplan and/or planning application, and this Appendix does not need to be overly prescriptive. No change is required.

The Council notes the importance of providing choice on how people travel, but disagrees with adding more detail to the Appendix, such as street user hierarchy and prioritising vulnerable groups. While the table does not refer to a 20-minute neighbourhood, it does encourage walkable neighbourhoods. It also refers to cycle parking and storage, a street hierarchy, active travel modes, and inclusive networks and paths. No change is required.

The issue of noise can be considered in the table under the ‘Safe and Pleasant’ section as “amenity”. If necessary, a Noise Impact Assessment can be requested through the planning application process. No change is required.

The PLDP does not set out how a development demonstrates its visual and landscape impact using viewpoints, but it is considered best practice. Viewpoints are taken from public vantage points from a range of distances and are unlikely to encroach onto the privacy of individuals. No change is required.

The Council notes the issue of privacy affecting existing properties that could be overlooked by new development, and the Appendix covers this in the table under ‘Safe and Pleasant’. The Council disagrees with stipulating the use of bungalows in these instances to avoid being over prescriptive when other design solutions could come forward including re-positioning of development, fenestration changes etc. No change is required.

The Council disagrees with adding a reference to connecting to water and waste water infrastructure as this is sufficiently covered under the ‘Resource efficient’ part of the six qualities of successful places. Development at this scale should be connecting to a public network and should have a limited impact on the design of a site. It is also considered Policy RD1 Providing Suitable Services. Sustainable Drainage Systems are considered in the Appendix under “Resource efficient”. No change is required.

The Council does not agree with adding water saving technologies to the table to avoid it being overly prescriptive and because water saving technologies are unlikely to have a significant impact on placemaking. It is noted that SEPA has not provided an example. Water efficiency is appropriately considered under paragraph C1.2 of the PLDP. No change is required.

The Council does not agree with including district heating in the table or including it as an example of low carbon design (6th bullet point), to avoid prejudicing current and emerging technologies, such as solar, heat pumps, cooling and fuel cells etc, and to allow flexible design. However, it is noted that low carbon design is not defined in the PLDP. If the Reporter is minded, to make an amendment, then the Council recommend a new glossary definition could be added to read, “Low carbon design: Is the concept of minimising greenhouse gas emissions and energy use in new or retrofitted buildings by using technologies such as, free cooling/heating thermal store/exchange, stand alone or roof

mounted wind turbines, photo voltaic (PV) solar energy systems, solar thermal hot water and solar collectors, biomass heating and fuel storage systems, district heating schemes, combined heat and power (CHP), ground, water and air source heating and cooling, thermal mass with earth pipes, phase change materials (PCM's), fuel cells, and energy storage systems.”

The Council does not agree with adding “Use of renewable energies is emphasised”, as it is adequately covered under the “Low carbon design” bullet point, which includes renewable technologies, and to avoid prejudicing current and emerging technologies. Furthermore, there is more emphasis on energy efficient than renewable energies in SPP. Paragraph 110 states the planning system should “enable provision of a range of attractive, well-designed, energy efficient housing, contributing to the creation of successful and sustainable places”, and paragraph 157 also states, “Local development plans should support new build developments, infrastructure or retrofit projects which deliver energy efficiency...” As suggested above, a new definition of low carbon design could be added to the PLDP, if the Reporter is minded to agree. Otherwise, no change is required.

The Council does not agree with including a reference to Building for Nature in the PLDP. Planners can advise of this, and encourage this, but with relevant natural heritage policies, biodiversity enhancement duties and other criteria within the design guidance which addresses this, this is sufficiently covered. There are numerous award-winning approaches for each criterion that could be listed (e.g., built heritage, innovation etc), but this would overwhelm the guidance and distract from the main aim this seeks to achieve. No change is required.

This Appendix considers the adaptability of a building for future needs, and issues on the internal layout of a home is not a consideration for the LDP. No change is required.

The Council notes NatureScot’s request for the Council’s guidance on the six qualities of successful places to apply in general to all developments and not just major developments and those it considers appropriate. However, to avoid being over prescriptive, as different types of developments will have different effects, the Council developed guidance for major developments and allocations requiring a Masterplan/Framework, as set out in Appendix 8 and small-scale developments, as set out in Appendix 9. Applicants for all types of development will still need to meet the relevant six qualities of successful place in Policy P1, and the policy also allows the Planning and Environment Service to apply these appendices to a development if they deem it appropriate. No change is required.

The Council does not agree with removing the reference to the Design Review Process from the second paragraph as this Appendix forms part of Policy P1, and it is included as a reminder that major developments will be required to participate in this process. No change is required.

Comments on electric car charging points are noted. No change is required.

Appendix 9 Building Design Guidance

Support for this Appendix is noted. No change is required.

The PLDP does not set out how a development demonstrates its visual and landscape

impact using viewpoints, but it is considered best practice. Viewpoints are taken from public vantage points from a range of distances and are unlikely to encroach onto the privacy of individuals. No change is required.

The Council notes the issue of privacy affecting existing properties where they could be overlooked by new development, and the Appendix covers this in the table under 'Safe and Pleasant'. The Council disagrees with stipulating the use of bungalows in these instances to avoid being over prescriptive when other design solutions could come forward including re-positioning of development, fenestration changes etc. No change is required.

The Council agrees with SEPA that the seventh bullet point under 'Safe and Pleasant' could be expanded to state that applicants will be required to demonstrate why they cannot connect to a public sewer network and to provide additional information on adoption agreements. The amendment proposed by SEPA provides a good solution. If the Reporter is minded, to make an amendment, then the Council recommend that the second sentence in the seventh bullet point under 'Safe and Pleasant' could be modified to read, "Where a private water supply or drainage arrangement are proposed, all technical information and reasons for not connecting to a public water/sewer, as well as details of adoption agreements with Scottish Water or lifetime maintenance proposals should be provided."¹

The Council agrees with SEPA that a footnote could be added to the table that requires applicants proposing private drainage to be compliant with SEPA's planning advice on waste water drainage. This approach is supported in PAN 79 Water and Drainage (AD0008 paragraphs 23 and 52) and it will ensure that this advice is referred to at the planning application stage. If the Reporter is minded, to make an amendment, then the Council recommend a new footnote is added at the end of the seventh bullet point under 'Safe and Pleasant' to read, "1 Please refer to SEPAs 'Planning Advice on Waste Water Drainage' (Land Use Planning System Guidance Note 19) for guidance on technical information requirements."

Appendix 10 Standards for Open Space

Support for this Appendix is noted. No change is required.

The representee has not explained how on street parking should be prioritised for disabled users. SPP Annex B provides minimum standards for car parks, but not on street parking. Requests for on street spaces dedicated to disabled people can be made to the Council on request. No change is required.

Policy P2 and Appendix 10 already provides for new developments to include green infrastructure, depending on its scale and use. Introducing street trees, for example, cannot be enforced retrospectively unless it is part of an approved scheme or by way of planning condition, but they can be introduced at the planning application stage, as appropriate. No change is required.

Appendix 10 already refers to SuDS in Table 1, and in the glossary, sustainable drainage systems is included in the definition of green-blue networks. No change is required.

Policy P1, paragraph P1.7 already requires developments to include measures to enhance biodiversity. Further advice is provided in Planning Advice 5/2015 Opportunities for

Biodiversity Enhancement in New Development (AD0047). No change is required.

The Council agrees that open space plays an important part in placemaking and it would be beneficial to include it in this Appendix. However, it is preferred that any additional wording is concise and focuses on what open space aims to achieve. If the Reporter is minded, to make an amendment, then the Council recommend that the end of the second sentence in the first paragraph could be modified to read, "...that are expected to be delivered as part of the design of a development to achieve successful placemaking."

The Council agrees with SEPA that additional wording could be added on the width of buffer strips due to local factors but would prefer to retain the minimum 6m rule as best practice. If the Reporter is minded, to make an amendment, then the Council recommend that the first bullet point in Table 1 in the note's column for Green-Blue Networks could be modified to read, "Should be a minimum of 6m wide, but widths may require to be wider as a result of local factors such as hydro-geomorphology, need for pollution control, native species habitats or active travel provision. They may be wider than 20m on major rivers or dynamic watercourses to allow them to follow their natural course."

The Council confirms that it intends to address SEPA's comment on river restoration through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

It is noted that SEPA requests a reference to their ground testing guidance as a footnote, and although this Appendix does not include reference to any other external documents, as this guidance is not referred to in the PLDP and cemeteries can have a detrimental impact on groundwater, the Council could support its inclusion. If the Reporter is minded, to make an amendment, then the Council recommend inserting a new footnote at the end of the second sentence in the note's column for Burial Grounds ("...ground testing²"), to read "² Ground testing shall be in accordance with SEPAs Guidance on assessing the impacts of cemeteries on groundwater (LUPS GU32)."

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan, or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue that is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as "non notifiable modifications" to Section 9 (Shaping Places) and to the related appendices 8, 9 and 10. However, where such matters arise from representations made to the proposed plan they are required to be addressed in the examination. I therefore address these as appropriate below.

Policy P1 Layout, Siting and Design

General

3. Paragraph P1.5 and the table in appendix 8 (Successful Placemaking Guidance) refer

to the need for a range of house types, size and densities. I do not consider it appropriate to include the example of larger sized homes in city centres in the policy wording. No modification is required.

4. I consider that matters relating to environmentally/ climate friendly design and construction are addressed in paragraph P1.5 under 'efficient' and the 'resource efficient' columns in the table in appendix 8 (Successful Placemaking Guidance). No modification is required.

Paragraph P1.1

5. Representees are concerned that the requirement for all housing proposals for over 50 homes to go through a design review process would cause delays. The council has explained that the term "design review process" is intended to cover a range of measures and not just a requirement to participate in a design panel.

6. Scottish Planning Policy states that "planning should take every opportunity to create high quality places by taking a design-led approach". It also states that "planning should support development that is designed to a high-quality, which demonstrates the six qualities of successful place."

7. I consider that the design review process for larger developments required by paragraph P1.1 would provide a collaborate, focussed approach to help improve design quality, consistent with the aspirations of Scottish Planning Policy. Taking account of the explanation provided by the council above, I consider it appropriate that there would be an element of flexibility in terms of the form of "design review process" required. This would allow matters such as the complexity and sensitivity of the proposal, availability of council resources and implications for timescales to be taken into account. No modification to the wording is required.

Paragraph P1.2

8. Paragraph 57 in Scottish Planning Policy promotes the use of design tools, including master plans, to guide the quality of development in and across places to promote positive change. Its states that this can help to provide certainty for stakeholders as a contribution to sustainable economic growth and should focus on delivering the six qualities of successful places.

9. Representees consider masterplans to be time consuming and a duplication of what is required as part of the pre-application engagement process, contrary to the aims of creating a streamlined planning system. However, it is recognised that master plans do have value for larger strategic sites involving a number of developers and a number of phases. It is suggested that the policy should be amended to only require a masterplan for proposals of more than 200 homes and/or 10 hectares.

10. I agree with the council that, in many of the settlements in Aberdeenshire, a proposal for 50 homes or a two hectare site would raise issues which would benefit from being addressed through a masterplan.

11. Scottish Planning Policy states that the role of a masterplan is to "describe and illustrate how a proposal will meet the vision and how it will work on the ground". I do not

consider this tool to have the same function as the pre-application engagement process or a design and access statement. I agree with the council that time and resources spent in preparing a masterplan can make for a smoother and faster process at planning application stage. I acknowledge that the successful implementation of paragraph P1.2 does require considerable commitment from the developer, council and the local community. However, I would expect masterplans for smaller sites to be more straightforward and less time consuming than those for large strategic sites. I conclude overall that the thresholds set out in paragraph P1.2 are appropriate in the context of the Aberdeenshire local development plan area. No modification is required in this regard.

12. The council has explained that the purpose of the phrase “deemed appropriate by the Planning Authority” is to cover the circumstances where a masterplan is considered necessary for sites below the specified threshold. I note that the council has provided one example, relating to the expansion of a small settlement which would raise issues in relation to key infrastructure provision. However, there may well be other valid reasons for requiring the preparation of masterplan and I therefore consider that highlighting one example in a footnote may be misleading. I consider the inclusion of the above phrase in paragraph P1.2 to be appropriate and that the risk of uncertainty for developers could be addressed through early engagement with the planning authority. No modification is required.

13. A planning permission can be “implemented” through activities which would not generally be described as construction, for example the creation of an access or ground works. I therefore consider that it would be potentially misleading to amend the wording of the last sentence in paragraph P1.2 as suggested. No modification is required.

14. The comments from the Scottish Environment Protection Agency (SEPA) relate to the practice of preparing and consulting on masterplans, and do not seek any changes to the wording of the policy. In response to the representation from NatureScot, the council has explained that the second part of paragraph P1.2 sets out the expectation that proposals coming forward on relevant sites will be consistent with the previously agreed masterplan or development framework. The council has also confirmed that there is a typographical error at the start of the footnote on page 47 of the proposed plan. Subject to a modification to amend the first word to read “For”, I do not consider that further clarification is required.

Paragraph P1.5

15. The six qualities of successful places are listed in paragraphs 41 - 46 of Scottish Planning Policy. These are replicated in paragraph P1.5 of the proposed plan, with the exception of the final bullet point which has been changed from “easy to move around and beyond” to “well connected”. I agree with Nestrans that the wording of the “well connected” bullet point is unclear and I do not consider that it aligns with paragraph 46 in Scottish Planning Policy.

16. The council has suggested the addition of a footnote to direct the reader to the glossary. However, I do not consider this suggestion would necessarily add clarity. I note that the six qualities of a successful place are also referred to in appendices 8 and 9, where the ‘well connected’ bullet point states “to create well connected places that promote intermodal shifts and active travel and are easy to move around.”

17. I find this wording to be more easily understood and in line with paragraph 46 in Scottish Planning Policy. In the interests of clarity and consistency, I recommend a modification to replicate the wording used in appendices 8 and 9 in paragraph P1.5.

18. The comment made by Nestrans regarding the importance of safe and attractive access arrangements, active travel links and safe connections to local facilities is not seeking a change to paragraph P1.5. No modification is required.

19. I do not consider that it would be appropriate to specifically mention 'green infrastructure' in paragraph P1.5, as its purpose is to provide an overview of the six qualities of successful places. No modification is required

Paragraph P1.6

20. The introduction to appendix 8 of the proposed plan explains that this guidance is intended to apply to major developments, sites which are identified as requiring a masterplan or framework, and other sites where appropriate. The introduction to appendix 9 states that it relates to proposals for single buildings or small scale developments. However, it also indicates that proposals should continue to meet the principles of a successful place outlined in appendix 8. I note that the six qualities of a successful place are listed in appendices 8 and 9.

21. I am satisfied that the wording of appendices 8 and 9 in the proposed plan address NatureScot's concern that the six qualities of successful places should apply to all development. However, I consider that the wording of paragraph P1.6 is confusing and not entirely consistent with the introductory paragraphs of appendices 8 and 9. I recommend a modification to reduce the potential for misunderstanding.

22. I note that the council does not agree with NatureScot's suggestion to include a hook for the preparation of further illustrative guidance for particular sites. Whilst I recognise that the preparation of graphics to accompany and further explain the information provided in the allocation summaries would be beneficial, I have no basis to require the council to do this. Given the council's position on this matter, it would be misleading to include the text suggested by NatureScot. No modification is recommended.

Paragraph P1.7

23. I agree with the council that matters relating to the loss of ancient woodland are more appropriately addressed in policy PR1 (Protecting Important Resources). No modification is required.

24. Paragraph 194 in Scottish Planning Policy states that the planning system should "seek benefits for biodiversity from new development where possible." Within this context, I do not consider the use of the word 'must', as suggested by RSPB Scotland, to be appropriate. I agree with the council that the identification of biodiversity enhancement opportunities may come from a range of sources, not just the applicant. No modification is required.

25. The change sought by RSPB Scotland in relation to 'off-site' enhancements is not seeking to remove the reference to these only being appropriate in rare circumstances. Instead, it points out that, where off-site enhancement is appropriate, there may be

suitable opportunities in countryside locations as well as within settlements. I do not consider that there is any policy basis to limit potential off-site enhancements only to within settlements. I therefore recommend a modification in line with RSPB Scotland's suggestion.

26. I agree with the council that it is helpful to refer to current relevant planning advice in footnotes, even if such advice may be updated and replaced during the plan period. The council has explained that the reference to the glossary is to direct the reader to the definition of planning advice and provide a web link. I note that this approach is used consistently throughout the proposed plan and I do not consider there is any overriding justification to change this. No modification is required.

Paragraph P1.8

27. Paragraph 180 of Scottish Planning Policy states that "in line with the waste hierarchy, particular attention should be given to encouraging opportunities for reuse, refurbishment, remanufacturing and reprocessing of high value materials and products." The council has explained that it has used the word 'recycle' in paragraph P1.8 of the proposed plan to cover this requirement. Whilst I recognise that there are merits in the council's wording in terms of being concise and using plain English, paragraph P1.8 does not fully align with Scottish Planning Policy. To address this matter, I recommend a modification to insert an additional sentence as suggested by Scottish Government.

Policy P2 Open Space and Access in New Development

Paragraph P2.1

28. Sportscotland requests that a reference be made in the plan to the need to keep documents on open space and pitches provision up to date. It points out that policy P2.1 includes a cross reference to appendix 10 which sets out standards for open space. In relation to organised sports facilities, it is noted that provision is to be guided by the findings of the Aberdeenshire Council Pitches Study, which was prepared in 2018 but has never been finalised or adopted by the council.

29. Paragraph 222 of Scottish Planning Policy states that development plans "should be informed by relevant, up-to-date audits, strategies and action plans covering green infrastructure's multiple functions, for example open space, playing fields, pitches..." However, I do not consider it necessary to highlight the need to keep supporting documents up to date in the plan itself. No modification is required.

30. The council has drawn my attention to the definitions of 'open space' and 'green-blue infrastructure' in the glossary of the proposed plan. Taking account of these definitions, I do not consider there is any justification to change the terminology used in paragraph P2.1. No modification is required.

31. Policy P2 relates to the provision of open space and access in new development. I agree with the council that protection of open spaces and woodland is addressed in the proposed plan, through the protected land designations in the settlement statements, where relevant, and other policies, including paragraphs PR1.7 and PR1.8. It would not be appropriate to produce "a list of green spaces that will not be granted planning permission" as proposals require to be assessed against all relevant policies in the plan. No modification is required.

32. NatureScot has requested three amendments to the wording of paragraph P2.1, two relating to biodiversity and one to active travel. I consider that the inclusion of references to biodiversity and the opportunity to connect open spaces to paths and active routes would be consistent with Scottish Planning Policy and other parts of the plan. However, I agree with the council that it would not be appropriate to include “rich in biodiversity” alongside the qualities of successful places in the first sentence. I accept the council’s suggestion that this should be included in the second sentence instead. A modification to paragraph P2.1 to address these matters is set out below.

Paragraphs P2.2 and P2.3

33. These paragraphs set out the expected open space requirements in major developments and on sites of less than 50 homes. A number of representees, including Homes of Scotland consider the expectation for 40% open space in a major development site, and the requirement for at least 120m² public open space in smaller developments, to be excessive and contrary to the move towards higher density development. They also consider that the provision of large amounts of open space places a financial burden on homeowners and housing associations.

34. The council has explained that the open space requirements set out in paragraphs P2.2 and P2.3 were introduced in previous local development plans. I have not been presented with any specific monitoring evidence to indicate that this level of provision is no longer appropriate. I agree with the council that open space is important for health, biodiversity, climate resilience and active travel. It can also contribute to the six qualities of successful places.

35. I note the evidence presented in relation to a comparison with the six acre standard provided by Fields in Trust. However, given the particular geographical and settlement characteristics of Aberdeenshire, I consider the Aberdeenshire Parks and Open Space Strategy 2010, referred to by the council, to be of more direct relevance. Paragraphs P2.2 and P2.3 both provide an element of flexibility to reflect the circumstances of particular sites and proposals. I consider that this wording allows specific concerns, such as those raised in representations, to be taken into account on a case by case basis.

36. The Woodland Trust Scotland is seeking 30% increase in native tree canopy cover as part of the 40% open space requirement, in line with its Emergency Tree Plan. Whilst there are recognised environmental benefits in increasing tree coverage, there is no national or strategic planning policy basis for me to include this as a requirement. Furthermore, this amount of tree cover may not be appropriate on all development sites.

37. I conclude that no modifications are required in relation to paragraphs P2.2 and P2.3

Paragraph P2.4

38. I agree with the council that the inclusion of the word ‘temporary’ is consistent with Scottish Planning Policy. However, the relevant paragraph is 229 not 220. No modification is required.

Paragraph P2.5

39. I note the concern raised by RSPB Scotland regarding the long term retention and

maintenance of temporary open space, which then forms part of a development proposal. However, I agree with the council that this would be a matter to be addressed at planning application stage or in the preparation of a masterplan. No modification is required.

Paragraph P2.6

40. Paragraph 5.14 of National Planning Framework 3 encourages local authorities to develop at least one exemplar walking and cycling friendly settlement. The Scottish Government is concerned that this matter is not addressed in the proposed plan. In its response, the council has referred to a number of settlement related cycle initiatives which have been introduced in Aberdeenshire. These would suggest that the aspirations of National Planning Framework 3 are being met. I do not consider there is any requirement for this matter to be specifically addressed through the local development plan. No modification is recommended.

41. I agree with the council that the word 'or' should not be changed to 'and' in the second sentence, as not all proposals which protect or promote paths and cycle routes will have masterplans/ design frameworks. No modification is required.

42. Policy P2.6 relates to the protection and promotion of access routes. I recognise that community led management plans may provide one means of implementing this policy but there may be others. I agree with the council that it would not be appropriate to refer to these in the policy itself. No modification is required.

43. I consider that the term "existing and potential public access routes" covers the various types of route referred to by Meldrum Paths Group. It would not be appropriate to list every potential type of route in a local development plan policy. No modification is required.

44. The wording of paragraph P2.6 only promotes opportunities for cycling and walking. I agree with Meldrum Paths Group and NatureScot that the wording should be amended to better reflect the different uses of access routes, in line with the national transport strategy. The council has suggested a form of words in its response above, which I consider would address both representations. A modification is recommended.

45. Policy P2.6 only relates to the protection and promotion of access routes in relation to new development. Formartine Rural Partnership is concerned that the plan does not promote access routes within and between adjacent communities and in their vicinities. This matter has also been raised in representations in relation to specific settlement statements in appendix 7, which are included in other schedule 4s.

46. Paragraph 228 in Scottish Planning Policy states that "local development plans should safeguard access rights and core paths, and encourage new and enhanced opportunities for access linked to wider networks." I agree with the council that the local development plan is not a framework or tool to promote footpaths, cycleways and active travel networks within and between settlements. There are other council documents, such as the Core Path Plan and the Outdoor Access Strategy (mentioned in a representation) which would fulfil this role. The local development plan can protect existing routes, promote good access from new development to these routes and, where appropriate, promote the enhancement or extension of existing routes as part of development proposals. It is within this context, that planning applications may be able to

help deliver proposals set out in community action plans. No modification is required to the wording of policy P2.6.

47. The reason why reference is made to the council's Open Space Strategy in paragraph P2.1 is that it provides the standards against which proposals are measured in terms of adequate provision of open space. The Outdoor Access strategy indicates that its purpose is "the efficient and effective management and enhancement of existing paths and associated infrastructure." As such, it is not directly relevant to the use and interpretation of policy P2.6. I agree with the council that information on access proposals can be presented in a range of ways and it would not be appropriate for the plan to prescribe a particular format. No modifications are required.

Policy P3 Infill Developments within Settlements and Householder Developments

48. SEPA's representation in relation to the wording of policy C4 Flooding regarding change of use proposals and their potential vulnerability to flood risk is addressed in Issue 11. A modification is recommended to reflect SEPA's representation on this matter. On this basis, SEPA's suggested amendment to policy P3 is not required. No modification is recommended.

Policy P4 Hazardous and Potentially Polluting Developments and Contaminated Land

General

49. I note that the council considered whether to include the pipeline consultation zones on the proposals map in response to comments made at the main issues report stage. However, it decided that this was not necessary as they are already mapped in separate planning advice, and other constraints such as flooding are also not shown in the proposals map. I note that following the previous local development plan examination, the council has produced planning advice on pipelines and hazardous development consultation zones which includes maps of the consultations zones. The council has suggested that a footnote be added to paragraph P4.2 to alert the reader to this planning advice with a link provided in the glossary.

50. In seeking the inclusion of pipeline consultation zones on the proposal maps, a representee has indicated that the strategic development plan examination reporter concluded that this is a matter for the local development plan. I find that the council's consideration of this matter in the preparation of the proposed plan is consistent with the reporter's expectation. I have not been provided with any specific evidence to demonstrate that the approach used in the existing local development plan is problematic. Subject to a modification making it clear where maps showing hazard consultation zones can be found (which I set out below), I do not consider it necessary for these to be shown on the proposals map.

51. I note the council's suggestion that any recommended changes to settlement boundaries or new allocations would require consideration to be given to the implications of pipeline consultation zones and that an oil and gas section would need to be added to the settlement statement, where appropriate. We have considered this matter in relation to modifications recommended elsewhere in the plan. However, no subsequent modifications to the settlement statements were found to be necessary. No specific modification to policy P4 is required.

Paragraphs P4.1 and P4.5

52. P4.1 states that permission will be refused if there is a risk of significant pollution, including impacts on noise and air quality. P4.5 states that if there is a significant impact on air quality or noise, developers will have to provide appropriate mitigation. I agree with the representee that the two paragraphs are not entirely consistent. The council states that paragraph P4.5 is intended to require mitigation measures, if the need for these have been identified through a noise impact assessment or air quality assessment. However, this is not what the wording of the policy in the proposed plan says. I suggest a modification to paragraph P4.5 in the interests of consistency and clarity.

Paragraph P4.2

53. I note that the main issues report does not include any suggested changes to the wording of the existing policy P4 and specifically states that “the policy remains sound and no changes are proposed”. The council has indicated that the wording of paragraph P4.2 in the proposed plan mistakenly omits text included in the equivalent paragraph in the adopted plan. I agree with the council that paragraph 4.2 should be amended to address this error. A modification is required.

Policy P5 Digital Infrastructure

54. The council has explained that paragraph 300 of Scottish Planning Policy makes clear that emissions of radiofrequency radiation are controlled and regulated under other legislation. It is therefore not necessary for planning authorities to treat radiofrequency radiation as a material consideration. I note that paragraph P5.4 in the proposed plan seeks to provide reassurance that the relevant guidelines on public exposure to radiofrequency radiation, where necessary. I do not consider that any modifications are required to policy P5 in response to this representation.

Policy P6 Community Facilities and Public Amenities

General

55. I recognise that the provision of cultural and arts facilities can make a positive contribution to the creation of vibrant, diverse communities and high quality places. I note that these are referred to in policy B1 as an appropriate town centre use. The representee has not requested any specific amendment to section 9 (Shaping Places) and I agree with the council that no change is required to policy P6. No modification is required.

56. I agree with the council that it would not be appropriate to address matters relating to paths, cycleways and active travel in policy P6. No modification is required.

Paragraph P6.1

57. A representee considers that the wording of paragraph P6.1 is inappropriate for large settlements. However, no explanation has been provided. I understand the term “is available to all community residents” to include the residents of the development and the existing community. I am unclear how an appropriate “target community” would be identified at planning application stage. No modification is required.

Paragraph P6.2

58. The council points out that the definition of community facilities in the glossary includes health facilities. I therefore agree that there is no requirement for health care infrastructure to be specifically mentioned in paragraph P6.2. No modification is recommended.

Appendices 8, 9 and 10

General

59. The material presented in appendices 8, 9 and 10 provides guidance on design and related matters in the context of the policies contained in section 9 and elsewhere in the plan. As such, the content of the appendices is not intended to be read in isolation. Nor is it necessary or appropriate for the appendices exhaustively to attempt to identify all matters that may potentially be relevant to the consideration of particular development proposals, as a number of representations seek. For these reasons I have not needed to deal separately with each of such matters raised in representations.

Appendix 8 - Successful Placemaking Design Guidance and Appendix 9 - Building Design Guidance

60. The council's car parking standards are set out in a separate document and are not contained in the proposed local development plan itself. The standards were the subject of revision in 2019 and are expressed as taking account of national guidance in the form of Scottish Planning Policy as well as reflecting local experience revealed in parking accumulation studies. These standards are able to be reviewed as may be appropriate during the plan period and I am satisfied that there is no need for any modification to the plan in this regard.

61. Appendix 8 explicitly seeks to promote accessibility and connectivity in and to new development, including to open spaces, and that paths and networks should be accessible for all and well lit. Achieving such attributes are matters of detail to be addressed in relation to specific proposals for new development, including through the preparation of masterplans where appropriate and the consideration of applications for planning permission. It is not appropriate for the plan to be overly prescriptive in this respect. There is accordingly no need for any modification to the table in appendix 8 in this regard.

62. The policy approach to considerations of the effect that new development may have in terms of visual or landscape impact is dealt with elsewhere in the plan, including in policy E2 in section 10 (Natural Heritage and Landscape). The "Safe and pleasant" and "Welcoming" qualities which are addressed in appendices 8 and 9 encompass noise, privacy and allied considerations. These, and related matters are in any event amongst the factors which would be taken into account at development management stage, when the particular circumstances and design solutions can be fully addressed. There is no need for appendices 8 or 9 to be modified in response to these representations. Nor would it be appropriate for the plan to specify that only low-level development would be acceptable in elevated locations.

63. The plan emphasises that development should be resource efficient, especially in section 13 (Climate Change). Policy C1 addresses water, energy and other resources in this regard, and the tables in appendices 8 and 9 lay further stress on this in the columns headed “Resource efficient”, referring to places and buildings respectively. There is no need for the entries in appendices 8 and 9 to duplicate these matters. However, I agree with the council’s suggestion that the addition of a further entry in the glossary to include a definition of the term “Low Carbon Design” would add clarity and assist in the interpretation and application of policy. I make a recommendation accordingly, but I have altered the council’s suggested wording to permit new technological solutions that may emerge over the plan period, and beyond, to be embraced.

64. Although the “Building with Nature” benchmarking regime may be useful in helping to ensure that development fosters nature conservation and related objectives, it is separate from the statutory development plan process. Policies elsewhere in the plan, especially in section 10 (Natural Heritage and Landscape), seek the protection and enhancement of natural heritage, including protected species and habitats and wider biodiversity. I agree with the council that no modification is required to the plan to require adherence to the external Building with Nature regime.

65. Appropriate internal design, including ensuring appropriate provision for people with mobility and other challenges standards, is appropriate. However, the provisions of separate legislation and control, including the Disability Discrimination Act 1995, the Equality Act 2010 and the Building Standards, provide a more specific framework to ensure appropriate measures are integral to new development. No modification to the plan is necessary in this regard.

66. Clarification that the six qualities of successful places is to apply to all development is addressed in the context of paragraph P1.6 above. No further modification is required to appendices 8 or 9 in this regard.

67. The references to a design review process in connection with the promotion of new development is addressed in the context of paragraph P1.2 above. No further modification is required to appendices 8 or 9 in this regard.

68. Although it is appropriate for new development to be connected to the public water supply and public sewer, this may not be possible in all cases. In such circumstances ensuring that reliance on alternative private provision is necessary and adopts established standards is appropriate. The additional wording and footnote suggested by SEPA in this regard, which the council accepts, would emphasise the need to justify such provision and adhere to relevant technical standards, including arrangements for future maintenance. I recommend modifications to include SEPA’s amended wording and additional footnote.

Appendix 10 Standards for Open Space

69. The reference in Table 1 of the appendix to Neighbourhood Streets having minimum parking does not preclude the prioritisation of provision for people with mobility or other challenges. No modification is required in response to representation made on this topic.

70. The nature and scale of the provision of open space, including green-blue networks and SuDS infrastructure, in connection with new development is covered in policy P2 as recommended to be modified, and appropriately reflected in appendix 10. Section 10 of

the plan (Natural Heritage and Landscape) contains specific provisions aimed at safeguarding biodiversity and section 13 (Climate Change) makes reference to buffer strips adjacent to waterbodies. In view of this and the provisions of paragraph P1.7 which also refers to biodiversity, there is no need for appendix 10 to be further modified in response to the representations by Sustrans and SEPA on these aspects.

71. The inclusion of a reference to placemaking in the introductory text before Table 1 of appendix 10, as SEPA suggests would helpfully emphasise linkages to the policies within Section 9 (Shaping Places). I agree that the council's suggested wording would more concisely address the representation by SEPA in this regard and I recommend a modification accordingly.

72. Greater clarity in connection with the provision of buffer strips alongside water courses, emphasising that in individual cases the detail of these would be a matter of individual assessment, would be achieved by including the amended wording suggested by SEPA. Acknowledging, in the text, that buffer strips can facilitate river restoration as well as maintenance, is also appropriate. I recommend modifications to Table 1 to address these aspects, but including alterations from the council's suggested wording to aid clarity.

73. Making reference to the need for appropriate ground testing to be undertaken in connection with any proposal for the establishment of new burial grounds, to safeguard groundwater quality, is appropriate as SEPA seeks and the council accepts. A modification is recommended accordingly.

Reporter's recommendations:

Modify the local development plan by:

1. Replacing the first word in the footnote on page 47 (referred to in paragraph P1.2) with "For..."
2. Replacing the last bullet point in paragraph P1.5 on page 48 with:
"well connected - to create well connected places that promote intermodal shifts and active travel and are easy to move around."
3. Replacing paragraph P1.6 on page 48 in its entirety with:
"Further design guidance on how to meet these qualities is provided in the allocation summaries in Appendix 7, Appendix 8 Successful Placemaking Guidance and Appendix 9 Building Design Guidance."
4. Replacing the second sentence in paragraph P1.7 on page 48 with:
"In very rare circumstances, when it is not practical to meet biodiversity net gain within a development site, we may require off-site contributions towards biodiversity enhancement within the settlement or near to the site."
5. Inserting the following new penultimate sentence into paragraph P1.8 on page 49:
"In line with the waste hierarchy, particular attention should be given to encouraging opportunities for reuse, refurbishment, remanufacturing and reprocessing of high value materials and products."

6. Replacing the last two sentences in paragraph P2.1 on page 49 with the following three sentences:

“Open space may make a significant contribution to green-blue networks in communities, particularly when it is natural in form, rich in biodiversity and has a significant impact in both the area and the edges it presents to other land uses. It should also seek to connect to paths and active travel routes in the area. The provision and types of open space should be considered early in the design process, and biodiverse, low maintenance community woodlands and community food growing areas, such as allotments are encouraged.”

7. Replacing the first sentence of paragraph P2.6 on page 50 with:

“Existing and potential public access routes (including core paths and other routes, such as public rights of way) should be protected and new developments must include appropriate opportunities for informal recreation and safe active travel, including walking and cycling, wheeling (travelling by wheelchair), riding etc.”

8. Replacing paragraph P4.2 on page 51 with:

“In determining planning applications for development within the consultation zones for hazardous installations (including oil and gas pipelines), we will consult with, and take full account of advice from the Health and Safety Executive (HSE), the Competent Authority (in the case of Control of Major Accident Hazardous sites) and the facility’s owners and operators, and will seek to ensure that any risk to public safety is not increased. Prospective applicants should check whether their proposed development is within the consultation zone of a major hazard site or a major accident hazard pipeline, and should seek further advice if this is the case. This confirmation and advice can be obtained from the HSE Planning Advice Web App at www.hse.gov.uk/landuseplanning/developers.htm or in Planning Advice, Pipeline and Hazardous Development Consultation Zones”.

9. Adding the following footnote to the end of the modified paragraph P4.2:

“see Planning Advice Pipeline and Hazardous Development Consultation Zones – see Glossary.”

10. Replacing paragraph P4.5 on page 51 with:

“Where an Air Quality Assessment or a Noise Impact Assessment indicates that a proposed development could have a significant detrimental impact on air quality or noise levels, appropriate mitigation measures must be provided.”

11. Adding a new definition in the appropriate alphabetical position in the Glossary of the plan, as follows:

“Low carbon design: The concept of designing to minimise greenhouse gas emissions and energy use. This may include using technologies such as free cooling/heating, thermal store/exchange, wind turbines, photo-voltaic and solar thermal collectors, biomass heating, energy storage, district heating, combined heat and power, ground, water and air source heating and cooling, fuel cells. Technological advancements may increase the range of potential contributions in this regard over time.”

12. Replacing the second sentence of the seventh entry in the “Safe and Efficient” column of Appendix 9 on page 883 with:

“Where a private water supply or drainage arrangement is proposed, all technical information and reasons for not connecting to a public water supply or sewer, as well as details of adoption agreements with Scottish Water or lifetime maintenance proposals

should be provided¹”

13. Adding a new footnote on page 883 beneath the table in Appendix 9 (linked to the modified second sentence of the seventh entry in the “Safe and Efficient” column of the table), as follows:

“¹. Please refer to SEPA’s “Planning Advice on Waste Water Drainage (Land Use Planning System Guidance Note 19), for guidance on technical information requirements.”

14. Adding the following text, at the end of the second sentence before Table 1 of Appendix 10 (page 887), after “delivered”:

“... as part of the design of a development to achieve successful placemaking.”

15. Replacing the first bullet point in the “Notes” column of Table 1 of Appendix 10 on page 887 (relating to Green-Blue Networks) with the following;

“Buffer strips should be a minimum of six metres wide, but may need to be wider in response to local factors including hydro-geomorphology, pollution control, nature conservation and active travel considerations.”

16. Adding ‘and river restoration.’ after ‘long term maintenance’ at the end of the 4th bullet point in the “Notes” column of Table 1 of Appendix 10 on page 887 (relating to Green-Blue Networks).

17. Adding the following new footnote linked to the reference to “ground testing” in the first sentence of the “Notes” column of the “Burial Grounds” row in Table 1 in Appendix 10 on page 889:

“Ground testing shall be in accordance with SEPA’s Guidance on assessing the impacts of cemeteries on groundwater (LUPS GU32).”

Planning authority’s summary of the representation(s):

Natural Heritage and Landscape Introduction

An Environmental Impact Assessment (EIA) Report alongside a planning application may identify ‘significant’ environmental impacts however this does not necessarily make a proposal unacceptable in land use terms. A representee has suggested that a common theme across the Proposed Local Development Plan (PLDP) 2020 is that policies are discussed in terms of ‘acceptability’ of environmental effects, whereas others are not. This inconsistency sets different ‘bars’ for different receptors (PP0588, PP0641, PP0733 and PP0736). One representee has suggested amending the introductory text to read, “All major developments and other developments where development is likely to have significant effects...” (PP0733). The policy should be reviewed and amended to ensure consistency with SPP and to ensure that the correct policy test is applied to each topic. (RD0086.A) (PP0588).

Section 10 needs to explicitly mention ancient woodland throughout the entire section. Recognition of the importance of ancient woodland along with other woodland is key to ensuring it is protected from development (RD0160.A) (PP0877).

Policy E1 Natural Heritage

Nature Conservation Sites

The continued protection of the River Dee Special Area of Conservation (SAC) and Local

Nature Conservation Site (LNCS) is supported. No modification sought (PP0077).

Support was expressed for the intention of the PLDP not to allow new development where it may have an unacceptable adverse effect on nature conservation. No modification sought (PP0974).

Paragraph E1.1

A representee has highlighted that although SACs, Special Protection Areas (SPAs) and Ramsar sites contribute to biodiversity, they may be designated for just a single species and therefore it is suggested that “species and habitat” is used in addition to “biodiversity” (PP1273).

Paragraph E1.2

Clarity was sought concerning what is being referred to by the term “internationally designated nature conservation site” as it is not included within the Glossary. The wording should reflect the requirements of the Habitat Regulations, with the criteria listed in the order they appear in the regulations. Regarding appropriate assessments, the last sentence states “in all cases”, it is not clear whether this refers to all proposals, or proposals affecting international sites. It is also inaccurate as an appropriate assessment is not required in all cases. An appropriate assessment is of a “proposal”, not of the “site”, therefore wording should clarify this. The mitigation should always be followed. It should also be made clear that the Council is required to undertake the appropriate assessment, but the applicant must supply the information to inform it. The representee has suggested revising the wording of paragraph E1.2 (PP1273).

NatureScot has suggested that the current wording is not comprehensive, and it could also lead to confusion over the legislative requirements. NatureScot has suggested revising the wording of paragraph E1.2. Specifically, the final sentence of the NatureScot’s proposed wording would clarify that an appropriate assessment is needed for those proposals that are considered likely to have a significant effect on any European site (RD0255.B) (PP1300).

Paragraph E1.3

A representee has suggested adding additional text to the paragraph to account for ancient woodland (RD0160.A) (PP0877).

A representee has suggested that the wording should be revised to define “nationally designated sites” as it is not currently included in the Glossary and it should be clear in the body of the text what is meant by this. Furthermore, an additional sentence regarding adverse impacts being satisfactorily mitigated should be included to emphasise the need to follow the mitigation hierarchy. The representee has suggested revising the wording of paragraph E1.3 (PP1252).

NatureScot has also suggested that paragraph E1.3 requires amending to make clearer the type of nationally designated sites being considered and include reference to the Cairngorms National Park as the LDP area abuts it and it would be possible for developments within the LDP area to affect the setting and special qualities of the Park. NatureScot has noted that the final sentence in paragraph E1.3 primarily discusses cases

where a proposal may be permitted despite having an adverse impact, and so for these the mitigation would be seeking to minimise impacts (RD0255.B) (PP1300).

Paragraph E1.4

A representee has suggested amending paragraph E1.4 as the loss of ancient woodland cannot by definition be mitigated against and reference should also be made to the Native Woodland Survey Scotland (NWSS) to identify the location, extent, type and condition of native woodlands within the area. This would then allow unacceptable developments to be directed away from these areas (RD0160.A) (PP0877).

Another representee has suggested that the policy wording should be altered regarding the proposals that public benefits must outweigh the nature conservation value of the site, as it is not believed it would be possible to ascertain whether public benefits outweigh the nature conservation value of the site, an assessment should be whether they outweigh any adverse impacts on the site. In addition, the wording should make clear that the mitigation hierarchy must be followed (PP1253).

NatureScot has suggested amending the final sentence in paragraph E1.4 as it is primarily discussing cases where a proposal may be permitted despite having an adverse impact, and so for these the mitigation would be seeking to minimise impacts. The amendment emphasises the importance of protecting ancient woodland (RD0255.B) (PP1300).

Paragraph E1.6

Policy E1.6 seeks to avoid any detrimental impact on protected species and does not introduce consideration of acceptability. All protected species are protected by Policy E1.6, therefore even a minor impact would result in conflict with policy. It is not consistent with the wording of other policies E1.1 – E1.5 and C2.2 in this regard where “avoid unacceptable environmental effects” is used. By introducing ‘unacceptable’ rather than having to avoid ‘any’ detrimental impact, would allow for decision-making that is reflective of the differing scale of legislative protection according to species (PP0422, PP0464, PP0597, PP0641, PP0736, PP1188 and PP1196). A representee has included an Appendix in support of their submission (RD0212.A) (PP1188).

There are differing scales of legislative protection given to different protected species. To accord with SPP the policy wording should reflect this, and that development proposals should be determined in accordance with those protections (RD0087.A) (PP0589).

A representee has sought clarification as to when a protected species survey is required. It is unclear if the text refers to European Protected Species alone or all protected species. The wording of the policy refers to the Conservation (Natural Habitats) Regulations 1994, however the wording should reflect the Habitat Regulations. It must be the site characteristics and the proposed development that are assessed in combination, alterations to the design and implementation of the proposed development may make it possible to carry out the development on the same site without detrimental impacts on protected species (PP1254).

NatureScot has requested replacing the third sentence in paragraph E1.6 on protected species to simplify the policy and avoid potential confusion and conflation over licencing tests (RD0255.B) (PP1300).

NatureScot has also suggested that if the Council wish to clarify the distinction between the licensing tests for European Protected Species and those for other protected species such as red squirrels, then additional wording could be added to this effect (RD0255.B) (PP1300).

Paragraph E1.7

A representee has highlighted that the current wording means the submission of a baseline survey is optional and request that the wording should be replaced with 'must' to strengthen the policy and make it clear that this is not optional. In addition, an ecological survey would not determine the presence of geological features and therefore it is suggested that 'geological' and 'geologist' are inserted (PP1255).

Paragraph E1.8

A representee has requested that the policy wording requires clarification, replace the word 'may' with 'must' as there are no circumstances where the criteria would not apply. In addition, ensure wording is less vague and ambiguous to protect the important sites. Ensure the use of the mitigation hierarchy to achieve 'no net loss' (PP1256).

NatureScot has suggested alternative text in order to clarify the relevant legislation in the context of EU Exit, and also consider it helpful to clarify that this clause is intended to support consideration of biodiversity and geodiversity impacts of development (RD0255.B) (PP1300).

NatureScot has suggested inserting a footnote to the first mention of the word "geodiversity" within paragraph E1.8 to point towards a link to SNH information on un-notified Geological Conservation Review (GCR) sites (RD0255.B) (PP1300).

The Scottish Environment Protection Agency (SEPA) has requested that the first sentence in paragraph E1.8 is amended to correct typographical errors (RD0214.A) (PP1219).

SEPA has indicated that they object to Policy E1 Natural heritage unless the second sentence in paragraph E1.8 is amended to include Groundwater Dependent Terrestrial Ecosystems to ensure it is consistent with, and reinforces, Policy PR1.4 (RD0214.A) (PP1219).

SEPA has indicated that they object to Policy E1 Natural heritage unless the third bullet point in paragraph E1.8 is amended to include net ecological gain to ensure it is consistent with, and reinforces, Policy P1.7 (RD0214.A) (PP1219).

Paragraph E1.9

The commitment against fragmentation is welcomed but it is believed that the policy should also seek ways to reverse the fragmentation of habitats and acknowledge that the loss of even individual trees and small woods, albeit gradually, has a high impact on natural heritage and biodiversity (RD0162.A) (PP0879).

Paragraph E1.10

It is requested that this paragraph includes a reference to woodlands after “biodiversity” as it is essential for woodlands to be included within the definition of biodiversity (RD0162.A) (PP0879).

NatureScot has welcomed the overall intent of paragraph E1.10 to enhance biodiversity, and that repetition across policies should be minimised, but has suggested the requirements for on or off-site delivery or contributions should be repeated, as in contrast to paragraph E1.10, paragraph P1.7 clearly states that where delivery is not practical within a development site, contributions towards off-site delivery may be required (RD0255.B) (PP1300).

Appendix 12 Local Nature Conservation sites

SEPA has no comments on Appendix 12 (RD0214.A). No modification sought (PP1219).

Policy E2 Landscape

SEPA has no comments on Policy E2 Landscape (RD0214.A). No modification sought (PP1219).

Paragraph E2.1

A representee has noted that Landscape and Visual Impact Assessment (LVIA) is a core part of the EIA process and provides a systematic approach but is currently ad hoc and unsatisfactory. The representee has suggested revising the policy wording (PP0733).

The inclusion of the word “historic” in the first sentence of E2.1 should be omitted as it risks identified effects on heritage automatically also being treated as effects on landscape. Impacts on the historic landscape should be dealt with in the Historic Environment policies. The phrase “should not otherwise significantly erode” is not a clear policy test and should be deleted from this policy (PP1194).

With respect to landscape character, apart from the reference to ‘characteristics’ included in the third sentence there is no obvious distinction between the first sentence and the third of E2.1 given that the landscape character as defined in the SNH Landscape Character Areas (LCAs) is the only clear description of the “key natural landscape elements, features or the composition or quality of the landscape character”. It is submitted that the third sentence of E2.1 is not required. The final sentence of E2.1 is unclear and requires revision, therefore, this sentence should be deleted and be better covered by E2.2 with the rest of the SLA policy (PP1194).

Paragraph E2.2

A representee has noted that large developments bordering on a Special Landscape Area (SLA) can have significant visual impact on the SLA. They suggest amending wording “Developments located within SLAs” to “Developments located within SLAs or bordering a SLA.” (PP0733).

Paragraph E2.2 describes the acceptability threshold, and it is submitted that this sentence could be worded more briefly for clarity. The requirement that adverse effects be “clearly outweighed” by benefits is excessive, it should be sufficient that they are

outweighed. The final sentence that deals with LVIA is considered to be non-sequitur and as drafted, carries no policy weight and should either be amended to become E2.3 – noting that the Council may require LVIA for developments anticipated to have landscape and visual effects – or be omitted. The representee has suggested revising the wording of paragraph E2.2 (PP1194).

NatureScot has suggested amending the second sentence in paragraph E2.2 to avoid the suggestion that the policy only applies to development within the SLAs, but that it may also apply to development outside an SLA (RD0255.B) (PP1300).

NatureScot has suggested adding a new sentence at the end of paragraph E2.2 to make further reference to Appendix 13, which can help guide assessment; and to set out that there are high expectations in terms of design etc (drawing on the wording at Section 3.4 of the SNH draft guidance on Local Landscape Areas) (RD0255.B) (PP1300).

Appendix 13 Aberdeenshire Special Landscape Areas

SEPA has no comments to make on Appendix 13 (RD0214.A). No modification sought (PP1219).

An amendment has been sought to Map 2 of Appendix 13 to move the South East Coast SLA boundary to the east to follow the line of the Coastal Tourist Route, before connecting with the A92 at the junction south of Dunnottar Woods. The importance of the SLA is recognised however removing the small area from it will pose no conflict with the general aims and objectives of the SLA designation. Due to the topography of the site, there is not a panoramic view of the coastline which you do get from the coastal route and that allows all of the elements of the SLA to be seen. It was noted that development on the bid site would not have a detrimental impact on the coastal setting. It is therefore maintained that the area makes no significant contribution to the special characteristics of the landscape and the area can be removed from the boundary of the SLA. The representee has included an Appendix (RD0176.A) in support of their submission (PP0929).

Policy E3 Forestry and Woodland

SEPA has no comments on Policy E3 Forestry and Woodland (RD0214.A). No modification sought (PP1219).

Forestry operations and woodland clearances for development often leave felled trees and debris and ruts from forestry vehicles blocking paths through the wood. The representee suggests adding a new paragraph to the policy text (PP0733).

A representee has suggested that similar wording to that used in Section 11 The Historic Environment should be applied to the whole of Section 10, specifically for Policy E3, especially the inclusion of "ensure that [green infrastructure and woodlands] understanding and enjoyment, as well as its benefits, are secured for present and future generations." (RD0162.A) (PP0879).

Paragraph E3.1

A representee has requested paragraph E3.1 specifies "native and semi-natural woodland" to reflect and recognise the importance of ancient woodland, ancient trees,

veteran trees, other trees of special interest and planted ancient woodland sites, including the urgent requirement to ensure they are protected from development (RD0162.A) (PP0879).

The representee has also requested that paragraph E3.1 be amended from "continue to protect and enhance" to "be protected and enhance" to reinforce the commitment to provide active support to the protection and enhancement of green infrastructure (RD0162.A) (PP0879).

Paragraph E3.2

A representee has suggested that paragraph E3.2 needs to be stronger and clearer wording used to make specific mention to native woodland and trees specifically (RD0160.A) (PP0877).

NatureScot has indicated that although paragraph E3.2 establishes a policy hook for the Planning Advice formed by the Forestry and Woodland Strategy, it is considered that more detail on requirements is needed which would give the necessary weight to key requirements that the Planning Advice itself will not have. An amendment to Paragraph E3.2 is therefore suggested that more clearly establishes the Council's stated commitment to the role of forests and woodlands in Aberdeenshire (RD0255.B) (PP1300).

Paragraph E3.3

There is a need for acknowledgement of the dual role of trees, especially native trees in the battle against both the nature and climate crisis. The majority of tree cover expansion should be delivered with native woods and trees, due to the importance of tackling the nature and climate crisis together. There needs to be an urgency of the scale of action to conserve and create landscapes that will welcome wildlife in a time of rapid climate change, and a number of changes are required (RD0159.A) (PP0876).

The term "strongly" is unnecessary and creates ambiguity in terms of its relative importance to other policies. It is also the case that in many housing developments a more appropriate and sustainable layout can be created with the removal and replacement of trees (PP1207 and PP1353).

Natural Heritage and Landscape Policy Map

Crathes, Drumoak and Durriss Community Council has highlighted that red kites are resident in the Drumoak area and are a highly protected species. As the species is included in Annex 1 of the EC Birds Directive as in danger of extinction, vulnerable to changes in their habitat and considered rare due to small populations or restricted local distribution, the Directive requires their most suitable territories in number and size be conserved as Special Protection Areas (PP0302).

Modifications sought by those submitting representations:

Natural Heritage and Landscape Introduction

Modify the PLDP to ensure all policies in Section 10 are consistent with each other and across the PLDP in terms of the 'acceptability' of environmental effects (PP0588 and

PP0641).

Modify the PLDP to amend the introductory wording of Section 10 from: “Where development is likely to have significant effects.” to “All major developments and other developments where development is likely to have significant effects...” (PP0733).
Modify the PLDP to ensure the policy is consistent with SPP, with the correct policy test applied to each topic (PP0588).

Modify the PLDP to ensure explicit reference is made to ancient woodland throughout Section 10 (PP0877).

Policy E1 Natural Heritage

Paragraph E1.1

Modify the PLDP to amend paragraph E1.1 to read: “We will not allow new development where it may have an unacceptable adverse effect on a nature conservation site designated for its biodiversity, species, habitat or geodiversity importance, except where the following circumstances apply.” (PP1273).

Paragraph E1.2

Modify the PLDP to amend paragraph E1.2 to read: “In the case of an internationally designated nature conservation site Special Protected Areas (SPA’s), Special Areas of Conservation (SACs), proposed SACs and SPAs and Ramsar Sites) we will not allow development which may have an adverse effect on a site’s integrity, except where there are no alternative solutions and there are imperative reasons of overriding public interest. In all cases, where there is likely to be a significant effect on a site, the Council carry out an appropriate assessment and the applicant must supply sufficient information to inform this”. Or alternative wording for the last sentence: “In all cases where there may be an effect on an internationally designated nature conservation site, the Council will carry out a Habitat Regulations Appraisal and the applicant must supply sufficient information to inform this.” (PP1273).

Modify the PLDP to amend paragraph E1.2 to read: “In the case of an existing or proposed Special Protection Area (SPA), existing, proposed or candidate Special Area of Conservation (SAC) or Ramsar Site, if it cannot be ascertained that the development would not adversely affect the integrity of the site, development will only be permitted where:

- there are no alternative solutions;
- there are imperative reasons of overriding public interest, that may, for sites not hosting a priority habitat type and/or priority species, be of a social or economic nature; and
- compensatory measures have been identified and agreed to ensure that the overall coherence of the European site network is protected.

“Where the site hosts a priority habitat type and/or a priority species, the reasons must relate to human health, public safety or beneficial consequences of primary importance to the environment, or other reasons which, in the opinion of Scottish Ministers, are imperative reasons of overriding public interest. It should be noted that development not directly connected with, or necessary to, the conservation management of a European site

and which is likely to have a significant effect on the site (either individually or in combination with other plans or projects) will require to be subject to an appropriate assessment in order to ascertain whether the development would not adversely affect the integrity of the site.” (PP1300).

Paragraph E1.3

Modify the PLDP to amend paragraph E1.3 by inserting, “except for ancient woodland” (PP0877).

Modify the PLDP to add, “(Site of Special Scientific Interest or a National Nature Reserve)” after “For nationally designated sites” (PP1252).

Modify the PLDP to revise the second sentence of paragraph E1.3 to read, “If adverse impacts cannot be avoided or satisfactorily mitigated, it must be demonstrated that any significant adverse effects ...” (PP1252).

Modify the PLDP to revise the second sentence of paragraph E1.3 to read, “For other recognised nature conservation sites (such as Local Nature Conservation Sites, nature reserves, designated wetlands, woodland in the Scottish Natural Heritage Ancient Woodland Inventory and the Native Woodland Survey of Scotland) the proposal’s public benefits must clearly outweigh the adverse impact on the site. In all cases impacts should be avoided if possible then mitigated against or compensated for.” (PP1253).

Modify the PLDP to amend paragraph E1.3 to read, “Development that affects Sites of Special Scientific Interest (SSSIs), National Nature Reserves (NNRs) or the Cairngorms National Park will only be permitted where a thorough assessment demonstrates that the objectives of the designation and the overall integrity of the site will not be compromised, or any significant adverse effects on the qualities for which the area has been designated are clearly outweighed by social, environmental or economic benefits of national importance. In all cases, any impacts should be minimised through careful design and mitigation measures.” (PP1300).

Paragraph E1.4

Modify the PLDP to amend paragraph E1.4 reference to “Scottish Natural Heritage Ancient Woodland Inventory” to “ancient woodland, including ancient semi-natural woodland (ASNW) and long-established woodland of plantation origin (LEPO).” (PP0877).

Modify the PLDP to amend paragraph E1.4 to reference the Native Woodland Survey Scotland (NWSS) (PP0877).

Modify the PLDP to amend paragraph E1.4 to read, “In all cases, impacts must be minimised through careful design and mitigation measures. There will be a strong presumption against removing ancient seminatural woodland or Plantations on Ancient Woodland Sites (PAWS). Where such woodland is present on or beside a development site, proposals should be designed to seek to accommodate and protect the woodland rather than remove it in part or entirely.” (PP1300).

Paragraph E1.6

Modify the PLDP to amend paragraph E1.6 to include the word “acceptability” (PP0422, PP0464, PP0597, PP0641, PP0736 and PP1188). A representee has included an Appendix in support of their submission (RD0092.A) (PP0597).

Modify the PLDP to amend paragraph E1.6 to read, “Development must seek to avoid any unacceptable detrimental impact on protected species ... Development affecting European Protected Species or likely to have an unacceptable detrimental impact on protected species ...” (PP1196).

Modify the PLDP to amend paragraph E1.6 to reflect the differing scales of legislative protection given to different species (PP0589).

Modify the PLDP to amend paragraph E1.6 to read, “Development must seek to avoid detrimental impact on protected species. A protected species survey to inform the assessment of impacts will be required where there is reason to believe protected species may exist on the site. The submission of species protection plans detailing appropriate avoidance and mitigation measures may be required. Development effecting European Protected Species or likely to have detrimental impact on protected species will not be approved unless a thorough assessment of the site and the proposed development has demonstrated that the development is required for imperative reasons of overriding public interest, there is no satisfactory alternative and the protected species population will be maintained at a favourable conservation status in its natural range. Lists of species protected by legislation are available from Scottish Natural Heritage.” (PP1254)

Modify the PLDP to replace the third sentence in paragraph E1.6 with, “Development affecting any protected species will only be permitted when it can be justified in accordance with the relevant protected species legislation.” (PP1300).

Modify the PLDP to add a new paragraph following E1.6 to read, “Species listed on Schedule 5 of the wildlife and countryside act will not be approved unless: (a) the proposal will give rise to, or contributes towards the achievement of, a significant social, economic or environmental benefit; and (b) there is no other satisfactory solution; and (c) there is no significant negative impact on the conservation status of the species. Development affecting any European Protected Species will not be approved unless: (a) it is required for imperative reasons of overriding public interest; and (b) there is no other satisfactory solution; and (c) the population will be maintained at a favourable conservation status in its natural range.” (PP1300).

Paragraph E1.7

Modify the PLDP to amend paragraph E1.7 to read, “A baseline ecological or geological survey must be prepared for all major developments and for small proposals where there is evidence to suggest that a habitat, geological feature or species of importance may exist on the site. This baseline survey must be provided by a suitably qualified ecologist or geologist, as appropriate.” (PP1255).

Paragraph E1.8

Modify the PLDP to amend paragraph E1.8 to read, “A number of criteria will be used to consider the biodiversity impacts of a development and these include whether it will affect habitats or species listed in: Schedule 2 or 4 of the Habitats Regulations; or the Scottish

Biodiversity List; or North East Scotland Biodiversity Partnership Local Important Species; or other species or habitats of importance to biodiversity; or areas. We will only approve ...” (PP1300).

Modify the PLDP to amend the first sentence of paragraph E1.8 to read, “The following criteria may apply if development may affect the undesignated habitats or habitats and species listed in Annex I and Annex II of the EC Habitats Directive, or species listed in Annexes I and II of the EC Birds Directive (RD0214.A) (PP1219).

Modify the PLDP to amend the second sentence of paragraph E1.8 to read, “Similar tests will apply to habitats, species on the Scottish Biodiversity List, North East Scotland Biodiversity Partnership Local Important Species, and other species of importance to biodiversity and Groundwater Dependent Terrestrial Ecosystems (GWDTE).” (RD0214.A) (PP1219).

Modify the PLDP to amend paragraph E1.8 to read, “The following criteria will apply if development may affect the undesignated habitats or species listed in Annex I, Annex II of the EC Habitat Directive, or species listed in Annexes I and II of the EC Birds Directive. The criteria also will apply to habitats, species on the Scottish Biodiversity List, North East Scotland Biodiversity Partnership Local Important Species, and other species of importance to biodiversity. Areas of importance to geodiversity, or seminatural habitats are also given this protection. We will only approve development when a baseline ecological survey has been carried out, when the development has been designed to avoid impacts where possible, and where impacts cannot be reasonably avoided, an ecological or geological management plan demonstrates acceptable mitigation and/or compensation measures. If there are remaining adverse effects, the applicant must demonstrate that there will be public benefits that outweigh the impacts on the habitat, species or site.” (PP1256).

Modify the PLDP to amend the third bullet point of paragraph E1.8 to read, “where impacts cannot reasonably be avoided, an ecological or geological management plan demonstrates public benefits that outweigh the ecological or geological value of the site and includes necessary mitigation and compensation measures to result in net ecological gain.” (RD0214.A) (PP1219).

Modify the PLDP to include a new footnote to the first mention of the word “geodiversity” within paragraph E1.8 to point towards a weblink to SNH information on un-notified Geological Conservation Review (GCR) sites and includes a link to SNH Natural Spaces website that allows map-based searches to be made for GCR sites. See <https://www.nature.scot/landforms-and-geology/protecting-our-geodiversity/placesand-plans-safeguard-geodiversity/geological-conservation-review-sites> (PP1300).

Paragraph E1.9

Modify the PLDP to amend paragraph E1.9 to seek ways to reverse the fragmentation of habitats and acknowledge that the loss of even individual trees and small woods, albeit gradually, has a high impact on natural heritage and biodiversity (PP0879).

Paragraph E1.10

Modify the PLDP to amend paragraph E1.10 to add “(including woodlands)” after

“biodiversity” (PP0879).

Modify the PLDP to add a new sentence at the end of paragraph E1.10, “In circumstances when it is not practical to deliver positive effects for biodiversity within a development site, we may require off-site contributions towards biodiversity enhancement within the settlement. These obligations may be controlled by conditions.” (PP1300).

Policy E2 Landscape

Paragraph E2.1

Modify the PLDP to amend paragraph E2.1 to read, “The landscape impact should be determined by a systematic Landscape and Visual Impact Assessment (LVIA) in accordance with the Landscape Institute’s guidance GMLVIA.” (PP0733).

Modify the PLDP to replace the first sentence in Policy E2.1 with, “We will refuse development that causes unacceptable effects through its scale, location or design on key characteristics, natural landscape elements, features or the composition or quality of the landscape character as defined in the Landscape Character Assessments produced by Scottish Natural Heritage. These impacts can be either alone or cumulatively with other recent developments.” (PP1194).

Modify the PLDP to move the final sentence of paragraph E2.1 to include it as the final sentence in Policy E2.2 (PP1194).

Modify the PLDP to remove the third sentence from paragraph E2.1 (PP1194).

Paragraph E2.2

Modify the PLDP to amend paragraph E2.2 wording from, “Developments located within SLAs” to “Developments located within SLAs or bordering a SLA.” (PP0733).

Modify the PLDP to amend the first sentence of paragraph E2.2 to read, “Boundaries and qualifying criteria for Special Landscape Areas are identified in Appendix 13, Aberdeenshire Special Landscape Areas. Developments located within, or affecting, Special Landscape Areas will only be permitted if adverse effects of the development on the qualifying interests are outweighed by social, environmental or economic benefits of at least local importance.” (PP1194).

Modify the PLDP to remove the final of paragraph E2.2 and include it as the final sentence in paragraph E2.3 (PP1194).

Modify the PLDP to amend the second sentence in paragraph E2.2 to read, “Development that has a significant adverse impact on the qualifying interests of a Special Landscape Area will not be permitted unless it is adequately demonstrated that these affect developments located within Special Landscape Areas and will only be permitted if the qualifying interests are not being adversely affected or effects of the development are clearly outweighed by social, environmental or economic benefits of at least local importance.” (PP1300).

Modify the PLDP to add a new sentence at the end of paragraph E2.2 to, “Appendix 13 on Special Landscape Areas is also intended to be used as a guide by prospective

developers in assessing potential impact. Development, in terms of its location, scale, design, materials and landscaping, should be of a high standard and enhance the special qualities and character of the Special Landscape Area." (PP1300).

Appendix 13 Aberdeenshire Special Landscape Areas

Modify the PLDP to amend the boundary of Map 2 of Appendix 13 to move the boundary to the east to follow the line of the Coastal Tourist Route, before connecting with the A92 at the junction south of Dunnottar Woods (PP0929).

Policy E3 Forestry and Woodland

Modify the PLDP to include a new paragraph stating that, "Developments involving tree felling will not be approved unless arrangements are in place to remove felled trees and debris and ruts from forestry vehicles from cleared areas, and to ensure all existing public paths through woodland are retained, or acceptable alternative paths are provided." (PP0733).

Modify the PLDP to use similar wording as used in Section 11 The Historic Environment to, "ensure that [green infrastructure and woodlands] understanding and enjoyment, as well as its benefits, are secured for present and future generations." (PP0879).

Paragraph E3.1

Modify the PLDP to amend paragraph E3.1 to include, "native and semi-natural woodland" (PP0879).

Modify the PLDP to amend paragraph E3.1 by replacing "continue to protect and enhance" with "be protected and enhance" (PP0879).

Paragraph E3.2

Modify the PLDP to amend paragraph E3.2 to make it stronger and clearer with specific reference to native woodland and trees (PP0877).

Modify the PLDP to amend paragraph E3.2 to read, "We will promote and support the forestry industry while strongly protecting and enhancing trees and woodlands in the planning and construction of built development. To achieve this, there will be a presumption against the removal of safe and healthy trees, non-commercial woodlands and hedgerows. Criteria in the Scottish Government's policy on Control of Woodland Removal will be used to determine the acceptability of woodland removal. Development is also required to continue to ensure that opportunities are taken to promote the role of woodlands in providing opportunities for community development, education and recreational access, protecting and enhancing environmental quality and biodiversity, landscape and historic assets." (PP1300).

Paragraph E3.3

Modify the PLDP to amend the second bullet point of paragraph E3.3 to read, "Promote native trees and woodlands to aid Scotland in mitigating and adapting to climate and nature emergencies." (PP0876).

Modify the PLDP to amend the fifth bullet point of paragraph E3.3. to read, “where appropriate protect and enhance trees and woodland in the planning and construction of built development.” (PP1207 and PP1253).

Natural Heritage and Landscape Policy Map

Modify the PLDP to designate the Drumoak area as a Special Protection Area (PP0302).

Summary of responses (including reasons) by planning authority:

Natural Heritage and Landscape Introduction

The Council have attempted to ensure consistency throughout the PLDP. The ‘acceptability’ of any adverse environmental effects from proposed developments will be determined on a case-by-case basis reflecting the merits of the proposal brought forward. No change is required.

The comment for the representee is noted with regards to concerns about compliance with SPP. When the policies are drafted and reviewed SPP is taken into consideration to ensure all of the policies included within the LDP are consistent with the policies in SPP. No change is required.

The Council agree with the minor amendments suggested by representees and as such paragraphs 3 and 4 should be amended accordingly. The Council confirms that it intends to address this through non-notifiable modifications, as set out in the List of Non-Notifiable Modifications.

Policy E1 Natural Heritage

Paragraph E1.1

The Council confirms that it intends to address this through non-notifiable modifications, as set out in the List of Non-Notifiable Modifications.

Paragraph E1.2

The Council acknowledge the changes sought by representees, including NatureScot in respect of paragraph E1.1. The Council believe that the revised text provided by NatureScot would also satisfy the changes sought by the other representee commenting on this section of the PLDP. If the Reporter is minded, to make an amendment, then the Council recommend that paragraph E1.2 could be modified to read, “In the case of an existing or proposed Special Protection Area (SPA), existing, proposed or candidate Special Area of Conservation (SAC) or Ramsar Site, if it cannot be ascertained that the development would not adversely affect the integrity of the site, development will only be permitted where:

- there are no alternative solutions;
- there are imperative reasons of overriding public interest, that may, for sites not hosting a priority habitat type and/or priority species, be of a social or economic nature; and

- compensatory measures have been identified and agreed to ensure that the overall coherence of the European site network is protected.”

“Where the site hosts a priority habitat type and/or a priority species, the reasons must relate to human health, public safety or beneficial consequences of primary importance to the environment, or other reasons which, in the opinion of Scottish Ministers, are imperative reasons of overriding public interest. It should be noted that development not directly connected with, or necessary to, the conservation management of a European site and which is likely to have a significant effect on the site (either individually or in combination with other plans or projects) will require to be subject to an appropriate assessment in order to ascertain whether the development would not adversely affect the integrity of the site.” could be added as a new paragraph (E1.3) with subsequent paragraph numbering being adjusted accordingly.

Paragraph E1.3

The representee does not make it clear within their representation where exactly within the paragraph the text “except for ancient woodland” should be added. In any case, the Council do not believe that it is important to make this distinction within the policy text. No change is required.

The Council acknowledge the changes sought by representees, including NatureScot in respect of paragraph E1.3. The Council believe that the revised text provided by NatureScot would also satisfy the changes sought by the other representee commenting on this section of the PLDP. If the Reporter is minded, to make an amendment, then the Council recommend that paragraph E1.3 could be modified to read, “Development that affects Sites of Special Scientific Interest (SSSIs), National Nature Reserves (NNRs) or the Cairngorms National Park will only be permitted where a thorough assessment demonstrates that the objectives of designation and the overall integrity of the site will not be compromised, or any significant adverse effects on the qualities for which the area has been designated are clearly outweighed by social, environmental or economic benefits of national importance. In all cases, any impacts should be minimised through careful design and mitigation measures.”

Paragraph E1.4

The Council note that NatureScot has not commented or sought changes to the first sentence of paragraph E1.4. As such, the Council believe this part of the policy text to be sound and as such no change is required.

The Council acknowledge the changes sought by representees, including NatureScot in respect of the second sentence of paragraph E1.4. The Council believe that the revised text provided by NatureScot would also satisfy the changes sought by the other representee commenting on this section of the PLDP. If the Reporter is minded, to make an amendment, then the Council recommend that paragraph E1.4 could be modified to read, “In all cases, impacts must be minimised through careful design and mitigation measures. There will be a strong presumption against removing ancient seminatural woodland or Plantations on Ancient Woodland Sites (PAWS). Where such woodland is present on or beside a development site, proposals should be designed to seek to accommodate and protect the woodland rather than remove it in part or entirely.”

Paragraph E1.6

The Council acknowledge the changes sought by representees, including NatureScot in respect of the second sentence of paragraph E1.6. The Council see merit in attempting to revise this part of Policy E1 to address matters raised by representees. If the Reporter is minded, to make an amendment, then the Council recommend that paragraph E1.6 could be modified to read, "Development must seek to avoid any unacceptable detrimental impact on protected species. A Protected Species Survey to inform the assessment of impacts will be required where there is reason to believe protected species may exist on or adjacent to the site. The submission of Species Protection Plans detailing appropriate avoidance and mitigation measures may be required. Development affecting any protected species will only be permitted when it can be justified in accordance with the relevant protected species legislation. Lists of species protected by legislation are available from NatureScot."

The Council agree with the inclusion of additional text as proposed by NatureScot. If the Reporter is minded, to make an amendment, then the Council recommend the following text be added as a new paragraph to follow paragraph E1.6, "Species listed on schedule 5 of the wildlife and countryside act will not be approved unless: (a) the proposal will give rise to, or contributes towards the achievement of, a significant social, economic or environmental benefit; and (b) there is no other satisfactory solution; and (c) there is no significant negative impact on the conservation status of the species. Development affecting any European Protected Species will not be approved unless: (a) it is required for imperative reasons of overriding public interest; and (b) there is no other satisfactory solution; and (c) the population will be maintained at a favourable conservation status in its natural range." Subsequent paragraph numbering would need to be adjusted accordingly.

Paragraph E1.7

The Council agree with the wording and rationale proposed by the representee with the exception of the text "for small". If the Reporter is minded, to make an amendment, then the Council recommend that paragraph E1.6 could be modified to read, "A baseline ecological or geological survey must be prepared for all major developments and other proposals where there is evidence to suggest that a habitat, geological feature or species of importance may exist on or adjacent to the site. This baseline survey must be provided by a suitably qualified ecologist or geologist, as appropriate."

Paragraph E1.8

There are several suggestions regarding how paragraph E1.8 should be amended, including those from SEPA and NatureScot. The Council see most merit in revising the first part of the policy text to align with that suggested by NatureScot with the inclusion of reference to Groundwater Dependent Terrestrial Ecosystems (GWDTE) as suggested by SEPA. If the Reporter is minded, to make an amendment, then the Council recommend that paragraph E1.8 could be modified to read, "A number of criteria will be used to consider the biodiversity impacts of a development and these include whether it will affect habitats or species listed in: Schedule 2 or 4 of the Habitats Regulations; or the Scottish Biodiversity List; or North East Scotland Biodiversity Partnership Local Important Species; or other species or habitats of importance to biodiversity; or Groundwater Dependent Terrestrial Ecosystems (GWDTE). We will only approve development proposals..."

The Council see merit in the suggestion put forward by SEPA to amend the 3rd bullet point. If the Reporter is minded, to make an amendment, then the Council recommend that the 3rd bullet point of paragraph E1.8 could be modified to read as two separate bullet points, “where impacts cannot be avoided the public benefits clearly outweigh the ecological or geological value of the site; and [insert new bullet point] an ecological or geological management plan is provided that includes necessary mitigation and compensation measures to result in ecological net gain.”

The Council see merit in the suggestion put forward by NatureScot to include a footnote associated with the term “geodiversity”. However, if the changes above are recommended by the Reporter, there will be no reference to geodiversity in paragraph E1.8. Therefore, if the Reporter is minded, to make an amendment, then the Council recommend that a footnote is insert following reference to geodiversity in paragraph E1.1 could be modified to provide a URL to SNH Natural Spaces website that allows map-based searches to be made for Geological Conservation Review sites.”

Paragraph E1.9

The Council acknowledge the change requested by the representee, but we do not believe it is appropriate to amend the PLDP to require that development seek to reverse fragmentation of habitat. No change is required.

Paragraph E1.10

The Council confirms that it intends to address this through non-notifiable modifications, as set out in the List of Non-Notifiable Modifications.

The Council agree with the inclusion of additional text as proposed by NatureScot. If the Reporter is minded, to make an amendment, then the Council recommend the following text be added as new paragraph to follow paragraph E1.10, “In circumstances when it is not practical to deliver positive effects for biodiversity within a development site, we may require off-site contributions towards biodiversity enhancement within the settlement. These obligations may be controlled by conditions.”

Appendix 12 Local Nature Conservation sites

The Council note comments made by SEPA. No change is required.

Policy E2 Landscape

Paragraph E2.1

The Council see some merit in revising the policy text in the most part as the representees suggest. If the Reporter is minded, to make an amendment, then the Council recommend that paragraph E2.1 could be modified to read, “We will refuse development that causes unacceptable effects through its scale, location or design on key characteristics, natural landscape elements, features or the composition or quality of the landscape character as defined in the Landscape Character Assessments produced by Scottish Natural Heritage. These impacts can be either alone or cumulatively with other recent developments. A “Landscape and Visual Impact Assessment” (LVIA) may be required to assess the effects of change on a landscape that could be experienced should a development proposal be

approved. Appropriate mitigation should be identified.”

The above suggested change would account for representations that seek to move reference to SLAs to paragraph E2.2 which are taken into account below.

Paragraph E2.2

There are several suggestions regarding how paragraph E2.2 should be amended, including from NatureScot. The Council see most merit in revising the first part of the policy text to align with that suggested by NatureScot but revise the remainder of the text to take into account of suggested changes to the structure of the text as outlined above. If the Reporter is minded, to make an amendment, then the Council recommend that paragraph E2.2 could be modified to read, “Development that has a significant adverse impact on the qualifying interests of a Special Landscape Area will not be permitted unless it is adequately demonstrated that these effects are clearly outweighed by social, environmental or economic benefits of at least local importance. Appendix 13 on Special Landscape Areas is also intended to be used as a guide by prospective developers in assessing potential impact. Development, in terms of its location, scale, design, materials and landscaping, should be of a high standard and enhance the special qualities and character of the Special Landscape Area.”

Appendix 13 Aberdeenshire Special Landscape Areas

The Council do not believe that the amendment sought to the boundary of map two of the South East Aberdeenshire Coast SLA is necessary. The SLA was identified following a Local Landscape Designation Review carried out in 2016, (AD0113). This study identified the extent of the coastal influence which clearly includes the area identified by the representee. No change is required.

Policy E3 Forestry and Woodland

The Council do not agree with the proposed inclusion of a new paragraph concerning the removal of felled trees, etc. and retreatment of public paths. These are matters that can be appropriately addressed through condition as part of the development management process. No change is required.

The representee suggests amending text under Policy E3. However, the Council see some merit in adding such a statement to the introductory text of the Natural Heritage and Landscape Section. If the Reporter is minded, to make an amendment, then the Council recommend that the second paragraph of the Natural Heritage and Landscape introductory text could be modified to read, “Our natural environment should ensure that its understanding and enjoyment, as well as its benefits, are secured for present and future generations. These policies ensure...”.

Paragraph E3.1

The Council see merit in the minor changes sought by the representee. The Council confirms that it intends to address this through non-notifiable modifications, as set out in the List of Non-Notifiable Modifications.

Paragraph E3.2

The Council agree with the inclusion of additional text as proposed by NatureScot. If the Reporter is minded, to make an amendment, then the Council recommend that paragraph E3.2 could be modified to read, “We will promote and support the forestry industry while strongly protecting and enhancing trees and woodlands in the planning and construction of built development. To achieve this, there will be a presumption against the removal of safe and healthy trees, non-commercial woodlands and hedgerows. Criteria in the Scottish Government’s policy on Control of Woodland Removal will be used to determine the acceptability of woodland removal. Development is also required to continue to ensure that opportunities are taken to promote the role of woodlands in providing opportunities for community development, education and recreational access, protecting and enhancing environmental quality and biodiversity, landscape and historic assets.”

Paragraph E3.3

The Council do not agree that the second bullet point of paragraph E3.3 should be amended to reflect “climate and nature emergencies”. As outlined in Schedule 4 Issue 1: Policy Symbols, Foreword, Section 1 – How to use this Plan, Section 2 – Influences on the Plan, Section 3 – Vision for the Plan and its Purpose and Section 4 – The Purpose of the Local Development Plan, Aberdeenshire Council has chosen not to formally declare a climate emergency. The Council has not been asked to declare a nature emergency. As such it would be inappropriate to use these terms within the policy text. No change is required.

The Council believe the modification sought to the fifth bullet point would dilute the emphasis placed within the policy text to protect and enhance trees and woodland through development. No change is required.

Natural Heritage and Landscape Introduction Policy Map

Designation of SPAs is not a statutory function held by the Council. No change is required.

Reporter’s conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan, or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue that is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” to Section 10 (Natural Heritage and Landscape) and to the related appendices 12 and 13. However, where such matters arise from representations made to the proposed plan they are required to be addressed in the examination. I therefore address these as appropriate below.

Introductory paragraphs

3. The initial paragraphs of section 10 of the plan do not themselves contain specific policies, and I see no inconsistency with the provisions of Scottish Planning Policy as is suggested in some representations. Any distinction between acceptability and significance, in the context of the consideration of environmental effects, is a matter which may relate to the more specific provisions addressing natural heritage, landscape and forestry considerations which follow and which I address below.

4. Modification to the wording of the second, third and fourth introductory paragraphs, along the lines that the council proposes, would appropriately emphasise the importance of woodland and forestry in this context and provide greater clarity around the assessment of environmental impacts. The modifications I recommend are consistent with those the council has suggested, but with minor alterations to assist clarity. With these modifications, no further changes are required to the introductory paragraphs of section 10.

Policy E1 Natural Heritage

5. The inclusion, in paragraph E1.1, of reference to species and habitat, in addition to biodiversity and geodiversity, would appropriately clarify the factors which may be relevant in the context of the designation of a nature conservation site. The addition of a footnote referring to the map-based search facility of NatureScot's "Natural Spaces" website would provide appropriate additional clarity in this regard. I recommend modifications accordingly.

6. The inclusion of fuller details in the text of paragraph E1.2 would add clarity and more accurately reflect the statutory protection afforded to internationally designated nature conservation sites and be consistent with Scottish Planning Policy (paragraphs 207 – 210). I recommend modifications as suggested by NatureScot and which the council accepts.

7. Greater clarity and the reflection of statutory protection afforded to nationally designated nature conservation sites would similarly be provided by inclusion of the fuller details in paragraph E1.3 as suggested by NatureScot and accepted by the council. The modification I recommend in this regard would be consistent with paragraphs 212 and 213 in Scottish Planning Policy and also address the representation on similar lines made by RSPB Scotland.

8. The additional text in paragraph E1.4, as suggested in the representation by NatureScot, would appropriately clarify the approach to be taken to the minimisation of effects on nature conservation sites (other than those internationally or nationally designated). The modification I recommend in this regard would also address the representation on similar lines made by RSPB Scotland. Subject to the recommended modification, the paragraph would include reference to the Native Woodland Survey of Scotland and to Plantations on Ancient Woodland Sites (PAWS). The recommended modifications to this paragraph, as well as those to the paragraphs of policy E3, would appropriately respond to the representations by Woodland Trust Scotland.

9. Consistent with recommended modifications to other parts of the proposed plan, it is appropriate for the wording of paragraph E1.6 to reflect that decision making on development proposals involves the balancing of positive and negative potential effects. The modification I recommend, in accordance with the council's suggestion, would be consistent with paragraph 214 in Scottish Planning Policy and address the

representations made in this regard by a number of respondents, including NatureScot.

10. Avoiding potential confusion between the different assessment and licencing regimes applying to European Protected Species and those protected under other legislation is appropriate. This would, as NatureScot suggests, be conveniently done by identifying the relevant requirements separately. Adding a new paragraph to achieve this, as the council suggests, would be appropriate and address the representations by NatureScot and others. I make a recommendation in this regard accordingly.

11. Making clear in paragraph E1.7 that baseline surveys may need to address geological as well as ecological considerations, as RSPB Scotland suggests, is appropriate and accepted by the council. However, the need for such surveys should be in response to the potential presence of the elements to be safeguarded, rather than be determined by the scale of the development involved. The modification I recommend reflects this.

12. The criteria to be taken into account in assessing the acceptability of development proposals in wider biodiversity and geodiversity terms derive from a range of legislative provisions and policy guidance. In this regard, following EU exit, making reference in paragraph E1.8 to the Habitats Regulations enshrined in domestic legislation would provide greater clarity, as NatureScot suggests, rather than citing the European Habitats and Birds Directives. This would also beneficially simplify the interpretation of policy. The amended wording suggested by NatureScot in this regard, the thrust of which the council accepts, would also address representations made by the Scottish Environment Protection Agency (SEPA) and RSPB Scotland on similar lines. I recommend modifications accordingly. The inclusion of reference to Groundwater Dependent Terrestrial Ecosystems, as sought by SEPA is addressed by my recommendation to include a footnote linked to paragraph E.1.

13. The extent to which development may rectify or alleviate pre-existing habitat fragmentation would be likely to be a potential benefit to be taken into account in an overall assessment of the merits of a particular development proposal. No modification to the wording of paragraph E1.9 is required in this regard.

14. Although involving some duplication with the provisions of paragraph P1.7, including reference in paragraph E1.10 to the mechanisms available to secure off-site biodiversity mitigation is appropriate. So too is making clear that biodiversity enhancements may include woodlands. I recommend a modification to paragraph E1.10 accordingly, although I have altered the council's suggested wording referring to conditions and obligations, for clarity.

Policy E2 Landscape

15. Rewording and altering the structure of paragraphs E2.1 and E2.2, as several representees suggest and the council accepts, would more clearly express the role of Landscape and Visual Impact Assessment and the Special Landscape Areas identified in Appendix 13. I recommend modifications accordingly, with retention of the footnotes linking to information provided by NatureScot on definitions and descriptions and guidance on landscape and visual impact assessment.

Appendix 13 Aberdeenshire Special Landscape Areas

16. I note that a representee (Bancon Homes) seeks an amendment to the boundary of the Special Landscape Area south of Stonehaven linked to its promotion of residential development on a site close to Braehead at East Newtonleys. I note that the indicative layout provided by the representee shows open space on the part of the site which lies within the Special Landscape Area. The provision of open space would not be likely to have a significant effect on the Special Landscape Area and it is not necessary to modify its boundary in this connection. The representee's proposed identification of bid site KN078 for residential development is addressed under issue 46. No modification is therefore required to the Special Landscape Area illustrated in Appendix 13.

Policy E3 Forestry and Woodland

17. The rewording of paragraph E3.1, as Woodland Trust Scotland seeks and the council supports, would add clarity to the intention to safeguard and seek to enhance woodlands, especially those of a native and semi natural character. I recommend a modification accordingly, although I have reworded the council's suggestion in the interests of readability.

18. Including additional wording in paragraph E3.2 to convey more clearly the strength of commitment to safeguarding trees and woodlands as sought by several representees, including NatureScot, would be consistent with Scottish Planning Policy (paragraphs 216 – 218). As is the inclusion of reference to the Scottish Government's Control of Woodland Removal policy. I recommend modifications as suggested by the council. The paragraph, subject to the recommended modification, promotes public access to woodlands, which would encompass the avoidance of obstructing public paths. The method of working in forestry operations is not susceptible to control through a policy provision in the proposed plan. I therefore agree with the council that a new paragraph to address these aspects, as sought by a representee, is not appropriate or necessary.

19. The bullet point criteria in paragraph E3.3 consists of a list of themes of the council's Forestry and Woodland Strategy. This, the paragraph explains, is prepared as Planning Advice which does not form part of this examination. It is therefore not appropriate for me to recommend any modification in this regard.

20. As the council explains, the designation of a Special Protection Area, as the representee community council seeks, is not a matter for the local development plan. Such designations are governed by separate specific legislative provisions and no modification is therefore appropriate in this regard.

Reporter's recommendations:

Modify the local development plan by:

1. Adding the following sentence at the start of the second introductory paragraph to section 10 on page 57:

"Our natural environment should ensure that its understanding and enjoyment, as well as its benefits, are secured for present and future generations."

2. Replacing the first sentence of the third introductory paragraph to section 10 on page 57, with the following text:

“We continue to be concerned about the loss of, or damage to, landscapes, habitats, forestry and woodlands (including ancient woodlands), and biodiversity due to construction, quarrying and environmental engineering for controlling floods and the cumulative effects of incremental changes.”

3. Replacing the first sentence of the fourth introductory paragraph to section 10 on page 57, with the following text:

“Environmental Impact Assessment (EIA) will be required in connection with all major and other developments likely to have significant effects on the environment.”

4. In paragraph E1.1 on page 57, inserting “, species, habitat” between “biodiversity” and “or geodiversity”.

5. Adding a footnote linked to the word “geodiversity” in paragraph E1.1 as follows:

“The Natural Spaces website provided by NatureScot allows map-based searches of Geological Conservation Review sites (insert weblink).”

6. Replacing paragraph E1.2 on page 57 with the following text:

“In the case of an existing or proposed Special Protection Area (SPA), existing, proposed or candidate Special Area of Conservation (SAC) or Ramsar Site, if it cannot be ascertained that the development would not adversely affect the integrity of the site, development will only be permitted where:

- there are no alternative solutions;
- there are imperative reasons of overriding public interest, that may, for sites not hosting a priority habitat type and/or priority species, be of a social or economic nature; and
- compensatory measures have been identified and agreed to ensure that the overall coherence of the European site network is protected.”

7. Inserting a new paragraph between paragraphs E1.2 and E1.3 as follows:

“Where the site hosts a priority habitat type and/or a priority species, the reasons must relate to human health, public safety or beneficial consequences of primary importance to the environment, or other reasons which, in the opinion of Scottish Ministers, are imperative reasons of overriding public interest. It should be noted that development not directly connected with, or necessary to, the conservation management of a European site, and which is likely to have a significant effect on the site (either individually or in combination with other plans or projects) will require to be subject to an appropriate assessment, in order to ascertain whether the development would not adversely affect the integrity of the site.”

8. Replacing paragraph E1.3 on page 57 with the following text:

“Development that affects Sites of Special Scientific Interest (SSSIs), National Nature Reserves (NNRs) or the Cairngorms National Park will only be permitted where a thorough assessment demonstrates that the objectives of designation and the overall integrity of the site will not be compromised, or any significant adverse effects on the qualities for which the area has been designated are clearly outweighed by social, environmental or economic benefits of national importance. In all cases, any impacts should be minimised through careful design and mitigation measures.”

9. Replacing the last sentence of paragraph E1.4 on page 58 with the following three sentences:

“In all cases, impacts must be minimised through careful design and mitigation measures.”

There will be a strong presumption against removing ancient semi-natural woodland or Plantations on Ancient Woodland Sites (PAWS). Where such woodland is present on or beside a development site, proposals should be designed to seek to accommodate and protect the woodland rather than remove it in part or entirely.”

10. Replacing paragraph E1.6 on page 58 with the following text:

“Development must seek to avoid any unacceptable detrimental impact on protected species. A Protected Species Survey to inform the assessment of impacts will be required where there is reason to believe protected species may exist on or adjacent to the site. The submission of Species Protection Plans detailing appropriate avoidance and mitigation measures may be required. Development affecting any protected species will only be permitted when it can be justified in accordance with the relevant protected species legislation. Lists of species protected by legislation are available from NatureScot.”

11. Inserting a new paragraph after paragraph E1.6 on page 58 as follows:

“Development affecting species listed in schedule 5 of the Wildlife and Countryside Act will not be approved unless:

- the proposal will give rise to, or contributes towards the achievement of, a significant social, economic or environmental benefit; and
- there is no other satisfactory solution; and
- there is no significant negative impact on the conservation status of the species.

Development affecting any European Protected Species will not be approved unless:

- it is required for imperative reasons of overriding public interest; and
- there is no other satisfactory solution; and
- the population will be maintained at a favourable conservation status in its natural range.”

12. Replacing paragraph E1.7 on page 58 with the following text:

“A baseline ecological or geological survey must be prepared for all developments and other proposals where there is evidence to suggest that a habitat, geological feature or species of importance may exist on or adjacent to the site. This baseline survey must be provided by a suitably qualified ecologist or geologist, as appropriate.”

13. Replacing paragraph E1.8 on page 58 with the following text:

“A number of criteria will be used to consider the biodiversity impacts of a development, including whether it will affect habitats or species listed in: Schedule 2 or 4 of the Habitats Regulations; or the Scottish Biodiversity List; or North East Scotland Biodiversity Partnership Local Important Species; or other species or habitats of importance to biodiversity; or Groundwater Dependent Terrestrial Ecosystems (GWDTE). We will only approve development proposals:

- when a baseline ecological survey has been carried out;
- when the development has been designed to avoid impacts where possible;
- where impacts cannot be avoided the public benefits clearly outweigh the ecological or geological value of the site; and
- where an ecological or geological management plan is provided that includes necessary mitigation and compensation measures to result in ecological net gain.”

14. Replacing paragraph E1.10 on page 59 with the following text:

“Policy P1 also says that all developments should identify measures that will be taken to

enhance biodiversity (including woodlands) in proportion to the development opportunities available and the scale of the development. In circumstances when it is not practical to deliver positive effects for biodiversity within a development site, we may require off-site contributions towards biodiversity enhancement within the settlement. Such measures may be secured by planning obligations or conditions.”

15. Replacing paragraph E2.1 on page 59 with the following text (retaining the footnote linked to Landscape Character Assessment):

“We will refuse development that causes unacceptable effects through its scale, location or design on key characteristics, natural landscape elements, features or the composition or quality of the landscape character as defined in the Landscape Character Assessments produced by Scottish Natural Heritage. These impacts can be either alone or cumulatively with other recent developments. A Landscape and Visual Impact Assessment (LVIA) may be required to assess the effects of change on a landscape that could be experienced should a development proposal be approved. Appropriate mitigation should be identified.”

16. Replacing paragraph E2.2 on page 59 with the following text (retaining the footnote linking to NatureScot’s guidance on LVIA):

“Development that has a significant adverse impact on the qualifying interests of a Special Landscape Area will not be permitted unless it is adequately demonstrated that these effects are clearly outweighed by social, environmental or economic benefits of at least local importance. Appendix 13 on Special Landscape Areas is also intended to be used as a guide by prospective developers in assessing potential impact. Development, in terms of its location, scale, design, materials and landscaping, should be of a high standard and enhance the special qualities and character of the Special Landscape Area.”

17. Replacing paragraph E3.1 on page 59 with the following text:

“Aberdeenshire’s forests and native and semi-natural woodland areas are valued and enjoyed by both residents and visitors and must continue to be resilient to the effects of climate change. They must be protected and, where appropriate, enhanced to safeguard the environment, habitats, species and local culture, whilst benefitting and supporting the local and national economy.”

18. Replacing paragraph E3.2 on page 59 with the following text:

“We will promote and support the forestry industry while strongly protecting and enhancing trees and woodlands in the planning and construction of built development. To achieve this, there will be a presumption against the removal of safe and healthy trees, non-commercial woodlands and hedgerows. Criteria in the Scottish Government’s policy on Control of Woodland Removal will be used to determine the acceptability of woodland removal. Development is also required to continue to ensure that opportunities are taken to promote the role of woodlands in providing opportunities for community development, education and recreational access, protecting and enhancing environmental quality and biodiversity, landscape and historic assets.”

Provision of the development plan to which the issue relates:	Policies relating to historic environment	
Planning authority's summary of the representation(s):		

The Historic Environment Introduction

Historic Environment Scotland (HES) has expressed concern regarding the introduction of a policy that includes listed buildings, scheduled monuments and archaeological sites together. This is seen as problematic, as the policy areas are separate in the SPP, reflecting the different types of protection each designation affords, which can result in confusion in terms of what may or may not be permitted or justified in policy terms (PP0743).

Policy HE1 Protecting Listed Buildings, Scheduled Monuments and Archaeological Sites (including other historic buildings)

General

SEPA confirms that they have no comments on Policy HE1. No modification sought (PP1219).

Paragraph HE1.1

Several representees have stated that paragraph HE1.1 is overly restrictive and are concerned with the 'negative effect' terminology used, with some noting that it is not consistent with Scottish Planning Policy (SPP), namely paragraphs 141 and 145 (PP0423, PP0589, PP0597, PP0642, PP0689, PP0736, PP0743, PP0954, PP1188, PP1193, PP1201, PP1306 and PP1355). Some representees have stated that they understand its objective, but that the paragraph should recognise that there may be material considerations that outweigh the negative impacts (PP0743, PP1201 and PP1355). Other representees are concerned this paragraph sets the bar too high in decision-making because there is no scenario under which a development could be approved with a negative effect no matter how minor in EIA terms (PP0597, PP0589, PP0642 and PP0736). Several representees have suggested that the wording is rewritten to present a more balanced approach that considers the individual circumstances of a particular site. The current wording, "we will not allow" is not helpful and is too inflexible. They also note, SPP paragraph 137 states "change should be sensitively managed to avoid or minimise adverse impacts", which make it clear that adverse impacts of development are not a reason for refusal and rounded consideration is necessary (PP0689, PP0954, PP1188 and PP1306). Alternative text is suggested including:

- Removing paragraph HE1.1 and use paragraphs HE1.3 and HE1.5 instead (PP0423 and PP0642).
- Paragraph HE1.1 introduces 'exceptional circumstances' for scheduled monuments as noted by SPP paragraph 145 and has 'special regard' to SPP paragraph 141 for circumstances where works to listed buildings (e.g., for retention) may have a negative effect but be deemed acceptable as part of a balanced approach (PP0423 and PP0642).
- Amending paragraph HE1.1 to be consistent with SPP and other PLDP policies dealing with specific named assets (PP0589 and PP0736).
- Incorporating an 'acceptability' test into paragraph HE1.1 (PP0736 and PP1193).
- Aligning paragraph HE1.1 with Section 11 introduction and reflect SPP and Historic Environment Policy for Scotland (HEPS), in particular, to replace the words "a negative effect" (PP0743).

- The wording is rewritten to present a more balanced approach that considers the individual circumstances of a particular site (PP0954 and PP1188).
- Amending paragraph HE1.1 so that it recognises that there may be material considerations that outweigh negative impacts (PP1201 and PP1355).
- Amending paragraph HE1.1 so that it states development should avoid or minimise adverse impacts, on weighting and exceptions (PP1306).

Three representees also raised issues over ‘setting’ and its meaning in Policy HE1. They note there is a clear distinction between setting and integrity of setting which is absent from Policy HE1. Paragraph 145 of SPP states that where there are exceptional circumstances where permission may be granted for development where it affects a scheduled monument or the integrity of its setting (PP0423, PP0597 and PP0642). It is requested that the policy is amended to be consistent with SPP or removed (PP0423 and PP0642).

Paragraph HE1.2

The Scottish Government has suggested that paragraph HE1.2 uses the ‘statutory list of Buildings of Special Architectural or Historic Interest’ terminology and that this should also be applied to scheduled monuments. This will ensure there is consistency with the description of each statutory process, suggesting using both references or referring to it as “designated Listed Buildings and Scheduled Monuments” (PP0578).

Paragraph HE1.3 (Listed Buildings)

It is requested that paragraph HE1.3 is amended to remove the requirement for a ‘Design Statement’ to demonstrate that a proposal will not have any negative impact on the listed building, but that it refers to paragraph HE1.1, as amended by the representee above. They also note that the relevant issues will need to be addressed at the planning application stage as they do not all relate to design (PP1306).

Paragraph HE1.4 (Listed Buildings)

HES has requested amending paragraph HE1.4 to require clear evidence, reference to socio-economics and on adaptation to tie it in better with HES Managing Change twin guidance on Demolition of Listed Buildings and Use and Adaptation of Listed Buildings (PP0743).

Paragraphs HE1.5 and HE1.6 (Scheduled Monuments and Archaeological Areas)

Several representees, including HES, raised concerns over the terminology and meaning of “impact on the integrity of the setting” in relation to HE1.5 and HE1.1, and the wording of SPP stating that HE1.5 does not recognise the difference between setting and integrity of setting of Scheduled Monuments. They note these are two separate matters and should be modified to reflect SPP paragraph 145 (PP0578, PP0423, PP0465, PP0597, PP0642, PP0589 and PP0743).

Two representees have stated that paragraph HE1.5 goes beyond the legislative standard, and it should be amended to be consistent with legislation related to heritage assets and SPP, and/or delete paragraph HE1.1. They have stated that it is not appropriate to apply the “imperative reasons of overriding public interest” (IROPI) test to

cultural heritage assets, as this was derived from the Habitats and Wild Birds Directive. They suggested that the Council seeks legal advice on the appropriateness of this wording and provide clarity about which policies apply, how they are to be applied, and to avoid confusion (PP0589 and PP0736).

The Scottish Government has requested that the requirement for Scheduled Monument Consent should be highlighted as it is a separate consent process, which is sought from HES. They argue, this would align with SPP paragraph 145, as HES are the consenting Authority for direct works affecting Scheduled Monuments (PP0578).

Policy HE2 Protecting Historic, Cultural and Conservation Areas Conservation Areas

General

SEPA has no comments on Policy HE2. No modifications sought (PP1219).

Paragraph HE2.1 (Conservation Areas)

HES has requested amending paragraph HE2.1 to create a clearer demolition policy on unlisted buildings in conservation areas that reflects HES current guidance, to avoid onerous consent criteria, and to allow a simpler approach (PP0743).

In order to accord with the Planning Act, it is requested that the paragraph recognises that there may be material considerations that outweigh negative impacts (PP1201 and PP1355).

A representee has requested amending paragraph HE2.1 to allow for a balanced approach to assessing the positives and negatives of a development proposal and avoid it being overly restrictive (PP1306).

Paragraph HE2.2 (Conservation Areas)

A representee has requested that additional text on veteran or trees outside of woodlands is included. They argue these are special because of their size, age or condition and retaining the trees will enhance any development (PP0877).

Paragraph HE2.3 (Battlefields, Inventory Gardens and Designed Landscapes)

HES has recommended that separate wording is considered between battlefield and designed landscapes in the first bullet point, as setting is not normally considered a distinct impact type for battlefields (PP0743).

Policy HE3 Helping to Reuse Historic Buildings at Risk

HES has welcomed the refinement of this policy as it sets a robust decision-making framework but have suggested it may be clearer to rename the policy to “Enabling Development to Help to Rescue Historic Buildings at Risk”, as it is largely focused on enabling development rather than other types of re-use such as adaptation or extension (PP0743).

A representee has requested that this policy is amended to allow enabling development to cross-fund business proposals in exceptional cases. They argue it would not conflict with SPP and refer to a DPEA decision on PPA-390-2042 (visitor centre in Dunblane) that stated there may be circumstances where enabling development is acceptable to cross-fund a business proposal. They refer to paragraph 28 in Planning Advice Note 73 Rural Diversification, which states “Occasionally, new housing is proposed as a mechanism to cross-fund a business proposal.” They identify other examples of enabling developments to cross subsidise commercial proposals based on economic benefits (Ury Estate and Menie Estate) and suggest the exclusion of enabling development for commercial development is not consistent with national planning policy and previous positive economic development decisions (PP1142).

SEPA has no comments on Policy H3 Helping to Reuse Historic Buildings at Risk. No modifications sought (PP1219).

A representee is concerned that the policy lacks clarity, as it is not evident to what its intention is. They argue it could be read as taking a very narrow view of what enabling development is – to make a building wind and watertight, which would be a short-sighted approach (PP1306).

A representee has requested further clarify on the last sentence of paragraph HE3.1, “This policy does not apply to enabling new commercial developments.” They argue it is unclear as any enabling development will still need to be commercially viable (PP1306).

Appendix 11 Conservation Areas

SEPA has no comments on Appendix 11. No modifications sought (PP1219).

Modifications sought by those submitting representations:

The Historic Environment Introduction

Modify the PLDP to split Policies HE1 and HE2 into separate policies on the different historic designations (PP0743).

Policy HE1 Protecting Listed Buildings, Scheduled Monuments and Archaeological Sites (including other historic buildings)

Paragraph HE1.1

Modify the PLDP to ensure consistency with SPP in paragraph HE1.1 (PP0423 and PP0597).

Modify the PLDP to incorporate an ‘acceptability’ test into policy HE1.1, in paragraph HE1.1 (PP0589 and PP0736).

Modify the PLDP to allow for ‘exceptional circumstances’ for Scheduled Monuments, and ‘special regard’ for Listed Buildings in scenarios where development may be considered acceptable in paragraph HE1.1 (PP0642).

Modify the PLDP to take account of the need for a balanced decision-making process in

paragraph HE1.1 (PP0689).

Modify the PLDP to make it consistent with SPP and other policies dealing with specific named assets in paragraph HE1.1 (PP0736).

Modify the PLDP to amend paragraph HE1.1 from, “We will not allow development that would have a negative effect on the character, integrity or setting of listed buildings, or scheduled monuments, or other archaeological sites.” to “We will not allow development that would have [an] adverse impact on the character, integrity or setting of listed buildings, or scheduled monuments, or other archaeological sites. If adverse impact is unavoidable, it should be minimised and justified.” (PP0743).

Modify the PLDP to consider a more balanced approach that takes into account the individual circumstances of a particular site in paragraph HE1.1 (PP0954 and PP1188).

Modify the PLDP to replace paragraph HE1.1 with, “We will not allow development that would have an unacceptable negative effect on the character, integrity or setting of listed buildings, or scheduled monuments, or other archaeological sites.” (PP1193).

Modify the PLDP to add: “...unless the benefits of the proposed development outweigh the negative impacts.” in paragraph HE1.1 (PP1201 and PP1355).

Modify the PLDP to amend paragraph HE1.1 from, “We will not allow development that would have a negative effect on the character, integrity or setting of listed buildings, or scheduled monuments, or other archaeological sites.” to “Development should avoid or minimise adverse impacts on the fabric and setting of the asset, and ensure that its special characteristics are protected, conserved or enhanced. Significant weight will be given to the asset’s conservation. Where development will cause adverse impacts, this will require clear and convincing justification. In addition, any adverse impact must be clearly outweighed by reasons of public interest, including those of a social or economic nature.” (PP1306).

Modify the PLDP to recognise that setting and integrity are two separate matters to reflect SPP in paragraph HE1.1. Amend HE1.1 to reference ‘exceptional circumstances’ for impact on heritage resources and include ‘integrity of setting’ for Scheduled Monuments or delete paragraph HE1.1 (PP0423).

Modify the PLDP to reflect distinction between ‘setting’ and ‘integrity of setting’ or delete the paragraph in paragraph HE1.1 (PP0642).

Paragraph HE1.2

Modify the PLDP to amend the second sentence in paragraph HE1.2 from, “We will protect all listed buildings contained on the statutory list of Buildings of Special Architectural or Historic Interest for Aberdeenshire, archaeological sites and scheduled monuments.” to “We will protect all listed buildings contained on the statutory list of Buildings of Special Architectural or Historic Interest for Aberdeenshire, all scheduled monuments contained on the statutory schedule of Monuments for Aberdeenshire and undesignated archaeological sites in Aberdeenshire.” (PP0578).

Paragraph HE1.3 (Listed Buildings)

Modify the PLDP to amend the second sentence in paragraph HE1.3 from, “A Design Statement is required to support any proposed development and demonstrate that it would not have any negative impact on the listed building.” to “A Design Statement is required to support any proposed development. The application documentation should fully address Policy HE1.1.” (PP1306).

Paragraph HE1.4 (Listed Buildings)

Modify the PLDP to amend paragraph HE1.4 from, “The demolition of a listed building will not be permitted unless the building is no longer of special interest, is incapable of repair or there are overriding environmental or economic reasons not to retain. It must be satisfactorily demonstrated that every effort has been made to continue the present use or find a suitable new use.” to “The demolition of a listed building will not be permitted unless there is clear evidence to show that the building is no longer of special interest, is incapable of repair or there are overriding environmental or socio-economic reasons not to retain. It must be satisfactorily demonstrated that every effort has been made to continue the present use or find a suitable new use with or without an appropriate adaptation of the building.” (PP0743).

Paragraph HE1.5 and HE1.6 (Scheduled Monuments and Archaeological Areas)

Modify the PLDP to bring them into line with SPP to include reference to ‘integrity of setting’ in paragraphs HE1.1 and HE1.5 (or HE1.1 deleted) (PP0423, PP0465, PP0578, PP0589, PP0597 and PP0642).

Modify the PLDP to amend paragraph HE1.5 from, “Development on nationally or locally important monuments or archaeological sites, or impacting on their setting, will only be allowed if ...” to “Development on nationally or locally important monuments or archaeological sites, or having an adverse impact on the integrity of their setting, will only be allowed if ...” (PP0743).

Modify the PLDP to include: “Any works directly affecting a designated Scheduled Monument requires Scheduled Monument Consent (SMC) which is obtained from Historic Environment Scotland. Advice on the SMC process and any requirements should be sought at an early stage from the Heritage Directorate, Historic Environment Scotland, Longmore House, Salisbury Place, Edinburgh, EH9 1SH. Telephone: 0131 668 8716 or email: hmenquiries@hes.scot” in paragraphs HE1.5 and HE1.6 (PP0578).

Review policy wording to ensure there is consistency with SPP and clarity in relation to the assessment criteria to be applied (PP00589).

Seek legal advice on the appropriateness of policy wording in relation to the stated ‘IROPI’ test (PP0736).

Policy HE2 Protecting Historic, Cultural and Conservation Areas

Paragraph HE2.1 (Conservation Areas)

Modify the PLDP to add at the end of the paragraph, “We will seek retention, restoration, and sympathetic adaptation of unlisted buildings which contribute positively to the special

architectural or historic interest of the area, prior to allowing their demolition.” in paragraph HE2.1 (PP0743).

Modify the PLDP to include, “...unless the benefits of the proposed development outweigh the negative impacts.” in paragraph HE2.1 (PP1201 and PP1355).

Modify the PLDP to amend paragraph HE2.1 from, “We will not allow development, including change of use or demolition that would fail to preserve or enhance the character or appearance of a conservation area. This applies both to developments within the conservation area and proposals outwith that would affect its character or appearance.” to “Development should seek to preserve or enhance the character and appearance of the conservation area. Significant weight will be given to the preservation and enhancement of the conservation area. Where development will cause adverse impacts, this will require clear and convincing justification. In addition, any adverse impact must be clearly outweighed by reasons of public interest, including those of a social or economic nature.” (PP1306).

Paragraph HE2.2 (Conservation Areas)

Modify the PLDP to amend the third sentence to add after the word “trees” insert “(including veteran or trees outside of woodlands)” in paragraph HE2.2 (PP0877).

Paragraph HE2.3 (Battlefields, Inventory Gardens and Designed Landscapes)

Modify the PLDP to change the first bullet point from, “the proposal would not have an adverse impact that compromises the objectives of the designation or the overall integrity, character and setting of the designated area, OR” to “the proposal would not have an adverse impact that compromises the objectives of the designation of an inventory garden and designed landscape or the key landscape characteristics and special qualities of an inventory battlefield OR;” in paragraph HE2.3 (PP0743).

Policy HE3 Helping to Reuse Historic Buildings at Risk

Modify the PLDP to amend the title of Policy HE3 from, “Helping to reuse listed buildings at risk” to “Enabling development to help to rescue historic Buildings at Risk.” (PP0743).

Modify the PLDP to amend paragraph HE3.1 from, “This policy does not apply to enabling new commercial developments.” to “Enabling development to cross fund business proposals will be considered in exceptional circumstances.” (PP1142).

Modify the PLDP to review the second sentence so that it is clearer and does not preclude more extensive heritage led regeneration that returns the heritage asset to use in paragraph HE3.1 (PP1306).

Modify the PLDP to review the last sentence, “This policy does not apply to enabling new commercial developments.” for the purpose of clarity in paragraph HE3.1 (PP1306).

Summary of responses (including reasons) by planning authority:

The Historic Environment Introduction

Comments from HES on separating the historic assets into their own policies is noted. However, the Council is content with the approach it has adopted with its groups of the historic environment policies into designated sites (Policy HE1) and designated areas (Policy HE2) (AD0034.A, pages 51-52). This had been considered at the 2017 LDP Examination and no change was proposed by the Reporter. No change is required.

Policy HE1 Protecting Listed Buildings, Scheduled Monuments and Archaeological Sites (including other historic buildings)

General

Comments from SEPA are noted. No change is required.

Paragraph HE1.1

The purpose of paragraph HE1.1 is to set the overall tone of this policy. However, the Council agrees that its policies should be consistent with SPP. As the comments mostly relate to the restrictive nature of this paragraph, the Council accepts HES's suggested amendments. If the Reporter is minded, to make an amendment, then the Council recommend that paragraph HE1.1 could be modified to read, "We will not allow development that would have an adverse impact on the character, integrity or setting of listed buildings, or scheduled monuments, or other archaeological sites. If adverse impact is unavoidable, it should be minimised and justified".

The Council is satisfied with its wording regard the comments on setting and the integrity of setting for battlefields. Paragraph HE1.1 reads "character, integrity or setting" as it refers to more than just archaeological sites. This issue is also discussed below (see Paragraph HE1.5). No change is required.

Paragraph HE1.2

The Council confirms that it intends to address the Scottish Government's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Paragraph HE1.3 (Listed Buildings)

The Council does not support removing the need for a Design Statement to demonstrate a proposal will have no negative effect on a listed building. The evolution of the design of a proposal and its impact on historic assets is an important consideration. However, this paragraph could be amended to ensure consistency with the proposed amendment to paragraph HE1.1. If the Reporter is minded, to make an amendment, then the Council recommend that paragraph HE1.3 could be modified to change the second sentence to read, "A Design Statement is required to support any proposed development and demonstrate that it would not have any adverse impacts on the listed building".

Paragraph HE1.4 (Listed Buildings)

The Council confirms that it intends to address HES's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Paragraphs HE1.5 and HE1.6 (Scheduled Monuments and Archaeological Areas)

The Council confirms that it intends to address HES's comments and other representees comments on the terminology used in paragraph HE1.5 and consistency with SPP through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council is satisfied with using "imperative reasons of overriding public interest" in paragraph HE1.5. SPP, paragraph 145 states "...permission should only be granted where there are exceptional circumstances." Paragraph HE1.5 sets out what these exceptions are. As such, it does not conflict with SPP and HES has not objected to this statement. No change is required.

The Council confirms that it intends to address the Scottish Government's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Policy HE2 Protecting Historic, Cultural and Conservation Areas

General

Comments from SEPA are noted. No change is required.

Paragraph HE2.1 (Conservation Areas)

The Council does not support adding a caveat to allow the demolition of buildings in a conservation area. SPP places a strong presumption on retaining buildings that make positive contribution to a conservation area (AD0012, paragraph 143). Introducing a caveat would weaken paragraph HE2.1. However, the Council agrees with HES's comment to create a clearer demolition policy on unlisted buildings in conservation areas. If the Reporter is minded, to make an amendment, then the Council recommends that paragraph HE2.1 could be modified to add at the end, "We will seek retention, restoration, and sympathetic adaptation of unlisted buildings which contribute positively to the special architectural or historic interest of the area, prior to allowing their demolition."

Paragraph HE2.2 (Conservation Areas)

While Tree Preservation Orders can be used to protect trees of cultural and historic interest, the Council would support including a reference to veteran or trees outside of woodlands in paragraph HE2.2. SPP notes the importance of veteran trees, and that individual trees should be protected (AD0012, paragraph 216). If the Reporter is minded, to make an amendment, then the Council recommends that paragraph HE2.2 could be modified to change the third sentence to read, "All details must be provided under the cover of a full application and any trees (including veteran or trees outside of woodlands) contributing to the character and appearance should be retained. Homeowners and business owners within the conservation area boundaries automatically have certain Permitted Development Rights removed."

Paragraph HE2.3 (Battlefields, Inventory Gardens and Designed Landscapes)

The Council confirms that it intends to address HES's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Policy HE3 Helping to Reuse Historic Buildings at Risk

Comments from SEPA are noted. No change is required.

The Council would support amending the title of the policy as suggested by HES, as it would help resolve the issues of clarity raised by the other representees and confirm this policy is not for enabling development to fund commercial/business proposals. If the Reporter is minded, to make an amendment, then the Council recommend that the title of Policy HE3 is changed to “Enabling development to help to rescue Historic Buildings at Risk”.

The language used in the policy, i.e., to make a listed building “wind and watertight”, has been written this way to encourage developers to keep costs to a minimum and avoid the use of more expensive fixtures to do the same job. To bring a building back into use may require fixing the walls, windows, roof and any other internal or external works. Therefore, the policy is not short-sighted. No change is required.

Appendix 11 Conservation Areas

Comments from SEPA are noted. No change is required.

Reporter’s conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan, or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue that is unresolved, they will not be addressed in my conclusions.
2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” to Section 11 (The Historic Environment) and to Appendix 11 (Conservation Areas). However, where such matters arise from representations made to the proposed plan they are required to be addressed in the examination. I therefore address these as appropriate below.

Policy HE1 Protecting Listed Buildings, Scheduled Monuments and Archaeological Sites (including other historic buildings)

3. Including reference in paragraph HE1.1 to the minimisation and justification of any adverse impacts on the historic environment is appropriate, as Historic Environment Scotland (HES) seeks, and the council accepts. Inclusion of this qualification would more closely reflect the need for adverse effects to be balanced against any potential benefits. However, the wording of the paragraph requires further modification to correct the impression that there would be an absolute bar to development which gave rise to any adverse effect, irrespective of any beneficial effects. Without such a further modification the paragraph would be internally inconsistent, giving rise to confusion as to its overall effect. The modification I recommend to paragraph HE1.1 would avoid this, and address the representations made by a number of respondents that, as drafted, the paragraph is too inflexible and not wholly consistent with Scottish Planning Policy, particularly in terms of paragraph 137.

4. An effect on the setting of a heritage asset may be capable of being distinct from an effect on the integrity of that asset or of its setting. However, as both setting and integrity are included in the paragraph, any such fine nuance would be capable of being taken into account in the consideration of a specific proposal. In any event, the modification I recommend to paragraph HE1.5 addresses this aspect and no further modification is needed in this regard.

5. Modifying paragraph HE1.2 so as to ensure consistency of terminology in referring to heritage assets, as Scottish Government seeks, is appropriate. This is reflected in my formal recommendation. Although the text of my recommended modification below does not include the footnote references 2 and 3 at the bottom of page 65 of the plan, I consider that these should be retained.

6. Consistent with my recommended modification to paragraph HE1.1, assessing proposals for alterations to listed buildings would involve a balancing of negative and positive effects. Paragraph HE1.2 would also apply to alterations to listed buildings. I consider that the wording of paragraph HE1.3 should be amended to provide a consistent approach with paragraphs HE 1.1 and HE1.2 and to qualify what a design statement should seek to demonstrate. The modification I recommend in this respect would more simply address what the representee seeks in this regard, without diluting the principles that paragraph HE1.3 embodies.

7. I note that the council accepts the modification that HES proposes be made to paragraph HE1.4 with regard to demolition of listed buildings. I agree that the proposed text would ensure appropriate consistency with the Managing Change guidance published by HES. I recommend a modification to this effect.

8. Drawing attention in paragraph HE1.5 to considering any effect on the integrity of the setting of an archaeological asset, and using wording more aligned to that of the relevant legislation would, as HES and others comment, more appropriately reflect national policy and improve clarity. I agree that inclusion in the paragraph of the phrase “imperative reasons of overriding public interest” could lead to confusion in view of the specific legal connotation of that test as applied by the Habitats and Wild Birds Directive. Paragraph 145 of Scottish Planning Policy refers to “exceptional circumstances” in this context and use of that phrase instead would align with national policy in that regard. My recommendation for modification to paragraph HE1.5 reflects these matters.

9. The inclusion of a footnote to paragraph HE1.6, as the council proposes, to draw attention to the separate Scheduled Monument Consent process would appropriately respond to the Scottish Government’s representation in that regard. I recommend a modification accordingly.

Policy HE2 Protecting Historic, Cultural and Conservation Areas

10. As the council rightly explains, Scottish Planning Policy (paragraph 143) seeks to ensure that development, and any proposals for demolition, preserves or enhances the appearance, character or setting of conservation areas. However, as presently worded, paragraph HE2.1 establishes an absolute bar to proposals that would fail to do that. This would exclude the carrying out of a balanced assessment of any harm in that respect against potential benefits that may exist. The council accepts the addition to the

paragraph suggested by HES, to ensure that consent criteria applying in conservation areas should not be more onerous than for listed buildings. Adopting HES's suggested addition, which I endorse, also requires a modification to the first sentence of the paragraph to acknowledge that a balancing of potential positive effects against any negative ones is required in decision making. However, use of the words "prior to" would be capable of misinterpretation and "in preference to" is clearer in this regard. I recommend modifications to paragraph HE2.1 accordingly. These recommended modifications would also address the criticisms raised by several other representees on these aspects.

11. Although paragraphs PR1.7 and PR1.8 in section 12 of the proposed plan seek to safeguard trees and woodlands, I agree that making reference in paragraph HE2.2 to the specific circumstances of trees in conservation areas, as the Woodland Trust seeks and the council supports, is appropriate. I recommend a modification to that paragraph accordingly.

12. More clearly distinguishing between the considerations relevant to battlefields as opposed to inventory gardens and designated landscapes in paragraph HE2.3, as HES suggests, is appropriate. To ensure consistency with the last part of the paragraph, it is also necessary to alter the first part of it to make clear that the paragraph applies to proposals which may affect the identified heritage asset and is not confined to development within such areas. I recommend modifications to paragraph HE2.3 accordingly.

Policy HE3 Helping to Reuse Historic Buildings at Risk

13. As the policy focusses on enabling development where historic buildings are at risk, I agree with HES that altering its title would serve to clarify that intention. However, use of the more generic word "safeguard" would be preferable to "help to rescue" in this context and I recommend a modification accordingly.

14. I note that some representees suggest that the intention and overall thrust of the policy lacks clarity, and that reference to making the building at risk wind and watertight represents a short-sighted approach. I disagree. The text of paragraphs HE3.1, HE3.2 and HE3.3 together provides a robust set of criteria to guide consideration of any proposal that may exceptionally be sought on the basis that it would be justified to secure the preservation of a building at risk. Nor do I regard the reference to minimising the extent of works to what may be necessary to secure the fabric of the building, to be unreasonably restrictive in this regard. As the policy overall makes clear, very particular circumstances would need to be demonstrated for an enabling development proposal to potentially come within its ambit. However, I do not see that excluding the consideration of commercial development adds anything of significance to the intention of the policy. The last sentence of paragraph HE3.1 should therefore be deleted, consistent with representations made in that regard, and I recommend a modification accordingly.

Reporter's recommendations:

Modify the local development plan by:

1. Replacing paragraph HE1.1 on page 65 with:

"We will resist development that would have an adverse impact on the character, integrity

or setting of listed buildings, or scheduled monuments, or other archaeological sites. If adverse impact is unavoidable, it should be minimised and justified.”

2. Replacing the first sentence of paragraph HE1.2 on page 65 with:

“We will protect all listed buildings contained on the statutory list of Buildings of Special Architectural or Historic Interest for Aberdeenshire, all scheduled monuments contained on the statutory schedule of Monuments for Aberdeenshire and undesignated archaeological sites in Aberdeenshire.”

3. In the first sentence of paragraph HE1.3 on page 65, replacing “will only be permitted if they are” with “should be”, and replacing the second sentence of the same paragraph with:

“A Design Statement is required to support any proposed development and demonstrate how the proposal addresses paragraphs HE1.1 and HE1.2.”

4. Replacing paragraph HE1.4 on page 66 with:

“The demolition of a listed building will not be permitted unless there is clear evidence to show that the building is no longer of special interest, is incapable of repair or there are overriding environmental or socio-economic reasons not to retain it. It must be satisfactorily demonstrated that every effort has been made to continue the present use or find a suitable new use, with or without an appropriate adaptation of the building.”

5. Replacing paragraph HE1.5 on page 66 with:

“Development on nationally or locally important monuments or archaeological sites, or having an adverse impact on the integrity of their setting, will only be allowed if there are exceptional circumstances, including those of a social or economic nature, and there is no alternative site. It is the developer’s responsibility to provide information on the nature and location of the archaeological features, including details of any mitigation measures proposed, prior to determination of the planning application.”

6. Adding a footnote linked to paragraph HE1.6 on page 66, as follows:

“Any works directly affecting a designated Scheduled Monument requires Scheduled Monument Consent (SMC), which is obtained from Historic Environment Scotland. Advice on the SMC process and any requirements should be sought at an early stage from Historic Environment Scotland.”

7. Replacing paragraph HE2.1 on page 66 with:

“We will resist development, including change of use or demolition, which would fail to preserve or enhance the character or appearance of a conservation area. This applies both to developments within the conservation area and proposals outwith that would affect its character or appearance. We will seek retention, restoration, and sympathetic adaptation of unlisted buildings which contribute positively to the special architectural or historic interest of the area, in preference to allowing their demolition.”

8. Replacing the third sentence in paragraph HE2.2 on page 66 with:

“All details must be provided under the cover of a full application and any trees (including veteran trees and trees outside of woodlands) contributing to the character and appearance should be retained.”

9. In the first line of paragraph HE2.3 on page 67, replacing “within” with “affecting”.

10. Replacing the first bullet point of paragraph HE2.3 on page 67 with:
"• the proposal would not have an adverse impact that compromises the objectives of the designation of an inventory garden or designed landscape, or the key landscape characteristics and special qualities of an inventory battlefield; or,"
11. Replacing the title of Policy HE3 on page 67 with:
"Policy HE3 Enabling development to safeguard Historic Buildings at Risk"
12. Deleting the last sentence of paragraph HE3.1 on page 67.

Provision of the development plan to which the issue relates:

Policies relating to protecting resources

Planning authority's summary of the representation(s):

Policy PR1 Protecting Important Resources

Paragraph PR1.1

The safeguarding of prime agricultural land in accordance with Scottish Planning Policy (SPP) within this policy section is welcomed. No modification sought (PP0460).

It is considered that current wording is too restrictive and not sufficiently flexible to permit developments where only a minor, and not significant effect is identified on resources. 'Acceptability' of environmental impacts needs to be factored in and policy wording needs to make provision for permitting development with no 'significant adverse impacts'. Also, the requirement to demonstrate that there are no alternative sites is excessive and unwarranted (PP0424, PP0466, PP0589 (see additional paper RD0212.A), PP0597, PP0643, PP0736, PP1125 and PP1188). A representee has included an Appendix (RD0185.A) in their representation which provides further detail to support their position (PP1125). If the benefits outweigh the negative effects, those projects should not be refused planning permission (PP0589). Negative environmental effects (whether significant in Environmental Impact Assessment (EIA) terms or not) are not always unacceptable in policy terms, and in fact it is unusual for a large-scale EIA to identify no significant effects to some degree (PP0424 and PP0466). The addition of 'unacceptable' to the policy wording and 'significant adverse impacts' would enable a balancing exercise in decision-making (PP0466 and PP0589).

It is recognised that the policy wording set out in paragraph PR1.1 is not a renewables specific policy, and therefore that any changes made to this policy section must recognise that the primary point of assessment is against the renewables/wind energy policies (PP0424).

Policy wording is inconsistent with Table 1 of SPP and sets a much higher test than SPP, particularly in relation to wind farm developments on peat and carbon rich soils, (PP0424, PP0466 and PP0597). In SPP the key test is whether any significant effects can be substantially overcome by siting, design, or other mitigation, but this is a different test to the one set out in paragraph PR1.1 which requires developers to avoid any negative impacts whatsoever, or demonstrate there is no alternative site (PP0424, PP0466, PP0597 and PP0643).

Carbon sinks and stores are protected by Policies C3, PR1.1 and PR1.10 but are inconsistent and not in accordance with SPP which groups carbon rich soils as Group 2 interest in terms of SPP Table 1, and as such significant effects should be substantially overcome. This is a different and less stringent test than set by Policy C3 which simply notes protection from disturbance or destruction. There needs to be consistency as they each apply to wind farm developments (PP0467).

Whilst the commitment to protect peat, carbon rich soils and trees and woodland is welcomed, paragraph PR1.1 is contradictory. The first sentence states that development having a negative impact will not be approved, whilst the second sentence gives criteria by which development would allow such an approval. There would be a need for mitigation and compensation if a negative effect is to be accepted and therefore the need for such measures should be included. The mitigation hierarchy should always be followed. There is also a concern that the policy could allow for inappropriate development on irreplaceable habitat such as peat. There are no criteria in the current policy which state that biodiversity impacts will also be considered (PP1257).

Paragraph PR1.2 (Air Quality)

Scottish Environment Protection Agency (SEPA) has noted their requested amendments have been made to paragraph PR1.2 and have no further comments. No modification sought.

There is conflict between paragraphs PR1.2 and PR1.1, as PR1.2 introduces more flexibility through the wording “significant”, yet both policy tests would apply to the same development. Clarification is required as to how two different policy tests for air quality (paragraph PR1.1 and PR1.2) can apply to the same development (PP0424 and PP0466).

In EIA terms ‘significant adverse impact’, as referenced in paragraph PR1.2, can still be deemed acceptable in the planning process. The addition of ‘acceptable’ to the policy would allow for more balanced decision-making (PP0736).

Paragraph PR1.3 (Water Environment)

Whilst SEPA has supported the rewording of paragraph PR1.3, the policy is objected to unless it includes a better reference to the Scottish River Basin Management (RBMP) in this policy or elsewhere in the Plan. It is noted that although the RBMP is cited as an important document relevant to the Plan on Page 10, there is no reference to it elsewhere in the Plan. Also notes that not all waterbodies have been ‘classified’ therefore reference to the RBMP should be made in Policy PR1 and suggests adding a footnote at paragraph PR1.3 (RD0214.A) (PP1219).

SEPA has also requested that the existing footnote 1 in paragraph PR1.3 is amended to emphasise what the required construction method statement needs to specifically address for these sites. Also notes that construction method statements may be required for any development site close to a water body that has the potential to cause pollution to that waterbody, and not just sites adjacent to the River Dee (RD0214.A) (PP1219).

Paragraph PR1.5 (Prime Agricultural Land)

The Scottish Government has requested modifications to policy wording in paragraph PR1.5 in order to meet paragraph 80 of SPP which sets out development considerations for development on prime agricultural land. SPP is clear that development should not be permitted, except where essential within a range of given circumstances, and that where it is necessary to use good quality land for development, the layout and design should minimise the amount of such land that is required (PP0578).

It has been highlighted that there is relatively little prime agricultural land, class 3.1, in Aberdeenshire. Good quality land, class 3.2, is more prevalent and more important to the rural agricultural economy in Aberdeenshire and should be protected from development where possible. Wording should be amended such that “prime agricultural land” is referred instead to “prime and good quality agricultural land”. Also, class 3.2 should be included in the description (PP0733).

Prime agricultural land is a resource that is fundamental to food production and biodiversity, and Bennachie Community Council is concerned that the wording within Policy PR1 does not sufficiently protect prime agricultural land from rural development. The policy is objected to on the basis that testing only the headland (edge of a field), which is already compacted and of poorer quality, gives misleading results to the overall quality of the soil (PP0863).

It is considered that the current wording in paragraph PR1.5 needs to be qualified in respect of other considerations which might outweigh the need to protect prime agricultural land, e.g., where there is a shortfall in the 5-year housing land supply or some other overriding consideration (PP1213 and PP1356).

It is considered that policy wording in paragraph PR1.5 is unnecessarily restrictive, and this precludes the decision maker to undertake a rounded assessment of the proposal. SPP paragraph 29 refers to giving due weight to net economic benefit and responding to economic issues, challenges, and opportunities. It also includes a presumption in favour of sustainable development. These policies set a clear expectation that the decision taker should balance various considerations in their decision, including economic benefits, which will be significant for housing development. It is notable that such wording is included in PR1.1 “In all cases development which impacts on any of these features will only be permitted when public economic or social benefits clearly outweigh any negative effects on the protected resource, and there are no reasonable alternative sites.” This wording should also be included in Policy PR1.5. This change is necessary to make it compatible with SPP paragraph 29 which refers to giving due weight to net economic benefit and responding to economic issues, challenges, and opportunities (PP1306).

Paragraph PR1.6 (Open Space)

There has been an objection to the policy statement that only ‘exceptionally’ would the

development of 'essential community infrastructure' be allowed. It is considered that this would significantly impact on the potential improvements of existing facilities or development that would benefit existing community infrastructure. There is also a concern that some sites are being deemed 'important' areas of open space on sites when they are not 'open space' (PP0193, PP0427, PP0843 and PP1124). It is acknowledged that new areas have been protected in the PLDP for consistency of the policy across Aberdeenshire, however, there remain football pitches, namely at Banff and Pitmedden, that are not protected (PP0193). The words 'exceptional', and 'essential community infrastructure' should be removed from the policy wording (PP0193, PP0427, PP0843 and PP1124).

A change has been sought in the policy wording to account for open spaces which are not specifically identified in the Settlement Statement maps. SPP states that all outdoor facilities should be identified in a LDP (Paragraph 226). This should be rectified by adding the text they have suggested or by undertaking a review of the Settlement Statement maps to ensure these are picked up. It is also requested that reference to sports pitches is replaced with "outdoor sports facilities" to ensure consistency with SPP and the Development Management Planning Regulations (2013), and to ensure that the facilities are covered by national policy provisions (PP0235).

It has been requested that the first sentence in paragraph PR1.6 on developing open space, provides a clear definition of "open" and "green" space, which should include woodland areas (PP0879). It is requested that paragraph PR1.6 includes woods in a list of green spaces that will not be granted planning permission (PP0879).

SEPA has noted and welcomed the amendments they previously requested that have been made to Policy PR1.6 and have no further comments to make. No modification sought (RD0214.A) (PP1219).

SEPA has supported the use of protected land in Appendix 7 to ensure that land which functions as a flood plain for rivers and watercourses is protected from inappropriate development. This ensures that communities have greater resilience to climate change, but also ensures the land continues to serve as green-blue networks within communities, providing amenity and habitat and supporting the health of places. No modification sought (RD0214.A) (PP1219).

Paragraph PR1.7 and Paragraph PR1.8 (Trees and Woodlands)

The policy should refer to the fact that the loss of ancient woodland cannot be mitigated for and also add in text to the first sentence in paragraph PR1.7 so that It is not only woodland on the site but also near development sites that should be protected to acknowledge that development may adversely affect adjacent woodlands through indirect edge effects (PP0877). In the same vein the RSPB have asked for protection of individual trees. They have also asked that the full title of the British Standard should also be included to benefit members of the public who may not be familiar with the publication. The tree survey would aid the assessment of the amenity value of the trees rather than the ecological survey and therefore revised wording is suggested to reflect this. In terms of the ecological survey, the word 'should' should be replaced with 'must' to make it clear that this is not optional (PP1258).

A representee would welcome acknowledgment that the loss of even individual trees and

small woodlands gradually has a high impact on the natural environment. There needs to be a stronger commitment to protect ancient woodland and this should be done with a clear statement in planning documents. Reference should be made to the number of different mapping resources available in order to look at the data available and use this when preparing the Local Development Plan (PP0878). Ancient woodland is a product of centuries of habitat continuity and cannot be replaced. It is requested that paragraph PR1.8 is amended to include “and woodland” in the first sentence after “...damage to existing trees...” and before “...must be minimised...” (PP0877).

Paragraph PR1.10 (Peat and Carbon Rich Soils)

It is considered this policy inclusion is unnecessary and should be deleted as it simply directs you to Policy C3, notes these resources are protected under that policy, and provides no basis for assessing applications. Paragraph PR1.10 also fails to mention these resources are protected under paragraph PR1.1 (PP0424, PP0466, PP0589, PP0643 and PP0736).

Carbon sinks and stores are protected by Policies C3, PR1.1 and PR1.10 but are inconsistent and not in accordance with SPP which groups carbon rich soils as Group 2 interest in terms of the SPP Spatial Framework. SPP which notes significant effects should be substantially overcome. This is a different and less stringent test than set by Policy C3 which simply notes protection from disturbance or destruction. There needs to be consistency across the policies and in terms of how they apply to wind farm developments (PP0467).

SEPA has objected to Policy PR1 on the basis that the additional text and footnote that had been previously requested has not been added to paragraph PR1.10 (or Policy C3 Carbon Sinks and Stores) to ensure that developers are required to carry out a soil or peat survey and management plan, in order to comply with Scottish Government Guidance and be transparent in terms of developer requirements where peat is likely to be present. The requested additional text and footnote should now be included (PP1219).

Education

There is concern that Scotland’s world education rankings continue to fall, and Scotland will drift into ‘below average’ status as Developer Obligations do not fully consider the impact that overcrowding in schools has on the quality of our children’s education. As such, proposes a new policy under Section 12 Protecting Resources to protect educational resources (PP0556).

Policy PR2 Reserving and Protecting Important Development Sites

Paragraph PR2.1

SEPA has welcomed the inclusion of cemeteries within paragraph PR2.1 and that they have also been identified as protected sites in the Settlement Plans. No modification sought (PP1219).

Nestrans has welcomed the first bullet point but suggest that the Strategic Development Plan is also referenced, in particular Schedule 1 “Summary of Potential Transport Intervention Options”. Policy wording should be amended accordingly (RD0227.A)

(PP1241).

Nestrans has highlighted that with regard to the treatment of disused railway lines (notably Formartine and Buchan Way). Aberdeenshire has a number of continuous lengths of disused railway line in its area, some of which have been adopted as Core Paths and provide strategic long-distance recreational routes (Deeside Line, Formartine and Buchan Way), whilst others remain clearly visible on the landscape but have been returned to private ownership (e.g., Ellon to Cruden Bay/Boddam). These assets are referred to in paragraph PR2.1. Some of these stretches of railway line have also been the subject of recent interest regarding the potential to re-open them as railway lines, which in some cases would also entail the creation of alternative recreational routes. The draft Regional Transport Strategy recognises this interest (with work recently undertaken on the section between Dyce and Ellon) but has concluded for the time being it would be difficult to justify the re-opening of currently disused rail lines in the area, but that the lines should continue to be safeguarded from development. No modification is sought in respect of Policy PR2 (RD0227.A) (PP1241).

Concern has been raised about the strength of the policy in protecting disused railway cuttings for the purposes of active travel projects. In particular, the removal of cuttings and embankments that were planned to be part of a community led active travel route along the former railway between Oldmeldrum and Inverurie is an issue. This infrastructure should be protected, and its removal should only be permitted once it has been established this would not hinder potential active travel development. The delivery of the Oldmeldrum/Inverurie travel route has the longstanding support of both Community Councils and Aberdeenshire Council, and was a top priority for Meldrum, Bourtie and Daviot Community Council's future vision consultation (2017). Many disused rail routes are not designated as core paths or currently in use but could provide excellent active travel routes between communities in the north east of Scotland (PP0881).

Whilst the overall intent of the Policy PR2 is supported, it is considered a Map should be appended in the PLDP to show the routes of the "closed railways" which will be protected under the policy. This would be beneficial for the avoidance of doubt, and to add confidence and certainty. This is in line with the desire for map based LDP's. The reinstatement of new local/rural railway services elsewhere in Scotland has been extremely successful, noting in particular the Kintore to Alford line (track bed largely intact). Such services in Aberdeenshire could bring significant benefits in terms of the sustainability of rural communities and future development within them. This would also serve to reduce the pressure on the Aberdeen green belt by providing attractive alternatives to car-based commuting and potentially take significant freight movements off the local road network with associated carbon saving, reduction in congestion and wear and tear on the network. The representee has included a map as an Appendix to their representation which provides further detail to support their position (RD0100.A) (PP0615).

Network Rail generally supports the approach of Policy PR2 and highlights that the continued support of the Council is needed in safeguarding and improving the railway network. There is a potential need for land in proximity to Drumlithie and Laurencekirk to allow formation of new rail loops in connection to Aberdeen and Central Belt rail improvements. These are at an early stage of design. It is requested that the policy wording provides for the general use of land to support future improvements to railway infrastructure (PP0444).

NHS Grampian requests that “health care infrastructure” is included as an additional bullet point within Policy PR2. It should also be recognised that existing social care sites will need to expand in the future and consideration must be given to the expansion requirements of health and social care facilities (PP1222).

Paragraph PR2.2

Scottish Enterprise has highlighted the importance of the ability to import and export carbon dioxide via Peterhead Port and produce hydrogen from natural gas at St Fergus. These are major components of the Acorn Project, this being a critical project for Aberdeenshire and in order to achieve emission reduction targets and maximise the economic benefits of a low carbon future (PP0503). This view is supported by other representees and an appropriate and suitable policy context for, and representation of, the full extent of the Acorn carbon and storage (CCS) and hydrogen projects is sought within the PLDP. Policy wording should be amended to include hydrogen production and identify the need for pipeline corridors associated with the movement of CO² by ship via Peterhead Port (PP0431, PP0503, PP0573, PP0762, PP0899 and PP1145).

Whilst supportive of the policy, acknowledgement is needed that the land at St Fergus Gas Terminal land should be reserved for major oil, gas and carbon capture and storage related development. It is considered the policy wording should confirm that a wider range of low carbon/renewable energy technologies would be supported on the reserved land site at the terminal. This change is required to better reflect the Scottish Government’s ambitions for tackling climate change and net-zero greenhouse gas emissions by 2045. The representee has included a location plan in their representation which provides further detail to support their position (RD0087.A) (PP0598).

Policy PR3 Reuse, Recycling and Waste

SEPA has supported the rewording of the policy section. No modification sought (RD0214.B) (PP1219).

Protecting Resources Policy Map

It is considered that Policy PR1 should acknowledge that the mapping of the Ancient Woodland Inventory is “provisional” and “not definitive” and should “be used with care”, and the Ancient Woodland designation should be removed from the Safeguarding Resources map. Of particular note is the SNH Guidance on Ancient Woodland Inventory (AWI) which states the following: that ancient Woodland comprises land that is “currently wooded and has been continuously wooded, at least since 1750”; there is “no legislation specifically protecting ancient woodland” but, despite this, SNH will seek to use the planning system to protect ancient woodland; the mapping shows the location of “many” of our most valuable woodlands (but not all); the inventory is a “provisional guide to the location of Ancient Woodland” and the inventory is “not definitive” and should be “used with care”. This does not provide a sufficiently accurate or concise base on which to include this in the LDP, does not add certainty and should not be included. It is noted that the Council have historically resisted identifying the SEPA Indicative Flood Map on the Proposals Map on the basis that the mapping is not theirs, could change in-between LDPs, and this would result in confusion. The representee does not see why this would be any different (particularly given the significant uncertainties highlighted about the

mapping) (PP0614).

Appendix 14 Areas Safeguarded or Identified as Areas of Search for Minerals Development

SEPA has confirmed that they have no comments on Appendix 14. No modification sought (PP1219).

The identification of Muirtack (map 38) is supported as an Area of Search on account of there being a shortage of sand and gravel resources in the Aberdeen area. Recent planning applications have shown there are no technical reasons to prohibit mineral extraction in this location (PP0224). However, another representee has objected to the site on account of the pollution from dust and having an adverse impact on the health of nearby residents. This is not a suitable site for a large quarry. Planning applications were previously refused as it was deemed there was no demand for an additional quarry site in the district (PP1121).

There has been an objection to the omission of Nether Park Quarry, Drumoak as a safeguarded mineral resource. The land in question was granted consent for a 10-year period for the continuation of sand and gravel (planning application reference APP/2016/0257, granted on 5 June 2018). As a working gravel quarry, it should be protected from inappropriate development in line with policy PR1 and PR1.9 in particular. It is not clear why this land does not appear in the list included in the Plan. Paragraph 238 of SPP requires LDPs to support the maintenance of a land bank of permitted reserves for construction aggregates of at least 10 years at all times. The principle of development remains acceptable on the site. Therefore, it is requested that Nether Park Quarry is included as a safeguarded mineral resource in Table 2, Appendix 14. In addition, it is requested that land to the west of the site is included as a further area of search in Table 1, Appendix 14 to ensure no other form development takes place that might sterilise the potential working. Also, considering the progressive restoration of the current quarry, it is not envisaged there would be, unacceptable environment impacts should extraction continue to the west of the currently consented area. The representee has included a site plan (RD0182.A) in their representation which provides further detail to support their position (PP0985).

The inclusion of the Blackhills Quarry site within Table 2, Appendix 14 (Map 16) is supported but it is requested that the boundaries are changed to reflect the area granted permission under planning application APP/2019/2369 (approved 31/3/2020). The site will be in line with SPP in terms of keeping the landbank of permitted reserves for construction aggregates of at least 10 years. The representee has included an Appendix (RD0183.A) in their representation which provides further detail to support their position (PP0986)

Modifications sought by those submitting representations:

Policy PR1 Protecting important resources

Paragraph PR1.1

Modify the PLDP to remove reference to the need to demonstrate there are no alternative sites, add a reference to the acceptability of impacts (PP0424, PP0466, PP0589 (additional Paper RD0087), PP0597, PP0643, PP0736 and PP1188), and amend existing wording as follows: "We will not approve developments that have an unacceptable

significant effect upon important environmental resources, or where significant effects cannot be substantially overcome ...” (PP0424, PP0466, PP0589, PP0597 and PP0643).

Modify the PLDP to amend paragraph PR1.1 to, “Developments that have a negative effect on important environmental resources associated with air quality, the water environment, important mineral deposits, prime agricultural land, peat and other carbon rich soils, open space, and important trees and woodland, will only be permitted when public economic or social benefits outweigh any negative effects on the protected resource or it has been demonstrated that appropriate mitigation can be put in place to address any impacts.” (PP1125).

Modify the PLDP to amend paragraph PR1.1 to, “There is a very strong presumption against developments that have a negative effect on important environmental resources associated with air quality, the water environment, important mineral deposits, prime agricultural land, peat and other carbon rich soils, open space, and trees and native and ancient woodland. In all cases development which impacts on any of these features will only be permitted when there are no reasonable alternatives and public and social benefits clearly outweigh any negative effects on the resource and there is appropriate mitigation or compensation. In considering such benefits, the carbon impact of the development and its likely effect on biodiversity shall be considered.” (PP1257).

Modify the PLDP to bring policy wording under paragraph PR1.1 (together with paragraph PR1.10 and policy C3) in line with SPP in terms of how they relate to wind farm developments, and to ensure consistency across the policies (PP0467).

Paragraph PR1.2 (Air Quality)

Modify the PLDP to address the conflict between paragraphs PR1.1 and PR1.2 and clarify how both policy tests would apply to a development (PP0424 and PP0466).

Modify the PLDP to amend policy wording under PR1.2 to insert “unacceptable” before “significant adverse impact” (PP0736).

Paragraph PR1.3 (Water Environment)

Modify the PLDP to add a new (first) footnote at the end of the first sentence, “The current status of a classified waterbody can be found via SEPA’s River Basin Management Planning webpage: <https://www.sepa.org.uk/environment/water/riverbasin-management-planning/>” in paragraph PR1.3 (PP1219).

Modify the PLDP to amend the first footnote to, “Development proposals within the River Dee catchment area may require a Construction Method Statement which addresses the interests of the River Dee SAC.” in paragraph PR1.3 (PP1219).

Paragraph PR1.5 (Prime Agricultural Land)

Modify the PLDP to revise the second sentence in paragraph PR1.5 to, “... For clarity, this includes, as a component of a settlement strategy or necessary to meet an established need, such as essential infrastructure where no other suitable site is available, for renewable energy generation or mineral extraction providing the site will be restored and returned to its original status.” and add a new sentence at the end of paragraph PR1.5 to

read, “Where it is necessary to use good quality land for development, the layout and design should minimise the amount of such land that is required.” (PP0578).

Modify the PLDP to amend “... prime agricultural land” to “...prime and good quality agricultural land.” and include class 3.2 in the description in policy sections PR1.1 and PR1.5 (PP0733).

Modify the PLDP to strengthen policy wording on prime agricultural land to protect quality soil by ensuring test pits are undertaken outwith the headland part of a field to give a more accurate measurement of soil quality (PP0863).

Modify the PLDP to amend the wording in paragraph PR1.5 to reflect that there may be considerations which outweigh the need to protect prime agricultural land (PP1213 and PP1356).

Modify the PLDP to amend the wording in paragraph PR1.5 to include, “In all cases development which impacts on any of these features will only be permitted when public economic or social benefits clearly outweigh any negative effects on the protected resource, and there are no reasonable alternative sites.” (RD025.A) (PP1306).

Paragraph PR1.6 (Open Space)

Modify the PLDP to remove the words “exceptional” and “essential community infrastructure” from the policy wording (PP0193, PP0427, PP0843 and PP1124).

Modify the PLDP to either add the following text to the policy wording or conduct a review of the Settlement Statement maps “Other areas of open space not specifically identified are still protected under this policy.” (PP0235).

Modify the PLDP to replace the phrase “sports pitches” with “outdoor sports facilities” in the second last sentence of the current policy (PP0235).

Modify the PLDP to provide a clear definition of “open” and “green” space, to include woodland areas in the first sentence in paragraph PR1.6 (PP0879).

Modify the PLDP to include woods in a list of green spaces that will not be granted planning permission in paragraph PR1.6 (PP0879).

Paragraph PR1.7 and Paragraph PR1.8 (Trees and Woodlands)

Modify the PLDP to include a statement that the loss of ancient woodland cannot be mitigated against and change the first sentence in paragraph PR1.7 inserting “and near” before “development sites” so that it reads, “This policy establishes a strong presumption in favour of retaining woodland on and near development sites.” (PP0877).

Modify the PLDP to amend wording to paragraph PR1.7 to, “This policy establishes a strong presumption in favour of retaining trees and woodland on and adjacent to development sites. There will be a strong presumption against development resulting in the loss of, or serious damage to, trees and woodlands of significant ecological, recreational, historical, landscape or shelter value. If there are trees or woodland on or adjacent to the application site, the applicant must submit a Tree Survey in accordance with British standard BS:5837 Trees in relation to design, demolition, and construction, to

determine the quality and amenity value of the trees. Where necessary an Ecological Survey and assessment by a suitably qualified professional of the biodiversity of the woodland and habitat, including both its current and potential future benefits, must be submitted. There may be instances where woodland removal is acceptable, for instance, where this would enhance priority habitats and their connectivity or allow peat bog restoration. For any proposals involving the removal of woodland, the Scottish Government Control of Woodland Removal Policy will apply.” (PP1258).

Modify the PLDP to ensure the Ancient Woodland Inventory, Historic OS maps and the Native Woodland Survey of Scotland are referenced and used when preparing the LDP (PP0878).

Modify the PLDP to insert “and woodland” after “existing trees” so that it reads, “Where development is considered appropriate, damage to existing trees and woodland must be minimised and there must be no unnecessary fragmentation of existing or potential woodlands networks.” in the first sentence of paragraph PR1.8 (PP0877).

Paragraph PR1.10 (Peat and Carbon Rich Soils)

Modify the PLDP to delete paragraph PR1.10 (PP0424, PP0466, PP0589, PP0643 and PP0736).

Modify the PLDP to review paragraph PR1.10 together with PR1.1 and policy C3 and where necessary amend these to be in line with SPP in relation to wind farm developments and for consistency with each other (PP0467).

Modify the PLDP to add the following text to paragraph PR1.10 as a new second sentence or include new wording in Policy C3 Carbon Sinks and Stores, “Where this resource is present, a soil or peat survey will be required to demonstrate that the highest quality of soil or deepest peat have been avoided. A soil or peat management plan will also be required to demonstrate that any unnecessary disturbance, degradation, or erosion has been minimised, and includes proposed mitigation measures” and insert a new footnote, “Further information on how to undertake a peat survey can be found in the Scottish Government’s Guidance on “Developments on Peatland: Peatland Survey (2017).” (PP1219).

Education

Modify the PLDP to add a new policy under Section 12, “Policy PR4 Protecting Education Resources. We will not approve developments that have a negative effect on important resources associated with the pre-school, primary or secondary education. In all cases development which impacts on any of these features will only be permitted when public economic or social benefits clearly outweigh the value of the educational resources to the local community, and there are no reasonable alternative sites. The developer will need to provide an eight-year prediction of school roll, class sizes and class numbers that highlights any loss of amenity.” (PP0556).

Policy PR2 Reserving and Protecting Important Development Sites

Paragraph PR2.1

Modify the PLDP to amend first bullet point to insert, “Strategic Development Plan” after “... Local or Regional Transport Strategy.” in paragraph PR2.1 (PP1241).

Modify the PLDP to strengthen the protection of sites needed in the future under Policy PR2 and ensure that disused railway infrastructure is protected in the interests of promoting active travel development (PP0881).

Modify the PLDP to include a Map, as an Appendix, to show the routes of the “closed railways” which will be protected under the Policy, for the avoidance of doubt in Policy PR2 (PP0615).

Modify the PLDP to add a new bullet point in paragraph PR2.1 “Health Care Infrastructure” (PP1222).

Paragraph PR2.2

Modify the PLDP to amend policy wording to provide for the general use of land to support future improvements to railway infrastructure (PP0444).

Modify the PLDP to amend the first sentence in paragraph PR2.2 to, “National Developments that directly affect the area covered by this Plan include proposals for the contribution to capturing and storing carbon, the production of hydrogen from natural gas as a low carbon fuel and making heat generation. Carbon capture and hydrogen production is specifically promoted at the St Fergus gas terminal but also at other locations and pipeline corridors associated with the movement of CO² by ship via Peterhead Port and pipelines from the central belt to St Fergus.” (PP0431, PP0503, PP0573, PP0762, PP0899 and PP1145).

Modify the PLDP to add an additional sentence to paragraph PR2.3 to state, “In addition, appropriate low carbon and renewable energy generation proposals will also be supported at the St Fergus Gas Terminal.” (PP0598).

Protecting Resources Policy Map

Modify the PLDP to remove or amend Policy PR1 (p73) “Protecting Important Resources” to acknowledge that the mapping on the Ancient Woodland Inventory is “provisional” and “not definitive” and should “be used with care”. Remove the Ancient Woodland designation from the Map (p78) (PP0614).

Appendix 14 Areas Safeguarded or Identified as Areas of Search for Minerals Development

Modify the PLDP to remove the Muirtack quarry site (map 38) from Appendix 14 (PP1121).

Modify the PLDP to include the land at Nether Park Quarry, Drumoak as a safeguarded mineral resource in Table 2, Appendix 14, and also include an additional area to the west of the quarry as an area of search for minerals (sand and gravel reserves) to be included in Table 1, Appendix 14 (PP0985).

Modify the PLDP to amend the boundaries of the Blackhills Quarry site at Blackhills of

Cairnrobin within Table 2, Appendix 14 (Map 16) to reflect the area approved in planning application APP/2019/2369 (PP0986).

Summary of responses (including reasons) by planning authority:

Policy PR1 Protecting Important Resources

Paragraph PR1.1

Paragraph PR1.1 is a general statement that sets the policy context for the subsections that follow, and any “important resources” which have not been considered in the remainder of the policy. For different resources these sections provide appropriate relaxation from the overall intent of the policy, to protect critical environmental capital.

The Council notes the support given to the safeguarding of prime agricultural land. No change required.

Introducing flexibility into the policy is not accepted. While it may be the case that an individual application has only minor adverse impact on protected resources, or the impacts may not be significant, the Council contend that impacts may have a cumulative impact and as such the prohibition on development is appropriate. Any statement that development should be allowed if the benefits outweigh the negative effects does not account for cumulative impacts on important environmental resources and runs counter to the concept stated within the second sentence of the paragraph, that there may be an alternative, benign, site for the development. In this context the introduction of additional flexibility would alter the balance in decision-making away from, first, seeking to do no harm. Comparison with the Environmental Impact Assessment methodology is inappropriate as this method is limited in the way that it anticipates potential cumulative impacts associated with other developments which may come forward, this can only be undertaken at a strategic level. The Council notes that only “important” environmental resources are protected in this way, so matters of the significance of the resource in question are embodied within the policy. No change is required

It is wrong to assume that because wind energy is not mentioned in the policy then the Policy C1 is somehow “primary”. Where relevant, all policies of the Plan apply equally. SPP Table 1 only applies to wind farms and is clear that this is consistent with SPP Table 1 Cell 2 where it identifies that wind farms in particular “may be appropriate in some circumstances”, (AD0012, page 39). It is misleading to use text in SPP regarding one development type and make wider generalisations that should apply to all development types. In any case the absolute and clear presumption against development is appropriately qualified in the second sentence of the paragraph. No change is required

The Council does not accept that the text of Policy C3 is inconsistent with paragraph PR1.1. Any development would result in “disturbance and destruction” of peat deposits. Likewise, the Council do not agree that mitigation is an appropriate and acceptable policy response to the potential loss of critical environmental capital. In exceptional cases mitigation may be appropriately considered to be a material consideration in determining a planning application in accordance with the development plan, but the Council anticipate this to be a rare occurrence and not something that should be enshrined in policy. There is no obligation that the Council know of by the Scottish Government that a “mitigation hierarchy” should always be followed. Mitigation is not always a response that

compensates for the loss of important resources. Biodiversity, while a very important element of environmental capital, is covered in its own right by policy E1 “Natural Heritage”. No change is required.

Paragraph PR1.2 (Air Quality)

The comments from SEPA are noted. No change is required.

There is no incompatibility between paragraphs PR1.1 and PR1.2. An absolute prohibition on development that has an adverse impact on air quality could be interpreted as not allowing any development to proceed at all, as impacts on air quality are inevitable, even if these are very minor. It is appropriate to have the qualifier that seeks “significant” impacts to clarify the policy. No change is required.

“Acceptable” impact is a matter of judgement in the context of the individual proposal. Each planning application is determined on its own merits. The Council believe there is a semantic difference between acceptable impacts and significant impacts. No change is required.

Paragraph PR1.3 (Water Environment)

The support from SEPA for this paragraph is welcomed. The Council do not believe that additional references to the River Basin Management Plan (RBMP) is necessary as this was one of the set of key documents that the Council has used in the formulation of the Plan, and to accept giving these documents a greater profile would lead to the argument that all the other strategies that the Council has used identified at PLDP section 2 “Influences on the Plan” should similarly be cross-referenced. While the Council acknowledge SEPA’s request to include reference to the RBMP in the form of a footnote, we see no value in making this reference. No change is required.

The Council also acknowledges SEPA’s request to amend the first footnote regarding Construction Method Statement. The Council do not believe that including a reference as to what elements a Construction Method Statement should contain is appropriate. This is an operational detail, and the standard that any submission should achieve so as to be an acceptable submission in support of a planning application is more appropriately provided through a Planning Advice note and should not be a matter of policy. No change is required.

Paragraph PR1.5 (Prime Agricultural Land)

The Council notes the Scottish Government’s requested changes to policy wording to clarify development considerations for development on prime agricultural land. The Council do not believe that such changes are necessary as the Local Development Plan echoes SPP Paragraph 80 and identifies land required to meet the settlement strategy, the policy contains a clause for the use of such land for limited life proposals and for small-scale development associated with a rural business. In the unlikely event that there be a shortfall in the 5-year housing supply then an immediate revision of the Local Development Plan would result, where impacts on prime agricultural land for any new land releases would be assessed. No change is required.

The matter of whether there should be additional flexibility to allow the development of prime agricultural land is not supported by SPP Paragraph 80 which is very clear on the

circumstances when development could take place. The Council accepts that layout and design should minimise the amount of such land that is required and if the Reporter is minded, to make an amendment, then the Council recommends that paragraph PR1.5 could be modified to add text after the final sentence to read, "...located on prime agricultural land. Where it is necessary to use prime agricultural land for development, the layout and design should minimise the amount of such land that is required."

With regard to the request to broaden the protection of prime agricultural land to class 3.2 and to amend policy wording under 'Protecting Resources' to "prime and good quality agricultural land", the Council do not believe that this would be appropriate. Due to the significant coverage of class 3.2 soil type this could increase restriction on new development dramatically. The classification of prime agricultural land is defined in a Glossary definition associated with SPP (paragraph 80). No change is required.

The Council are aware of the concerns voiced by Bennachie Community Council, and aware of the poor practice of some surveyors to only sample obviously degraded farmland. Where there is doubt in the quality of the independent assessment (insofar that it is not "independent" of the developers' aspirations), such a survey would not be accepted in support a planning application. No change is required.

Homes for Scotland are correct that weight requires to be given to net economic benefit and responding to economic issues, challenges, and opportunities, but the Council believe that this reflects material considerations which, coming to a decision for an individual planning application, may be set with the development plan. It is appropriate that this general principle is reflected in paragraph PR1.1. The position adopted by the Scottish Government at SPP paragraph 80 is clear and it would be inappropriate to add further flexibility to the policy, see AD0012, page 22. No change is required.

Paragraph PR1.6 (Open Space)

The Council note there are concerns with regard to the limits of development permitted on open space to only exceptional circumstances, and only for essential community infrastructure. The policy reflects SPP paragraph 220 which identifies that "Planning should protect, enhance and promote green infrastructure, including open space and green networks, as an integral component of successful placemaking". The Council agree that green infrastructure is "an integral element of places from the outset of the planning process" and one of the cornerstones of consideration of place within Appendix 7 (Settlement Statements) was an early consideration of open space and green networks. It is always the case that proposals for the development of open space can be made as bids to the Local Development Plan and considered in the context of the wider settlement. Therefore, the controls placed on development of open space identified in the Plan to only including community infrastructure, are appropriate. In all cases the policy applies a test of whether the development is ancillary to the existing use, allowing enhancement of such areas during the course of the Plan. No change is required

A site does not need to be included in the PLDP Appendix 7 for it to be granted protection under this policy. Importance is not solely restricted to aspects of use but can equally relate to the juxtaposition of surrounding land uses, and contribution to the character of an area through its contribution to the local landscape. This is confirmed by Planning Advice Note 65: Planning and Open Space paragraph 13, (AD0007). No change is required.

Whether sites meet the test of “importance” can be tested through the protected land designations made in Appendix 7 of the PLDP. In retrospect, Deveronvale Football Club’s ground at Princess Royal Park in Banff would probably meet this test of importance (due to the contribution it makes to the setting of the town centre and Banff Conservation Area), but this would have to be something that is addressed in the Open Space Strategy associated with the next Development Plan, as its protection at this stage would represent a significant addition to the Plan, as would any review of the Settlement Statement maps to pick up all outdoor sports facilities. At this time the definition of such an area as important only provides additional clarity to the application of the policy and does not impact on the judgement, at the time of a planning application, whether an area is, or is not, protected by this policy. At Pitmedden, the site of Formartine United’s football ground is at some distance from the town of Pitmedden and would not be considered to be important to the setting and open space requirements of that village. No change is required.

The Council agree with SportScotland that amendment should be made to the term “sports pitches” within this paragraph, to read “outdoor sports facilities”. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Woodland Trust Scotland seeks definitions in the Plan for “open” and “green” space, and for those definitions to include woods. Types of open space are detailed in Table 1 “Types of Open Space” within Planning Advice Note 65: Planning and Open Space paragraph 13, (AD0007, page 4). This includes “natural and semi-natural greenspaces” which would include woodlands. There is no need to repeat PAN 65 in the Local Development Plan. Trees and woodlands are given specific protection under Policy PR1 Trees and Woodlands, and through Natural Heritage and Landscape policies. No change is required

Comments from SEPA are noted. No change is required.

Paragraph PR1.7 and Paragraph PR1.8 (Trees and Woodlands)

The Council note the request to include a statement that the loss of ancient woodland cannot be mitigated for. However, as confirmed by Scottish Forestry in their MIR response, our policies are currently in line with the Scottish Government’s policy on Control of Woodland Removal (AD0014) and MIR Issues and Actions Papers, AD0040.A, pages 130-143). No change is required.

With regard to the protection of trees and woodlands near or outside development sites, the Council are content that paragraph PR1.7 sentence two protects any serious damage to trees and woodlands that might arise from development. Landscape and recreational impacts are considered within the policy, and so the addition of the term “amenity” is not needed. No change is required.

The Council would agree that the full title of the British Standard referred to in the text (BS 5837) would assist in policy interpretation. A footnote should be included to address this issue. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

It is not considered necessary to amend policy wording with regard to the ecological survey to make it imperative, as such a survey is conditional only “where necessary” and

would be, part of the suite of information required by the development management function if it were thought necessary due to potential ecological impact (as opposed to landscape or recreational impacts). No change is required.

The requested amendment to policy wording is not required. The policy intention is clear as currently stated. Damage to many trees is synonymous with damage to a woodland. No change is required.

Paragraph PR1.10 (Peat and Carbon Rich Soils)

The Council notes the comments that question the necessity for this policy paragraph, but it is included for the purpose of completion and for signposting and therefore should remain. As it refers to Policy C3 and has no policy content in itself, it cannot be inconsistent with that policy. No change is required.

SPP Table 1 relates specifically to wind farm issues whereas the policies in the PLDP relate to all development types. SPP is a material consideration in development management decisions, but the primacy of the development plan is paramount. No change is required.

SEPA's request for additional text and a footnote that had previously been requested to stipulate the requirement for a soil or peat survey and management plan is noted. The Council would reiterate its previous response that it considers there is adequate provision made under Policy C3 to ensure there will be no unnecessary disturbance including mitigation measures MIR Issues and Actions Papers, AD0040.A, pages 130-143). No change is required.

Education

Developer Obligations cannot address matters of revenue funding for staffing of "overcrowded" schools but can, over time, provide any new buildings that allows schools to function according to their predicted school roll. Education capacity is a matter taken very seriously in both the Education Service and by the Developer Obligations Team within the Legal Service. If a need for education infrastructure is identified from a development then this is a key element of the developer obligation package, based upon a roll forecast agreed with the developer. Where a need is identified Policy RD2 requires such a contribution to be made to make the development acceptable in planning terms, and consequently allow a consent to be issued. No change is required.

Policy PR2 Reserving and Protecting Important Development Sites

Paragraph PR2.1

Comments from SEPA are noted. No change is required.

The Council would agree with Nestrans that reference to the Strategic Development Plan should be incorporated within the first bullet point of paragraph PR2.1. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council notes from Nestrans that our continued safeguarding of disused railway lines

is supported. The Council also welcomes the information clarifying the situation regarding potential interest in the re-opening of these as railway lines, but as these are not proposals then the general terms of the policy are appropriate. No change is required.

The concern raised about the protection of disused railways and the request to map the routes is acknowledged. Production of a map of protected sites would be a significant modification to the Plan, resulting in significant re-consultation and neighbour notification. The Council is content that, as railway lines are distinct landscape features, a broad policy approach is justified. No change is required.

It is notable from the representees overall that there is an unavoidable conflict of interest between protecting disused railway lines for their reinstatement as railway lines, and protection of the routes for active travel or recreational uses. The Council maintain that Policy PR2 provides an overarching protection for these interests as it stands. Development of a new rail line would be a major project in itself and issues such as the loss of rights of way and active travel routes would have to be considered in their determination, and particularly with reference to policy P2 Open Spaces and Access in New Developments (paragraph P2.6). No change is required.

At the time of writing, the location of new rail loops in proximity to Drumlithie and Laurencekirk is unknown. The Council is content that as part of a national development, lack of reference to these proposals in the LDP is not a significant omission (see NPF3, AD0004, paragraph 6.7, Key projects of national significance, No 9 High Speed Rail). No change is required.

NHS Grampian facilities are Community Facilities and as such “community infrastructure” within the terms of the policy. Expansion of existing facilities within important development sites is not precluded by this policy, which protects against alternative uses on such sites. No change is required.

Paragraph PR2.2

The importance of making provision for carbon capture and storage, renewable energy projects is acknowledged. Such developments are National Developments under NPF3. Significant land has been safeguarded south west of Peterhead (allocation R2) for servicing National Developments. In addition, substantial land is allocated for major oil and gas related developments around the St Fergus Gas Terminal, although this excludes the coastal strip included in National Grid Gas PLC’s submission site plan. Creation of hydrogen from natural gas would fall within the description of a gas related development. The Council do not believe that the introduction of a very general statement allowing a wide range of low carbon/renewable energy technologies to be developed on the site should be supported, as this devalues the site’s key strategic importance as a North Sea coastal location and the deliverability of the current extensive allocation of land south west of Peterhead which is more suitable for renewable industries that require access to pipelines and to South Peterhead Harbour. The Local Development Plan does not need to refer to a single project, as the Council can anticipate a range of projects to capitalise on Peterhead’s important location. No change is required.

Policy PR3 Reuse, Recycling and Waste

Comments from SEPA are noted. No change is required.

Protecting Resources Policy Map

In response to the comments raised about Ancient Woodland and its mapping, SPP recognises this as an important and irreplaceable national resource that should be protected and enhanced, as should other native and long-established woodlands of high conservation value. The scope of what SPP expects us to protect is wider than that shown on the Native Woodland Survey of Scotland map base. Whilst the Council note the caveats that NatureScot have made on the use of the map we still believe that it is the only tool available to show the location of sites which are likely to meet the definition of "Ancient Woodland". Given that NatureScot's analysis was undertaken using historical mapping, the Council has no reason to believe that the sites that they have identified are not robust. Other indicators of antiquity and current biodiversity may only be identified through a site survey. There is no comparison to be made with the mapping of flooding and Ancient Woodland, as flooding information is a live dataset which is managed by SEPA and will change on the basis of predicting information on the impacts of climate change, whereas the Ancient Woodland is a factual historic dataset, and is unlikely to change unless historic woodland sites are destroyed. No change is required.

Appendix 14 Areas Safeguarded or Identified as Areas of Search for Minerals Development

A position paper was produced by Aberdeenshire Council in October 2019 to analyse issues of the available land bank and the status of existing Areas of Search for Minerals Development in Aberdeenshire, so as to inform Policy R3 Minerals, Policy PR1.9 and Appendix 14 in the PLDP, (AD0181).

Comments from SEPA are noted. No change is required.

The Council welcomes the support for including the Muirtack site (map 38). The site has been subject to a number of planning applications for removal of sand and gravel (reference APP/2017/2425), for the formation of an access road (APP/2019/2724), and for mineral extraction and associated infrastructure APP/2019/2723). All three applications were recommended for approval by Officers but refused by Elected Members contrary to that advice. Member refusal of the proposal was largely based on amenity issues and a demonstrable need for the resources. All three applications were appealed (PPA-110-2359, PPA-110-2398 and PPA-110-2399). The appeal PPA-110-2359 was the first to be issued and the appeal was dismissed, and planning permission refused. The Decision Notice concluded that "Although the SPP is generally supportive of this development I do not consider this to be sufficient to set aside my concerns regarding the impact of quarry traffic on the minor road". It is clear that the mineral reserves are workable, provided difficulties associated with access and local amenity can be resolved. Particularly telling is the discussion by the Reporter in appeal PPA-110-2359 on the sand and gravel landbank where they conclude at paragraph 24 of the Decision Notice that "All indications are that the reserves of sand and gravel in the market area represent a land bank of less than 10 years supply" (AD0071, PPA-110-2359 Decision Notice pages 1-14).

The second and third appeals PPA-110-2398 and PPA-110-2399 were recently granted subject to a number of planning of conditions. It is noted, however that the boundary of the site as per the planning application and appeal differs slightly from the boundary of the map included within the LDP at map 38 which requires to be addressed. The Council

confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council acknowledges that Nether Park Quarry, Drumoak (known as “Site 15, Kirkton of Durris” in the Supplementary Guidance 6 “Areas Safeguarded or Identified as Areas of Search for Minerals Development”) is not included as a safeguarded mineral resource, (AD0034.J). The justification for this is within the position paper Areas of Search and Safeguard for Minerals where it is stated that this site should be removed as it is too small for consideration. Under the consents issued for development up to 2028, there is no land in this area that can, in addition, be safeguarded for future extraction without compromising woodland, the River Dee SAC or residential amenity at Mills of Drum. No change is required.

It is acknowledged that that Blackhills Quarry site map 16 does not reflect the boundaries of the area granted planning permission through application APP/2019/2369 as detailed in their submission. However, the Proposed Local Development Plan was written largely before consent was granted for this extension. The Plan was approved for consultation on March 5, 2020 whereas consent was granted on 31 March 2020. As the purpose of the Appendix 14 sites is to safeguard future minerals sites, and this site now has the comfort of a full planning consent, to continue its inclusion in the Plan either as the original site or with the small southern extension is somewhat meaningless. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Reporter’s conclusions:

Preliminary matter

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue that is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” to Section 12 (Protecting Resources). However, where such matters arise from representations made to the proposed plan they are required to be addressed in the examination. I therefore address these as appropriate below.

Policy PR1 Protecting Important Resources

Paragraph PR1.1

3. The overall aim of section 12 of the proposed plan is to protect natural and environmental resources and to ensure that development would safeguard these, including as a component of fostering sustainable development. A number of representations seek modified wording to component paragraphs of the policy specifically to introduce greater flexibility, for example by specifying that any negative impacts would need to be “unacceptable” for the protection afforded by the policy to bite. This would introduce a need for subjective judgement going beyond whether any effect would be positive, negative or neutral. However, the second sentence in the first paragraph of

policy PR1 recognises that negative effects are to be balanced against potential benefits. Such a balancing exercise would appropriately be undertaken at the development management stage, reflecting an assessment of the detailed information that would be expected to be available at the time of consideration of an application for planning permission. A presumption against negative effects on important environmental resources, as the policy provides, should be retained and no modification is appropriate in this regard.

4. I do not find that there is any inherent inconsistency between the considerations of potential effects on carbon rich soils deriving from policies C3 and PR1, the provisions of both of which (as well as all other relevant policies) may well require to be taken into account in assessing particular development proposals. No modification is required in this context.

Paragraph PR1.2 (Air Quality)

5. As I have commented above, policy PR1 overall acknowledges that negative effects are to be balanced against potential benefits. I do not find there to be any inherent conflict between paragraphs PR1.1 and PR1.2 in this regard. Effects that would be insignificant would be unlikely to be decisive in any assessment, so referring to significant effects in the text is appropriate. No modification is required.

Paragraph PR1.3 (Water Environment)

6. I acknowledge that it is not practicable to include explicit cross-references to all the documents mentioned in section 2 (Influences on the plan). However, highlighting the specific source of information on the classification of waterbodies would add clarity and assist in the application of the policy. Adding a footnote drawing attention to the river basin management plan website, as SEPA requests, would be appropriate and I make a recommendation to this effect. The slight alteration to the wording of footnote 1 on page 73 of the proposed plan, referring to the River Dee SAC, as suggested by SEPA (from “in the interests of” to “which addresses the interests of” this designation), would have no significant effect on the meaning of the text of this part of the policy. No modification is therefore required in that regard.

Paragraph PR1.5 (Prime Agricultural Land)

7. Scottish Planning Policy (paragraph 80) establishes a robust national policy of safeguarding the limited resource of high-quality agricultural land. It recognises that use of such land to accommodate development may be necessary, but only where this is essential. That form of words acknowledges that agricultural land quality is one aspect to be considered in this respect, albeit an important one. The wording of paragraph PR1.5 of the proposed plan would inappropriately preclude development of such land even where this was established to be essential. To be consistent with Scottish Planning Policy, the paragraph should be amended to acknowledge that development may need to be accommodated on prime agricultural land where this is essential, as the Scottish Government representation seeks. I recommend a modification to this effect.

8. With the inclusion of an essential development test, as I recommend, it is not necessary to replicate other aspects set out in paragraph 80 of Scottish Planning Policy. Consideration of these would be an inherent part of the consideration of any particular

development. The council's suggestion of the potential inclusion of text repeating that the use of any such land should be minimised is not therefore necessary. Nor would it be appropriate to modify the wording to increase flexibility in the operation of the policy. To do so, as sought by other representees, would inappropriately reduce the level of protection to be afforded to prime agricultural land, contrary to the aims of national policy.

Paragraph PR1.6 (Open Space)

9. The inclusion of the word "normally" in the first line of the paragraph, and the recognition in the second sentence of paragraph PR1.1 that negative effects are to be balanced against potential benefits, recognises that there may be circumstances where development impacting on open space areas may be appropriate. However, the overall aim of policy PR1.6 is the protection of open space. In this regard, the wording of paragraph PR1.6 is consistent with the provisions of Scottish Planning Policy paragraphs 219 to 233 concerned with maximising the benefits of green infrastructure.

10. Although some open spaces are identified in settlement statements within Appendix 7, the protection afforded by this aspect of policy PR1 is not limited to such defined areas. Although Scottish Planning Policy paragraph 226 provides that sites for new sport and recreation provision should be specified in local development plans, it does not imply that the safeguarding of such facilities provided by paragraph 220 applies only to sites specifically identified. It is not therefore necessary for paragraph PR1.6 to be modified to refer to all open space sites, nor for all such sites to be explicitly identified in the settlement statements. For clarity and to ensure consistency with Scottish Planning Policy, it is appropriate, as the council suggests, for the reference to "sports pitches" to be amended to "outdoor sports facilities", as sought by sportscotland. This would accord with the definition contained in the glossary to Scottish Planning Policy, which in turn draws attention to the provisions of the Development Management Procedure Regulations relevant to such facilities. I make a recommendation accordingly.

11. Although the plan contains no site-specific identification of the Deveronvale FC ground at Banff or the Formartine United ground at Pitmedden, policies in the proposed plan do seek to protect such facilities. Protection is afforded to open spaces generally by both paragraphs PR1.1, and PR1.6, and to sports facilities by paragraph PR1.6. It is not therefore necessary for the plan to be modified in this regard as sought by the respective representees.

12. The glossary to the proposed plan contains a definition of the term "Open Space" (on page 1178). This is wider than, but consistent with, the definition used in the glossary to Scottish Planning Policy. Both definitions draw attention to the civic function of such spaces. Trees are explicitly referred to in the plan's definition of open space, so the protection afforded by paragraph PR1.6 would equally extend to woodland areas. In any event, these are more particularly addressed in paragraphs PR1.1, PR1.7 and PR1.8. No modification is required in response to the Woodland Trust Scotland's representation in this context.

13. Representations relating to the identification of Harlaw Park in Inverurie as protected open space are addressed under issue 34, which covers the settlement statement for Inverurie and Port Elphinstone.

Paragraphs PR1.7 and PR1.8 (Trees and Woodlands)

14. Paragraphs 216 to 218 of Scottish Planning Policy set out national policy relating to ancient and other woodlands. Paragraphs PR1.7 and PR1.8 are consistent with Scottish Planning Policy in this regard but it is not necessary for the proposed plan to duplicate these provisions. The inclusion of a footnote setting out the full title of the British Standard referred to in paragraph PR1.7, as a representee seeks, would appropriately assist clarity and the interpretation of policy. I therefore make a recommendation to that effect, as the council proposes. The reference to minimising damage to trees in paragraph PR1.8 also encompasses impacts on woodlands, without needing a further modification to the text.

Paragraph PR1.10 (Peat and Carbon Rich Soils)

15. Consideration of the potential impact of development on peat and carbon rich soils would also bring into play the provisions of policy C3 (Carbon sinks and stores) in the Climate Change section of the proposed plan. However, I do not consider that paragraph PR1.10 introduces any inconsistency in this regard. The provisions of policy C3 of the proposed plan, and the related footnote on page 84, make appropriate reference to the assessment of impacts in this regard. There is no necessity for duplication in this paragraph and I agree that no modification is therefore required.

Education

16. The impact of development on education resources or capacity are matters addressed by the fourth bullet point of paragraph PR2.1 and by policy RD2 (especially paragraphs RD2.10 and RD2.11). I see no need to introduce further policy provisions in relation to protecting education provision as sought by the community council representee.

Policy PR2 Reserving and Protecting Important Development Sites

Paragraph PR2.1

17. I agree with the council that adding a reference, in the first bullet point of paragraph PR2.1, to the approved Aberdeen City and Shire Strategic Development Plan would be appropriate (in respect of safeguarding transportation projects). I recommend a modification to this effect.

18. I acknowledge, as the council comments, that there may be tensions between protecting physical infrastructure associated with closed rail lines (so as to facilitate their potential re-opening) and the opportunities for the use of such lines as active travel routes or for recreational purposes. It is not reasonably possible for the proposed plan to resolve such tensions in respect of all locations where they may arise. Nor would it be reasonably practicable, as a representee suggests, for the proposed plan to identify (on a map or otherwise) all such infrastructure to which the protective aspect of the policy would apply. Detailed consideration in this regard would be a matter for assessment in the context of any specific proposal for re-use that may come forward. In this context, I am satisfied that the protection afforded to closed rail lines and associated infrastructure in the first bullet point of paragraph PR2.1 is appropriate and that no modification is required.

19. As the council points out, health care facilities would be regarded as community

infrastructure, which the sixth bullet point of paragraph PR2.1 makes reference to. Such facilities would therefore be protected by policy PR2. However, as the definition of “Community Facilities” contained in the glossary explicitly encompasses health facilities, the inclusion of that phrase would give greater clarity as to the intention of policy in this regard, as the representee seeks. I recommend a modification to achieve this.

Paragraph PR2.2

20. Paragraph PR2.2 makes reference to national developments affecting the area covered by the proposed plan, but use of the word “include” makes clear that this is not intended to be an exhaustive list. The absence of explicit reference to hydrogen production and high-speed rail does not conflict with the inclusion of such developments in National Planning Framework 3. It is not necessary for the proposed plan to replicate the content of the National Planning Framework, a revised version of which is in any event in preparation. When approved, this will form part of the statutory development plan along with the proposed plan when adopted. It would be inappropriate for the proposed plan to adopt more prescriptive language as this could potentially conflict with the current, or any future version of the National Planning Framework and the detail associated with these, including any new rail loops that may be contemplated. No modification is required in this regard.

Safeguarding Resources map

21. Because of the small scale of the map on page 78 of the proposed plan, the representation of the areas to which the features presented on it apply is inevitably not detailed. However, the on-line version of the plan includes the ability to zoom in so as to be able to view the map at a larger scale, showing greater detail. The precise boundaries and detailed geographical extent of particular features shown on the map, including areas of ancient woodland as referred to by a representee, and the relevance of these to a development proposal, would appropriately be the subject of site-specific information and assessment through the development management process. The map, notwithstanding the small scale of the paper version, nevertheless provides a useful overview of the spatial distribution of the important elements it illustrates. I agree with the council that it would be inappropriate to remove the ancient woodland notation from the map on page 78. No modification is required to the map or to the policy wording in this regard.

Appendix 14: Areas safeguarded or identified as areas of search for minerals development

22. Planning permission has been granted for the extraction of sand and gravel at the Muirtack site referred to in Table 1 and illustrated on Map 38 on page 1141 of Appendix 14 (appeal decision references PPA-110-2398 and PPA-110-2399). It is not therefore appropriate, as a representee seeks, for the site to be excluded as an area of search for mineral extraction. However, as the council has pointed out, the boundaries of the site illustrated on Map 38 differ in detail from that covered by the planning permissions. A modification to the plan to ensure consistency with the extant permissions is therefore appropriate, as the council proposes. I make a recommendation to this effect.

23. The council acknowledges that Map 16 on page 1151 of Appendix 14 does not accurately reflect the extent of the land where planning permission has been granted for the extension of the quarry at Blackhills of Dunrobin. Deleting the map and the

corresponding entry in the list of safeguarded mineral sites in Table 2 of Appendix 14, as the council indicates had been its intention, would be inappropriate. The importance of protecting the site from development which would be inconsistent with the exploitation of hard rock, as paragraph PR1.9 provides, is rendered all the more relevant by the granting of planning permission in that regard. Modifying the plan so as to accurately to reflect the extent of the planning permission is appropriate and consistent with the approach to be followed at the Muirtack site, referred to above. I make a recommendation to this effect. The corresponding entry for the site in Table 2 of Appendix 14 should therefore be retained and no modification is required in that regard.

24. Notwithstanding my conclusions above in respect of the sites at Muirtack and Blackhills of Dunrobin, as active extraction and subsequent progressive restoration is currently taking place at Nether Park Quarry by an established minerals operator, the promotion of any development that would be inconsistent with mineral extraction would be unlikely. It is not therefore essential that the site of the existing active quarry be identified as a safeguarded minerals site. Mineral resources may exist to the west of the land where extant planning permissions authorise extraction. However, I have no clear evidence which would enable me to conclude that extending mineral extraction to the relatively small area identified in the representation would inevitably be acceptable. Identifying the further area referred to in the representation as being safeguarded for such development is therefore not appropriate. The acceptability of mineral extraction in this area would be a matter to be considered in response to an application for planning permission in that regard. Extraction would not necessarily be precluded if found to be acceptable, notwithstanding the site not being specifically safeguarded in the plan for that purpose. No modification is therefore necessary in this respect.

Reporter's recommendations:

Modify the local development plan by:

1. Adding a footnote linked to the phrase "water bodies" in the second line of paragraph PR1.3 on page 73, as follows:
"The current status of a classified waterbody can be found via SEPA's River Basin Management Planning webpage: <https://www.sepa.org.uk/environment/water/riverbasin-management-planning/>"
2. Adding "essential," before the word "allocated" in the third line of paragraph PR1.5 (Prime Agricultural Land) on page 74.
3. Replacing "sports pitches" with "outdoor sports facilities" in the penultimate sentence of paragraph PR1.6 (Open Space) on page 74.
4. Adding a footnote linked to the reference to "BS 5837" at the end of the third sentence of paragraph PR1.7 on page 75, as follows:
"British Standard for Trees in relation to design, demolition and construction – Recommendations"
5. Replacing the first bullet point of paragraph PR2.1 (Reserving and Protecting Important Development Sites) on page 76 with:
"delivering improvements to transportation including projects identified in the Settlement Statements, the Aberdeen City and Shire Strategic Development Plan, the Local or

Regional Transport Strategy, or the Strategic Transport Projects Review, routes recognised in the Core Paths Plan network, closed railways and their abutments, embankments and cuttings, existing airports and airfields and operational areas of ports and harbours;”

6. Adding the words “facilities and” between “community” and “infrastructure” in the sixth bullet point of paragraph PR2.1 (Reserving and Protecting Important Development Sites) on page 76.

7. Amending the boundary of the area of search for minerals at Muirtack as illustrated on Map 38 in Appendix 14 on page 1141, to accord with the site in respect of which planning permission has been granted for sand and gravel extraction by appeal decisions PPA-110-2398 and PPA-110-2399.

8. Amending the boundary of the area of safeguarded mineral resources at Blackhills of Cairnrobin, as illustrated on Map 16 in Appendix 14 on page 1151, to accord with the site of the planning permission granted for the lateral extension of the adjacent hard rock quarry (planning permission reference APP/2019/2369).

Provision of the development plan to which the issue relates:

Policies relating to climate change

Planning Authority’s summary of the representation(s):

Climate Change Introduction

It has been acknowledged that the statement “possibly the greatest challenge facing the world today” remains valid (PP0924 and PP1141). However, representees have expressed considerable concerns that the climate change section has not been updated to reflect the wide range of Scottish Government climate change legislative and policy ambitions, and associated publications including those on national energy policy and strategy that set out key measures to address this challenge. In particular, the Proposed Local Development Plan (PLDP) should reflect the ‘climate emergency’ declaration and the ambition to achieve net-zero greenhouse emissions by 2045, which includes the 75% cut in emissions by 2030 (PP0420, PP0590, PP0597, PP0639, PP0736, PP0924, PP0994, PP1000, PP1141 and PP1188). Representees have included an Appendix (RD0088.A and RD0212.A) in their representation which provides further detail to support their position (PP0590 and PP1188). In particular, the Climate Change policy wording

should provide further support for renewable energy developments at the scale required to meet energy and climate change targets (PP0924, PP1000 and PP1141). The Climate Change (Emissions Reduction Targets) (Scotland) Act 2019 requires public bodies to lead by example to combat climate change and the level of ambition of the PLDP is disappointing (PP0924).

The Planning (Scotland) Act 2019 is also relevant (PP0639) as it brings in, at sections 3ZA(1) and 3ZA(2) a definition of the purpose of planning “to manage the development and use of land in the long-term public interest” that “anything which contributes to sustainable development... is to be considered as being in the long-term public interest” (PP0924). Recognition of the likely position of the emerging NPF4 is recommended to be included in the PLDP (PP0924, PP1000 and PP1141). This would give the opportunity for the PLDP to align itself with targets on climate change, emissions, sustainable development, and also economic recovery post Covid-19 (PP1141). It is also noted that the Royal Town Planning Institute (RTPI) have stated that climate change should be at the forefront of future planning policy (PP1000).

The socio-economic benefits of renewable energy development should be more broadly recognised as being key to the ‘transition economy’ in moving from oil and gas to a low carbon economy. Also, the ability of renewable energy development to utilise skills already present in the north east of Scotland in the oil and gas sector should be recognised. The representee has included an Appendix (RD0088.A) in their representation which provides further detail to support their position (PP0590)

Climate change policies should highlight the need to facilitate walking, cycling, and public transport ahead of the private car (PP0881 and PP1241). A representee has included an Appendix (RD0227.A) in their representation which provides further detail to support their position (PP1241). Concern has been expressed that the Climate Change section is ‘silent’ on this issue, and therefore policy elements should be included that encourage developments to be located and designed to increase opportunities for active travel, provide ‘low impact’ transport, and reduce ‘high impact’ road transport (PP0881). Nestrans noted that in 2017, 37% of Scotland’s greenhouse gas emissions are accounted for by transport. This emphasises the requirement for land use policies to support reductions in the need for travel, and the facilitation of walking, cycling and public transport, ahead of private car use. The representee has included an Appendix (RD0227.A) in their representation which provides further detail to support their position (PP1241).

Policy C1 Using Resources in Buildings

Paragraph C1.1 and paragraph C1.2

The decision not to seek Platinum Standard for carbon dioxide and energy cost reduction as suggested in the Main Issues Report (MIR) stage, has been welcomed (PP1206, PP0690, PP1125, PP1306 and PP1354). The Platinum Standard would have made many developments unviable (PP1206 and PP1354). However, it is still considered the requirements under Policy C1 are too onerous, and references to Silver and Gold Standards for emissions and water should be removed as these are better dealt with through the statutory Building Regulations processes which are regularly updated to reflect new standards (PP0690, PP1125, PP1206, PP1306 and PP1354). On the other hand, with regard to design/layout/construction of new buildings, it is considered that the

climate change policies are weak and should be strengthened (PP0343). Representees have included an Appendix (RD0159.A and RD0259.A) in their representation which provides further detail to support their position (PP1125 and PP1306)

There are concerns that by stipulating similar measures, as implemented through Building Regulations, this results in a duplication of work. The policy will soon be superseded by updated Building Regulations (due in 2021), and the policy presents information which Planners are not qualified to assess (PP1125 and PP1306). Representees have included an Appendix (RD0159.A and RD0259.A) in their representation which provides further detail to support their position (PP1125 and PP1306). Significant progress has already been made in reducing emissions through building standards reviews and significant further change is already planned. Adding different targets in the planning system simply complicates matters and will jeopardise the efficiencies of scale on new technology which could be achieved by pursuing a Scotland-wide approach (PP1206 and PP1354).

Policy C1 should be re-written to focus on matters which can be directly delivered (PP1125). In securing the Silver Standard measures proposed, it should be made clear that planning policy will not seek greater requirements than the Building Regulations prevailing at the time (PP0690 and PP1125). SPP encourages a holistic approach, and the 'Fabric first' approach should be adopted ahead of the requirement to install low and zero carbon generating technologies. Furthermore, the development industry is at the forefront of delivering sustainable and energy efficient new homes. The Council should focus instead on measures to improve older housing stock across Aberdeenshire which are much less energy efficient (PP1125). A representee has included an Appendix (RD0159.A) in their representation which provides further detail to support their position (PP1125).

Meeting the standards identified in the policy also requires detailed specification of materials, and this level of design detail is not available at the planning stage in most cases (PP1206, PP1306 and PP1354). A representee has included an Appendix (RD0259.A) in their representation which provides further detail to support their position (PP1306).

The Scottish Environment Protection Agency (SEPA) has strongly recommended that paragraph C1.1 should replace the "Silver" with "Gold" for the Target Emissions Rate to promote stronger sustainable design in relation to the Scottish Building Standards. They highlight that other Local Authorities, including Aberdeen City Council, Glasgow City Council, and Perth & Kinross Council have/are updating their policies/supplementary guidance requiring developments to achieve at least Gold Standards by 2020. They also note their disappointment that the preferred option in the MIR of "Platinum" sustainability label was not taken forward into the Plan. The representee has included an Appendix (RD0214.A) in their representation which provides further detail to support their position (PP1219).

SEPA has requested that paragraph C1.2 replaces "Gold" with "Platinum" level for water efficiency to promote stronger sustainable design in relation to the Scottish Building Standards. They add, making more efficient use of water is important in adapting to climate change and protecting wildlife and natural resources, which is of relevance to parts of Aberdeenshire that rely on water abstracted from the River Dee which is a Special Area of Conservation. The representee has included an Appendix (RD0214.A) in their representation which provides further detail to support their position (PP1219).

With reference to the refuelling of alternative fuel vehicles (paragraph C1.1), Nestrans has supported the acceleration of decarbonisation of the current fleet of road vehicles through home electric charge points etc. The representee has included an Appendix (RD0227.A) in their representation which provides further detail to support their position. No modification is sought (PP1241).

Paragraph C1.3

SEPA has welcomed the inclusion of paragraph C1.3, which identifies the circumstances where developments will be expected to consider district heating schemes. No modification sought. The representee has included an Appendix (RD0214.A) in their representation which provides further detail to support their position (PP1219).

Whilst this paragraph briefly mentions alternative ways such as district heating schemes, there is however a lack of recognition that new homes will not be able to be fitted with gas boilers after 2025, and alternative ways to heat and power homes will have to be found (PP0994).

Paragraph C1.4

Whilst NHS Grampian has given their support to the policy, they highlight that health and social care facilities require specialised buildings tailored to specific needs, and therefore it is difficult to meet the requirements laid out in the policy. It is requested that a further exception is added to paragraph C1.4 to state that “specialist buildings are excluded where it can be demonstrated that it would not be possible for targets to be met for reasons related to their specialist nature.” (PP1222).

Paragraph C1.5

SEPA welcomed the inclusion of paragraph C1.5, which sets out what is expected from Energy Statements submitted at the planning application stage. The representee has included an Appendix (RD0214.A) in their representation which provides further detail to support their position. No modification is sought (PP1219).

Policy C2 Renewable Energy

Paragraph C2.1

Representees have welcomed the statement in paragraph C2.1 that renewable developments will be supported where these are appropriately located and sized (PP0425, PP0467, PP0590, PP0597, PP0644, PP0736, PP0924 and PP1141). However, there are concerns that the PLDP renewable energy policies do not adequately reflect the severity of the climate change emergency or the important role of the planning system in helping to achieve the net-zero target (PP0425, PP0467, PP0590, PP0597, PP0644, PP0736, PP0994, PP1141 and PP1192). This does not reflect the aims of the Council’s own Climate Change Declaration (PP0590). The policy, as drafted, does not accurately reflect the approach to renewable energy policy which is set out in Scottish Planning Policy (SPP) (PP1192). A representee has included an Appendix (RD0088.A) in their representation which provides further detail to support their position (PP0590).

A representee objects to the PLDP on the basis that a more positive and flexible approach

is required to enable renewable energy development in the region. The PLDP should align itself with the technologies best suited to delivering a low carbon energy, and the representee promotes onshore wind as being the cheapest form of low carbon electricity generation available to the UK (PP1141).

It is noted that all renewable energy proposals will be considered favourably where they avoid or address any unacceptable significant adverse impacts, and that these impacts are set out in the policy in respect of the relevant forms of renewable energy. The policy should be reworded to be generally supportive of renewable energy developments subject to detailed environmental consideration. Biomass should not be covered in this paragraph but considered in a single biomass category later in the policy (PP1192). In a similar vein SEPA has strongly recommended replacing paragraph C2.1 with a more general statement in the first sentence to cover all possible renewable energy technology, rather than limiting it to specific types of renewables. Wording has been proposed accordingly (RD0214.A) (PP1219).

In the interests of helping to achieve net-zero emissions, it is considered beneficial for the PLDP to provide support for renewable energy schemes that provide a direct supply of renewable energy to a high energy user, such as the St Fergus site (PP0598).

Historic Environment Scotland (HES) has suggested that the term 'built heritage' in paragraph C2.1 is changed to "the historic environment" to reflect all aspects of cultural heritage features and the terminology used for this policy area (PP0743).

Paragraph C2.2

The statement regarding approval of further wind development in appropriate locations is generally supported. However, there are concerns with regard to policy implementation on account of there being no set of criteria against which to assess wind farm applications as per paragraph 169 of SPP (PP0425, PP0467, PP0590, PP0597, PP0644, PP0736, PP0924, PP1141 and PP1188). Clarity is also required in terms of which other PLDP policies apply, notably policies PR1 (paragraph PR1.1), R3 and R4, and aligning with SPP paragraph 169 assessment criteria (PP0590, PP0597, PP0644, PP1141 and PP1188). Representees have included an Appendix (RD0088.A and RD0212.A) in their representations which provides further detail to support their position (PP0590 and PP1188).

It is strongly disagreed that the Strategic Landscape Capacity Assessment for Wind Energy in Aberdeenshire Final Report (2014) ("the Strategic Capacity Report") remains relevant and fit for purpose, and reference to this should be removed (PP0425, PP0467, PP0590, PP0597, PP0644, PP0736, PP0746, PP1000, PP114, PP1188 and PP1192). Although supportive of onshore wind development, and at most be a supporting technical study, the document should not be used as a primary decision-making tool but should be strengthened and updated, and the PLDP should make it clear that this Study will not be relied upon to determine acceptability of proposals (PP0425, PP0994, PP1141 and PP1192). Representees have included an Appendix (RD0088.A and RD0212.A) in their representations which provides further detail to support their position (PP0590 and PP1188).

The particular concerns raised about the Strategic Capacity Report are in relation to how it can be used to determine future applications with it having no scope or flexibility to allow

for 'large' or 'very large' turbines, and since the context has significantly changed in terms of national energy policy, climate change policy and targets, changed technologies, power output, including the cumulative situation (PP0425, PP0467, PP0597, PP0644, PP0736, PP0924, PP0994, PP1141 and PP1192). The 'preferred areas' for onshore wind development are also questioned (PP1141). It is also highlighted that without a strategy for approving renewable energy developments, it is more difficult to reach national energy and climate change targets (PP1000). Policy wording should be amended to include wording to state that a flexible approach to developments should be allowed for large wind farms and turbines (PP1141).

It is noted that whilst the Strategic Capacity Report does not form part of the PLDP, the Spatial Framework which is part of the PLDP does align with SPP Table 1. Reference to the Capacity Report should therefore be removed and with greater emphasis given to the Spatial Framework (PP0425, PP0467, PP0597, PP0644 and PP0736). Identification of large areas of strategic capacity of wind turbine development in the Spatial Framework Map (in the PLDP) highlights the policy conflict, as the 2014 Strategic Capacity Report states there are no areas of Aberdeenshire suitable for extensive wind farms with large turbines (PP0425 and PP0644).

The Scottish Government has submitted that, as written, Policy C2 does not indicate the minimum scale of onshore wind development that the Spatial Framework applies to. To comply with paragraph 161 of SPP the development plan is required to indicate the minimum scale of onshore wind development (PP0578).

Paragraph C2.3

Whilst the first sentence of this paragraph is broadly accepted, the necessity and appropriateness of the remainder of the text within this paragraph is questioned. The wording does not clearly set out the Council's position on repowering and lifetime extensions given these are likely to become increasingly common over the lifetime of the PLDP, including both physical and operational only extensions (PP0425, PP0467, PP0590, PP0644, PP0736 and PP1188). Where turbines are being repowered, policy should make provision for, and support, the best available technology including larger scale turbines (PP0590). The policy should be amended to set out the Council's 'in principle' support for such applications which should be considered on their own merits, and for consistency with the Onshore Wind Policy Statement (2017), with the policy updated to include the climate change emergency and meeting the net-zero emissions target (PP0425, PP0467, PP0590, PP0644, PP0736 and PP0924). Representees have included an Appendix (RD0088.A and RD0212.A) in their representations which provides further detail to support their position (PP0590 and PP1188).

Whilst it is considered the Council are supportive of wind energy and applications for repowering and extensions to wind farms, the policy would be better presented as a list of factors to be considered by all wind farm applications in keeping with SPP paragraph 169, taking into account positive and negative effects, with repowering and extensions separated out into a paragraph of its own, establishing the matters unique to these proposals. Detailed assessment of repowering and extensions should include consideration of the extent to which the proposal makes use of existing infrastructure and resources, and where possible, limit the need for additional footprint (PP1192).

With reference to the sentence 'Existing bases should be reused', it is suggested that this

is amended to include the wording “where possible”. It is considered unreasonable to stipulate this as a policy requirement on account of turbine foundations being of a bespoke design, with possible technical reasons why bases cannot be reused (PP0590, PP0736, PP1141, PP1188 and PP1192). It is also considered unreasonable as this does not take into account modern commercial scale turbines that require greater spacing, with a repowering ‘like for like’ situation improbable (PP1141). Representees have included an Appendix (RD0088.A and RD0212.A) in their representations which provides further detail to support their position (PP0590 and PP1188).

The wording of paragraph C2.3 should acknowledge community benefits of wind energy development, in terms of addressing zero carbon emission targets and funding available to local communities during the lifetime of wind energy developments (RD0212.A) (PP1188).

NatureScot has suggested replacing “larger nacelles” with “larger blades” in paragraph C2.3, as it is more likely that amendments will seek larger blades rather than larger nacelles. The representee has included an Appendix (RD0255.A) in their representation which provides further detail to support their position) (PP1300).

Paragraph C2.4

Whilst Policy C2 has been supported overall, it is suggested that specific reference is made to oil and gas pipelines within the text of paragraph C2.4 to ensure a consistent and clear approach to the safeguarding of oil and gas pipelines (PP0714). It is also considered that the environmental considerations set out in paragraph C2.4 should provide a criteria-based approach to support paragraph C2.3 (PP1192).

Paragraph C2.5

The policy wording for solar panel arrays is supported, however in light of the benign nature of the technology, it is considered the Council could provide more explicit support for solar sites through the PLDP. This would help gain general appreciation and acceptability of solar PV across different types of the countryside including green belt and coastal areas. It is considered that adopting a more permissive approach to solar in the green belt would align with the public mood which would support inobtrusive forms of renewable energy (PP0603).

In comparison with Wind Energy, On-Farm Biomass and Hydro-Electric, it is considered the policy is silent on appropriate siting and location for solar development. The opening line on the solar section should be clear that Solar Photo Voltaic (PV) development can be accommodated on a range of different sites on account of solar proposals having a minimal visual impact especially where mitigation can be put in place. Taking into consideration that the PLDP is recognising the ‘urgent challenges of climate change’, a technology like Solar PV can enhance biodiversity, increase land diversification, and improve the character of the green belt. It is requested that the wording “throughout the countryside” is introduced in the first sentence after “We will approve.... arrays greater than 4kW.” (PP0603).

It is noted that paragraph C2.4 provides protection for paths on wind turbine sites, and it is requested that paragraph C2.5 should include the same level of protection for path routes affected by proposed solar farms. Taking into consideration that solar farm arrays may

cover a large area and can be expected to increase in number and extent in the future, it is considered unlikely that general access rights would apply to solar farms. Therefore, it is of critical importance that their layout is not permitted to adversely affect path routes (PP1311).

Paragraph C2.6

SEPA has strongly recommended that paragraph C2.6 requires new hydro-electric schemes to also consider their possible impact on the wider natural environment, as ancillary development such as access tracks are not situated within the water environment. The representee has included an Appendix (RD0214.A) in their representation which provides further detail to support their position (PP1219).

NatureScot has sought amendments to paragraph C2.6 on hydro-electric schemes to note that decision-making will be primarily concerned with 'significant' effects, and that the potential impact of hydro-electric schemes extends beyond the water environment, but the 'wider natural environment', including terrestrial habitat and landscape and visual impacts for example. The representee has included an Appendix (RD0255.A) in their representation which provides further detail to support their position (PP1300).

Paragraph C2.8

SEPA has strongly recommended that a new paragraph is added after paragraph C2.8 on energy storage, as it will provide certainty to the community and developers that this type of development is considered appropriate and necessary by Aberdeenshire Council. SPP paragraph 167 is cited which states "Development plans should identify areas capable of accommodating renewable electricity projects... or energy storage projects of a range of scales" and paragraph 168, which states, "Energy storage schemes help to support development of renewable energy and maintain stability of the electricity network in areas where reinforcement is needed to manage congestion". SEPA also states that as an oversupply of energy is likely to become more of an issue the closer that Scotland gets to realising its 100% electricity from renewables target, energy storage will be essential to help realise the ambition to become a net renewable energy exporter. The representee has included an Appendix (RD0214.A) in their representation which provides further detail to support their position (PP1219).

Policy C3 Carbon Sinks and Stores

Paragraph C3.1

Concerns have been raised that the policy wording is not consistent with SPP which groups carbon rich soils as a Group 2 interest 'Areas of significant protection' in the SPP Spatial Framework Table 1, in relation to onshore wind farms. This is a different and less stringent test than set by Policy C3 which notes that these resources will be protected from disturbance or destruction. Policy C3, together with the policies under paragraphs PR1.1, PR1.10, should be reviewed to be consistent with SPP and consistent with each other, and clarified as to how they apply to wind energy development (PP0425, PP0467, PP0590, PP0597, PP0644 and PP0736). A representee has included an Appendix (RD0088.A) in their representation which provides further detail to support their position (PP0590).

The Scottish Government has stated that the policy requires a reference to commercial extraction of peat that outlines it will only be permitted in those areas suffering historic, significant damage through human activity and where the conservation value is low, and restoration is impossible. To accord with SPP para. 241 which states “Policies should protect areas of peatland and only permit commercial extraction in areas suffering historic, significant damage through human activity and where the conservation value is low, and restoration is impossible.” It is their view the absence of this statement despite the protection offered by Policy C3, peatlands not matching the criteria set out in SPP could be left vulnerable to commercial extraction (PP0578).

It is considered that the policy should be strengthened in relation to woodland, in particular ancient woodland, on account of this being irreplaceable. A re-wording of the paragraph is requested accordingly (PP0877).

It is considered there should be no requirement to demonstrate no net effect under this policy on the basis that wind farms will have a positive effect on CO². In some cases, it may be beneficial to undertake habitat restoration of peatland areas rather than replanting and the policy should recognise this. New wording is requested in paragraph C3.1 to insert “no net negative effect” and to include reference to compensatory planting or exemption in accordance with the Control of Woodland Removal policy (PP1195).

A representee has highlighted the impacts on biodiversity that damage to peatland and woodland can cause, therefore considers the policy needs to reflect this as well as carbon impacts and encourage opportunities to offset carbon while enhancing biodiversity. Alternative wording is requested to include “carbon assessment tools” to clarify what the appropriate tool might be. There may be instances where trees and woodlands may not be appropriately sited and removal without replanting may be acceptable, the last sentence of the policy contradicts this, and therefore reference to compliance with Policy PR1 Protecting Important Resources paragraph PR1.7 would ensure consistency with the LDP and the Control of Woodland Removal Policy. A re-wording of paragraph C3.1 is proposed to reflect these issues (PP1259).

NatureScot has suggested broadening the wording of Policy C3 (paragraph C3.1) to include deep peat and priority peatland habitat and allowing that the definition of these is set out in the 2016 guidance, rather than trying to define these within the policy itself, otherwise there is some scope for confusion. A re-wording of the first sentence in paragraph C3.1 is suggested which changes “high carbon peat rich” to “carbon rich soils”, includes “deep peat and priority peatland habitat”, and deletes the existing wording “as Class 1, 2 and 5, and greater than 0.5m depth”. The representee has included an Appendix (RD0255.A) in their representation which provides further detail to support their position (PP1300).

NatureScot has requested adding a new second sentence to paragraph C3.1 to reflect the key focus on peat classes 1 and 2 (the nationally important resource) and the protection that SPP currently gives to these areas (SPP para 166). The representee has included an Appendix (RD0255.A) in their representation which provides further detail to support their position (PP1300).

NatureScot has requested amending the second sentence in paragraph C3.1 that deals with the carbon calculator to more accurately reflect the protection that is outlined at SPP paragraph 205. The representee has included an Appendix (RD0255.A) in their representation which provides further detail to support their position (PP1300).

NatureScot also suggested that adding to paragraph C3.1 that where peat is present and may be affected, a peat survey and peat management plan is likely to be required. It is also noted that the focus of such a survey is typically directed at areas mapped as class 1 and 2 peat. The representee has included an Appendix (RD0255.A) in their representation which provides further detail to support their position (PP1300). SEPA has welcomed the additional reference to Class 5 in paragraph C3.1 and have no further comment to make on Policy C3. No modification sought (PP1219).

Paragraph C3.2

The important role of trees in adapting to climate change has been highlighted. The trees provide environmental services, including functioning as carbon sinks. By planning native woodland, settlements can adapt to climate change and are then more resilient and able to absorb and respond to change, especially climate change. It is requested that wording is included to emphasise native woodlands (PP0876).

Policy C4 Flooding

General

SEPA has given their support to the requirement set in the PLDP for a Flood Risk Assessment (FRA) to be undertaken prior to development occurring for many of the sites allocated in Appendix 7, as this will ensure that flood risk is appropriately considered and directed away from medium to high flood risk areas, and that developers are fully informed of the potential flood risk issues affecting the site that may constrain the developable area. The representee has included an Appendix (RD0214.A) in their representation which provides further detail to support their position. No modification sought (PP1219).

Paragraph C4.1

SEPA has objected to Policy C4 unless paragraph C4.1 is amended to clarify that a Flood Risk Assessment (FRA) will be required for a development within an area with an indicative flood risk of 0.5% or greater. It is argued that the current sentence is ambiguous and suggests a FRA may not be required for land with a greater than 10% annual chance of flooding, which is incorrect, as SEPA would request a FRA if a site lies within an indicative flood map extent with a 0.5 (1:200) chance of flooding or greater. SEPA also noted this principle has been taken forward in Appendix 7. The representee has included an Appendix (RD0214.A) in their representation which provides further detail to support their position (PP1219).

With reference to the second sentence in paragraph C4.1, SEPA has requested that the policy adopts the convention of other public bodies and is amended to refer to an area of lower flood risk as that being within the extent of a 0.1% AEP to 0.5% AEP event. They are not aware of any other public body in Scotland that refers to a 1-in-400 years return period (i.e., 0.25% AEP) and as there is no publicly available indicative national mapping of the 0.25% AEP floodplain published. SEPA is unclear how a developer would be able to ascertain whether their site lies within such an area. SEPA argues that the commonly adopted definition across Scotland for an area with a lower risk of flooding (i.e., within the

low to medium category) is somewhere that would be impacted by an event with a return period of between 1-in-1,000 years and 1-in-200 years (i.e., 0.1% AEP to 0.5% AEP). SEPA also noted that the Strategic Flood Risk Assessment that accompanies the proposed LDP refers to this annual exceedance probability (0.1% AEP to 0.5% AEP), as well as paragraph C4.4 of this policy, which refers to lower flood risk as 0.1% AEP (1-in-1,000 years). An amendment to the second sentence in paragraph C4.1 is sought. The representee has included an Appendix (RD0214.A) in their representation which provides further detail to support their position (PP1219).

SEPA has objected to Policy 4 unless the third sentence in paragraph C4.1 is amended to state that development should “not increase flood risk vulnerability”, as there is currently no reference to the redevelopment of existing buildings and the potential for increased vulnerability to flood risk in this or other policies (e.g., Policies B1 to B4, R1 and P3). There must be policy provision to make clear that in most cases, redevelopment in flood risk areas must be for uses that are the same or less vulnerability to flooding as the existing/most recent use, and that this addition is supported by SPP paragraph 263. The representee has included an Appendix (RD0214.A) in their representation which provides further detail to support their position (P1219).

SEPA has objected to Policy C4 unless paragraph C4.1 includes a new footnote within the third sentence to require the redevelopment of buildings to comply with SEPA’s ‘Flood Risk and Land Use Vulnerability Guidance’. It is argued that there is currently no reference to redevelopment of existing buildings and the potential for increased vulnerability to flood risk in this policy, nor any cross-referencing of Policy C4 in other policies that allow redevelopment of buildings. Consequently, existing footnote “12” will require to be renumbered to “13”. The representee has included an Appendix (RD0214.A) in their representation which provides further detail to support their position (PP1219).

SEPA has recommended a word in the first bullet point in paragraph C4.1 is changed from “It is a development to effect flooding...” to “...alleviate flooding...” as it is not clear what is meant, and this modification will make this bullet point more consistent with paragraph C4.5. The representee has included an Appendix (RD0214.A) in their representation which provides further detail to support their position (PP1219).

SEPA has recommended that the second bullet point in paragraph C4.1 is changed to “flood storage and conveyance function...” because conveyance is just as important as storage but more difficult to mitigate if impacted. The representee has included an Appendix (RD0214.A) in their representation which provides further detail to support their position (PP1219).

Paragraph C4.2

With reference to the first sentence in paragraph C4.2, SEPA has objected to Policy C4 unless reference to the minimum of 100 years flood resilience for residential development is removed, as its inclusion indicates that this would be an acceptable approach to enabling residential development within medium to high flood risk areas, which is it not, and would be contrary to SPP, paragraph 263. The representee has included an Appendix (RD0214.A) in their representation which provides further detail to support their position (PP1219).

Paragraph C4.3

SEPA has requested that “Policy PR1.3” is referred to in paragraph C4.3, and that it is simplified to only state that buffer strips will be required rather than also including their purpose. The representee has included an Appendix (RD0214.A) in their representation which provides further detail to support their position (PP1219).

SEPA has requested that paragraph C4.3 includes a new sentence to highlight that wider buffer strips may be required, as developments should avoid the natural river corridor to allow sufficient space for river processes and restoration, as the floods of winter 2015/2016 demonstrated that rivers e.g., the River Dee, can be very dynamic and change course in extreme flood events. In relation to this, SEPA strongly recommends including a new footnote that cross-references the open space policy where wider multiple benefits of buffer strips are covered (i.e., Appendix 10) and refers to Aberdeenshire Council’s buffer strip guidance. They argue open space is a valuable addition to several aspects of the Plan’s aspirations including place making and active travel, so the links to the wider benefits should be made, and that new developments should avoid the natural river corridor to allow sufficient space for river processes and restoration, as rivers can be very dynamic and change course in extreme flood events. The representee has included an Appendix (RD0214.A) in their representation which provides further detail to support their position (PP1219).

Paragraph C4.4

SEPA has strongly recommended that paragraph C4.4 removes the word ‘local’ as the evidence could be of any type (and not just local), for example, it could be from more detailed modelling that becomes available or a new dataset that is produced. The representee has included an Appendix (RD0214.A) in their representation which provides further detail to support their position (PP1219).

Policy C4 – Additional paragraph

SEPA has requested the inclusion of an additional paragraph at the end of Policy C4 to create paragraph “C4.7” on culverts. This is to help reinforce not only Policy C4, but other policies in the Plan, as culverting has a range of harmful and system wide impacts on the environment and can be the cause of localised flooding constricting the natural flow of a watercourse and cause long-term maintenance problems. They add this gives the opportunity to create green-blue infrastructure and better placemaking, and the additional paragraph will help the Policy comply with SPP paragraph 255. It is also requested that a new footnote is included to support the new paragraph on culverts, by referring to Scottish Government’s Surface Water Management Planning Guidance (2018) and SEPAs Culverting of Watercourses – Position Statement and Supporting Guidance. The representee has included an Appendix (RD0214.A) in their representation which provides further detail to support their position (PP1219).

Policy C4 – Footnotes

In relation to footnote 8, SEPA has strongly recommended removing the reference to the 2019 version of the ‘Technical Flood Risk Guidance for Stakeholders...’, as their technical guidance for developers is regularly updated and the most recent version should always be used. The representee has included an Appendix (RD0214.A) in their representation

which provides further detail to support their position (PP1219).

In relation to footnote 10 and its reference to ‘Freeboard’, SEPA has requested the removal of “the allowance made for natural variations” as it is not an accurate or appropriate description of the uncertainties and physical factors being accounted for. Instead, the first sentence of the footnote should read “Freeboard is an extra allowance provided above estimated flood levels...” The representee has included an Appendix (RD0214.A) in their representation which provides further detail to support their position (PP1219).

SEPA has requested that footnote 11 refers to the correct SEPA document on climate change allowance. The representee has included an Appendix (RD0214.A) in their representation which provides further detail to support their position (PP1219).

Climate Change Policy Map

It has been noted that the policy map sets out those ‘areas with strategic capacity for wind turbine development’ as required by SPP para. 162 (PP0597). It is also noted that the map is identical to the one in the current LDP (PP0425). However, the source of this strategic capacity assessment is not stated and there is no reference to what wind turbine height has been considered (PP0425, PP0597 and PP0644).

Efforts made to combat climate change and move towards clean energy are supported, however, the representee has expressed concerns that the Bennachie Special Landscape Area (SLA) is mostly classified as Group 3 in the Spatial Framework for Wind Energy. This should be afforded greater protection and reclassified as Group 2 as the current classification is not in line with Bennachie’s status as an SLA. Placement of wind farms on or around the hill group risks adverse visual impact and reduced recreational value. By reclassifying the area to Group 2, this would allow a greater level of scrutiny over any wind farm applications in the area (PP0746).

Modifications sought by those submitting representations:

Climate Change Introduction

Modify the PLDP to amend policy wording under Climate Change and Vision for the Plan sections to reflect the Scottish Government’s key commitments as set out in legislation in relation to the declared ‘climate emergency’ and ambition to achieve net-zero greenhouse gas emissions 2045 (PP0420, PP0590, PP0597, PP0639, PP0736, PP0924, PP0994, PP1000 and PP1188).

Modify the PLDP to include the following sentence in the Introduction to Climate Change, “...Scottish Government commitment to reducing the effects of climate change through a 75% cut in emissions by 2030, and net-zero greenhouse gas emissions by 2045.” (PP1141).

Modify the PLDP to ensure the Climate Change policy wording supports further renewable energy developments at the scale required to meet energy and climate change targets (PP0924, PP1000 and PP1141).

Modify the PLDP to ensure the Climate Change policy section provides broad positive

support for the socio-economic benefits of renewable energy development, and the 'transition economy' in the north east of Scotland (PP0590).

Modify the PLDP to include new policy elements in the Climate Change section that encourage and facilitate walking, cycling, and public transport modes of travel ahead of the private car (PP0881 and PP1241).

Policy C1 Using Resources in Buildings

Paragraph C1.1 and paragraph C1.2

Modify the PLDP to state within Policy C1 that any requirements to meet emissions and energy cost reductions shall not exceed the Building Regulations prevailing at the time (PP0690 and PP1125).

Modify the PLDP to remove Silver and Gold standards from the policy for emissions and water efficiency (PP0690, PP1125, PP1206, PP1306 and PP1354).

Modify the PLDP to strengthen Climate Change policies in relation to design/layout/construction of buildings (PP0343).

Modify the PLDP in paragraph C1.1 to replace "Silver" with "Gold" for the Target Emissions Rate (PP1219).

Modify the PLDP in paragraph C1.2 to replace "Gold" with "Platinum" for water efficiency (PP1219).

Paragraph C1.3

Modify the PLDP in Policy C1 to recognise that new homes will not be fitted with gas boilers after 2025, and that alternative ways to heat and power homes will have to be found (PP0994).

Paragraph C1.4

Modify the PLDP to include a sentence in paragraph C1.4 under Policy C1 to read, "Specialist buildings are excluded where it can be demonstrated that it would not be possible for targets to be met for reasons related to their specialist nature." (PP1222).

Policy C2 Renewable Energy

Paragraph C2.1

Modify the PLDP to strengthen policy by including reference to the climate change emergency and net-zero greenhouse gas emission reduction target by 2045 and ensure this is reflected throughout Section 13 (PP0425, PP0467, PP0590, PP0597, PP0644, PP0736, PP0924, PP0994 and PP1141).

Modify the PLDP in paragraph C2.1 to introduce a more positive and flexible approach to renewable energy technologies that are best suited to delivering a low carbon energy, recognising that onshore wind provides the cheapest form of low carbon electricity in the

UK (PP1141).

Modify the PLDP to reflect SPP within paragraph C2.1 to re-word this to be generally supportive of renewable energy developments, subject to detailed environmental consideration, with biomass covered in a separate policy category (PP1192).

Modify the PLDP to replace paragraph C2.1 to read, “We will support renewable energy technology developments that are proposed on appropriate sites and of the appropriate design. This support is not at the expense of other policies regarding Natural Heritage, Built Heritage and Protecting Natural Resources. Biomass schemes (energy from biological material derived from living or recently living organisms) will be treated as an industrial process suitable for business land. These may be hazardous developments through their impact on air quality.” (PP1219).

Modify the PLDP to include wording under paragraph C2.1 to state that particular support will be provided for renewable energy schemes that provide a direct supply to high energy users such as the St Fergus Gas Terminal (PP0598).

Modify the PLDP to amend policy wording under paragraph C2.1 to replace ‘Built Heritage’ with “the Historic Environment” (PP0743).

Paragraph C2.2

Modify the PLDP to incorporate into paragraph C2.2 assessment criteria for wind farm applications in compliance with SPP paragraph 169 and clarify which other PLDP policies apply in the assessment of wind farm applications (PP0425, PP0467, PP0590, PP0597, PP0644, PP0736, PP0924, PP1141 and PP1188).

Modify the PLDP to amend policy wording to make it clear that the Landscape Capacity Report will not determine the acceptability of specific project proposals or reference an updated Landscape Capacity Study (PP0425, PP0994 and PP1141) or remove the reference and give greater emphasis to the Spatial Framework which should be updated to reflect SPP Table 1 (PP0425, PP0467, PP0590, PP0597, PP0644, PP0736, PP0924, PP1000, PP1188 and PP1192).

Modify the PLDP to include wording to state “take a flexible approach to developments to allow new large wind farms with large turbines.” (PP1141).

Modify the PLDP to indicate the minimum scale of onshore wind development that the Spatial Framework applies to (PP0578).

Paragraph C2.3

Modify the PLDP under paragraph C2.3 to amend wording to clearly set out the Council’s position on, and ‘in principle’ support for, repowering and lifetime extensions for operational as well as physical extensions, and that proposals will be considered on their own merits (PP0425, PP0467, PP0590, PP0644, PP0736, PP0924 and PP1188). In relation to repowering and lifetime extensions, consistency with the Onshore Wind Policy Statement (2017) and a policy position on climate change emergency and meeting the net-zero target is required (PP0425 and PP0467).

Modify the PLDP to amend wording under paragraph C2.3 by listing the factors to be considered by wind farm applications in keeping with SPP paragraph 169 in a criteria-based approach and separate out repowering extensions into a paragraph of its own. This should set out the matters unique to wind repowering and extensions, ensuring the proposal makes use of existing infrastructure and resources where possible, and limits the need for additional footprint (PP1192).

Modify the PLDP to amend paragraph C2.3 wording to state “where possible” in relation to “Existing bases should be reused” (PP0590, PP0736, PP1188 and PP1192) and include requirements for commercial scale turbines (PP1141).

Modify the PLDP to reflect the community benefits of wind energy development within paragraph C2.3 (PP1188).

Modify the PLDP to replace reference to “larger nacelles” in paragraph C2.3 with “larger blades” (1300).

Paragraph C2.4

Modify the PLDP to change paragraph C2.4 to read, “Turbines must not compromise health and safety (including the operation of existing oil and gas pipelines) or adversely affect aircraft or airfields (including radar and air traffic control systems, flight paths and ministry of defence low flying areas) and/or telecommunications. Unacceptable significant adverse effects on the amenity of dwelling houses, such as from noise, or on tourism and recreation interests including core paths and other established routes used for public walking, riding, or cycling should also be avoided.” (PP0714).

Modify the PLDP to capture the environmental considerations identified in paragraph C2.4 within a criteria-based approach for assessing all wind energy applications (PP1192).

Paragraph C2.5

Modify the PLDP to amend the opening line of paragraph C2.5 to state, “We will approve applications for solar panel arrays greater than 4kW throughout the countryside if: ...” (PP0603).

Modify the PLDP to include an additional bullet point under paragraph C2.5 to ensure public access rights to the area of a solar farm are given similar emphasis to that afforded in policy to a wind farm (PP1311).

Paragraph C2.6

Modify the PLDP under paragraph C2.6 to add, “...and surrounding natural environment” at the end of the first sentence (PP1219).

Modify the PLDP to amend the first sentence in paragraph C2.6 by inserting the words “significant” and “wider natural environment” such that the paragraph reads, “We will approve hydro-electric schemes if they are located, sited and designed to have no significant individual or cumulative adverse impact on the water environment and the wider natural environment.” (PP1300).

Paragraph C2.8

Modify the PLDP to insert, “C2.9 Part of the development of renewable energy and ensuring there is adequacy of supply in the development of energy storage. We will therefore support proposals for energy storage as part of low carbon energy proposals that will be supported as long as they meet other Plan policy requirements.” after the current C2.8 paragraph (PP1219).

Policy C3 Carbon Sinks and Stores

Paragraph C3.1

Modify the PLDP to ensure consistency with SPP (Table 1) and consistency across these policies in the PLDP by reviewing policy C3 together with policies under paragraphs PR1.1, PR1.10 (PP0425, PP0467, PP0590, PP0597, PP0644 and PP0736).

Modify the PLDP to include in Policy C3 a reference to commercial extraction of peat to outline that this would only be permitted in those areas suffering historic, significant damage through human activity and where the conservation value is low, and restoration is impossible (PP0578).

Modify the PLDP in paragraph C3.1 to update the text in the final sentence to insert, “...and green infrastructure” after ‘as part of the open space’ and insert at the end of the paragraph: “... except in the case of ancient woodland where its loss cannot be mitigated for.” (PP0877).

Modify the PLDP in paragraph C3.1 to change the phrase in the second sentence, ‘have no net effect on CO₂’ to: “have no net negative effect...” and add the following new sentence at the end of paragraph C3.1, “In the case of development in commercial woodland then compensatory planting, or exemption, in accordance with the Scottish Government’s Policy on Control of Woodland Removal will be required.” In addition, include in Policy C3 wording to promote habitat restoration in peatland areas (PP1195).

Modify the PLDP to re-word paragraph C3.1 as follows:

“We will protect carbon sinks and stores, such as appropriately sited woodland and high-carbon peat rich soils (defined by Scottish Natural Heritage’s Carbon and Peatland map 2016 as Class 1, 2 and 5, and greater than 0.5m depth), from disturbance or destruction.

Development proposals that may result in the loss of, or disturbance to, peat will only be permitted if carbon assessment tools, such as the carbon calculator for wind farms, is used to demonstrate that the development will, within its lifetime, have no net effect on CO₂ and there are no significant detrimental impacts on biodiversity. Consideration should be given to on and offsite opportunities in order to achieve this carbon balance, for example through peatland restoration or native tree planting. Preferably, these should contribute positively to open space requirements and as part of the green-blue networks within settlements.

Removal of woodland will only be permitted if policy PR1.7 is complied with. Compensatory planting should be carefully located and designed to avoid negative effects on sensitive species or important open habitats”. (PP1259).

Modify the PLDP to amend the first sentence to read, “We will protect carbon sinks and stores, such as woodland and carbon rich soils, deep peat, and priority peatland habitat (as defined by Scottish Natural Heritage’s Carbon and Peatland map 2016 Report ‘Carbon-rich soils, deep peat and priority peatland habitat mapping’, from disturbance or destruction.”) in paragraph C3.1 (PP1300).

Modify the PLDP to add a new second sentence in paragraph C3.1 to read, “Development proposals that may affect areas of class 1 and 2 peat will only be permitted if it can be demonstrated that any significant effects can be substantially overcome by siting, design or other mitigation.” (PP1300).

Modify the PLDP to amend the second sentence in paragraph C3.1 to read, “Development proposals that may result in the loss of, or disturbance to, any peat or carbon rich soils will only be permitted if tools such as the “Carbon Calculator” are used to assess the effects of development on carbon dioxide emissions, and such release is minimised.” (PP1300)

Modify the PLDP to include within paragraph C3.1 the requirement for a peat survey and peat management plan where peat (typically areas mapped as class 1 and 2) is present and may be affected (PP1300).

Paragraph C3.2

Modify the PLDP to change the first sentence of paragraph C3.2 to include the following wording after “including proposals for”: “... native woodlands (including sustainable production focused plantations) using a mix of native and non-native tree species.” (PP0876).

Policy C4 Flooding

Paragraph C4.1

Modify the PLDP to amend the first sentence of paragraph C4.1 to read, “Flood Risk Assessments should be undertaken in accordance with SEPA Technical Flood Risk Guidance [footnote] and will be required for development in the indicative medium to high category of flood risk of 0.5% or greater annual probability (1 in 200 years or more frequent).” (PP1219).

Modify the PLDP to amend the second sentence of paragraph C4.1 to, “Assessment may also be required in areas of lower annual probability (0.1%-0.5% annual probability) in circumstances where other factors indicate a potentially heightened risk or there are multiple sources of potential flooding.” in paragraph C4.1 (PP1219).

Modify the PLDP to amend the third sentence of paragraph C4.1 to read, “Development should not increase flood risk vulnerability [insert new footnote] and should avoid areas of medium to high risk, functional floodplain or other areas where the risks are otherwise assessed as heightened or unacceptable except where:”, with a new footnote introduced after “flood risk vulnerability”, to add “Development should comply with SEPA’s ‘Flood Risk and Land Use Vulnerability Guidance’ in relation to redevelopment.” (PP1219).

Modify the PLDP to amend the first bullet point in paragraph C4.1 to delete “effect” and change to “alleviate” such that the sentence reads, “It is a development to alleviate flooding or erosion of riverbanks or the coast.” (PP1219).

Modify the PLDP to amend the second bullet point in paragraph C4.1 to read, “It is consistent with the flood storage and conveyance function of a floodplain.” (PP1219).

Paragraph C4.2

Modify the PLDP in paragraph C4.2 to amend the first sentence by deleting “... (this is normally a minimum of 100 years for residential development)” (PP1219).

Paragraph C4.3

Modify the PLDP in paragraph C4.3 to replace, “Buffer strips, for enhancement of the watercourse and necessary maintenance, must also be provided for any water body” with “Policy PR1.3 requires buffer strips to all waterbodies.” (PP1219).

Modify the PLDP in paragraph C4.3 to add a new second sentence, “Wider buffer strips may be required to mitigate flood risk depending on the topography or river dynamics.” and add a new footnote number 14: “Further buffer strip guidance can be found in Appendix 10: Standards for Open Space and Aberdeenshire Council’s “Guidance for Developers: Buffer Strips Adjacent to Water Courses and Water Bodies” (PP1219).

Paragraph C4.4

Modify the PLDP to remove the word “local” in paragraph C4.4 (PP1219).

Modify the PLDP to add a new paragraph at the end of Policy C4 “C4.7 We are opposed to the enclosed culverting of watercourses for land gain and will actively seek to discourage such proposals. We encourage the daylighting (or de-culverting) of existing culverted watercourse [insert new footnote].” and include a new footnote number “16” to state “This is supported by Scottish Government’s “Surface Water Management Planning Guidance (2018) and SEPAs Culverting of Watercourses – Position Statement and Supporting Guidance.” (PP1219).

Modify the PLDP to remove “2019” from footnote 8 in Policy C4 (PP1219).

Modify the PLDP to amend footnote 10 in paragraph RD1.2 to read, “Freeboard is the allowance made for natural variations in an extra allowance provided above estimated flood levels ...” (PP1219).

Modify the PLDP to amend footnote 11 in paragraph RD1.2 to read, “Freeboard and climate change allowance advice can be found in SEPA’s “Climate change allowances for flood risk assessment in land use planning.” (PP1219).

Climate Change Policy Map

Modify the PLDP to identify the source of the mapped Spatial Framework for Wind Energy and what scale of development applies, including turbine heights (PP0425, PP0597 and PP0644).

Modify the PLDP to reclassify the area defined by Bennachie SLA boundaries as a Group 2 area in the Spatial Framework for Wind Energy map (PP0746).

Summary of responses (including reasons) by Planning Authority:

Climate Change Introduction

The Council notes the representees' concerns that the 'climate emergency' and the Scottish Government's ambition to achieve 'net-zero' emissions by 2045 are not stated as an ambition for the PLDP. Whilst it may appear to be incumbent upon the Council to set out the new climate change targets, within the lifetime of a LDP, targets and ambitions can change, and have changed in the course of preparing this LDP. While land use planning has an influence on many of the sectors where the Government has identified change will be necessary, it is very difficult to predict what actions they may require to be taken. This LDP could mislead if it were to adopt positions that were made stricter by the Scottish Government. It is better to take a conservative action at this time and await the new policies that will be forthcoming through the National Planning Framework (NPF4). There is nothing in the PLDP that is inconsistent with the Planning (Scotland) Act 2019 requiring the management and development of use of land in so far that it contributes to sustainable development. No change is required.

The Council agrees that climate change should be at the forefront of future planning policy and, as noted above, we have made sustainable development and climate change one of the pillars in the Vision that the LDP is founded upon. The Council maintain that our commitment within Section 4 "The Purpose of the Local Development Plan and its outcomes", paragraph 4.3 to "take on the challenges of sustainable development and climate change", and the overarching statement "Climate change is possibly the greatest challenge facing the world today" demonstrate our commitment to addressing climate change issues and provides the necessary gravitas. No change is required.

Aberdeenshire Council already leads by example to combat climate change issues, as evidenced by the Aberdeenshire Council Environmental and Climate Change Policy (2017) (AD0100). An annual carbon budget figure is set each year to keep the Council on track for its commitment to reduce emissions by 75% by 2030 and Net-Zero by 2045 using 2010/11 as a baseline year. No change is required.

Climate change is a much wider topic than just renewable energy development, which is more appropriately discussed in the context of Policy C2 below. No change is required.

As stated in Section 2, paragraph 2.3 of the PLDP the Regional Economic Development Strategy is an important document that has influenced the PLDP. This recognises that there are a number of key industries in the north east (AD0027, pages 10, 15- 17 and 21) and it would be misleading for the LDP to acknowledge only the socio-economic benefits of renewable energy production. Other industries also contribute to addressing climate change issues. No change is required.

The Council acknowledges the comments regarding the policy elements that are considered missing with regard to 'low impact' transport and the need to encourage walking, cycling and public transport modes of travel ahead of the private car. However, the PLDP reflects these issues in a number of other sections in the Plan, as evidenced by the use of the "umbrella" icon throughout the Plan to show where policy topics make a

contribution to the strategic aim of taking on the challenges of sustainable development and climate change. In Section 4, under paragraph 4.3, specific reference is made to having tested allocations to make sure that planning considers reducing the need to travel and encouraging active travel. Shaping Places Policy P1 Layout, Siting and Design in particular requires development to promote intermodal shifts and active travel. There is therefore no need to repeat these elements in the introductory text to the specific “climate change” group of policies. No change is required.

Scottish Renewables (PP0590) has provided links to their NPF4 supplementary position statements, submitted to the Scottish Government, as further evidence of their views on matters raised in the PLDP. These are not specific to the Aberdeenshire Local Development Plan 2021 and echo the points that they make in their submissions. No change is required.

Policy C1 Using Resources in Buildings

Paragraph C1.1 and paragraph C1.2

The Council notes the industry response which has welcomed our decision which was made following consideration of this matter in the MIR (AD0040.A, Issue 13 Climate Change, pages 146, 148 and 151-152), not to seek Platinum Standard for CO² emissions and energy cost reduction. These standards still have to be developed and proposed by the Scottish Government through the sustainability labelling scheme in the Building Regulations (AD0001, section 7.1) and basing a policy on a non-existent standard would be unwise. SEPA has expressed disappointment at the removal of the Platinum sustainability label, and request replacing Silver with Gold for Target Emissions Rate (TER). The Council’s policy position remains that they should reflect the minimum requirement established in Building Regulations, currently ‘Silver’ for emissions. Above all a realistic target has to be set to achieve cost effective development which is ‘zero-carbon ready’. The Council have experience, over the last ten years, of trying to implement an ambitious policy with little success and cannot take comfort from those few other Authorities who may now be going down that path. No change is required.

The Council would agree with representees that the statutory building standards regulatory process is best placed to enforce sustainability standards. The Council are aware of the potential duplication with the building regulation process and are committed to delivering Planning Advice to ensure that any duplication is minimised, but that wider energy issues (such as heat networks), which the Planning Authority is competent to assess, are given appropriate consideration early in the development of a planning proposal. This advice will inform the content of the ‘Energy Statement’ to be used to demonstrate compliance with the objectives of the policy and commit the developer to actions. The Energy Statement should be an ‘Executive Summary’ of intent tested by the content of the building standards application. This will not be required to specify exactly what materials are used, or provide design details, but instead make assumptions on ways in which the use of materials and design elements will contribute to achieving the Silver sustainability standard. The Council have been advised that the standards required by the Silver sustainability rating will improve as building regulations change, and so it is appropriate to use a standard in the Plan that can reflect current thinking. The Council believe that the Energy Statement will focus thinking on the energy needs for a whole development and does not cause any further complications. No “new” targets have been set that the development industry was not already aware of. No change is required.

The development plan is not an instrument that can be used to improve the energy efficiency of older housing stock, and both Scottish Government initiatives and the Local Housing Strategy are working to this objective. No change is required.

Others consider the climate change policies too weak in relation to the design, layout, and construction of new buildings. The Council are of the view that investment in a “fabric first” approach to construction to reduce overall resource demand within a building is a very important component. It pays dividends for the developer in meeting and exceeding the Target Emissions Rate and reducing the proportion of carbon dioxide that must be met through low and zero generating technologies and water conservation so as to achieve the Silver sustainability label (by reducing the overall CO² generated by the building as a whole). The Energy Statement will require matters of aspect and layout to be considered as wider energy conservation issues. No change is required.

The Council agrees that efficient use of water remains important and as such we have maintained the “Gold” standard or BREEAM level 5 standard for water efficiency. In response to SEPA’s request to raise this to “Platinum” level, this is unreasonable as the Building Standards Technical Handbook has not currently defined this standard. No change is required.

The Council notes Nestrans support for the acceleration of decarbonisation of road vehicles through home electric charge points. The Council would highlight that this is also promoted under Policy RD1. No change is required.

Paragraph C1.3

The Council acknowledges the support SEPA has given to the policy provision we have made for district heating schemes. With regard to the concern raised about a lack of recognition in policy to address the need to provide alternative ways to heat and power new homes other than gas boilers after 2025, the Council do not consider it necessary to reflect this in policy. This is a matter of national policy and common knowledge in the development industry. It would be a statement of fact over which the Council would have no influence should representees object to its inclusion in the Plan. The Climate Change section promotes all forms of alternative technologies, and the housing industry will respond by necessity. No change is required.

Paragraph C1.4

The Council notes NHS Grampian’s support for the Climate Change section and their request for specialist buildings to be excluded from meeting targets where these cannot be met due to their specialist nature. Their submission to the MIR was considered at the time (AD0040.A, Issue 13 Climate Change, pages 146, 148 and 151-152). The Council believe that it would be entirely inappropriate for “specialised buildings” to be exempt from the policy as there will always be a need to minimise the energy used in space heating, use water efficiently, and embrace local renewable energy generation within buildings. The Council are confident that a pragmatic approach would be taken by the Planning Authority regarding the energy use of high energy equipment in such buildings (such as CT and MIR scanners), but it remains appropriate to consider the building envelope in the context of the policy. NHS Grampian, as a public body, are obliged to reduce energy use and conserve water within their operation in the same way as Aberdeenshire Council is,

through efficient construction and energy and heat generation on site and many local NHS facilities display various innovative technologies designed to achieve this objective. No change is required.

Paragraph C1.5

The Council notes that SEPA has welcomed the inclusion of the requirement for Energy Statements to be submitted at the planning application stage. No change is required.

Policy C2 Renewable Energy

Paragraph C2.1

Support for the policy is welcomed. In terms of the climate emergency and net-zero emissions reduction target, the Council maintain that our PLDP statement “Climate change is possibly the greatest challenge facing the world today” remains valid and is a statement that will have longevity over the lifetime of the Plan. No change is required.

With regard to the request to modify paragraph C2.1 to provide a focus on onshore wind, the Council consider there is no requirement for this as the wording is sufficiently positive for all renewable energy. This is in line with SPP, which has a broad approach to renewable energy. Nor do the Council consider there is a need to provide a more generalised statement on renewable energy development with biomass covered separately. A separate issue was noted during the MIR consultation relating to on-farm biomass (by NatureScot and SEPA), which has resulted in its relatively high profile in this paragraph (AD0040.A, Issue 13 Climate Change, pages 147, 150 and 151-152). The Council consider the current wording should remain to set the policy context for renewable energy, including that generation schemes using biomass are treated as industrial, not agricultural or forestry, processes. No change is required.

The policy is consistent with the Aberdeenshire Climate Change Declaration that the Council will “Work with others across the region to ensure that Aberdeenshire reaches Net-Zero by 2045, by promoting energy transition and a circular economy” (AD0100). Commitments within that document to “update to our relevant policies” have been taken out of context as the declaration refers to Aberdeenshire Council’s own, internal policies and not those that manage the workings of others within the area which in planning terms could lead to local declarations that are completely out of step with Scottish Government policy. No change is required.

No further actions are required to create a more positive and flexible approach to renewable energy developments generally. The text stated in the PLDP that the Council will support renewable energy development in appropriate locations, furthers an action on addressing climate change but, reasonably, constrains that development in inappropriate locations in the public interest. No weighting is given in the policy to any one form of renewable energy over another on the basis of cost. No change is required.

The Council does not agree that additional support should be given for renewable energy schemes that provide a direct supply to high energy users such as the St Fergus gas terminal. All proposals for development must meet all of the relevant policies in the Local Development Plan and should not be judged on the final user. No change is required.

The Council agrees that the term 'Built Heritage' in paragraph C2.1 should be changed to "The Historic Environment" for consistency across the PLDP and to reflect all aspects of cultural heritage features. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Paragraph C2.2

The Council notes that representees have welcomed our ongoing support for wind energy developments in appropriate locations, but that concerns are voiced that there is no criteria-based approach against which to assess wind farm applications as per SPP para 169, and there is a lack of clarity as to which other PLDP policies apply in the assessment of applications. Most policies of the Plan apply to all development proposals. Paragraph PR1.1 is a broad statement of intent regarding the scope of those resources that should be protected in the public interest and remains valid for all development types. Some policies relate to the specific development types. The Council notes the relevance of policies R3 Minerals and R4 Hill tracks to wind energy developments and stand by these policies as statements of our intent regarding these uses within a larger development proposal, the objective of which is to erect a wind turbine. No change is required.

SPP gives 19 elements which require to be considered in the determination of any proposal (AD0012, paragraph 169). Within SPP none of these is given greater weight than any other. Three of these are intrinsic to wind energy proposals and make no contribution to the decision-making process on whether an individual site is appropriate but are instead encompassed in the general support for renewable energy proposals (net economic benefits, contribution to renewable energy generation targets, effect on greenhouse gas emissions). Paragraphs C2.2, C2.3 and C2.4 seek specific consideration of landscape capacity, environmental effects, cumulative impacts, aviation, telecoms, residential amenity, tourism and recreation and public access routes). At paragraph C2.9. the Council identify that bonds or legal agreements may be used to ensure the removal of visible renewable energy structures. The policy refers to "other policies regarding Natural Heritage, Built Heritage and Protecting Resources". Within these policy groups individual policies address issues of natural heritage, landscape, scheduled monuments, listed buildings, water quality, and carbon rich soils. Section 14, The Responsibilities of Developers sets out what the Council expect from developers in terms of planning obligations. No change is required.

In essence only three elements from the list in SPP are not addressed by the PLDP: Impacts on road traffic and on adjacent trunk roads are outwith the expertise of the Planning Authority to evaluate and are generally advised to us by the Roads Authority when significant impacts are identified that may result in modification or refusal of an application. Finally, "opportunities for energy storage" as a consideration for whether a wind turbine is in an appropriate site would seem to be an inconsequential consideration within the debate. Therefore, the Council are clear that the policy does adhere to SPP paragraph 169 and that no change is required.

The Council does not agree that the Strategic Landscape Capacity Assessment for Wind Energy in Aberdeenshire Final Report (2014) (AD0174) is no longer valid or fit for purpose. The comments received to the Proposed Local Development Plan are very similar to those received and considered in the MIR (AD0040.A, Issue 13 Climate Change, pages 146-147, 149 and 151-152). No change is required.

The Council would agree that at its core the Landscape Capacity Assessment is a technical study, but it also represents a clear independent and professional view of the capacity of the Aberdeenshire landscape to accommodate wind turbines of different scales. This is a matter identified in SPP (AD0012, paragraph 169). This advice exists nowhere else. It provides consistency for development management pre-application advice, and clarity for the development industry regarding the scale of wind turbine development which Aberdeenshire Council has agreed is appropriate across the area. Even though it is now six years old it still remains very valid, having taken into account those turbines that have been granted consent at the time but have not yet secured a licence to connect to the National Grid. There is a significant legacy of consents which have to be assessed in coming to a decision. No change is required.

In 2019 the author of the Landscape Capacity Assessment confirmed that the views expressed regarding large and very large turbines in the Aberdeenshire landscape remained true, even in the face of the larger scale turbines now coming on to the market. Matters of national energy policy, climate change policy and improvements in technology do not alter the capacity of a landscape to accommodate wind turbines. The Landscape Character Assessments used at the time have been superseded by revised assessments but remain valid in the context of the study. The core advice element i.e., whether a landscape is a 'turbine landscape' and cannot accommodate more turbines without significant adverse effect, remains valid.

However, the Council recognises that the perception of the scale of impact that we can accept is likely to have changed as communities become accustomed to the turbines that have been built. Certain parts of the Landscape Capacity Assessment guidance may need to be updated in the coming years (particularly the datum of what has been approved and built). An early refresh of the guidance would be appropriate, and a footnote could be added to highlight this. The Council confirms that it intends to address this issue through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Spatial Framework was approved by Scottish Ministers in the Aberdeen City and Shire Strategic Development Plan 2020 (AD0016, page 43, Figure 7) and is replicated in the Climate Change policy map on page 86 of the PLDP. The map's key illustrates that in the group 3 tier is an "area for potential subject to detailed criteria". SPP is clear in paragraph 169 that landscapes and visual impacts, and cumulative impacts are legitimate considerations. Therefore, there are no inconsistencies either within the Plan or with SPP from referencing the Landscape Capacity study within the policy. No change is required.

In response to the Scottish Government's requirement for Policy C2 to indicate the minimum scale of onshore wind the Council note that this is not a mandatory requirement, but that we "should" include such information. Aberdeenshire Council agree that the minimum height of turbines, as detailed in the Strategic Landscape Capacity Assessment for Wind Energy in Aberdeenshire Final Report (2014) paragraph 2.3.2 Wind Energy Development Types is less than 15m to blade tip as these are not considered to have the same qualities of scale, prominence, and widespread visibility that lead to the wider cumulative impacts that characterise larger turbines (blade tip higher than 15m). No change is required.

Paragraph C2.3

The Council's 'in principle' position on supporting repowering and lifetime extensions is clear within the policy. The Council do not believe that any form of presumption towards the "best available technology" is an appropriate direction to take as, in the public interest, we are more concerned with potential adverse effects of the proposal rather than the technology that it uses. The Council are also clear that the environmental impacts of a wind turbine proposal are based on its size and location, and that if the replacement turbine is of the same scale and the predicted impacts are the same then "lifetime extension" is usually appropriate. It would be inappropriate to consent to a modest turbine, with no adverse impacts only for it to be replaced (even before it was built) by a much larger, possibly damaging, installation with no public scrutiny. In that context, where material differences are present, a planning application would be required. With regard to the climate emergency and meeting net-zero target emissions, the Council have embedded this in our overall policy position that we will tackle climate change and adaptation. No change is required.

As discussed above, the Council has addressed all of the issues (except energy storage) that are to be considered for any wind turbine proposal within this and other policies, no separate list is required. The only change for a "re-powered" site to a new site is that material weight would be placed on the previous use, and evidence assessed to ensure it remained a benign proposal at that scale and location. No change is required.

The Council does not consider it necessary to amend wording to include references such that existing bases should be reused "where possible". The policy wording as written serves the purpose in that it states "should" rather than "must". No change is required.

The Council's support for the development of wind turbines intrinsically recognises the value that they may give to the landowner, and by virtue of a discretionary payment, to the community itself. However, this latter element is not a valid planning consideration as there is no obligation on the developer, to make such a payment, in order to make his proposal acceptable in planning terms. SPP confirms that such negotiations, through the Local Authority, to secure community benefit should take place once consent is granted (AD0016, paragraph 173). This ensures that the prospect of any community payment cannot influence the planning decision-making process in any way.

NatureScot's suggestion to replace "larger nacelles" with "larger blades" is agreed. The Council wrongly assumed that larger blades would require a larger nacelle, and that the nacelle was the collective term for the part of the turbine at the top of the tower. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Paragraph C2.4

Oil and gas pipelines are protected by the implementation of Policy P4 Hazardous and Potentially Polluting Developments and Contaminated Land and do not require specific reference in this policy. No change is required.

The policy under which any renewable energy proposal will be considered is the generic Policy C2. Repetition of text is unnecessary when all policies of the Plan apply to relevant developments. No change is required.

Paragraph C2.5

Support for the solar panel policy is welcomed. However, the Council does not agree that the policy needs to go further in its support for solar farms, nor is it appropriate for there to be explicit promotion of development in the green belt and coastal areas as this would contradict Policy R1 Special Rural Areas. It would also be inappropriate to make such a bold statement to the effect that “solar proposals have a minimal visual impact” as this will depend on the site being considered. The Council agrees that public appreciation and understanding of solar panel technology is important, however this is for the industry to promote in ways it sees fit e.g. on-site outdoor interpretation panels such as provided on wind farm sites. No change is required.

Outdoor access rights would always be taken into consideration for solar farm applications, as per all types of development. Whilst the Council recognise that security and public access present conflicting needs on such sites, these issues are for the planning application process to resolve, possibly through path diversion as one option. Policy P2 (paragraph P2.6) protects existing public rights of way and promotes new opportunities for informal recreation. No change is required.

Paragraph C2.6

The Council notes that SEPA and NatureScot highlight the potential impact of hydro-electric schemes extend beyond the ‘water environment’. The Council does not agree that additional wording should be included with reference to the ‘surrounding natural environment’ as all policies apply and if significant adverse impacts were identified on natural heritage or the built environment then policies E1, E2, HE1, and HE2 would apply. The Council also does not agree with NatureScot’s request to emphasise the ‘significant’ effects of schemes, as this would be inconsistent with the Natural Heritage and Landscape policies which refer to unacceptable or unacceptable adverse impacts. No change is required.

Paragraph C2.8

Despite the advice from Scottish Government in SPP (AD0012, paragraph 167) that development plans should identify areas capable of accommodating energy storage projects the Council remains of the view that either such facilities would be geographically specific (such as pumped storage hydro-electric schemes) or would be related to the National Grid 400Kv network. In this context the potential areas capable of accommodating such facilities within the LDP area would be very large and their identification in the Plan would not assist the developer, and could only alarm the public, given the very infrequent incidence of such proposals. At Peterhead, and in accordance with NPF3 (AD0004 paragraph 3.41) the Council have identified a large area ‘R2’ which is reserved for development associated with Carbon Capture and Storage and other major energy developments set out in NPF3. As this is a major hub for the grid network, and is being proposed for national and international interconnectors it fulfils the aspirations of SPP. No change is required.

Policy C3 Carbon Sinks and Stores

Paragraph C3.1

In relation to the Policy C3 Carbon Sinks and Stores the Council are entirely comfortable

that the wider interpretation that they use, compared to SPP (AD0012, page 39 Table 1: Spatial Frameworks). The Council's interpretation is entirely appropriate and based on advice provided by NatureScot (see PLDP page 84, footnote 7). Table 1 refers to "carbon rich soils" but this is only part of the sum of carbon sinks within Aberdeenshire. Within the LDP policy, the protection extends to Classes 1,2 and 5 in the Scottish Natural Heritage Carbon-rich soils, deep peat, and priority peatland habitat mapping Consultation Analysis Report (2016) (see AD0011. These classes only relate to areas where there are priority habitats (as defined in the UK Biodiversity Action Plan) and / or deep peat (a surface peat layer of greater than 50cm). Classes 1 and 2 taken together identify the nationally important resource and NatureScot suggest protection of only Classes 1 and 2. The Council do not seek to define high carbon peat rich soils but refer to NatureScot's own definition to provide absolute clarity. NatureScot have confirmed in correspondence that "there is probably some outstanding confusion over how Councils feel they are expected to consider Class 5 peat" and that they "think that it is reasonable that the key focus is on Classes 1 and 2 (the nationally important mapped interest). But where peat is present, applicants are required (by SPP) to assess the likely effects of the development on carbon emissions and aim to minimise this release" (AD0136). The Council note SEPA's agreement with this position. No change is required.

The objective of the Plan is to maintain, and if possible, increase, carbon stored in biotic material within Aberdeenshire. The use of the Carbon Calculator (see <https://informatics.sepa.org.uk/CarbonCalculator/index.jsp>) is a recognised and accepted methodology for assessing whether the impact of a development can be offset by the carbon savings that result from its development. The Carbon Calculator was developed specifically to address the impact of wind farms on carbon rich soils but is transferrable and represents our preferred "carbon assessment tool". It is equally applicable to damaged peatlands, meeting the Scottish Government concerns that the Council do not accord with SPP paragraph 241 (which permits commercial extraction in areas which have suffered historic, significant, damage through human activity and where the conservation value is low, and restoration is impossible) (AD0012, paragraph 241). No change is required.

NatureScot propose to replace the references to high carbon peat rich soils to include definitions that include matters of habitat conservation which are already addressed elsewhere in the Plan. Likewise, their references to the need for peat surveys and peat management plans is out of context for this policy, which is effectively a restrictive policy based on the best geographical data available. SPP requires that applicants should assess the likely effects of development on carbon dioxide (AD0012, paragraph 205). The Carbon Calculator is an example of an assessment that could be used to meet this obligation. No change is required.

There is no inconsistency between policy C3 and paragraphs PR1.1 and PR1.10 of the PLDP, although it is accepted that conservation of carbon sinks and stores could have been placed in the Protecting Resources section. That was a choice the Council considered but dismissed as it felt that carbon sinks and stores fell more neatly into the Climate Change section. A cross-reference links the two sections. In any case, all policies of the PLDP apply, no matter which section they are placed in. No change is required.

Comments relating to there being a need for policy to include text that the objective should be for "no net negative effect" is unnecessary, as that would be the outcome of a positive

result from the Carbon Calculator. The Council are not convinced that “wind farms have a positive effect on CO²” and that the requirement to demonstrate no net effect should be waived for this development type. If a particular proposal will indeed have no negative effect, then the Carbon Calculator is an appropriate tool to show this. No change is required.

In relation to the request to strengthen policy in relation to woodland, it is considered that all woodland, including ancient woodland, is sufficiently and appropriately protected under the Protecting Important Resources, and Natural Heritage and Landscape policies. No change is required.

Planting to compensate for carbon store loss is currently an inexact science and is likely to show an immediate loss of carbon from the environment, until the trees grow to a size where they make a positive contribution to the carbon balance. It is unlikely to make a significant contribution to the net-zero carbon target of the Scottish Government before 2050. It is not an approach that the Council favour, preferring instead to avoid impacts rather than compensate for them. Compensatory planting for loss of woodland needs to consider aspects of amenity and recreation as well as carbon and wildlife, resulting in our requirement for any compensatory planting to be associated with the open space requirements of existing settlements. No change is required.

Impacts on Biodiversity are addressed under natural heritage policies, and all policies of the Plan apply to development proposals. Policy P1 requires all developments to identify measures that will be taken to enhance biodiversity. The Council are aware that there may be instances where trees and woodlands may not be appropriately sited, but we do not agree with RSPB that the policy prevents replanting elsewhere. Paragraphs PR1.7 and C3.1 are consistent in that both introduce conditions for the removal of any woodland with PR1.7 using “loss of trees and woodlands.... will not normally be permitted” whereas C3.1 uses the phrase “will only be permitted”. Both policies refer to the need for compensatory planting should tree loss occur. No change is required.

Paragraph C3.2

In relation to native woodlands raised by the Woodland Trust Scotland, a key aim of the Forest and Woodland Strategy is to ‘Promote trees and woodlands to aid Scotland in mitigating and adapting to climate change.’ It also supports the planting of native woodlands (AD0102, Pages 3, 11 and 17). The Council do not consider it appropriate to elaborate further on the wording: ‘proposals for woodland’, within paragraph C3.2. No change is required.

Policy C4 Flooding

General

SEPA’s support for the requirement for a FRA to be undertaken for allocated sites in Appendix 7 is welcomed. No Change is required.

Paragraph C4.1

SEPA points out an anomaly. The use of the range 0.5% to 10% reflects the indicative flood maps used to scope flood risks in the development management process, but clearly a risk higher than 10% would be as unacceptable as a risk of 0.5-10%. The

Council confirms that it intends to address SEPA's comments through non-notifiable modifications, as set out in the List of Non-Notifiable Modifications.

SPP sets out a framework that LDPs should use (AD0012, paragraph 263). In this framework it sets out three classes of risk, phrasing each as a range (e.g., Low to medium risk (1:1000 to 1:200 years)). SPP identifies that it is not possible to plan for development solely on the basis of calculated probability of flooding and introduces additional factors such as the effects of climate change, including an allowance for freeboard (AD0012, paragraph 264). Flood Risk Assessments may be required at the upper end of the probability range (i.e., close to 0.5% risk, a risk of more than 1 in 200 years Probability). The policy remains consistent with SPP insofar that it identifies a range of flood risk circumstances at the upper end of the low to medium range where assessments should take place. That no other Authority provides this clear guidance is immaterial. A 0.25 (1 in 400 year) annual risk could actually be lower than the nationally accepted 1 in 200 year, plus climate change allowance, plus freeboard. The PLDP makes it clear that the 1 in 200-year risk is not a realistic threshold when these issues are also considered. No change is required.

Despite SEPA's assertions, indicative mapping is only a theoretical guide to flood risk and while proposals under 0.5% (1 in 200 year) annual probability are almost certain to fall beneath the threshold, these maps do not define the flood risk of a particular site. Sites which do require a Flood Risk Assessment will be between the 0.5 to 0.1 (1 in 200 and 1 in 1000) annual flood risk area due to climate change and freeboard and it is misleading to use the boundary of 0.5 annual risk as a definitive boundary. The policy merely seeks to be clear on this issue. No change is required.

SEPA's request that paragraph C4.1 should be amended by including a statement that "development should not increase flood risk vulnerability" is unfounded since paragraph C4.2 refers to "increased severity of flood risk elsewhere". Likewise, the introduction of the term "re-development" is unnecessary as in planning terms re-development will constitute a form of development. There are no inconsistencies or omissions, and no change is required.

The Council agrees that the term "alleviate flooding" and that the use of the term "conveyance" are more accurate and clearer interpretations of the terms and improves the policy. The Council confirms that it intends to address these comments through non-notifiable modifications, as set out in the List of Non-Notifiable Modifications.

Paragraph C4.2

SEPA's desire to see the removal of the phrase "this is normally a minimum of 100 years" from the paragraph C4.2 is unfounded as there are no realistic projections of flood risk beyond the year 3020, one hundred years into the future. Use of this period is appropriate. The purpose for asking for flood risk resilience within the lifespan of the building is to encourage "hard" alleviation which is a feature of the building as built and not a temporary solution such as plastic skirts which will not last the test of time. The use of 100 years is to avoid (relatively) short-term solutions, argued on the basis that the building itself will not last a reasonable lifetime. The Council cannot expect flood resilience to such an extent that the risks are removed in perpetuity. No change is required.

Paragraph C4.3

SEPA's request to have a direct cross-reference in Paragraph 4.3 to policy PR1.3 is unfounded as the reference is found in the following paragraph, through a footnote. Planning Advice has been prepared that details best practice in the creation of buffer strips and what Aberdeenshire Council would expect in a planning application. No cross-reference is required to the policy P2 Open Space and Access in New Development as this policy would apply independently of any obligation for buffer strips, and buffer strips would form a useful part of the green-blue network. Paragraph C4.4 clarifies that buffer strips should be located in areas of potentially lower risk. Matters such as the location of green-blue networks need to be assessed as part of any developments wider landscaping plan. No change is required.

Paragraph C4.4

The Council do not agree with SEPA that the word "local" should be removed in terms of evidencing heightened risk of coastal flooding as local site circumstances (such as a soft substrate or an open landscape with respect to storm surges) may increase the risks. The term does not refer to "local" modelling of predicted flood risk. No change is required.

Culverting of watercourses is accepted bad practice and would be prohibited through the use of paragraph C4.2, which seeks to avoid increased severity of flood risk elsewhere. Again, the emphasis of the Plan is through promotion of green-blue networks as part of the open space obligations, not featureless culverts. The Council do not believe that an additional clause is required to comply with the principles set out at SPP (AD0012, Paragraph 255). No change is required.

Throughout the Plan there are references to documents that are likely to be updated and revised throughout the life of the Plan. The footnotes represent the most up to date publications on which the Plan has been based. If updated documents are published prior to adoption of the Plan the Council will make the appropriate changes. No change is required.

Climate Change Policy Map

The strategic capacity assessment was developed in-house through a sieve mapping technique. It is Aberdeenshire Council data, which was provided to the Strategic Development Plan Authority for inclusion in the Aberdeen City and Shire Strategic Development Plan 2020 and approved by Ministers with that document. There has been no material change to the criteria used to produce the strategic capacity map since it was developed for the LDP 2017. The Council accept that it has not included the 15m threshold for turbine size that Aberdeenshire uses for wind turbines, and amendment of the key to this effect would be appropriate. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council note the representee's concerns regarding Bennachie SLA being mostly classified as Group 3 in the Spatial Framework for Wind Energy. This is a dataset classified by the Scottish Government. Local landscape designations are non-statutory and not considered within the Government's classification as per national and international designations. The SLA is afforded protection under Policy E2 in the PLDP. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan, or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue that is unresolved, they will not be addressed in my conclusions.
2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” to Section 13 (Climate Change). However, where such matters arise from representations made to the proposed plan they are required to be addressed in the examination. I therefore address these as appropriate below.

Introductory text

3. The introductory paragraph to Section 13 Climate Change of the proposed plan is unchanged from the equivalent paragraph in the adopted local development plan. A number of representations express the view that this does not lay sufficient stress on, or adequately draw attention to, the nationally applicable policy and legislative context in relation to climate change matters, which have moved on significantly since the preparation of the existing plan. In this regard, representees draw attention, amongst other matters, to the Scottish Government's declaration of a climate emergency; the Climate Change (Emissions Reduction Targets) (Scotland) Act 2019; the ambition to achieve net-zero greenhouse gas emissions by 2045; and the purpose of planning provisions included in the Planning (Scotland) Act 2019. As the council points out, these provisions arise separately from the local development plan context and such targets may change during the plan period. However, the direction of travel of climate change related policy and regulatory measures is clear and is unlikely to be reversed.
4. I accept that policies C1 to C4 and their component parts set out more specific provisions in relation to a range of considerations related to climate change. However, it is the introductory paragraph of section 13 which outlines the context and sets the tone for these policies. Against the above background, I conclude that the introductory paragraph should acknowledge the increased level of ambition to seek to address climate change matters that is expressed through national policy and legislation since the previous local development plan. I recommend modifications to the text of the introductory paragraph accordingly. These modifications are consistent with what is sought in this regard by a significant number of representees. They would also better relate to the detail of the policies concerned with specific aspects which follow later in this section of the plan.
5. Several representees seek further changes to the introductory paragraphs of this section, proposing that references to greenhouse gas emissions, renewable energy developments, as well as encouragement of public transport and non-motorised travel modes, be included in the introductory paragraphs. Such matters are addressed more specifically in other parts of this section and elsewhere within the proposed plan, including in policy P1 Layout, Siting and Design. I agree with the council that no further modifications to the introductory paragraphs of section 13 are necessary with regard to these matters.

Policy C1 Using resources in buildings

6. The standards of energy and resource efficiency that buildings should seek or be required to achieve are expressed differently in the proposed plan than is the case in the existing plan. Several representees are critical of what they perceive to be a lessening of such standards, while others (mainly representing developer interests) seek removal of reference in the policy to specific target standards. National and multi-national trends reflect increasing ambitions to move towards greater levels of energy and resource efficiency, to seek to reduce climate change-related emissions as well as for other reasons. The provisions of the proposed plan should be consistent with this context.

7. I appreciate that the primary means of regulating construction standards, including those related to energy and resource efficiency, is through the application of the mandatory Building Regulations, and that duplication in this regard could be a potential cause of confusion. However, the acknowledged significance and urgency of the climate change challenge requires that there should be no actual or perceived lessening of construction-related performance standards sought by policies of the proposed plan in comparison to those of its predecessor. At development management stage, the requirement for the provision of an Energy Statement, expressed in paragraph C1.5, would assist in assessing the acceptability of measures contributing to climate change related measures. Although I note that the council refers to advice that it intends to produce, it is necessary for the proposed plan to set the context so that developers and others can understand what is expected in this regard. The council's "fabric first" approach to energy and resource efficiency is appropriate in this regard. But this reinforces the necessity of ensuring that the policies and other provisions of the proposed plan do not represent any real or apparent reduction in the rigour with which high standards of energy and resource efficiency are to be sought in new development. I note the council's comment, that it has had little success in trying to implement an ambitious policy in this regard in recent years. However, rather than justifying less ambitious policy objectives in the proposed plan as the council appears to suggest, I regard this as requiring retention of policies that are at least as ambitious as those of the predecessor plan.

8. I appreciate that the reference in paragraph C1.1 to the "Silver" sustainability rating for CO₂ reduction and energy efficiency is expressed to be the minimum requirement, and that this may change as a result of likely future updating of Building Regulations. However, as this is in replacement of the "Gold" standard referred to in the existing plan, this inappropriately gives the impression that a lesser standard of performance would be acceptable in future. I note that the table in Appendix 9 (Building Design Guidance) retains reference to the achievement, wherever feasible, of the "Platinum" standard as expressed in Section 7 of the Building Standards Technical Handbook, and in view of this, I see no justification for omitting such reference in paragraph C1.1.

9. For the above reasons, I recommend paragraph C1.1 be modified to make clear that the proposed plan does not imply any diminution in the CO₂ and energy performance requirements for new development from that of the adopted plan.

10. The Scottish Environment Protection Agency (SEPA) has requested that, in relation to water efficiency, the achievement of "Platinum" level should be specified in place of the "Gold" referred to in paragraph C1.2 of the proposed plan (as well as on page 60 of the existing plan). In response, the council explains that this standard is not currently defined

in the Building Standards Technical Handbook. It would not be appropriate for the proposed plan to refer to an as yet undefined standard, so I agree that no modification is required in this respect.

11. Any requirement involving the phasing out of gas boilers for domestic heating would, as the council points out, arise from national legislative measures. I agree that it is not necessary for this possibility to be reflected in any modification to the provisions of the proposed plan, in paragraph C1.3 or elsewhere.

12. I acknowledge that specialist health and other facilities may have particular energy and resource needs which could differ from those of more generic developments. However, the policy context of the proposed plan, subject to the recommended modification, contains flexibility to enable the circumstances of particular proposals to be taken into account in any assessment at the development management stage. Any such circumstances would be expected to be addressed in an Energy Statement submitted at application stage. I therefore see no need for the limited exceptions to the application of policy C1, as referred to in paragraph C1.4, to include health-related developments. No modification is therefore required in this regard.

Policy C2 Renewable Energy

13 As drafted, paragraph C2.1 is supportive of renewable energy developments in general, subject to consideration of potential adverse locational or other implications. Scottish Planning Policy presents, at paragraph 169, a list of the considerations relevant to the assessment of all energy infrastructure developments. I have considered whether including a cross reference in paragraph C2.1 to these provisions of current national policy, would appropriately clarify the criteria against which such developments would be assessed. However, as the current version of Scottish Planning Policy is likely to be superseded in the near future, it would not be appropriate to rely on a document that may not be in force at the time of formal adoption of the plan or shortly thereafter. The draft of National Planning Framework 4, currently under consideration by the Scottish Parliament, retains essentially these same criteria, albeit somewhat differently worded. Although that document will in due course form part of the development plan, it would not be appropriate to include specific reference to it at this time.

14. I conclude that the criteria expressed in Scottish Planning Policy paragraph 169 are relevant to the consideration of renewable energy developments and likely to continue to be so after Scottish Planning Policy is replaced. Instead of including a reference to an external national policy document, I consider that the relevant criteria should be included in the plan. I therefore make a recommendation to this effect. This also addresses the criticism in a number of representations that paragraphs C2.3 and C2.4 are insufficiently clear as to the criteria to be applied in this respect.

15. While the list of renewable energy technologies identified in paragraph C2.1 is wide, expressing these as examples rather than an exclusive list would enable any potential new technologies that may emerge to be accommodated in policy terms. This would confirm that, subject to proper consideration of any relevant constraints, support is given to renewable energy developments of all forms. This would provide the added flexibility sought in representations and my recommended modification reflects this. With this modification, there is no need, as sought by some representees, to single out onshore wind above any other technologies for the purposes of this paragraph.

16. Amending the wording to refer to “the historic environment” rather than “built heritage”, as sought by Historic Environment Scotland and supported by the council, would assist clarity and consistency. A modification to this effect is recommended.

17. Paragraph C2.2 makes reference to the mapping at the end of section 13. This reflects the spatial framework contained in the approved Aberdeen City and Shire Strategic Development Plan, with which the proposed plan is required to be in conformity. However, the map also includes an additional layer of “areas with strategic landscape capacity for wind turbine development” under the heading “local landscape guidance”. I understand that this information is taken from the 2014 Strategic Landscape Capacity Assessment Final Report.

18. The council considers its approach to be consistent with Scottish Planning Policy. However, the inclusion of “areas with strategic landscape capacity for wind turbine development” on the climate change map would apply additional constraints to the wind energy spatial framework, which paragraph 163 in Scottish Planning Policy explicitly states should not happen in the interests of national consistency.

19. Paragraph 163 in Scottish Planning Policy goes on to state that the spatial framework is complemented by the development management process, where the merits of an individual proposal will be carefully considered against the full range of environmental, community, and cumulative impacts set out in paragraph 169. Group 3 areas are identified as having potential for wind energy development, subject to detailed considerations. However, my reading of paragraph C2.2 and the climate change map in the proposed plan is that not all sites which are located within a group 3 area would be treated as having potential, subject to detailed considerations. The additional mapping layer, which if included in the adopted plan would have development plan status, suggests that group 3 locations outwith the “areas with strategic landscape capacity for wind turbine development” do not have the same potential. I consider this approach to be contrary to paragraph 163 in Scottish Planning Policy. A modification is recommended to remove the orange hatched areas and the associated reference in the key from the climate change map on page 86.

20. I agree with the council there are no inconsistencies with Scottish Planning Policy from referencing the landscape capacity study in policy C2. Although I accept that, during the lifetime of the plan, it may be appropriate to update landscape assessment guidance as the council acknowledges, that does not mean that it has no relevance in assisting the assessment of wind energy proposals at application stage. It provides a broad spatial framework, but detailed landscape and visual assessments will inevitably be needed to inform consideration of specific development proposals. However, I agree that, as worded, the paragraph places unjustified emphasis on the 2014 document. The inclusion of a footnote drawing attention to the likelihood of such guidance being updated would be appropriate, as the council suggests. Furthermore, a modification to the last sentence of paragraph C2.2 is necessary to make clear that development-specific landscape assessment is required. I make a recommendation to that effect accordingly. My further recommended modification (below) to the key to the climate change map on page 86 clarifies the minimum scale that the spatial framework is intended to apply to, as sought by the Scottish Government.

21. The criteria I recommend be included in paragraph C2.1 referred to above, are also relevant to wind energy projects, including proposals for re-powering existing facilities. In

the context of any proposals for upgrading or re-powering existing facilities, clarifying that existing infrastructure, including turbine bases, should be reused where possible would appropriately reflect the need to take account of the circumstances at the time. Altering the reference to “blades” rather than “nacelles” in the third sentence of paragraph C2.3, as NatureScot proposes and the council accepts, would appropriately aid clarity. I recommend modifications be made to paragraph C2.3 accordingly. With the incorporation of my recommended modifications, no further changes are necessary to paragraphs C2.3 or C2.4.

22. My recommended modification to paragraph C2.1 includes reference to effects on communities and any socio-economic implications as being amongst the criteria to be considered as part of the assessment of wind energy developments. With the inclusion of specific reference to these criteria, it would not be appropriate to prejudge the outcome of any development-specific assessment by affording greater weight to community financial benefits than other considerations, as a representee appears to suggest. No further modification is required paragraph C2.3.

23. Solar energy proposals are encompassed by the term renewable energy. Explicit support for such developments is expressed in paragraphs C2.1 and C2.5. There is no need for such support to be expressed more strongly or for modifications implying that potential adverse impacts should be given reduced weight in the consideration of solar energy proposals. With the recommended inclusion, in paragraph C2.1, of reference to the criteria listed in paragraph 169 of Scottish Planning Policy, the relevant assessment criteria would be appropriately made clear. There is no need to duplicate these considerations in paragraph C2.5 relating to solar panels and no modification is necessary in this regard.

24. Although the acceptability of hydro-electric schemes, as with all development proposals, would be assessed against the provisions of the plan as a whole, singling out reference to the water environment could inappropriately be seen as implying that other environmental effects are of lesser importance. I therefore recommend a modification to counter such potential misinterpretation, by adding reference to the wider natural environment. This would appropriately address the representations made by SEPA and NatureScot in this regard. Many, if not most, developments may potentially have positive as well as negative effects. Whether a particular development would be acceptable or unacceptable is not simply a function of the significance of any environmental impacts. It would involve an assessment of overall acceptability taking account all potential effects, both positive and negative. These could include social and economic benefits, but may not be limited to such categories. The criteria I recommend be included in paragraph C2.1 will also be relevant. As drafted, the paragraph implies that any adverse impact would be an absolute bar to development, but then suggests that such impacts may be disregarded for larger schemes in some cases. Modifications are required to address the internal conflicts within paragraph C2.6 and the representations by SEPA and NatureScot.

25. There is force in SEPA’s representation that the proposed plan should express support for energy storage projects. The plan identifies a large site at Peterhead (area R2) reserved for carbon capture, storage and related development consistent with the provisions of National Planning Framework 3. However, I agree with the council that it is not reasonably practicable for the plan additionally to contain location-specific proposals for hypothetical energy storage facilities. Expressing support for energy storage facilities would be more clearly achieved in a modification to paragraph C2.1, rather than through

the addition of a further paragraph as SEPA suggests. My recommended modification to that paragraph addresses this representation.

Policy C3 Carbon Sinks and Stores

26. As the council acknowledges, there is a degree of overlap between the support for the protection of carbon sinks and stores expressed in this policy and sections 10 (Natural Heritage and Landscape) and 12 (Protecting Resources) of the plan. Those sections contain policy provisions which specifically address nature conservation, landscape, woodland and other aspects which several representees seek more detailed reference to in paragraphs C3.1 and C3.2. However, as the council explains, the policies of the proposed plan as a whole apply to all developments where they are relevant. Duplicating such provisions in these paragraphs is not necessary. Nor do I see any fundamental inconsistency between the treatment of such considerations in the different sections of the plan. I therefore agree that no modification is required to paragraphs C3.1 or C3.2.

Policy C4 Flooding

27. Paragraph C4.1 appropriately makes reference to SEPA Technical Flood Risk Guidance which provides much of the detailed advice relevant to the consideration of flood-related implications of development. As SEPA is principal advisory and regulatory provider of technical expertise in such matters, I give considerable weight to SEPA's representations. Ensuring consistency in the explanation and application of policy on flooding matters is particularly important in view of the specialist nature of the assessments involved. I note that the council accepts that modifications are appropriate to paragraph C4.1 with regard to the manner in which it presents categories of flood risk, but maintains that other aspects of SEPA's representations should not result in modifications. The vulnerability of a development to flooding is wholly distinct from any effect that development may have on the risk of flooding elsewhere. That concept encompasses the use and occupation of development, particularly with regard to accommodating people overnight. Contrary to the council's position, it is appropriate for a modification to be made to the text of the paragraph to refer to the assessment of vulnerability, as sought by SEPA. I therefore recommend modifications to paragraph C4.1 to reflect SEPA's representations, including in relation to the footnotes referred to in the paragraph.

28. The reference to "normally a minimum of 100 years" in paragraph C4.2 relates to the assumed lifespan of residential development. It is not a reference, as SEPA's representation appears to assume, to any measure of likelihood of flooding at a particular location. Planning for buildings to be flood resilient for the duration of their potential lifetime, as the paragraph seeks, is appropriate. I note that the council's reference to the year 3020 in its response above appears to be an error (which I take it should have been stated as 2120). In any event, paragraph 263 of Scottish Planning Policy does not rule out residential development in areas of medium to high flood risk and proposals would need to be assessed against the criteria in paragraph C4.1. For these reasons, no modification is required to this paragraph of the policy.

29. SEPA's representation seeking a footnote to paragraph C4.3 to cross-refer to paragraph PR1.3 in the Protecting Resources section of the plan is, as the council explains, already reflected in the text, albeit it appears against paragraph C4.4. No modification is required in this respect. I agree that the inclusion of the word "local" to

qualify the nature of evidence that may demonstrate a heightened risk of flooding is inappropriate. I recommend deleting that word, as SEPA seeks. This modification would not exclude the consideration of local evidence, but would allow other evidence to be taken into account whatever its origin.

30. Although paragraph C4.2 seeks to ensure flood resilience and to require that development does not increase the risk of flooding elsewhere, it does not make explicit reference to the undesirability of culverting watercourses. It is therefore not sufficient to rely on that paragraph to convey a policy intention to oppose culverting, which I note that the council accepts would generally be considered bad practice. The introduction of a new paragraph, C4.7, as SEPA seeks to address this omission is appropriate and I recommend a modification accordingly.

Climate change policy map

31. I note that the council accepts that the absence of reference in the map key to the 15-metre turbine blade tip threshold it applies should be rectified. I agree that an amendment is appropriate in this regard, as the council proposes. I recommend a modification accordingly.

32. In view of the protection afforded in landscape character terms at Bennachie by policy E2, and because the wind energy spatial framework groups defined on the map derive from the Strategic Development Plan and an external dataset, it is neither necessary nor appropriate for the map to be altered in this regard as a representee seeks.

Reporter's recommendations:

Modify the local development plan by:

1. Replacing the first, introductory, paragraph on page 81 with:

“Climate change is possibly the greatest challenge facing the world today. The Scottish Government’s declaration of a Climate Emergency and the enactment of the Climate Change (Emissions Reduction Targets) (Scotland) Act 2019 are responses to this. These have influenced and are reflected in the policies set out in this local development plan. Scottish Planning Policy favours development that contributes to sustainable development and policies and decisions are needed to support action to tackle climate change and adaptation, including taking account of flood risk. For Aberdeenshire, this means reducing the use of energy (both in the distribution of development and within developments themselves), conserving water, promoting energy generation by renewable sources, sustaining existing carbon stores (such as peat and wood), and dealing with long-term flood risks.”

2. Replacing the whole of paragraph C1.1 on page 81 with:

“All developments must be designed to reduce carbon-dioxide emissions and reduce the use of energy. For all development, the target is to at least meet the current Scottish building regulations Target Emissions Rate (TER) and achieve the sustainability rating ‘Gold’ level for carbon dioxide reduction and energy efficiency, including through the installation of low and zero carbon generating technologies. Wherever feasible, a Platinum sustainability label under section 7 of the Building Standards Technical Handbook should be sought. This should include consideration of alternative fuel vehicles including electric and hydrogen refuelling.”

3. Replacing the whole of paragraph C2.1 on page 82 with:

“We will support renewable energy developments, including solar, wind, biomass (energy from biological material derived from living, or recently living organisms) and hydro-electricity projects, as well as energy storage projects, which are in appropriate sites and of the appropriate design. Assessment of the acceptability of such developments will take account of any effects on: socio-economic aspects; renewable energy targets; greenhouse gas emissions; communities; landscape and visual aspects; natural heritage; carbon rich soils; the historic environment; tourism and recreation; aviation, defence, telecommunications and broadcasting interests; road traffic; hydrology; and opportunities for energy storage. We treat biomass schemes as industrial processes suitable for business land. These may be hazardous developments through their impact on air quality. This support is not at the expense of other policies regarding Natural Heritage, the Historic Environment and Protecting Resources.”

4. Replacing the last sentence of paragraph C2.2 on page 82 with:

“This guidance remains relevant but is not a substitute for detailed assessment of the landscape impact of specific development proposals.”

5. Adding a footnote linked to the reference in paragraph C2.2 on page 82 to the document entitled “Strategic Landscape Capacity Assessment for Wind Energy in Aberdeenshire Final Report”, as follows:

“It is anticipated that Strategic Landscape Capacity Assessment guidance will be updated during the lifetime of the Plan.”

6. In the third sentence of paragraph C2.3, replacing “nacelles” with “blades”.

7. Replacing the penultimate sentence of paragraph C2.3 on page 82 with:

“Existing infrastructure, including turbine bases, should be reused where possible.”

8. Replacing the first and second sentences of paragraph C2.6 on page 83 with:

“We will approve hydro-electric schemes if they are located, sited and designed to have no unacceptable individual or cumulative impact on the water or wider natural environment, taking account of the relevant criteria set out in paragraph C2.1.

9. Replacing the whole of paragraph C4.1 on page 84 with:

“Flood Risk Assessments should be undertaken in accordance with SEPA Technical Flood Risk Guidance⁸ and will be required for development in the indicative medium to high category of flood risk of 0.5% or greater annual probability (1 in 200 years or more frequent)⁹. Assessments may also be required in areas of lower annual probability (0.1%-0.5% annual probability) in circumstances where other factors indicate a potentially heightened risk or there are multiple sources of potential flooding. Assessments should include an allowance for freeboard¹⁰ and climate change¹¹. Development should not increase flood risk vulnerability¹² and should avoid areas of medium to high risk, functional floodplain or other areas where the risks are otherwise assessed as heightened or unacceptable except where:

- It is a development to alleviate flooding or erosion of riverbanks or the coast;
- It is consistent with the flood storage and conveyance function of a floodplain;
- It would otherwise be less affected by flooding (such as a play area or car park);
- It is essential infrastructure. The location is essential for operational reasons for example for water-based navigation, agriculture, transport or utilities infrastructure and an

alternative lower risk location is not available¹³.”

10. Deleting footnotes 8 to 11 at the bottom of page 84 and inserting footnotes 8 to 13 as referred to in modified paragraph C4.1 above, as follows:

⁸ Guidance on technical guidance for developers is provided in Technical Flood Risk Guidance for Stakeholders - SEPA requirements for undertaking a Flood Risk Assessment – 2019.

⁹ The Scottish Environment Protection Agency (SEPA) have produced indicative maps of flood risk areas and these are a useful starting point for developers in considering the location of their proposals.

¹⁰ Freeboard is an extra allowance provided above estimated flood levels. It is a factor of safety in flood protection design (usually expressed as height above flood level), which allows for factors related to the uncertainty in estimating flood risk (e.g. wave action, settlement, morphological changes).

¹¹ Advice on freeboard and climate change allowances can be found in SEPA’s publication “Climate change allowances for flood risk assessment in land use planning”

¹² Proposals should comply with SEPA’s ‘Flood Risk and Land Use Vulnerability Guidance’ in relation to redevelopment.

¹³ See SEPA’s Land Use Vulnerability Guidance

11. In the last line of paragraph C4.4 on page 85, deleting the word “local”.

12. Adding a new paragraph C4.7 and related footnote as follows:

“We are opposed to the enclosed culverting of watercourses for land gain and will actively seek to discourage such proposals. We encourage the daylighting (or de-culverting) of existing culverted watercourse¹⁶.”

¹⁶ This is supported by Scottish Government’s “Surface Water Management Planning Guidance (2018) and SEPA’s Culverting of Watercourses – Position Statement and Supporting Guidance.”

Climate change map

13. Removing the orange hatched areas, the associated reference to “Areas with strategic capacity for wind turbine development” and the heading “Local Landscape Guidance”, from the climate change map and key on page 86.

14. In the key to the climate change map on page 86:

Replacing the heading “Spatial Framework for Wind Energy”, with “Spatial Framework for Wind Energy (applicable to turbines greater than 15 metres height to blade tip)”.

Issue 12	Section 14 – Responsibilities of Developers and Appendix 15 Recycling and Waste Facilities	
Development plan reference:	Proposed LDP, Section 14, Page 87-94 Appendix 15 Recycling and Waste Facilities, Page 1155-1166	Reporter: Rob Huntley

Provision of the development plan to which the issue relates:	Policies relating to the responsibilities of developers
Planning authority's summary of the representation(s):	
<p>Responsibilities of Developers Introduction</p> <p>A representee has requested the right to make comment on Planning Advice Developer Obligations and Affordable Housing once it is available for consultation (PP1294).</p> <p>Policy RD1 Providing Suitable Services</p> <p><u>General</u></p> <p>Newtonhill, Muchalls and Cammachmore Community Council has requested that Policy RD1 includes a policy that places a condition on developers to make good any loss of television reception with all costs being borne by the developer (PP0556).</p> <p><u>Paragraph RD1.1</u></p> <p>The Scottish Government has recommended that Policy RD1 includes clear information on the promotion of sustainable transport links, modes and choices for new developments and include reference to the sustainable travel hierarchy. It is vitally important that sustainable modes are prioritised and are provided for within new development to reduce inequalities, tackle climate change, help deliver economic growth and improve health and wellbeing. The Policy should support the National Transport Strategy 2 (NTS2) and detail developments should be planned that are or can be, strongly linked to accessible transport systems (PP0578).</p> <p>As the Proposed Local Development Plan (PLDP) does not include a separate chapter on transport, the message of promoting sustainable travel modes, links and choices should be firmly embedded within the PLDP. The PLDP details in paragraph 4.7 the need to promote efficient use of transport and encourages using methods of transport other than the private car. However, it is considered the Plan does not sufficiently promote the sustainable travel hierarchy or sustainable travel modes as stated within the NTS2 (PP0578).</p> <p>The PLDP does not mention the sustainable travel hierarchy nor promote the provision of sustainable transport links, modes or choices sufficiently in accordance with NTS2. Policy RD1 is considered not robust enough to comply with the NTS2 on prioritising non-motorised modes and providing sustainable travel links and choices in developments. Plans should raise the bar in terms of promoting accessible sustainable travel choices to</p>	

fully realise and plan for sustainable places (PP0578).

A representee has highlighted that the wording in paragraph RD1.1, conflicts with the wording in paragraph RD1.2. The representee has stated that the wording suggests that development will only be allowed if it provides electric vehicle charging infrastructure – these places a significant burden on the house building industry and concern was raised regarding the capacity of the existing network to accommodate an unknown and potential increase in demand. However, when reading paragraph RD1.2 dealing specifically with Vehicle Charging Points, it highlights that new home designs should consider including at least one charging point. Crucially it acknowledges that this may not always be appropriate to the design of the property and therefore remains ‘discretionary’. The representee supports the discretionary approach to allow flexibility which also allows the PLDP to remain adaptable, however has suggested a modification to the wording in paragraph RD1.1 which better aligns with the intended policy approach and avoids potential duplication or conflict with regulations coming through new building standards. The representee has included an Appendix (RD0195.A) in their representation which provides further detail to support their position (PP1125).

The representee has stated that hydrogen fuel stations are unlikely to be appropriate within residential developments for amenity reasons and this should be made clear in the PLDP. Provision of these should be restricted to commercial developments (PP0691 and PP0975).

Two representees have stated that this policy indicates that development will only be permitted if it allows for adequate vehicle charging and it is considered that this is too vague to be expressed as a policy. There is current uncertainty regarding future preferred technologies and how they will be provided. As such it is recommended that this policy is removed and reconsidered at the LDP review stage (PP1214 and PP1357).

The Scottish Environment Protection Agency (SEPA) has commented that they are disappointed that the Council is not trying to meet or go beyond national guidance on air quality, the number of electric vehicle charging points and on no and ultra-low emission vehicles. SEPA has referred to ‘Land Use Planning and Development Control: Planning for Air Quality’ published by Environment Protection UK and the Institute of Air Quality Management, ‘Electric vehicles: driving the transition’ published by the House of Commons Business, Energy and Industrial Strategy Committee, and the Scottish Government’s target to remove the need for new petrol or diesel cars or vans on Scotland’s Roads by 2032. The representee has included an Appendix (RD214.A) in their representation which provides further detail to support their position (PP1219).

A representee has commented that the current wording in paragraph RD1.1 does not promote walking or cycling, and that additional wording on cycle storage, cycleway and footpath connections should be added to development requirements (PP1260).

A representee has commented that the intent behind Policy RD1.1 is understandable as it is clear that new technology will play an important part of this. The representee broadly supports the policy, however, has requested amendments be made to the text (PP1306).

Paragraph RD1.2 (Vehicle Charging Points)

A representee has expressed their support for Policy RD1, paragraph RD1.2 and the

Council's proposed approach to electric vehicle charging points. No modification sought (PP0751).

Newtonhill, Muchalls and Cammachmore Community Council has stated that electric vehicle charging points should not be discretionary, and that Policy RD1.2 Vehicle Charging Points should require developers to include at least one electric vehicle charging point per household and that workplaces also include charging points (PP0556).

The Scottish Government has stated that Policy RD1.2 should be worded more positively to reflect Scottish Planning Policy (SPP), paragraph 275. As currently worded, this policy allows complete discretion to the developer with regards to electric vehicle charging points for both housing and employment. SPP, paragraph 275 states that Development Plans should support the provision of infrastructure necessary to support positive changes in transport technologies, such as charging points for electric vehicles. It is considered that the policy could be more positively worded to reflect this important ministerial priority (PP0578).

The importance of including policies that look favourably on development that includes electric charging points should be fully considered. This should be focused on delivering sustainable transport in rural communities where the private car is the only option for many, rather than basing policy around access to public transport when many areas will never reach a critical population mass to justify public transport investment (PP0716).

SEPA has commented that they are disappointed that the Council is not trying to meet or go beyond national guidance on air quality, the number of electric vehicle charging points and on no and ultra-low emission vehicles. SEPA refers to 'Land Use Planning and Development Control: Planning for Air Quality' published by Environment Protection UK and the Institute of Air Quality Management, 'Electric vehicles: driving the transition' published by the House of Commons Business, Energy and Industrial Strategy Committee, and the Scottish Government's target to remove the need for new petrol or diesel cars or vans on Scotland's Roads by 2032. The representee has included an Appendix (RD214.A) in their representation which provides further detail to support their position (PP1219).

A representee has commented that policy needs to be strengthened and more ambitious to support the transition to electric vehicles. The representee has stated that electric charging points should be provided within all new developments and considered that one charge point for 25 employees is very low with rapid changes in technology likely to mean this figure will become quickly out of date. The representee has suggested this should be included in Supplementary Guidance on parking standards instead (PP1261).

Paragraph RD1.4 (Access to New Development)

A representee supported the requirements set out in the policy in relation to public transport services and transport hubs. No modification sought (PP0659).

NHS Grampian has supported the text within paragraph RD1.4 and welcomed the requirement for developments to be well related to public transport services, or the delivery of improvements to public transport services. No modification sought (PP1222).

Two representees have recognised the need for development to be sustainable, however

have considered that any contributions towards public transport must be reasonable in terms of the tests set out in Circular 3/2012. Obligations must fairly and reasonably relate to the proposed development and this must be recognised in zoning a site for development (PP0691 and PP0975).

A representee has stated that the development industry should not be expected to 'fund' major improvements to pre-existing infrastructure deficits. The current wording of the policy could be deemed contrary to Circular 3/2012. Instead, where public transport provision is not available in close proximity to a development site, then it would be more appropriate to seek proportionate contributions toward identified improvements. The representee has included an Appendix (RD0195.A) in their representation which provides further detail to support their position (PP1125).

Three representees have sought amendment to the wording of the policy on the basis that Policy RD1.4 is not consistent with the test of reasonableness as set out in Circular 3/2012, paragraph 14, which states that obligations should fairly and reasonably relate in scale and kind to the proposed development (PP1215, PP1306 and PP1358).

Paragraph RD1.5

A representee supported the requirements set out in the policy in relation to footway connections, cycle infrastructure and provision of a safe route to school. No modification sought (PP0659).

To encourage cycling, connections must be provided in the same way that car access is required for developments. As such, the representee has requested that the wording is amended so that the word "should" is replaced by the word "must" and that it is provided by the developer and not simply shown on plans (PP1262).

A representee has commented that they both understand and support the intent behind Policy RD1.5. However, it was considered that the wording of the policy could lead to ransom strips if it requires works to be undertaken on third party land. As such, the representee has requested that wording contained within paragraph RD1.5 is amended (PP1306).

A representee objects to the current wording of the first sentence of paragraph RD1.5 and has requested that the text is amended. The representee has included an Appendix (RD0195.A) in their representation which provides further detail to support their position (PP1125).

Paragraph RD1.6

Policy RD1.6 should allow more than 12 homes, rather than 6 homes, to be accessed via private road (PP1306). Another representee considered that the number of homes which can be accessed via private road should be increased from 6 to 12 (PP1125). The representee considered that this would create more opportunities for SME Homebuilders (PP1306 and PP1125), in line with the findings of Homes for Scotland's Small-Scale Home Builders' Report (PP1306). It would also provide additional flexibility within housing layouts and benefit larger sites (PP1125). A representee has included an Appendix (RD0195.A) in their representation which provides further detail to support their position (PP1125).

Paragraph RD1.7

A representee has requested that clarification is required of the wording “the formation of new access” as it is open to misinterpretation, i.e., referring to facilities for vehicular traffic when the policy is referring to recreation routes for pedestrians, cyclists, and active travel. It runs the risk of confusion with the alternative meaning, i.e., private accesses to house plots, which is the topic of paragraph RD1.8. The representee suggests a clearer form of words would be “the formation of new public access routes” (PP1312).

Paragraph RD1.12 (Water and Waste Water)

SEPA has indicated that they object to Policy RD1 unless paragraph RD1.12 is amended to state that applicants must “demonstrate” rather than “show” the private treatment works is a reasonable alternative, to ensure the policy wording is in line with SEPA’s Policy and Supporting Guidance on Provision of Waste Water Drainage in Settlements WAT-PS-06-08, which is identified as a material planning consideration and supported by PAN 79 Water and Drainage. The representee has included an Appendix (RD0214.A) in their representation which provides further detail to support their position. (PP1219).

SEPA has requested additional wording at the end of the first sentence that requires a binding maintenance agreement for approved private sewerage treatment works where Scottish Water cannot/will not adopt it. Unadopted works can significantly impact the environment when not maintained properly in the long-term. The representee has included an Appendix (RD0214.A) in their representation which provides further detail to support their position. The representee has included an Appendix (RD214.A) in their representation which provides further detail to support their position (PP1219).

Paragraph RD1.16 and RD1.17 (Waste Management Requirements)

SEPA has confirmed that they have no issues with the wording in paragraph RD1.16 or paragraph RD1.17. No modification sought (PP1219).

Policy RD2 Developer Obligations

Paragraph RD2.1

NHS Grampian has expressed support for Policy RD2, in particular the requirement for development proposals to provide infrastructure and services. The representee has included an Appendix (RD0216.A) in their representation which provides further detail to support their position. No modification sought (PP1222).

A representee has raised concern that revenue accrued from planning gain is returned to the public sector and is not seen locally (PP0048).

A representee states that Policy RD2 fails to fully reflect the wording of Circular 3/2012 and provides no justification for contributions being sought through the Settlement Statements in Appendix 7. Contributions for each settlement have not been justified on a settlement basis – this must be provided to ensure housing allocations are viable (PP0692 and PP1306). It is considered that, having regard to the Elsie Supreme Court Decision, it must be demonstrated that the link between the obligation sought and the contribution is more than trivial, and the lack of information provided precludes this assessment.

Additionally, it is considered that the PLDP lacks focus on delivery (PP1306).

SEPA has requested that paragraph RD2.1 is amended to include additional wording as stated in the Scottish Borders Council Local Development Plan Policy IS2: Developer Contributions, which SEPA have commended and consider would assist delivery of the objectives of the PLDP. The representee has included an Appendix (RD214.A) in their representation which provides further detail to support their position (PP1219).

Developer contributions should be made much more widely available for constructing footpaths and cycleways in Aberdeenshire, both within settlements and their vicinities, and between adjacent settlements. Widening the availability of this funding should bring forward more paths and cycleways construction and help in achieving the aims and outcomes of the PLDP. It will also keep faith with communities and Community Actions Plans. In the Strategic Environmental report (SEA), table 6.2, page 63, column 3, it stated “Developer contributions will be sought towards public transport, and roads infrastructure improvements to help mitigate the traffic impact” – it does not include footpaths and cycleways (PP0884).

A representee has raised concerns regarding the lack of detail provided on the methodologies used by the Council in calculating developer obligations. It is not considered to be acceptable to replace supplementary guidance with non-statutory planning advice – it does not form part of the adopted Plan. Greater transparency is required on methodologies and as it stands, they have not been subject to sufficient scrutiny. The representee has included an Appendix (RD0195.A) in their representation which provides further detail to support their position (PP1125).

A representee has commented that there is no information by way of justification for the items which developers are expected to contribute to, or the actual cost. It is stated that the representee cannot make an informed comment of the acceptability of the policy and have recommended that the Council prepare a detailed assessment and justification for the infrastructure contributions being sought and submit to the DPEA with the Schedule 4s and give relevant parties the opportunity to comment upon it at the relevant stage in the process (PP1216 and PP1359).

Paragraph RD2.2

Network Rail has requested that they should be clearly excluded from having to make developer contributions as a publicly owned company (PP0444).

Paragraph RD2.7 (Transport)

Network Rail has generally supported the approach outlined in paragraph RD2.7. No modification sought (PP0444).

Network Rail has stated that the rail industry’s Long-Term Planning Process is informed by Network Rail’s forecast of rail demand on individual corridors and the likely capacity constraints that are likely to arise as a result of increases in passenger and freight demand. This long-term, high-level view informs the more detailed work required to make investment decisions in the short and medium terms. No modification sought (PP0444).

Nestrans has commented that they welcome the inclusion of Policy RD2.7, however,

would recommend additional wording to specifically mention the region's principal road network and active travel network (RD0227.A) (PP1241).

A representee raised concern that Policy RD2.7 focuses developer obligations on road and rail networks, but this policy element should focus equally on providing transport infrastructure that address the non-road and non-rail users, namely those that walk, wheel or cycle as a means of transport. The representee considered that this should be explicitly stated (PP0881).

For development plan objectives relying on sustainable transport and improved rail connections to be realised, Network Rail must rely on Plan policy and guidance which ensures the impacts of proposals on rail infrastructure are clearly assessed and that delivery, including funding, responsibilities are clear (PP0444).

Network Rail has commented that they are committed to reducing the risk at level crossings. The increase in usage of a level crossing may impact on, line speed, conflicting with a main Government objective for faster journey times and increased road traffic across a level crossing may also have an adverse effect on the road network. Therefore, promotion of development where it may have an impact on level crossings should be avoided as only in exceptional circumstances will Network Rail permit new crossings to be introduced into the network (PP0444).

A representee recommended that the wording in paragraph RD2.7 requires to be updated to ensure consistency of the language used. It is stated that the present wording suggests all development will be required to contribute, however the representee considers that this will not apply to all development and as such the wording should be amended. The representee has included an Appendix (RD0195.A) in their representation which provides further detail to support their position (PP1125).

Paragraph RD2.8 (Local Transport Infrastructure)

A representee raised concern that Policy RD2.8 focuses developer obligations on road and rail networks. However, these policy elements should focus equally on providing transport infrastructure that address the non-road and non-rail users, namely those that walk, wheel or cycle as a means of transport. The representee considered that this should be explicitly stated (PP0881).

A representee recommended that the wording in paragraph RD2.8 requires to be updated to ensure consistency of the language used. It is stated that the present wording suggests all development will be required to contribute, however the representee considers that this will not apply to all development and as such the wording should be amended. The representee has included an Appendix (RD0195.A) in their representation which provides further detail to support their position (PP1125).

Paragraph RD2.9 (Open Space and Access)

Correction is required of the spelling of "Core Path Plan" in Policy RD2.9. The representee requests that the text should be amended to read "Core Paths Plan" (PP1312).

A representee recommended that the wording in paragraph RD2.9 requires to be updated

to ensure consistency of the language used. It is stated that the present wording suggests all development will be required to contribute, however the representee considers that this will not apply to all development and as such the wording should be amended. The representee has included an Appendix (RD0195.A) in their representation which provides further detail to support their position (PP1125).

Paragraph RD2.10 (Primary Education)

Contributions from developers towards education should be made in advance of any development being accepted to ensure facilities are in place in time (PP0264 and PP0657). This is particularly pertinent in areas where educational provision is stretched due to intense programmes of housing development (PP0657).

A representee recommended that the wording in paragraph RD2.10 requires to be updated to ensure consistency of the language used. It is stated that the present wording suggests all development will be required to contribute, however the representee considers that this will not apply to all development and as such the wording should be amended. The representee has included an Appendix (RD0195.A) in their representation which provides further detail to support their position (PP1125).

Paragraph RD2.11 (Secondary Education)

Contributions from developers towards education should be made in advance of any development being accepted to ensure facilities are in place in time (PP0264 and PP0657). This is particularly pertinent in areas where educational provision is stretched due to intense programmes of housing development (PP0657).

A representee recommended that the wording in paragraph RD2.11 requires to be updated to ensure consistency of the language used. It is stated that the present wording suggests all development will be required to contribute, however the representee considers that this will not apply to all development and as such the wording should be amended. The representee has included an Appendix (RD0195.A) in their representation which provides further detail to support their position (PP1125).

Paragraph RD2.12 (Community Facilities)

Contributions from developers towards social facilities should be made in advance of any development being accepted to ensure facilities are in place in time (PP0264).

A representee objects to the current wording used in the policy as it is inappropriate for clarifying where new community facilities are required for large settlements. Additional wording should be inserted into the policy to provide clarity (PP0733).

A representee recommended that the wording in paragraph RD2.12 requires to be updated to ensure consistency of the language used. It is stated that the present wording suggests all development will be required to contribute, however the representee considers that this will not apply to all development and as such the wording should be amended. The representee has included an Appendix (RD0195.A) in their representation which provides further detail to support their position (PP1125).

Paragraph RD2.13 (Strategic Recycling and Waste Infrastructure)

A representee recommended that the wording in paragraph RD2.13 requires to be updated to ensure consistency of the language used. It is stated that the present wording suggests all development will be required to contribute, however the representee considers that this will not apply to all development and as such the wording should be amended. The representee has included an Appendix (RD0195.A) in their representation which provides further detail to support their position (PP1125).

Paragraph RD2.14 (Health and Care Facilities)

NHS Grampian has expressed support for Policy RD2, in particular the specific reference to health care. No modification sought (PP1222).

The representee has objected to contributions to healthcare facilities being sought. Many practices are run as private business and the Council has no control over where the money is spent. The National Health Service (NHS) is funded through general taxation and an additional levy should not be required from housebuilders (PP0692, PP1294 and PP1306). Furthermore, homebuilders and occupants of new homes contribute to general taxation. It is for privately run general practitioners to make decisions about expansion of existing surgeries (PP1306). Representees have included an Appendix (RD0249.A and RD0259.A) which provides further detail to support their position (PP1294 and PP1306)

Paragraph RD2.16 (Other Off-Site Contributions)

NatureScot has requested that paragraph RD2.16 is amended to retain the emphasis that is contained within Policy P1.7 and clarifies that the Council expects that there will be a focus on achieving biodiversity benefits within the development site (RD0255.B) (PP1300).

Appendix 15 Recycling and Waste Facilities

SEPA has confirmed that they have no issues with Appendix 15, as it sets out the clear expectations that the Council have and how these can be met. No modification sought (PP1219).

Domestic waste containers should not be required to be left on pavements as this impacts the width of the footpath, creates clutter, and should not obstruct sight lines for people walking, cycling, or wheeling (PP0778).

Waste and recycling centres should accommodate non-motorised access and allow access to the disposal areas for pedestrians and those travelling actively without crossing traffic lanes (PP0778).

Modifications sought by those submitting representations:

Responsibilities of Developers Introduction

Modify the PLDP to make Planning Advice Developer Obligations and Affordable Housing available for consultation and public comment (PP1294).

Policy RD1 Providing Suitable Services

General

Modify the PLDP to add a new paragraph under Policy RD1 Responsibilities of Developers titled: “RD1.8 Terrestrial Television Reception” and include a condition on developers to make good any loss of television reception with all costs being borne by the developer (PP0556).

Paragraph RD1.1

Modify the PLDP to amend policy wording under RD1.1 to include clear information on the promotion of sustainable transport links, modes and choices for new developments and include reference to the sustainable travel hierarchy (PP0578).

Modify the PLDP to amend paragraph RD1.1 to read, “We will only allow development that provides adequate road connections, waste management collections, water supply or waste water connections and treatment as appropriate. Consideration should also be given to the provision of vehicle charging points (including hydrogen fuel stations where appropriate).” (PP1125).

Modify the PLDP to amend policy wording under RD1.1 to explicitly limit Hydrogen Fuel stations to commercial developments only where practical and viable (PP0691 and PP0975).

Modify the PLDP to remove policy wording under RD1.1 in its entirety (PP1214 and PP1357).

Modify the PLDP to amend paragraph RD1.1 to be more ambitious by meeting or going beyond the current minimum guidance of provision set out in national documents (PP1219).

Modify the PLDP to amend paragraph RD1.1 to read as follows, “We will only allow development that provides adequate vehicle charging (including Hydrogen Fuel Stations), road, cycleway and footpath connections, cycle storage, waste management collections, water supply or waste water connections and treatment as appropriate.” (PP1260).

Modify the PLDP to amend paragraph RD1.1 to read as follows, “We will only allow development that provides adequate vehicle charging (this could include Hydrogen Fuel Stations), road connections, waste management collections, water supply or waste water connections and treatment as appropriate.” (PP1306).

Paragraph RD1.2 (Vehicle Charging Points)

Modify the PLDP to amend paragraph RD1.2 Vehicle Charging Points to require developers to provide at least one electric vehicle charging point per household and that workplaces also include charging points (PP0556).

Modify the PLDP to clarify and more positively reflect SPP paragraph 275 in relation to electric vehicle charging points in paragraph RD1.2 (PP0578).

Modify the PLDP to promote development of electric vehicle charging points in rural areas in paragraph RD1.2 (PP0716).

Modify the PLDP to amend paragraph RD1.2 to be more ambitious by meeting or going beyond the current minimum guidance of provision set out in national documents (PP1219).

Modify the PLDP to amend paragraph RD1.2 to read as follows, "All new residential properties and workplaces must provide electric charging points. Electric vehicle charging points must be provided in car parking spaces used by the public, including those for major leisure and retail uses. Provision of charging points must be in line with supplementary guidance on parking standards. Their provision will be managed by the application of the Standards for Road Construction Consent and Adoption." (PP1261).

Paragraph RD1.4 (Access to New Development)

Modify the PLDP to amend paragraph RD1.4 so that contributions are sought where they "fairly and reasonably relate to the proposed development" and state in allocations when public transport contributions are required (PP0691 and PP0975).

Modify the PLDP to amend paragraph RD1.4 to read, "Development must be close to existing public transport services (if available) or deliver proportionate improvements to public transport services, in scale with the development. Where there is no or limited services, the developer may be required to contribute proportionately to service extensions or improvements to the closest public transport hub." (PP1125).

Modify the PLDP to amend paragraph RD1.4 to read as follows, "Development must be close to existing public transport services (if available) or deliver major improvements to public transport services, proportionate in scale with the development. Where there is no or limited services, the developer may be required to fund or contribute proportionately to service extensions or improvements to the closest public transport hub provided the link complies with tests in Circular 3/2012." (PP1215 and PP1358).

Modify the PLDP to amend paragraph RD1.4 to read as follows, "Development must be close to existing public transport services (if available) or deliver improvements to public transport services, proportionate in scale with the development. Where there is no or limited services, the developer may be required to contribute proportionately to service extensions or improvements to the closest public transport hub." (PP1306).

Paragraph RD1.5

Modify the PLDP to amend paragraph RD1.5 to read as follows, "All developments must include formal lit footway connections to adjacent developments that provide for access by wheelchair users, people with sensory disabilities, the elderly, those accompanied by small children and other less mobile groups. As appropriate, safe, and convenient access should also be provided for service, delivery and other goods vehicles required by the development. Cycle infrastructure connections must be provided to existing and planned local and strategic active cycle routes and existing cycle networks should be improved where possible. In particular, and where appropriate, a safe route to school should be identified and delivered." (PP1262).

Modify the PLDP to amend paragraph RD1.5 to read as follows, "All developments must include formal lit footways within the site boundary which are compatible with enabling connections to adjacent developments that provide for access by wheelchair users, people

with sensory disabilities, the elderly, those accompanied by small children and other less mobile groups. As appropriate, safe, and convenient access should also be provided for service, delivery and other goods vehicles required by the development. Cycle infrastructure connections should be shown to existing and planned local and strategic active cycle routes. In particular, and where appropriate, a safe route to school should be identified and delivered.” (PP1306).

Modify the PLDP to amend the first sentence of paragraph RD1.5 to read, “... all developments must include formal lit footway connections on land within their control, up to the boundary with adjacent development ...” (PP1125).

Paragraph RD1.6

Modify the PLDP to amend paragraph RD1.6 to allow more than 12 homes, rather than the stated 6 homes, to be accessed via road (PP1306).

Modify the PLDP to amend paragraph RD1.6 to increase the number of homes which can be accessed via private road from 6 to 12 (PP1125).

Paragraph RD1.7

Modify the PLDP to amend the first sentence of paragraph RD1.7 to read as follows, “When development requires the formation of new public access routes, these should be designed to the agreed standard, and must be resource efficient, safe and convenient for cyclists, pedestrians and public transport.” (PP1312).

Paragraph RD1.12 (Water and Waste Water)

Modify the PLDP to amend the first sentence of paragraph RD1.12 to read as follows, “Where a connection to the public drainage infrastructure is demonstrated to be unfeasible, connection to a private drainage infrastructure can be supported, if it is demonstrated satisfactorily that disposal of sewage can be achieved without negative impacts on public health, amenity, or the environment and where, cost and practicability demonstrate there is no reasonable alternative, and where the developer commits to a maintenance agreement with homeowners for the lifetime of the plant where adoption by Scottish Water is either not sought or not granted.” (PP1219).

Policy RD2 Developer Obligations

Paragraph RD2.1

Modify the PLDP to amend Policy RD2 Developer Obligations to require developers and landowners to invest back into the communities from which they profit (PP0048).

Modify the PLDP to amend paragraph RD2.1 to reflect the full policy tests of Circular 3/2012 and provide justification for contributions set out in Appendix 7 (PP0692).

Modify the PLDP to amend Policy RD2 Developer Obligations to provide full justification for each of the contributions sought (PP1306).

Modify the PLDP to amend the first sentence in paragraph RD2.1 to read as follows,

“Contributions will be sought towards the provision of the necessary infrastructure and the protection, enhancement and promotion of environmental assets.” (PP1219).

Modify the PLDP to make Developer Contributions more widely available for constructing footpaths and cycleways in Aberdeenshire, both within settlements and their vicinities and between adjacent settlements (PP0884).

Modify the PLDP to include an Appendix titled ‘Developer Obligations’ which details the exact methodologies for calculating the specific Developer Obligations contributions (PP1125).

Modify the PLDP to remove Policy RD2 or prepare a detailed assessment and justification for the contribution sought on the infrastructure (PP1216 and PP1359).

Paragraph RD2.2

Modify the PLDP to amend paragraph RD2.2 to add the following sentence, “Network Rail shall be excluded from paying developer contributions for their development.” (PP0444).

Paragraph RD2.7 (Transport)

Modify the PLDP to amend paragraph RD2.7 to read as follows, “We need contributions to make transportation improvements as shown in Appendix 7 and in the Delivery Programme. These will include work on the trunk road network, the principal local road network, active travel routes, and improvements to rail infrastructure, within Aberdeenshire and in Aberdeen City. The Aberdeen City and Shire Strategic Development Plan has prepared a cumulative transport appraisal to inform their strategic transport advice.” (PP1241).

Modify the PLDP to amend paragraph RD2.7 provide equal focus for developer obligations on non-road and non-rail forms of transport, namely walking, wheeling, and cycling (PP0881).

Modify the PLDP to ensure the impacts of proposals on rail infrastructure are clearly assessed and that delivery, including funding, responsibilities are clear (PP0444).

Modify the PLDP to ensure that the promotion of development where it may have an impact on level crossings is avoided as only in exceptional circumstances will Network Rail permit new crossings to be introduced into the network (PP0444).

Modify the PLDP to amend the first sentence of paragraph RD2.7 from, “We need contributions to make transportation improvements as shown in Appendix 7 and in the Delivery Programme.” to “We may need contributions to make transportation improvements as shown in Appendix 7 and in the Delivery Programme.” (PP1125).

Paragraph RD2.8 (Local Transport Infrastructure)

Modify the PLDP to amend paragraph RD2.8 to provide equal focus for developer obligations on non-road and non-rail forms of transport, namely walking, wheeling, and cycling (PP0881).

Modify the PLDP to amend the first sentence of paragraph RD2.8 from, “We will contributions to fully address the effect of individual developments” to “We may need contributions to fully address the effect of individual developments” (PP1125).

Paragraph RD2.9 (Open Space and Access)

Modify the PLDP to amend paragraph RD2.9 to the correct spelling of “Core Paths Plan” (PP1312).

Modify the PLDP to amend paragraph RD2.9 from, “In very rare circumstances, when it is not practical to meet the open space obligations within the Plan on the development site, we will ask for contributions elsewhere in the settlement towards those items identified in the Open Space Audit as being locally lacking or to improve the main path network in the local area as shown in the Core Path Plan.” to “In very rare circumstances, when it is not practical to meet the open space obligations within the Plan on the development site, we may ask for contributions elsewhere in the settlement towards those items identified in the Open Space Audit as being locally lacking or to improve the main path network in the local area as shown in the Core Path Plan.” (PP1125).

Paragraph RD2.10 (Primary Education)

Modify the PLDP to amend paragraph RD2.10 to clarify that contributions from developers towards education facilities should be made in advance of any development commencing (PP0264 and PP0657).

Modify the PLDP to amend the first sentence of paragraph RD2.10 from, “We will need contributions to ensure there are adequate primary school places for an increase in the number of school pupils likely to result from new residential developments.” to “We may need contributions to ensure there are adequate primary school places for an increase in the number of school pupils likely to result from new residential developments.” (PP1125).

Paragraph RD2.11 (Secondary Education)

Modify the PLDP to amend paragraph RD2.11 to clarify that contributions from developers towards education facilities should be made in advance of any development commencing (PP0264 and PP0657).

Modify the PLDP to amend the first sentence of paragraph RD2.11 from, “We will also need to ensure there are adequate secondary school places to fully accommodate pupils expected as a result of proposed development, as shown in Appendix 7.” to “We may also need to ensure there are adequate secondary school places to fully accommodate pupils expected as a result of proposed development, as shown in Appendix 7.” (PP1125).

Paragraph RD2.12 (Community Facilities)

Modify the PLDP to amend paragraph RD2.12 to clarify that contributions from developers towards social facilities should be made in advance of any development commencing (PP0264).

Modify the PLDP to amend paragraph RD2.12 to insert the text, “Where larger developments are located distant from existing settlements centres, the land for new

community facilities could be on or adjacent to the site of the new development.” (PP0733).

Modify the PLDP to amend the first sentence of paragraph RD2.12 from, “We will need contributions to deal with the effects of a development on communities where a specific shortfall is identified.” to “We may need contributions to deal with the effects of a development on communities where a specific shortfall is identified.” (PP1125).

Paragraph RD2.13 (Strategic Recycling and Waste Infrastructure)

Modify the PLDP to amend the first sentence of paragraph RD2.13 from, “We will need contributions for facilities in line with details in Appendix 7.” to “We may need contributions for facilities in line with details in Appendix 7.” (PP1125).

Paragraph RD2.14 (Health and Care Facilities)

Modify the PLDP to remove paragraph RD2.14 which details the requirements of contributions to healthcare facilities (PP0692, PP1294 and PP1306).

Paragraph RD2.16 (Other Off-Site Contributions)

Modify the PLDP to amend paragraph RD2.16 to read as follows, “In exceptional circumstances, when it is not practical to achieve adequate biodiversity benefits within a development site, we may also require enhancement of biodiversity (or geodiversity) offsite, as set out in the general biodiversity Policy P1.7.” (PP1300).

Appendix 15 Recycling and Waste Facilities

Modify the PLDP to amend Appendix 15 to state that waste containers should not be required to be left on the footway (PP0778).

Modify the PLDP to amend Appendix 15 to state that waste and recycling centres should accommodate non-motorised access (PP0778).

Summary of responses (including reasons) by planning authority:

Responsibilities of Developers Introduction

Planning Advice on Developer Obligations and Affordable Housing has not been completed and it is intended that, due to its technical nature it would be inappropriate to undertake public consultation. Targeted stakeholder engagement with Agencies and Stakeholder Bodies, including Homes for Scotland, is proposed. No change is required.

Policy RD1 Providing Suitable Services

General

The potential impact of energy infrastructure on telecommunications and broadcasting transmission links is noted in SPP (AD0012, paragraph 169). In determining planning applications for new energy projects (such as wind turbines), objection on the basis of interference with television signal would constitute a material consideration if it can be

demonstrated that there is likely to be adverse effects as a consequence of the development being permitted. In such instances this could be adequately considered in existing development management processes, and amendments could be made to the layout, siting and design of a development, or provision of booster infrastructure, to prevent loss of signal. Other types of development would rarely cause a loss of signal at the source. However, the loss of domestic television signal at the destination is not a material consideration. With different methods of accessing television, such as satellite, cable, and internet streaming, the partial or complete loss of one type of signal would not, therefore preclude access to television. It is not considered justified to add a new policy regarding television reception. No change is required.

Paragraph RD1.1

The Council acknowledges the Scottish Government's comments regarding the inclusion of clear information on the promotion of sustainable transport links, modes and choices for new development and the need for the inclusion of a reference to the sustainable travel hierarchy. However, whilst the PLDP makes no explicit reference to the sustainable travel hierarchy, policies RD1.4 and RD1.5 reflect the principles of the sustainable travel hierarchy and clearly contain the requirements for developments to implement active travel modes. Furthermore, it is worth noting that the Council have made choices on site selection based on sustainability criteria. The Council does not agree that the policy is not sufficient or robust enough – active travel is a requirement for each development. Furthermore, Appendix 7, the Settlement Statements refers to local transport infrastructure, which highlights that development may be required to contribute to sustainable travel. As such, the PLDP promotes sustainable travel where practical and deliverable. No change is required.

The Council notes the representee's comments regarding the conflicting sentiments in paragraph RD1.1 and paragraph RD1.2 regarding electric vehicle charging. However, whilst paragraph RD1.1, states that we will only allow development that provides adequate vehicle charging, paragraph RD1.2 states specifically in which circumstances adequate vehicle charging will be required and crucially states that for new home designs and workplaces, electric vehicle charging points remain discretionary. No change is required.

The acceptability of hydrogen fuel stations will be determined through the planning application process, which will assess the appropriateness of any proposal within its setting and will take into consideration any impact on residential amenity. No change is required.

The Council does not agree that paragraph RD1.1 should be removed. Given that the Council are planning for development that is likely to persist for many decades, it may be a loss of opportunity if we do not require provision of such services. Policy RD1.2 provides further information and guidance on what is considered to be 'adequate' provision of services and the Council consider that the information provided on each of the services mentioned in paragraph RD1.1 is successfully set out in Policy RD1.1 as a whole. No change is required.

The Council acknowledges SEPA's comments stating that the Council is not going beyond national guidance on air quality, the number of electric vehicles charging points and on no and ultra-low emission vehicles. However, the Aberdeenshire Council Annual Progress Report for Air Quality 2020 states "The Aberdeenshire Council area enjoys good air quality

with no exceedances of the national air quality objectives. Consequently, there is no requirements for Aberdeenshire Council to declare any air quality management areas (AQMA's)" (AD0096, Executive summary and Paragraphs 2.1, and 6.1) A pragmatic approach has been taken in paragraph RD1.2, and as such the Council consider the policy to be sufficient. No change is required.

Active travel is a requirement of all development and it is not considered that this requires to be reiterated within this section of the PLDP. It is required through Policy P1 (paragraph P1.5) as one of the qualities of a successful place and promoted as a means of transport in policy P2 (paragraph P2.6). No change is required.

The Council notes the representees comment regarding amendment to the text that makes Hydrogen Fuel Stations more discretionary. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Paragraph RD1.2 (Vehicle Charging Points)

The Council note the support given to Policy RD1, paragraph RD1.2 and the Council's proposed approach to electric vehicle charging points. No change is required.

The Council acknowledges Newtonhill, Muchalls and Cammachmore Community Council's comments that electric vehicle charging points should not be discretionary. However, there are issues associated with providing such facilities for flats, on-street, and in communal areas that present significant issues. Additionally, as it is not yet guaranteed that electric vehicle charging is a matter for the Building Regulations, the policy obligation instead refers to other regulations to achieve the change required. The Council considers a pragmatic approach has been taken to the policy and as such, no change is required.

The Council notes the Scottish Government's comment on the re-wording of Policy RD1.2 to reflect SPP more closely. However, there are issues associated with providing such facilities for flats, on-street, and in communal areas that present significant issues. Additionally, as it is not yet guaranteed that electric vehicle charging is a matter for the Building Regulations, the policy obligation instead refers to other regulations to achieve the change required. The Council considers a pragmatic approach has been taken to the policy and as such, no change is required.

The Council acknowledges the representee's comments that the PLDP should include policies that look favourably on development that includes electric charging points and be focussed on delivering sustainable transport in rural communities. However, this would not be in line with the principle of the right development, in the right location. The Council acknowledge that there is currently a general lack of provision of frequent public transport on routes other than the main inter urban routes. This provision sits with the Local Transport Authority and does not fall under the remit of the LDP. No change is required.

The Council acknowledges SEPA's comments stating that the Council is not going beyond national guidance on air quality, the number of electric vehicles charging points and on no and ultra-low emission vehicles. However, this has been discussed under Paragraph RD1.1 and in light of this the Council consider paragraph RD1.2 to also be sufficient. No change is required.

The Council considers the policy to be robust. As there are issues associated with providing such facilities for flats, on-street, and in communal areas that present significant issues, a discretionary approach is considered appropriate. One charging point for 25 employees is set out as a guide within the policy. The policy also refers to other regulations for managing their provision. No change is required.

The Council notes that there is an error in the final sentence of paragraph RD1.2 with regards to the regulations that have been referred to for managing the provision of electric vehicle charging points in car parking spaces. The Council's Transportation Service has advised that the regulations which are to be referred to in this context are the Car Parking Standards for Development Control in Aberdeenshire (AD0106 and AD0132). If the Reporter is minded, to make an amendment, then the Council recommend that the final sentence of paragraph RD1.2 could be modified to read, "Their provision will be managed by the application of the Car Parking Standards for Development Control in Aberdeenshire", and the associated footnote (footnote 2) updated to read, "See Car Parking Standards for Development in Aberdeenshire."

Paragraph RD1.4 (Access to New Development)

The Council note the support given to the requirements set out in the policy in relation to public transport services and transport hubs. No change is required.

The Council note the support from NHS Grampian on the text within paragraph RD1.4 and the requirement for developments to be well related to public transport services, or the delivery of improvements to public transport services. No change is required.

The representee's comments in terms of the contributions towards public transport being reasonable in terms of the tests set out in Circular 3/2012 are noted. However, as specified in paragraph RD2.1, "Contributions must fairly and reasonably relate in scale to the proposed development and will be needed to make the proposed development acceptable in planning terms, all in line with the policy tests contained in Planning Circular 3/2012 (AD0002, paragraph 14). No change is required.

The Council notes the representee's comment stating that the development industry should not be expected to 'fund' major improvements to pre-existing infrastructure deficits and that a more flexible, proportionate approach should be taken. The principle of cumulative contributions to infrastructure is established in Planning Circular 3/2012 Developer Obligations and Good Neighbour Agreements (AD0002, paragraphs 17, 20, and 22-23). This principle has been translated into paragraphs 1 and 2 on page 89 of the PLDP. This policy, therefore, meets the policy tests of Planning Circular 3/2012, and ensures that all developments that contribute towards creating a problem in terms of infrastructure capacity also contribute towards creating the solution. This is fair as otherwise the burden could fall entirely on the first site to develop beyond the capability of existing infrastructure which, would be a significant disincentive to deliver development. It is fair and reasonable to proportionately spread the cost of necessary infrastructure delivery across developments when it serves a planning purpose and is related to the proposed development. No change is required.

The Council notes the representee's comments in terms of the wording of Policy RD1.4 not being consistent with the test of reasonableness as set out in Circular 3/2012, however as specified in paragraph RD2.1, "Contributions must fairly and reasonably relate in scale

to the proposed development and will be needed to make the proposed development acceptable in planning terms, all in line with the policy tests contained in Planning Circular 3/2012". No change is required.

Paragraph RD1.5

The Council note the support given to the requirements set out in the policy in relation to footway connections, cycle infrastructure and provision of a safe route to school. No change is required.

The representee's comments on cycle connections are noted, however the Council consider that "should" is an appropriate term as dedicated cycle access may not be required as motorised vehicle access can also provide that function. Additionally, in accordance with Policy P1 Layout, Siting and Design, development designs will only be approved that demonstrate the six qualities of successful places – one of which is to create well connected places that require intermodal shifts and active travel and as such, active travel is a requirement of developments. No change is required.

The Council acknowledges comments on ransom strips; however, we do not consider that the wording requires to be amended. Sustainable travel is a key objective of the policy and the provision of active travel is a requirement for all developments. The possibility of ransom strips should not preclude the provision of active travel links. No change is required.

It is not considered that the first sentence of paragraph RD1.5 requires amendment as the detail provided in the PLDP is sufficient and adding further detail relating to ownership or "control" of the land provides no useful purpose. No change is required.

Paragraph RD1.6

The representee's comments regarding the number of homes to be accessed via private road are noted. However, as specified in the Council's Standards for Road Construction Consent and Adoption, a private access is defined as any way over which the public does not have a right, of passage. In residential developments a private access may serve up to five dwellings. Any number above five dwellings will mean that there is a public right of access and as such six or more individual dwellings should be served by a road, which will require Roads Construction Consent and the submission of a Road Bond in a residential area (AD0111, page 5) In light of this, the Council do not consider it appropriate to amend paragraph RD1.6 to allow 12 homes, or more, to be accessed via private road as this is not in line with the Council's best practice. Additionally, it is considered that allowing incremental development on private roads could lead to the deterioration of rural roads. No change is required.

Paragraph RD1.7

There is no reasonable opportunity for misinterpretation of the first sentence of paragraph RD1.7. No change is required.

Paragraph RD1.12 (Water and Waste Water)

The Council agrees with SEPA that amendment should be made to paragraph RD1.12 to

state that applicants must “demonstrate” rather than “show” that private treatment works is a reasonable alternative. The Council also agree that amendment should be made to paragraph RD1.12 so that additional wording is added at the end of the first sentence that requires a commitment by the developer to a maintenance agreement with homeowners for approved private sewerage treatment works where Scottish Water cannot/will not adopt it. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Paragraph RD1.16 (Waste Management Requirements)

The comments from SEPA regarding the wording in paragraph RD1.16 and RD1.17 are welcomed. No change is required.

Policy RD2 Developer Obligations

Paragraph RD2.1

The Council welcome the support from NHS Grampian. No change is required.

Developer obligations are paid by developers and contribute towards specific infrastructure projects that are necessary to make the development acceptable in planning terms for all users. Money from Developer Obligations is earmarked at the point of agreement for specific items, and if those items are not delivered in a reasonable time limit then the money gets refunded to the developer. As such, the money is not returned to the public sector. No change is required.

The Council notes the representee’s comment regarding Policy RD2 failing to fully reflect wording of Circular 3/2012, however as specified in paragraph RD2.1, “Contributions must fairly and reasonably relate in scale to the proposed development and will be needed to make the proposed development acceptable in planning terms, all in line with the policy tests contained in Planning Circular 3/2012”. The purpose of the Settlement Statements is to highlight what might be required, and the Council has assessed infrastructure needs for each settlement and the results of those assessments are reflected in the Settlement Statements. The delivery of the sites is not considered a “Responsibilities of Developers” issue, and the Council would refer to the Proposed Delivery Programme for information on the planned delivery of sites. No change is required.

SEPA’s comments are noted regarding amendment to the first sentence of paragraph RD2.1, however the Council do not consider that amendment to the wording is required. The protection of environmental assets is sufficiently covered within the Policy E1 Natural Heritage. Furthermore, Policy P2 Open Space and Access in New Development also sufficiently covers the enhancement and promotion of environmental assets. Thus, it is not considered that RD2.1 requires amendment to state that contributions towards environmental assets are required as the required provision is already covered in other policies within the PLDP. No change is required.

The representee’s comments are noted regarding developer contributions for the construction of active travel routes, however as stated in Planning Circular 3/2012 planning obligations should only be sought where they relate to the proposed development (AD002, paragraphs 20 to 24). As such, the Council cannot reasonably expect contributions to be made from developers to pathways and cycleways across

Aberdeenshire if they have no relation to the development. No change is required.

Supplementary Guidance is no longer a feature of the PLDP in accordance with the provisions of the new Planning (Scotland) Act 2019 (AD0010) and relevant information on need for contributions to infrastructure have been incorporated in the PLDP. This is in line with our consideration of the removal of supplementary guidance as “another issue” in the MIR (AD0038.A, page 8, and AD0040.A, pages 18 and 20). The method of calculation of developer contributions is an operational issue and not considered a policy matter and as such the Council do not consider it necessary to be included within the PLDP policy text. The methodologies used for calculating developer contributions will be available in Planning Advice: Developer Obligations and Affordable Housing which is being developed. Public engagement on this technical document will be targeted at a SP=EED Level 1 with targeted stakeholder engagement with agencies and stakeholder bodies, including Homes for Scotland. No change is required.

Paragraph RD2.2

The Council note Network Rail’s request to be excluded from having to make developer contributions, however public agencies such as Network Rail are still required to make contributions towards the necessary infrastructure. As such, if development proposed by Network Rail is seen to require contributions to make the proposed development acceptable in planning terms (all in line with the policy tests contained in Planning Circular 3/2012 (AD0002, paragraph 14)), even as a publicly owned company they will be required to make contributions that fairly and reasonably relate in scale to the proposed development. No change is required.

Paragraph RD2.7 (Transport)

The Council welcomes Network Rail’s support for the approach outlined in paragraph RD2.7. No change is required.

The Council notes Network Rail’s statement regarding the rail industry’s Long-Term Planning Process. No change is required.

Nestrans comments on the Region’s principal road network and active travel network are noted. Policy P1 Layout, Siting and Design covers the requirement for active travel routes and as such it is not necessary to be repeated in paragraph RD2.7. Additionally, the requirement for improvements to rail infrastructure is considered to be appropriately placed at the end of paragraph RD2.7. The Council agree that the principal local road network should be included within the text and if the Reporter is minded, to make an amendment, then the Council recommend that paragraph RD2.7 could be modified to read “We need contributions to make transportation improvements as shown in Appendix 7 and in the Delivery Programme. These will include work on the trunk road network (including necessary works in Aberdeen City) and the principal local road network. The Aberdeen City and Shire Strategic Development Plan has prepared a cumulative transport appraisal to inform their strategic transport advice. This could also include improvements to rail infrastructure”.

Active travel is a requirement of all development and it is not considered that this requires to be reiterated within this section of the PLDP. No change is required.

Network Rail are consulted during the planning application process if the development is

likely to result in a material increase in the volume or a material change in the character of traffic using a level crossing. As such, any impact from proposed developments on rail infrastructure, including on level crossings, would be assessed at the planning application stage. Paragraph RD2.7 states that contributions towards transportation improvements include improvements to rail infrastructure. No change is required.

Aberdeenshire Council agree that not all items listed in Policy RD2 will be required from all developments. Paragraph RD2.5 is clear that the “need for” contributions will depend on an assessment of the circumstances at the time of the application. Only if there is a need will obligations be sought. No change is required.

Paragraph RD2.8 (Local Transport Infrastructure)

Active travel is a requirement of all development and it is not considered that this requires to be reiterated within this section of the PLDP. No change is required. The Council agrees that it is not the case that all items listed in Policy RD2 will be required from all developments. RD2.5 is clear that the “need for” contributions will depend on an assessment of the circumstances at the time of the application. Only if there is a need will obligations be sought. No change is required.

Paragraph RD2.9 (Open Space and Access)

The Council agrees with the representee that amendment should be made to the spelling of the term Core Path Plan, to read “Core Paths Plan”. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council agrees that not all items listed in Policy RD2 will be required from all developments. Paragraph RD2.5 is clear that the “need for” contributions will depend on an assessment of the circumstances at the time of the application. Only if there is a need will obligations be sought. No change is required.

Paragraph RD2.10 (Primary Education)

Developer obligations are only sought to deal with the infrastructure required as a spatial consequence of new development and, only when strictly necessary to allow development to proceed. Paragraph RD2.10 indicates what may be asked for in terms of primary school provision, and clearly states that all new housing developments within a primary school catchment area will contribute to any identified need. The anticipated identified need is detailed in Appendix 7, the Settlement Statements, which show what is currently forecast to be required from development in each settlement. No change is required.

The Council agrees that not all items listed in Policy RD2 will be required from all developments. Paragraph RD2.5 is clear that the “need for” contributions will depend on an assessment of the circumstances at the time of the application. Only if there is a need will obligations be sought. No change is required.

Paragraph RD2.11 (Secondary Education)

Developer obligations are only sought to deal with the infrastructure required as a spatial consequence of new development and, only when strictly necessary to allow development

to proceed. Paragraph RD2.11 indicates what may be asked for in terms of secondary school provision. The identified need is detailed in Appendix 7, the Settlement Statements, which show what is currently forecast to be required from development in each settlement. No change is required.

The Council agrees that not all items listed in Policy RD2 will be required from all developments. Paragraph RD2.5 is clear that the “need for” contributions will depend on an assessment of the circumstances at the time of the application. Only if there is a need will obligations be sought. No change is required.

Paragraph RD2.12 (Community Facilities)

Developer obligations are only sought to deal with the infrastructure required as a spatial consequence of new development and, only when strictly necessary to allow development to proceed. Paragraph RD2.12 indicates what may be asked for in terms of community facilities. The anticipated identified need is detailed in Appendix 7, the Settlement Statements, which show what is currently forecast to be required from development in each settlement. No change is required.

Paragraph RD2.12 indicates what may be asked for in terms of community facilities. Appendix 7, the Settlement Statements, provides the specific detail for each settlement in terms of what and where new community facilities are required. No change is required.

The Council agrees that not all items listed in Policy RD2 will be required from all developments. Paragraph RD2.5 is clear that the “need for” contributions will depend on an assessment of the circumstances at the time of the application. Only if there is a need will obligations be sought. No change is required.

Paragraph RD2.13 (Strategic Recycling and Waste Infrastructure)

The Council agrees that not all items listed in Policy RD2 will be required from all developments. Paragraph RD2.5 is clear that the “need for” contributions will depend on an assessment of the circumstances at the time of the application. Only if there is a need will obligations be sought. No change is required.

Paragraph RD2.14 (Health and Care Facilities)

The Council welcomes support from NHS Grampian on Policy RD2, in particular the reference to health care. No change is required.

Evidence for the needs of new health care facilities is provided directly from NHS Grampian. Where a new development will affect service delivery and a solution is required to mitigate the effects, then a contribution is necessary to make the development acceptable in land use planning terms. It is not a replacement of national taxation as it is not used for the revenue costs of running health care facilities and so is no different from any other developer obligation. It is necessary to ensure that the PLDP actively helps facilitate the efficient delivery of services across Aberdeenshire, rather than creating new issues for services to respond to. The contributions sought will be used to mitigate the adverse effects of the new development with contributions being used towards the requirements of health facilities, whether through new land, technology to increase the capacity of existing buildings, or money towards extensions and reconfiguration. No

change is required.

Paragraph RD2.16 (Other Off-Site Contributions)

There is no justification for off-site habitat creation as a developer responsibility, and the Council believe that loss of habitat should be first and foremost avoided. Under the terms of Scottish Government Planning Circular 3/2012 (AD0002), the Council cannot see how this could be “required” to allow a development to go ahead. No change is required.

Appendix 15 Recycling and Waste Facilities

The comments from SEPA on Appendix 15 Recycling and Waste Facilities are welcomed. No change is required.

The representee’s comments on domestic waste containers are noted, however street furniture is not a matter that the PLDP has any influence over as it would be a matter for the Roads Authority. No change is required.

The Council acknowledges the representee’s comments on the accommodation of non-motorised access at waste and recycling centres, however we do not consider this to be necessary or deliverable as the majority of traffic to recycling centres is by motorised transport and site management recognises conflicts between vehicles and pedestrians moving around the site. No change is required.

Reporter’s conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” to Section 14 (Responsibilities of Developers) and Appendix 15 (Recycling and Waste Facilities). However, where such matters arise from representations made to the proposed plan they are required to be addressed in the examination. I therefore address these as appropriate below.

3. The representation submitted by the Scottish Government (PP0578) includes comments from Transport Scotland in relation to mitigating the impact of development allocations on the trunk road network. The council has addressed the matters raised in the schedule 4 forms for the settlements in question; Mintlaw (Issue 21); Ellon (Issue 22); Inverurie (Issue 34); Kintore (Issue 35); Laurencekirk (Issue 43); and Chapelton (Issue 47). However, these settlement specific comments from Transport Scotland also raise wider issues in relation to the overall approach to infrastructure and developer obligations in the proposed plan. These are addressed below under the section on policy RD2 Developer Obligations.

The responsibilities of developers

4. Section 14 of the proposed plan is concerned to ensure that development incorporates, or is otherwise able to facilitate, the provision of necessary infrastructure or facilities. Policies RD.1 and RD.2 address complementary aspects of such provision, focussing respectively on elements to be incorporated as an integral part of development; and on securing, including through financial contributions, matters necessary to support and make such development acceptable.

5. This broad approach is appropriate, but several representations comment that the proposed plan contains insufficient detail to enable the implications for specific developments to be fully understood and properly taken into account in their implementation. Supplementary guidance was adopted in connection with the current local development plan and this provides a more detailed policy context to guide such provision. However, the council does not contemplate that equivalent supplementary guidance is to be put in place in connection with the proposed plan. Instead, the council intends to prepare what it refers to as planning advice in this context.

6. I am aware, from responses to a further information request (FIR010), that the council has now issued a draft version of its planning advice note on developer obligations and affordable housing for consultation with selected stakeholders. The advice note does not form part of the development plan and its contents, or response to it, are not a matter for consideration through this examination. However, the council's intention not to consult the wider public on the advice note is of relevance, given the representations on this matter.

7. Scottish Planning Policy explains that engaging with all interests is one of the seven core values of the planning service, and that engagement with communities should be undertaken at all stages of the planning process. The preparation of planning advice to be used to guide the provision of necessary infrastructure and facilities, without inclusive public consultation (as the council apparently currently contemplates), would not accord with Scottish Planning Policy. Although certain aspects of this planning advice involve assessments of costings and mechanisms for apportioning these among developments, I do not accept that the technical nature of some of these considerations would warrant excluding appropriate public consultation. My consideration of representations on policy RD2 has implications for the format of further guidance or advice. However, this has no bearing on the need for appropriate and proportionate community engagement, as envisaged in national policy. I will return to this matter under policy RD2.

8. I disagree with the council's suggestion that an effect on domestic television reception would only be a material consideration in cases involving new energy projects. A potential effect of development in this regard would be capable of being a material consideration in the context of other types of development, depending on the circumstances. However, it is not reasonably possible, or desirable, for the proposed plan to attempt to identify all such considerations that may be potentially material. The development management process is capable of addressing any such considerations as may arise as the council suggests. No modification is therefore necessary in this regard.

Policy RD1 Providing Suitable Services

9. Within policy RD1, paragraph RD1.1 is clearly intended to set the overall context with more details relating to particular infrastructure and services being addressed in the subsequent paragraphs RD1.2 to RD1.16.

10. As the proposed plan does not contain a separate transport section, it is appropriate, as Transport Scotland comments, for the approach to development to foster sustainable transport links and choices. I agree that this should be given greater emphasis in the plan. Paragraph RD1.1 should be modified to emphasise the promotion of sustainable transport links, as an intrinsic element of the services that should be provided in conjunction with development. The modification I recommend in this regard also responds to a number of representations which seek more specific reference to walking and cycling.

11. Including reference to making provision in respect of alternatively fuelled vehicles is appropriate, and I agree with the representations by Scottish Government and Scottish Environment Protection Agency (SEPA) that the policy should be worded more positively in this regard. I recommend a modification to paragraph RD1.2 accordingly. However, any mandatory requirement to include vehicular charging facilities in development would be a matter for legislation, beyond the scope of this plan.

12. Several representees express conflicting views, in relation to paragraphs RD1.4 to RD1.8, as to whether the elements of access provision addressed in those paragraphs “must” or “should” be included. The need for any access works or enhancement would be assessed at the development management stage, depending on the context and circumstances of individual development proposals. It is not therefore appropriate for these paragraphs to imply that such works would always be required. Requiring access works to be designed in accordance with the appropriate technical standards is however appropriate and retention of the word “must” is therefore justified in the first sentence of paragraph RD1.8. The modifications I recommend to paragraphs RD1.4 to 1.7 address this aspect, and also respond to the concern expressed by several representees about reasonableness and consistency with the tests of circular 3/2012.

13. Necessary access and other enhancements, as well as other measures referred to in paragraphs of policy RD1, are likely in many cases to involve planning obligations which policy RD2 addresses. The recommendations I make for the preparation of supplementary planning guidance in the context of policy RD2 provides an appropriate mechanism to enable further detail to guide how the provision of suitable services and infrastructure referred to in policy RD1 can be delivered.

14. If access or other works are necessary to enable development to be satisfactorily carried out, ensuring delivery of such provision is appropriate irrespective of whether this would involve use of third-party land. I therefore disagree with the suggestion made by a representee that necessary off-site works should not be required where this would create what the representee refers to as “ransom strips” and no modification is appropriate to paragraph RD1.5 in this regard.

15. Altering the relevant general threshold from 6 dwellings to 12 for development to be served by a road suitable for public adoption is not appropriate. This would, as the council explains, conflict with the standards for road construction. However, the modification I recommend to Paragraph RD1.6 enables flexibility to take account of particular circumstances at the development management stage.

16. The provisions of paragraph RD1.7 relate to access provision generally and is not, as a representee suggests, confined to non-vehicular traffic. No further modification

beyond that explained above is required to this paragraph.

17. I agree with the council that an alteration to the wording of paragraph RD1.12 in respect of wastewater matters would make the intention clearer. I therefore recommend a specific modification in this regard.

Policy RD2 Developer Obligations

18. Recurring themes amongst representations made in response to policy RD2 overall, and in relation to its component parts, include;

- a suggestion that the wording of the policy is both confusing and not clearly consistent with national policy;
- an absence of detail on the nature of, and justification for, specific developer contributions;
- lack of clarity on the circumstances in which contributions will (as opposed to may) need to be secured and how these would be calculated.

19. There is considerable overlap between matters raised in representations relating to the council's approach to securing developer contributions and those commenting on infrastructure requirements. We issued two further written information requests (FIR007 and FIR010) in relation to representations on developer obligations and infrastructure requirements.

20. Paragraph 139 of Circular 6/2013 "Development Planning" states that "items for which financial or other contributions, including affordable housing, will be sought, and the circumstances (locations, types of development) where they will be sought should be included within the plan itself".

21. The council has indicated that the items for which contributions will be sought are set out in paragraphs RD2.7 to RD2.16 of the proposed plan and the circumstances where they will be sought are included in the settlement statements and paragraph 2.5. The non-statutory planning advice note on developer obligations and affordable housing would provide further detail.

22. The council states that details of infrastructure required to mitigate the impact of proposed development would be subject to individual assessment through a methodology that has been agreed and used with the development industry for many years, and would be shared at the time of a planning application, or during pre-application discussions. This would be in the form of a developer obligations assessment report, carried out by the council's developer obligations team, which assesses the level of proportional contributions required towards developer contributions and affordable housing. All proposals would require to be in line with Policy RD2 Developer Obligations.

23. The council considers its approach to be pragmatic and realistic, in terms of setting out the details of required infrastructure in the local development plan. It states that specific requirements will depend on the circumstances at the time a planning application is submitted.

24. Homes for Scotland and other parties consider that the proposed plan does not sufficiently make clear the circumstances in which developer obligations will be sought. The settlement statements do not, in all cases, present a clear justification or

quantification for contributions. It is not appropriate to rely on planning advice because it would be non-statutory and not subject to due scrutiny.

25. Representees comment that the costs of developer obligations would affect the deliverability of development and where these are not known, or cannot be estimated with a degree of certainty, the deliverability of particular developments (especially housing schemes) cannot be properly assessed. This could impact on the viability and therefore effectiveness of particular sites.

26. I note that paragraphs RD2.7 to RD2.16 provide a list of infrastructure items for which financial or other contributions may be sought. However, the circumstances in which contributions will be sought are not fully explained, either in section 14 of the proposed plan or the settlement statements. Whilst the council states that the approach to developer obligations in the proposed plan is a continuation of its current practice, I do not consider that the level of information provided is consistent with Circular 6/2013. For many of the allocated sites, the proposed plan provides insufficient detail to enable developers to undertake even a basic viability assessment.

27. Paragraph 275 in Scottish Planning Policy indicates that development plans are expected to identify any required transport and related infrastructure and, alongside other associated documents, should set out how, and by whom, this is to be delivered and phased. Transport Scotland considers that the approach taken in the proposed plan to the identification of required transport infrastructure is not consistent with Scottish Planning Policy. It states that the developments which will be required to contribute to mitigation should be identified within the local development plan, with information included on the nature, scale and delivery mechanisms of such mitigation. The local development plan should be deliverable and developers and stakeholders should understand any potential contributions towards infrastructure and how that infrastructure will be delivered.

28. The council points to the content of the settlement statements in Appendix 7 of the proposed plan in this regard. However, I agree with representees that, in many cases, the need for specific items of infrastructure to be provided or augmented in respect of particular identified development allocations is absent.

29. In relation to the identification of transport infrastructure, the council has undertaken a transport assessment of the proposed plan based on Transport Scotland's "Development Planning and Management Transport Appraisal Guidance (DPMTAG)". It builds on the equivalent assessment undertaken for the adopted local development plan. I note that the DPMTAG assessment considers the transport options associated with existing and new allocations in the proposed plan and makes recommendations on necessary transport interventions on a settlement basis.

30. I sought further information on the relationship between the DPMTAG assessment and the proposed plan. Transport Scotland indicates that the transport appraisal process, as outlined in Scottish Planning Policy, is intended to determine any potential cumulative impacts of the local development plan's spatial strategy on the transport network and to determine the required, deliverable mitigation solutions. This mitigation may include improvements to the local and/or trunk road networks, which may require developer contributions to facilitate delivery.

31. The council's response is less clear. It states that the role of the DPMTAG

assessment is to identify those interventions that may be required to accommodate new development over and above the base case, and the evaluation and commentary provided within that document provides the justification for transport infrastructure improvements identified in the settlement statements of the proposed plan. However, it points out that not all improvements required to the strategic network are as a result of new development. The council, through its delivery programme, will identify where assessment may be required as a result of new development and will subsequently broker contributions for mitigation of traffic impacts caused by new development.

32. I agree with Transport Scotland that the approach taken in the proposed plan to the identification of necessary transport infrastructure does not meet the expectations of paragraph 275 of Scottish Planning Policy. I find that the level of detail provided on transport interventions in the settlement statements is patchy and not always consistent with the recommendations in the DPMTAG assessment or the information contained in the Delivery Programme April 2020.

33. I conclude that there are deficiencies in the proposed plan in relation to the information provided on infrastructure required to support development allocations and the circumstances in which developer obligations would be sought. I am not able, in this examination, to recommend specific modifications to the proposed plan to address these matters. I agree with the council that including this information in an appendix to the plan at this late stage in the preparation process would result in a significant delay in the adoption of the plan. However, paragraph 123 in Circular 6/2013 allows me to recommend actions that could be taken to remedy the deficiencies.

34. Within this context, I sought the views of the council and other relevant parties on the preparation of statutory supplementary guidance to address these matters. The council does not consider this to be necessary and is concerned about the implications of new regulations and guidance on local development plans due to come into effect in 2022. However, it does accept that the draft planning advice note currently in preparation could instead be promoted as statutory supplementary guidance.

35. The Scottish Government response has clarified that the transitional arrangements for the new development plan system under the Planning (Scotland) Act 2019 envisage that “a period of 24 months, after the coming into force of the development plan regulations, will be allowed for the adoption of supplementary guidance associated with local development plans adopted under the 2006 Act”. I anticipate that the proposed plan will be adopted under the 2006 Act and therefore, if the new regulations come into force as expected in summer 2022, the council would have until summer 2024 to prepare and adopt statutory supplementary guidance. I note that Homes for Scotland strongly supports the planning advice note being promoted to statutory supplementary guidance.

36. I also asked the council to suggest how policy RD2 could be modified to provide the basis for statutory supplementary guidance to be prepared. It has suggested that the last sentence in paragraph RD2.2 be replaced with the following:

“Supplementary Guidance Developer Obligations and Affordable Housing will be prepared to show the infrastructure for which contributions will be sought and the methodologies and evidence for calculating these, the types of development requiring a contribution; policy departures; matters relating to development viability; the management of the process; matters relating to upfront and phased payments and the

management of the funds received.”

37. Taking account of Scottish Government advice on the transitional arrangements for the new development plan system, I consider that the council should prepare statutory supplementary guidance to provide further detail on the items for which financial or other contributions will be sought; the circumstances where they will be sought; and the levels of developer contributions or methodologies for their calculation. Information should be provided on the transport and related infrastructure required in association with allocations in the plan (in line with paragraph 275 of Scottish Planning Policy). It would be for the council to decide what other matters from its draft planning advice note should be included in the statutory supplementary guidance. The procedures for preparing supplementary guidance are set out in legislation and include the requirement to publicise a draft version of the supplementary guidance and give people the opportunity to comment.

38. I do not consider that the modification suggested by the council sufficiently reflects the provisions of circular 6/2013 and paragraph 275 of Scottish Planning Policy. I therefore recommend alternative wording. Given that the supplementary guidance is necessary to remedy a deficiency in the plan, I consider it necessary to set a target timescale by which the council must send a copy of the guidance it wishes to adopt to Scottish Ministers.

39. The council states that matters of local transport infrastructure would depend on specific constraints relating to the site design and transport impact of the proposal. It considers that it would be misleading to identify specific measures to mitigate local transport impact, in advance of transport assessments being undertaken, as and when development proposals come forward. I accept that there may be circumstances where it would not be appropriate or possible for the supplementary guidance to specify the exact infrastructure requirements associated with an allocated site. I consider that the supplementary guidance should provide as much information as possible and set out clearly how, when and by whom, further details will be provided.

40. This approach would address the need for appropriate scrutiny and consultation, including with the wider public and mean that, where possible, detailed information on developer obligations and infrastructure requirements would form part of the development plan. It is expected that the council will consult with Transport Scotland to ensure the supplementary guidance sets out a clear position on the trunk road infrastructure needed to support the development allocations in the plan. It is my understanding that information on how, when and by whom infrastructure is to be delivered will be provided through the Delivery Programme, which will be subject to regular updates. Modifications to paragraph RD2.2 and the introductory paragraph on page 89 of the proposed plan are recommended to address these matters.

41. The wording of policy RD 2.1, and the subsequent paragraphs RD 2.2 to RD 2.16, imply that developer contributions are to be the primary means of ensuring the provision of necessary physical and social infrastructure in connection with development. The use of the phrase “we will need contributions...” in the paragraphs referring to such infrastructure provision emphasises this impression. However, it is to be expected that development proposals would (or should) be designed to include such necessary facilities as part of the development where appropriate, or be able to make optimum use of existing facilities or capacity. In many cases, specific infrastructure provision that may be

necessary could be governed by conditions attached to a planning permission, which circular 3/2012 explains is generally to be preferred to using planning obligations.

42. Paragraph RD2.1 rightly acknowledges that developer obligations must be consistent with the policy tests set out in circular 3/2012. The detail of how the scope and scale of any necessary contributions are to be assessed will be set out in supplementary guidance. However, as this guidance is not currently available, it is appropriate for the approach to developer obligations to be more clearly expressed in the plan, at least in its essential elements. A modification is necessary to paragraph RD2.1 to more explicitly reflect the operation of the tests in circular 3/2012.

43. Financial contributions would be expected to be largely confined to circumstances where direct provision of the relevant infrastructure as part of the development is either not possible, is not appropriate in the circumstances, or where a proportionate contribution to provision serving a wider area is required (in connection with necessary additional education capacity, for example). As circular 3/2012 makes plain, it is not possible to define all the circumstances in which planning obligations may be appropriate. However, the listing, in paragraphs RD2.7 to RD2.16, of specific matters in respect of which contributions are said to be needed could be taken as suggesting that there is no requirement for items of physical or social infrastructure not listed. Modifications are necessary to the wording of paragraph RD2.1 more directly to reflect the tests in the circular and to several of the following paragraphs to correct the impression that contributions would be sought as a matter of course, rather than where consistent with the application of those tests. I am aware that these changes to policy RD2 may result in inconsistencies with the wording used in the services and infrastructure section of the settlement statements. In the absence of specific representations, we have no remit to consider these through the examination. It would be for the council to decide whether any consequential modifications would be appropriate, prior to the adoption of the plan

44. Paragraphs RD2.7 – RD2.8 and RD2.10 – RD2.14 in the proposed plan indicate that details are provided in Appendix 7. As further information on developer obligations and infrastructure requirements is also to be provided in supplementary guidance, reference should be made to this in these paragraphs. Modifications to this effect are recommended. The phrases “transportation improvements” and “transportation infrastructure” mentioned in paragraphs RD2.7 and 2.8 do not exclude public transport facilities or those related to active travel such as walking and cycling. With the recommended modifications, and the further detail that would be expected to be included in supplementary guidance, there is no need for further categories of such provision to be listed in these paragraphs.

45. The council has suggested some additional text for paragraphs RD2.10, RD2.11, RD2.12 and RD2.14 to help explain the circumstances in which contributions would be sought. Whilst the inclusion of this text within the plan itself would be in line with circular 6/2013, I am not able to confirm whether all relevant circumstances are included and I am conscious that there has been no opportunity for public consultation. I therefore consider that, on this occasion, these matters should instead be addressed through the supplementary guidance. No further modifications are recommended.

46. Although, as a representee points out, the providers of health, medical and related services often operate as commercial businesses, many hospital, clinic and other health facilities are public sector resources. I see no reason why physical or social infrastructure

involved in health and care provision should be treated differently in principle from other infrastructure and services necessary to support development and those who occupy it. The application of the circular 3/2012 tests would ensure that any financial or other contributions would only be applicable where all the relevant criteria are met. No modification is required in this regard.

47. Nor do I see any justification that development promoted by Network Rail should be exempt from making provision to secure infrastructure or services made necessary by that development. Network Rail's status as a publicly owned company has no bearing on the effect that such development may have on the need for infrastructure or services.

48. Several representations seek to emphasise that contributions secured through planning obligations should be utilised locally to the development, that education and social facilities should be provided in advance of development, and that the categories of infrastructure should be widened to encompass footpath and cycleway enhancements. With the inclusion of more specific reference to the tests in circular 3/2012 contained in the modifications I recommend, and the further detail to be included in supplementary guidance, there is no need for further modifications to achieve these objectives.

49. The correction in paragraph RD2.9 to refer to "Core Paths Plan", as the council proposes in response to a representation is appropriate and I recommend a modification accordingly.

Appendix 15 Recycling and Waste Facilities

50. The guidance on the provision to be made for bin storage, contained in Tables 1 and 2 of Appendix 15 of the proposed plan, includes locational and accessibility components, as well as addressing the appropriate scale of such provision. While this guidance can influence the manner in which waste and recycling facilities are integrated into new development, storage and collection arrangements applying in existing developed areas are matters of operational management of the services involved. I agree with the council that no modification is needed in this regard.

Reporter's recommendations:

Modify the local development plan by:

1. Replacing the last sentence in the unnumbered introductory paragraph on page 89 with:

"This approach will be further detailed through Supplementary Guidance on Developer Obligations and Affordable Housing, as well as the Delivery Programme."

Policy RD.1 Providing Suitable Services

2. Replacing paragraph RD1.1 on page 89 with:

"We will only allow development that is located and designed to take advantage of or incorporate the services, facilities and infrastructure necessary to support it. Such matters may include sustainable transport linkages and supporting infrastructure, facilities for alternatively fuelled vehicles, road access, waste management provision, water supply, wastewater connections and treatment, and other elements as may be appropriate in the circumstances."

3. Replacing paragraph RD1.2 on page 89 with:

“Residential development should, where practicable, incorporate appropriate provision for electric vehicle charging. The availability of one charging point for every 25 employees should be aimed for at workplaces. Electric vehicle charging points should be provided in car parking spaces used by the public, including in connection with major retail and leisure uses. Their provision will be managed by the application of the Standards for Road Construction Consent and Adoption².”

4. Replacing “must” with “should” in the first line of paragraph RD1.4 on page 90.

5. Replacing “must” with “should” in the first line of paragraph RD1.5 on page 90.

6. Replacing “must” with “should” in the first line of paragraph RD1.6 on page 90.

7. Replacing “must” with “should” in the third line of paragraph RD1.7 on page 90.

8. Replacing paragraph RD1.12 on page 91 with:

“Where a connection to the public drainage infrastructure is demonstrated to be unfeasible, connection to a private drainage infrastructure can be supported, if it is demonstrated satisfactorily that there is no reasonable alternative, and where the developer commits to a maintenance agreement with homeowners for the lifetime of the plant where adoption by Scottish Water is either not sought or not granted. Appropriate supporting evidence should be provided to support using private drainage infrastructure. Planning permission may be granted on the condition that private drainage infrastructure may be used temporarily with the requirement to connect to public drainage infrastructure when it becomes available.”

Policy RD2 Developer Obligations

9. Replacing paragraph RD2.1 on page 92 with:

“Where, by itself or cumulatively, development would give rise to the need for new or improved infrastructure or services, and this is not to be directly provided as an integral part of the development, planning obligations or other appropriate means to secure such provision may need to be put in place. Planning obligations, including those securing financial contributions, must meet each of the five tests set out in paragraph 14 of Planning Circular 3/2012¹¹. Planning obligations must:

- be necessary to make the proposed development acceptable in planning terms;
- serve a planning purpose;
- relate directly or cumulatively to the proposed development;
- fairly and reasonably relate in scale and kind to the proposed development;
- be reasonable in all other respects.

It is not possible to indicate all the circumstances where planning obligations are appropriate. The settlement statements in Appendix 7 indicate the nature of infrastructure or service provision necessary in connection with development proposed in this plan, where these are known. Paragraphs RD2.7 to RD2.16 below give guidance in relation to certain categories of infrastructure and services.

10. Replacing the final sentence in paragraph RD2.2 on page 92 with the following sentences:

“Supplementary Guidance on Developer Obligations and Affordable Housing will be

prepared. This will provide further detail on the items for which financial or other contributions, including affordable housing, will be sought; the circumstances (locations, types of development) where they will be sought; and the levels of developer contributions or methodologies for their calculation. Information will be provided on the transport and related infrastructure required in association with allocations in the plan. Where the exact requirements for site specific infrastructure are not known, the guidance will include as much detail as possible and set out clearly how, when and by whom, this information will be provided. A copy of the Supplementary Guidance, which the council wishes to adopt, will be submitted to Scottish Ministers within 12 months from the date the local development plan is adopted.”

Transport

11. Replacing paragraph RD2.7 on page 93 with:

“We may need contributions towards transportation improvements as shown in Appendix 7, Supplementary Guidance and the Delivery Programme. These could include work on the trunk road network and in Aberdeen City. The Aberdeen City and Shire Strategic Development Plan has prepared a cumulative transport appraisal to inform their strategic transport advice. This could also include improvements to rail infrastructure.”

Local Transport Infrastructure

12. Replacing paragraph RD2.8 on page 93 with

“We may need contributions to fully address the effect of individual developments. We may also need contributions if more than one development affects transportation infrastructure. We provide details of this in Appendix 7 and Supplementary Guidance. All new development within a settlement may be required to contribute to any identified need.”

Open Space and Access

13. In the second line of paragraph RD2.9 on page 93, replacing “will” with “may”.

14. In the last line of paragraph RD2.9 on page 93, replacing “Core Path Plan” with “Core Paths Plan”.

Primary Education

15. Replacing paragraph RD2.10 on page 93 with:

“We may need contributions to ensure there are adequate primary school places for an increase in the number of school pupils likely to result from new residential developments. We give details in Appendix 7 and Supplementary Guidance. All new housing developments within a primary school catchment may be required to contribute to any identified need.”

Secondary Education

16. Inserting the words “and Supplementary Guidance” at the end of paragraph RD2.11 on page 93.

Community Facilities

17. Replacing the first two sentences of paragraph RD2.12 on page 93 with:
“We may need contributions to deal with the effects of a development on communities where a specific shortfall is identified. We give details of this in Appendix 7 and Supplementary Guidance.”

Strategic Recycling and Waste Infrastructure

18. Replacing the first two sentences of paragraph RD2.13 on page 93 with:
“We may need contributions for facilities in line with details in Appendix 7 and Supplementary Guidance. This could involve the developer contributing towards strategic recycling and waste infrastructure that benefit residents within the catchment area.”

Health and Care Facilities

19. Replacing the second sentence in paragraph RD2.14 on page 94 with:
“Appendix 7 and Supplementary Guidance provide information on where such provision may be required.”

Issue 13	Appendix 16 Schedule and Landownership and Glossary	
Development plan reference:	Proposed LDP, Appendix 16 Schedule and Landownership, page 1197-1170 Proposed LDP, Glossary, Page 1171 -1180	Reporter: Rob Huntley
Body or person(s) submitting a representation raising the issue (including reference number):		
<p>Appendix 16 Schedule and Landownership No representations were received on this section of the Proposed Aberdeenshire Local Development Plan (PLDP) 2020.</p> <p>Glossary PP0589 Scottish Renewables PP0723 Charles Miller PP0733 Paul Davison PP0736 RWE Renewables UK PP1219 Scottish Environment Protection Agency</p>		
Provision of the development plan to which the issue relates:	Appendix 16 Schedule and Landownership Glossary	
Planning authority's summary of the representation(s):		
<p>Glossary</p> <p>Two representees have requested that the term “protected species” should be defined in the Glossary as the meaning differs depending upon the context (PP0589 and PP0736).</p> <p>A representee has requested that the definition of “Protected Land” be amended to clarify its role and purpose (PP0733).</p> <p>A representee has requested adding the definition of ‘Environmental Impact Assessment (EIA)’ in the glossary to clarify its role and purpose, and to reference the Town and Country Planning EIA Regulations definitions of “EIA development” and “Environmental Impact Assessment” (PP0733).</p> <p>A representee has questioned the definition of a ‘settlement’ in the glossary. The definition appears to be tied to an out-of-date report on rural facilities, which does not come from the Aberdeen City and Shire Strategic Development Plan (SDP). They argue the definition is subjective, the process to finalise the definition appears to have taken an unreliable approach, and the required facilities were not previously a requirement to be a settlement. They add, the approach is also failing to keep up to date with changes in the economy, and that many of these facilities are not now viable in settlements (PP0723).</p> <p>Scottish Environment Protection Agency (SEPA) has suggested amending the definition of ‘Buffer Strips’ by altering the words from “watercourse” to “waterbody”. Buffer strips are required for water bodies. This ensures consistency/compliance with the wordings in</p>		

Appendix 10. SEPA has also requested to amend the definition of ‘Freeboard’ (PP1219).

SEPA has suggested expanding the definition of “Infrastructure” due to its vast meaning. They suggest adding overhead and underground pipelines and electricity cables along with associated substation infrastructure should be included in this definition (PP1219).

Modifications sought by those submitting representations:

Glossary

Modify the PLDP to include a definition of ‘protected species’ (PP0589 and PP0736).

Modify the PLDP to amend the definition for protected land to read, “Development will not be allowed on protected land designated with “P” classification in the LDP.” (PP0733).

Modify the PLDP to include a definition for Environmental Impact Assessment (PP0733).

Modify the PLDP to amend the definition of a “settlement” and remove the requirement for rural facilities (PP0723).

Modify the PLDP to amend the first sentence for Buffer Strips to read, “Vegetated land adjacent to a waterbody that helps protect and improve water quality, run-off and biodiversity.” (PP1219).

Modify the PLDP to amend the definition of Freeboard to read, “The allowance made for natural variations in flood levels. A factor of safety in flood protection design (usually expressed as height above flood level), which allows for factors related to the uncertainty in estimating flood risk (e.g., wave action, settlement, morphological changes).” (PP1219).

Modify the PLDP to amend the definition of Infrastructure to read, “The facilities and other items needed to support development. This includes roads and transport facilities, energy and communication networks, sewage and water facilities.” (PP1219).

Summary of responses (including reasons) by planning authority:

Glossary

The Council confirms that it intends to address comments by adding a definition of “Protected Species” through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council does not agree with the amended definition of “Protected Land”, which is used to protect open space for its setting, recreation, education use and leisure use. Policy PR2 Reserving and Protecting Important Development Sites and the Settlement Statements in Appendix 7 clarify the role and purpose of each designation. No change is required.

The definition of the word “Settlement” is partially adopted from the Rural Facilities Monitoring Report published by the Council’s Planning Information and Delivery Team in January 2017 (See AD0114). The SDP does not focus on the definition of settlement but focuses on “sustainable mixed communities” which is a different entity. The SDP (see

AD0016) states that there would be pressure for housing in the countryside and this pressure will be dealt with through Rural policies in the Aberdeenshire Local Development Plan. It also highlights that new development should be well served by public transport and this is covered within the definition of settlement. The Council disagrees with amending the definition of “settlement” to reflect economic changes and allocations are proposed to help sustain existing facilities. No change is required.

The Council does not support adding the definition of EIA to the glossary as it is already defined in the EIA Regulations and Circular 1/2017, which the introductory text for Section 10 Natural Heritage and landscape directs users of the Plan towards (see AD0041.A, page 57). However, if the Reporter is minded, to add a definition in the Glossary, then the Council recommend that the definition of EIA to be as following:

“Environmental Impact Assessment (EIA) – As per The Town and Country Planning (Environmental Impact Assessment) (Scotland) Regulations 2017, this is a means of drawing together, in a systematic way, an assessment of a project’s likely significant environmental effects in order to allow a reasoned conclusion of these effects to be reached. Projects of a type listed in Schedule 1 of the EIA Regulations must always be subject to EIA. Projects of a type listed in Schedule 2 must be subject to EIA where they are likely to have significant effects on the environment following a Screening Process conducted by the Planning Authority (or Scottish Ministers).”

The Council confirms that it intends to address SEPA’s comments on buffer strips, Freeboard and infrastructure through a non-notifiable modification, as set out in as set out in the List of Non-Notifiable Modifications.

Reporter’s conclusions:

Preliminary matters

1. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” to definitions included in the glossary. However, where such matters arise from representations made to the proposed plan they are required to be addressed in the examination. I therefore address these as appropriate below.

Glossary

2. For clarity and ease of understanding by users of the plan, I agree that the inclusion of a definition of the term “protected species” is appropriate. However, such species are not confined to those that are endangered, as the council’s proposed wording would suggest. As representees point out, the protection afforded to species and their habitats is expressed in a range of legislative provisions in Scots, European and wider international law, with the relevant applicable provisions being dependent on the particular context. It is not appropriate to include comprehensive details of all relevant legislative provisions in the plan, but the inclusion of a broad definition, with a signpost to sources of further guidance, is appropriate. I recommend a modification accordingly.

3. I agree with the council that it is not appropriate to widen the definition of “Protected Land” included in the glossary, to encompass designations beyond its reference to open space. Although Policy PR2 (Reserving and Protecting Important Development Sites), safeguards sites for specific purposes, the policy and settlement statements in

Appendix 7 clarify the role and purpose of those separate designations. No modification is required.

4. The word “settlement” is used in different ways in the proposed plan including descriptively, such as “sustainable settlements”. A significant widening of the scope of the term could undermine or confuse the policy intention to foster a sustainable pattern of settlement in rural areas. No modification is required.

5. I agree with the council’s comment that it is not necessary for a definition of Environmental Impact Assessment to be introduced in the glossary. This would duplicate, in a potentially confusing manner, the legislative provisions and guidance contained in the relevant Regulations and Scottish Government Circular 1/2017, to which reference is made in Section 10 (Natural Heritage and Landscape) of the proposed plan. No modification is required.

6. The council accepts the substance of the representations by the Scottish Environment Protection Agency (SEPA) in respect of the definition of specific terms in the glossary, as set out in the “Modifications sought by those submitting representations” section above. I agree that this would generally assist clarity and I recommend modifications to the definitions of “Infrastructure” and “Buffer Strips” accordingly. However, Scottish Planning Policy contains, in its glossary, a definition of the term “freeboard allowance”. The use of a consistent definition is appropriate in the proposed plan and that is reflected in my recommended modification, rather than the somewhat different wording suggested by SEPA and the council.

7. The recommended modifications below address matters covered under Issue 13. However, there are further modifications to the glossary which we are recommending in response to representations covered under other issues. These are set out in the relevant schedule 4.

Reporter’s recommendations:

Modify the local development plan by:

1. Adding a new definition in the appropriate alphabetical position in the Glossary, together with a link to further guidance available on the NatureScot website, as follows:

“Protected species: Species that are afforded legal protection in Scots, European or wider international law.

(further guidance is published on the NatureScot website [Legal framework | NatureScot](#))”

2. Replacing the word “watercourse” with “waterbody” in the second line of the definition of “Buffer Strips” in the Glossary on page 1173.

3. Replacing the heading “Freeboard” and the whole of the text of that entry in the Glossary, on page 1175, with:

“Freeboard Allowance: A height added to the predicted level of a flood to take account of the height of waves or turbulence and uncertainty in estimating the probability of the flooding.”

4. Replacing the whole of the text of the entry relating to “Infrastructure:” (but retaining that heading) in the Glossary, on page 1176, with:

“The facilities and other items needed to support development. This includes roads and transport facilities, energy and communication networks, sewage and water facilities.”

Issue 14	Omissions from the Plan

Provision of the development plan to which the issue relates:	None	
Planning authority's summary of the representation(s):		
<p>General</p> <p>The Proposed Local Development Plan (PLDP) 2020 should be written in 'plain English' (PP0001).</p> <p>The Policy Interpretation Notes do not appear on the Council's website, but are referred to by Officers in determining planning applications. They appear to be internal documents that have not been the subject of scrutiny by Councillors and/or the Scottish Government. It makes sense that they do not form part of the LDP, but in the interests of transparency they should be made publicly available (PP0183).</p> <p>NHS Grampian has noted that there may be cross-border issues between Aberdeen City and Shire that may need to be addressed. The provision of facilities in Aberdeenshire may also serve areas lying within Aberdeen City and vice versa (PP1222).</p> <p>NatureScot has requested that all the Settlements Statements in Appendix 7 are reviewed to check whether masterplans are required to align with Council Policy P1 Layout, Siting and Design. They note that the requirement for a masterplan is not mentioned in the allocation summary for a particular allocation, despite it being discussed in the Delivery Programme (e.g. Cairnbulg and Inverallochy, site OP1 and Cornhill, site OP2 and OP3) and in other cases the requirement for a masterplan is not set out in either document</p>		

despite the allocation exceeding the threshold identified in the Council's policy (e.g. Inverurie and Port Elphinstone, site OP16 and Gourdon, site OP2 for 5.5ha employment land (PP1300)).

The PLDP should recognise the role of voluntary groups as well as the Local Rural Partnerships as a potential 'conduit' for action. There is an increasing network of community based voluntary groups across Aberdeenshire who have taken on the management of local routes, including developments in some cases. These groups should be supported by the Council through the LDP as a mechanism for implementing national and local policies in a cost-effective manner (PP1360).

Environment

The PLDP does not cover Scottish Government's declared 'climate emergency' or net-zero greenhouse gas emissions target by 2045 which are significant statements and legally binding commitments since the current LDP was adopted and clearly have wide-ranging land use/planning implications. Relevant energy related documents include National Infrastructure Assessment (July 2018), Intergovernmental Panel on Climate Change Report (October 2018), Committee on Climate Change Net Zero reports (May 2019 and June 2020) and the amended Climate Change (Scotland) Act 2009 by the Climate Change (Emissions Reduction Targets) (Scotland) Act 2019 that sets greenhouse gas targets. The NPF4 outcomes under the 2019 Planning Act are to meet greenhouse gas targets within the Climate Change acts. The Programme for Scotland 2019-2020 'Protecting Scotland's Future' clearly recognises the vital role the planning system has in tackling climate change and the PLDP does not reflect these clear policy objectives and government announcements, duplicating current LDP policies, inconsistent with SPP and inconsistency between individual LDP policies (PP0462).

Concern has been expressed that throughout the PLDP some policies are discussed in terms of 'acceptability' of environmental effects whereas others are not. This introduces inconsistency across policies and sets different 'bars' for impacts on different receptors. A significant effect in Environmental Impact Assessment (EIA) terms does not make a proposal unacceptable in land use policy terms. Wording across different policy topic areas should be amended to reference 'acceptability' to allow judgement to be applied in decision-making. Policy wording should also be reviewed and amended to ensure consistency with SPP (PP0736).

NatureScot has requested that the Appendix 7 allocation summaries should include a standard statement on the requirement for the development to deliver good quality, biodiverse open space. They state that this will improve consistency between the allocation summaries and could make a significant difference to the quality of development being delivered by the Plan. NatureScot recognise there are separate policies on biodiversity and on open space, but reminding developers of the need for good quality, biodiverse, open space within the allocation summaries themselves will improve the quality of development coming forward. NatureScot note that reference to the phrase "open space" can vary markedly between Settlement Statements, which gives an imperfect impression (e.g., it does not take account of the Council consistently requiring buffers around watercourses – these being a form of biodiverse open space), but it shows that there could be variations in how consistently developers are reminded of the need to deliver good quality open space. Similarly, reference to "biodiverse" or "biodiversity" is seen in around 40% of allocation summaries within one Settlement Statement, but not at

all in the allocation summaries (PP1300).

Transport

A representee has advised that they are regulated in five-year control periods and the LDP would be active for 10 years. The next Control Period (CP6) runs from April 2019 to March 2024. No modification sought (PP0444).

The Scottish Government has identified that the PLDP makes no explicit consideration of freight as required by SPP Paragraph 282. In order to accord with SPP Para 104 which states that LDPs should "... locate development which generates significant freight movements, such as manufacturing, processing, distribution, and warehousing, on sites accessible to suitable railheads or harbours or the strategic road network." (PP0578).

It is requested that the words "walking and cycling" are replaced with "walking, cycling and wheeling" throughout the Plan (PP0778).

In Appendix 7C Settlement Statements for Formartine, few settlements include policies which promote footpaths and cycleways (PP0884). Furthermore, there is no mention of the Meldrum Meg Way nor the Haddo Link/Ythan Trail in the relevant settlements (PP0884).

Over recent times, traffic on country roads and in settlements, has increased in number and drivers are driving faster, but roads have remained unchanged. This leads to, pedestrians or cyclists feeling anxious about safety and forced to use vehicles if they have access to one. It is likely that off-road footpaths and cycleways could supply a significant solution to these issues, and greatly improve the quality of life, at a relatively minor cost (PP0884).

Infrastructure for vehicular traffic and non-vehicular traffic should be included in the Settlement Summaries/Statements to reflect statements in the Delivery Programme (PP0881).

Nestrans has highlighted that the PLDP 2020 is inconsistent in the way it regards cumulative strategic transportation improvement. Statements such as that included for Tippetry under 'Strategic Transportation' (PLDP page 497) should be included for all Settlement Statements within the influence of each Strategic Growth Area (SGA) (PP1241).

Nestrans has noted that there is inconsistency in wording and approach adopted in the Settlement Statements regarding the treatment of Disused Railway Lines/Formartine and Buchan Way. The representee has included an Appendix in their representation which includes a Table 1 – Treatment of Route of Formartine and Buchan Way/ Boddam Branch (RD0227.A) in their representation which provides further detail to support their position. This lists the settlements connected by the Dyce to Peterhead and Fraserburgh route, and the Ellon to Boddam route and highlights the differing treatment of the route within each of the Settlement Statements (PP1241).

NatureScot has requested that all the Settlements Statements in Appendix 7 are reviewed to check whether reference to active travel provision might be helpfully included, together with recognition of any opportunities to link into wider path networks. They argue this will

help promote safe and convenient active travel opportunities for larger sites (e.g., over 40 homes), in keeping with the LDP's objectives, as stated at paragraph 3.3 of the Proposed Plan, and that even the smaller allocations could benefit from inclusion of relatively standard wording on active travel so as to improve delivery of more liveable and walkable places (PP1300).

NatureScot has requested that all the Settlements Statements in Appendix 7 are reviewed to check whether reference to "footpaths" might be better replaced with the word "paths" or the phrase "active travel route", as they consider it is better to use "paths" and/or "active travel routes", as they cover a broader spectrum (PP1300).

A representee has welcomed the recognition of the role of walking and cycling in enhancing quality of life, active travel and addressing climate change in the PLDP, but has stated there is a disconnect between these high-level objectives and implementation. The Plan does not identify opportunities or implementation of actions that would deliver the benefits that are outlined in the Plan. It would be beneficial for the Plan to recognise that 'walking and cycling' does not cover the full range of activities/people undertake and as such could be interpreted as incomplete or even discriminatory (PP1360).

Appendix 7 does not appear to identify opportunities to enhance active travel or recreation beyond generic statements that developments may need to contribute to strategic or local transport infrastructure. For example, the 'Shaping Places' P1 and P2 do not appear to be adequately translated into opportunities or actions at the settlement level, and the structure of the PLDP does not provide space for the connectivity between settlements within and potentially between Council areas (PP1360).

The Plan needs to highlight opportunities for communities to promote the development of high-quality routes that could, for example, be implemented through Developer Contributions and it needs to be recognised that funding may need to be made available to assist communities to determine the feasibility of such routes. Specific actions that could be identified are the development of safer rural roads where the national speed limit is incompatible with non-vehicular road users. This is particularly the case where core paths have been designated on public roads (PP1360).

The representee is in favour of inserting core paths in settlement maps, however, for many Settlement Statements, in the local transport infrastructure section focuses on 'footway extensions, upgrades and crossing facilities, cycle infrastructure...'; rather than recognising the integral value of paths within and between settlements that may not coincide with public roads (PP1360).

Modifications sought by those submitting representations:

General

Modify the PLDP to be written in 'plain English' (PP0001).

Modify the PLDP to include a reference to Planning Interpretation Notes, which should be subject to scrutiny (PP0183).

Modify the PLDP to address issues of health and care facilities as a cross border issue (PP1222).

Modify the PLDP to review Appendix 7a to Appendix 7f Settlement Statements to check whether masterplans are required to align with Council Policy P1 Layout, Siting and Design (PP1300).

Modify the PLDP to recognise the role of, and support, community based voluntary groups involved in the management of local routes (PP1360).

Environment

Modify the PLDP to consider sustainable development and give it more prominence and encouragement of further renewable energy developments and refer to the Scottish Government's declared 'climate emergency' or net-zero greenhouse gas emissions target by 2045 within the PLDP, incorporating other relevant Acts (PP0462).

Modify the PLDP policies to ensure the text across different topics references 'acceptability' of environmental effects appropriately and are consistent with the SPP (PP0736).

Modify the PLDP to include a standard statement setting out the need for good quality, biodiverse open space in Appendix 7a to Appendix 7f, where this is not already covered (PP1300).

Modify the PLDP to review the Settlement Statements in Appendix 7a to Appendix 7f to include a reference to active travel provision, together with recognition of any opportunities to link into wider path networks (PP1300).

Transport

Modify the PLDP to provide clear information on how the movement of freight vehicles would be considered (PP0578).

Modify the PLDP to replace words "walking and cycling" with "walking, cycling and wheeling" throughout the Plan (PP0778).

Modify the PLDP and include transport infrastructure in the 'Services and Infrastructure' section, in terms of provision of infrastructure for both vehicular traffic and non-vehicular traffic in the Settlement Summaries/Statements (PP0881).

Modify the PLDP to place a greater emphasis on promoting Footpaths, Cycleways and Active Travel Networks both within communities and their vicinities and between adjacent communities. Furthermore, input Meldrum Meg Way and the Haddo Link/Ythan Trail in the relevant Settlement Statements (PP0884). In addition to these, to create safer travel, utilise off-road footpaths and cycleways (PP0884).

Modify the PLDP to establish an appropriate level of consistency following review of the "strategic transport" policy comments in each Settlement Statement within the influence of each strategic growth corridor, with the expectation that the statement "All development will be required to contribute towards cumulative strategic transportation improvements including interventions on the A90/ A92/ A96 and in Aberdeen City" be included as standard where appropriate (PP1241).

Modify the PLDP to ensure the Settlement Statements in Appendix 7 on protecting land forming part of the Formartine and Buchan Way (and other relevant disused railway corridors such as the Boddam branch) are clear, consistent, and appropriate to achieve the outcomes that are being sought (PP1241).

Modify the PLDP to amend Appendix 7 Settlement Statements by reviewing and checking whether reference to “footpaths” might be better replaced with the word “paths” or the phrase “active travel route” (PP1300).

Modify the PLDP to ensure that the Settlement Statements identify opportunities to enhance active travel or recreation beyond generic statements (PP1360).

Modify the PLDP to ensure that the Settlement Statements recognise the integral value of paths within and between settlements that may not relate to public roads and that there is planned active travel connectivity between settlements and between Council Administrative Areas (PP1360).

Modify the PLDP to promote ‘safer rural roads’ (PP1360).

Modify the PLDP to ensure appropriate language is used to adequately reflect and promote in its objectives and policies to enable a full range of activities for people of all abilities, not just ‘walking and cycling’ (PP1360).

Summary of responses (including reasons) by planning authority:

General

The PLDP has been written to avoid planning ‘jargon’ where possible. Specific comments raised by this representee have been addressed and the PLDP provides a glossary for specific words. No change is required.

Policy Interpretation Notes were produced for the Aberdeenshire LDP 2017 as internal documents to ensure consistency in interpretation of LDP policies by the Planning and Environment Service. They will cease to be of relevance upon adoption of the next LDP. No change is required.

The Council agrees with NHS Grampian that considerable investment is required in health and care facilities to support the proposals in the Plan, but financial decisions of this nature are not appropriate for the LDP. Engagement by both Aberdeen City Council and Aberdeenshire Council has taken place with NHS Grampian throughout the Plan-making processes so that they are clear where their investment decisions need to be made. In some settlements the Council have met with their requests to safeguard specific sites for medical facilities. No change is required.

With reference to masterplans, Policy P1 Layout, Siting and Design, is a catchall policy that applies to all qualifying developments (AD0041.A, pages 47-49). Sites in the Plan are noted to require a masterplan unless a masterplan already exists, or a planning consent is in the process of being implemented. At Cairnbulg and Inverallochy, site OP1 for 85 homes the Settlement Statement seeks integration with existing development, and a masterplan may not be required. At Cornhill, site OP2, a masterplan is also required in

the Settlement Statement. At Inverurie and Port Elphinstone, site OP16 for 50 homes, it is noted that integration is required with a previously masterplanned site. At Gourdon, site OP2 for 5.5ha employment land, it is noted that the site is flat and undeveloped, and the Council believe that a masterplan for this industrial estate extension would serve no real purpose and instead propose a strategic landscape buffer. Review of allocations has not identified any other possible omissions. No change is required.

While the Council recognises the important and powerful role that voluntary groups and Local Rural Partnerships can have in achieving the aims of the Plan, their involvement is best focused through Community Action Plans and Place Plans as providing solutions to local issues. The Plan, on purpose, does not identify who will implement looked for improvements. Where there is a commitment from a local body to undertake works, then this will be detailed in the Action Programme. No change is required.

Environment

The Council does not agree that the PLDP does not adequately address the climate emergency and other Reports. The high-level Reports cited by the respondent are not specific actions for the Planning Authority and the Council have to await National Planning Framework 4 (NPF4) for a clear insight as to how the Scottish Government expects a modernised planning system to address these important issues. In Section 4 of the Plan, the Council have been as clear as we can in our intentions on reducing carbon emissions. There is no duplication on the PLDP on this matter either, as policies P1, C1 etc. NPF4 has not yet been published. No change is required.

In terms of the comments regarding consistency of environmental protection elements of policies, the policies have been written to avoid duplication – so environmental effects are focused in one policy. The Council disagrees that a development with a significant impact in the EIA would be acceptable unless caveats allowed exceptions. These are stated in the relevant policies. No change is required.

The Council does not agree that there is a need to include a standard statement on the requirement for the development to deliver good quality, biodiverse open space within the Settlement Statements. This is a requirement under Policy P2 Open Space and Access in New Development (AD0041.A, pages 49-59). The Council do not believe this needs to be repeated within the allocation summaries. Open space is qualified to the standards shown in the Aberdeenshire Council Parks and Open Spaces Strategy (AD0107), which includes, at Appendix 1, a standard for natural and semi-natural green spaces for any development greater than 5 houses. No change is required.

Transport

In developing the PLDP no need was identified for additional freight transfer stations, roadside facilities, or overnight lorry parking. Allocations for new employment land have been made with regards to SPP (AD0012, paragraph 104), including appraisal of accessibility to railheads, harbours, and the strategic road network. Appendix 1, Table 2 shows that no allocations greater than 1.5ha have been made in locations not served by the strategic (A class) road network. No change is required.

Consideration of active travel is required by both proposed paragraphs P1.5 and RD1.5 for all developments and it is not necessary to include these details in Appendix 7. Likewise

reference to “wheeling” as an active travel mode would seem to be superfluous. The Local Path network is marked on the settlement proposals map, and it is not necessary to repeat this information in the Settlement Statement text. It would be misleading to promote off-road footpaths and cycleways as an aspiration in the Plan when there is no certainty that the land or funding for such infrastructure will be available. No change is required.

The Council does not agree that the Settlement Statements should reflect the Delivery Programme. The LDP is considered to be a snapshot in time, whereas the Delivery Programme will be subject to change during the life of the Plan and it would be misleading and possibly obstructive to include statements on transport infrastructure that is required associated with sites when a full and detailed analysis has not been undertaken as part of a planning application. No change is required.

Any universal statement regarding the need for development to contribute to cumulative strategic transport interventions is misguided as not all development will result in impacts on the strategic transport network, and to ask for developer contributions towards unspecified, un-costed elements would not meet the tests of scale and kind and reasonableness detailed in Planning Circular 3/2012: Planning obligations and good neighbour agreements (AD0002). Without prior information as to what the interventions might be the Plan would become open ended and it would be impossible for developers to conduct any meaningful financial tests on the deliverability of development sites. Where interventions are known, then these are detailed for specific settlements in the Appendix 7 Settlement Statements. Local transport impacts are more readily apparent and have a section dedicated to them in the “Responsibilities of Developers” section (paragraph RD1.3 and following) (AD0041.A, page 89). No change is required.

With regards to the protection of disused railway lines the Appendix provided by Nestrans illustrates that most of the Formatine and Buchan Way is protected as a core path and is given a “Protected” designation in the Settlement Statements. Policy PR2 Reserving and protecting important development sites provides general protection for closed railways that may be reasonably needed in the future. In their submission Nestrans identify that it would be “difficult to justify the re-opening of disused rail lines in the area” reflecting that this is at present only an aspiration that does not warrant a specific proposal in the Settlement Statements. No change is required.

The Council does not agree that there is a semantic difference between a footpath or a path, and in the interests of ‘plain English’ we would suggest that the use of the phrase “active travel route”, while being appropriate in some places, does not provide clarity within the Settlement Statements. No change is required.

The Council notes the support given for the recognition of the role of walking and cycling in enhancing quality of life, active travel and addressing climate change in the PLDP. Implementation of these objectives will depend on specific circumstances of planning applications and it would be misleading at this time to identify specific opportunities and implementation actions. Within the Plan the focus has been on supporting infrastructure for walking and cycling although the Council recognise that walking and cycling routes can be used for a range of other activities. The Council believes that the broad policy approach adopted in the Settlement Statements is appropriate, both as a statement of intent and as a means to lever in developer obligations, should they be required. The Council does not agree that their approach is discriminatory, as any acceptable standard

of path infrastructure would have to be fully accessible to people with protected characteristics (such as wheelchair users). No change is required.

Funding of studies to assess shortcomings in the existing road network, unrelated to new development is a matter for Community Action Plans and the Local Transport Strategy rather than the PLDP. No change is required.

It would be misleading to promote active travel routes between settlements when there are no proposals for the creation of these routes. The Core Path Network represents a clear commitment to routes in rural areas, that the Plan supports. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

General

2. The request that the plan be written in plain English follows on from comments on particular aspects of the New Deer settlement statement, which are addressed under Issue 21. I note that the council has sought to avoid planning 'jargon' where possible and definitions have been provided in the glossary at the end of the plan to help the reader. I also note that the accessibility details on page 3 of the proposed plan offer assistance to those who need information from the document in an alternative format, including 'Easy Read'. No modification is required.

3. I note the council's explanation regarding the internal status of policy interpretation notes relating to the existing local development plan. Matters regarding the publication of these notes is beyond the scope of this examination. No modification is required.

4. NHS Grampian's representation does not seek any modification to the proposed plan in relation to its comment on cross boundary provision and use of health and social care facilities.

5. The council has reviewed the allocations in the proposed plan, in response to NatureScot's representation regarding inconsistencies in the requirement for masterplans. I note its explanation regarding the particular allocations mentioned by NatureScot and, on this basis, agree that no change is required. The council has concluded that there are no other possible omissions in relation to a requirement for masterplans. I have no evidence before me to dispute this conclusion. No modification is recommended.

6. I agree with the council that the role of voluntary groups and other organisations in relation to the actions required to deliver the plan's policies and proposals is a matter for the Delivery Programme. No modification is required to the proposed plan

Environment

7. Representations regarding the omission of references to the climate change emergency and relevant legislation and policy documents are also included under issues 1 and 11. Modifications are recommended in the schedule 4s for these issues to include reference to the climate change emergency and emissions targets. No other modifications are required.

8. Comments from RWE Renewables regarding the wording of individual policies and their consistency with Scottish Planning Policy are included in the schedule 4s covering the relevant policies. In general terms, I do not consider it necessary or appropriate for the wording of all policies to be the same. For example, more stringent policy criteria would be expected for international and national environmental designations than for sites of local interest.

9. I agree that a significant effect in environmental impact assessment terms does not necessarily make a proposal unacceptable in land use planning terms. Paragraph 4.1 of the proposed plan recognises that conflicts may arise where proposals meet the requirements of one policy at the expense of another. In such circumstances, the vision of the plan should be used to guide the granting of planning permission. No modification is required in response to this overarching point on the policies in the proposed plan.

10. Policy P2 (Open Space and Access in New Developments) requires all new developments to provide adequate public open space, in line with the council's standards. This would apply to planning applications for the allocation sites included in the settlement statements in Appendix 7. Representations on the wording of policy P2 in the proposed plan, including from NatureScot on biodiversity matters, are addressed under Issue 7 (Shaping Places and Appendices 8, 9 and 10). Paragraph 8 in Planning Circular 6/2013 Development Planning states that "Scottish Ministers want development plans to be succinct". The proposed plan is already a lengthy document and I do not consider it necessary to repeat the requirements of policy P2 in the allocation summaries. No modification is required.

Transport

11. Paragraph 104 in Scottish Planning Policy states that local development plans should locate development which generate significant freight movements on sites accessible to suitable rail heads or harbours or the strategic road network. The council has referred to Table 2 in Appendix 1, as evidence that all business allocations larger than 1.5 hectares are located next to the strategic (A class) road network.

12. I note that the relative size and geographical distribution of business sites are also illustrated on the "Shaping Business Development" map on page 28 of the proposed plan. Furthermore, paragraph B2.1 in policy B2 Employment/Business Land (on page 26 of the proposed plan) states that developments which generate significant Heavy Goods Vehicle movements will only be permitted on land accessible to suitable railheads, harbours or the trunk road network. I am satisfied that the proposed plan is consistent with paragraph 104 in Scottish Planning Policy. No modification is required.

13. Paragraph 282 in Scottish Planning Policy states that planning authorities should consider the need for improved and additional freight transfer facilities and additional overnight lorry parking facilities. It also states that strategic freight sites and existing

roadside facilities and provision for lorry parking should be safeguarded.

14. I note that site R2 on the Portlethen key map (page 730 of the proposed plan), which is located next to the A92 road, is reserved for a lorry park. The council has indicated that no other matters relating to the provision of additional freight transfer facilities, roadside facilities or overnight lorry parking were raised during the plan preparation stages. The representation from the Scottish Government is not seeking a change in relation to the improvement or safeguarding of any specific facilities. Within this context, there is no reason for me to require a modification to the plan

15. The National Transport Strategy makes a number of references to “wheeling”, alongside walking and cycling, in prioritising sustainable transport. “Wheeling” is defined as “travelling by wheelchair”. In the interests of promoting active travel routes which are accessible by all, I do not consider that a reference to “wheeling” would be superfluous.

16. A review of all the settlement statements to consider inclusion of the term “wheeling” would be disproportionate at this stage in the plan process. Instead I recommend modifications to amend the definition of the term ‘active travel’ in the glossary and include the word ‘wheeling’ in the sixth outcome heading in section 4 of the proposed plan to include the word ‘wheeling’. Further recommended modifications under issue 1 and issue 7 would also make reference to ‘wheeling’. I consider that these changes would also address the comments made by Aberdeenshire Local Outdoor Access Forum on this matter.

17. I agree with representees that the use of the word “footpath” is potentially misleading where the intention is to create an active travel route suitable for walking, cycling and wheeling. However, I do not consider it proportionate to require the council to review all references to a “footpath”, and consider whether an alternative description is required, at this stage in the plan process. I therefore do not recommend a modification to the plan.

18. A number of representees have requested that additional detailed information be included in settlement statements on the protection of existing active travel routes and the promotion of new opportunities. Evidence suggests inconsistencies in the information provided for different settlements.

19. I recognise the detailed knowledge that local groups have of their area and their role in protecting and promoting access opportunities. However given the number of settlements covered by the proposed plan, I do not consider it would be possible to include the level of detail sought by representees in all areas. I note that the core paths are shown on the settlement maps and that some allocation summaries refer to specific footpath and cycle routes. However the absence of detailed information on existing and potential future routes in other settlement statements would not prevent the opportunity for new or improved connections to be addressed through planning applications. Each settlement statement indicates that development may be required to contribute to local transport infrastructure and, where appropriate, allocation summaries refer to the need to provide connections to existing routes.

20. The need for development to provide new path connections is also covered in other policies in the proposed plan, for example paragraph B1.2 of policy B1 (town centre development) and paragraph P2.6 of policy P2 (open space and access in new development). Throughout the period of the local development plan, new or improved

active travel opportunities may be identified by developers, local communities or others and these could be included in future updates of the Delivery Programme. However I agree with the council that funding for studies to assess shortcomings in the existing transport network, not related to development proposals, is not a matter for the local development plan. No modifications are required on this matter.

21. Nestrans has requested that the “strategic transport” policy comments in each settlement statement within the influence of each strategic growth corridor be reviewed to establish an appropriate level of consistency. It expects that a statement requiring all development to contribute towards cumulative strategic transportation improvements would be included as standard, where appropriate.

22. Matters relating to infrastructure requirements and developer contributions are addressed in the schedule 4 for issue 12. In the absence of sufficient information in the proposed plan, a modification is recommended requiring the council to prepare statutory Supplementary Guidance on developer obligations and affordable housing. This guidance is expected to include information on the transport and related infrastructure required in association with allocations in the plan. It is my understanding that the details on how and by whom, this infrastructure is to be delivered and phased will be provided in the Delivery Programme, which will be subject to regular updates.

23. I agree with the council that a blanket requirement for all development in strategic growth areas to contribute to cumulative strategic transportation improvements would not be consistent with planning circular 3/2012. The preparation of supplementary guidance provides the opportunity for further consideration of the need and justification for contributions towards strategic transportation improvements. No further modifications are required.

Reporter’s recommendations:

Modify the local development plan by:

1. Amending the outcome heading in paragraph 4.7 on page 15 to read:
“To make efficient use of the transport network, reduce the need to travel and promote walking, cycling, wheeling and public transport.”
2. Replacing the definition of “active travel” in the glossary on page 1173 with:
“An approach to travel that focusses on physical activity such as walking, cycling and wheeling (travelling by wheelchair).”

Provision of the development plan to which the issue relates:	Banff Settlement Statement Macduff Settlement Statement	
Planning Authority's summary of the representation(s):		
<p>Banff</p> <p><u>Vision</u></p> <p>Nestrans has noted that options are being considered for an active travel bridge adjacent to Banff (River Deveron) Bridge. This will enhance safe linkages between the communities of Banff and Macduff. The A947 forms a key connection to Banff, and Nestrans supports the work of Aberdeenshire Council in relation to the action plan for this route (RD0227.A). No modification sought (PP1241).</p> <p><u>Site P2 – To protect an area of open space at Banff Castle</u></p> <p>Clarification has been sought as to the meaning of the protection and whether additional conditions will have to be met in order to build a house on the site (former Castle Orchard) that currently has lapsed planning permission, but which is intended to be renewed. Historically the site was advertised as a housing site. It is considered that the designation should not deter a fresh planning application (PP0977).</p>		

Site R1 – Reserved for cemetery extension

Scottish Environment Protection Agency (SEPA) has requested that additional wording is added to the allocation text for site R1, or as a separate bullet point, to state that a detailed groundwater assessment and water features survey will be required, due to the underlying geology and presence of a possible private water supply within 250m of this site (RD0214.B) (PP1219).

Concern has been raised about health and safety and environmental risks associated with cemetery site R1, and who will pay for the cost of moving the septic tanks of affected adjacent homes. Provision for privacy screening for adjacent properties and parking has been queried. It is considered that the current road will need to be reconfigured which will affect the local environment (PP0244).

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Goldenknowes

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B) (PP1219).

Site OP1 could adversely affect the tourist business operation of the adjacent Banff Springs Hotel as a consequence of poor design layout of the new development which could have a negative impact on the amenity of the area (PP0199).

To avoid ambiguity, new neighbourhood facilities for site OP1 should be clearly restricted by maximum floorspace and not just specified as 'neighbourhood' facilities. The new facilities should also be subject to a retail impact assessment on existing centres (PP0558).

Site OP2 – Colleonard Road

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B) (PP1219).

Clarity is sought as to whether site OP2 will affect Wrack Woods. Concern has also been raised about road access to this part of the town and road safety for school children, as there are no pavements or street lighting along the existing road. A representee has requested to know if there will be a bypass (PP0244).

It has been highlighted that site OP2 has had no developer interest in 16 years and has not attempted to seek planning permission during this period. Being one of two long-term constrained sites in the settlement, and given the progression of OP1, the OP2 allocation

is less likely to attract developer interest due to marketability, physical and infrastructure constraints. The Council has not demonstrated that the allocation will be delivered during the Plan period which is contrary to SPP. Site OP1 will meet demand in the settlement for the Plan period (PP1030).

Non-Allocated Site – New N001 – Land North West of Site R1

It has been requested that additional land be included to the northwest of site R1 for 6 homes. The representee considered this is an acceptable site for continued growth from existing development sites to avoid sporadic development, and as the site is in close proximity to the town centre and proposed cemetery (PP0543).

Macduff

Vision

Nestrans noted that options are being considered for an active travel bridge adjacent to Banff (River Deveron) Bridge. This will enhance safe linkages between the communities of Banff and Macduff. The A947 forms a key connection to Banff, and Nestrans supports the work of Aberdeenshire Council in relation to the action plan for this route (RD0227.A). No modification sought (PP1241).

Site BUS – Safeguarded for business use

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation of BUS (RD0214.B). No modification sought (PP1219).

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Land South of Corskie Drive and Site CC1 – Corskie Drive/B9026 Commercial Centre

SEPA commented that they have no flooding, strategic drainage or water supply issues with the allocation summary for site OP1 (RD0214.B) (PP1219).

There has been objection to site OP1 on the basis that this is a poor planning decision to allow new housing on the periphery of the settlement when there is an adequate supply of vacant houses, under-used sites and development opportunities. The representee considered that unless development of these sites is encouraged, the overall character, appeal and appearance of the settlement could be diminished (PP0308).

Concerns have been raised about the split of the former CC1 into OP1 housing/CC1 commercial use (PP0126 and PP0595). It is considered this is a poor development with a

long access corridor for the housing, and homes overlooking the old railway line path and sitting behind commercial retail development. It would make better sense to allocate this site for residential use only, given its proximity to the school and sports centre. This would provide a better fit with the residential nature of the area, and on account of there being little demand for commercial/retail development. The representee also queried whether there would be another access point to the main road for the commercial site and be the subject of future development (PP0126). Another representee had no objection to the revised site CC1/new OP1, but on the basis that the entire site is allocated as housing, if a commercial client cannot be found (PP0595).

NHS Grampian has objected to the failure of the Proposed Local Development Plan (PLDP) to safeguard land for a new health centre within site CC1 and is seeking to re-instate this. In the Local Development Plan (LDP) 2017 and in the Main Issues Report (MIR) (bid site BB031), site CC1 in Macduff was identified for a new health centre and large format stores. Allocation was sought for 0.8ha of land within CC1 for a health centre during the “call for sites”. In the MIR it was stated “inclusion of land for a health centre should be a condition on which this site is supported, as this remains a requirement for NHS Grampian at this location”. Subsequently, in the draft Proposed LDP it stated, “land is required for a new health centre within the CC1 site, which has been safeguarded as site R1” (PP1223).

Modifications sought by those submitting representations:

Banff

Site P2 – To protect an area of open space at Banff Castle

Modify the PLDP to clarify the meaning of P2 and what the implications are in relation to renewing a lapsed planning permission (PP0977).

Site R1 – Reserved for cemetery extension

Modify the PLDP to amend site R1 to clarify ground testing, health and safety/environmental risks, who is paying for moving septic tanks of affected adjacent homes, provision for privacy screening, parking and road upgrades to provide access to the proposed cemetery (PP0244).

Modify the PLDP to include the following wording to site R1 designation text or as a separate bullet point, “A detailed groundwater assessment and water features survey will be required to fully assess the suitability of this site as a cemetery.” (PP1219).

Site OP1 – Goldenknowes

Modify the PLDP to amend site OP1 to ensure development is set back from the roadside to maintain green areas and provide a welcoming approach to the town (PP0199).

Modify the PLDP to amend site OP1 to state that neighbourhood retail facilities are restricted by maximum floor space levels and are subject to a Retail Impact Assessment where over 400sqm gross floorspace (PP0558).

Site OP2 – Colleonard Road

Modify the PLDP to amend site OP2 to clarify impact on Wrack Woods, provision for road access, if there is to be a new bypass created, and provision of a safe route to school (PP0244).

Modify the PLDP to remove site OP2 in favour of identifying an alternative effective allocation in the RHMA or, if constrained by marketability, in the AHMA (PP1030).

Non-Allocated Site – New N001 – Land North West of Site R1

Modify the PLDP to include an area of land west of site R1 for 6 homes (PP0543).

Macduff

Site OP1 – Land South of Corskie Drive and Site CC1 – Corskie Drive/B9026 Commercial Centre

Modify the PLDP to remove site OP1 for 22 homes (PP0308).

Modify the PLDP to amend sites OP1 and CC1 to allocate the entire site for housing (PP0126) or include provision for site CC1 to be changed to housing land if a commercial use proves undeliverable (PP0595).

Modify the PLDP to include a site for a health centre within the CC1 allocation (PP1223).

Summary of responses (including reasons) by planning authority:

Banff

Vision

Comments from Nestrans are noted. No change is required.

Site P2 – To protect an area of open space at Banff Castle

In accordance with Policy PR1, development will not normally be permitted on any area of open space. The designation has been applied due to the significant contribution this area of land makes to the character of the place, as described in the Settlement Statement. The representee does not provide any mapped information to identify the plot of land in question nor has information been provided regarding the lapsed planning application. Our historical records identify planning application numbers B/86/0308 and B/88/0199 in relation to the 'Erection of Dwellinghouse at Castlehill, Castle Street, Banff', with the most recent application dating back to 1988. The Council can confirm the planning consent has lapsed. The Council maintain that site P2 as mapped in the PLDP should be protected. No change is required.

Site R1 – Reserved for cemetery extension

The Council notes the health and safety and environmental concerns raised in relation to site R1. It is not normally appropriate for the Settlement Statement to set out ground testing regimes for new cemeteries. Site R1 is a large area of land set aside until such a

time as trial digs are carried out to clarify if and how much of the land is feasible for burial ground use, and how much land is required for the new cemetery. In relation to privacy screen planting, parking and road upgrades, these would be addressed at the planning application stage.

Taking into consideration the aforementioned representee's environmental concerns together with SEPA's requested modification, the Council consider it appropriate that the designation text for R1 should be amended to read, "R1 – For a cemetery extension (subject to detailed groundwater assessment and water features survey)." The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Goldenknowes

Comments from SEPA are noted. No change is required.

The concern raised about the design layout of site OP1 is noted. Design policies are in place to ensure there is good visual and amenity appeal, and that places are distinctive, safe, pleasant and welcoming.

Regarding concerns about the impact of new neighbourhood retail facilities for OP1 on existing retail centres, and the request to restrict new facilities by maximum floorspace, it is stated in the Settlement Statement that new retail uses for this site are restricted to those associated with a 'neighbourhood' centre. As defined in Appendix 2 Retail Centres of the PLDP, a neighbourhood centre is a development providing retail provision of less than 500m². The requirement for a Retail Impact Assessment will be determined at the planning application stage. No change is required.

Site OP2 – Colleonard Road

Comments from SEPA are noted. No change is required.

In relation to the concerns about potential impact on adjacent woodlands, policies are in place to protect and enhance the natural environment. With regard to road access and road safety concerns, it is stated in the Settlement Statement that an Access Strategy will be required to address the issues raised. The Council can confirm that the link between A97 and A98 (the 'bypass') remains an 'aspiration', as stated in the Settlement Statement Vision. No change is required.

It is not agreed that site OP2 should be removed in favour of identifying an alternative effective allocation in the RHMA. The revised site as per bid BB020, which covers a smaller area than the previous OP2 from LDP 2017, has been assessed as deliverable and a good fit for the settlement, taking into account that Banff characteristically operates

at a slow rate of development due to market conditions in the area (MIR 2019, Appendix Banff and Buchan, AD0038.B, pages 7-10). No change is required.

Non-Allocated Site – New N001 – Land North West of Site R1

The Council does not support allocating a new site west of site R1 for 6 homes. The site was not put forward as a development bid so was not considered as such at the MIR stage, nor subject to site assessment and public consultation. The representation does not include any site details or site location plan, nor supporting information such as an environmental assessment to allow a detailed evaluation of the suitability of the proposal. In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 – Shaping Homes and Housing – Housing Land Supply, Policy H1 Housing Land and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. No change is required.

Macduff

Vision

Comments from Nestrans are noted. No change is required.

Site BUS – Safeguarded for business use

Comments from SEPA are noted. No change is required.

Flood Risk

Comments from SEPA are noted. No change is required.

Site OP1 – Land South of Corskie Drive and Site CC1 – Corskie Drive/B9026 Commercial Centre

Comments from SEPA are noted. No change is required.

The Council note there is a concern regarding the split of the former CC1 to create a new housing site OP1. The intention for allocating a part of the site in this particular location for housing is to facilitate future expansion of the settlement westwards. In the process of assessing bid sites BB040 and BB037 to the west of proposed site OP1, the Council's Road and Transportation Service had identified that a joint access strategy would be required to overcome the challenge of accessing the area from the existing street network. By including OP1 in the PLDP with safeguarded access to the west, this provides the potential for the aforementioned bid site areas to be developed in future, and a road access solution found in the process. Thus, inclusion of site OP1 is considered important for its facilitating role, and to provide an appropriate amount of land to meet local housing need during the Plan period. No change is required.

With regard to the revised site CC1 (as set out in the PLDP for 2.5ha for large format stores with a link road), it is important to retain sufficient land as a commercial centre to protect the viability and vitality of the town centre and promote new commercial development. No change is required.

The site that was initially proposed to be reserved for healthcare uses as identified in the MIR 2019 and subsequent Issues and Actions papers (AD0040.A, pages 32-35), was subsequently removed. This was a late decision based on our best understanding of a changed situation with regards to healthcare needs in Macduff, as advised by NHS Grampian. In our ongoing dialogue with our partners in health and social care, our understanding was that it was unlikely there would be a requirement for a new health centre within Macduff within the lifespan of the LDP 2021. The Council consider a mid-term review of the LDP would assist NHS Grampian in relation to provision of healthcare needs. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as "non-notifiable modifications" in relation to the settlement statement matters covered in Issue 15. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Banff

Site P2 – To protect an area of open space at Banff Castle

3. Site P2 consists of land surrounding Banff Castle, which has been identified as a protected area. The settlement statement contends that the protection is necessary due to the significant contribution the area of land makes to the character of the place. The representation states planning permission was granted to develop a house on land within site P2 approximately 20 years ago, which has since lapsed. The representation seeks reassurances that the designation will not impede any future planning application for a house on the same site.

4. The council has confirmed that there is no extant planning permission for a dwelling house within site P2 and that, in accordance with policy PR1, development would not normally be permitted on any area of open space. During my site inspection, I viewed the castle, its immediate context and views to and from the site from within the surrounding settlement. I am satisfied that the proposed extent of site P2 is necessary to ensure that the setting of the historic asset and the character of the surrounding area can be effectively preserved. No modification is required.

Site R1 – Reserved for cemetery extension

5. Site R1 lies to the northwest of the existing cemetery in Banff on the other side of Whinhill Road. The fields included within the designation are immediately adjacent to a

residential property situated to the southwest. I note the concerns raised regarding the potential impacts of the proposed use on amenity, privacy, health and safety matters, drainage, and potential road infrastructure upgrades. During my site inspection I observed that the low wall surrounding the residential property would result in inter-visibility between users of the cemetery and the occupants of the house when using their garden ground, thereby potentially affecting the occupants' privacy and amenity. However, detailed matters such as the layout of the site, identification of potential subsurface constraints, necessary infrastructure upgrades, boundary treatments and landscaping requirements would be addressed at the planning application stage, when interested parties would have the opportunity to comment.

6. I agree that additional text should be included to indicate that a detailed groundwater assessment and water features survey will be required, due to the underlying geology and presence of a possible private water supply within 250 metres of this site. The outcome of this assessment may indicate that elements of the site are not suitable for use as a cemetery. However, this does not prevent it being reserved for this purpose in the plan.

Site OP1 – Goldenknowes

7. Concerns have been raised by the adjacent commercial hotel regarding the potential for poor design to have an adverse impact on business operations and amenity in general. Site OP1 is included in the existing local development plan and a masterplan is already in place for the land allocation. In addition to the approved masterplan, design policies are provided within the proposed plan which require development to be distinctive, safe, welcoming and pleasant. The specific layout of any future development on the site would be determined at the application stage with policies in place to protect amenity. No modification is required.

8. Asda requests that neighbourhood facilities, which are proposed as part of new housing allocations, are restricted to a maximum gross floorspace of 400 square metres or require a retail impact assessment. I agree with the council that the nature of the proposed retail facilities and potential impact on the town centre are addressed in the allocation summary. I have no evidence before me to indicate that 500 square metres retail floorspace (as referred to in appendix 2 of the proposed plan) would be inappropriate in neighbourhood centres. Any planning applications would also require to be assessed in terms of policy B1 (Town Centre Development), which includes reference to retail impact assessments. No modification is required.

Site OP2 – Colleonard Road

9. No specific modifications to the plan are requested by representee PP0244. The council's response provides further clarification on the matters raised and I have nothing further to add. No modification is required.

10. Site OP2 is identified as being subject to physical, marketability and infrastructure constraints in the housing land audit. The representation seeking the removal of this site does not suggest a specific alternative allocation, claiming instead that the housing demand for the settlement as a whole would be met by site OP1.

11. The council contends that the identified physical and infrastructure constraints on the site can be overcome. Furthermore, I note that Banff is one of the regeneration areas

identified as a priority in the strategic development plan's spatial strategy. Whilst no evidence has been provided by the council regarding an expected start date or completion rates, the landowner has indicated an intention to focus on delivery of the site, following involvement with a successful nearby development.

12. I do not consider the removal of site OP2 from the plan to be justified. However, given the ongoing development of nearby site OP1, and the characteristic slow rate of development in Banff identified by the council, it is unlikely that 200 homes would be deliverable in the plan period. I consider that a contribution of 100 homes, towards the strategic development plan allowance for the Rural Housing Market Area in the period to 2032, would be more realistic. No modification to the Banff settlement statement is required, as the capacity of the site would still be 200 homes. However, a modification to the relevant table in appendix 6 Housing Land Allocations is recommended. The implication of deducting 100 homes from the allocations identified to meet the strategic development plan allowance in the period up to 2032 is addressed in issue 5.

Non-Allocated New Site N001 - Land North West of Site R1

13. This non-allocated site is situated outwith the settlement boundary to the north west of site R1, on land to the south of Gowanhall Farm. An allocation for six homes is being sought. However, the site was not put forward by the landowner as a bid site and has therefore not been subject to environmental assessment or consultation with key agencies or the public. No site plan or indicative layout has been provided.

14. Consideration of housing need is undertaken through the housing needs and demand assessment which has informed the strategic development plan allowances. Banff lies within the Rural Housing Market Area and it is concluded under issue 5 that no additional allocations are required to meet the strategic development plan allowance in the period up to 2032.

15. In the absence of any identified need for additional housing in the Rural Housing Market Area, and given that no engagement or assessment has taken place to establish the suitability of the site for housing, I do not support its allocation. No modification is required.

Macduff

Site OP1 – Land South of Corskie Drive

16. Site OP1 is allocated for retail use as part of CC1 in the existing local development plan. The council states that the site has been re-designated for housing in order to facilitate potential future expansion of the settlement westward. During my site inspection, I found the site and the adjacent site CC1 to represent a logical and sensitive future expansion of Macduff.

17. Site OP1 is the only housing designation within the settlement and, as such, is the only greenfield housing opportunity site within Macduff. I have not been provided with any evidence that would lead me to agree with the representation that there is a more than adequate supply of vacant houses, under-used sites and development opportunities within Macduff. The site contributes towards meeting the strategic development plan allowance for the Rural Housing Market Area to meet housing needs up to 2032. I do not

consider there is any justification to remove allocation OP1 from the plan.

18. I agree with the representation that the long access corridor from the B9026 to site OP1 is unfortunate. However, I consider that it is necessary to ensure that any short-term development of site OP1 does not impede the future development of site CC1 or vice versa, in the event that one site is delivered in advance of the other. The settlement statement is clear that a combined transport assessment with the adjacent site CC1 will be required to support any development proposal and I am satisfied that an appropriate access solution can be developed at that time, to serve both sites and to facilitate the future development of land to the west. No modification is required.

Site CC1 – Corskie Drive / B9026 Commercial Centre

19. Site CC1 is allocated in the existing local development plan. The site is identified in the proposed plan as the preferred location for large format stores, if town centre locations are not available. There are no alternative retail centres identified on the settlement map for Macduff. As such, I consider that it is important to allocate the site for the duration of the plan and do not agree that the site should be re-designated for housing, if there is no interest from a commercial client. As explained in issue 5, there is no requirement to allocate further housing sites to meet the strategic development plan allowance for the Rural Housing Market Area for the period up to 2032.

20. The main issues report and the subsequent issues and actions paper identify site CC1 for retail and health uses in line with the existing local development plan, with an area within the site identified as ‘R1 – Reserved for Healthcare use’. However, the council took a late decision to remove reference to healthcare facilities on the understanding that it was unlikely that there would be a requirement for a new health centre in Macduff within the lifetime of this plan.

21. NHS Grampian contends that there is still a requirement for the facility on the site, stating that there is no justification for its removal from the plan. Given that the Health Authority has advised of the continuing need for the facility, and that such a use formed part of the public consultation and committee approval, I am satisfied that it would be appropriate to amend the entry within the settlement statement to support the delivery of a healthcare facility on the site.

22. However, the area originally identified for a healthcare facility (R1) includes a section of the access route for, and forming part of, site OP1. I consequently find that, rather than specifically identifying an area on the settlement map, it would be more appropriate to update the allocation summary for CC1 to confirm that 0.8 hectares of the site is required for a healthcare facility. Furthermore, the allocation summary should be modified to require the preparation of a masterplan for site CC1 to identify a suitable location for the healthcare facility, which does not compromise the deliverability of sites OP1 or CC1. Modifications to this effect are recommended.

Reporter’s recommendations:

Modify the local development plan by:

1. Amending the entry for Banff OP2 in the relevant table for the Rural Housing Market Area in appendix 6 to replace the figure 200 in the column entitled “Local Growth RHMA” with the figure 100. (Note – a revised version of Appendix 6, incorporating all the

recommended modifications, is provided at the end of this report.)

2. Replacing the second row of the title for allocated site 'CC1 – Corskie Drive / B9026 Commercial Centre' in the Macduff settlement statement on page 239 with:

“Allocation: 2.5 hectares for large format stores and a healthcare facility, with a link road.”

3. Adding the following new third and fourth sentences to the first paragraph of the allocation summary for CC1 – Corskie Drive / B9026 Commercial Centre in the Macduff settlement statement on page 239:

“A site of 0.8 hectares is required for a healthcare facility. A Masterplan will be required to identify a suitable location for the healthcare facility, which does not compromise the deliverability of sites OP1 or CC1.”

Planning Authority's summary of the representation(s):	
<p>Cairnbulg and Inverallochy</p> <p><u>Flood Risk</u></p> <p>Scottish Environment Protection Agency (SEPA) has recommended that the 'Flood Risk' section is split into two separate bullet points, one for flood risk issues relevant to the settlement and the second relevant to OP1 (RD0214.B) (PP1219).</p> <p><u>Services and Infrastructure</u></p> <p>SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).</p> <p><u>Site OP1 – South of Allochy Road</u></p> <p>SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).</p> <p>A representee has objected to site OP1 remaining in the Local Development Plan (LDP) as it is a long-term constrained site having entered the Housing Land Audit (HLA) in 2006. The site was constrained in the 2019 HLA and was not seen as contributing any possible housing until 2024. An issue relating to a 'ransom strip' is noted as a constraint. Furthermore, the OP2 and OP3 sites will deliver housing and are associated with a committed housebuilder, which makes it even more unlikely that the OP1 site can be delivered during the lifetime of the Plan (PP1120).</p> <p><u>Site OP2 – Westhaven</u></p> <p>SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219).</p> <p>The OP2 site should be removed and an alternative site in the Local Growth and Diversification Area of the Rural Housing Market Area (RHMA) or in the Local Growth and Diversification Area of the Aberdeen Housing Market Area (AHMA) should be identified. The OP2 site is a windfall site having entered the HLA in 2019 without being subject to public consultation. It is included as an existing effective land supply and therefore cannot count against the Strategic allowance. The reference to 6 houses counting against the allowances is erroneous as only 3 additional houses have been approved beyond the 37 homes in the HLA (PP1119).</p> <p><u>Site OP3 – Land North of Rathen Road</u></p> <p>Support has been received for the allocation of the OP3 site as it forms a logical expansion of the settlement and work is actively been undertaken with the development to</p>	

bring this site forward (PP0396).

SEPA has noted that the SFRA identifies surface water as a possible issue for site OP3, but have no further requirements for this site (RD0214.B). No modification sought (PP1219).

Crovie

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that an extra bullet point is added to the 'Strategic drainage and water supply' section to state that 'there is no public waste water infrastructure available' to be consistent with other Settlement Statements (RD0214.B) (PP1219).

Fraserburgh

Vision

Nestrans has indicated that they are aware of Fraserburgh Harbour Board's masterplan proposals, and the importance of strategic connectivity to and from the town via the A90(N) and A952 (RD0227.A). No modification sought (PP1241).

Site R1 – For a park, and sport and recreation facilities associated with the approved Masterplan for site OP2

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the designation summary for site R1 (RD0214.B). No modification sought (PP1219).

The boundary of the southern part of the R1 site should be amended to exclude a parcel of land adjacent to a house known as 'Whinburn'. It is requested that the Masterplan for site OP2 is reviewed to correctly identify land ownership boundaries, as previously agreed with the Council. The representee has included an Appendix in their representation which provides further detail to support their position (PP0910).

Site R2 – Reserved for healthcare use

Support has been expressed for the inclusion of the R2 site for future healthcare requirements (PP1223).

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the designation summary for site R2 (RD0214.B). No modification sought (PP1219).

Site BUS1, BUS2, BUS3 and BUS4 – Safeguarded for business use

SEPA has no issues with the allocation text for sites BUS1, BUS2, BUS3 or BUS4, but note that the SFRA identifies flood risk issues that are due to small watercourses and/or surface water, which the Council's flood risk colleagues may wish to address through a Sustainable Drainage System (SuDS) or other measures (RD0214.B) (PP1219).

Flood Risk

SEPA has requested that the second 'Flood Risk' bullet point is amended to state that a buffer strip "will" be required as opposed to "may" be required (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Kirkton Development

SEPA has requested that as a cemetery is proposed within site OP1, that text is included within the allocation text or as a separate 'Flood Risk' bullet point requiring a detailed groundwater assessment and water features survey, as there may be a private water supply within 250m of this site and a well in the western part of the site (RD0214.B) (PP1219).

The number of homes likely to be completed between 1 January 2019 to 31 December 2037 is 395 homes and this should be reflected in Table 3 to avoid overstatement of the contribution this site will make to delivery during the lifetime of the LDP. This is based on residual capacity built at 20 homes per annum with a likely completion at the end of 2046 which falls outwith the Plan period (PP1080).

Site OP2 – Land to West of Boothby Road

SEPA recommends minor rewording to the last paragraph of the OP2 summary regarding the location of the buffer strip as the boundary of the site has changed from the Main Issues Report (MIR) to the Proposed Local Development Plan (PLDP) stage (RD0214.B) (PP1219).

The boundary of the Masterplan for site OP2 and R1 site should be amended to exclude a parcel of land adjacent to a house known as 'Whinburn', as it is in separate, private ownership. It had been previously agreed with the Council to exclude this land (PP0910).

The second phase of 240 homes is marketability constrained. Given the housebuilder's assessment of demand for the settlement and the anticipated delivery rate continuing at 15 homes per annum from phase 1 which will be completed mid-2031, the likely contribution to the effective supply will be 105 houses by the end of 2037. The combined site allocation should therefore be reduced from 590 to 291 to accurately reflect the likely contribution to the delivery of housing from this allocation (PP1079).

Site OP3 – Phingask

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP3 (RD0214.B). No modification

sought (PP1219).

Site OP4 – Land at Tyronhill Farm

SEPA has requested that the allocation summary for the site states that the site will be required to connect to the public waste water sewer (RD0214.B) (PP1219).

The OP4 site is capable of accommodating more than 30 homes and increasing the allocation numbers would make more efficient use of the land and be consistent with the densities of the other sites in the LDP (PP0737). Reference to retaining the granite buildings should be removed from the Plan and the stipulation is unduly prescriptive that it should be decided through design analysis and structural survey as part of a planning application (PP0737).

Site OP4 is already developed with farm buildings. The delivery of infrastructure to this small area cannot be assured with confidence to satisfy SPP as the adjacent OP1 site has an anticipated completion is 2047. The density of the site is too high for the existing vernacular buildings to be retained on site and the pedestrian links with OP1 are unlikely to be available within the lifetime of the Plan. While the allocation should be removed, the settlement boundary should include the site to enable a more appropriate level of development brought forward as a windfall site should it be viable (PP1104).

Site OP5 – Land to the East of Phingask

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP5 (RD0214.B). No modification sought (PP1219).

Site OP6 – Land within Kirkton Development

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP6 (RD0214.B). No modification sought (PP1219).

Site CC1 – South Harbour Road Commercial Centre

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site CC1 (RD0214.B). No modification sought (PP1219).

Non-Allocated Site – Bid Site BB022 – Part of R1, Land West of Greenbank Gardens

A representee has requested that bid site BB022 is allocated for 95 homes to the west of OP2. It is argued that the site is ready to be developed as a housing area with landscape buffers and public open space. Site OP2 is subject to a masterplan and is partly developed, to the south, and partly constrained, to the north, as it is understood that the landowners are not intending to sell the land for any further development. Site BB022 is available for development and potentially could form part of the required masterplan covering the land currently allocated for housing development (PP0810).

Gardenstown

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Braegowan/ Morven View Road

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

The site is incorrectly stated as effective. The site is marketability constrained and the planning application submitted in 2014 has not been determined. There is the possibility of a ransom strip and the site has failed to deliver for 14 years and is constrained in the HLA 2019. There is no reason for confidence that the site will deliver during the lifetime of the Plan which is contrary to Scottish Planning Policy (SPP) (PP1101).

Site OP2 – Bracoden Road/ Knowhead

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219).

The site is incorrectly stated as being effective. The site is constrained by ownership and has been in the audit since 2004 with the planning permission on site lapsed and is constrained in the HLA 2019. There is no reason for confidence that the site will deliver during the lifetime of the Plan which is contrary to SPP (PP1101).

Memsie

Site R1 – For education or community uses

SEPA has requested that additional text is added to the allocation summary to state that the site is adjacent to a 1:200 fluvial extent of the Water of Philorth and a Flood Risk Assessment (FRA) may be required (RD0214.B) (PP1219).

Flood Risk

SEPA has requested that the Council's Flood Prevention Unit confirms whether an FRA for site OP2 is still required, as the site boundary has changed since the MIR consultation and the site is further away from the watercourse (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has requested that the bullet point under 'Strategic drainage and water supply' is amended as discharge from the OP2 site to the private waste water treatment works

(WWTW) is unlikely to be technically feasible (or highly challenging) due to the limited flows in the receiving watercourse, and the licence would need a variation from SEPA which they might not be able to authorise (RD0214.B) (PP1219).

Site OP1 – Crossroads

SEPA has requested that the last sentence of site OP1 is removed as it is not relevant as private drainage will not be acceptable at this location (RD0214.B) (PP1219).

This site is constrained, (PP0376 and PP1055) on ownership and marketability grounds and has had no developer interest in over 8 years. There is no basis of confidence that the site can deliver in the Plan period to satisfy SPP. The OP2 site is the preferred site as it is in keeping with the existing pattern of development of the settlement (PP1055). The site is undeliverable (PP0376).

The site is incapable of connecting to the necessary drainage infrastructure (PP0376, PP0482) as there is no public sewer in Memsie (PP0482) and unresolvable drainage issues with private soakaways failing due to ground conditions (PP1055). There are also no shops or recreation areas in Memsie and the school in Rathen is already exceeding capacity (PP0482). Additionally, the OP1 site would increase traffic in the area where there is only one point of entry, creating noise and safety issues (PP0482).

Site OP2 – Land North of Cairn Close

SEPA has confirmed that they do not require a FRA for this site but recommend the Council's Flood Prevention Unit confirms whether the requirement for an FRA still remains or whether this can be removed from the allocation summary (RD0214.B) (PP1219).

Additionally, SEPA has requested that the last paragraph in the allocation text for site OP2 is removed and replaced with text that clarifies the difficulties connecting to the private treatment plant north of site OP1 and a growth project will be required for the whole settlement (RD0214.B) (PP1219).

Support has been noted for the allocation of the OP2 site. However, objection is made to the inclusion of the requirement for a second point of access to the A981 and bus stops. Planning permission was granted for the site (APP/2012/3544) which made provision for access to the north into the bid site. The requirement to provide access to the A981 is restricted by the identification of P2 along the eastern boundary. It is also noted that the boundary of the allocation does not extend as far as the A981 nor was the requirement for the second point of access included within the Main Issues Report. The representee has included Appendices (RD0048.A and RD0048.B) in their representation which provides further detail to support their position (PP0377).

A representee objects to the Plan as the PLDP, fails to identify the land in its entirety. The allocation boundary should be extended, and housing numbers increased to 40 homes. The expansion of the site should happen now rather than in the future. The principle of development in this location has been accepted through previous LDPs. The representee has included Appendices (RD0047.A and RD0047.B) in their representation which provides further detail to support their position (PP0376).

Non-Allocated Site – Bid Site BB021 – Land South of Muir Road

A representee has requested that bid site BB021 be allocated in the LDP as it provides a logical extension to the settlement, avoids ribbon development and provides opportunities to improve drainage and enhancements to the Cairn for residents and visitors. Open space is provided to preserve views to the Cairn and its proximity is not considered a constraint to development. A masterplan could be created to plan the development in stages. This site is deliverable whereas the OP1 site is not and should be removed (PP0813).

New Aberdour

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – St Drostan's Lane

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

NatureScot requests that the allocation summary includes a requirement for active travel provision as it is a large development of 48 homes, and it would help promote safe and convenient active travel opportunities which is in keeping with the LDP's objectives (RD0255.B) (PP1300).

The OP1 site is constrained in the HLA 2019 and the allocation should not be relied upon due to its likely very slow build rate. The site was identified for housing over 15 years ago, there has been a recent planning application which shows a piecemeal approach to its development contrary to the Settlement Statement. The site is constrained by WWTW capacity, poor access, and overhead electricity lines with costs likely to discourage mainstream housebuilders given the low demand for housing (PP1035).

New Byth

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Former New Byth Primary School

SEPA has commented that they have no flooding, strategic drainage or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

The planning permission on this site has lapsed and no attempt has been made to progress the site in 10 years. The site will remain marketability constrained during the life of the Plan and demand in the settlement is readily met by individual plot developments. The smaller OP2 from the LDP 2017 might be a more viable alternative (PP1078).

Non-Allocated Site – Bid Site BB013 – Site Adjacent to Urquhart Road

Concerns are noted regarding the conflict between vehicles and walkers through increased traffic, there being limited amenities to support development and local drainage issues. It is thought that the access to the other end of Urquhart Road is considered a more sensible approach. The representee has included an Appendix (RD0046.A) in their representation which provides further detail to support their position (PP0374).

Pennan

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has requested, for consistency, that a 'Strategic drainage and water supply' bullet point is added that reflects Scottish Water's comments on the capacity of its infrastructure in Pennan (RD0214.B) (PP1219).

The community facilities and the sports and recreation facilities bullet points make reference that residential developments will be required to make developer obligation payments. There are no residential allocations identified in the conservation area, therefore the section is unnecessary (PP1075).

Rathen

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Site R1 – For a cemetery extension

SEPA has requested that the allocation text for site R1 includes the need for a groundwater assessment (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has requested that the first sentence of the 'Strategic drainage and water supply' bullet point is amended to state that Rathen lies within a SEPA Waste Water Drainage Consultation Area and that full site investigations for all private water proposals will be required (RD0214.B) (PP1219).

The only allocation in the settlement has planning permission with a Section 75 (S75) that makes no reference to developer obligations in respect of recycling and waste, community facilities and health care facilities. The Settlement Statement should be consistent with the developer obligations sought and the Council's position in relation to the S75 Agreement (PP1059).

OP1 – Bridge of Rathen

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

Historic Environment Scotland (HES) has noted that the OP1 site is located approximately 140m west of the scheduled monument known as St Ethernan's, Rathen Old Parish Church, but HES is content that the potential impact on the setting of the monument is unlikely to be significant (RD0266.A) (PP1343).

Non-Allocated Site – Bid Site BB034 – Land North and East of Rathen West Church

The site was not identified as a preferred site in the MIR as it was not seen to be a logical extension to the settlement and would visually impact on the setting of listed buildings and monuments and additionally the community do not want additional development due to the current infrastructure conditions. It is however, considered that the site is a logical extension and would help to alleviate existing constraints and any required improvements would be undertaken in tandem with OP1. The site is available, viable and deliverable within the Plan period and has no challenges in terms of topography or gradient. A sustainable, accessible and high-quality development could be delivered and meet the objectives of the settlement by meeting local housing needs (PP1322).

Rosehearty

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – South of Ritchie Road

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

NatureScot has requested that as part of the masterplan process, further consideration should be given to the extent and siting of development within this site, embedding mitigation of landscape and visual effects by design, and that the proposed landscape planting should be of an appropriate scale and integrated into the development with good quality open space. NatureScot is concerned that the design, location and narrow width of the proposed strategic landscape planting will do little to mitigate the effects of the prominent and relatively large-scale site at this locale (RD0255.B) (PP1300).

The settlement currently has four allocated sites with a total capacity of 110 homes, the oldest from the 1990s, which are all constrained due to marketability. These are also either long-term constrained, have physical or ownership constraints. OP1 has had its capacity increased previously in an attempt to meet allowances despite being marketability constrained. The varying capacities of these sites have not attracted any planning applications. There is no reason to promote OP1 as contributing to the allowances given the lack of interest in the allocations available, removal of existing allocations and no basis to support confidence in the delivery of the site within the Plan period necessary to satisfy SPP (PP1086).

Site OP2 – Murison Drive

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

Site OP3 – Cairnhill Road/adj Bowling Green

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

This allocation formed part of a larger site that goes back to 1978 where development activity has only taken place in one area. There has been no interest shown in this area and it remains allocated with no justification for retaining the site given SPP requires confidence in it becoming effective (PP1088).

Sandhaven and Pittulie

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – St Magnus Road, land opposite Caird Place

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification

sought (PP1219).

Tyrie

Non-Allocated Site – New N027 – Land to North and South of Main Road

Land to the north and south of Tyrie should be allocated in the LDP. Tyrie would be a desirable place in which to live because of the school being close by and accessible by the footpath indicated, and the close proximity of the settlement to Fraserburgh. There is a bus lay-by but development to the land south of the road could also lead to a bus lay-by being formed on the southbound carriageway too, as bus services regularly pass through and stop in Tyrie. Numerous access points could be used, and it is believed that services are available to connect to the development. Employment uses could be located to the south. The representee has included an Appendix (RD0083.A) in their representation which provides further detail to support their position (PP0538).

Modifications sought by those submitting representations:

Cairnbulg and Inverallochy

Flood Risk

Modify the PLDP to split the 'Flood Risk' bullet point into two bullet points, "Parts of the settlement are at risk from coastal flooding. Flood Risk Assessments may be required" and "A Flood Risk Assessment will be required for OP1 due to the risk of surface water flooding." (PP1219).

Site OP1 – South of Allochy Road

Modify the PLDP to remove site OP1 (PP1120).

Site OP2 – Westhaven

Modify the PLDP to remove the OP2 allocation and identify an alternative allocation in the Local Growth Area of the RHMA or in the Local Growth Area of the AHMA (PP1119).

Crovie

Services and Infrastructure

Modify the PLDP to add a new bullet point to the 'Strategic drainage and water supply' section to state, "There is no public waste water infrastructure available." (PP1219).

Fraserburgh

Site R1 – For a park, and sport and recreation facilities associated with the approved Masterplan for site OP2

Modify the PLDP to amend the southern boundary of the R1 site to exclude a parcel of land adjacent to 'Whinburn' which is in private ownership (PP0910).

Site BUS1, BUS2, BUS3 and BUS4 – Safeguarded for business use

Consider the need to raise flood risk issues for sites BUS1, BUS2, BUS3 and BUS4 in the Plan (PP1219).

Flood Risk

Modify the PLDP to amend the second 'Flood Risk' bullet point's last sentence to "... buffer strip will be required ..." (PP1219).

Site OP1 – Kirkton Development

Modify the PLDP to amend the allocation summary for the OP1 site to include, "A detailed groundwater assessment and water features survey will be required to fully assess the suitability of this site as a cemetery." (PP1219).

Modify the PLDP to amend the OP1 allocation from 600 to 395 homes and amend the allocation entry in Appendix 6 (PP1080).

Site OP2 – Land to West of Boothby Road

Modify the PLDP to amend the last paragraph allocation summary for the OP2 site, "A buffer strip will be required alongside the watercourse on the northern boundary running through the site ..." (PP1219).

Modify the PLDP to ensure the masterplan for site OP2 and R1 is amended to exclude a parcel of land adjacent to 'Whinburn' which is in private ownership (PP0910).

Modify the PLDP to amend the OP2 allocation from 590 to 291 homes and modify the allocation entry in Appendix 6 (PP1079).

Site OP4 – Land at Tyronhill Farm

Modify the PLDP to amend the allocation summary for OP4 to add, "Connection to the public waste water network will be required for this site." (PP1219).

Modify the PLDP to amend the OP4 allocation to increase the numbers from 30 homes to 40-50 homes and remove reference to retaining the existing granite steading buildings from the allocation summary (PP0737).

Modify the PLDP to remove the OP4 allocation whilst retaining the current settlement boundary and find an alternative site in the RHMA Local Growth Area or if marketability constrained, the Local Growth Area of the AHMA (PP1104).

Non-Allocated Site – Bid Site BB022 – Part of R1, Land West of Greenbank Gardens

Modify the PLDP to allocate bid site BB022 for 95 homes (PP0810).

Gardenstown

Site OP1 – Braegowan/Morven View Road

Modify the PLDP to remove site OP1 (PP1101).

Site OP2 – Bracoden Road/Knowhead

Modify the PLDP to remove site OP2 (PP1101).

Memsie

Site R1 – For education or community uses

Modify the PLDP to add the following text to the allocation summary, “The site is adjacent to the 1:200 fluvial extent of the Water of Philorth. A FRA may be required.” (PP1219).

Flood Risk

Modify the PLDP to amend the ‘Flood Risk’ section, if required, after confirmation is sought regarding the need for a Flood Risk Assessment (FRA) for OP2 (PP1219).

Services and Infrastructure

Modify the PLDP to amend the ‘Strategic drainage and water supply’ to read, “There is insufficient capacity at Memsie Cairn Stone septic tank ... The development at Westcroft Close is currently served by a private treatment plant which has not yet been taken over by Scottish Water. This treatment plant is expected to serve OP2. Due to limited flows in the receiving watercourse for this treatment plant, additional private treatment for the OP2 site may not be possible. Until a growth project can be implemented for the whole settlement, development during the Plan period may be limited at this site.” (PP1219).

Site OP1 – Crossroads

Modify the PLDP to remove the last sentence in the last paragraph, “Further private septic tanks in Memsie should be avoided as there have been a number of ineffective soakaways identified in the village.” (PP1219).

Modify the PLDP to remove site OP1 (PP0376 and PP0482).

Modify the PLDP to remove site OP1 and allocate an alternative effective site in the Local Growth and Diversification Area in the RHMA, or if marketability constrained, within the adjacent AHMA Local Growth and Diversification Area (PP1055).

Site OP2 – Land North of Cairn Close

Modify the PLDP to amend the OP1 allocation, if required, after confirmation if the FRA for OP2 is still required (PP1219).

Modify the PLDP to remove the last paragraph in the allocation text and replace it with, “Due to limited flows in the receiving watercourse for this treatment plant, additional private treatment for OP2 site is unlikely to be feasible. Until a growth project can be implemented for the whole settlement, development during the Plan period may be limited at this site. Early discussions with Scottish Water should take place in this regard.”

(PP1219).

Modify the PLDP to amend the OP2 allocation summary to remove the requirement of providing a second access onto the A981 and bus stops (PP0377).

Modify the PLDP to amend the OP2 allocation to increase the site boundary and allocate site capacity to 40 homes (PP0376).

Non-Allocated Site – Bid Site BB021 – Land South of Muir Road

Modify the PLDP to remove site OP1 and allocate BB021 for housing land (PP0813).

New Aberdour

Site OP1 – St Drostan's Lane

Modify the PLDP to amend the allocation summary for OP1 to include, "Provision for active travel is required. Efforts should be made through the site layout to link into the core path network." (PP1300).

Modify the PLDP to remove site OP1 (PP1035).

New Byth

Site OP1 – Former New Byth Primary School

Modify the PLDP to remove site OP1 and reallocate the OP2 site as per the LDP 2017 (PP1078).

Non-Allocated Site – Bid Site BB013 – Site Adjacent to Urquhart Road

Modify the PLDP to reconsider access to the site (PP0374).

Pennan

Services and Infrastructure

Modify the PLDP to add a bullet point in the 'Services and Infrastructure Service's section under 'Strategic drainage and water supply' that confirms the capacity in Pennan (PP1219).

Modify the PLDP to remove the 'Services and Infrastructure section' from the Pennan Settlement Statement (PP1075).

Rathen

Site R1 – For a cemetery extension

Modify the PLDP to amend the R1 site summary to add, "A groundwater assessment will be required to assess the hydraulic connectivity of the site with the Water of Philorth/Water of Tyrie." (PP1219).

Services and Infrastructure

Modify the PLDP to amend the first sentence of the 'Strategic drainage and water supply' so it reads, "There is no public waste water infrastructure in Rathen. Rathen lies within a SEPA Waste Water Drainage Consultation Area. SEPA will require full site investigations for all private waste water proposals." (PP1219).

Modify the PLDP to remove the sections on Recycling and Waste, Community facilities and Health Care facilities under the 'Services and Infrastructure section' of the Rathen Settlement Statement (PP1059).

Non-Allocated Site – Bid Site BB034 – Land North and East of Rathen West Church

Modify the PLDP to include the bid site BB034 for housing for 10 self-build plots (PP1322).

Rosehearty

Site OP1 – South of Ritchie Road

Modify the PLDP to insert the following text after the second sentence in the allocation summary for site OP1 in Rosehearty, "Landscape planting should be of an appropriate scale and integrated into the development with good quality open space. Consideration should be given to the extent and siting of development within this site, embedding mitigation of landscape and visual effects by design." (PP1300).

Modify the PLDP to remove the 49 homes contribution to the allowances for OP1 Rosehearty and identify an alternative effective allocation in the Local Growth Area of the RHMA, or if marketability constrained, in the Local Growth Area of the AHMA (PP1086).

OP3 – Cairnhill Road/adj Bowling Green

Modify the PLDP to remove site OP3 (PP1088).

Tyrie

Non-Allocated Site – New N027 – Land to North and South of Main Road

Modify the PLDP to allocate land to the north and south of Tyrie for housing and/or employment (PP0538).

Summary of responses (including reasons) by planning authority:

Cairnbulg and Inverallochy

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – South of Allochy Road

Comments from SEPA are noted. No change is required.

The Council does not agree that site OP1 should be removed. The OP1 site has been assessed as a good fit for development within the settlement, and it is not considered that the legal issue with road access is a constraint to development as the land in question is owned by Aberdeenshire Council (see MIR Issues and Actions Papers, AD0040.B, pages 7-11). It is noted that it is worth taking into account that development characteristically operates at a slower rate due to market conditions in the area. Therefore, it is seen that it is appropriate to allocate land within the northern towns that have the ability to deliver housing to meet local housing need. No change is required.

Site OP2 – Westhaven

Comments from SEPA are noted. No change is required.

The Council does not agree that the OP2 site should be deleted from the Plan and an alternative sought. The site is an effective site as outlined in the HLA and is an appropriate extension to the settlement and should be allocated. Discussion regarding strategic allowances is noted, however more information can be found within Schedule 4 Issue 5: Section 8 – Shaping Homes and Housing – Housing Land Supply, Policy H1 Housing Land and Appendix 6 Housing Land Allocations.

Site OP3 – Land North of Rathen Road

Comments in support of the allocation are noted. No change is required.

Comments from SEPA are noted. No change is required.

Crovie

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Fraserburgh

Vision

Comments from Nestrans are noted. No change is required.

Site R1 – For a park, and sport and recreation facilities associated with the approved

Masterplan for site OP2

Comments from SEPA are noted. No change is required.

The area of land identified has been incorrectly included within the site boundary of the R1 site as it has previously been acknowledged by both the Council and through the 2016 LDP Examination, (AD0036, page 295), that the area of land within private ownership adjacent to 'Whinburn' at Greenbank of Phingask, should be removed from the R1 designation. The Council confirms that it intends to address this issue through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site R2 – Reserved for healthcare use

Support for the inclusion of the site is noted. No change is required.
Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Sites BUS1, BUS2, BUS3 and BUS4 – Safeguarded for business use

SEPA has highlighted that they have no issues with the allocation text for the BUS site but note that there may be a case for the Council's Flood Risk and Coast Protection Team to address any flood risk on the site. It is however considered that this would be achieved at the planning application stage for any future potential development. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Kirkton Development

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council does not agree that site OP1 should be amended to reduce the allocation. The OP1 site has been assessed as a good fit for development within the settlement. It should be taken account of that development in the northern towns characteristically operates at a slow rate of development due to market conditions in the area. Therefore, it is seen that it is appropriate to allocate land within the northern towns that have the ability to deliver housing to meet local housing need. No change is required.

The Council notes the following non-notifiable modification has been made to the PLDP to update factual references since the PLDP was agreed, to include "(planning application reference APP/2016/0618 for 120 homes)" at the end of the first paragraph. This is as set out in the List of Non-Notifiable Modifications.

Site OP2 – Land to West of Boothby Road

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

As noted above (see site R1), the area of land identified adjacent to 'Whinburn' at Greenbank of Phingask has been incorrectly included within the site boundary of the R1 site. It had previously been acknowledged by both the Council and through the 2016 LDP Examination, (AD0036, page 295), that the area of land within private ownership should be removed from the R1 designation. To address the matter, in addition to excluding the land from site R1 in the PLDP mapping, the allocation summary text for site OP2 should be amended to ensure that the land in question is excluded from the Masterplan in any future revision. The Council confirms that it intends to address this issue through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council does not agree that site OP2 should be amended to reduce the allocation. The OP2 site has been assessed as a good fit for development within the settlement. It should be taken account of that development in the northern towns characteristically operates at a slow rate of development due to market conditions in the area. Therefore, it is seen that it is appropriate to allocate land within the northern towns that have the ability to deliver housing to meet local housing need. No change is required.

Site OP3 – Phingask

Comments from SEPA are noted. No change is required.

Site OP4 – Land at Tyronhill Farm

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The comments relating to increasing the capacity of the site are noted, however, taking into account the requirement to retain the granite buildings on site, the capacity is deemed appropriate. The comments regarding the removal of the requirement for the retention of the granite buildings is noted, however it is felt these provide an important attribute, adding character and enhancing sense of place which is one of the six qualities of designing a successful place as noted through Policy P1 Layout, Siting and Design (AD0041.A, paragraph P1.5, page 48). It is also not agreed that the allocation should be removed from the Plan. The land is suitable for development and there is a clear logic for allocating the site and extending the settlement boundary around it such that the site can be absorbed into the wider development of the OP1 site as it progresses over time. No change is required.

Site OP5 – Land to the East of Phingask

Comments from SEPA are noted. No change is required.

Site OP6 – Land within Kirkton Development

Comments from SEPA are noted. No change is required.

Site CC1 – South Harbour Road Commercial Centre

Comments from SEPA are noted for the CC1 site (bulky comparison outlets). No change is required.

Non-Allocated Site – Bid Site BB022 – Part of R1, Land West of Greenbank Gardens

The Council does not support allocating bid site BB022 for 95 homes to the west of OP2. The comments relating to the deliverability of the site are noted. However, as stated in the MIR the site is not well related to the existing settlement or the facilities the settlement offers and is constrained due to poor connectivity. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. No change is required.

Gardenstown

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Braegowan/Morven View Road

Comments from SEPA are noted. No change is required.

Site OP1 is considered to be an effective site as this was granted planning permission on 28 July 2020 (APP/2014/2686). This is a relatively recent planning permission and there is nothing to note that the site cannot now come forward within the Plan period under this application. The Council notes the following non-notifiable modification has been made to the PLDP to update factual references since the PLDP was agreed to insert at end of first paragraph, “Planning permission has been granted for the construction of 25 homes (planning application reference APP/2014/2686)”. This is set out in the List of Non-Notifiable Modifications.

Site OP2 – Bracoden Road/Knowhead

Comments from SEPA are noted. No change is required.

This site is subject to planning permission which has been deemed to have commenced, however no houses are yet developed. As the permission has been implemented, the development of the houses can then follow. It is not agreed that site OP2 should be removed in favour of identifying an alternative effective allocation in the RHMA. The OP2 site has been assessed as a good fit for development within the settlement, taking into account that Gardenstown characteristically operates at a slow rate of development due to market conditions in the area. Therefore, it is seen that it is appropriate to allocate land within the northern towns that have the ability to deliver housing to meet local housing need. No change is required.

Memsie

Site R1 – For education or community uses

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Flood Risk

After confirmation with the Council's Flood Risk and Coast Protection Team that they agree SEPA's standpoint regarding flood risk, it is concluded that the requirement for a Flood Risk Assessment can be removed. The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Crossroads

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Drainage issues have been identified as concerns relating to the site. Neither SEPA nor Scottish Water noted issues of drainage as to a reason as to why the site could not continue to be allocated. A specific solution for the site would be developed at the early stages of the planning application process, and like all developments Scottish Water highlight that early engagement is encouraged. With regard to the questioned deliverability of this development, whilst the site has been deemed constrained in the HLA for reasons of marketability and ownership, it is the slow market conditions that present the primary constraint. This would not preclude the site from being allocated but would have an equal effect on any site in the village. It is maintained that the site fits appropriately in the settlement and presents an opportunity to consolidate the settlement. Issues relating to amenity and road safety will be matters that would be considered when a planning application was submitted. No change is required.

Site OP2 – Land North of Cairn Close

Support expressed for site OP2 is noted.

After confirmation received from the Council's Flood Risk and Coast Protection Team as requested, the Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

With regard to the last paragraph in the allocation text, the Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The requirement for the second access is something that is set out in Aberdeenshire

Council's Road Standards. The Standards stipulate that where an access road serves more than 50 homes but less than 100 homes, an emergency access route must be provided, and when it exceeds 100 homes it must have two points of access (AD0111, paragraph 12.1, page 33). The specific requirements for this site would be discussed at the planning application stage. No change is required.

The request for the full extent of the site requested to be allocated is noted. However, as stated within the Issues and Actions paper the full area would be a significant extension overall for a village the size of Memsie in an open, flat countryside setting, and in a location distant from key services and facilities (AD0040.B, page 40). Whilst the Council acknowledge that the principle of development in this part of the village has already been accepted by existing development and site OP2, and that the development would make effective use of existing infrastructure investment, we maintain that the smaller extension of 20 homes (site OP2) is a more appropriate scale of development for this settlement over the next Plan period. No change is required.

Non-Allocated Site – Bid Site BB021 – Land South of Muir Road

The Council does not support allocating bid site BB021 for housing land. The request to allocate the land is noted, however, the allocation of this site would result in a significant extension into open countryside which would have a detrimental impact on the landscape of the settlement. The scale of the proposed allocation would also result in the overdevelopment of Memsie and change the character of the settlement which is all noted in the MIR Issues and Actions Papers, (AD0040.B, pages 36 – 44). As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. No change is required.

New Aberdour

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – St Drostan's Lane

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council does not agree that the OP1 allocation should be removed from the LDP. Sites within the northern settlements characteristically operate at a slower rate of development due to market conditions in the area. Therefore, it is seen that it is appropriate to allocate land within the northern towns that have the ability to deliver housing to meet local housing need. It is acknowledged however, that there has been

recent development on the OP1 site but to avoid further piecemeal development and to allow for a continuation of the planned approach to the settlement additional text was added into the Settlement Statement Vision and the allocation summary to advise against further piecemeal development. No change is required.

New Byth

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Former New Byth Primary School

Comments from SEPA are noted. No change is required.

It is noted that the representee considers that the planning permission on this site has lapsed. However, as the demolition of the old school building has been undertaken and formed part of the planning application it is considered that the consent was implemented. Furthermore, the site is considered to be a brownfield site and promotion of development on brownfield sites is considered to be in keeping with SPP rather than developing the alternative site noted as this is a greenfield site. It is not agreed that site OP3 should be removed in favour of identifying an alternative effective allocation in the RHMA. Sites within the northern settlements characteristically operate at a slower rate of development due to market conditions in the area. Therefore, it is seen that it is appropriate to allocate land within the northern towns that have the ability to deliver housing to meet local housing need. No change is required.

Non-Allocated Site – Bid Site BB013 – Site Adjacent to Urquhart Road

The Council does not support allocating bid site BB013 for 10 self-build homes. Concerns relating to this site are noted. The site was identified to be carried forward at the Main Issues Report Stage, however in consideration of comments received at the Issues and Actions stage, (see Issues and Actions Papers, AD0040.B, pages 47-50) the bid site was not proposed to be allocated within the LDP 2021. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the RHMA. No change is required.

Pennan

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable

modification, as set out in the List of Non-Notifiable Modifications.

The comments relating to the developer obligations not being required are noted. This being said, these comments do not only relate to allocated development but are a requirement for any development within the settlement. It is noted that the settlement of Pennan is within a conservation area, so new development is likely to be limited but the comment remains relevant. No change is required.

Rathen

Site R1 – For a cemetery extension

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The comments relating to the developer obligations not being required are noted. It is correct that the only allocation has planning permission with a related S75 Agreement which includes details of any developer obligations required. However, these comments do not only relate to allocated development but are a requirement for any development within the settlement. It is noted that the settlement of Rathen has a number of constraints to overcome before development can happen so any new development is likely to be limited but the comment remains relevant. No change is required.

Site OP1 – Bridge of Rathen

Comments from SEPA and Historic Environment Scotland are noted. No change is required.

Non-Allocated Site – Bid Site BB034 – Land North and East of Rathen West Church

The Council does not support allocating bid site BB034 for 10 self-build plots. It is noted within the Issues and Actions Papers, that development in this location does not provide a logical extension to the settlement and is located close to scheduled monuments and listed buildings (AD0040.B, pages 55-57). Issues relating to infrastructure constraints are noted for this site. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the RHMA. No change is required.

Rosehearty

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – South of Ritchie Road

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

It is not agreed that site OP1 should be removed in favour of identifying an alternative effective allocation in the RHMA. The OP1 site has been assessed as a good fit for development within the settlement, taking into account that Rosehearty characteristically operates at a slow rate of development due to market conditions in the area. Therefore, it is seen that it is appropriate to allocate land within the northern towns that have the ability to deliver housing to meet local housing need. No change is required.

Site OP2 – Murison Drive

Comments from SEPA are noted. No change is required.

Site OP3 – Cairnhill Road/adj Bowling Green

Comments from SEPA are noted. No change is required.

The Council does not agree that site OP3 should be removed in favour of identifying an alternative effective allocation in the RHMA. The OP3 site has been assessed as a good fit for development within the settlement, taking into account that Rosehearty characteristically operates at a slow rate of development due to market conditions in the area. Therefore, it is seen that it is appropriate to allocate land within the northern towns that have the ability to deliver housing to meet local housing need. No change is required.

Sandhaven and Pittulie

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – St Magnus Road, land opposite Caird Place

Comments from SEPA are noted. No change is required.

Tyrie

Non-Allocated Site – New N027 – Land to North and South of Main Road

The Council does not support allocating new site N027 for housing and / or employment. The site was not put forward as a development bid so was not considered as such at the MIR stage, nor subject to site assessment and public consultation. The representation does not include any supporting information such as an environmental assessment to allow a detailed evaluation of the suitability of the proposal. In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.
2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” in relation to the settlement statement matters covered in Issue 16. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Cairnbulg and Inverallochy

Flood risk

3. I agree that the suggestion from the Scottish Environment Protection Agency (SEPA) to split the ‘flood risk’ bullet, to create a dedicated bullet for flood risk issues relevant to the settlement as a whole and those relevant to site OP1 separately, will add clarity. A modification to this effect is recommended.

Site OP1 – South of Allochy Road

4. Site OP1 is identified as being constrained for marketability reasons in the 2020 Housing Land Audit. I note from the further information submitted by the council in response to request FIR 016 that the access constraint, referenced in the third party representation, the main issues report and the issues and actions paper, has been resolved to enable development to commence on the site.
5. Whilst the council is unable to provide detailed information on the likely start date and the rate of completion, I have been informed that the site OP2 in the settlement has provided on average 10 completions per year and is programmed to be completed in 2022. I note from the bid submission that the land is presently marketed for sale and I am satisfied that the resolution of the access constraint would allow site OP1 to be deliverable by 2032.

6. I have been provided with no specific evidence to convince me that the site would not become effective during the plan period. No modification is required.

Site OP2 – Westhaven

7. The representation does not seek to remove the allocation of site OP2, as suggested by the council. Rather, it seeks for the contribution of the site to the strategic allowances in table 3 of appendix 6 in the proposed plan to be deleted and an alternative allocation to be identified to make up the shortfall. No specific alternative site is suggested within the representation.

8. Table 3 of appendix 6 in the proposed plan states that the site will contribute six units to the Rural Housing Market Area between 2020 and 2032. The representation contends that this figure should only be three units, as only three houses have been approved beyond the initial 37 houses noted in the housing land audit 2019.

9. The allocation summary in the proposed plan indicates that the site has permission for 43 homes, which is six more than the total shown in the 2019 audit. I have no reason to dispute this figure. Furthermore, I have been provided with no evidence to convince me that it would not be possible to deliver 43 homes in total on the site, and no constraints have been brought to my attention that would lead me to believe that this cannot be achieved during the lifetime of this plan. No modification is therefore required.

Crovie

Services and infrastructure

10. SEPA has requested that an additional bullet point be added to highlight the absence of public wastewater infrastructure. I consider that this amendment would provide clarification on this matter and consistency with other settlement statements. A modification is therefore recommended.

Fraserburgh

Site R1 – For a park, and sport and recreation facilities associated with the approved Masterplan for site OP2

11. A representation seeks the removal of an area of privately-owned land from site R1. The council has confirmed that the inclusion of the land was a mapping error and has provided evidence to show that its removal has been previously agreed. Given the circumstances, it would be reasonable and appropriate to amend the settlement map to exclude the area in question. I note that as a consequence, the settlement boundary would also need to be amended. Modifications are recommended.

Flood risk

12. SEPA has requested a minor rewording of a bullet point to clarify that an appropriate buffer strip will be required adjacent to existing watercourses within parts of specified housing sites. I agree that such a change would provide certainty to developers and users of the plan and a modification is therefore recommended.

Site OP1 – Kirkton Development

13. I agree that the additional text suggested by SEPA in relation to the requirement of a detailed groundwater assessment and water features survey to assess the suitability of the site as a cemetery is necessary. I have included a modification to that effect.

14. Representation PP1080 does not seek to reduce the density of the site, as suggested by the council. Rather, it seeks for the contribution of the allocation toward the delivery of houses during the lifetime of the plan to be reduced within table 3 of Appendix 6.

15. Table 3 in Appendix 6 of the proposed plan indicates that site OP1 forms part of the existing housing land supply and is not identified as contributing towards the strategic development plan allowances for the period 2020 - 2032. The agreed 2019 housing land audit forms the base supply for the strategic development plan and the proposed plan. Consideration was given to the contribution that existing sites would make towards meeting the housing land requirement for the period up to 2032 through the strategic development plan examination. This included an assessment of agreed and extrapolated completion rates for these sites and this information was used to inform the strategic development plan allowances. No evidence has been presented to suggest that there has been a change in circumstances in relation to this site since the strategic development plan examination. A modification is recommended in Issue 5 to make clear that the figures in the final column of the tables in Appendix 6 may include homes that are not expected to be built until after 2032. No further modification is required.

16. The council has proposed additional text to the allocation summary to provide the specific planning application reference for phase one of development on the site. However, since this suggested change has not been prompted by a representation, it does not form part of my examination.

Site OP2 – Land to West of Boothby Road

17. I agree that the modification suggested by SEPA would more accurately respond to the conditions on site following the boundary change between the main issues report stage and the extent of the site included within this plan.

18. To align with the proposed change referenced at paragraph 11 above, I agree that the allocation summary should be amended to provide clarity and to ensure the land in question is excluded from any future revision of the adopted masterplan. A modification to that effect is therefore proposed.

19. Representation PP1079 does not seek to reduce the density of the site as suggested by the council. Rather, it requests that the contribution made by the second phase of development of the site to the effective land supply be reduced to reflect the projections outlined within the 2019 housing land audit.

20. Table 3 in appendix 6 of the proposed plan indicates that site OP2 forms part of the existing housing land supply. The part of the site (240 homes) noted as constrained in the 2019 audit is not identified as contributing towards the strategic development plan allowances for the period 2020 - 2032. The anticipated programming of development beyond 2032 does not require a change to the overall capacity of the site. However, as

indicated above, a modification is recommended in issue 5 to make clear that the figures in the final column of the tables in appendix 6 may include homes that are not expected to be built until after 2032. No further modification is required.

Site OP4 – Land at Tyronhill Farm

21. The additional text suggested by SEPA in relation to the public waste water network would provide useful information for future development proposals. I agree that a modification is appropriate.

22. The landowner/developer of the site has requested that the reference to the retention of the existing granite steading buildings be removed from the allocation summary and that the notional capacity of the site should be increased to 40-50 dwellings to align with allocations of a similar scale in the plan. During my site inspection, I noted that the building group is formed of a mixture of traditional steading buildings and modern block/concrete byres/stores. The more modern buildings are in a state of disrepair, but the traditional buildings appear to be in a reasonable condition.

23. The allocation summary does not implicitly state that the granite buildings must be retained. Rather it is stated that their retention is preferred, with any proposal to remove the buildings to be justified by a supporting design statement. I find this to be a reasonable approach to take as it is not uncommon to highlight key or prominent characteristics of an allocation. Any design statement prepared by the landowner/developer could consider the condition of the buildings, their architectural merit, and their contribution toward the sense of place. Any proposal to replace the buildings and deliver an alternative density of development to the indicative capacity noted in the allocation summary could be effectively communicated through the design statement. No modification is needed.

24. A representation seeks the allocation to be deleted from the plan contending that the connecting infrastructure cannot be assured. I do not agree. It was clear during my site inspection that the closer elements of OP1 have already been built or are under construction. It is reasonable to assume that any prerequisite infrastructure can be in place during the coming ten years.

25. The representation also contends that the high density is of concern given the preference for the retention of the existing traditional buildings. Having viewed the site, I am satisfied that 30 units is not an unrealistic level of development for the site taking into consideration the removal of the modern structures and the potential conversion of the traditional steading should it be retained. No modification is required.

Non-allocated Bid Site BB022 – Part of R1, Land West of Greenbank Gardens

26. The bid site is situated immediately to the south east of site OP2. The eastern section of the proposed site is situated within the settlement boundary forming part of site R1, which is reserved for a park, sport and recreation facilities. The landowner contends that the site is easily accessible for pedestrians and cyclists from recently developed land to the east via land under his control. Whilst the land may be accessible to pedestrians and cyclists, I noted during my site inspection that it would be challenging for vehicular traffic to access the site directly from the main settlement in the east. Any access from the west would result in the development being remote from the wider settlement.

27. Depending on how sites OP2 and R1 are developed in the future, it may be possible to effectively link the site to the settlement as a logical long-term expansion. However, at this time the development of the site in isolation, or in advance of the substantial allocation to the north east, would result in the bid site being disjointed and remote from the existing settlement and its facilities. Consideration of housing need is undertaken through the Housing Needs and Demand Assessment which has informed the strategic development plan allowances. Fraserburgh lies within the Rural Housing Market Area and it is concluded under issue 5 that no additional allocations are required to meet the strategic development plan allowance in the period up to 2032. No modification is required.

Gardenstown

Sites OP1 – Braegowan/Morven View Road

28. A representation contends that table 3 in Appendix 6 of the proposed plan wrongly shows site OP1 as effective. From checking the relevant entry in the 2019 housing land audit, I agree that there is an error in the table and that the site should instead be included in the “Constrained 2019” column. The council has confirmed that planning permission has recently been granted for the construction of 25 homes on site OP1 (APP/2014/2686). On this basis, I consider it reasonable to conclude that the marketability constraint can be overcome and the site can therefore contribute towards the strategic development plan allowance for the Rural Housing Market Area in the period up to 2032. I agree with the council that reference to this planning permission should be included in the allocation summary for OP1 to provide clarity on the planning status of the site. Modifications to the relevant table in Appendix 6 and the allocation summary for OP1 are recommended. The implications of these changes for the housing land provision in the Rural Housing Market Area are addressed in Issue 5.

Site OP2 – Bracoden Road/Knowhead

29. A representation also contends that table 3 in Appendix 6 of the proposed plan wrongly shows site OP2 as effective. From checking the relevant entry in the 2019 housing land audit, I agree that there is an error in the table and that the site should also be included in the “Constrained 2019” column. The council has advised that there is an extant planning permission for housing on the site and development could start at any time. However, from the information provided in the representation, it would appear that the site has had permission for some time, with no homes having been built. Furthermore, the 2019 housing land audit indicates that the site is subject to an ownership constraint. On the basis of the information before me, it is uncertain whether the site would be deliverable during the plan period. Whilst I consider that site OP2 should not be identified as contributing towards the strategic development plan allowance for the Rural Housing Market Area, this would not prevent development coming forward on the site during the plan period. A modification is required to the relevant tables in Appendix 6 to move the site from the effective to constrained column. No other modifications are recommended.

Memsie

Vision

30. SEPA has requested that the general text in the Memsie vision be amended to remove reference to constraints regarding waste water treatment and poor ground conditions for soakaways, following the implementation of the wider amendments they have suggested for the settlement statement. I note that the council has not addressed these points in its responses above. SEPA contends that the sentences are not required and do not add clarity regarding the drainage constraints in the village.

31. I consider that matters relating to infrastructure constraints are more appropriately addressed in the service and infrastructure section of the settlement statement. However, the vision section of the Memsie settlement statement includes reference to a number of constraints. It would be potentially misleading to remove reference to those relating to drainage and retain the others, which are not the subject of representations. Whilst I agree that the sentences relating to drainage matters are not necessary, I do not consider they are causing harm. No modification is therefore recommended.

Site R1 – For education or community uses

32. SEPA has requested additional text be added to the description to highlight that the site is adjacent to an area at risk of flooding, which may require a flood risk assessment to be carried out. I agree that the modification would provide important information to prospective developers. A modification is recommended.

Flood risk

33. Following the realignment of the boundary for site OP2 in the proposed plan, SEPA has suggested that the bullet point regarding flood risk be updated. The council proposes to delete the second sentence of the bullet point to remove the reference to the potential for a flood risk assessment to be required for site OP2. However, I am satisfied that the amended boundary of the settlement results in the allocation being a significant distance from the watercourse. I therefore consider that the bullet point relating to flood risk and the close proximity of the watercourse to OP2 should be removed in its entirety; subject to the change referenced at paragraph 30 above being implemented, which highlights relevant flood risk implications for the settlement.

Services and infrastructure

34. I agree with SEPA's suggestion to reword the bullet point relating to strategic drainage and water supply to highlight the constrained flows into the Memsie Cairn Stone septic tank. Whilst the rewording proposed by the council does not totally align with the text suggested by SEPA, I find that it is sufficient to effectively communicate the issues identified. I recommend a modification on this basis.

Site OP1 – Crossroads

35. Given SEPA's advice that private drainage solutions will not be acceptable in this location, I agree with the proposed modification to the allocation summary.

36. The representation seeking the removal of this site does not suggest a specific alternative allocation. It contends that the alleged lack of developer interest since 2013 shows that there is no basis to assume that the site will deliver housing during the plan

period. Site OP1 is identified as constrained for marketability and ownership reasons in the 2020 housing land audit, although the council contends that the primary constraint is the slow market conditions.

37. In order to better understand matters relating to the deliverability of this allocation, I asked the council to provide a copy of the bid submission (FIR08). I note that the submission was made on behalf of a party who is the sole owner of the site. Whilst no details are provided regarding previous marketing of the site, I have no specific evidence before me to indicate that the ownership constraint cannot be overcome. In terms of marketability, I note that the allocation summary provides support in principle for self build plots. I consider that a flexible approach to the form of development on the site may help overcome the marketability constraint. Furthermore, in response to a further information request in relation to issues 2 and 5 (FIR08), the council has explained that a range of measures are being used to support housing development, particularly in the Rural Housing Market Area. This is a relatively small site and I consider it reasonable to assume that 15 units can be delivered by 2032. I conclude that the allocation should be retained.

38. Other representations raise concerns regarding road safety, drainage and amenity issues regarding the site. During my site inspection, I considered the position of the allocation, potential access points and the proximity of the site to existing properties. I am satisfied that a design solution could be achieved to ensure that the position of dwellings would have no unacceptable impact on the amenity of nearby properties, and that an appropriate access solution could be realised for the modest number of houses proposed.

39. Furthermore, any growth project initiated by Scottish Water could potentially facilitate wastewater management from the site and surface water drainage could be a consideration of any proposal. I am satisfied that the constraints identified could be resolved during the lifetime of the Plan. No modification is required.

Site OP2 – Land North of Cairn Close

40. Following the modification to the services and infrastructure bullet point referred to in paragraph 34, I am satisfied that the allocation summary should likewise be amended to align with the additional information provided. I therefore agree that a modification would provide additional clarity for developers.

41. The landowner/developer has requested that site OP2 be extended to the northeast to include all land between OP2 and P2 as part of the allocation. I note that the Main Issues Report included the land as a potential allocation option. The Issues and Actions Paper (AD0040.B) concluded that including the extra land would result in a significant extension overall for a village the size of Memsie, which should take place on an incremental basis.

42. During my site inspection, I noted that the additional land to the northeast of OP2 would make a logical expansion to the settlement. However, consideration of housing need is undertaken through the housing needs and demand assessment which has informed the strategic development plan allowances. Memsie lies within the Rural Housing Market Area and it is concluded under issue 5 that no additional allocations are required to meet the strategic development plan allowance in the period up to 2032. Therefore, no modification is required to the extent of site OP2.

43. The landowner/developer contends that it is unreasonable and impractical to require a second vehicular access to the site onto the A981. The council has advised that the requirement for a second access is set out within Aberdeenshire Council's Road Standards. Having viewed the site and its context, I am satisfied that there are multiple opportunities to provide additional access to the land which could be explored at the design stage of any development proposal. A modification to the allocation summary text and the Local Transport Infrastructure bullet point is therefore recommended to reflect this.

44. The landowner/developer contends that there are bus stops within 400 metres of the site and does not agree with the allocation summary, which states that there is poor accessibility to the existing stops meaning that new stops/links are required. During my site inspection I noted that, aside from a small section of the B9032, there is a continuous footway from the new developments at Cairn Close and Westcroft Close to the existing bus stops. However, it would appear that the northernmost element of OP2 would be a considerable distance from these bus stops and the extension of the settlement to the north may indeed require that the existing public transport links are brought closer to the most populist area in the village, as development takes place.

45. Active travel requirements, and the means of connecting the development to public transport links, will ultimately be a consideration at the planning application stage. Modifications are therefore recommended to the settlement allocation and the 'local transport infrastructure' bullet point to reflect that the specific requirements will be identified at the planning application stage.

Non-Allocated Bid Site BB021 – Land South of Muir Road

46. This site was included in the main issue report consultation. The Issues and Actions Paper indicates that the site was not recommended to be taken forward because of its impact on the setting of the Cairn of Memsie and on the overall openness of the landscape, which the council contends is a defining characteristic of the village.

47. Having visited this extensive site, I acknowledge the suggestion of the landowner that a significant portion of the land in the east could be retained as open space to preserve the setting of the scheduled monument. I also note the landowner's comments regarding the positive drainage characteristics of the site compared to the wider settlement.

48. However, consideration of housing need is undertaken through the housing needs and demand assessment which has informed the strategic development plan allowances. Memsie lies within the Rural Housing Market Area and it is concluded under issue 5 that no additional allocations are required to meet the strategic development plan allowance in the period up to 2032. Therefore, even if the site would potentially be an effective development opportunity, there is no justification to allocate it at this time. No modification is required.

New Aberdour

Site OP1 – St Drostans Lane

49. Representation PP1035 contends that the allocation should be deleted as it is noted as being long-term constrained in the housing land audit and that the settlement statement should be updated accordingly. The council has advised that sites within the northern settlements traditionally operate at a slower rate of development due to market conditions in the area. Whilst the site may indeed be constrained, I note that it is not listed as providing a contribution towards the strategic development plan allowance for the Rural Housing Market Area in the period 2020 - 2032. I am therefore satisfied that it should remain in the plan and be available in the event that there is local demand for housing in the future.

50. I agree with NatureScot that it would be useful to highlight within the allocation summary that there is a requirement for active travel provision to link the site with the core path to the north of the site. A modification to this effect is recommended.

New Byth

OP1 – Former New Byth Primary School

51. Representation PP1078 contends that the allocation should be deleted because progress has not been made on the delivery of housing on the site since planning permission was approved in 2010. The council has confirmed that the planning permission remains extant since the former primary school was demolished, thereby implementing the consent. Whilst the site may be listed within the housing land audit as being marketability constrained, I note that it is not identified as providing a contribution towards strategic development plan allowance for the Rural Housing Market Area in the period 2020-2032. I am therefore satisfied that it should remain in the plan and be available in the event that there is local demand for housing in the future. No modification is required.

Non-Allocated Bid Site BB013 – Site Adjacent to Urquhart Road

52. This site was included in the main issues report for 10 self-build homes and was not recommended to be taken forward by officers in the Issues and Actions Paper owing to concerns regarding access, road safety, the loss of prime agricultural land, and a community preference for infill development as opposed to the outward expansion of the settlement. A representation suggests that the site may be a more viable alternative to site OP1 given the nature of demand in the settlement.

53. For the reasons highlighted at paragraph 51, I am satisfied that site OP1 should remain allocated within the plan. Furthermore, it is concluded under issue 5 that no additional allocations are required to meet the strategic development plan allowance for the Rural Housing Market Area in the period up to 2032. Therefore, even if the concerns raised by the council could be addressed, there is no justification to allocate further sites at this time. No modification is required.

Pennan

Services and Infrastructure

54. A representation requests that the services and infrastructure section of the settlement statement be deleted. It contends that the developer contributions listed within

the section are not relevant as there are no housing allocations within the settlement. However, I am satisfied that the requirements may be relevant for any future development proposals in or close to the settlement boundary. I do not therefore agree that the section should be deleted.

55. SEPA has suggested that an additional bullet point be added for consistency with other settlement statements to highlight the constrained sewerage system in Pennan. I agree that this information would be useful for potential developers and would be consistent with other settlement statements in the plan. A modification is therefore recommended.

Rathen

Site R1 – For a cemetery extension

56. SEPA has requested that additional information be included within the settlement statement to highlight that a groundwater assessment will be required to assess the hydraulic connectivity of the site with the Water of Philorth/Water of Tyrie. I agree that this information will provide clarity regarding the steps necessary to realise the proposed use and a modification is therefore recommended to that effect.

Services and Infrastructure

57. SEPA has suggested modifications to clarify that Rathen lies within a SEPA Wastewater Consultation Area and that full site investigations will be required for all private water proposals. I agree that this is important information that will add value to the settlement statement. I therefore agree with the modification proposed.

58. A representation seeks the removal of the references to developer contributions within the services and infrastructure section because the sole allocation within the settlement already benefits from planning permission, which was issued pursuant to a section 75 agreement which makes no reference to any developer obligations. However, I am satisfied that the requirements may be relevant for any future development proposals in or close to the settlement boundary. I do not therefore agree that the references to developer obligations should be deleted.

Non-Allocated Bid Site BB034 – Land North and East of Rathen West Church

59. This extensive bid site was considered through the main issues report stage but was not recommended to be taken forward to the plan due to the potential negative visual impacts on the historic environment and the setting of the settlement itself. Having viewed the site, I agree with the council that providing access to any development would prove challenging given the topography, the presence of mature trees to its western boundary, the constrained road to the south, and the various historic buildings and archaeological remains in the vicinity.

60. However, I do not agree that the site necessarily represents an illogical extension to the settlement. I find that development could potentially integrate well with the surrounding environment, providing the site layout and its overall design responds accordingly to its context. This is especially the case given the topography, which could be utilised to ensure that visual impacts on nearby sensitive receptors are minimised.

61. However, Rathen is located within the Rural Housing Market Area. It is concluded under issue 5 that no additional allocations are required to meet the strategic development plan allowance in the period up to 2032. Therefore, even if the site is effective and immediately available for development as the landowner contends, there is no justification to allocate it at this time. No modification is required.

Rosehearty

Site OP1 – South of Ritchie Road

62. The representation seeking the removal of this site and the deletion of its contribution toward the strategic allowance in the Rural Housing Market Area does not suggest a specific alternative allocation. It contends that the alleged lack of developer interest since 2013 shows that there is no basis to assume that the site would deliver housing during the plan period. Site OP1 is identified as constrained for marketability reasons in the 2020 housing land audit, although the council highlights that the settlement characteristically operates at a slow rate of development due to market conditions in the area.

63. The vision section of the settlement statement describes Rosehearty as providing a commuter role with a range of local services. The existing local development plan includes four sites for housing. However, I note that a site at Cairnhill Croft for 40 homes has not been included in the proposed plan and sites OP2 and OP3 in the proposed plan are not identified as contributing towards the strategic development plan allowance for the Rural Housing Market Area. As a result, mixed use allocation OP1 is the only site in Rosehearty where housing is expected to be delivered with the plan period. On this basis and in the absence of any specific evidence to the contrary, I consider it reasonable to assume that 49 homes can be delivered in the period to 2032. I recommend that the site is retained in the plan.

64. NatureScot has requested that additional text be provided within the allocation summary to communicate the necessary steps that will require to be taken to mitigate potential visual effects of future development on the landscape. I am satisfied that the proposed information will add clarification regarding the expected content of any future masterplan. A modification is therefore recommended.

Site OP3 – Cairnhill Road/adj Bowling Green

65 Representation PP1088 contends that the allocation should be deleted and that the settlement statement should be updated accordingly because it has been part of an identifiable residential development site for an extended period with no interest having been shown in the element covered by site OP3. Whilst the site may indeed be marketability constrained as confirmed within the 2020 Housing Land Audit, I note that it is not listed as providing any contribution toward the strategic development plan allowance for the Rural Housing Market Area in the period 2020 - 2032. I am satisfied that it should remain in the plan and be available for housing development in the event that there is future demand. No modification is required.

Tyrie

Non-Allocated New N027 – Land to North and South of Main Road

66. This bid site did not form part of the main issues report consultation and as such has not been subject to any environmental assessment or public consultation. The site is of approximately the same size as the adjoining hamlet of Tyrie, straddling the busy A98 and bounded in part to the south by a watercourse. It is concluded under issue 5 that no additional housing sites are required to meet the strategic development plan allowance for the Rural Housing Market Area within which Tyrie is situated. There is therefore no current justification to allocate the site on the grounds of housing need and no modification is recommended.

Reporter's recommendations:

Modify the local development plan by:

Cairnbulg and Inverallochy

1. On page 198, in the Cairnbulg and Inverallochy settlement statement, splitting the 'Flood Risk' bullet point into the following two bullet points:
“- Parts of the settlement are at risk from coastal flooding. Flood Risk Assessments may be required”; and
“- A Flood Risk Assessment will be required for OP1 due to the risk of surface water flooding.”

Crovie

2. Inserting the following additional bullet point into the Services and Infrastructure section of the Crovie settlement statement on page 206:
“Strategic drainage and water supply: There is no public waste infrastructure available.”

Fraserburgh

3. Amending the key map and map 3 in the Fraserburgh settlement statement on pages 223 and 225 to exclude the area of land immediately to the east of Greenbank of Phingask from site R1, as per the plan submitted within representation PP0910. (As a consequence, the settlement boundary will need to be amended).
4. Replacing the last sentence of the second Flood Risk bullet point, in the Fraserburgh settlement statement on page 216 with:
“A detailed Flood Risk Assessment will be required to accompany any future development proposals for these sites and an appropriate buffer strip will be required adjacent to existing watercourses.”
5. Inserting the following text at the end of the first paragraph of the allocation summary for OP1: Kirkton Development in the Fraserburgh settlement statement on page 217:
“A detailed groundwater assessment and water features survey will be required to fully assess the suitability of this site as a cemetery.”
6. Replacing the first sentence in the last paragraph of the allocation summary for OP2: Land to west of Boothby Road in the Fraserburgh settlement statement on page 218 with:
“A buffer strip will be required alongside the watercourse running through the site and

should be integrated positively into the development”

7. Adding the following sentence to the end of the first paragraph in the allocation summary for OP2: Land to west of Boothby Road in the Fraserburgh settlement statement on page 218:

“Future revision of the masterplan must ensure that the parcel of land to the south of R1, adjacent to ‘Whinburn’ at Greenbank of Phingask, is excluded.”

8. Amending the allocation summary for OP4 – Land at Tyronhill Farm in the Fraserburgh settlement statement on page 219 to add the following sentence at the end of the second paragraph:

“Connection to the public waste water network will be required for this site.”

Gardenstown

9. Inserting the following sentence at the end of the first paragraph in the allocation summary for OP1: Braegowan/Morven View Road in the Gardenstown settlement statement on page 229:

“Planning permission has been granted for the construction of 25 homes (planning application reference APP/2014/2686)”

10. Amending the entry for Gardenstown OP1 in the relevant table in Appendix 6 to delete the number 25 from the “Effective 2019” column and add 25 to the “Constrained 2019” column and the “Local Growth RHMA” column. (Note – a revised version of appendix 6, incorporating all the recommended modifications, is provided at the end of this report.)

11. Amending the entry for Gardenstown OP2 in the relevant table in Appendix 6 to delete the number 11 from the “Effective 2019” column and add 11 to the “Constrained 2019” column. (Note – a revised version of Appendix 6, incorporating all the recommended modifications, is provided at the end of this report.)

Memsie

12. Adding the following text to the end of the description for reserved site R1 in the Memsie settlement statement on page 243:

“The site is adjacent to the 1:200 fluvial extent of the Water of Philorth. A flood risk assessment may therefore be required.”

13. Removing the flood risk title and bullet point from the Memsie settlement statement on page 243.

14. Replacing the strategic drainage and water supply bullet point in the Memsie settlement statement on page 244 with:

“Strategic drainage and water supply: There is insufficient capacity at Memsie Cairn Stone septic tank to serve OP2. Due to limited flows in the receiving watercourse for this treatment plant, additional private treatment for OP2 may not be possible. Until a growth project can be implemented for the whole settlement, development during the Plan period may be limited at this site.”

15. Deleting the final sentence in the last paragraph of the allocation summary for OP1: Crossroads in the Memsie settlement statement on page 245.

16. Replacing the third paragraph in the allocation summary for OP2 – Land North of Cairn Close in the Memsie settlement statement on page 246 with:

“Due to limited flows in the receiving watercourse for the waste water treatment plant associated with the site, additional private treatment for OP2 site is unlikely to be feasible. Until a growth project can be implemented for the whole settlement, development during the Plan period may be limited at this site. Early discussions with Scottish Water should take place in this regard.”

17. Replacing the second sentence in the first paragraph of the allocation summary for OP2 – Land North of Cairn Close in the Memsie settlement statement on page 246 with:

“A new access onto the A981 may be required to provide additional vehicular access.”

18. Replacing the final sentence in the first paragraph of the allocation summary for OP2 – Land North of Cairn Close in the Memsie settlement statement on page 246 with:

“New bus stop infrastructure may be required on the A981 together with associated footway links to ensure that the public transport network is easily accessible from the site.”

19. Replacing the first two sentences of the ‘Local transport infrastructure’ bullet point in the Memsie settlement statement on page 244 with:

“A new access from the A981 will be required into site OP2 connecting internally to Westcroft Close. New bus stops may be required on the A981. New footway provision will be required on the B9032 to link site OP1 with the existing network.”

New Aberdour

20. Adding the following sentences after the existing third sentence of the third paragraph of the allocation summary for OP1: St Drostans Lane in the New Aberdour settlement statement on page 249:

“Provision for active travel is required. Efforts should be made through the site layout to link into the core path network.”

Pennan

21. Adding the following additional bullet point within the services and infrastructure section of the Pennan settlement statement on page 254:

“Strategic drainage and water supply: The sewerage system in Pennan consists of a combined network that drains to a pumping station, which then pumps to a septic tank for treatment. Scottish Water will initiate a growth project if required once development meets their five growth criteria. Early engagement with Scottish Water is encouraged.”

Rathen

22. Adding the following text to the end of the description for site R1 in the settlement features table of the Rathen Settlement Statement on page 261:

“A groundwater assessment will be required to assess the hydraulic connectivity of the site with the Water of Philorth/Water of Tyrie.”

23. Replacing the first sentence of the ‘strategic drainage and water supply’ bullet point in the Rathen settlement statement on page 262 with:

“There is no public waste water infrastructure in Rathen. Rathen lies within a SEPA Waste Water Drainage Consultation Area. SEPA will require full site investigations for all private waste water proposals.”

Rosehearty

24. Inserting the following new sentence after the second sentence of the first paragraph in the allocation summary for OP1: South of Ritchie Road in the Rosehearty settlement statement on page 266:

“Landscape planting should be of an appropriate scale and integrated into the development with good quality open space. Consideration should be given to the extent and siting of development within this site, embedding mitigation of landscape and visual effects by design.”

<p>Aberchirder</p> <p><u>Flood Risk</u></p> <p>Scottish Environment Protection Agency (SEPA) has recommended that site P3 is removed from the 'Flood Risk' section and that this is amended to reflect the BUS site only (see RD0214.B) (PP1219).</p> <p><u>Non-Allocated Site – Site OP1 (LDP 2017) – West of Cranna</u></p> <p>It is considered important for the settlement to have an identified housing allocation to maintain the viability of the community. The allocation was first made when an existing site was under construction therefore demand exists with a windfall delivering homes at the start of the Plan period. The site has only been in the Housing Land Audit (HLA) for 6 years and removal of sites has not been applied consistently (PP1050).</p> <p>Bogton</p> <p><u>Settlement Status</u></p> <p>Bogton should be included as a settlement with a defined boundary due to its recent expansion. This should incorporate land to allow for further development, in particular Carnousie Avenue area (PP0623).</p>	

Cornhill

Flood Risk

SEPA has requested that the 'Flood Risk' section is amended to exclude reference to SEPA's indicative flood risk map and to note the adjacent watercourse (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Midtown

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

Site OP2 – Land to the West of Midtown

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219).

A representee has requested that site OP2 be removed from the PLDP. It was not promoted as a potential residential allocation through the Main Issues Report (MIR) and no reasonable alternative was identified. The OP2 allocation of 63 houses in a settlement (Cornhill) where an existing adjacent site has remained undeveloped (apart from demolition work), would be marketability constrained if it entered the housing land audit. Taken with OP1, the total capacity of both sites would exceed the number of houses in the existing settlement. Such an excessive allocation is not warranted (PP1116).

Crudie

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Land at Hawthorn Croft and Site OP2 – Hawthorn Crescent

SEPA has confirmed that that they have no flooding, strategic drainage or water supply issues with the allocation summary for sites OP1 and OP2 (RD0214.B). No modification sought (PP1219).

A representee requested that the OP1 and OP2 sites are deleted and a new OP1 allocation is allocated for 14 homes, 1 of which was built by January 2019. It has also been highlighted that only one home has been built since its planning history back to 1999, with failure to stimulate any interest in the development. The OP1 and OP2 sites

have marketability and infrastructure constraints. As an existing site it does not qualify as a contribution to the allowances to avoid double counting. It should be restricted to 8 homes to reflect the effective and post 5-year effective entries of the HLA 2019 (PP1109).

Fordyce

Flood Risk

SEPA has recommended a new 'Flood Risk' bullet point should be added to cover the settlement due to the presence of the Burn of Fordyce (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has requested that for consistency, a 'Strategic drainage' bullet point is added under 'Services and Infrastructure' that confirms with Scottish Water that the proposed population growth is within the design criteria for the existing waste water infrastructure or, if not, it highlights the need for an upgrade (RD0214.B) (PP1219).

Site OP1 – West Church Street

SEPA has commented they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

The continued inclusion of site OP1 for 5 homes has been supported. The representee has included a supporting statement (RD0043.A) in their representation which provides further detail to support their position (PP0323). Other representees have objected to the site on the basis that there is no need for the additional housing (PP0980), and that the site is constrained by marketability and misrepresented as a qualifying new allocation in the established supply as at, January 2019 (PP1115). It is considered an alternative location should be found for the site in the Rural Housing Market Area (RHMA) or in the Local Growth Area of the Aberdeen Housing Market Area (AHMA), as the site is constrained by marketability as identified in the HLA 2019, and the site has not been promoted through a planning application (PP1115).

There is a concern that 5 homes could be located within what is a large field and it is considered that further information is required as to positioning, type and aesthetics of the homes. The representee has included a supporting statement (RD0043.A) in their representation which provides further detail to support their position (PP0323). A representee considers this will set a precedent for further development of the entire field. Overdevelopment would impact on the character and pattern of the settlement which should be protected and preserved. There are also concerns relating to the impact on neighbouring properties' privacy, views, house value, increased traffic and safety and the amenity of the settlement. Impact on the conservation area is a particular concern in relation to its associated appearance, layout and historical value, together with an impact on tourism. Impact on wildlife within adjacent woodland due to noise/pollution are further concerns, and there is a lack of infrastructure to support development. Access would be taken from an unsafe, unlit road at the school. It is considered the development is not needed when Portsoy and other areas are available that could easily be extended (PP0980).

Inverboyndie

Site BUS – Safeguarded for business uses

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for the BUS site (RD0214.B). No modification sought (PP1219).

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has requested that for consistency, a strategic drainage bullet point is added under 'Services and Infrastructure' that confirms with Scottish Water that the proposed population growth is within the design criteria for the existing waste water infrastructure or, if not, it highlights the need for an upgrade (RD0214.B) (PP1219).

Ladysbridge

Services and Infrastructure

SEPA has requested that for the avoidance of doubt, a 'Strategic drainage' bullet point is added under 'Services and Infrastructure' that states all development will be required to connect to the waste water network (RD0214.B) (PP1219).

NHS Grampian has objected to the failure of the Proposed Local Development Plan (PLDP) to make reference to the need for health care facilities under 'Services and infrastructure' in the Ladysbridge Settlement Statement. It is requested that an additional section is provided stating, "Health and care facilities: All residential development must contribute towards the creation of additional capacity at existing medical facilities or a new health centre in Macduff. Contributions towards expansion of existing pharmacy facilities or within a new facility may be required." (PP1223).

Site OP1 – Phase 5, Ladysbridge Village

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

The site has approval after the base date of the LDP and is a windfall site and not an allocation that can count towards the allowances. This approach would set an unacceptable precedence in allowing the allowances to be met in part throughout the lifetime of the plan by the contribution from windfall sites. The bid for additional housing on the site was not supported with no alternative identified for public consultation at the MIR (PP1064).

Site OP1 is located approximately 500m northwest of the Scheduled Monument known as Hills of Boyndie, barrows & enclosures 700m southwest of Mill of Boyndie, but Historic Environment Scotland is content that the proposed development will not significantly impact on its setting (RD0266.A). No modification sought (PP1343).

Portsoy

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Target Road

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

A representee has objected to site OP1 on the basis of loss of sea views for a number of residents. Park Road is often lined with parked cars making access difficult and there are already two other construction sites close by (PP0150).

Site OP2 – Depot, Park Road

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP2 (RD0214.B) (PP1219).

Site OP3 – Former Campbell Hospital

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B) (PP1219).

Non-Allocated Site – Bid Site BB028 – OP3 Durn Road

It is considered that the former site OP3 should be reallocated for 125 homes to support sustainable delivery of housing in the RHMA, support the future growth of Portsoy and sustain the town's existing services. It is considered there is no evidence to support flood risk concerns, and the site may be able to offer a positive solution to existing drainage issues in the area. The representee has included a supporting statement (RD0042.A) in their representation which provides further detail to support their position (PP0322).

Sandend

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has requested that for consistency, a strategic drainage bullet point is added under 'Services and Infrastructure' that confirms with Scottish Water that the proposed

population growth is within the design criteria for the existing waste water infrastructure or, if not, that it highlights the need for an upgrade (RD0214.B) (PP1219).

Site OP1 – Rear of Seaview

SEPA has recommended that the last sentence in the allocation summary for Site OP1 is removed from the first paragraph, as this requirement is repeated in the second paragraph, and new text is added to the last sentence of the second paragraph, to clarify a Flood Risk Assessment is required due to overland runoff (RD0214.B) (PP1219).

A representee has objected to site OP1 on the basis of it being long-term constrained, having been in the HLA since 1995, and planning applications have either been withdrawn or expired. The site does not relate well to the settlement and any demand could be accommodated by the rural policies. The site inflates the established supply (PP1089).

Whitehills

Site P5 – To protect the playing field and recreation ground

It is considered that a blanket designation is not appropriate and site P5 should be removed or altered to only cover the very east of the site. It could be a requirement for future developers of the area to ensure the setting of Red Well is protected, or for policies to provide the protection. The representee has included a supporting statement (RD0043.A) in their representation which provides further detail to support their position (PP0323).

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has requested that for consistency, a strategic drainage bullet point is added under 'Services and Infrastructure' that confirms with Scottish Water that the proposed population growth is within the design criteria for the existing waste water infrastructure or, if not, it highlights the need for an upgrade (RD0214.B) (PP1219).

Site OP1 – Knock Street

Support has been given to the inclusion of site OP1 for 30 homes. The representee has included a supporting statement (RD0043.A) in their representation which provides further detail to support their position. No modification sought (PP0323).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B) (PP1219).

The site has been in the audit for 8 years and not attracted developer interest or planning application, it is marketability constrained and the increased capacity in 2016 was still while it was constrained and devoid of interest. It is poorly located as highly visible backlands development would be difficult to integrate with the existing settlement. A

previous adjacent allocation to the south was removed as no interest was shown in that site. It should remain in the Plan but not contribute to meeting the allowances due to its constrained status and absence of developer interest (PP1106).

Modifications sought by those submitting representations:

Aberchirder

Flood Risk

Modify the PLDP to remove site P3 from the 'Flood Risk' section and amend to read, "Due to the presence of a watercourse on its eastern edge, a Flood Risk Assessment may be required for the BUS site. A buffer strip will be required adjacent to the watercourse which should be integrated positively into the development." (PP1219).

Non-Allocated Site – Site OP1 (LDP 2017) – West of Cranna

Modify the PLDP to reinstate former site OP1 for 45 homes (PP1050).

Bogton

Settlement Status

Modify the PLDP to identify and include Bogton as a settlement in the Banff and Buchan Settlement Statements (PP0623).

Cornhill

Flood Risk

Modify the PLDP to amend the 'Flood Risk' section to read, "There is a risk of flooding from a small watercourse and fields adjacent to OP1 and OP2, which are located within the Scottish Environment Protection Agency's indicative 1 in 200-year flood risk area. A Flood Risk Assessment will be required." (PP1219).

Site OP2 – Land to the West of Midtown

Modify the PLDP to remove site OP2 (PP1116).

Crudie

Site OP1 – Land at Hawthorn Croft and Site OP2 – Hawthorn Crescent

Modify the PLDP to remove OP1 Crudie and amend OP2 allocating it as OP1 for 8 homes with the Appendix 6 entry stating LDP 2017 as 14, 1 built by Jan 2019, 8 effective 2019 and 5 constrained 2019 with no entry for the Allowances 2020-2032 and the LDP allocation of 8 homes (PP1109).

Fordyce

Flood Risk

Modify the PLDP to include a new 'Flood Risk' bullet point to cover the settlement, identifying the presence of the Burn of Fordyce (PP1219).

Services and Infrastructure

Modify the PLDP to add a new bullet point under the 'Services and Infrastructure' section 'Strategic drainage and water supply' that confirms with Scottish Water that the proposed population growth is within the design criteria for the existing waste water infrastructure or, if not, that there is the need to upgrade it (PP1219).

Site OP1 – West Church Street

Modify the PLDP to remove site OP1 (PP0980).

Modify the PLDP to remove site OP1 and identify an alternative site in the Local Growth Area of the RHMA, or in the AHMA, in a location where marketability constraints are not an issue (PP1115).

Inverboyndie

Services and Infrastructure

Modify the PLDP to add a new bullet point, 'Strategic drainage and water supply' stating the requirement to confirm with Scottish Water that the proposed population growth is within the design criteria for the existing waste water infrastructure or, if not, that there is the need for an infrastructure upgrade (PP1219).

Ladysbridge

Services and Infrastructure

Modify the PLDP to add a new sentence after 'Strategic drainage and water supply' to read, "All development will be required to connect to the public waste water network." (PP1219).

Modify the PLDP to add a section for "Health and care facilities" stating, "All residential development must contribute towards the creation of additional capacity at existing medical facilities or a new health centre in Macduff. Contributions towards expansion of existing pharmacy facilities or within a new facility may be required." (PP1222).

Site OP1 – Phase 5, Ladysbridge Village

Modify the PLDP to remove the contribution to the allowances for OP1 Ladysbridge and allocate an alternative site in the Local Growth Area of the RHMA, or if marketability constrained, in the Local Growth Area of the AHMA (PP1064).

Portsoy

Site OP1 – Target Road

Modify the PLDP to remove site OP1 and identify an alternative site for the development that has less impact on residents (PP0150).

Non-Allocated Site – Bid Site BB028 – OP3 Durn Road

Modify the PLDP to reallocate former site OP3 (bid site BB028) for 125 homes (PP0322).

Sandend

Services and Infrastructure

Modify the PLDP to include a new bullet point 'Strategic drainage and water supply' that confirms with Scottish Water that the proposed population growth is within the design criteria for the existing waste water infrastructure or, if not, that there is the need to upgrade (PP1219).

Modify the PLDP to remove reference to developer obligations (PP1089).

Site OP1 – Rear of Seaview

Modify the PLDP to amend the allocation summary for OP1 to remove the last sentence in the first paragraph and add the following text to the last sentence of the second paragraph, "... Flood Risk Assessment, due to overland runoff, must ..." (PP1219).

Modify the PLDP to remove site OP1 (PP1089).

Whitehills

Site P5 – To protect the playing field and recreation ground

Modify the PLDP to remove site P5 and extend the P3 designation to the south to provide protection for Red Well (PP0323).

Services and Infrastructure

Modify the PLDP to add a new bullet point under the 'Services and Infrastructure' section 'Strategic drainage and water supply' that confirms with Scottish Water that the proposed population growth is within the design criteria for the existing waste water infrastructure or, if not, that there is the need to upgrade it (PP1219).

Site OP1 – Knock Street

Modify the PLDP to remove the contribution to the allowances of 30 homes for OP1 Whitehills and reallocate an alternative site in the RHMA Local Growth Area, or if marketability constrained, the Local Growth Area of the AHMA (PP1106).

Summary of responses (including reasons) by planning authority:

Aberchirder

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Non-Allocated Site – Site OP1 (LDP 2017) – West of Cranna

The Council does not support allocating bid site OP1 (LDP 2017) for 45 homes. The site was removed from the Plan as there was no certainty over the development of the site. There was no developer interest in the site and also no bid submission was received for the site which again shows the lack of support for the site moving forward. It should be noted that the site would form a logical extension to the settlement in the future should demand exist, but it is not currently seen that there is appropriate demand to retain the site. No change is required.

Bogton

Settlement Status

The comments from the representee are noted. However, Bogton does not meet the definition of a 'settlement' as per the Glossary. There is also no proposed protected or opportunity sites within the area therefore there is no requirement for Bogton to be included in the Local Development Plan. No change is required.

Cornhill

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Midtown

Comments from SEPA are noted. No change is required.

Site OP2 – Land to the West of Midtown

Comments from SEPA are noted. No change is required.

The bid submission made for the MIR had been to keep the site as it currently stands in the LDP 2017 for housing and the school, but with a change to the housing allocation from 25 to 18 homes. In response to comments from Aberdeenshire Council's Education Service, the Officers' recommendation was to remove the P3 site as there was no prospect of a primary school being built in the location, and to revise the site capacity for OP2 further to 12 homes (see MIR Issues and Action Papers, AD0040.B, pages 12-13). At the Banff and Buchan Area Committee on 27 August 2019 the Committee decision was to reallocate the whole area for housing rather than removing the protected land, (AD0117). This was the decision as there was a keen desire to retain an opportunity for

future growth to the west within the settlement boundary. The number of homes applied to the allocation of 63 homes is an indicative capacity. It is not agreed that the site would automatically become constrained within the HLA as there was a desire for the site to be allocated for housing. It is therefore, seen as appropriate to allocate the land for housing within the Plan to allow for growth within the settlement. No change is required.

Crudie

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Land at Hawthorn Croft and Site OP2 – Hawthorn Crescent

Comments from SEPA are noted. No change is required.

The Council does not agree that the OP1 and OP2 sites should be deleted from the PLDP and a new OP1 site allocated. The sites are an appropriate extension of the settlement and the OP2 site has Full Planning Permission for 9 homes and should be allocated. It is also noted that it is worth taking into account that development characteristically operates at a slower rate due to market conditions in the area. Therefore, it is seen that it is appropriate to allocate land within the northern towns that have the ability to deliver housing to meet local housing need. Discussion regarding strategic allowances is noted however, more information can be found within Schedule 4 Issue 5: Section 8 - Shaping Homes and Housing – Housing Land Supply, Policy H1 Housing Land and Appendix 6 Housing Land Allocations. No change is required.

Fordyce

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – West Church Street

Comments from SEPA are noted. No change is required.

The comments in support for the inclusion of the site are noted. No change is required.

Comments of concern related to the OP1 site are noted. However, the Council maintain that the site for 5 homes should be retained as an allocation as this site presents the only potential direction of development for the settlement without impacting on its historic setting. Comments relating to concerns regarding infrastructure and amenity would be matters that would be considered at the planning application stage. No change is required.

It is not agreed that the OP1 site should be deleted from the Plan and an alternative sought. As identified above, the site presents the only appropriate extension of the settlement and should be allocated. It should also be taken into account that development characteristically operates at a slower rate due to market conditions in the area. Therefore, it is seen that it is appropriate to allocate land within the northern towns that have the ability to deliver housing to meet local housing need. No change is required.

Inverboyndie

Site BUS – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Ladysbridge

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Throughout the preparation of the LDP and in consultation with stakeholders, information was not forthcoming on the requirements for Ladysbridge, however if the Reporter is minded, to make an amendment, then the Council recommend that an additional bullet point could be inserted into the Services and Infrastructure section of the Ladysbridge Settlement Statement as follows, "Health and care facilities: All residential development must contribute towards the creation of additional capacity at existing medical facilities or a new health centre in Macduff. Contributions towards expansion of existing pharmacy facilities or within a new facility may be required".

Site OP1 – Phase 5, Ladysbridge Village

Comments from SEPA and Historic Environment Scotland are noted. No change is required.

The site was included within the Main Issues Report and therefore was subject to public consultation. There is no requirement to have multiple sites per settlement for public consultation through the Main Issues Report. The market in the northern towns can be slightly slower than elsewhere in Aberdeenshire meaning that there may not be two different sites within a town that could be brought forward. Therefore, it is seen that it is appropriate to allocate land within the northern towns that have the ability to deliver housing to meet local housing need. Discussion regarding strategic allowances is noted

however, more information can be found within Schedule 4 Issue 5: Section 8 – Shaping Homes and Housing – Housing Land Supply, Policy H1 Housing Land and Appendix 6 Housing Land Allocations. No change is required.

Portsoy

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Target Road

Comments from SEPA are noted. No change is required.

Concerns were raised in relation to the access, but it should be noted that within the ‘Services and Infrastructure’ section of the Settlement Statement, under the ‘Local transport infrastructure’ bullet point, that the OP1 site along with the OP2 site is required to consider the cumulative total of existing units served from Park Road and provide a secondary access in line with Aberdeenshire Council standards, see Proposed LDP, AD0041.D, page 257. Issues relating to amenity for existing residents would also be considered through the planning application stage, but it should be noted that the right to a view is not a material planning consideration.

Site OP2 – Depot, Park Road

Comments from SEPA are noted. No change is required.

Site OP3 – Former Campbell Hospital

Comments from SEPA are noted. No change is required.

Non-Allocated Site – Bid Site BB028 – OP3 Durn Road

The Council does not support allocating bid site BB028 for 125 homes. It is maintained that site OP3 can no longer be deemed deliverable owing to the specific nature of the flood risk to this site and should therefore be removed. The key issue is that development on this site, at this scale, would not be permitted without two primary access points north and south; however, the only viable access point which is from the north through the LDP 2017 OP4 site is at high risk of flooding from the Soy Burn. Taking access from this point therefore risks cutting off the development during flood times. There is also the additional issue of the steeply sloping nature of the site and its questioned ability to achieve a suitable sustainable drainage solution. These recommendations were presented through the MIR Issues and Actions Papers, AD0040.B, pages 52-54, to Banff and Buchan Area Committee meeting on 27 August 2019, (AD0117) and subsequently at Infrastructure Services Committee (ISC) on 3 October 2019, (AD0151). Aberdeenshire Council remains to be convinced that a suitable sustainable drainage solution is feasible on this sloping site to address surface water issues. The community’s concerns regarding the site and flooding in general remain relevant, and their desire to see this site removed on account of

repeated flooding in recent years was another factor that the Committee took into consideration in agreeing to remove this site.

It should be emphasised that Scottish Planning Policy (paragraph 120) requires that Planning Authorities are obliged to allocate a range of sites which are effective or expected to become effective to meet the housing land requirement in the Strategic Development Plan and be confident that the land can be brought forward for development within the Plan period, (AD0012, page 29). Unfortunately, the Council are not confident that site OP3 is deliverable within the Plan period. It is notable that the site was first indicated as a future housing site in the 2006 Local Plan, and subsequently allocated in the LDP 2012 and LDP 2017, with no progress to date.

Sandend

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Rear of Seaview

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

This site is a small-scale allocation and provides the opportunity for self-build within the locality. It is also worth noting that the OP1 site has been assessed as a good fit for development within the settlement, taking into account that development characteristically operates at a slower due to market conditions in the area. Therefore, it is seen that it is appropriate to allocate land within the northern towns which has the ability to deliver housing to meet local housing need. No change is required.

Whitehills

Site P5 – To protect the playing field and recreation ground

The decision to include the land as the P5 designation was discussed and recommendations made at the Banff and Buchan Area Committee on 27 August 2019, see MIR Issues and Actions Papers, Issue 37 Whitehills, pages 66-68 (AD0117 and AD0040.B). This area of land was included within the Settlement Statement to conserve the setting of the settlement. It is considered appropriate to retain this protection in the interests of maintaining the strong sense of place and identity related to the settlement's distinctive coastal setting. Impact on landscape and visual sensitivities of the area are key considerations to take into account, together with the amenity quality of the settlement.

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Knock Street

Comments in support of site OP1 are noted. No change is required.

Comments from SEPA are noted. No change is required.

It is not agreed that the OP1 site should be deleted from the PLDP. The site is an appropriate extension of the settlement. It is also noted that it is worth taking into account that development characteristically operates at a slower rate due to market conditions in the area. Therefore, it is seen that it is appropriate to allocate land within the northern towns that have the ability to deliver housing to meet local housing need. Discussion regarding strategic allowances is noted however, more information can be found within Schedule 4 Issue 5: Section 8 - Shaping Homes and Housing – Housing Land Supply, Policy H1 Housing Land and Appendix 6 Housing Land Allocations. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” in relation to the settlement statement matters covered in Issue 17. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Aberchirder

Flood Risk

3. The Scottish Environment Protection Agency (SEPA) has requested that the bullet point on flood risk be reworded. The changes proposed would more accurately reflect the nature of flood risk in the settlement, and would highlight the potential need for a flood risk assessment prior to the development of site BUS. I therefore recommend a modification to this effect.

Non-Allocated Site – Site OP1 (LDP 2017) – West of Cranna

4. OP1 – West of Cranna is one of two housing sites in Aberchirder allocated in the 2017 local development plan, neither of which are included in the proposed plan. This

site has an indicative capacity of 45 homes and formed part of the main issues report consultation. The site is listed as marketability constrained in the 2019 housing land audit and the Issues and Actions paper (ADA0040.B) recommended its exclusion from the proposed plan, due to a lack of confidence that it is deliverable. A representee contends that the allocation should be reinstated so as to be consistent with other marketability-constrained sites, especially since the settlement now has no identified housing allocations.

5. In response to a request for further information (FIR016), the council has confirmed that there have been two recent pre-application enquiries regarding the site, although no planning application has been submitted. It has indicated that the local primary school is presently operating at 57% capacity, with a projected decline to 52% in 2025.

6. The council considers that the site has potential for development and suggest that its status could be reviewed again for development in a future plan or mid-term review of the current plan. It does not have any specific evidence that the marketability constraints in Aberchirder are more acute than other comparable areas within the Rural Housing Market Area.

7. The council has indicated that the only other known issues affecting development of this site are the need to provide appropriate vehicular access and contributions towards providing additional capacity at An Caorann Medical Practice. I have no evidence before me to suggest that these matters cannot be addressed. With regards to strategic environmental assessment, the 2019 interim environmental report for the main issue report finds that the development of the site would have an overall slightly positive impact, providing affordable homes and helping to sustain the settlement.

8. I note that a number of the sites identified to meet the strategic development plan allowance for the Rural Housing Market Area are subject to marketability constraints. Non-site specific representations on this matter are addressed under Issue 2. In response to a further information request (FIR008), the council explained that it employs a range of measures to assist the delivery of housing in areas where marketability is a problem. On the basis of the information before me, I am satisfied that there are no particular reasons why this site could not be developed during the lifetime of the plan.

9. Given the suitability of the site as a logical expansion to the settlement, the recent pre-application enquiries, the absence of any other housing sites in Aberchirder and the opportunity to support the local school, I consider that it would be appropriate to reinstate it as a housing allocation. As the site does not form part of the 2019 effective supply, I consider that it should be identified as contributing land for 45 homes towards the strategic development plan allowance for the Rural Housing Market Area.

10. It is recommended that the plan be modified to allocate the site as allocation OP1: West of Cranna for 45 homes and include an allocation summary based on that provided in the existing local development plan, as set out in the recommendations below. Whilst included in the Delivery Programme 2021, there has been no consultation on the need for contributions towards a medical practice during the preparation of the plan and the matter has not been raised by NHS Grampian or any other party. I therefore do not consider that this should be included as a requirement in the allocation summary. The Aberchirder settlement map should be amended to show site OP1 and include it within the settlement boundary. A change would also be required to appendix 6 to identify site OP1 Aberchirder as contributing 45 homes to the strategic development plan allowance for the

Rural Housing Market Area. The implications of this change for the overall housing land provision are addressed under Issue 5.

Bogton

11. Due to the absence of any local facilities, I do not consider that Bogton meets the definition of “a settlement” provided in the glossary of the proposed plan. However, I note that the use of this definition is not applied consistently in the proposed plan and there are settlement statements included for settlements which do not meet this definition. The council has explained that statements are provided where there are allocated, protected or reserved sites to be shown.

12. Bogton does not have any existing or proposed protected or opportunity sites. I therefore agree with the council that a settlement statement should not be provided. No change is required.

Cornhill

Flood Risk

13. SEPA has requested a rewording of the bullet point to clarify that there is a risk of flooding from a small watercourse and fields adjacent to sites OP1 and OP2. I agree that such a change would highlight the need for a flood risk assessment to be undertaken, providing clarity to potential developers and users of the plan and a modification is therefore recommended.

Site OP2 – Land to the West of Midtown

14. I note that the inclusion of site OP2 for housing was specifically requested by the Area Committee, following the main issues report consultation. The strategic environmental assessment for the site indicates only a minor negative effect in relation to water. Matters relating to flood risk and strategic drainage and water supply are covered in the settlement statement. Furthermore, neither SEPA nor any local residents have raised objection to the inclusion of the site within the proposed plan.

15. The representation seeking the removal of this site does not suggest a specific alternative allocation. The representation contends that when the site enters the housing land audit it will be constrained for marketability reasons, arguing that there can be no basis to express confidence that the site will become effective during the plan period.

16. As site OP2 is a new allocation, and no specific evidence has been provided to demonstrate that it is not effective, I do not agree that the site should be removed from the plan. I agree with the representation that the indicative capacity of 63 units is high relative to the scale of the settlement. However, from viewing the site and its context within the settlement, I am not convinced that the level of development proposed would be unachievable. No modification is required.

Crudie

Site OP1- Land at Hawthorn Croft and Site OP2 – Hawthorn Crescent

17. A representee has requested that sites OP1 and OP2 are deleted and a new OP1 allocation is allocated for 14 homes. Site OP1 in the 2017 local development plan has been separated into two distinct allocations (OP1 and OP2) in the proposed plan. Site OP2 consists of an area of land that already benefits from planning permission for nine houses, one of which has been constructed. The remaining eight homes on this part of the site form part of the effective 2019 housing land supply and do not contribute to the strategic development plan allowance.

18. Site OP1 is the residual land from the existing 2017 land allocation, considered through the main issues report consultation as site BB006, following the submission of a bid from the landowner. Site OP1 is allocated for ten houses in the proposed plan, which represents an increase in capacity from the five homes envisaged in the current local development plan. This part of the site is shown as constrained in the 2019 housing land audit and, as such, all 10 homes can potentially contribute towards the strategic development plan allowance for the Rural Housing Market Area.

19. The 2020 housing land audit identifies the site as constrained for marketability and infrastructure reasons. As the allocation is located next to a site which has planning permission and is under construction, I consider it reasonable to conclude that the marketability constraint can be overcome. Furthermore, the services and infrastructure section of the settlement statement sets out a way forward to address the waste water treatment capacity constraint. I am satisfied that the constraints identified for site OP1 could be resolved to allow the homes to be deliverable by 2032. From viewing the site, I do not consider that 10 homes would be excessive and envisage that a design solution could be identified to deliver such a density on the site. No modification is required.

Fordyce

Flood Risk

20. SEPA has requested that an additional bullet point be added to the settlement statement to advise that parts of Fordyce are at risk of flooding from the Burn of Fordyce. I find that an additional bullet point to highlight that flood risk assessments may be required would add clarity to potential developers and users of the plan. The modification proposed by the council does not effectively communicate that flood risk assessments may be necessary. An alternative modification to that proposed by the council is therefore recommended.

Services and Infrastructure

21. SEPA has requested, for consistency with other settlement statements, that a strategic drainage bullet point be added to highlight the need to connect to the local sewer and provide upgrades if there is not sufficient capacity. I am satisfied that the inclusion of information highlighting these matters will add value to the settlement statement for potential users of the document. A modification is therefore recommended.

Site OP1 – West Church Street

22. One representee objects to the allocation, contending that full layout information is required for the site to ensure that the five houses are of an appropriate form and positioned in a suitable location. Specific concerns have been raised regarding potential

adverse impacts on the conservation area, the appearance of the wider settlement, traffic, privacy, amenity and wildlife.

23. The allocation summary on page 212 of the proposed local plan highlights that the layout and design of any development must be sympathetic to the conservation area and the density of the existing built form. When undertaking my site inspection, I noted that site OP1 is positioned on low-lying land to the south of the village, which is already bounded to the north by modern development that was delivered as a sensitive southward expansion from the historic core of the settlement.

24. I am satisfied that there are sufficient opportunities to access the land and that the design policies in the plan would serve to preserve amenity and require that any future development integrates positively with its context. From observing the scale of the site, I find that it would be possible to deliver five residential units without having any unacceptable adverse impact on amenity. Furthermore, it is important to note that the potential impact of any future development on the character and appearance of the conservation area is a statutory consideration.

25. A number of other concerns were raised within the representation that are not material planning considerations. These include the potential identities of future residents and how they may behave, impacts on private views, and devaluation of existing properties in the settlement. I have not taken these matters into consideration as part of the examination.

26. Another representee requests that the five houses are deleted from contributing towards the Rural Housing Market Area because the site is marketability constrained. I note that the landowner has submitted a bid proposal for the inclusion of the land, advising that the site is now being actively marketed and that there is a good prospect that it will be developed.

27. I am aware that a number of sites identified to meet the strategic development plan allowance for the Rural Housing Market Areas are subject to a marketability constraint. Non-site specific representations on this matter are addressed under Issue 2. In response to a further information request (FIR008), the council has explained that it employs a range of measures to assist the delivery of housing in areas where marketability is a problem. This is the only housing allocation in Fordyce and I consider it reasonable to conclude that five homes would be deliverable by 2032. No modification is therefore recommended.

Inverboyndie

Services and Infrastructure

28. SEPA has requested that, for consistency with other settlement statements, a strategic drainage bullet point be added to highlight the need to connect to the local sewer and provide upgrades if there is not sufficient capacity. I am satisfied that the inclusion of information highlighting these matters will add value to the settlement statement for potential users of the document. A modification is therefore recommended.

Ladysbridge

Services and Infrastructure

29. SEPA has requested that the strategic drainage and water supply bullet point be modified to clarify that all development will be required to connect to the public sewer. I am satisfied that the modification would add clarity for developers and be consistent with the other settlement statements in the plan.

30. NHS Grampian has requested that additional information be added to clarify that contributions will be required from residential development toward the creation of additional capacity at existing medical facilities or a new health centre in Macduff. It has likewise been suggested that there may be a requirement to upgrade existing pharmacy facilities to serve the settlement. The council contends that these requirements were not highlighted throughout the preparatory stages of the proposed plan, including in response to the main issues report consultation.

31. Policy RD2.14 in the proposed plan indicates that it may be appropriate to seek contributions towards health and care facilities. Whilst NHS Grampian has indicated that there is a need for additional capacity at existing medical facilities or a new health centre at Macduff, it has not been demonstrated that financial contributions from development at Ladysbridge would meet the tests of Circular 3/2012. Furthermore, I note that planning permission has already been granted for allocation OP1. I consider that the wording suggested by NHS Grampian should be amended to indicate that there may be a requirement for contributions towards both medical and pharmacy facilities. A modification to this effect is recommended.

Site OP1 – Phase 5, Ladysbridge Village

32. A representee requests that the allocation is removed from the plan and therefore would not contribute towards the strategic development plan allowance for the Rural Housing Market Area. The representee further contends that the site is a windfall site and not an allocation that can count toward meeting strategic allowances. No alternative site has been suggested.

33. I note that planning permission in principle has been granted for the development of 35 houses on the site (APP/2019/0569) and that the wider site has already been developed. The site does not form part of the 2019 base supply and can therefore contribute towards the strategic development plan allowances. I see no justifiable reason to remove the allocation or to suspect that the site cannot be effectively delivered during the plan period. No modification is required.

Portsoy

Site OP1 – Target Road

34. A representee raised concerns regarding access and the impact of any future development on the views of existing residents, suggesting that an alternative site should be identified. No alternative site has been suggested. During my site inspection, I noted that accessing the site was problematic due to the relatively narrow width of the road. However, the settlement statement specifically identifies access as an issue for potential developers to address.

35. Furthermore, the allocation is for only ten homes and any development would need to meet the council's standards for off-street parking. The limited increase in traffic would not be insurmountable and I note that an additional emergency access would be required when triggered by new development. Whilst private views are not a material planning consideration, the impacts on the amenity of the surrounding area (including on residential amenity) would be a consideration at the planning application stage. No modification is required.

Non-Allocated Bid Site BB028 – OP3 Durn Road

36. This site was allocated within the 2012 and 2017 Local Development Plans and formed part of the main issues report consultation. The site is listed as being constrained physically in the 2019 and 2020 housing land audits. The Issues and Actions paper recommended its exclusion from the proposed plan due to constraints regarding flooding, surface water management and access.

37. The land is not identified as being directly at risk of flooding on SEPA's flood maps, but it is bounded to the north by a small watercourse (Soy Burn). The council contends that two accesses are required to serve the site, one of which would need to traverse land subject to flooding. During my site inspection I noted several opportunities to access the site, including from Durn Avenue to the south, from Soy Avenue in the north east, and from Soy Burn Gardens in the north. I noted the proximity of the watercourse to the north of the site and accept that the second access point would require to cross the Soy Burn in an area identified as being at risk of flooding on SEPA's flood maps. Anecdotal evidence has also been provided within the submission that land adjacent to the site has flooded in recent years.

38. The council further contends that the steeply sloping nature of the site is such that it is questionable whether surface water on the site can be effectively managed. I visited the site and did not consider it to slope excessively. I would fully envisage that an appropriate solution could be found to manage surface water within the site.

39. The council states that Scottish Planning Policy requires that planning authorities are obliged to allocate a range of sites which are effective or expected to become effective to meet the housing land requirement in the Strategic Development Plan and to be confident that the land can be brought forward through the development plan period. The landowner contends that any development of the site should be subject to full flood risk assessment and traffic impact assessment to ensure that the identified constraints can be overcome.

40. Given the constraints identified, and the lack of certainty that these constraints could be overcome to enable the site to come forward for development during the plan period, I agree with the council that the site cannot be relied upon to meet identified demand. Consideration of housing need is undertaken through the Housing Needs and Demand Assessment which has informed the strategic development plan allowances. Portsoy lies within the Rural Housing Market Area and it is concluded under issue 5 that no additional allocations are required to meet the strategic development plan allowance in the period up to 2032. No modification is therefore required.

Sandend

Services and Infrastructure

41. SEPA has requested, for consistency with other settlement statements that a strategic drainage bullet point be added to highlight the need to connect to the local sewer and provide upgrades, if there is not sufficient capacity. I am satisfied that the inclusion of information highlighting these matters will add value to the settlement statement for potential users of the document. A modification is therefore recommended.

Site OP1 – Rear of Sandend

42. SEPA has recommended a slight modification to the allocation summary to highlight that the necessary flood risk assessment is required due to overland runoff. I am satisfied that this would add clarity for potential developers and therefore agree with the suggested modification.

43. A representee requests that the allocation is deleted because it is poorly sited and marketability constrained. I noted during my site inspection that the topography of the site is very challenging and that accessing the site may prove difficult. However, this is the only housing allocation within the settlement and the site is allocated in the existing local development plan. The site is not identified as contributing towards the strategic development plan allowance for the Rural Housing Market Area which provides an element of flexibility in terms of delivery timescales. I am therefore satisfied that no modification is required.

Whitehills

Site P5 – To protect the setting of the ancient ‘Red Well’

44. A representee seeks the removal of site P5 and suggests that P3 be extended to the south, as this would effectively preserve the setting of the ancient Red Well. In response to the representation, the council states that the area of land was included to conserve the setting of the settlement, in order to maintain the strong sense of place and identity related to the settlement’s distinctive coastal setting. However, the supporting text in the settlement statement describes the purpose of site P5 as being “to protect the setting of the ancient ‘Red Well’ as a significant contribution to the character of the place.” No mention is made of the role of site P5 being to preserve the setting of the settlement itself, its sense of place or its identity.

45. Having visited the site, I found it to be prominently situated on the approach to the settlement from the south east. Retaining the site free of development would ensure sufficient distance between any built form and the Red Well, by establishing a buffer around the monument. However, I agree with the representation that the allocation of the entire field is not necessary to preserve the setting of the Red Well.

46. The Issues and Actions paper explains that it was the Committee’s intention to identify the site as protected land in order to conserve the setting of the settlement. This purpose has not been included in the proposed plan. However, as there is no representation seeking to amend the description, I am unable to make any changes through this examination.

47. Whilst I consider the reason given in the proposed plan for protecting site P5 to be

inaccurate, I am clear that the designation is serving the purposes intended by the committee. As the land has been included within the settlement boundary, I consider the protected land designation to be necessary to ensure the preservation of the setting of both the historic monument and the settlement. I do not recommend a modification to remove or reduce the extent of the designation.

Services and Infrastructure

48. SEPA has requested that the strategic drainage and water supply bullet point be modified to clarify that all development will be required to connect to the public sewer. I am satisfied that the modification of the bullet point will add clarity for developers and will be consistent with the other settlement statements in the plan.

Site OP1 – Knock Street

49. Representation PP1116 contends that the allocation should remain but that the contribution toward the Rural Housing Market Area allowances be removed from appendix 6 in the proposed plan and an alternative site be identified to deliver the shortfall. No alternative site is specifically suggested.

50. The 2019 housing land audit identifies the site as being marketability constrained. However, the landowner has advised that the site is presently being marketed and that there is interest amongst local housebuilders.

51. I note that a number of sites identified to meet the strategic development plan allowance for the Rural Housing Market Areas are subject to a marketability constraint. Non-site specific representations on this matter are addressed under Issue 2. In response to a further information request (FIR008), the council has explained that it employs a range of measures to assist the delivery of housing in areas where marketability is a problem. This is the only housing allocation in Whitehills and no specific information has been presented to demonstrate that the marketability constraint cannot be overcome. Given the reassurance provided by the landowner, I consider it reasonable to conclude that the site would be deliverable by 2032. No modification is recommended.

Reporter's recommendations:

Modify the local development plan by:

Aberchirder

1. Replacing the flood risk bullet point in the Aberchirder settlement statement on page 186 with:

“Due to the presence of a watercourse on its eastern edge, a Flood Risk Assessment may be required for the BUS site. A buffer strip will be required adjacent to the watercourse which should be integrated positively into the development.”

2. Amending the Aberchirder settlement map on page 188 to show allocation OP1 as per the 2017 local development plan and the 2019 Main Issues Report and include site OP1 within the settlement boundary.

3. Inserting the following new allocation under a new heading “Allocated Sites” in the Aberchirder settlement statement on page 187:

“OP1: West of Cranna, Allocation: 45 homes

This site was previously allocated as site OP1 in the LDP 2017. It partially overlooks the village and the design of the development should reflect both its historic character and the single storey houses in Cranna View. The principle road access is likely to be off Murray Crescent/Old Road with secondary access off Cranna View (currently a footpath). It is expected that the site will contribute towards affordable housing in line with Policy H2 Affordable Housing. These should be integrated into the design of the development to provide a mix of house types and sizes to meet local needs.”

4. Adding Aberchirder OP1 (45 homes) to the list of existing sites contributing towards the strategic development plan allowance for the Rural Housing Market Area in the relevant table in Appendix 6. (Note – a revised version of Appendix 6, incorporating all the recommended modifications, is provided at the end of this report.)

Cornhill

5. Replacing the flood risk bullet point in the Cornhill settlement statement on page 202 with:

“There is a risk of flooding from a small watercourse and fields adjacent to OP1 and OP2, which are located within the Scottish Environment Protection Agency’s indicative 1 in 200-year flood risk area. A Flood Risk Assessment will be required.”

Fordyce

6. Adding a new flood risk section with the following bullet point to the Fordyce settlement statement on page 211.

“Flood Risk: Parts of Fordyce are at risk of flooding from the Burn of Fordyce. Flood Risk Assessments may be required.”

7. Adding the following additional bullet point to the Services and Infrastructure section of the Fordyce settlement statement on page 211:

“Strategic drainage and water supply: All new development will be required to connect to the waste water network. Developers should seek early engagement with Scottish Water to identify the capacity of waste water infrastructure, and if required upgrade the facility.”

Inverboyndie

8. Adding the following additional bullet point to the services and infrastructure section of the Inverboyndie settlement statement on page 232:

“Strategic drainage and water supply: All new development will be required to connect to the waste water network. Developers should seek early engagement with Scottish Water to identify the capacity of waste water infrastructure, and if required upgrade the facility.”

Ladysbridge

9. Replacing the strategic drainage and water supply bullet point in the Ladysbridge settlement statement on page 233 with:

“Strategic drainage and water supply: Sewer network investigations may be required. All development will be required to connect to the public waste water network.”

10. Adding the following bullet point to the services and infrastructure section of the

Ladybridge settlement statement on page 233:

“Health and care facilities: Residential development may be required to contribute towards the creation of additional capacity at existing medical facilities or a new health centre in Macduff. Contributions towards expansion of existing pharmacy facilities or within a new facility may also be required.”

Sandend

11. Adding the following additional bullet point to the services and infrastructure section of the Sandend settlement statement on page 269:

“Strategic drainage and water supply: All new development will be required to connect to the waste water network. Developers should seek early engagement with Scottish Water to identify the capacity of waste water infrastructure, and if required upgrade the facility.”

12. Removing the last sentence in the first paragraph of the allocation summary for OP1: Rear of Seaview in the Sandend settlement statement on page 270.

13. Replacing the last sentence of the second paragraph of the allocation summary for OP1: Rear of Seaview in the Sandend settlement statement on page 270 with:

“In addition, all necessary site surveys and assessments deemed to be required through the planning permission process such as Archaeological Survey, Drainage Impact Assessment, and Flood Risk Assessment due to overland runoff must also be carried out on the development site as a whole.”

Whitehills

14. Adding the following additional bullet point to the services and infrastructure section of the Whitehills settlement statement page 275:

“Strategic drainage and water supply: All new development will be required to connect to the waste water network. Developers should seek early engagement with Scottish Water to identify the capacity of waste water infrastructure, and if required upgrade the facility.”

Provision of the development plan to which the issue relates:	Peterhead Settlement Statement	
Planning authority's summary of the representation(s):		
<p><u>General</u></p> <p>Nestrans has highlighted that the Draft Regional Transport Strategy (RTS) (2020) contains actions seeking the dualling of the A90(T) north of Ellon to the Toll of Birness, and other improvements between Toll of Birness to Peterhead. The draft RTS also recognises the strategic importance of Peterhead Port, and supports walking and cycling developments in the town. No modification proposed (PP1241).</p> <p><u>Site P12 – To protect the cemetery as an amenity for the settlement and for contributing to the character of the place</u></p> <p>A representee has requested removal of site P12 and designating the site as an opportunity site for mixed-use development. The representee has argued that the designation of site P12 ignores the extant planning history and development implemented to date. Open space was considered at the planning applications stage. There are no material changes to the planning or environment context to justify site P12 for open space,</p>		

including no changes to the cemetery to set aside the extant permissions, which is currently white land in the Aberdeenshire Local Development Plan (LDP) 2017. There were no significant archaeological finds during archaeological evaluations on the site. The Proposed Local Development Plan (PLDP) ignores the aspirations for development that will bring forward a second retail unit on this site under extant Planning Permission in Principle and potentially mixed-use development on the western plot. This proposal was not put forward within the Main Issues Report (MIR) or Draft Proposed Local Development Plan and the site does not appear to be considered within the Aberdeenshire Open Space Audit. The representee has included a number of Appendices (RD0124.A, RD0124.C and RD0124.D, RD0124.E and RD0124.F) in their representation which provides further detail to support their position (PP0740).

Site R1 – For sport and recreation uses

The Scottish Environment Protection Agency (SEPA) has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation for site R1 (RD0214.B). No modification required (PP1219).

Site R2 – For development related to Peterhead Power Station, Carbon Capture and Storage, a possible landfall for a potential international North Sea interconnector, onshore connections to support offshore renewable energy, and major energy developments as set out in National Planning Framework 3

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation for site R2 (RD0214.B). No modification required (PP1219).

Several representees have requested that the boundary of site R2 be amended to cover the full extent of the existing decommissioned pipeline corridor between Peterhead Power Station and the jetty in the South Bay Harbour of Peterhead Port to allow a connection between the port to the power station for Carbon Capture and Storage related development (PP0431, PP0503, PP0573, PP0762, PP0899 and PP1145). One representee seeks to include site P9 (PP0573). This will allow a connection between the port to the power station for Carbon Capture and Storage related development. Illustration map shows the basis around which to extend the boundary of the R2 designated area north and east to the boundary of the P9 area designated to protect for 'port related activities' (PP0573). This is to ensure that the proposal is in line with the Acorn project (to import and export carbon dioxide via Peterhead Port and produce hydrogen from natural gas at St Fergus) and is protected under the relevant and appropriate policy within the PLDP (PP0503). The representees have included map as part of their representation to support their position (PP0431, PP0503, PP0573, PP0762, PP0899 and PP1145).

Site R4 – For care and support service facilities

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation for site R4 (RD0214.B). No modification required (PP1219).

TC – Peterhead Town Centre

A representee has requested extending the town centre boundary to include site P12. The site lies within 140m of the boundary and given this distance and extant planning permissions, the boundary should be extended as it forms a logical extension where an

existing store generates significant linked trips with other shops and services within the town centre. Planning history demonstrates the acceptability of development across the entire site noting applications granted in 2010 before Aldi revised their development strategy. The supporting statement submitted with planning applications noted the importance of regenerating the site which is still relevant as it is partially developed. The representee has included a number of Appendices (RD0124.A, RD0124.B and RD0124.D) in their representation which provides further detail to support their position (PP0740).

Site BUS1 – Safeguarded for business uses

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation for site BUS1 (RD0214.B). No modification required (PP1219).

Site BUS2 – Safeguarded for business uses

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation for site BUS2 (RD0214.B). No modification required (PP1219).

Flood Risk

SEPA has requested amending the first 'Flood Risk' bullet point to accurately state that all of Peterhead is identified as an area potentially vulnerable to flooding in the National Flood Risk Assessment and parts are at risk from coastal flooding (RD0214.B) (PP1219).

SEPA has requested amending the second 'Flood Risk' bullet point to be more accurate and state sites OP1, OP2, OP3, OP4, OP5, OP6, CC1, R2, R3, BUS3, BUS4 and SR1 may be at risk of flooding as shown on the SEPA Indicative Flood Maps. They note that sites BUS4, SR1 R2 and R3 have a number of watercourses adjacent or throughout these sites, part of site OP6 is within SEPA's indicative flood risk map and the SFRA requires a FRA for site BUS3 (RD0214.B) (PP1219).

SEPA has also requested amending the second 'Flood Risk' bullet point to remove site P7 for consistency (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Inverugie Meadows

NHS Grampian has welcomed a portion of the land within the site to be provided for a health centre. No modification required (PP1223).

A representee has requested removing reference to "significant alterations to the A90 to provide vehicular access to the site" in paragraph one of the allocation summary unless there is evidence of support and approval from Transport Scotland, who have previously resisted attempts to significantly alter the existing access points into the site from the A90. They suggested if there is no evidence then alternative access arrangements should be contemplated, or the allocation significantly reduced in capacity (PP1076).

A representee has requested removing references to preserving the railway line in paragraph one of the allocation summary. They argue there is no realistic possibility of the railway line opening and the route has been compromised at various points by substantial developments since its closure. Its status as the Formartine and Buchan Way should be used for clarity that the footpath is being preserved (PP1076).

A representee has requested removing references to requiring land for a health centre in paragraph one of the allocation summary. Peterhead Hospital may not remain open in the future, but it could be redeveloped as a new health centre due to its central location. It is unnecessary to propose development that has not been decided to be delivered (PP1076).

SEPA has requested additional text highlighting the need for opportunities to restore and enhance the straightened watercourse to be investigated (RD0214.B) (PP1219).

NatureScot has requested that the allocation summary for site OP1 requires compensatory planting in relation to the Control of Woodland Removal Policy – e.g. that equivalent compensatory planting must be provided should there be tree loss. They note there are areas of commercial forestry at the south of site OP1, which is identified as site BU052 in the MIR 2019, which suggested there may be 180 homes in this locality (RD0255.B) (PP1300).

Site OP2 – Wester Clerkhill

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation for site OP2. No modification sought (RD0214.B) (PP1219).

Site OP3 – Land at West Road

One representee welcomes the allocation of OP3 for 225 homes. No modification sought (PP0558).

A representee has requested reducing the allocation of site OP3 to 206 homes to be consistent with the Housing Land Audit 2019 (HLA) (PP1060).

SEPA has requested rewording the last paragraph of site OP3 on enhancing straightened watercourses and to highlight the need for a Geomorphological Assessment for consistency and hydromorphology concerns (RD0214.B) (PP1219).

Site OP4 – Land West of A90(T)

The Scottish Government has requested that the allocation summary for site OP4 states Transport Scotland is to be consulted for future planning applications, as it is for site OP5. They note that sites OP4 and OP5 used to be site BUS3 in the LDP 2017 (PP0578).

The Scottish Government also requested that the PLDP states that crossing points over the A90 require to be grade separated, and not just the Formartine and Buchan Way. This will provide clarity for developers on the infrastructure requirements (PP0578).

SEPA has recommended adding that “a Flood Risk Assessment (FRA) may be required” to assess surface water flooding on the site (RD0214.B) (PP1219).

Site OP5 – Land at Wellbank Land

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation for site OP5. No modification sought (RD0214.B) (PP1219).

Site OP6 – Land West of Damhead Way

SEPA has stated they will object unless the allocation summary for site OP6 highlights that this site falls partially within the SEPA's indicative flood risk map, and a FRA will be required. They also note that site P4 is unlikely to be of sufficient width to eliminate this flood risk (RD0214.B) (PP1219).

Site CC1 – Upperton Industrial Estate

SEPA has recommended that site CC1 should include the need for a FRA to assess surface water flooding on the site (RD0214.B) (PP1219).

Non-Allocated Site – Bid Site BU043 – Land at Dales Industrial Estate, North of Damhead Way

A representee requested removing site BUS3 in favour of allocating bid BU043 for 100 homes. It is argued that promoting growth in Peterhead is important, as it is Aberdeenshire's largest settlement, is a major employment and service centre, and it is the northern anchor of the Energetica Corridor. They also note the lack of new sites contradicts the MIR 2019, which states "There is demand and opportunities in Peterhead..." states. Sites OP1 and OP2 are not moving forward. They report there is a lack of choice of sites for development, and this site will provide a balanced housing distribution, with consequential benefits to traffic flows and traffic management in Peterhead and impact on schools and community facilities. Re-zoning the primary school catchment to Meethill would resolve the education constraint. The site is not too large when compared with sites OP1 and OP2. The site relates better to the adjoining residential land to the north at site OP2. A portion of land is reserved for care and support facilities at R4 and the open space to the east at Dales Park (PP0447).

The representee also argues that this bid site should be considered because it is screened and therefore isolated from the rest of Dales Industrial Estate making it suitable for residential use. Being within the Health and Safety Executive (HSE) hazard consultation zone should not prevent residential development and a consultation process can be carried out. The site can overcome constraints in terms of screening from employment uses, health and safety and education. Also, the loss of around 4 hectares of employment land is not a major issue based on the supply of employment land in Peterhead (PP0447).

Non-Allocated Site – Bid Site BU044 – Land at Wellington Place Farm, West of A90 and Dales Industrial Estate

A representee has requested that bid BU044 to be allocated as an opportunity site for 500 new homes and 30,000sqm of industrial, business, commercial and retail floorspace (mixed-use). It is argued that site BU044 is deliverable, and promoting growth in Peterhead is important, as it is Aberdeenshire's largest settlement, is a major employment and service centre, and it is the northern anchor of the Energetica Corridor. They also

note the lack of new sites contradicts the MIR 2019, which states “There is demand and opportunities in Peterhead...”. Sites OP1 and OP2 are not moving forward. They report there is a lack of choice of sites for development. This mixed-use site is located adjacent to existing employment land. It reduces the need to travel for workers on the other side of the A90. The precedent for development on the west side of the A90 has already been set by the OP1 development at Inverugie Meadows and the allocated land immediately to the south of the Wellington Place Farm site at OP5 and BUS 4. Any standalone element will be addressed by good and safe connectivity across the A90. Re-zoning the primary school catchment to Meethill would resolve the education constraint. The site is not too large when compared with sites OP1 and OP2. They also suggested the allocation summary should cover the following:

- A masterplan is required for this new site.
- There should be reference to affordable homes.
- Contribution shall be made for a safe crossing at the A90(T) road.
- Contribution shall be made towards community facilities and other requirements that may be identified.
- The development should support the capacity at Meethill Primary, which is forecasted to be at 39% in 2022.
- To minimising potential noise nuisance, the industrial park and the proposed housing will be separated by the A90, a landscaped boundary on the western side of the A90 and soft Class 4 business uses would be provided.
- The second access would be provided onto the trunk road (without detriment to the road network and the trunk road) and this provides the opportunities to connect with the wider road network.
- A possible addition of an employment site within this bid site. It would be acceptable to add this in a future phase. The representee submitted a location plan (RD0068.A) in support of the representation (PP0446).

Non-Allocated Site – Bid Site BU055 – Site South of Faith Acres (OP1 Extension), Berryhill

A representee has requested extending site OP1 to include land between the A950 and the unclassified road at Stella’s Voice for 150 homes, which is identified as bid site BU055 in the MIR 2019. They report that Transport Scotland has resisted approaches from the landowner of site OP1 to approve the modifications necessary for site access from the A90, delaying the delivery of the site. They argue, this extension would provide greater flexibility for additional vehicular access without reference to Transport Scotland. The modification has a defensible boundary with the opportunity to provide a gateway feature to Peterhead. The plantation on site, which is ready for harvesting, can be replaced as part of the extension of the site to create a more homogenous landscape setting for the whole OP1 development. The representee submitted a location plan (RD0192.A) in support of the representation (PP1095).

Non-Allocated Site – New Site N016 – Waterside Hotel

A representee has requested amending the settlement boundary to include the Waterside Hotel and land associated with it. It is adjacent to the existing settlement boundary and falls within the coastal zone. They state that the site is a brownfield site and including it within Peterhead’s settlement boundary will allow it to form part of the settlement and provide the opportunity for new housing. They note the review of the coastal zone is not proposed to be carried out until 2022 to enable changes. Removing this designation

would benefit businesses impacted by Covid and Peterhead is within a regeneration priority area. A visual separation of the site from the coast would remain, as it is east of the River Ugie and the golf course provides a further buffer. The undeveloped part of the hotel, which is located to the northeast of the site, can be retained as protected land and accessible to the public. The representee has included an Appendix (RD0134.A) in their representation which provides further detail to support their position (PP0764).

Modifications sought by those submitting representations:

Site P12 – To protect the cemetery as an amenity for the settlement and for contributing to the character of the place

Modify the PLDP to remove site P12 (PP0740).

Site R2 – For development related to Peterhead Power Station, Carbon Capture and Storage, a possible landfall for a potential international North Sea interconnector, onshore connections to support offshore renewable energy, and major energy developments as set out in National Planning Framework 3

Modify the PLDP to amend the boundary of R2 to cover the full extent of the existing decommissioned pipeline corridor between Peterhead Power Station and the jetty in the South Bay Harbour of Peterhead Port. An illustrative for pipeline route is provided (PP0431, PP0503, PP0573, PP0762, PP0899 and PP1145). The illustrative plan shows the expansion at the east of the boundary covering site P9 to protect for 'port related activities' (PP1145).

TC – Peterhead Town Centre

Modify the PLDP to extend Peterhead's Town Centre boundary to include site P12 (PP0740).

Flood Risk

Modify the PLDP to amend the first 'Flood Risk' bullet point from, "Parts of Peterhead lie within an area potentially vulnerable to flood risk as identified by the National Flood Risk Assessment. Flood Risk Assessments may be required." to "Peterhead is identified as an area potentially vulnerable to flooding in the National Flood Risk Assessment. Parts of the town are at risk from coastal flooding. Flood Risk Assessments may be required." (PP1219).

Modify the PLDP to amend the second 'Flood Risk' bullet point from, "Parts of sites OP1, OP2, OP3, OP4, OP5, R2, CC1, P7 and BUS3 lie within an area potentially vulnerable to flood risk as identified by the National Flood Risk Assessment or have a small watercourse running through or adjacent to the site. A detailed Flood Risk Assessment may be required to accompany any future development proposals and/or an appropriate buffer strip required adjacent to the watercourse." to "Parts of sites OP1, OP2, OP3, OP4, OP5, OP6, CC1, R2, R3, BUS3, BUS4 and SR1 may be at risk of flooding as shown on the SEPA Indicative Flood Maps or because there is a small watercourse running through or adjacent to the site. Flood Risk Assessments may be required. Buffer strips will be required alongside all watercourses." (PP1219).

Site OP1 – Inverugie Meadows

Modify the PLDP to amend the allocation summary of site OP1 to remove from paragraph one, “significant alterations to the A90 to provide vehicular access to the site.” (PP1076).

Modify the PLDP to amend the allocation summary of site OP1 to remove from paragraph one, “to preserve the railway line.” (PP1076).

Modify the PLDP to amend the allocation summary of site OP1 to remove from paragraph one, “provision of land for a health centre.” (PP1076).

Modify the PLDP to amend the allocation summary of site OP1 to add a new sentence after the second sentence in the last paragraph, to read, “Opportunities to restore and enhance the straightened watercourse should be investigated.” (PP1219).

Modify the PLDP to amend the allocation summary of site OP1 to add at the end of the penultimate paragraph to read, “Compensatory planting must be provided should there be tree loss.” (PP1300).

Site OP3 – Land at West Road

Modify the PLDP to amend site OP3 to reduce the number of homes from 225 to 206 (PP1060).

Modify the PLDP to amend the allocation summary of site OP3 to change the last paragraph from, “A Flood Risk Assessment will be required. A buffer strip will be required along the watercourse and should be integrated positively into the development. Enhancement of the watercourse/burn through re-naturalisation and removal of redundant structures will require to be investigated.” to “A Flood Risk and Geomorphological Assessment will be required. A buffer strip will be required along the Collie Burn and should be integrated positively into the development. No construction should take place within the natural river corridor. Opportunities to restore and enhance the straightened watercourse should be investigated.” (PP1219).

Site OP4 – Land West of A90(T)

Modify the PLDP to amend the allocation summary of site OP4 to add, “Transport Scotland must be consulted at the early stage of the planning application to agree on impacts related to the trunk road network.” (PP0578).

Modify the PLDP to amend the allocation summary of site OP4 to clarify that all crossing points over the A90 require to be grade separated (PP0578).

Modify the PLDP to amend the allocation summary of site OP4 to add, “A Flood Risk Assessment may be required to assess surface water flooding on the site.” (PP1219).

Site OP6 – Land West of Damhead Way

Modify the PLDP to amend the allocation summary of site OP6 to add, “The SEPA Indicative Flood Map shows a significant portion of this site to be at risk of flooding from the watercourse running through it. A Flood Risk Assessment will be required to

determine the developable area and width of the buffer strip required along the watercourse. It is likely the buffer strip will need to be significantly wider than that already provided by the protected area P4. Opportunities to restore and enhance the straightened watercourse should be investigated.” (PP1219).

Site CC1 – Upperton Industrial Estate

Modify the PLDP to amend the allocation summary of site CC1 to add, “A Flood Risk Assessment may be required to assess surface water flooding on the site.” (PP1219).

Non-Allocated Site – Bid Site BU043 – Land at Dales Industrial Estate, North of Damhead Way

Modify the PLDP to remove allocation BUS3 and allocate bid site BU043 as an opportunity site for 100 homes. The allocation summary should include the following statements:

- “Consultation with HSE needs to be carried out in terms of health and safety regulations”.
- “Landscaping must be provided on all sides to create a buffer between the industrial estates.” (PP0447)

Non-Allocated Site – Bid Site BU044 – Land at Wellington Place Farm, West of A90 and Dales Industrial Estate

Modify the PLDP to include bid site BU044 for 500 new homes and 30,000sqm of industrial, business, commercial and retail floorspace (mixed-use). In the allocation summary, state, “a landscaped boundary on the western side of the A90 and soft Class 4 business uses need to be provided to minimise noise concern and to enhance landscape setting”, as well as the following:

- A masterplan is required for this new site.
- Reference to affordable homes.
- Contribution shall be sought for a safe crossing at the A90(T) road.
- Contribution shall be made towards community facilities and other requirements that may be identified.
- To minimise potential noise nuisance, the industrial park and the proposed housing will be separated by the A90, a landscaped boundary on the western side of the A90 and soft Class 4 business uses would be provided.
- The second access would be provided onto the trunk road (without detriment to the road network and the trunk road) and this provides the opportunities to connect with the wider road network (PP0446).

Non-Allocated Site – Bid Site BU055 – Site South of Faith Acres (OP1 Extension), Berryhill

Modify the PLDP to extend site OP1 to include land between the A950 and the unclassified road at Stella’s Voice for 150 homes, which is identified as bid site BU055 in the MIR 2019.

Non-Allocated Site – New Site N016 – Waterside Hotel

Modify the PLDP to amend the Peterhead Settlement boundary to include new site N016 and designate the undeveloped grounds of the hotel as protected land for public open space (PP0764).

Summary of responses (including reasons) by planning authority:

General

It is noted that Draft Regional Transport Strategy (RTS) (2040) (AD0024) contains potential actions for dualling of the A90(T) north of Ellon to the Toll of Birness in page 58 and strategic importance of Peterhead Port. No change is required.

Site P12 – To protect the cemetery as an amenity for the settlement and for contributing to the character of the place

It is noted that a supermarket has been built on part of the site (to the northeast) and the land adjacent to the built-up area appears to be a gap site and has the potential to become an infill site. Therefore, to rectify this error, the Peterhead settlement map would require to be updated. If the Reporter is minded to make an amendment, then the Council recommend to remove site P12 from the Peterhead Settlement Plan and amend labelling P13-P15 accordingly.

Site R1 – For sport and recreation uses

Comments from SEPA are noted. No change is required.

Site R2 – For development related to Peterhead Power Station, Carbon Capture and storage, a possible landfall for a potential international North Sea interconnector, onshore connections to support offshore renewable energy, and major energy developments as set out in National Planning Framework 3

Comments from SEPA are noted. No change is required.

The purpose of designating reserved land is to protect land for certain development that is in the public interest. The land that is proposed to be reserved is usually unbuilt. It is suggested to extend the boundary towards the northeast of existing R2 and this is not achievable because the site in question is mostly built-up. The pipeline corridor is already established and unlikely to affect the built-up areas. Site P9 is protected for port related activities, which means that it plays a role in delivering this development and more, therefore, it is not required to change its designation. No change is required.

Site R4 – For care and support service facilities

Comments from SEPA are noted. No change is required.

TC – Peterhead Town Centre

The site P12 is designated to protect the cemetery, however, this designation was made in error. There is a large retail unit (Aldi) development on the site. The town centre boundary has been carefully selected based on activities and shops in the area. Although the Aldi store is not far away from the existing boundary of the town centre, the presence

of this single shop set on the opposite side of a roundabout does not justify it being included within the town centre boundary. Furthermore, there are no other shops next to this Aldi store. No change is required.

Sites BUS1 and BUS 2 – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Inverugie Meadows

The support for a health centre within site OP1 has been noted.

The OP1 site has been brought forward from the Aberdeenshire Local Development Plan 2017 (AD0034.E, pages 248-249). During the review of the site, the Council's Transportation Team has been consulted and they sought to add the words "significant alterations to the A90 to provide vehicular access to the site". The Planning and Environment Service must take cognisance of the view of the consultee to provide a development that is safe, reliant and secure. Transport Scotland shall be consulted at the planning application or further masterplanning stage. Transport Scotland did not raise any concerns regarding the infrastructure requirement for this site in their consultation but mentioned that previous communication had taken place regarding safe connections over the A90(T). No change is required.

The Formartine and Buchan Way is a core path and is used by the public for recreation. It is also a cycle route connecting with Mintlaw and other settlements. The Formartine and Buchan railway line is protected in the event the railway line becomes active in the future regardless of how unlikely a situation this is at the present time. Any compromises can be dealt with during the preparation of the re-opening of the railway line and a Compulsory Purchase Act may be applied to gain control of the land. Therefore, it is not recommended to remove the reference for preserving the railway line. No change is required.

A health centre must be provided within the site OP1 due to the scale of the population likely to derive from this development. It can be estimated that over 4000 people may reside on this site once it is developed. Furthermore, the neighbouring sites OP2 and OP3 and other recently developed sites, together shall bring a major pressure on the existing health centre. The NHS has confirmed with the Planning and Environment Service, through bid and public consultation responses, that a health centre shall be allocated within this site. No change is required.

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council confirms that it intends to address NatureScot's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP2 – Wester Clerkhill

Comment from SEPA has been noted. No change is required.

Site OP3 – Land at West Road

Support for the allocation for 225 homes has been noted. No change is required.

The Council does not agree to reducing the allocation from 225 to 206 homes. The allocation total of 225 homes reflects the agreed planning applications on this site. The site boundaries have not been adjusted within the site being carried forward and thereby totals are also representative of completed units within the allocated areas. Housing completions are set out within Appendix 6 Housing Land Allocations. Details on the calculation of the housing land supply and contributions to the allowances is provided in the Schedule 4 Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations. No change is required.

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP4 – Land West of A90(T)

The Council confirms that it intends to address Scottish Government Planning and Architecture Division's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

This site was previously designated as BUS3 and no agreement was made with Transport Scotland regarding a crossing point on to the BUS3 site. Therefore, it is not considered necessary to clarify all the crossing points over the A90. Should this be required, this matter can be dealt with at the planning application stage. No change is required.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP5 – Land at Wellbank Land

Comment from SEPA has been noted. No change is required.

Site OP6 – Land West of Damhead Way

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site CC1 – Upperton Industrial Estate

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Non-Allocated Site – Bid Site BU043 – Land at Dales Industrial Estate, North of Damhead Way

The Council does not support the allocation of bid site BU043 for 100 homes on site BUS3 (business/employment site). This bid site was not a preferred site in the MIR (AD0038.C, page 54). The site is adjacent to the existing industrial park, and access via an existing industrial estate is not deemed suitable. It is argued by the representee that there is a lack of choice of sites for development in Peterhead. However, there are several opportunities and choice of sites in Peterhead. Three large opportunity sites have been identified for this Plan period and brownfield and gap site opportunities may also arise during this Plan period. Furthermore, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area.

Peterhead is a well-established town and has a high demand for new homes. This brings pressure for the primary schools and secondary school and some of the primary schools in Peterhead are forecast to be at overcapacity. It has been suggested by the representee to rezone the primary school catchment to Meethill in order to resolve the education constraint. The Council's Education Service predicts that the capacity at Meethill Primary would be on the rise over the next few years and it is only this Service that can re-zone a school, after public consultation.

It is agreed that the site is not too large in comparison to other opportunity sites, however, the housing density would be high. The site area is 4.35 hectares aiming to deliver 100 homes. This usually would not be an issue in many towns, but Peterhead is predominately spread out and new developments are delivering ample open spaces. In addition, it has not been noted that the stretch of linear woodland at the north of the site covers 0.85ha of grounds and 0.75ha of grounds at the south, meaning only 2.785ha of land would be developable. This means that a similar layout is unlikely to be delivered on this site.

The site is screened to the north, south and west, but it is very close to a business park, which means that the properties are likely to be affected from various nuisance. This business park mainly has businesses that falls within use class order 5 and 6 and some offices. Therefore, screening is unlikely to solve the constraints associated with the distance. The representee mentions that site R4 reserved for a care home is set just to the north of this proposed site. The site R4 is not as close to the business park in comparison to the proposed site. The site also falls within Health and Safety Executive (HSE) hazard consultation zone and HSE may likely object to this site at the planning application stage. The site is designated as BUS3 site in the PLDP, and it is preferred that this site remains safeguarded for business uses.

In conclusion, no change is required.

Non-Allocated Site – Bid Site BU044 – Land at Wellington Place Farm, West of A90 and Dales Industrial Estate

The Council does not support the allocation of land on bid site BU044 for 500 homes, and 30,000sqm of industrial, business, commercial and retail floorspace. The employment and

retail element were not proposed in the original bid, which was not identified as a preferred site in the MIR (AD0038.C, page 54). In the MIR, the site was not preferred because it is set directly opposite an industrial park that would make it a “standalone” development for some time in the future. Also, a second access would have to be taken from the A90(T) and this would result in further traffic congestion and would unlikely be supported by Transport Scotland. Finally, there is constraint on education provision in the local primary schools which is supported by the School Roll Forecasts 2019 (AD0095). The location of the site permits access to limited primary schools and safe crossings would be required.

Peterhead is a well-established town and has a high demand for new homes. This brings pressure for the primary schools and secondary school and some of the primary schools in Peterhead are forecast to be at overcapacity. It has been suggested by the representee to rezone the primary school catchment to Meethill in order to resolve the education constraint. It has been predicted by the Education Service that the capacity at Meethill Primary would be on the rise over the next few years. Furthermore, due to the location of the site, this may not be possible.

It is argued by the representee that there is a lack of choice of sites for development in Peterhead. Six large opportunity sites for housing, employment and commercial land have been identified for this Plan period, which provide a sufficient and appropriate choice of sites in Peterhead. Brownfield and gap site opportunities may also arise during this Plan period. Furthermore, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area.

The representee argues that “This mixed-use site is located adjacent to existing employment land. It reduces the need to travel for workers on the other side of the A90”. The housing development is highly unlikely to be tied to the industrial development, i.e., worker’s accommodation, therefore, it cannot be presumed that the employees of those industries shall reside within this housing scheme which would reduce the need to travel.

The site is set next to site BUS3, which is safeguarded for business uses. The BUS3 site is almost fully developed with a couple of small pockets of land left to build. The bid site is set north of BUS3 site sharing a border. This is not favoured as it would be a standalone development.

In conclusion, no change is required.

Non-Allocated Site – Bid Site BU055 – Site South of Faith Acres (OP1 Extension), Berryhill

The Council does not support the allocation of Bid Site BU055 as an extension of site OP1. This bid site was not identified as a preferred site in the MIR (AD0038.C, pages 55 and 56). This bid site contains pockets of woodland to the south, which would significantly impact on the existing wildlife and their habitat if removed or reduced. Furthermore, there are many minor watercourses flowing throughout the site. The road infrastructure does not meet the standard required to service the site. Finally, the impact on the setting of the listed building which is set directly to the west of the site would be adversely affected.

The site is set directly west of A90(T) therefore Transport Scotland shall be consulted for this development at a planning application stage. During the initial consultation with

Transport Scotland prior to MIR submissions, Transport Scotland did not welcome this site for further discussion. No further progress was made because the site was not favoured by the Planning and Environment Service. The Roads Development Team of Aberdeenshire Council were not in favour of this development due to the proximity to the A90(T) and access arrangements.

The precedent for development on the west side of the A90 has been somewhat set, but this site should only be considered after site OP1 is delivered. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area.

In conclusion, no change is required.

Non-Allocated Site – New Site N016 – Waterside Hotel

The Council does not support the new site N016 to be included within the Peterhead Settlement boundary. The site is situated north of Peterhead. The site falls within the coastal zone. In addition to this, the setting of the site is rural. The hotel is a standalone building set within the countryside. To the east the River Ugie is flowing north to south and to the west is the A90(T). For these reasons, the Planning and Environment Service is not recommending the site to be included within the Peterhead settlement boundary. The site is well screened from the A90(T) and residential developments. It is important to retain the setting of the site and prevent urban sprawling. The natural setting surrounding the hotel is important for wildlife and their habitat. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the proposed plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the provisions of the proposed plan, or which simply make comments that do not seek modifications to the proposed plan. Therefore, unless these relate to an issue which is unresolved, they are not addressed in my conclusions.
2. The council has indicated that it intends to make what it refers to as 'non-notifiable modifications' to the Peterhead settlement statement. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Flood risk

3. The Scottish Environment Protection Agency (SEPA) seeks a number of modifications in respect of sites OP1, OP2, OP3, OP4, OP5, OP6, CC1, R2, R3, BUS3, BUS4, SR1 and P7. I note that the council is content to amend the flood risk bullet points and the allocation summaries for sites OP1, OP3, OP4, OP6 and CC1 as sought, to highlight the potential for flooding and the requirement for flood risk assessments to be undertaken. To provide clarification on these matters, I agree that the proposed plan should be modified and recommend below the modifications sought by SEPA.

Site P12 (land immediately south of Kirk Street)

4. As I noted at my site inspection, a supermarket and associated customer car parking occupy part of the site. Also, vehicular access has been created to serve two further plots which benefit from an extant planning permission in principle for food and non-food retail development. The council has acknowledged its error in identifying the site as 'protected land' and is content for the proposed plan to be modified to remove the site from the table of protected land and associated mapping. I note that the site has been the subject of past archaeological investigations, which have not revealed any significant finds. In light of the foregoing, I agree that the proposed plan should be modified to remove reference to site P12 from the settlement statement, including the table of settlement features, key map and map 5.

5. I do not, however, agree that the site should be identified as a development opportunity; it is partially developed and the principle of development has been established on the remainder of the site, for which planning permission in principle has been granted. Nor do I agree that the town centre boundaries should be extended to include it; despite its proximity, there is no continuity of shopping/commercial uses between the town centre and the site. The site also lies beyond the busy A982/ King Street/ Kirk Street roundabout. No modifications to the proposed plan are required in this regard.

Site R2 (land south of Peterhead)

6. Site R2 is allocated 'reserved land' for development related to; Peterhead Power Station; Carbon Capture and Storage; landfill for a potential international North Sea interconnector; onshore connections to support offshore renewable energy; and, major energy developments, as set out in National Planning Framework 3. The council's support for carbon networks designed to store CO₂ in offshore oil and gas fields, especially around Peterhead and the gas fired power station, is expressed in Policy C3.2.

7. As noted in representations, the facilities at the port are considered essential to projects reliant on the importation and exportation of carbon dioxide and hydrogen, among other things. As such, it would appear prudent to ensure that the route of the pipeline corridor between the port and the power station is safeguarded. The illustration that accompanies the representations indicates a pipeline corridor that broadly follows the line of South Base Road; it does not run through a built-up area as suggested by the council. While site P9 safeguards land between South Base Road and the tanker jetty for port-related activities, there would nonetheless remain a gap between site P9 and R2.

8. The importance of creating a carbon capture and storage network at Peterhead is recognised in National Planning Framework 3 (national development 3). For this reason, and to provide the assurance sought by Scottish Enterprise, the port authority and a number of energy companies, that the land requirement for such a project is safeguarded, I conclude that site R2 should be extended to include the line of the pipeline corridor. I recommend a modification below.

9. Our conclusions on matters relating to the wording of Policy PR2.2 are addressed under Issue 10 (protecting resources).

Site OP1: Inverugie Meadows

10. The provision of a health centre on site OP1 is supported by NHS Grampian; its representation makes no reference to the future of Peterhead Hospital. Whilst the NHS requirement is not defined, I find that it is reasonable to assume that development on the scale proposed would give rise to a need for health facilities, among other community amenities. I do not accept that such a requirement is inappropriate or will lead to land being sterilised, as suggested. The council's position on the provision of essential infrastructure to facilitate planned development is clearly expressed in the proposed plan (Section 14: responsibilities of developers). I do not agree that reference to a health centre should be removed from the supporting text to proposal OP1. Accordingly, no modification is required in this regard.

11. A representee also seeks the removal of the phrase 'to preserve the railway line' from the supporting text, as there is no real prospect of the Peterhead to Mintlaw railway line being reopened; adding that the route has been compromised at various points by development following its closure. Whilst I agree that the phrase does not accurately describe the current use of the route as a foot/cycle path, the proposed plan seeks to protect former railway lines from development should they be required for future transport projects. I recommend a modification below to better reflect the council's intention in this regard.

12. Allocation OP1 is a feature of the existing plan. Transport Scotland has not objected to its inclusion in the proposed plan. It is, however, keen to ensure the provision of safe and convenient pedestrian/cycle crossing points over the trunk road. The site is considered to be effective (housing land audit 2020) and a masterplan for part of the site has been approved. The council adds that Transport Scotland will be consulted as part of the preparation of future masterplans and planning applications as proposals progress. On this basis, I am satisfied that the scale of development proposed is capable of being served by vehicular accesses taken from the A90(T) to the satisfaction of Transport Scotland and the council, as Roads Authority. Accordingly, no modification is required.

13. I agree with NatureScot that the need for compensatory tree planting should be mentioned, to reflect the Scottish Government's control of woodland removal policy. In this regard, I recommend that the proposed plan is modified accordingly.

OP3: Land at West Road

14. The reference to the development of 225 houses on site OP3 reflects an extant planning permission. I do not agree that the number of houses noted in the proposed plan should be amended to 206 merely to accord with an entry in the housing land audit 2019. The audit simply provided a snapshot of the amount of land available for the construction of housing at that time. I note that the corresponding entry in the Housing Land Audit 2020 records the site's capacity as 225 houses, with a construction programme running to 2027. No modification to the proposed plan is required in this regard.

OP4: Land West of A90(T)

15. In the interests of consistency, I agree that the proposed plan should be amended to include the same sentence regarding consultation with Transport Scotland, as currently provided for site OP5. A modification is recommended.

Non-allocated Bid Site BU043 (land at Dales Industrial Estate)

16. I agree that the site is not suitable for housing development; it lies adjacent to existing business uses and within a Health and Safety Executive hazard consultation zone; vehicular access would be via industrial estate roads; and, although screened in part by woodland planting, new housing would most likely be affected by noise and other nuisances from nearby industrial and open storage operations.

17. I note the comments made in representations regarding the need to provide choice of housing sites in Peterhead. However, as we conclude under issue 5 in this report, sufficient land has been identified in the Rural Housing Market Area to meet identified needs. I conclude that the site should remain part of business allocation BUS3. No modification required.

Non-allocated Bid Site BU044 (Wellington Place Farm)

18. The site lies immediately beyond the settlement boundary to the west of the A90(T) and opposite the Dales Industrial Estate, which for the most part is screened by an embankment and a belt of mature trees. The representee seeks a modification to the proposed plan that would see the site allocated for 500 houses and 30,000 square metres of industrial, business, commercial and retail uses. It adds, the precedent for development extending beyond A90(T) to the west has been established with the allocation of site OP1 (Inverugie Meadows). Although the site is considered well-located in relation to the settlement, the council argues that its proximity to an industrial estate, infrastructure constraints to adequately serve new development and potential for traffic congestion are such that it is unable to support the proposal. Furthermore, the council considers that there is a sufficient supply of deliverable housing sites throughout the Rural Housing Market Area.

19. The extant development plan identifies Peterhead as part of a strategic growth area; a focus for new housing development in support of the Energetica Corridor. Peterhead is also identified as a regeneration priority area. The proposed plan continues this policy position. As such, I accept that the successful development of the site could contribute housing and employment opportunities to support economic growth and regeneration activities in the town and beyond. However, as we conclude in Issue 5 (shaping homes and housing), sufficient land has been allocated in the Rural Housing Market Area to meet identified needs. Also, the amount of employment land allocated throughout the strategic growth area is significantly above that required by the strategic development plan, Appendix 1, Table 1 (summary of employment land allocations) refers. Furthermore, the proposed plan promotes a strategic reserve of employment land extending to 42.6 hectares immediately to the south of proposed site (ref: SR1).

20. The representation also refers to the provision of 5,000 square metres of commercial and retail space. However, it does not support the proposal with a sequential assessment or predicted demand for further retail facilities in the area. In this regard, the proposed plan allocates land a short distance to the south-east of the site (ref: CC1), which is a committed commercial centre for large format retailing, including the potential development of a supermarket.

21. While I accept that the promoter of the site has suggested ways in which infrastructure constraints could be overcome, these do not appear to have been examined in any detail, including the acceptability of new junction onto the trunk road; the position of Transport Scotland on this matter is unknown.

22. Finally, I note that the strategic development plan, at paragraph 4.19, states that allocations within local development plans should be of a scale which would not inhibit the delivery of current strategic allocations, that is, major land allocations which are to be delivered over a number of phases (as defined in the strategic development plan glossary). In this context, a development of the scale and mix proposed at Wellington Place Farm could be regarded as having the potential to inhibit the delivery of development on allocated site OP1 (1265 houses, community facilities and four hectares of employment land) which, as the proposed plan notes on page 352, is expected to be developed in phases. In conclusion, for the reasons set out above, I agree with the council that the proposed plan should not be modified.

Non-allocated Bid Site BU055 (site south of Faith Acres)

23. The council’s assessment of the site contained in the Main Issues Report recognises that the site has some merit as a housing allocation. It relates well to the settlement as it would in effect be an extension to the allocated housing-led mixed-use site OP1 (Inverugie Meadows). However, for a number of reasons, the council chose not to promote the site as a housing development opportunity in the proposed plan. I broadly agree with its assessment and note in particular the concerns regarding vehicular access, impact on the A90(T)/ A950 junction and the potential effects of development on the conservation interests of the site and its surroundings.

24. Furthermore, the 2020 housing land audit indicates that development at site OP1 is not due to commence until 2023 and is likely to continue beyond the plan period. There is therefore no justification for an extension of the site at this time. Also, as we conclude elsewhere in this report, sufficient land has been identified in the Rural Housing Market Area to meet identified needs.

Non-allocated New Site N016 (Waterside Hotel)

25. The A982 North Road provides a clear defined boundary to Peterhead in this location. I do not accept that the hotel’s inclusion within the ‘coastal zone’ is an anomaly. It stands alone in a landscaped setting, beyond which the Collieburn embankment is protected as an amenity for the setting of the town and as part of the green-blue network. No modification is required in response to the representation.

Reporter’s recommendations:

Modify the local development plan by:

1. Replacing the first bullet point under the heading ‘Flood Risk’ on page 350 with the following:

“Peterhead is an area potentially vulnerable to flooding, as identified by the National Flood Risk Assessment. Parts of the town are at risk from coastal flooding. Flood risk assessments may be required.”

2. Replacing the second bullet point under the heading ‘Flood Risk’ on page 350 with the following:

“Parts of sites OP1, OP2, OP3, OP4, OP5, OP6, CC1, R2, R3, BUS3, BUS4 and SR1 may be at risk of flooding, as shown on SEPA’s Indicative Flood Maps or due to

watercourses running through or adjacent to the sites. Flood Risk Assessments may be required in support of development proposals. Buffer strips will be required alongside watercourses.”

3. Deleting proposed allocation P12 from the table of ‘Protected Land’ in Appendix 7B, on page 349.

4. Removing proposed allocation P12 from the Peterhead key map, map 5 and map 6, on pages 356, 361, 362, respectively.

5. Extending site R2 in a north easterly direction to the boundary of the P9 area along the route of the pipeline corridor (shown on the map in representation PP0573 and others) on the Peterhead Key Map on page 356 (and maps 1 to 8 where applicable).

6. Replacing the fifth sentence of the first paragraph of the allocation summary for OP1 (Inverugie Meadows) on page 352 with:

“At least one crossing should link the Formartine and Buchan Way (Core Path) across the A90 (T).”

7. Adding the following seventh sentence to the end of the first paragraph of the allocation summary for OP1 (Inverugie Meadows) on page 352:

“Development proposals, including pedestrian crossing arrangements, should not compromise the ability of the former railway line to form part of a future transportation project, should it be required.”

8. Adding the following sentence to the penultimate paragraph of the allocation summary for OP1 (Inverugie Meadows) on page 352:

“Compensatory planting must be provided should there be any loss of trees.”

9. Adding the following sentence as a new third sentence to the last paragraph of the allocation summary for OP1 (Inverugie Meadows) on page 352:

“Opportunities to restore and enhance the straightened watercourses should be investigated.”

10. Replacing the final paragraph of the allocation summary for OP3 (land at West Road) on page 354 with:

“A Flood Risk and Geomorphological Assessment will be required. A buffer strip will be required along the Collie Burn and should be integrated positively into the development. No construction should take place within the natural river corridor. Opportunities to restore and enhance the straightened watercourse should be investigated.”

11. Adding the following sentence after the fourth sentence of the allocation summary for OP4 (land west of A90(T)) on page 354;

“Transport Scotland must be consulted at an early stage in the preparation of planning applications in order to assess the impacts of development proposals on the trunk road network.”

12. Adding the following sentence at the end of the allocation summary for OP4 (land west of A90(T)) on page 354:

“A Flood Risk Assessment may be required to assess surface water flooding on the site.”

13. Adding the following sentence after of the first sentence of the allocation summary for

OP6 (land west of Damhead) on page 355:

“A SEPA Indicative Flood Map shows that a significant portion of the site to be at risk of flooding from the watercourse running through it. A Flood Risk Assessment will be required to determine a developable area and width of buffer strip required along the watercourse. It is likely that the buffer strip will need to be significantly wider than that provided by site P4 (protected land). Opportunities to restore and enhance the straightened watercourse should be investigated.”

14. Adding the following sentence as a third paragraph to the allocation summary for CC1 (Upperton Industrial Estate) on page 355:

“A Flood Risk Assessment may be required to assess surface water flooding at the site.”

Planning authority's summary of the representation(s):		
<p>Boddam</p> <p><u>General</u></p> <p>A representee has indicated that planning permission (APP/2020/0758) for a shelter for walkers that would meet the requirements of different individuals such as disabled members of the public and parents with electric prams. The area is relatively traffic free and provides a safe environment for walkers. It is located within close to bus stop and to the A90(T). No modification sought (PP0060).</p>		

Flood Risk

Scottish Environment Protection Agency (SEPA) has recommended that the 'Flood Risk' bullet point should be split in two and refer them to the National Flood Risk Assessment and coastal flooding for site OP1 (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply'. No modification sought (RD0214.B) (PP1219).

Site OP1 – East of Inchmore Gardens

A representee objects to the allocation due to being marketability constrained and being absent from the HLA 2019. The representee stated that the site has been deleted from the audit because the area of the site has been reduced for less than five homes (PP1036).

This site is located approximately 50m north of the Scheduled Monument known as Boddam Castle, but Historic Environment Service (HES) is content that some additional houses in this location of a similar scale/height to those which have already been built, are unlikely to significantly impact on its setting. No modification sought (PP1343).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation for site OP1 (RD0214.B). No modification required (PP1219).

Non-Allocated Site – Bid Site BU030 – Land off A90

Interest has been expressed in developing this site and therefore, the site should be allocated in the Proposed Local Development Plan (PLDP). The site presents no impact on the Local Nature Conservation Site (LNCS) status. Any visual impact can be addressed through planting/bunding and adequate access can be achieved. A question has been raised as to why the land has been identified within the Boddam Power Station consultation zone, and if consultation has taken place in this respect (PP0754).

Non-Allocated Site – Bid Site BU031 – Land off A90

This site should be allocated to enhance opportunities for Boddam and help sustain services, particularly since the allocation for site OP1 has been reduced to 9 units. Boddam provides developers with an alternative to Peterhead and the site location is the only direction the settlement can expand in future. Whilst the site is separated by the main road, this can be overcome through new infrastructure, including a pedestrian crossing. Also, the site will not have any impact on the LNCS status, and the creation of safer walking routes linking to wider networks would limit/eliminate the impact on the Sites of Special Scientific Interest (SSSI), Special Areas of Conservation (SAC) and Special Protected Area (SPA) to the east (PP0756).

Hatton

Site BUS – Safeguarded for business uses

SEPA has stated that there is a potential surface water flooding issue at site BUS and suggest the Council's Flood Prevention Unit should comment on whether any further requirements need to be highlighted and added (RD0214.B) (PP1219).

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

A representee has requested amending the statement on health and care facilities to state that contributions should go towards the creation of additional capacity at existing medical facilities or a new health centre in Cruden Bay, and towards pharmacy facilities (PP1223).

Site OP1 – Land of Northfield

A representee has objected to the allocation of the site in the Local Development Plan (LDP) on the basis that the settlement does not have adequate facilities to support further development, the road capacity is insufficient, there are protected species on the allocated site and this development would obstruct the view of local residents (PP0296).

Another representee has objected to the allocation of this site. They stated that the site is constrained due to marketability and ownership since 2014, identified in the Housing Land Audit and no planning applications have been submitted in the past 7 years, therefore, this site is unlikely to be delivered. The site has a narrow access on to the Main Street and there is no frontage on to the track due to separation by a field. The site is unlikely to be economically serviced by the existing WWTW because it is on the opposite side of the settlement. A competent assessment of the deliverability of homes in this location would conclude not to retain the site. There is no basis for confidence that the site will deliver housing, therefore, this allocation is contrary to Scottish Planning Policy (SPP) (PP1105).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation for site OP1 (RD0214.B). No modification sought (PP1219).

Site OP2 – Off Station Road

Cruden Community Council and another representee have raised concerns regarding flood risk due to existing flood risk in the area and drains set above the road level. The development has been ongoing for the last 3 years and only 3 homes have been built, causing disruptions to those residing surrounding the site (PP0163 and PP0198). Site conditions could persist until development is finished with no requirement for landscaping the site (PP0163).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation for site OP2 (RD0214.B). No modification sought (PP1219).

NatureScot has suggested amending or removing wording in the allocation summary for site OP2 in Hatton to avoid suggesting that connection to a public sewer is necessary to mitigate effects on the Buchan Ness to Collieston Coast Special Protection Area. NatureScot advise that while connection to the public sewer may be required by the Council, given the qualifying interests of the site (seabirds) and the nature of the proposed development, this mitigation is not necessary to avoid an adverse effect on integrity of the Buchan Ness to Collieston Coast SPA (RD0255.B) (PP1300).

Non-Allocated Site – Site OP5 LDP 2017 – Land at Hatton Vale

A representee has requested the continued allocation of site OP5 from the Aberdeenshire Local Development Plan 2017. They argue the removal of site OP5 from the PLDP appears to be an error. Site OP5 is planned as an extension of area OP3. Site OP5 is the subject of a planning application reference APP/2020/1157 submitted for Planning Permission in Principle (PPP) (PP1182).

Longhaven

Flood Risk

SEPA has requested amending the ‘Flood Risk’ bullet point to accurately state the source of the flood risk and when a FRA may be required for site OP1 (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on ‘Strategic drainage and water supply’ (RD0214.B). No modification sought (PP1219).

A representee has requested amending the health and care facilities section to state that contributions should go towards the creation of additional capacity at existing medical facilities or a new health centre in Cruden Bay, and towards pharmacy facilities (PP1223).

Site OP1 – Land Adjacent to Longhaven School

A representee has requested the removal of this site. They state the site is constrained by marketability, no developer has shown interest in this site and no planning application has been submitted in the past decade. There is an issue with access into the site because the access track is not feasible, is constrained by third party ownership and would be unable to satisfy the Roads Authority. The settlement lacks public sewerage and WWTW. It is incapable of delivering 30 homes and there is no basis for confidence in its delivery, therefore, the site is contrary to SPP (PP1057).

SEPA has requested to insert “Flood Risk Assessment” in the second paragraph of the allocation summary (RD0214.B) (PP1219).

Modifications sought by those submitting representations:

Boddam

Flood Risk

Modify the PLDP to amend the 'Flood Risk' bullet point from, "Parts of Boddam lie within an area identified by the Scottish Environment Protection Agency as being potentially vulnerable to coastal flooding, particularly the east of Boddam. There is a high possibility of land drainage flooding occurring on site OP1. Flood Risk Assessments may be required." to read:

- "Parts of Boddam are in an area potentially vulnerable to flooding as identified by the National Flood Risk Assessment."
- "Parts of the settlement may be at risk from coastal flooding. Flood Risk Assessments may be required."
- "There is a high possibility of land drainage flooding occurring on site OP1. A Flood Risk Assessment may be required." (PP1219).

Site OP1 – East of Inchmore Gardens

Modify the PLDP to remove site OP1 from Boddam Settlement Statement (PP1036).

Non-Allocated Site – Bid Site BU030 – Land off A90

Modify the PLDP to allocate bid site BU030 as an opportunity site for business use in the Boddam Settlement Statement (PP0754).

Non-allocated Sites – Bid Site BU031 – Land off A90

Modify the PLDP to allocate bid site BU031 as an opportunity site for residential development in the Boddam Settlement Statement (PP0756).

Hatton

Site BUS – Safeguarded for business uses

The representee advises consultation with the Council's Flood Prevention Unit to clarify whether any further requirements need to be highlighted in the allocation text or in a flood risk bullet point (PP1219).

Services and Infrastructure

Modify the PLDP to amend the statement on "Health and Care Facilities" from, "All development will be required to contribute towards the creation of additional capacity or extension at the Cruden Medical Group facilities (Hatton Surgery and Cruden Bay Surgery)." to "All residential development must contribute towards the creation of additional capacity at existing medical facilities or a new health centre in Cruden Bay. Contributions towards expansion of existing pharmacy facilities or within a new facility may be required." (PP1223).

Site OP1 – Land of Northfield

Modify the PLDP to remove OP1 from the Hatton Settlement Statement (PP0296, PP1105).

Site OP2 – Off Station Road

Modify the PLDP to include mitigation measure that address the flooding resulting from the drainage in the area (PP0163). Provide clarity regarding the delivery of site OP2, particularly in relation to roads development, site management and landscaping conditions (PP0198).

Modify the PLDP to amend or remove the following wording in the allocation summary for site OP2 in Hatton to avoid suggesting that connection to a public sewer is necessary to mitigate effects on the Buchan Ness to Collieston Coast SPA, "The site is set directly adjacent to a burn that flows towards Buchan Ness to Collieston SPA and is likely to have an impact through drainage. The proposal would need to connect to a public sewer to mitigate effects on the Special Protection Areas." (PP1300).

Non-Allocated Site – Site OP5 LDP 2017 – Land at Hatton Vale

Modify the PLDP to reinstate the existing allocation site OP5 in the Hatton Settlement Statement.

Longhaven

Flood Risk

Modify the PLDP to amend the 'Flood Risk' bullet point from, "Parts of sites OP1 and P1 are in an area potentially vulnerable to flood risk as identified by the National Flood Risk Assessment. A Flood Risk Assessment may be required." to "Due to the presence of small watercourses running adjacent to the site, Flood Risk Assessments may be required for site OP1." (PP1219).

Services and Infrastructure

Modify the PLDP to amend the statement on "Health and Care Facilities" from, "All development will be required to contribute towards the creation of additional capacity or extension at the Cruden Medical Group facilities (Hatton Surgery and Cruden Bay Surgery)." to "All residential development must contribute towards the creation of additional capacity at existing medical facilities or a new health centre in Cruden Bay. Contributions towards expansion of existing pharmacy facilities or within a new facility may be required" (PP1223).

Site OP1 – Land Adjacent to Longhaven School

Modify the PLDP to remove site OP1 from the Longhaven Settlement Statement (PP1057).

Modify the PLDP to amend the allocation summary of site OP1 by adding a new sentence after the second sentence in the second paragraph, "A buffer strip ... development. A Flood Risk Assessment maybe required. Enhancement of ..." (PP1219).

Summary of responses (including reasons) by planning authority:

Boddam

General

The site is located to the west of Boddam and south of Peterhead. The site is not encroaching site R2 (Peterhead). The planning application APP/2020/0758 has been granted. The site is set within a rural setting therefore, the site is not encroaching any settlement boundary. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – East of Inchmore Gardens

A planning application was granted in May 2020 for 3 homes and the site was removed from the HLA 2019 (AD0022, pages 13-14). This would have made it a site of less than 5 homes meaning it did not meet the criteria for inclusion in the audit. However, this site shall be reinstated in the future HLAs. No change is required.

Comments from HES are noted. This site is close to Boddam Castle scheduled monument. The setting of the scheduled monument should be considered at the planning application stage. No change is required.

Comments from SEPA are noted. No change is required.

Non-Allocated Site – Bid Site BU030 – Land off A90

The Council does not support the allocation of bid site BU030 for business use. This bid site for business uses was not identified as a preferred site in the Main Issues Report 2019 (MIR) (AD0038.C page 11). The site is designated as a Local Nature Conservation Site and an important geological site therefore any development may have a considerable impact on the landscape. The site is set adjacent to the A90(T), and there are concerns relating to access to the site. The development would be visually prominent from the A90(T) and it would not be possible to mitigate visual impact by adding plant/landscape buffers along the A90 due to the topography of the site and proximity to the road. The site is also considered to be poorly situated as it is segregated from the settlement and its scale and location would have a negative impact on Stirling Village. No change is required.

The site is within the consultation zone for Peterhead Power Station and is designated as site R2 which is within the Peterhead Settlement Statement. Site R2 is designated for "development related to Peterhead Power Station, Carbon Capture and Storage, a possible landfall for a potential international North Sea interconnector, onshore connections to support offshore renewable energy, and major energy developments". This development is identified in the National Planning Framework 3 (AD0004) and any land adjacent to Peterhead Power Station is subject to consultation due to the potential impact of future expansion of the power station and also due to other technical matters.

Any consultation with Peterhead Power Station would be held at the planning application stage. This proposal was “Not Preferred” at the Main Issues Report stage therefore, no formal consultation was held with Peterhead Power Station. No change is required.

Non-Allocated Site – Bid Site BU031 – Land off A90

The Council does not support the allocation of bid site BU031 for a residential development. This bid site for 50 homes was not identified as a preferred site in the MIR (AD0038.C, page 11). This site is situated within one mile of the Bullers of Buchan Coast SSSI, Buchan Ness to Collieston SAC and Buchan Ness to Collieston Coast SPA, therefore, this development would result in a negative visual impact on the landscape setting. In the MIR, it has been noted that there are surface water flooding issues on the A90, and minor watercourses run through the site; no mitigation measure has been submitted to ensure that flooding would not increase as a result of this development. The development is likely to create additional pressure on the existing infrastructure and traffic congestion due to the proximity to the A90(T). It can be argued that access would be taken from the north, however, all the traffic is likely to exit on to the A90(T), which shall create additional pressure. It is unclear how a pedestrian crossing can be achieved across the A90(T) and the view of Transport Scotland is unknown in this respect. This development would result in urban sprawl on the west of the A90 and the constraints are unlikely to be resolved. In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. No change is required.

Hatton

Site BUS – Safeguarded for business uses

The Flood Prevention Team have been consulted (AD0125) and they are satisfied with being consulted at the planning application stage and requested to highlight that “A Flood Risk Assessment may be required. Further information on ground levels and surface water drainage would be required” in the ‘Flood Risk’ bullet point. The Council confirms that it intends to address SEPA’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address NHS Grampian’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Land of Northfield

The Council does not agree to removing this site. It is noted that the site has been constrained due to ownership and marketability and this is backed by (AD0022, page 17).

However, the site is recognised to be a logical extension of the settlement, therefore, the site is retained in the PLDP for this Plan period.

The settlement of Hatton has a public hall, school and a range of services, therefore, there are adequate facilities to support further development in the settlement. During consultations, Roads Development did not raise any issue (AD0133) regarding the road capacity being insufficient for accommodating the additional traffic, therefore, it can be argued that the existing roads in Hatton have the capacity to accommodate additional cars. The PLDP states that “New vehicle access is to be taken from Main Street with new footways on Main Street to connect to the existing network” (AD0041.E, page 309). Therefore, the existing narrow access on to the Main Street is not a matter of consideration. Pedestrian access will be provided on the east side connecting to Main Street/Northfield Gardens (AD0041.E, page 309), therefore, any safety concern regarding suitable walking path can be mitigated.

Policy P1 Siting, Layout and Design ensures that any development would not overlook, overbear and overshadow any existing properties. The detailed layout will be assessed at the planning application stage which will ensure that the layout blends in with the surrounding area and that it follows Policy P1.

Currently, there is concern regarding the existing WWTW, therefore, in the Services and Infrastructure section of the PLDP, it is stated that Scottish Water must be consulted during the early stage of the planning process for all development (AD0041.E, page 308). This would be addressed at the planning application stage. This means that the development may be delayed but this does not justify the removal of this site from the PLDP.

Comments from SEPA are noted.

In conclusion, no change is required.

Site OP2 – Off Station Road

The concerns raised by the representees are noted. SEPA’s flood map (AD0168) show that parts of site OP2 fall within a flood risk area. Therefore, in the allocation text of site OP2, it is stated that a Flood Risk Assessment is mandatory. No change is required.

The site is recognised to be a logical expansion to Hatton and development has already commenced. The development is on-going and expected to be completed during this Plan period, therefore, no change is required. Landscaping and strategic screening were agreed at the planning application stage and this is a requirement to ensure that any developments are screened and would enhance the landscape character. No change is required.

Comments from SEPA are noted. No change is required.

The wordings in the allocation summary is the same as the proposed text given by NatureScot, therefore, no change is required.

Non-Allocated Site – Site OP5 LDP 2017 – Land at Hatton Vale

The Council does not support the continued allocation of site OP5. In the MIR, it is noted that site OP5 has been proposed to be removed from the PLDP by the Cruden Bay Community Council because concerns and issues with access and traffic have been identified (AD0038.C, page 23). A planning application (application reference APP/2020/1157) has been submitted for Planning Permission in Principle (PPP) which is currently pending. However, as the decision is yet to be reached, the Planning and Environment Service do not alter their position. No change is required.

Longhaven

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address NHS Grampian's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Land Adjacent to Longhaven School

The Council does not support the removal of site OP1. In the HLA 2019 (AD0022, page 17), It is noted that this site is constrained by marketability and there has been no interest shown by developers in the past decade. However, this site remains as the only logical location for the provision of additional housing within the settlement, hence it is allocated for this Plan period. A suitable access point has been identified, which is the existing access track that links Longhaven with the farms to the north. It is recognised that this access track requires to be upgraded to an adoptable standard which is achievable. Issues of private ownership is a civil matter over which the Council has no control. One of the conditions set out in the allocation summary of the PLDP is that the waste water treatment must be connected to a single waste water treatment plant of sufficient capacity and that would have to be installed to a standard that can be adopted by Scottish Water (AD0041.E page 312), therefore, no change is required.

The Council confirms that it intends to address NHS Grampian's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Reporter's conclusions:

Preliminary matters

1. My examination of the proposed plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the provisions of the proposed plan, or which simply make comments that do not seek modifications to the proposed plan. Therefore, unless these relate to an issue which is unresolved, they are not addressed in my conclusions.

2. The council has indicated that it intends to make a number of non-notifiable modifications in relation to settlement statements considered under Issue 19. However, I note that the modifications sought are matters raised in representations and therefore require to be considered as part of the examination. I address these matters below.

Boddam

Flood risk

3. The Scottish Environment Protection Agency (SEPA) seeks modifications to the settlement statement in respect of flood risk. The changes sought would provide clarity on the source of the flooding advice (National Flood Risk Assessment) and consistency with similar advice expressed elsewhere in the proposed plan. Other than a small change to make the first bullet point easier to read, I recommend that the proposed plan is modified as sought by SEPA.

Site OP1: East of Inchmore Gardens

4. The housing land audit 2020 identifies the site as being constrained for ownership reasons; its absence from the previous (2019) audit being due to a grant of planning permission for three houses, taking the site below the threshold for inclusion. The planning permission has since lapsed.

5. The site immediately adjoins a modern housing development through which provision for vehicular access exists. Historic Environment Scotland has not objected in principle to the prospect of development on the site despite its proximity to a Scheduled Ancient Monument. Based on the evidence before me, I conclude that housing development on the site would be appropriate.

6. In response to a further information request (FIR008) seeking clarification on the ownership constraint, the council has indicated that the owner does not intend to allow any more homes to be built on the site. The council has therefore suggested that the allocation should be deleted. However, as I have not been able to confirm the owner's views on this matter, I do not consider it would be appropriate to remove the allocation from the plan.

7. Site OP1 has been identified as contributing nine homes towards the strategic development plan allowance for the Rural Housing Market Area. However, the information provided by the council suggests that these homes are not deliverable in the period up to 2032. A modification is therefore required to remove the allocation from the list of sites which contribute towards meeting the strategic housing land requirement. The implications of this change for the overall housing land provision are addressed in Issue 5 (shaping homes and housing). No modification is required to the Boddam settlement statement.

Non-allocated Bid Site BU030 (land adjacent to the A90(T))

8. I agree with the council's assessment of the site; it is prominent and forms part of a designated Local Nature Conservation Site (proposed plan, appendix 12, Map 39D). Importantly, the site also forms part of a 'reserved land' designation (Peterhead settlement statement Map 8, site reference R2) for development related to Peterhead Power Station. In addition, it would be necessary to secure vehicular access from the A90(T), for which no transport appraisal appears to have been undertaken. No

modification to the proposed plan is required in response to the representation.

Non-allocated Bid Site BU031 (land adjacent to the A90(T))

9. I also agree with the council's assessment of site BU031 which, although not identified as reserved land (R2), shares many of the considerations pertinent to site BU030; it too is prominent and forms part of a designated Local Nature Conservation Site (proposed plan, appendix 12, Map 39D). The development of the site for housing would also require the formation of safe and convenient crossing points over the A90(T), for which no appraisal appears to have been undertaken. In addition, the council alludes to the risk of flooding on the site associated with a watercourse/ drain that runs through the site.

10. Furthermore, as we conclude under Issue 5 in this report, sufficient land has been identified in the Rural Housing Market Area to meet identified needs. No modification to the proposed plan is required in response to the representation.

Hatton

Site BUS – Safeguarded for business uses

11. SEPA has indicated that there is potential for surface water flooding at the site and that this should be highlighted in the plan. In addition, due to the contouring of surrounding land, the council's Flood Risk and Coast Protection service notes a flood risk assessment may be required to support development proposals. To this end, it suggests that prospective developers should seek its advice. To address this matter, the council has suggested wording to be added to the settlement statement. I consider that the flood risk potential of the BUS designation should be highlighted in the plan and, in the interests of consistency with the approach taken in other settlement statements, the text under the heading 'Flood Risk' should be modified. I recommend below a modification based on the wording provided by the council, but with minor amendments to ensure consistency with similar statements made elsewhere in the proposed plan.

Services and infrastructure: health care facilities

12. NHS Grampian has indicated how financial contributions secured from new residential development should be deployed to best meet the needs of Hatton and other settlements. I agree that the health and care facilities bullet point should be amended to more accurately reflect the improvements required to support new development in Hatton. A modification is recommended based on the wording provided by NHS Grampian.

Site OP1: land off Northfield

13. As I observed, Hatton has a range of public facilities and local services. As such, I do not agree with the suggestion that the settlement has inadequate facilities to support new residential development. With regard to the site itself, the proposed plan makes clear that vehicular access would be taken directly from Main Street and not the unmade path/farm track to the east. I recommend that the settlement map is modified to make this clear to the reader by including the access within the site boundary. More broadly, I agree that development of the site would be a logical extension of the settlement.

14. I note that the site is constrained for marketability and ownership reasons in the housing land audit and is not identified as contributing towards the strategic development plan allowance for the Rural Housing Market Area in the period up to 2032. However,

should these constraints be overcome, there does not appear to be any reason to prevent the site being developed during the plan period. With access taken from Main Street, I consider that the site is capable of being developed in accord with the requirements of Policy P1 (layout, siting and design) and supporting text of the settlement statement. In conclusion, I conclude that the allocation should remain in the plan. No modification is required.

Site OP2: land off Station Road

15. The issues raised by the community council and other representations in respect of the ongoing development of the site are not matters for the local development plan or this examination; they are matters for the development management and building standards functions of the council.

16. With regard to the representation lodged by NatureScot, the council appears to have misunderstood the change being sought; it seeks the removal of text from the proposed plan not its inclusion. As NatureScot makes clear in its representation, while a connection to a public sewer may be required, it is not needed to mitigate the effects of proposed development on the Buchan Ness to Collieston Coast Special Protection Area (seabirds), as presently suggested. General advice on drainage and water supply matters pertinent to Hatton is set out on page 308 of the proposed plan. I agree that the proposed plan should be modified to address NatureScot's concerns, which I discuss further in my consideration of non-allocated site OP5 below.

Non-allocated site OP5: land at Hatton Vale

17. The site lies immediately adjacent to site OP2 (land off Station Road) and is promoted for 15 houses in the existing plan. The housing land audit 2019 identified the land as forming part of an effective site. Owing to access and traffic constraints, and a delay in development proposals coming forward, the council resolved through its consideration of the Main Issues Report (2019) not to promote the site for housing in the proposed plan. However, the council has confirmed that planning permission was granted in February 2022 for a development of 13 houses on completion of a legal agreement (FIR020). The parties agree that the granting of planning permission confirms that all outstanding access and traffic concerns have been resolved and that the site is no longer constrained. As such, the council assumes that the site will deliver homes at a modest rate until 2028.

18. The landowner states that the site should be included in the proposed plan, adding that the development of the site was always intended as a second phase of development once planning permission was secured and development on the adjoining site was complete (site OP2 in the proposed plan); on which progress has stalled due to challenging economic circumstances. If included in the proposed plan, the landowner seeks a further modification to remove the requirement for a pedestrian/ cycle path to be created linking the site with the recreation field/ play area immediately beyond the burn (site ref: P2), which it states is easily accessible from Main Street (Station Road).

19. Given the foregoing, the omission of the site from the proposed plan appears to be a matter of unfortunate timing. Since the publication of the proposed plan, outstanding matters have been resolved and planning permission granted for the development of 13 houses. Also, the landowner has indicated its intent to progress development of the site. If the proposed plan is modified to include the site, the council suggests that it is shown as

an extension to housing allocation OP2 (as shown on the proposed settlement map). It also suggests wording to accompany the allocation in the settlement statement, including reference to the requirement for a link to be created between the site and the play area (P2) over the Water of Cruden.

20. On the basis of the information presented in FIR020, I consider that the proposed plan should be modified to include land at Hatton Vale as a housing allocation. I agree with the council that this is best achieved by extending allocation OP2; given that vehicular access to the allocated land is to be secured via that site and would share infrastructure and amenities. I also agree that a safe and accessible pedestrian/ cycle link should be created from the site over the Water of Cruden to the play park and areas beyond and that this should be reflected in the allocation summary. I do not accept that a route from the site via Rowan Terrace and Main Street/ Station Road to the play park would be more pedestrian friendly, as suggested. I recommend a modification below based largely on that provided by the council. I have, however, removed text to address the concerns of NatureScot relating to the Buchan Ness to Collieston Coast Special Protection Area (see paragraph 16 above), added a title and indicated that the site is allocated for 34 homes; which is the existing OP2 allocation plus the number of houses recently granted planning permission.

21. As the extended site already forms part of the 2019 base supply, the recommended modification has no implications for the strategic development plan allowance for the Rural Housing Market Area. However, a minor change to the relevant table in Appendix 6 (housing land allocations) is required in the interests of clarity and consistency.

Longhaven

Flood risk

22. The amendments sought by SEPA would correct an inaccuracy in the text and provide clarification on the source of flood risk in Longhaven and site OP1 (land adjacent to Longhaven School). SEPA also seeks a modification to the allocation summary of site OP1 to ensure that it aligns with the modified statement under the heading 'Flood Risk'. I agree that the proposed plan should be modified to ensure that it provides accurate information and advice. I recommend below the required modifications.

Services and infrastructure: health care facilities

23. NHS Grampian has indicated how financial contributions secured from new residential development should be deployed to best meet the needs of Longhaven and other settlements. I agree that the health and care facilities bullet point should be amended to more accurately reflect the improvements required to support new development in Longhaven. A modification is recommended below based on the wording provided by NHS Grampian.

Site OP1: Land adjacent to Longhaven School

24. Site OP1 is identified as constrained for marketability reasons in the 2019 housing land audit and is not identified as contributing towards the strategic development plan allowance for the Rural Housing Market Area in the period up to 2032. However, this is the only housing allocation in the settlement and, should this constraint be overcome, there does not appear to be any reason to prevent the site being developed during the

plan period.

25. I do not agree that the site should be removed from the proposed plan, as suggested by a representee. Whilst access to the A90(T) would need to be carefully considered, the access track from which the site would be served joins a side road running parallel with the trunk road and not the trunk road itself; the side road in effect operates as a lay-by allowing vehicles to leave and re-join the A90(T) safely. Transport Scotland has not objected to the proposed allocation. No modification to the proposed plan is required in response to the representation.

Reporter’s recommendations:

Modify the local development plan by:

Boddam

1. Replacing the bullet point in the flood risk section of the Boddam settlement statement on page 289 with the following two bullet points:

“• Parts of Boddam lie in an area that is vulnerable to flooding, as identified by the National Flood Risk Assessment. As such, parts of the settlement may be at risk from coastal flooding. Development proposals may therefore be required to be supported by Flood Risk Assessments;

• There is a high possibility of land drainage flooding occurring on site OP1. A Flood Risk Assessment may be required.”

2. Amending the entry for Boddam OP1 in the relevant table in Appendix 6 to show that the site is not identified as contributing towards the strategic development plan allowance for the Rural Housing Market Area. (Note – a revised version of Appendix 6, incorporating all the recommended modifications, is provided at the end of this report.)

Hatton

3. Replacing the description of BUS in the ‘settlement features’ table in the Hatton settlement statement on page 307 with:

“Safeguarded for business uses. Further information on ground levels and surface water drainage will be required. Prospective developers are advised to consult the council’s Flood Prevention Unit.”

4. Replacing the bullet point under the heading ‘Flood Risk’ in the Hatton settlement statement on page 308 with:

“• Parts of Hatton lie in an area that is vulnerable to flooding, as identified by the National Flood Risk Assessment. Development proposals on site BUS may therefore be required to be supported by Flood Risk Assessments. Prospective developers are advised to consult the council’s Flood Risk and Coast Protection service.

5. Adding the following second bullet point to the flood risk section of the Hatton settlement statement on page 308:

“• There is potential for surface water flooding at site BUS. A Flood Risk Assessment may be required.”

6. Replacing the health and care facilities bullet point in the services and infrastructure section of the Hatton settlement statement on page 308 with:

“• All residential development will be required to contribute towards the creation of additional capacity at existing medical facilities or a new health centre at Cruden Bay. Contributions towards the expansion of existing pharmacy facilities or within a new facility may also be required.”

7. Amending the boundary of allocated site OP1 on the Hatton settlement plan on page 310; extending the pink wash of the allocation to include the field access immediately to the east of existing farm buildings southwards to Main Street.

8. Replacing the allocation summary for site OP2 (off Station Road) in the Hatton settlement statement on page 309 with:

“OP2: Off Station Road - Allocation 34 houses

This site was previously allocated as OP3 and OP5 in the LDP 2017. Planning Permission in Principle for residential development on the site has been granted (planning application references APP/2004/2977, APP/2011/2388 and APP2020/1157) and the site is currently under construction and expected to continue into this Plan period. For any future phases, design of the development should take into consideration the rural character of the site and existing trees and woodland should be retained where possible.

A pedestrian and cycle link is to be provided across the burn which forms the site’s northern boundary to link the site with the neighbouring recreational area, core path network and wider settlement to the north and east. There is a sewer mains located within the ground and running through this site. Scottish Water should be consulted to ascertain whether a sewer relocation is required.

A Flood Risk Assessment may be required. A buffer strip will be required along the Water of Cruden on the north eastern boundary of the site to enhance wildlife corridor. Enhancement of the straightened watercourse through re-naturalisation and removal of any redundant features will need to be investigated.

It is expected that the site will contribute towards affordable housing in line with Policy H2 Affordable Housing. This should be delivered as part of the early phases of development and should be integrated into the design of the development to provide a mix of house types and sizes to meet the local need.”

9. Amending the boundaries of allocated site OP2 (off Station Road) on the Hatton settlement map on page 310 as per the FIR020 Hatton Settlement Statement Extended OP2 Map. (The whole of site OP2 should be included within the settlement boundary).

10. Amending the entry for Hatton OP2 in the relevant table in Appendix 6 for sites in the Rural Housing Market Area to replace the figure ‘21’ with ‘34’ in the final column. (Note - A revised version of Appendix 6, incorporating all the recommended modifications, is provided at the end of this report.)

Longhaven

11. Replacing the bullet point in the flood risk section of the Longhaven settlement statement on page 311 with:

“• Due to the presence of a small watercourse adjacent to the site, a Flood Risk Assessment may be required.”

12. Adding the following new sentence after the second sentence of the allocation summary for OP1 (land adjacent to Longhaven School) in the Longhaven settlement statement on page 312:

“A Flood Risk Assessment may also be required.”

13. Replacing the health and care facilities bullet point in the services and infrastructure section of the Longhaven settlement statement on page 312 with:

“• All residential development will be required to contribute towards the creation of additional capacity at existing medical facilities or a new health centre at Cruden Bay. Contributions towards the expansion of existing pharmacy facilities or within a new facility may also be required.”

Planning authority's summary of the representation(s):

Crimond

Flood Risk

Scottish Environment Protection Agency (SEPA) has recommended adding a bullet point under the heading 'Flood Risk' to state that a Flood Risk Assessment is required for site OP2 and possibly for site OP1 (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – South of the Corse

A representee has requested the removal of site OP1 from the Proposed Local Development Plan 2020 (PLDP). They argue that this site is constrained due to marketability and ownership issues as mentioned in the Housing Land Audit (HLA) 2019, and no timescale has been set to remove these constraints. The site has been allocated in the last four local plans, but no planning application has been lodged. It is an arbitrary allocation that has no regard to drawing suitable boundaries and/or considering the adjacent built environment. Therefore, allocating this site would disregard the policies laid out in Scottish Planning Policy (SPP) because there is no guarantee that this site shall be delivered in the near future (PP1107).

SEPA has requested amending the allocation summary to clarify that a Flood Risk Assessment may be required due to the presence of small watercourses along the boundaries of the site and past records of flooding (RD0214.B) (PP1219).

Site OP2 – Land West of Crimond Medical Centre

Support has been expressed for including site OP2 for 30 homes as it would sustain the economy of the village and enhance the community (PP0028, PP0085, PP0117, PP0140, PP0155 and PP0216).

SEPA has requested amending the allocation summary to clarify that a Flood Risk Assessment and buffer strips will be required to minimise flood risk (RD0214.B) (PP1219).

NatureScot has requested additional text is added to the allocation summary on the siting and design of any development, which should contribute to the gateway to Crimond from the busy A90 trunk road when approaching from the west. NatureScot noted that the site is set on a relatively flat landscape towards the northwest edge of the existing settlement and are concerned because this means that the site is highly likely to erode. This would be on the basis of the compact nature of the existing settlement and its contribution to the merging of the settlement with surrounding small farm clusters in the wider countryside. NatureScot also advised that there is some limited scope to develop a small part of the south eastern part of the site where it abuts the existing settlement edge (RD0255.B) (PP1300).

Non-Allocated Site – Bid Site BU058 – Moss Side Camp

A representee has requested the allocation of bid site BU058 for 50 to 80 homes. They state there is an existing development on the brownfield site, which is part of the larger site, therefore, the principle of development has been established. There are a number of derelict buildings within the site and development of this site would improve the aesthetic view of the area and achieve the vision of development outlined in the vision section. The site is connected to Crimond and provides a logical extension to the south and the A90 in line with the settlement strategy. The proposal would support the services in the village. It would not alter the 'Crimond Belt' ancient woodland, but rather contribute to its conservation, and enhance access to the woodland through core paths (PP1187).

New Leeds

Services and Infrastructure

SEPA has no comment on the 'Strategic drainage and water supply' bullet point. No

modification sought (RD0214.B) (PP1219).

It is requested that references to Secondary Education, Community Facilities, Sports and Recreational facilities, and Recycling and Waste Facilities are removed as no residential allocations are identified, which would generate a need for developer obligations in respect of these facilities (PP1039).

New Pitsligo

General

The representee has suggested reducing the need for affordable housing in New Pitsligo because comments from the Community Council state that there are sufficient social homes in the settlement, hence, there is little support for more affordable housing (PP0808).

Flood Risk

SEPA has recommended adding a new 'Flood Risk' bullet point for site OP2 due to surface water flood risk and that a Flood Risk Assessment may be required (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

A representee has requested amending the health and care facilities section to state that contributions should go towards medical facilities in Maud or New Pitsligo (PP1223).

Site OP1 – Land at Alexander Bell Place

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation/designation summary for site OP1 (RD0214.B). No modification sought (PP1219).

Objection has been raised to the allocation of site OP1 for 12 homes. They argue there is no demand for development, and it has remained undelivered over the last 20 years. It is identified as a constrained site in the HLA, and there is no basis or justification that it might satisfy SPP (PP1077).

Site OP2 – Land at Denedoch

Several representees have objected to the allocation of site OP2 for 90 homes (PP0122, PP0217, PP0221, PP0245, PP0300, PP0314, PP0315, PP0316 and PP1037). A representee has included a letter and photos (RD0014.A and RD0014.B) in their representation which provides further detail to support their position (PP0122). A range of reasons were cited including that:

- There is no demand for development on this site (PP0217, PP0221, PP0300, PP0315, PP0316 and PP1037).

- There are many empty Council properties adjacent to Church Street (PP0217, PP0221, PP0300, PP0315 and PP0316).
- The site has remained undelivered over the last 25-30 years, it is identified as a constrained site in the HLA, and there is no basis or justification that it might satisfy SPP (PP1037).
- The proposal would constitute an increase in the carbon footprint/air pollution as there are very limited public transport available, which means the majority of residents shall be travelling for services and employment (PP0122, PP0245, PP0300, PP0314, PP0315 and PP0316).
- The development would create pressure on the primary school and GP surgery. Also create additional pressure on local amenities (PP0314, PP0315 and PP0316).
- The development would result in an impact on wildlife in the surrounding areas including Den Wood and a negative impact on the natural environment (PP0221, PP0300, PP0314 and PP0315)
- The development would result in additional traffic, in particular at School Street (PP0314, PP0315 and PP0316).
- The site will not be able to cope with the additional traffic as vehicles will pass through private lanes that are adjacent to the site and result in further upkeep and repair costs to the owners (PP0315 and PP0316).
- Concern for the safety of the children who play on these lanes (PP0315 and PP0316).
- The development would have a negative impact on the surface sewage system at School Street (PP0217).
- There are inadequate services available for the current residents (PP0221 and PP0300).
- The development would introduce overlooking into existing properties (PP0300 and PP0314).
- Flooding from surface and sewage water is a particular concern as this has been an issue in the past causing considerable damage and impact on residents (PP0217 and PP0245). The development site is known to cause flooding issues to adjacent properties (PP0300).
- The development would result in noise pollution (PP0314 and PP0316).
- Concern has been raised regarding retaining the current standard of living that it is at present because the size of the site is too small for the proposed number of homes (PP0314, PP0315 and PP0316).

SEPA has recommended that the allocation summary for site OP2 states the reason why a Flood Risk Assessment may be required, which is to assess surface runoff from adjacent land (RD0214.B) (PP1219).

NatureScot has requested that the allocation summary states that the siting and design of development reflects the existing strong geometric grid development pattern of New Pitsligo, as the site is located on sloping ground, which raises the site's landscape and visual sensitivity (RD0255.B) (PP1300).

NatureScot has also requested that the allocation summary considers active travel and links to the core path network as this is a large development. They note the inclusion of this wording would help promote safe and convenient active travel opportunities (in keeping with the Proposed Plan's aims). They also report that a core path lies nearby, across the road to the north of the site (RD0255.B) (PP1300).

Non-Allocated Site – Bid Site BU034 – Part of P1, East of Low Street

A representee has requested the allocation of bid site BU034 for 30 homes. The representee argues that this site is more desirable due to its proximity to the local services and demand for self-build housing plots. The representee has included two proposed plans (RD0147.A) in their representation which provides further detail to support their position (PP0808).

Settlement Map

A representee has requested amending the settlement plan to show a large double garage in the rear garden. The representee has included a plan (RD0018.A) in their representation which provides further detail to support their position (PP0175).

St Combs

Flood Risk

SEPA has requested amending the 'Flood Risk' bullet point to state that there is a small watercourse alongside site OP1 (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Site to North of High Street

SEPA has no issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

Site OP2 – Site to North of High Street

Support has been expressed for the inclusion of site OP2 for 45 homes (PP0380 and PP0381).

A representee has objected to the requirement for a masterplan showing access arrangements for sites OP1 and OP2 and that the need for a second access is removed from the allocation summary. They argue producing a masterplan will add delay to the delivery of the site. Access arrangements to site OP1 can be addressed through planning applications. No emergency access is required for site OP2 as less than 50 homes are proposed. If site OP1 is included as part of the access arrangement, the total number of units would be less than 100, which is still below the threshold for a second access. The representee has included three Appendices (RD0050.A, RD0050.B and RD0050.C) in their representation which provides further detail to support their position (PP0381).

Non-Allocated Site – Bid Site BU035 – Land to West of St Combs

A representee has requested increasing the size of site OP2 to include Bid Site BU035 and allocate it for a total of 119 homes. They argue it would be seen in the context of existing development in the area, it would have no detrimental impact on the amenity of

the area, and a larger site would support the primary school, which is currently significantly under capacity. A second point of access is stated as a requirement for site OP2, but this would require a larger allocation as it cannot be delivered without it. The representee has included two Appendices (RD0049.A and RD0049.B) in their representation which provides further detail to support their position (PP0380).

St Fergus

Flood Risk

SEPA has requested amending the 'Flood Risk' bullet point to remove reference to SEPA's indicative Flood Map as site OP1 is not within it (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – South of Newton Road

A representee requests to delete the contribution towards meeting the strategic allowances in respect of the site OP1 from table 3, Appendix 6 Housing Land Allocations. It has been argued that in the HLA 2019, it is stated that this site was added in 2012 into the audit. However, this is incorrect because part of the site fronting the road was released into the audit in 2006 under reference U/SF/R/011 for 10 homes. Two planning applications were withdrawn, the last being in May 2019, possibly due to issue with access into the site. In 2014 the size of the site was doubled and allocated for 55 homes to meet the strategic housing requirement without considering that the existing site has been sitting idle for many years. In 2017, the site became constrained due to ownership as more than one owner owns the site. Given these impediments to development, there is no logical or component basis to assert the 13 units can contribute to the strategic allowance (PP1090).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

A representee has requested increasing the number of homes on this site from 38 to 55 homes, which was supported in the Main Issues Report (MIR) as bid site BU022. They claim that there is a demand for housing in St Fergus. The location of the site represents a natural and logical extension to the settlement, and it will support local services and facilities (PP1323).

Non-Allocated Site – Bid Site BU015 – Land at Kinloch Road

A representee has requested the allocation of bid site BU015 for 25 homes. They note that part of site OP1 has planning permission for 20 homes, the school roll is falling, it forms a logical extension, access has been identified in the approved planning application for site OP1, and there are no constraints preventing its deliverability (PP0397).

St Fergus Gas Terminal

Vision

A representee has requested amending the Vision to provide support for low carbon technologies, which would assist in reducing emissions and thus contribute to the net zero objective (PP0598).

Flood Risk

SEPA has requested amending the 'Flood Risk' bullet point to refer to SEPA's Indicative Flood Map and restoring watercourses (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site R1 – For major oil and gas related development within St Fergus Gas Terminal

It has been suggested that the designation summary should include reference to carbon capture and storage and low carbon/renewable energy generation (PP0598) as well as hydrogen production in order to provide clarity on the nature of Oil and Gas related developments that could come forward (PP0431, PP0503, PP573, PP0762 and PP1145).

Representees have highlighted that several of their assets are within site R1 and that they request to be involved in the preparation, alterations and review of plans that affect their assets or site-specific proposals. The representees have included Appendices (RD0163.A, RD0203.A and RD0203.B) in their submission which provides further detail to support their position (PP0893 and PP1174).

Strichen

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

A representee has requested amending the health and care facilities section to state that contributions should go towards medical facilities in Maud or New Pitsligo (PP1223).

Site OP1 – West of Burnshangie House

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

A representee has objected to the allocation of site OP1 as the proposed road layout is unsuitable and would result in additional traffic. There are a number of mature trees and the plan for these trees is unclear. There are bats in the area and this development would result in the loss of their natural habitat (PP0176).

Site OP2 – Hospital Brae

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

A representee has objected to the allocation of site OP2 for 22 homes as the proposed road layout is unsuitable and would result in additional traffic. The site is located at a steep road with a blind corner. It is estimated that an additional 80 cars would travel to and from the development of OP2 daily. The site is used for community purposes by the residents of Strichen for walking, playing, etc. There are paths within the site used by the residents. There are several mature trees and the plan for these trees is unclear. There are bats in the area and this development would result in the loss of their natural habitat (PP0176).

Site OP3 – Land at Brewery Road

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP3 (RD0214.B). No modification sought (PP1219).

Two representees have objected to the allocation of site OP3 for 49 homes (PP0327 and PP1085). One has noted that their property is not shown on the settlement plan and are concerned about the loss of privacy (PP0327), and access into the site is inadequate (too narrow) (PP0327 and PP1085). There is a sufficient number of housing sites allocated in Strichen (OP1 and OP2) (PP0327). It is noted that the proposal has been changed from 60 to 49 homes to avoid the need for two access points. (PP0327). The proposed access would not meet the Road Standards guideline and be unable to achieve visibility splays and radii at the junction, and the applicant does not have control over the grounds of neighbouring properties, which may result in the site becoming constrained (PP1085).

NatureScot has requested that the allocation summary for site OP3 strongly advocates a development pattern that reflects the geometric grid layout that is distinctive to Strichen. This area contributes to the immediate landscape setting of Strichen and is highly visible in views from the High Street. Development of this site is likely to incur significant landscape and visual impacts (RD0255.B) (PP1300).

Non-Allocated Site – Bid Site BU009 – Land at Norwood Field, North of Brewery Road

A representee has requested the allocation of bid site BU009 for 100 homes, which includes site OP3 for 49 homes. They state that a new main access road can be provided via a junction onto Brewery Road to the east and that the proposed access route for site OP3 is too narrow to be adopted. Instead, this narrow road can be used as a private road for a foot/cycle path and emergency access, which increases the capacity of developing in this area to 100 homes. Therefore, site OP3 could be extended to accommodate a further 60 homes. The representee has included an Appendix (RD0058.A) with their submission which provides further detail to support their position (PP0401).

NatureScot notes that in the 'Issues and Actions' Report their comments relevant to BU009 and BU057 (Strichen) have been swapped (RD0255.B) (PP1300).

Modifications sought by those submitting representations:

Crimond

Flood Risk

Modify the PLDP to include a new 'Flood Risk' bullet point that states, "Due to the presence of small watercourses running through or adjacent to the site a Flood Risk Assessment will be required for OP2 and may be required for OP1." (PP1219).

Site OP1 – South of The Corse

Modify the PLDP to remove site OP1 (PP1107).

Modify the PLDP to amend the allocation summary of site OP1 to change the first sentence in paragraph four from, "A Flood Risk Assessment may be required because part of the area is potentially vulnerable to flood risk as identified by the National Flood Risk Assessment." to "A Flood Risk Assessment may be required because part of the area is potentially vulnerable to flood risk as identified by the National Flood Risk Assessment due to the presence of small watercourses along the boundaries of the site and past records of flooding." (PP1219).

Site OP2 – Land West of Crimond Medical Centre

Modify the PLDP to amend the allocation summary of site OP2 to change the second to fourth sentences in paragraph one from, "There are watercourses flowing on the east, north and west, therefore a Flood Risk Assessment may be required. Buffer strips may be required along the watercourses and should be positively integrated into the open space. The buffer strips should enhance the landscape and wildlife corridor." to "Due to watercourses flowing on the east, north and west, a Flood Risk Assessment will be required. Buffer strips will be required along the watercourses and should be positively integrated into the open space to minimise flood risk and enhance the landscape and wildlife corridor." (PP1219).

Non-allocated Site – Bid Site BU058 – Moss Side Camp

Modify the PLDP to allocate site BU058 for 50 to 80 homes (PP1187).

New Leeds

Services and Infrastructure

Modify the PLDP to remove references to Secondary Education, Community Facilities, Sports and Recreational facilities, and Recycling and Waste Facilities from New Leeds Settlement Statement (PP1039).

New Pitsligo

General

Modify the PLDP to reduce affordable housing need (PP0808).

Flood Risk

Modify the PLDP to add a new 'Flood Risk' bullet point that states, "Due to surface water flood risk a Flood Risk Assessment may be required for site OP2." (PP1219).

Services and Infrastructure

Modify the PLDP to amend the "Health and care facilities" section from, "All development will be required to contribute towards the creation of additional capacity at the Central Buchan Practice in New Pitsligo." to "All residential development must contribute towards the creation of additional capacity at existing medical facilities in Maud or New Pitsligo." (PP1223).

Site OP1 – Land at Alexander Bell Place

Modify the PLDP to remove site OP1 (PP1077).

Site OP2 – Land at Denedoch

Modify the PLDP to remove site OP2 (PP0122, PP0217, PP0221, PP0245, PP0300, PP0314, PP0315, PP0316 and PP1037).

Modify the PLDP to amend the Plan to reflect all buildings in the area correctly (PP0175).

Modify the PLDP to amend the allocation summary of site OP2 to change the last sentence of paragraph two from, "A Flood Risk Assessment may be required." to "A Flood Risk Assessment may be required to assess surface runoff from adjacent land." (PP1219).

Modify the PLDP to amend the allocation summary of site OP2 to include the following text after the second sentence, "Care should be taken to ensure the siting and design of development reflects the existing strong geometric grid development pattern of New Pitsligo." (PP1300).

Modify the PLDP to amend the allocation summary of site OP2 to include the following text at the end to read, "Provision for active travel is required. Efforts should be made through the site layout to link into the core path network." (PP1300).

Non-allocated Site – Bid Site BU034 - Part of P1, East of Low Street

Modify the PLDP to allocate bid site BU034 for 30 homes (PP0808).

Settlement Map

Modify the PLDP to show the large double garage at the rear garden within the New Pitsligo settlement plan (PP0175).

St Combs

Flood Risk

Modify the PLDP to amend the 'Flood Risk' bullet point from, "There is a risk of surface water flooding within the OP1 and OP2 sites. A Flood Risk Assessment may be

required.” to “There is a small watercourse alongside site OP1 and some risk of surface water flooding to both the OP1 and OP2 sites. A Flood Risk Assessment may be required.” (PP1219).

Site OP2 – Site to North of High Street

Modify the PLDP to amend the allocation summary for site OP2 to remove the requirement to prepare a masterplan and remove the requirement for a second point of access and emergency access (PP0381).

Non-Allocated Site – Bid Site BU035 – Land to West of St Combs

Modify the PLDP to extend site OP2 to include bid site BU035 and allocate the whole site for 119 homes (PP0380).

St Fergus

Flood Risk

Modify the PLDP to replace the ‘Flood Risk’ bullet point from, “Part of site OP1 is within the Scottish Environment Protection Agency’s (SEPA) indicative 1 in 200-year flood risk area, or has a small watercourse running through or adjacent to the site or is at risk from surface water flooding. A Flood Risk Assessment may be required.” to “Due to the presence of surface water flooding a Flood Risk Assessment may be required for site OP1.” (PP1219).

Site OP1 - South of Newton Road

Modify the PLDP to remove site OP1 from the St Fergus Settlement Statement (PP1090).

Modify the PLDP to extend the boundary of site OP1 and increase the capacity to 55 units (PP0380).

Non-Allocated Site – Bid Site BU015 – Land at Kinloch Road

Modify the PLDP to allocate site BU015 for 20 homes (PP0397).

St Fergus Gas Terminal

Vision

Modify the PLDP to amend the last sentence in the Vision from, “Any future development should be oil and gas, or carbon capture storage related and contribute towards employment within the area.” to “Any future development should be oil, gas, carbon capture or low carbon related and, where possible, contribute towards employment within the area.” (PP0598).

Flood Risk

Modify the PLDP to change the ‘Flood Risk’ bullet point with the following text from, “Part of site R1 lies within the area potentially vulnerable to flood risk as identified by the National Flood Risk Assessment. A detailed Flood Risk Assessment will be required to

accompany any future development proposals for this site and adequate buffer strips will be required adjacent to existing watercourses.” to “Parts of the site are shown to be at risk of flooding on the SEPA Indicative Flood Map. Flood Risk Assessments may be required. Buffer strips will be required alongside watercourses and opportunities to restore and enhance them should be investigated.” (PP1219).

Site R1 – For major oil and gas related development within St Fergus Gas Terminal

Modify the PLDP to add a sentence in the allocation text to state: “early engagement with National Grid on proposals is welcomed.” (PP0893).

Modify the PLDP to amend text for site R1 from, “For major oil and gas related development within St Fergus Gas Terminal.” to “For major oil and gas related development within St Fergus Gas Terminal, including Carbon Capture and Storage (CCS) and hydrogen production.” (PP0431 and PP0503).

Modify the PLDP to amend text for site R1 from, “For major oil and gas related development within St Fergus Gas Terminal.” to “For major oil and gas related development within St Fergus Gas Terminal, including Carbon Capture and Storage (CCS) and hydrogen production from natural gas related developments.” (PP0573, PP0762 and PP1145).

Strichen

Services and Infrastructure

Modify the PLDP to amend the text in the ‘Health and Care Facilities’ bullet point from, “All development will be required to contribute towards the creation of additional capacity at the Central Buchan Practice in New Pitsligo.” to “All residential development must contribute towards the creation of additional capacity at existing medical facilities in Maud or New Pitsligo.” (PP1223).

Site OP1 – West of Burnshangie House

Modify the PLDP to remove site OP1 (PP0176).

Site OP2 – Hospital Brae

Modify the PLDP to remove site OP2 (PP0176).

Site OP3 – Land at Brewery Road

Modify the PLDP to remove site OP3 (PP0327 and PP1085) and identify an alternative effective allocation in the Local Growth Area of the Rural Housing Market Area (RHMA), or if marketability constrained, in the Local Growth Area of the Aberdeen Housing Market Area (AHMA) (PP1085).

Modify the PLDP to amend the allocation summary of site OP3 to add at the end of the penultimate paragraph, “Proposals should encourage a development pattern that reflects the geometric grid layout, which is distinctive to Strichen.” (PP1300).

Non-Allocated Site – Bid Site BU009 - Land at Norwood Field, North of Brewery Road

Modify the PLDP to extend site OP2 and include site BU009 for 100 homes (PP0401).

Modify the PLDP to address the information swap relevant to bid sites BU009 and BU057 in Strichen, as identified by NatureScot, as required (PP1300).

Summary of responses (including reasons) by planning authority:

Crimond

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – South of the Corse

The Council does not agree with removing site OP1. While the HLA 2019 (AD0022 page 15) states it is constrained for marketability and ownership, it is not possible for the Planning Authority to set a timescale to remove the constraint. It is also noted that the site has been allocated in previous LDPs, but the site is a logical expansion of Crimond. It is adjacent to The Corse Road and the allocation summary requires the design of the new homes and materials to take into account neighbouring housing in Leys Drive and The Corse. No change is required.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP2 – Land West of Crimond Medical Centre

The support expressed for site OP2 is noted.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Non-Allocated Site – Bid Site BU058 – Moss Side Camp

The Council does not support allocating bid site BU058 for between 50 and 80 homes. Bid site BU058 for 100 homes was not identified as a preferred option in the MIR 2019 (AD0038.C, page 14). The Crimond Belt (woodland) splits this site from Crimond and would elongate the settlement. Almost half the site includes a locally important archaeological site, which includes the remains of a World War II camp site that was associated with the nearby airfield at Rattray. The proposal would also result in overdevelopment and there are access concerns as the road to the southeast is a single-

track road. Furthermore, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. No change is required.

New Leeds

Comments from SEPA are noted. No change is required.

Whilst there are no allocated sites identified within the settlement boundary, proposals for new development may still be submitted for sites within and adjacent to the settlement, which will require to be appropriately assessed by the Council in accordance with the relevant policies of the PLDP. In such instances, developer obligations will require to be sought to ensure that development impacts are mitigated against. No change is required.

New Pitsligo

General

The Council does not support reducing the number of affordable homes in New Pitsligo. New developments are expected to include a mix of house types to deliver sustainable mixed communities. For consistency, Policy H2 Affordable Housing in the PLDP 2020 (AD0041.A, page 42) includes a standard 25% requirement for affordable homes where four or more homes are proposed. Any deviation from the policy can be considered at the planning application stage. No change is required.

The reference to “shops” should be removed from the Vision as it is no longer in operation. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Flood Risk

The Council confirms that it intends to address SEPA’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Land at Alexander Bell Place

The Council does not agree with removing site OP1 for 12 homes. It is acknowledged that this site been allocated in previous Plans. However, this site is a logical extension to the village and a planning application is pending on part of this site for 5 homes (APP/2019/2823). No change is required.

Comment from SEPA is noted. No change is required.

Site OP2 – Land at Denedoch

The Council does not agree with removing site OP2 for 90 homes. The site is only ownership constrained and could come forward at any time (AD0022, page 22). It would likely be developed in phases, which would allow the education system to cope with additional pupils. Developer Obligations would be sought for health and care facilities, education, and infrastructure. Pedestrian safety and environmental factors, including the

protection of habitats and drainage concerns would be addressed at the masterplanning or planning application stage. The site itself is not at risk from flooding, but from surface water runoff from the adjacent field, which can be assessed in a Flood Risk Assessment. The main access would be taken via School Brae and a secondary access point to be taken from School Street. New Pitligo is served by local services and amenities and therefore considered an appropriate location for new development. This accords with SPP (AD0012, paragraph 40), which outlines that new development should be within or adjacent to settlements. The number of empty homes has not been quantified by the representee and this is not a material consideration for the LDP. With regards to concerns about overlooking, New Pitligo is built on a hill, so there will be some elements of overlooking, but Policy P1 Layout, siting and design considers issues of overlooking, overshadowing, and overbearing developments which will be applied to the assessment of any development proposals (AD0041.A, pages 47-49). No change is required.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council confirms that it intends to address NatureScot's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Settlement Map

The Council has no control over the OS Vector Local Map that is supplied to us by Ordnance Survey to use as the base map for the LDP. The Council understand that that the OS Vector Local Map is updated on a quarterly basis. Unfortunately, the Council is unable to accommodate the representees request to have the garage shown on the PLDP map. This is a matter for Ordnance Survey to resolve. No change is required.

Non-Allocated Site – Bid Site BU034 – Part of P1, East of Low Street

The Council does not support allocating bid site BU034 for 30 homes. Bid site BU034 for 30 homes was not identified as a preferred option in the MIR (AD0038.C page 45). As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. While the site would form a logical extension due to its proximity to local services, the southern part of the site includes ancient woodland, part of which is covered by a Tree Protection Order (TPO). Therefore, it is important to prioritise these trees over housing development, especially where other opportunity sites exist elsewhere. This development could have a significantly negative impact on these trees and cause disturbance to wildlife. Furthermore, no justification has been provided on how these trees would be protected. No change is required.

St Combs

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comment from SEPA is noted. No change is required.

Site OP1 – Site to North of High Street

Comment from SEPA is noted. No change is required.

The name of site OP1 is incorrectly titled the same as site OP2. Therefore, site OP1 should be called “Site to West of Millburn Avenue”. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP2 – Site to North of High Street

Support expressed for site OP2 is noted.

The Council does not support removing the need for a masterplan for sites OP1 and OP2. A masterplan can be requested by the Council if it deems there is a need for one to ensure good layout and design and not solely due to the number of homes being less than 50, i.e., not a major development. In this case, a masterplan is required for both sites to ensure that the access arrangements are in place, as these sites are adjacent to each other and share a common boundary. It is noted that site OP1 measures approximately 2 hectares and site OP2 measures approximately 3.4 hectares, which would make both sites a major development. Under Policy P1 Layout, Siting and Design, these sites would meet the threshold for requiring a masterplan (AD0041.A, pages 47-49). No change is required.

The Council does not support removing the access arrangements between sites OP1 and OP2. These sites are located next to each other and share a common boundary. There is concern as to the access arrangements, and in particular a second access point from the High Street or Millburn Avenue, or otherwise, the suitability of the access track set to the northwest. It is noted that an approved planning application shows access leading to site OP1. No change is required.

It is noted that the fourth sentence in paragraph one refers to site OP2 when it should be site OP1. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Non-Allocated Site – Bid Site BU035 – Land to West of St Combs

The Council does not support increasing the size of OP2 by allocating bid site BU035 for a total of 119 homes. Bid site BU035 for 100 homes was not identified as a preferred option in the MIR (AD0038.C, page 60). Bid site BU036, which overlaps this bid, was however allocated as site OP2. Nonetheless, bid site BU035 would significantly extend the settlement. Measuring 9ha, it would almost double the size of St Combs. The scale of the bid site would also cause the primary school to be at overcapacity and alter the character, shape and sense of place of St Combs. There is concern as to the access arrangements, and in particular a second access point from the High Street or Millburn Avenue, or otherwise, the suitability of the access track set to the northwest. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and

sufficient supply of deliverable housing sites within the Rural Housing Market Area. No change is required.

St Fergus

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – South of Newton Road

The Council does not agree with increasing the number of homes on site OP1 from 38 to 55 homes. A planning application (reference APP/2019/1606 (AD0060)) was submitted in July 2019 for 20 homes. The Council's Infrastructure Services (Flood Risk and Coastal Prevention) amended their initial response on 18 October 2019 due to the localised flooding events in September 2019 and they objected to the proposal on these grounds. They noted that the SuDS basins, which discharge to a minor watercourse, have insufficient capacity and this is unacceptable because it will exacerbate flooding. A subsequent response in November 2019 to the updated plans revealed that the SuDS basin will now tie in with an existing drainage pipe which discharges to a watercourse 170 metres further south. However, cross-sections of the receiving watercourse are required and until this has been proven to be satisfactory, the consultee has upheld their objection on this proposal. A drainage impact assessment was submitted in January 2020 which reflected the changes sought and the objection was removed for those 20 homes only, however, this planning application was refused due to not meeting other relevant policies.

It also came to the light that additional grounds would be required to allow adequate SuDs provision and land for flooding needs to be identified for the remaining homes that are yet to undergo the planning application process. Therefore, consultation was held with the Development Management Team and it was agreed that a lower number of homes can be approved on this site, and 38 homes were considered appropriate. A further planning application was submitted on the same site for 20 homes (reference APP/2020/0227 (AD0061)) whereby the Infrastructure Services (Flood Risk and Coastal Prevention) objected to the application notwithstanding further information being submitted by the applicant for post-development surface water run-off. It was highlighted that no assessment has been made on any of the drainage proposals outwith the application site boundary. Although the measures are indicative only this would be required to be assessed as part of any subsequent application involving the adjacent site. As a result, the proposed 38 homes should be retained in the Plan.

In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area.

In conclusion, no change is required.

Non-Allocated Site – Bid Site BU015 – Land at Kinloch Road

The Council does not support allocating bid site BU015 for 25 homes. Bid site BU015 for 25 homes was not identified as a preferred option in the MIR (AD0038.C, page 63). The site is constrained by road access as the existing road needs to be upgraded to create a better linkage with St Fergus/Kirkton, and its prominent location would also affect the setting of the settlement and the listed St Fergus Parish Church. It is noted that a planning application for three homes on the edge of the settlement was refused due to the SuDs requirement not being met and not being able to demonstrate safe access and egress from the site (APP/2020/0645 (AD0063)). A new planning application on the same site for three homes is pending but concerns on road safety was highlighted (APP/2020/2336 (AD0065)). This roads issue demonstrates that to accommodate any further development, the existing road needs to be widened. Nonetheless, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area.

With regards to the development at site OP1, the approved planning application for 20 homes to the east of the site includes access off Newton Road in the settlement and access off the corner of Kinloch Road. It proposes no road widening of Kinloch Road.

In conclusion, no change is required.

St Fergus Gas Terminal

Vision

The Council agrees that the Vision could be modified to allow further types of energy generating uses at St Fergus Gas Terminal, as requested by the National Grid. If the Reporter is minded, to make an amendment, then the Council recommend that the last sentence in the vision could be modified to “Any future development should be oil, gas, carbon capture or low carbon related and, where possible, contribute towards employment within the area.”

Flood Risk

The Council confirms that it intends to address SEPA’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site R1 – For major oil and gas related development

The Council agrees that the uses supported on site R1 could be expanded. If the Reporter is minded, to make an amendment, then the Council recommend that site R1 could be reserved for the following, “For major oil and gas related development within St Fergus Gas Terminal, including Carbon Capture and Storage (CCS) and hydrogen production”.

The site R1 is allocated for major gas and oil related developments. Carbon Capture and Storage (CCS) and hydrogen production falls within this remit and it is believed that it is

not necessary to add additional wordings to the proposal. Any additional wordings may narrow the development scheme, and this may prevent further or additional projects on oil and gas or oil and gas related activities to come forward. It is not necessary to alter the allocation in order to be in line with Acorn's project because further opportunities may arise during this Plan period. No change is required.

Comments from the National Grid on being consulted on the preparation or amendments of future plans and specific proposals are noted. No change is required.

Strichen

Services and Infrastructure

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address NHS Grampian's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – West of Burnshangie Road

The Council does not agree with removing site OP1. The current access road leading into the development site is unsuitable, hence, Burnshangie Road is required to be upgraded to meet the Roads Standard; this has been identified within the allocation summary. In addition, an additional access from Hospital Brae may also be suitable as an emergency access or a second access. It has been highlighted in the allocation text that a loop should be provided between Hospital Brae and Burnshangie Road to meet the requirements. The concern regarding tree loss is considered in the allocation summary, which states that the woodland along the boundary should be retained where possible. Bats would be more appropriately considered at the planning application stage. No change is required.

Comment from SEPA is noted. No change is required.

Site OP2 – Hospital Brae

The Council does not agree with removing site OP2. The allocation summary states that the access into this site can be taken from Hospital Brae which forms the southern site boundary. Therefore, it is not anticipated to foresee any constraints for access. The paths, trees and any community facility and wildlife within and surrounding the site would be taken into consideration at the planning application stage. No change is required.

Comment from SEPA is noted. No change is required.

Site OP3 – Land at Brewery Road

The Council does not agree with removing site OP3. The site is well connected in relation to the settlement and a new junction, including footway provision, is required onto Brewery Road from the site to comply with Aberdeenshire Standards for Road Adoption, which is highlighted in the allocation summary. The Council's Roads Development Team did not object to the visibility splay and radii at the junction after an amended plan was submitted during the MIR consultation stage. The three opportunity sites in Strichen provide choices

for development during the Plan period and this site is not considered to result in overdevelopment. The control and ownership of ground is a civil matter, and no comments can be made. Any concerns regarding overshadowing and overlooking shall be assessed at the planning application stage under Policy P1 Layout, Siting and Design (AD0041.A, pages 47-49). No change is required.

Comment from SEPA is noted. No change is required.

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Non-Allocated Site – Bid Site BU009 - Land at Norwood Field, North of Brewery Road

The Council does not support extending site OP3 and allocating bid site BU009 for 100 homes. Bid site BU009 for 60 homes was not identified as a preferred option in the MIR due to limited road access points (AD0038.C, page 68). The proposed alternative access could, however, be used for site OP3, and extending this site westwards could be considered at the next LDP Review. However, the Council is concerned that the scale of the proposal could result in overdevelopment and put pressure on existing services. According to the School Roll Forecast, by 2024, Mintlaw Academy is forecast to be at 94% capacity and Strichen Primary School at 87% capacity (AD0095). Furthermore, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. No change is required.

The Council notes the error reported by NatureScot that their comments relevant to bid sites BU009 and BU057 had been swapped in the Issues and Actions paper for Buchan (AD0040.C, pages 55-56). These comments were translated directly from SNH's MIR response where the swap originated. Whilst the Council acknowledge this 'swap' in information was not identified in the Issues and Actions paper, site BU057 was not in fact included in the PLDP. With regard to bid site BU009, if the Reporter is minded, to make an amendment, then the Council recommend that the allocation summary for site OP3 could be modified to include text to state that the site should only be developed on the lower slopes of the site.

Reporter's conclusions:

Preliminary matters

1. My examination of the proposed plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the provisions of the proposed plan, or which simply make comments that do not seek modifications to the proposed plan. Therefore, unless these relate to an issue which is unresolved, they are not addressed in my conclusions.

2. The council has indicated that it intends to make a number of 'non-notifiable modifications' to the settlement statements in Issue 20. However, where matters arise from representations made to the proposed plan they require to be considered as part of the examination. I address such matters as appropriate below.

Crimond

Flood Risk

3. The Scottish Environment Protection Agency (SEPA) suggests that a bullet point is added under the heading 'Flood Risk' to acknowledge the presence of small watercourses running through the settlement and that development proposals will be required to be supported by a flood risk assessment. I agree that this would be appropriate and consistent with the approach taken in other settlement statements. A modification is recommended below which also takes account of my recommendation in relation to allocation OP2 below.

Site OP1: south of The Corse

4. The site has been a feature of successive development plans without attracting any development interest. As such, it is suggested that there is no basis to support the view that the site will deliver the housing necessary to meet the housing land requirement. It is also suggested that the site is an arbitrary allocation which pays no regard to field boundaries or the adjacent dwellings.

5. The council, through the Main Issues Report, acknowledges that the site is constrained and that there appears to be no likelihood of the site coming forward for development in the near future. It adds, however, that the site should be promoted in the plan as it represents a logical expansion of the settlement.

6. In the absence of developer interest since the mid-1990s and with no imminent prospect of the issues that constrain the site being resolved, I agree that it is reasonable to conclude that the site is unlikely to become effective in the proposed plan period; as required in Scottish Planning Policy, paragraph 120. Furthermore, I do not consider that the site represents a logical expansion of Crimond; it does not follow established field boundaries and has a limited street frontage. I also note that the council raises the prospect of a second vehicular access being required to serve new development, potentially via Church Avenue, which would necessitate a road being taken through a mature tree belt identified as 'protected land' (P1) on the settlement map. Furthermore local housing needs can be met through new allocation OP2 to the west of Crimond Medical Centre. For these reasons, I conclude that the site should be removed from the proposed plan and recommend a modification to this effect below.

7. The 25 homes at site OP1 at Crimond do not form part of the 2019 effective land supply and are not identified as contributing towards the strategic development plan allowance for the Rural Housing Market Area. The removal of the site therefore does not have any implications for the ability of the plan to meet the strategic housing land requirement in the period up to 2032. However, an amendment is required to remove allocation Crimond OP1 from the relevant table in Appendix 6.

8. In light of my recommendation to remove site OP1 (south of the Corse) from the proposed plan, there is no need for me to address SEPA's representation in respect of the site.

OP2: land west of the Crimond Medical Centre

9. SEPA seeks changes to the allocation summary to state that prospective developers will be required to support proposals with a flood risk assessment and incorporate

features that would minimise flood risk and enhance the natural environment. As a new site, I agree that the suggested changes would provide clarity and certainty to prospective developers in the preparation of proposals for the site. I recommend that the proposed plan is modified accordingly.

10. NatureScot also seeks changes to the allocation summary. While the council states that the modification it intends to make to address NatureScot's comments is set out in its list of non-notifiable modifications, this is not the case. I have considered the comments of NatureScot, with which I concur for the most part. I do not agree, however, that development of the site has the potential to erode the compactness of the settlement; development presently extends along the A90(T) to the north, including the recently built medical centre and community hub. Furthermore, the buffer strips sought by SEPA along watercourses to the north and west of the site, with appropriate landscaping, would provide containment and ensure that development does not merge with the small farm clusters that lie beyond the site. Nonetheless, as a prominent site seen on the approach to the settlement, I agree that it is important to stress the importance of good development design. I recommend a modification below based on that suggested in NatureScot's representation.

Non-allocated Bid Site BU058: Moss Side Camp

11. I agree with the council's assessment of the site; it lies beyond the Crimond Belt (mature woodland), a significant feature in the landscape which in effect separates the site from the settlement; it is a locally important archaeological site; and, is presently served only by a single track road off the A90(T). Furthermore, as we conclude in issue 5 of this report, sufficient land has been identified in the Rural Housing Market Area to meet the strategic development plan allowance for the period to 2032. No modification to the proposed plan is required in response to the representation.

New Leeds

12. As the proposed plan does not allocate sites for new development in the village, it is suggested that the settlement statement is modified to remove references to developer contributions. As the council notes, however, new development proposals may still come forward within the settlement which could have an impact on service provision and existing infrastructure. For this reason, I agree that it is appropriate for the settlement statement to refer to the developer contributions that may be sought should there be deficiencies in service provision and/ or infrastructure to meet the needs of a site. No modification to the proposed plan is required in response to the representation.

New Pitsligo

Flood Risk

13. The New Pitsligo settlement statement does not include a flood risk section. The wording suggested by SEPA would address this omission. I agree that a modification is required in the interests of consistency with other parts of the proposed plan. I recommend a modification below.

Affordable housing

14. It is suggested that there is sufficient affordable housing in New Pitsligo and that the

council's policy on the topic should be set aside or the requirement reduced. The council explains that its affordable housing policy is applied consistently throughout Aberdeenshire where four or more houses are proposed. Should a reduction in the number of affordable houses be justified, the council adds that this can be discussed with a developer when making a planning application. I agree with the council on this matter. No modification to the proposed plan is required in response to the representation.

Health and care facilities

15. NHS Grampian seeks a modification to the settlement statement in respect of medical facilities to serve the residents of Maud and New Pitsligo. I agree that the health and care facilities bullet point should be amended to more accurately reflect the improvements required to support new development in New Pitsligo. A modification is recommended based on the wording provided by NHS Grampian.

Site OP1: land at Alexander Bell Place

16. A representation seeks the removal of the site from the proposed plan; arguing that the site entered the housing land audit in the early 1990s and is constrained by ownership issues. The representation adds that while outline planning permission was granted for 12 houses on the site in 2000, there has been no interest in developing the site since that time. The Main Issues Report acknowledges that the site is constrained. It adds, however, that the landowner has confirmed that the site will be made available for development in the next plan period. In this regard, I note that a planning application was lodged for the development of 5 houses in 2019. Although, the application was subsequently withdrawn, it does indicate that there is developer interest in the site. Furthermore, the site is not identified as contributing towards the strategic development plan allowance for the Rural Housing Market Area for the period up to 2032, which provides more flexibility in terms of delivery timescales. On this basis, I agree with the council that the site should remain part of the plan.

Site OP2: land at Denedoch

17. The removal of allocated site OP2 from the proposed plan is sought by a number of representees; mostly local residents whose properties back directly onto the site and cite the adverse impacts that development would have on their amenity and the village. Part of the site is allocated for residential development in the existing plan (site OP2, 10 houses); which, it is claimed, has not attracted any developer interest since it entered the housing land audit in the mid-1990s. It is also noted that the site is constrained by ownership issues.

18. The Main Issues Report acknowledges that the site is constrained. It notes, however, that the landowner has confirmed that the site will be made available for development in the next plan period. Since the publication of the Main Issues Report (2019) and the Housing Land Audit (2019), the council, through the proposed plan, proposes to increase the size of the site and its capacity (90 houses), to make it a more attractive proposition to developers. The site is not relied upon to meet the strategic housing land requirement in the period up to 2032 (see Appendix 6, Table 3 (housing allocations in the rural housing market area)).

19. The strategic environmental assessment indicates that the allocation is likely to have mixed effects, with negative impacts on air quality and climate but positive impacts on

material assets and population. From my observations of the site and surroundings, I consider that the site should remain a feature of the plan. While development design requires to be carefully considered, as the site lies on sloping ground, there appears to be no impediment to its development other than the resolution of the ownership constraint; it is sufficiently large to ensure that a satisfactory layout, siting and design of development can be achieved whilst safeguarding the amenity of existing residents; there is scope to enhance the existing landscape and provide boundary planting; vehicular access is readily achievable from School Brae and School Street; and, measures exist to secure financial contributions towards the provision of essential infrastructure. Furthermore, as the council notes, New Pitsligo is served by a range of local services and facilities and is an appropriate location for new development.

20. I note the concerns in representations regarding the number of houses that could be built on the site. However, I also note, as set out in Policy H1, paragraph H1.3, the site capacities expressed in the proposed plan are indicative. The paragraph also states that higher densities of development need to be justified, which may be through an approved masterplan which has been subject to appropriate public consultation. I consider that the detailed concerns of local residents are best addressed in this context and/or at the subsequent planning application stage.

21. With regard to flood risk, I note that SEPA does not object in principle to the allocation. The amendments sought to the proposed plan would highlight the potential flood risk associated with surface runoff from the adjacent sloping land to the west. A modification is recommended. I consider that the amendments requested by NatureScot would be consistent with the aim of the plan to promote walking and cycling and policies P1 (Layout, Siting and Design) and P2 (Open Space and Access in New Developments). They would also help address some of the concerns raised in other representations regarding impacts on transport and amenity. I agree that the allocation summary should be modified along the lines suggested in NatureScot's representation.

22. While noting the concerns of local residents, for the reasons set out above, I conclude that the site should remain a feature of the plan. I recommend modifications below to address the concerns of the statutory consultees.

Non-allocated Bid Site BU034: part of P1 east of Low Street

23. I agree with the council's assessment of the site and that it should not be included in the plan; it lies beyond the settlement boundary and is bound on two sides by mature woodland, which the council states includes ancient woodland, part of which is subject to a Tree Protection Order. Whilst the representation is supported by a drawing indicating the extent of tree canopies, it is not supported by a tree survey or measures to protect the trees from development. Furthermore, as we conclude in Issue 5, sufficient land has been identified in the Rural Housing Market Area to meet identified needs. No modification to the proposed plan is required in response to the representation.

St Combs

Flood Risk

24. The amendment sought by SEPA draws attention to the presence of a small watercourse alongside site OP1. I consider the addition of the suggested text necessary to provide clarification on matters relating to the potential risk of flooding. A modification

is recommended.

Site OP2: land north of High Street (to be renamed site west of Milburn Avenue)

25. Part of the site benefits from planning permission for 19 dwellings with vehicular access taken directly from High Street. The approved site layout also includes provision for vehicular access through the site to serve land directly to the north (allocated site OP1) and west (land forming part of allocated site OP2). At my site inspection, I noted that site investigation works have commenced.

26. I agree with the council that the need for a masterplan is not determined solely by the size of a site or the number of dwellings being proposed; a masterplan is required where the development of a site or sites require co-ordination to ensure that they are successfully developed. In this instance, one site is reliant on the other for vehicular access and footpath/cycle paths are required to create connections and integrate the sites with the village. I also agree with the council that reference to the requirement for a second access should not be removed; again, the requirement for such is not determined solely by the number of dwellings proposed, rather it is to ensure good connectivity with the surrounding area. On this basis, I do not agree with the representee that the supporting text to the proposal should be modified.

Non-allocated Bid Site BU035 – land to west of St Combs

27. I broadly agree with the council's assessment of the site. The promoted site is large, particularly so in comparison with the existing settlement. The representee suggests that the site is capable of accommodating over 100 houses which, as the council notes, would place significant pressure on existing services, including school facilities. Furthermore, as we conclude in Issue 5 in this report, sufficient land has been identified in the Rural Housing Market Area to meet identified needs. No modification to the proposed plan is required in response to the representation.

St Fergus

Flood Risk

28. SEPA has advised the council that site OP1 does not lie within a flood risk area and that the bullet point under the heading 'Flood Risk' should be modified. I agree that the plan should be modified to reflect the nature of the flood risk in St Fergus. I recommend a modification below.

Site OP1: land south of Newton Road

29. The site is the subject of two representations; one seeking its removal from the proposed plan, the other an increase in the site's estimated capacity from 38 to 55 houses. The first representation argues that the site is constrained and is unlikely to make a contribution to meeting the strategic housing land requirement. However, I note that planning permission was granted for 20 houses on the eastern half of the site in June 2020 and, as I observed at my site inspection, development has commenced. Table 3 in appendix 6 of the proposed plan indicates that 25 homes on the site are included in the 2019 effective housing land supply and the remaining 13 have been identified as contributing towards the strategic development plan allowance for the Rural Housing Market Area. Given that the site is under construction, I consider it reasonable to

conclude that the remaining capacity of the site can be delivered by 2032. No modification is required.

30. The second representation seeks to restore the site capacity to that expressed in the existing plan, that is, 55 houses. The council explains that the reduced site capacity is due to land drainage constraints. I have not been presented with any evidence that challenges the council's position on this matter. No modification to the proposed plan is required in response to the representations.

Non-allocated Bid Site BU015: land at Kinloch Road

31. The landowner seeks the inclusion of the site in the proposed plan for residential development (the Main Issues Report refers to a proposal of 25 houses). At my site inspection, I noted that Kinloch Road is a narrow road that falls considerably once beyond properties at Orchard Bank before turning sharply at the recreational field; at which point a new access is being constructed to serve development on site OP1. I agree with the council that without significant improvement, Kinloch Road would be unable to safely serve a development of the scale envisaged.

32. In June 2021, I note that the council granted planning permission to the landowner to erect three dwellings on that part of the site which fronts Kinloch Road. The scale of the development is such that, other than for the creation of a lit footpath from the proposed housing to the new access serving site OP1, no alterations to Kinloch Road were required. No modification to the proposed plan is required in response to the representation.

St Fergus Gas Terminal

Vision

33. I agree that the settlement statement vision should be modified to include reference to low carbon related development and recognise that not all development would necessarily contribute towards local employment. I recommend below a modification as sought by National Grid.

Site R1

34. With regard to the settlement features table, whilst National Grid has provided a form of words that it wishes to see incorporated into the proposed plan, I agree with the council that the purposes for which the land has been reserved should be written as broad as possible, so as not to preclude other suitable uses that may come forward during the plan period. I recommend below a modification as suggested by the council.

Flood Risk

35. SEPA has requested amendments to the flood risk bullet points which would more accurately reflect the extent of the flood risk and explain the purpose of the required buffer strips. I agree that the plan should be modified accordingly.

Strichen

Health and care facilities

36. NHS Grampian seeks a modification to the settlement statement in respect of medical facilities to serve the residents Strichen, which are located in Maud and New Pitsligo. I agree that the health and care facilities bullet point should be amended to more accurately reflect the improvements required to support new development in Strichen. A modification is recommended based on the wording provided by NHS Grampian.

Site OP1: west of Burnshangie House

37. A representation seeks the removal of the site from the proposed plan; citing concerns about accessibility, effects on trees and loss of habitat. I have inspected the site and surroundings and agree with the council that the issues raised are capable of being resolved; access to the site can be achieved from Burnshangie Road and Hospital Brae; the site is sufficiently large to incorporate a buffer strip to protect the trees that bound the site to the west; and, provisions exist within the proposed plan to ensure that planning applications are supported by the necessary assessments, including bat and habitat appraisals. I consider that the site should remain a feature of the plan. No modification to is required in response to the representation.

Site OP2: Hospital Brae

38. A representation seeks the removal of the site from the proposed plan, which is located close to proposed site OP1; arguing that it is located at the top of a steep road with a blind corner, which would be unable to accommodate the traffic generated by its development and that on the nearby proposed site OP1. The representation also cites concerns regarding tree and habitat loss.

39. I consider it reasonable to assume that the majority of traffic generated by development on allocation OP1 would choose to access the site via Burnshangie Road. Also, the supporting text to allocation OP1 refers to the need to create a 'loop' between Burnshangie Road and Hospital Brae, which would provide an alternative route to Hospital Brae. As such, the level of traffic using Hospital Brae would most likely be less than that cited in the representation. With regard to other matters raised, as I note above, provisions exist within the proposed plan to ensure that future planning applications are supported by necessary assessments, including bat and habitat appraisals. I consider that the site should remain a feature of the plan. No modification to is required in response to the representation.

Site OP3: land at Brewery Road

40. Representations seek the removal of the allocated site from the proposed plan; citing inadequate access arrangements and adverse effects on residential amenity. In addition, NatureScot has concerns regarding the development of the site, noting that the area contributes to the landscape setting of the village, is highly visible from High Street and that development would give rise to significant landscape and visual impacts.

41. At my site inspection, it was apparent that the point of access shown on the Strichen settlement statement map would be inadequate to serve housing development on the site. In response to matters raised in representations, the council refers to the acceptability of alternative access arrangements. However, I was not directed to those arrangements nor, would it appear, were they made available for public comment whilst the proposed plan was on deposit. To clarify matters, I sought further information from the council, site

promotor and representees on the issue of vehicular access to the site (FIR005).

42. As noted by NatureScot, the site is clearly visible from within the village, most of which is a designated conservation area. From Water Street, in particular, the site appears as part of the open countryside framed by trees and mature woodland.

43. In response to my further information request, the council has confirmed that the intended point of access to the site is through the curtilage of Milmont, a residential property in the ownership of the site promotor, located further to east on Brewery Road. The existing informal field entrance, shown as the point of access on the settlement statement map, would be used for emergency access and as a cycle/footpath. The council acknowledges that it should have amended the site allocation boundaries in light of the revised access proposals lodged by the site promotor. The council adds, its road development team has considered the alternative access arrangements and that the requirement for a new junction, including footway provision, to an adoptable standard, is highlighted in the allocation summary; however, the detailed response of the road development team has not been made available for my consideration.

44. The council explains that site capacity has been established through an assessment of the proposals against the requirements of its Standards for Road Construction and Adoption (2015). Based on the information provided, and in the absence of confirmation that a fire tender could access the site via the emergency access from Brewery Road, development on the site would be restricted to 49 houses.

45. Although unaware of the location of the alternative access point at the time of my site inspection, I did walk the length of Brewery Road from Bridge Street as part of my consideration of this matter and bid site BU009 (see below). In doing so, I noted that Milmont and The Coach House sit below the level of Brewery Road as it rises to the west. As to whether this is an impediment to a vehicular access being created or would affect Milmont to the extent that it would necessitate its demolition is unclear from the material presented to me. It is also unclear, based on the drawing reproduced by the council (FIR005, figure 1), the effect a new road in this location would have on the protected woodland, which lies immediately beyond the boundaries of Milmont. Finally, and importantly, it is unclear whether the owner/occupier of The Coach House is aware of the revised access proposals or has had an opportunity to engage in this exercise; there is no indication in the council's response, or that from the site promotor, to suggest that this is the case. If the proposed plan allocation summary and settlement statement map is taken at face value, it would not be apparent to the reader that an access road intended to serve a development of 49 houses would be located between Milmont and the Coach House to serve housing beyond.

46. I agree with NatureScot that the site is highly visible and makes a valuable contribution to the landscape setting of the village. Despite reference to the requirement for strategic landscaping to minimise the visual effects of new development, the rising landform of the site is such that it would nevertheless remain visible and prominent as it rises up the hillside when seen from the village, particularly Water Street. I consider that such an effect would be significant and erode the landscape setting of the village.

47. Given the uncertainty of achieving an acceptable vehicular access, I am not satisfied that the site can be regarded as effective. The council has confirmed that failure to deliver the development on the site would not compromise the proposed plan meeting the

housing land requirement in the plan period, which it considers to be in surplus.

48. In conclusion, taking account of the all matters discussed above, I consider that the allocated site should be removed from the proposed plan. As noted by a representee, in allocating sites, planning authorities should be confident that land can be brought forward for development within the plan period (Scottish Planning Policy 2014, paragraph 119). However, the responses to FIR005 suggests that there is uncertainty that an acceptable access can be achieved without adverse impacts on amenity, including the protected woodland. Also, I am uncertain that the owners/occupiers of The Coach House have had an opportunity to engage in this matter; it is entirely possible that they haven't given that the property does not directly bound the allocated site and the error of showing the access on the settlement statement map as being located elsewhere. I also conclude that development of the site would have a significant effect on the landscape setting of the village.

49. For these reasons, I recommend a modification below that removes the site from the proposed plan. An amendment is also required to remove allocation Strichen OP3 from the relevant table in Appendix 6. Our conclusions on the implications of this change for the overall housing land provision are addressed in Issue 5 (shaping homes and housing).

Non-allocated site: BU009: land at Norwood Field, north of Brewery Road

50. The site incorporates and extends beyond allocated site OP3 to align with field boundaries to the north and west. The bid sought an allocation for 100 houses. The council's response, as set out in the Main Issues Report, notes that the site is inaccessible and consequently considered the site undeliverable. On this basis, the council resolved not to promote the site in the proposed plan. The alternative access proposals to serve allocated site OP3, which I discuss above, emerged after the preparation of the Main Issues Report.

51. In its response to FIR005, the council notes that the Standards for Road Construction and Adoption (2015) require the provision of two access points to serve a development of 100 houses. As I note above in my assessment of allocated site OP3, it is unclear whether a vehicular access to serve half this number of houses is achievable without adverse impacts on amenity. In addition, my conclusions above that the site is prominent and its development would have a significant effect on the landscape setting of the village are equally pertinent to this site. For these reasons, I conclude that the proposed plan should not be modified in response to the representation.

Reporter's recommendations:

Modify the local development plan by:

Crimond

1. Adding the following second bullet point in the flood risk section of the Crimond settlement statement in page 292:

“• Due to the presence of small watercourses running through or adjacent to the site a Flood Risk Assessment will be required to support proposals for site OP2”

2. Removing site OP1 (south of the Corse) from the Crimond settlement statement by deleting the site from the table of allocations and from the settlement statement map on

pages 294 and 295 of the proposed plan, respectively. (The settlement boundary should also be amended accordingly.)

3. Deleting the entry for Crimond OP1 from the relevant table in Appendix 6 for sites in the Rural Housing Market Area. (Note: a revised version of Appendix 6, incorporating all the recommended modifications, is provided at the end of this report).

4. Replacing the second, third and fourth sentences of the first paragraph of the allocation summary for OP2 (Land west of Crimond Medical Centre) in the Crimond settlement statement on page 294 with:

“Due to watercourses flowing to the east, north and west of the site, a Flood Risk Assessment will be required. Buffer strips will be required along the watercourses and should be positively integrated into the open space to minimise flood risk and enhance the landscape and wildlife corridor.”

5. Delete the first sentence of the second paragraph of the allocation summary of site OP2 (land west of Crimond Medical Centre) in the Crimond settlement statement on page 294 of the proposed plan and replace with five new sentences. Also, delete the existing fourth sentence, which reads, ‘Appropriate screening is required to the north and south of the site’. The beginning of the paragraph should then read:

“The site lies in a prominent ‘gateway’ location. Housing design should be of a high standard and sympathetic to its surroundings. New development should be concentrated towards the south-east part of the site to ensure that it integrates well with the settlement. Appropriate landscape screening and buffer strips must be provided along the site’s northern and western boundaries where watercourses flow. Appropriate landscaping is also required along the site’s A90(T) frontage. The layout plan must...”

New Pitsligo

6. Adding the following new heading and bullet point to the New Pitsligo settlement statement after the table of settlement features on page 340:

“Flood Risk

- Due to surface water flood risk, a flood risk assessment may be required to support development proposals on site OP2.”

7. Replacing the health and care facilities bullet point in the New Pitsligo settlement statement on page 341 with:

“• Health and care facilities: All residential development must contribute towards the creation of additional capacity at existing medical facilities in Maud or New Pitsligo.”

8. Adding the following sentence after the second sentence of the second paragraph of the allocation summary for OP2 (land at Denedoch) in the New Pitsligo settlement statement on page 342:

“Care should be taken to ensure that the siting and design of new development reflects the strong geometrical grid pattern of existing development in New Pitsligo. It is expected...”

9. Replacing the last sentence of the second paragraph in the allocation summary for OP2 (land at Denedoch) in the New Pitsligo settlement statement on page 342 with:

“A Flood Risk Assessment may be required to assess surface water runoff from adjacent land.”

10. Adding the following two new sentences at the end of the second paragraph in the allocation summary for OP2 (land at Denedoch) in the New Pitsligo settlement statement on page 342:

“Provision for active travel is required. In this regard, the site layout should incorporate links to the core path network.”

St Combs

11. Replacing the flood risk bullet point in the St Combs settlement statement on page 368 with the following:

“• A small watercourse runs to the north of site OP1, as such, there is some risk of surface water flooding on sites OP1 and OP2. Flood Risk Assessment may be required.”

St Fergus

12. Replacing the flood risk bullet point in the St Fergus settlement statement on page 372 with the following:

“• A Flood Risk Assessment may be required to support development proposals for site OP1 due to surface water flooding.”

St Fergus Gas Terminal

13. Replacing the final sentence of the ‘Vision’ in the St Fergus Gas Terminal settlement statement on page 375 with:

“Any future development should be oil, gas, carbon capture or low carbon related and, where possible, contribute towards employment within the area.”

14. Replacing the text relating to ‘Reserve Land: R1’ in the St Fergus Gas Terminal settlement statement on page 375 with:

“For major oil and gas related development at St Fergus gas Terminal, including carbon capture and storage, and hydrogen production.”

15. Replacing the flood risk bullet point in the St Fergus Gas Terminal settlement statement on page 375 with the following:

“• Parts of the site are shown to be at risk of flooding on the SEPA Indicative Flood Map. Accordingly, Flood Risk Assessments may be required to support development proposals. Buffer strips may also be required alongside watercourses. Opportunities to restore and enhance watercourses should be investigated.”

Strichen

16. Replacing the health and care facilities bullet point in the Strichen settlement statement on page 378 with:

“• Health and care facilities: All residential development must contribute towards the creation of additional capacity at existing medical facilities in Maud or New Pitsligo.”

17. Deleting allocated site OP3: Land at Brewery Road from the Strichen settlement statement and map on pages 380 and 381 and amending the settlement boundary to that shown in the existing local development plan at this location.

18. Deleting the entry for Strichen OP3 from the relevant table in appendix 6 for sites in the Rural Housing Market Area. (Note – a revised version of appendix 6, incorporating all

the recommended modifications, is provided at the end of this report.)

No modification sought (PP1219).</p> <p>A representee has requested amending the health and care facilities section to state that contributions should go towards the creation of additional capacity at existing medical facilities or a new health centre in Cruden Bay, and towards pharmacy facilities (PP1223).</p> <p><u>Site OP1 – Land at Nether Backhill</u></p> <p>SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site OP1 (RD0214.B). No modification sought (PP1219).</p> <p><u>Non-Allocated Site – Bid Site BU001 – Nether, Backhill</u></p> <p>A representee has requested allocating land that was identified in the Main Issues Report 2019 (MIR) for bid site BU001 for development. They state it could be an extension of site OP1 or a separate opportunity site (PP1301). The representee has included a plan in their submission (RD0256.A) which provides further detail to support their position</p>	

(PP1301).

Auchnagatt

Flood Risk

SEPA has recommended adding a second 'Flood Risk' bullet point relating to sites OP1 and R1 as they lie within SEPA's Indicative 1:200 flood risk area and have a small watercourse adjacent to them (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has recommended amending the 'Strategic drainage and water supply' bullet point to state that the existing waste water treatment plant is at capacity (RD0214.B) (PP1219).

NHS Grampian has requested inclusion of a statement on health care facilities be added to the Services and Infrastructure section (PP1223).

Site OP1 – Land at North of Braemo

The representee has expressed their support for site OP1 and commented on the need for a Flood Risk Assessment and potential flood issues affecting the site. They note the issues relating to a blocked culvert can be addressed by maintenance or diverting the culvert over neighbouring land, any flooding issues associated with Ebrie Burn can be investigated and mitigated. No modification sought (PP0840).

A representee requested the removal of site OP1 from the Auchnagatt Settlement Statement and from table 3, Appendix 6 Housing Land Allocations. It is argued that the site has been recorded in the Housing Land Audit (HLA) as constrained due to infrastructure and marketability during the interim period from the granting of planning permission in January 2016 and the publication of HLA 2019. The constraint on infrastructure is not noted in the HLA 2019. The last planning permission has now lapsed (PP1031).

It is argued that the site has been recorded in the Housing Land Audit since 1995 and the site has been remaining as a constrained site for a long period of time. The last planning permission expired and there is questionable demand to justify an allocation of this scale. It is constrained due to infrastructure and ownership.

SEPA has stated that they will object to site OP1 if the allocation summary does not convey the scale of flood risk at the site, which will be a major constraint in proportion to the size of the site. They also noted that while the Strategic Flood Risk Assessment (SFRA) identifies flooding for this site, the allocation summary implies that SuDS and a buffer will mitigate this flood risk. However, this site is at significant fluvial flood risk and a Flood Risk Assessment is required to assess the fluvial flooding that is likely to affect the site (RD0214.B) (PP1219).

Site OP2 – Land at Annochie Place

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219).

Two representees have objected to the inclusion of site OP2 (PP1099 and PP1392).

It is argued that the site has been recorded in the Housing Land Audit since 1995 and the site has been remaining as a constrained site for a long period of time. The last planning permission expired and there is questionable demand to justify an allocation of this scale. It is constrained due to infrastructure and ownership. There is no waste water treatment works available and the timescale to resolve these constraints is unknown (PP1031 and PP1099).

The development of site OP2 would double the size of Auchnagatt. There are few services and limited public transport available. The school is at near capacity. The existing septic tank is not large enough. Concerned about house type and tenure (mostly small households of three or less in Auchnagatt), road access, and increase in traffic and air pollution given Auchnagatt's rural location and most occupants will require a vehicle to commute (PP1392).

Cruden Bay

Site R1 – Marks the proposed strategic landscaping required for site OP1 and OP2

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R1 (RD0214.B). No modification sought (PP1219).

Site R2 – Safeguarded for a pedestrian path/cycleway/railway line

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R2 (RD0214.B). No modification sought (PP1219).

A representee has objected to the allocation of site R2 because this is a protected area for wildlife. This allocation will affect the privacy of the representee's home, compromise the security to the rear of their property and the path is too close to the rear side of the properties on Braehead Drive. It is suggested that an alternative route should be found (PP0073).

Site R3 – For potential expansion of the school

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R3 (RD0214.B). No modification sought (PP1219).

Site R4 – For a medical facility

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the designation summary for site R4 providing the amendment to the 'Flood Risk' section is made. Otherwise, they request amending the designation summary to state why a Flood Risk Assessment is required (RD0214.B) (PP1219).

NHS Grampian has welcomed the inclusion of site R4 for a medical facility. No modification sought (PP1223).

Flood Risk

SEPA has recommended amending the 'Flood Risk' bullet point to include an additional sentence highlighting that parts of the settlement may be at risk from coastal flooding (RD0214.B) (PP1219).

SEPA has recommended adding a new 'Flood Risk' bullet point to highlight the need for a Flood Risk Assessment for sites OP2 and R4 due to the presence of a watercourse (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

NHS Grampian has requested amending the health and care facilities section to state that contributions should go towards the creation of additional capacity at existing medical facilities or a new health centre in Cruden Bay, and towards pharmacy facilities (PP1223).

Site OP1 – Land at Aulton Road

SEPA has requested that for site OP1 the last three sentences in the third paragraph are replaced to accurately state the source of the flood risk and when a Flood Risk Assessment may be required (RD0214.B) (PP1219).

Site OP2 – South of Aulton Road

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP2 providing the amendment to the Flood Risk section is made. Otherwise, they request amending the allocation summary to state why a Flood Risk Assessment is required (RD0214.B) (PP1219).

Non-Allocated Site – Bid Site BU066 – Captain's Cabin, Aulton Road

The representee has expressed their support for the amendment of the Cruden Bay map that includes a site at the southern edge of a settlement, which recently acquired planning permission (APP/2019/0798). No modification required (PP0146).

Fetterangus

Flood Risk

SEPA has recommended amending the 'Flood Risk' bullet point to replace the existing text to accurately state the source of the flood risk and when a Flood Risk Assessment may be required for sites OP2, OP3 and R1. They also recommended highlighting that a buffer strip is required for site R1 (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply'. No modification sought (RD0214.B) (PP1219).

Site OP1 – Land North of Ferguson Street

A representee has requested reducing the allocation of site OP1 from 26 to 6 homes to reflect the Aberdeenshire Housing Land Audit 2019 (HLA). The Aberdeenshire Housing Land Audit 2019 (HLA) indicates that the residual effective capacity of this allocation is just 6 houses, with the remaining 20 houses constrained due to lack of access (PP1111). SEPA has advised amending the text on the third paragraph to remove references to buffer strips because SEPA is not aware of any watercourses at or around the site boundaries and the SFRA did not identify any either (RD0214.B) (PP1219).

Site OP2 – Land Adjacent to Playing Fields

A representee has requested removing site OP2. They state that the HLA 2014 and HLA 2019 show that this site was constrained on the grounds of ownership, it is not an attractive site or viable for developers and no planning application has been submitted since it was allocated. Therefore, it is unlikely to be delivered in this Proposed Plan period. They suggested an alternative and effective allocation should be made in the Local Growth Area of the Rural or Aberdeen Housing Market Areas (PP1112).

SEPA has requested amending the third and fourth paragraphs in relation to buffer strips and Flood Risk Assessments (RD0214.B) (PP1219).

Historic Environment Scotland (HES) is concerned that site OP2 could affect the setting of two scheduled monuments, Fetterangus Church and Fetterangus Church symbol stone, as the allocation would bring housing closer to the monuments (around 215 metres east of site OP2). They have requested that consideration is given to mitigating the impact through sensitive housing design and using landscaping, such as using trees in the western section of the allocation to screen the development from view, in line with HES Setting guidance (PP1343).

Site OP3 – Land East of Gaval Street

A representee has supported this allocation, which is sufficient in scale and capacity to meet the demand of this small rural settlement. No modification required (PP1112).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP3 (RD0214.B). No modification sought (PP1219).

Longside

Flood Risk

SEPA has recommended amending the 'Flood Risk' bullet point to state the sources of flood risk and that a Flood Risk Assessment may be required for sites OP1 and OP2 (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Land off Station Terrace

Objections to site OP1 have been raised on the grounds of road safety issues, lack of access to public transport, detrimental impact on amenity for local residents, lack of demand, increased traffic and that there are lanes with limited/no pavements (PP0330 and PP0333). Concern has also been raised at the proposed new junction on Station Road due to lack of visibility and road safety (PP0330). Another representee is concerned with the new junction at Auchlee Farm Road as the existing road has a blind bend, and with the limited pavements would have a detrimental impact on road safety (PP0333). The site will result in car dependency as the distance to the nearest bus stop is almost one mile (PP0333).

It is also reported that the PLDP states that site OP1 is an allocation for 30 homes, but the Strategic Environment Assessment states 50 homes, so clarity is required. Station Road should be changed to Station Terrace in paragraph two (PP0333).

One representee has argued that site OP1 is unlikely to accommodate 30 homes, as the site context and location demand, lower-rise development, and that the eastern boundary of the site should be as was shown in the original bid site (BU029). They add, a lower-density development would still allow for affordable housing but also for more open space and biodiversity enhancement areas, particularly adjoining the Formartine & Buchan Way. This would provide the opportunity to exceed LDP open-space requirements and create a highly desirable area in which to live (PP0394).

SEPA has requested amending the allocation summary on buffer strips (RD0214.B) (PP1219).

Site OP2 – Land off Inverquhomery Road

SEPA has noted that the SEPA Indicative Maps show surface water flooding affecting site OP2 and have requested that the last two sentences in the allocation summary are replaced to state that “a Flood Risk Assessment may be required due to the presence of surface water flooding.” (RD0214.B) (PP1219).

Longside Airfield

General

A representee has expressed their support that the allocation has been restricted to Class 6 (storage and distribution) uses but has requested a section on oil and gas pipelines is added to the Settlement Summary. They note that the Main Issues Report 2019 (MIR) Issues and Actions Paper recommended the inclusion of text referring to the pipeline consultation zones, but this was not included in the PLDP. As such, the Settlement Statement conflicts with the approach adopted in all other settlements (PP0714).

Flood Risk

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation text in the Flood Risk section (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Longside Airfield

A representee has objected to the extent of the site because it includes the active 28/10 runway currently used by North East Aviators/Buchan Aero Club (NEA/BAC). The site plan includes the active runway and a significant area to the south of this boundary, which forms part of the active airfield and the area operated by NEA/BAC. This conflicts with the Longside Airfield statement. The allocation summary states that the site is located south of the operation airfield, but the Longside Airfield settlement map does not present the same. The operational part of the airfield is owned by Aberdeenshire Council and is subject to a long lease with CHC Scotia Ltd. NEA/BAC have a lease with CHC Scotia to act as Airfield Operators. NEA/BAC use part of the original 28/10 runway with an agreed overrun area to the west. An emergency corridor is provided for aircraft within the adjacent pipe yard. They also use a north/south facing grass runway (PP0145). The representee has included a historical plan and plan submitted by the applicant (for bid) in their submission which provides further detail to support their position (PP0386).

A representee has requested the allocation summary references Policy P4 and the Health and Safety Executive's (HSE) specific advice due to the presence of the Forties Pipeline that passes through the eastern portion of the site (PP0981).

SEPA has requested adding a statement in the allocation summary that seeks the requirement to assess the site for potential radioactive substances and a groundwater drainage assessment as the site is a former military airfield and radium 226 may be present due to its use in aircraft dials during World War Two (RD0214.B) (PP1219).

Maud

Flood Risk

SEPA has requested amending the 'Flood Risk' bullet point to accurately state the source of the flood risk and when a Flood Risk Assessment may be required for sites OP1 and OP2 (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

A representee has requested amending the health and care facilities section to state that contributions should go towards the creation of additional capacity at existing medical facilities in Maud or New Pitsligo (PP1223).

Site OP1 – Land at Castle Road

A representee has requested the removal of site OP1 unless it can be demonstrated that the required supporting infrastructure and services (e.g., water, education, road network,

and health care) can be delivered. They are concerned over the impact on already pressured services, and road and pedestrian safety from increased traffic on Castle Road. (PP0241).

SEPA has requested adding a new sentence on the need for buffer strips in site OP1, as this was identified in the Strategic Flood Risk Assessment (RD0214.B) (PP1219).

SEPA has recommended that the last two sentences on affordable housing in the last paragraph are moved to a separate paragraph (RD0214.B) (PP1219).

Site OP2 – Land West of Castle Terrace

A representee has requested the removal of site OP2 unless it can be demonstrated that the required supporting infrastructure and services (e.g., water, education, road network, and health care) can be delivered. They are concerned over the impact on already pressured services, and road and pedestrian safety from increased traffic on Castle Road. (PP0241).

SEPA has requested amending the allocation summary for site OP2 in Maud to clarify that a Flood Risk Assessment and buffer strips will and not may be required, as this is a requirement in the SFRA and restoration measures including riparian tree planting cannot mitigate the flood risk (RD0214.B) (PP1219).

Site OP3 – Land at Bank Road East

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP3 (RD0214.B). No modification sought (PP1219).

Mintlaw

Vision

The Scottish Government has requested that the PLDP indicates that development within Mintlaw will be constrained to agreed limits until such time as the necessary upgrades to Toll of Birness Junction, which links the A90(T) Aberdeen to Peterhead road with the A952 to Fraserburgh, have been identified and implemented (PP0578).

Flood Risk

SEPA has requested amending the 'Flood Risk' bullet point to accurately state the source of the flood risk. They also stated that a Flood Risk Assessment may be required for sites OP1, OP2, OP3 and OP5 (RD0214.B) (PP1219).

SEPA has also requested a separate bullet point for site BUS2 to state that a buffer strip will be required, as well as the possibility of a Flood Risk Assessment (RD0214.B) (PP1219).

In addition, SEPA recommended that site R1 is removed from the 'Flood Risk' bullet point as there is no watercourse on/adjacent to the site (RD0214.B) (PP1219).

Site BUS1

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site BUS1 (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Nestrans has highlighted the importance of linking future developments in Mintlaw to improve the A90(T)/A952 Toll of Birness junction. No modification sought (PP1241).

The Scottish Government has requested that the PLDP and Delivery Programme clearly detail the required scheme to upgrade the Toll of Birness Junction, its cost, how it will be delivered, and if this will include developer contributions to ensure delivery within the appropriate timescale in accordance with Scottish Planning Policy (SPP) and Circular 3/2012 Planning obligations and good neighbour agreements. The Scottish Government is concerned that the information within the PLDP and Delivery Programme provides a contradictory message on delivery and funding and does not provide the clarity with regard to the requirement for improvements to deliver development within the settlement of Mintlaw. They also note that while the PLDP does state the requirement for all new development to contribute towards an upgrade of the A952/A90, Toll of Birness junction, no detail is provided on the nature and scale of upgrade, its associated costs, how contributions would be gathered and how it would be delivered in accordance with SPP and Circular 3/2012 (PP0578).

Site OP1 – Land at Nether Aden

A representee does not object to site OP1 in principle but has requested that the agreed infrastructure for the original development (e.g., play equipment, bus stops, well-lit paths), as required in the agreed planning permission and the 2012 masterplan is installed before any further development is undertaken. Safety concerns have also been raised as there are no pavements along narrow roads and parking is inadequate (PP0072).

A representee has requested the new retail facilities that are to be provided as part of a development are restricted to a maximum floorspace level to prevent ambiguity with the reference to 'neighbourhood' and allow adequate assessment of retail impact on existing centres (PP0558).

SEPA has requested correcting a typo in the second sentence of the fourth paragraph to read "buffer strips" (RD0214.B) (PP1219).

Site OP2 – Land at Northwoods

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219).

A representee has requested reducing the allocation for site OP2 from 600 to 380 homes to reflect completions provided in the Housing Land Audit (HLA) 2019 and the available contribution to the effective housing land supply to the end of 2032. They note at an

average build rate of 20 houses per annum the site will not be built out until 2044 (PP1054).

Two representees have requested that the allocation summary be amended to that public transport infrastructure should be provided on Blaring Road or the A952 to serve sites OP2 and OP6. They also add it would be detrimental to woodland on the A952 (PP0734 and PP0738).

Site OP3 – Former Artlaw Crescent/Nether Aden Road

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP3 (RD0214.B). No modification sought (PP1219).

Site OP4 – Land South of Sutherland Drive

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP4 (RD0214.B). No modification sought (PP1219).

Site OP5 – South of Nether Aden Road

A representee has requested that site OP5 is removed as it is constrained for marketability, which is evidenced in the HLA 2019, and there is no confidence that this site will be delivered in this Plan period due to other large sites currently being delivered (PP1412).

SEPA has recommended the removal of the last sentence of the third paragraph of site OP5 in relation to retention of trees, as this requirement is repeated in the second the paragraph (RD0214.B) (PP1219).

Site OP6 – Land North of Balring Road

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP6 (RD0214.B). No modification sought (PP1219).

Two representees have requested that the allocation summary is less restrictive on the retention of trees along Balring Road, as this road needs to be upgraded to an adoptable standard to accommodate this development. They suggest the allocation summary should state that tree loss should be minimised and allow for compensatory planting (PP0734 and PP0738).

Two representees have requested that the allocation summary states that public transport infrastructure should be provided on Blaring Road to serve this site. They also add it would be detrimental to woodland on the A952 (PP0734 and PP0738).

Non-Allocated Site – Bid Site BU033 – Land East of OP3

A representee has requested that site OP3 be extended to include bid site BU033 for an additional 30 homes. It is argued that this extension will make site OP3 more viable to developers, and the bid site is close to a bus route, primary school, and amenities (PP0537).

Non-Allocated Site – Bid Site BU048 – Land at Longside Road, north east of Mintlaw

School

NHS Grampian has requested that bid site BU048 be allocated for healthcare facilities. NHS Grampian has indicated that two sites were proposed at the “call for site” stage and site BU048 was identified as an Officer’s preference in the MIR and was allocated as Future Opportunity Site (FOP 2) in the draft Proposed Local Development Plan. However, this site is not taken forward in the Proposed LDP and therefore, there needs to be a site identified within Mintlaw, which is centrally located and close to public transport routes (PP1223).

New Deer

General

This Settlement Statement contains many ‘in vogue’ words and phrases which are meaningless without explanation, such as “vision” and “aspiration” (PP0001).

Vision

A representee has stated that there is no A991 and seeks clarification on which road is being referred to and more details on where the path network starts and ends. They also have requested a plan of the proposed path (PP0001).

The representee has queried as to why there is an aspiration for a road through protected land, P2 as this would conflict with the purpose of the protective designation (PP0001).

Site R1 – For a 2m wide strip of land to allow for a footway link to the New Deer showground

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R1 (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on ‘Strategic drainage and water supply’ (RD0214.B). No modification sought (PP1219).

A representee has requested amending the health and care facilities section to state that contributions should go towards the creation of additional capacity at existing medical facilities in Maud or New Pitsligo (PP1223).

Site OP1 – Land at Fordyce Road

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

Site OP2 – Land at Auchreddie Road East

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219).

Clarity is sought as to how these sites would be sold on a plot-by-plot basis and how this can contribute towards affordable housing. Furthermore, explanation is required as to how affordable housing can be integrated into an early phase of the development (PP0001).

Site OP3 – Land at Auchreddie Croft

A representee has expressed support for site OP3 for 30 homes. They noted that wayleaves have been obtained for access, sewage, and surface run off water. No modification required (PP0395).

A representee has requested removing site OP3. They state that the HLA 2019 show that this site was constrained on the grounds of marketability. There are alternative sites within the settlements that are likely to progress in the Plan period and would meet the demand of homes, hence, it is not an attractive site or viable for developers. Therefore, it is unlikely to be delivered in this Proposed Plan period. They suggested an alternative and effective allocation should be made in the Local Growth Area of the Rural or Aberdeen Housing Market Areas (PP1040).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP3 (RD0214.B). No modification sought (PP1219).

A representee has noted that the scale and number of homes on site OP3 has been reduced from 40 to 30 homes but has requested reasons for increasing the density of the site (PP0001). The representee also requested clarity on the meaning of “pedestrian permeability” in the allocation summary and how it is achieved (PP0001). Clarity on the definition of public transport infrastructure, i.e., if it is a bus stop or interchange being sought (PP0001).

Non-Allocated Site – Bid Site BU021 – Land South of Fordyce Terrace

A representee has requested the allocation of bid site BU021 for 40 homes and the removal of site P2 to facilitate this proposal. They argue this bid site should be supported for the following reasons:

- Site P2 is currently agricultural land and not open space or available for public use;
- The site benefits from its location within the settlement boundary and is close to services and facilities;
- It will not affect the setting of the listed church and adjacent buildings, as the site is at a lower level;
- The site is surrounded by existing housing and the site would be readily absorbed into the landscape/townscape;
- The PLDP acknowledges there is scope for further new development in New Deer;
- The PLDP indicated site P2 could be developed as a new link road meaning the Council is supportive of development at this location;
- This site would help facilitate the aspirational road link, which would provide further local community benefits;
- The site is available, viable, deliverable and does not present challenges in terms of topography or gradient; and
- It would be a sustainable and high-quality development that would complement existing housing and meet the objectives of the settlement and local housing needs

(PP1319).

Non-Allocated Site – New Site N018 – Land at Auchreddie Croft

A representee has requested the allocation of a new site N018 for a minimum of 10 homes. They argue that there will be a shortfall of housing in New Deer as existing sites OP1 and OP2 are progressing, and site OP3 has been reduced from 40 to 30 homes. Access to site OP3 is through this site, the 10 homes eliminated from site OP3 could be allocated on this new site. This site is available for development and it will not prejudice the adjoining Community Association land. The representee has included a site layout plan (RD0057.A) in their submission which provides further detail to support their position (PP0400).

Old Deer

Site R1 – For a community purpose (cemetery extension)

SEPA has requested that site R1 requires a detailed groundwater assessment due to the likely hydraulic connectivity of this site to the Cock Burn (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Land at Abbey Street

A representee has expressed their support for the housing allocation for site OP1 but have requested that the number of homes is increased from 10 to 15, which was supported in the MIR. They state local residents would benefit from more housing, the site is effective, viable and deliverable for housing with no challenges in terms of topography or gradient and would follow the pattern of development in the surrounding area. It would respect the surrounding environment and the design would reflect scale, form and density of existing residential developments in the surrounding area. It would also create a more sustainable and higher quality development that would meet the objective of the settlement and meet the housing needs (PP1320). The representee has included an extract from the MIR in their submission which provides further detail to support their position (PP1320).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

Site OP2 – St Drostan's Eventide Home

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219).

Rora

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage

and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Land at The Park

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

Settlement Plan

A representee has requested amending the boundary of site OP1 to reflect the approved planning application (now expired), APP/2015/0056. They argue it provides for the possibility of a village green, integrates better with the existing settlement, and provides for an appropriate gradual development of the settlement (PP1087). According to the HLA 2019, the site is constrained due to marketability.

Stuartfield

Flood Risk

SEPA has recommended removing site P6 from the 'Flood Risk' bullet point (RD0214.B) (PP1219).

Site P2 – To protect the pond and open space as amenities for the settlement and to protect the area as a significant contribution to the character of the place

The allocation text for P2 should be amended to protect the water supply and sluice gate as part of the historic nature of the B listed Quartalehouse Mill (PP0719).

Site R1 – For a sustainable drainage system

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R1 (RD0214.B). No modification sought (PP1219).

Site R2 – For sports, recreation and community facilities

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R2 (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – North of Knock Street

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

A representee has requested that the required link road (or part of) for site OP1 to the B9030 at site P7 should be planned and completed as a matter of urgency. They note that the existing road is narrow and unsuitable for heavy vehicles, which is damaging the

category B-Listed Waulkmill, Quartalehouse Mill and caused the collapse of the riverbank. They also highlight the potential impact on field drains/walls and vibration damage to the sewage pipe and to recreational users (PP0717).

A representee has requested increasing the number of homes allocated on site OP1 from 75 to 100 homes for the following reasons:

- Increasing the site capacity was supported by the Buchan Area Committee on 3 September 2019 before it was reduced to 75 homes at Full Council on 5 March 2020 due to insufficient capacity at Stuartfield Primary School.
- There will be sufficient capacity at Stuartfield Primary School, which the School Roll Forecast 2019 shows is at 82% capacity, as the annual build rate has reduced since the HLA 2019 was published and there are no other allocations in Stuartfield.
- School capacity should not be a reason for capping development as the Local Authority is obliged to resolve these issues and developer obligations from the site has built a recent extension.
- An additional 25 homes are a more efficient use of land, which is more consistent with the density target in the Aberdeen City and Shire Strategic Development Plan.
- It does not represent over-development and the remaining unbuilt area for 33 units is enormous.
- The agreed masterplan notes the site can accommodate more than 75 units and an increase may improve the layout (PP0739). The representee has included a proposed site layout plan in their submission which provides further detail to support their position (PP0739).

Two representees have requested that the number of homes on site OP1 is reduced to 43 homes to reflect the number of homes completed in the HLA 2019 (PP0718 and PP1068) and avoid overstatement of the available land supply (PP1068) or the site is limited to 75 homes (PP0718). A representee reported that the primary school is already constrained by this development despite the school extension and additional housing will strain the limited capacity, and there is insufficient capacity at the waste water treatment works to service additional housing (PP0718).

Non-Allocated Sites – LDP 2017 Site OP2 – North of Windhill Street and Bid Site BU007 – Land to the West of Stuartfield

A representee has requested either the re-allocation of site OP2 from the LDP 2017 and bid site BU007 for 25 homes or the allocation of bid site BU007 for 20 homes and this change should be reflected in Appendix 6: Housing Land Allocations. Bid site BU007 was identified as a preferred site in the MIR 2019, where it stated, the bid site is “well connected and considered to form a logical extension to the settlement. The site can be considered to be an extension of the OP2 allocation”. However, it was only identified as a Future Opportunity (reserved) site in the draft PLDP 2019. They disagree with the HLA 2019, which states site OP2 is constrained due to ownership issues, and that this site has not been developed as it is too small to be commercially viable. They also reported that the site is not at risk from flooding, as stated in the MIR and draft PLDP. Issues on education can be considered at the planning application stage using developer obligations if necessary. The representee has included the completed bid application form, Draft Proposed Local Development Plan and representation submitted for the MIR (RD0055.A, RD0055.B and RD0055.C) in their submission which provides further detail to support their position (PP0386).

Non-Allocated Site – Bid Site BU006 – Land to the West of Stuartfield

Two representees have requested the allocation of bid site BU006 for 60 homes (PP0385 and PP0398).

It is argued that this bid site is a sensible place for development and suggest a lower density development to allow more green space that would link to nearby trees and provide a benefit for the community. The only housing allocation in Stuartfield is almost built out, claiming 68 out of 75 homes are now built, which could have a negative effect on Stuartfield Primary School, as its catchment has been rezoned to resolve education issues. They also state that allocating this site will allow for topping up existing developer obligation contributions and allow the school to be extended, otherwise monies may be claimed back by developers (PP0398).

Another representee has stated that bid site BU006 connects well with Stuartfield and is a logical extension to the settlement. It is contained in the landscape, its lower density is consistent with other housing densities in Stuartfield, the site is not within a flood risk area, the existing woodland would be retained and would also screen the site, and it would provide housing choice. They also disagree with the MIR, which stated that bid site BU006 would not form a logical extension to the settlement, but for bid site BU007, which forms part of bid site BU006, it stated that this site would be well connected and a logical extension to Stuartfield. The representee has included the completed bid application form with supporting maps and representation submitted for MIR (RD0054.A and RD0054.B) in their submission which provides further detail to support their position (PP0385).

Non-Allocated Site – Bid Site BU016 – Land South of Quartale - house Farm

A representee noted that there is a sluice gate at the northeast corner of the pond that provides water exclusively to the historic water wheel at Quartalehouse Mill. Property deeds state that the property retains the right to a supply of water from the pond. No modification sought (PP0719).

A representee has requested the allocation of bid site BU016 for one home and the remainder of the site retained with landscaping and footpaths to create a gateway feature to the settlement. They argue the site is within the settlement boundary, albeit within protected land, site P1) and not countryside, as stated in the MIR. The principle of development on this site has already been accepted through the application for a house APP/2015/1330 which is now built. Site P1 is currently only open fields with no landscaping and it is not used by residents. Another single house would not have a detrimental impact on the protected area, and it would enhance the protected status. They would also accept a smaller area for the house, but this could impact on the delivery of landscaping and paths. The representee has included the completed bid application form with supporting maps and representation submitted for MIR (RD0012.A and RD0012.B) in their submission which provides further detail to support their position (PP0119).

Modifications sought by those submitting representations:

Ardallie

Services and Infrastructure

Modify the PLDP to amend the “Health and care facilities” section to replace, “All development will be required to contribute towards the extension of Cruden Medical Group Facilities (Hatton Surgery and Cruden Bay Surgery).” to “Health and care facilities: All residential development must contribute towards the creation of additional capacity at existing medical facilities or a new health centre in Cruden Bay. Contributions towards expansion of the existing pharmacy facilities or within a new facility may be required.” (PP1223).

Non-Allocated Site – Bid Site BU001 – Nether, Backhill

Modify the PLDP to allocate bid site BU001 for a residential development (PP1301).

Auchnagatt

Flood Risk

Modify the PLDP to add a second ‘Flood Risk’ Bullet point to read, “A significant proportion of site OP1 lies within SEPA’s Indicative 1:200 flood risk area and has a small watercourse adjacent to it. A Flood Risk Assessment will be required for OP1 and its associated SuDS scheme on site R1.” (PP1219).

Services and Infrastructure

Modify the PLDP to replace the first sentence in the ‘Strategic drainage and water supply’ bullet point from, “There is no available waste water treatment works capacity.” to “The existing waste water treatment plant is at capacity.” (PP1219).

Modify the PLDP to include a new statement on Health and care facilities that reads, “Health and care facilities: All residential development must contribute towards the creation of additional capacity at existing medical facilities or a new health centre in Ellon.” (PP1223).

Site OP1 – Land at North of Braemo

Modify the PLDP to remove site OP1 from the Auchnagatt Settlement Statement (PP1031).

Modify the PLDP to amend the allocation summary of site OP1 to change the fourth sentence in paragraph two from, “A Flood Risk Assessment may be required because part of the site lies within an area potentially vulnerable to flood risk as identified by the National Flood Risk Assessment.” to “The SEPA Indicative Flood Maps show 30% of the site is at risk of flooding from the Ebrie Burn. In addition, the small watercourse along the northeast boundary of the site has caused flooding to nearby houses in the past. A Flood Risk Assessment will be required to determine the capacity of this site and the site layout options. Any areas of the site found to be at risk of flooding will not be suitable for any development and will be required to be retained as greenspace which should be integrated within the development as amenity land and a green-blue corridor. SuDS for the site should be provided on reserved land to the southeast (R1).” (PP1219).

Site OP2 – Land at Annochie Place

Modify the PLDP to remove site OP2 (PP1099 and PP1392).

Cruden Bay

Site R2 – Safeguarded for a pedestrian path/cycleway/railway line

Modify the PLDP to remove site R2 (PP0073).

Site R4 – For a medical facility

Modify the PLDP to amend the designation summary for site R4 to state why a Flood Risk Assessment is required (PP1219).

Flood Risk

Modify the PLDP to amend the Flood Risk section to add a second sentence to the 'Flood Risk' bullet point to read, "Parts of the settlement may be at risk from coastal flooding." (PP1219).

Modify the PLDP to add a new 'Flood Risk' bullet point to read, "Due to the presence of small watercourses running through or adjacent to the site a Flood Risk Assessment may be required for OP2 and R4." (PP1219).

Services and Infrastructure

Modify the PLDP to replace the "Health and Care Facilities" section from, "All development will be required to contribute towards the creation of additional capacity or extension at the Cruden Medical Group facilities (Hatton Surgery and Cruden Bay Surgery)." to "All residential development must contribute towards the creation of additional capacity at existing medical facilities or a new health centre in Cruden Bay. Contributions towards expansion of existing pharmacy facilities or within a new facility may be required." (PP1223).

Site OP1 – Land at Aulton Road

Modify the PLDP to amend the allocation summary and replace the last three sentences in paragraph three from, "There is a small watercourse adjacent to the site. Any guidance provided by SEPA to mitigate flood risk must be adhered to. A Flood Risk Assessment may be required for any further development." to "Due to potential flood risk from the Water of Cruden, a Flood Risk Assessment may be required for any further development not covered by the existing masterplan and planning permission." (PP1219).

Site OP2 – South of Aulton Road

Modify the PLDP to amend the allocation summary for site OP2 to state why a Flood Risk Assessment is required, unless the Flood Risk section is amended, as requested above (PP1219).

Fetterangus

Flood Risk

Modify the PLDP to amend the 'Flood Risk' bullet point from, "Parts of sites OP2 and R1 are set adjacent to an area potentially vulnerable to flood risk as identified by the National Flood Risk Assessment. A Flood Risk Assessment may be required." to "Due to the presence of small watercourses running though or adjacent to the sites, Flood Risk Assessments may be required for sites OP2, OP3 and R1. A buffer strip will be required along the minor watercourse on the eastern boundary of site R1." (PP1219).

Site OP1 – Land North of Ferguson Street

Modify the PLDP to amend site OP1 and reduce the allocation from 26 homes to 6 homes (PP1111).

Modify the PLDP to amend the allocation summary of site OP1 to change paragraph three from, "Strategic landscaping will also be required in addition to a buffer strip adjacent to the watercourse on the southern boundary to reduce visual impact. Enhancement of these straightened watercourses through re-naturalisation and removal of any redundant features will require to be investigated. A buffer strip will be required along the northern and southern boundaries of the site to reduce landscape and visual impact." to "Strategic landscaping will be required to reduce landscape and visual impact, particularly along the northern and southern boundaries." (PP1219).

Site OP2 – Land Adjacent to Playing Fields

Modify the PLDP to remove site OP2 and allocate an alternative and effective site in the Local Growth Area of the Rural of Aberdeen Housing Market Area (PP1112).

Modify the PLDP to amend the allocation summary of site OP2 to remove the penultimate sentence in paragraph five "A Flood Risk Assessment may be required." and change paragraph four from, "Strategic landscaping is to be added along the watercourse. A buffer strip will be required adjacent to the watercourses on the northern and southern boundaries of the site to reduce visual impact. Enhancement of these straightened watercourses through re-naturalisation and removal of any redundant features will require to be investigated." to "Strategic landscaping will be required, particularly adjacent to the watercourses on the northern and southern boundaries of the site, to reduce visual and flood risk impact. A Flood Risk Assessment may be required. Enhancement of the straightened watercourse through re-naturalisation and removal of any redundant features will require to be investigated." (PP1219).

Modify the PLDP to amend the allocation summary of site OP2 to include in paragraph three mitigation measures to reduce the impact on the setting of two scheduled monuments through sensitive housing design and landscaping, such as using trees along the western section of the allocation to screen the development from view, in line with HES Setting Guidance (PP1343).

Longside

Flood Risk

Modify the PLDP to amend the Flood Risk section from, "Parts of Longside are located

adjacent to an area potentially vulnerable to flood risk as identified by the National Flood Risk Assessment. A Flood Risk Assessment may be required.” to read:

- “Parts of Longside are shown to be at risk from flooding on the SEPA Indicative Flood Map. Flood Risk Assessments may be required.
- Due to a watercourse near to the OP1 site, a Flood Risk assessment may be required.
- Due to surface water issues on site OP2, a Flood Risk assessment may be required.” (PP1219).

Site OP1 – Land off Station Terrace

Modify the PLDP to remove site OP1 (PP0330 and PP0333).

Modify the PLDP to ensure the number of homes site OP1 is allocated for is consistent between the PLDP and the Strategic Environment Assessment (PP0333).

Modify the PLDP to amend the allocation summary of site OP1 to change Station Road to Station Terrace in paragraph two (PP0333).

Modify the PLDP to amend site OP1 to match the layout proposed in bid site BU029 (PP0394).

Modify the PLDP to amend the allocation summary of site OP1 to change the fourth and fifth sentences in the first paragraph from, “No development should occur below 22.05m AOD and buffer strips will be required to mitigate landscape impact. The buffer strips should be positively integrated into the open space.” to “No development should occur below 22.05 AOD. Buffer strips will be required to mitigate flood risk and landscape impact and should be positively integrated into the open space.” (PP1219).

Site OP2 – Land off Inverquhomery Road

Modify the PLDP to amend the allocation summary of site OP2 to change the last two sentences from, “There is a risk of surface water flooding as identified by the National Flood Risk Assessment. A Flood Risk Assessment may be required.” to “A Flood Risk Assessment may be required due to the presence of surface water flooding.” (PP1219).

Longside Airfield

General

Modify the PLDP to include a new Oil and Gas Pipelines section that reads, “Oil and Gas Pipelines - Part of the settlement is within the Health and Safety Executive (HSE) consultation distance associated with one or more oil and gas pipelines in the vicinity. Developments within this distance must comply with Policy P4: Hazardous and potentially polluting developments and contaminated land, and with the HSE ‘Land Use Planning Methodology.’” (PP0714).

Site OP1 – Longside Airfield

Modify the PLDP to reduce the site boundary to exclude the 28/10 runway, 38/18 grass runway and the land to the south of the runway, which is included in the lease between the

Council and CHC Scotia. The representee also seeks confirmation that if the land to the south were to be developed, a similar agreement to be in place for the west (PP0145).

Modify the PLDP to amend the allocation summary to include, "Development on this site must accord with Policy P4 Hazardous and Potentially Polluting Developments and Contaminated Land and the Health and Safety Executive "Land Use Planning Methodology." (PP0981).

Modify the PLDP to amend the allocation summary and add the following text, "An assessment of the site for potential radioactive substances and a groundwater drainage assessment are required to be submitted." (PP1219).

Maud

Flood Risk

Modify the PLDP to amend the statement on Flood Risk from, "Parts of OP1 are located adjacent to an area potentially vulnerable to flood risk as identified by the National Flood Risk Assessment. A Flood Risk Assessment may be required." to "Due to the presence of small watercourses running through or adjacent to the sites, Flood Risk Assessments may be required for sites OP1 and OP2." (PP1219).

Services and Infrastructure

Modify the PLDP to replace the statement on "Health and Care Facilities" from, "All development will be required to contribute towards the creation of additional capacity or extension at the Mintlaw Surgery or the new Health Centre in Mintlaw." to "Health and care facilities: All residential development must contribute towards the creation of additional capacity at existing medical facilities in Maud or New Pitsligo." (PP1223).

Site OP1 – Land at Castle Road

Modify the PLDP to remove site OP1 unless it can be demonstrated that the required supporting infrastructure and services (e.g. water, education, road network, and health care) can be delivered (PP0241).

Modify the PLDP to amend the allocation summary of site OP1 to add after the fourth sentence in paragraph two, "A buffer strip will be required along any watercourse in/around the site, and around the ponds adjacent to the northern boundary. Opportunities to restore and enhance the straightened watercourse should be investigated." (PP1291)

Modify the PLDP to amend the allocation summary of site OP1 to move the last two sentences in the last paragraph to their own separate paragraph (PP1219).

Site OP2 – Land West of Castle Terrace

Modify the PLDP to remove site OP2 unless it can be demonstrated that the required supporting infrastructure and services (e.g. water, education, road network, and health care) can be delivered (PP0241).

Modify the PLDP to amend the allocation summary of site OP2 to change the last three

sentences in paragraph two from, “A Flood Risk Assessment and buffer strip may be required. Any flood risk can be mitigated through planting native trees, wildflower verges and nectar plants and this would also enhance the landscape setting. The enhancement of the straightened watercourse through re-naturalisation and removal of any redundant features will require to be investigated.” to “A Flood Risk Assessment will be required, and any areas of flood risk will be unsuitable for development. A buffer strip will be required along the length of the watercourse adjacent to the site which should be integrated positively into the development. Opportunities to restore and enhance the straightened watercourse should be investigated.” (PP1219).

Mintlaw

Vision

Modify the PLDP to indicate that development within Mintlaw will be constrained to agreed limits until such time as the necessary upgrades to the Toll of Birness junction have been identified and implemented (PP0578).

Flood Risk

Modify the PLDP to amend the ‘Flood Risk’ bullet point from, “Parts of sites OP1, OP2, OP5, R1 and BUS2 are located adjacent to an area potentially vulnerable to flood risk as identified by the National Flood Risk Assessment, or have a small watercourse running through or adjacent to the site. A Flood Risk Assessment may be required.” to “Parts of sites OP1, OP2, OP3 and OP5 may be at risk of flooding as identified on the SEPA Flood Maps or because they have a small watercourse running through or adjacent to the site. Flood Risk Assessments may be required.” (PP1219).

Modify the PLDP to include a new second ‘Flood Risk’ bullet point to read, “Due to the presence of a small watercourse, any further development at site BUS2 may require a Flood Risk Assessment. A buffer strip will be required and opportunities to restore and enhance the straightened watercourse should be investigated.” (PP1219).

Services and Infrastructure

Modify the PLDP to ensure there is consistency between it and the Delivery Programme on the detail required to upgrade the Toll of Birness junction, including its cost, how it will be delivered and if this will include developer contributions to ensure delivery within the appropriate timescale in accordance with SPP and Circular 3/2012 (PP578).

Site OP1 – Land at Nether Aden

Modify the PLDP to amend the allocation summary to ensure the delivery of amenities including play equipment, bus stops, post box, and safe well-lit paths to the village shops and schools are provided as per the approved planning permission and 2012 Masterplan, and that these are delivered before the development continues (PP0072).

Modify the PLDP to amend the reference to ‘neighbourhood’ retail by restricting it to maximum floorspace levels, and subjecting proposals to a Retail Impact Assessment where over 400sqm gross floorspace (PP0558).

Modify the PLDP to correct the typo in the second sentence of the fourth paragraph from “buffer strip” to “buffer strips” (PP1219).

Site OP2 – Land at Northwoods

Modify the PLDP to reduce the allocation from 600 to 380 homes (PP1054).

Site OP5 – South of Nether Aden Road

Modify the PLDP to remove site OP5 for 50 homes and replace it with an alternative site elsewhere in the local growth area of the Rural Housing Market Area (PP1412).

Modify the PLDP to amend the allocation summary to remove the last sentence in paragraph three: “Retention of tree belts/woodland at the boundaries of the site will be required.” (PP1219).

Site OP6 – Land North of Balring Road

Modify the PLDP to amend the allocation summary for site OP6 to change the fifth sentence in paragraph one from, “The row of trees to the north and south should be retained.” to “Any loss of trees should be minimised where possible, and any loss of trees on the Balring Road should consider suitable compensatory planting.” (PP0734 and PP0738).

Modify the PLDP to amend the allocation summary for site OP6 to change the sixth sentence in paragraph one from, “Adequate public transport infrastructure on the A952 must be provided to achieve active travel, including bus stops.” to “Public transport infrastructure should be provided on the Balring Road to serve the OP2 and OP6 developments.” (PP0734 and PP0738).

Non-Allocated – Bid Site BU033 – Land East of OP3

Modify the PLDP to extend site OP3 to include bid site BU033 for 30 homes (PP0537).

Non-Allocated Site – Bid Site BU048 – Land at Longside Road, north east of Mintlaw School

Modify the PLDP to allocate bid site BU048 as a Reserved Site for “a healthcare facility” (PP1223).

New Deer

General

Modify the PLDP to use ‘plain English’ for words such as “vision” and “aspiration” unless they are further defined (PP0001).

Vision

Modify the PLDP to replace “A991” with the correct road name (PP0001).

Modify the PLDP to clarify where the path network starts and finishes and show a detailed route of the path network. Furthermore, further details should be provided regarding the vision of the path network (PP0001).

Modify the PLDP to clarify the need for a link road through site P2 in the Vision (PP0001).

Services and Infrastructure

Modify the PLDP to replace the statement on “Health and Care Facilities” from, “All development will be required to contribute towards the creation of additional capacity of the Central Buchan Practice in New Pitsligo.” to “Health and care facilities: All residential development must contribute towards the creation of additional capacity at existing medical facilities in Maud or New Pitsligo.” (PP1223).

Site OP2 – Land at Auchreddie Road East

Modify the PLDP to clarify how Policy H2 Affordable homes will apply to serviced plots and how this can be integrated into an early phase of development (PP0001).

Site OP3 – Land at Auchreddie Croft

Modify the PLDP to clarify why the site capacity has been reduced from 40 homes to 30 homes (PP0001).

Modify the PLDP to define “pedestrian permeability” and how this be achieved (PP0001).

Modify the PLDP to clarify what “public transport infrastructure” means (PP0001).

Modify the PLDP to remove site OP3 from the New Deer Settlement Statement (PP1040).

Non-Allocated Site – Bide Site BU021 – Land South of Fordyce Terrace

Modify the PLDP to allocate bid site BU021 for 40 homes and remove site P2 from the New Deer Settlement Statement (PP1319).

Non-Allocated Site – New Site N018 - Land at Auchreddie Croft

Modify the PLDP to allocate new site N018 for at least 10 homes in the New Deer Settlement Statement (PP0400).

Old Deer

Site R1 – For a community purpose (cemetery extension)

Modify the PLDP to amend the designation summary to add, “Due to the likely hydraulic connectivity of site R1 to the Cock Burn, a detailed groundwater assessment will be required to fully assess the suitability of this site as a cemetery.” (PP1219).

Site OP1 – Land at Abbey Street

Modify the PLDP to increase the allocation of OP1 from 10 to 15 homes (PP1320).

Rora

Settlement Map

Modify the PLDP to amend the boundary of site OP1 to reflect the planning permission granted under APP/2015/0056 (PP1087).

Stuartfield

Flood Risk

Modify the PLDP to amend the 'Flood Risk' bullet point to remove reference to site P6.

Site P2 – To protect the pond and open space as amenities for the settlement and to protect the area as a significant contribution to the character of the place

Modify the PLDP to amend the text for P2 to note the sluice gate at the northeast corner of the pond provides water exclusively to the historic water wheel at Quartalehouse Mill and it retains the right to a supply of water from the pond as per the property deeds (PP0719).

Site OP1 – North of Knock Street

Modify the PLDP to amend the allocation summary of site OP1 to state that a link road on site P7 from B9030 to site OP1, which passes the sewage works, should be planned and completed prior to continuing development on site OP1 (PP0717).

Modify the PLDP to increase the allocation of site OP1 to 100 homes (PP0739).

Modify the PLDP to reduce the allocation of site OP1 to 43 homes (PP0718 and PP1086)

Modify the PLDP to limit the allocation of site OP1 to 75 homes (PP0718).

Dialogue should be opened with Scottish Water and Ross-shire Engineering to ensure part of the link road is completed before the commencement of work on the WWTW (PP0717).

Non-Allocated Sites – LDP 2017 Site OP2 – North of Windhill Street and Bid Site BU007 – Land to the West of Stuartfield

Modify the PLDP to allocate LDP 2017 site OP2 and BU007 for 25 homes (PP0386).

Modify the PLDP to allocate bid site BU007 for 20 homes (PP0386).

Non-Allocated Site – Bid Site BU006 – Land to the West of Stuartfield

Modify the PLDP to allocate bid site BU006 for 60 homes (PP0385 and PP0398).

Non-Allocated Site – Bid Site BU016 – Land South of Quartale – House Farm

Modify the PLDP to reduce the area of site P1 to allow for a single home and to allow for

landscaping and footpaths on the remainder of site P1 (PP0119).

Summary of responses (including reasons) by planning authority:

Ardallie

Site R1 – For a sustainable drainage system (SUDS) for site OP1

Comments from SEPA are noted. No change is required.

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address NHS Grampian's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Land at Nether Backhill

Comments from SEPA are noted. No change is required.

Non-Allocated Site – Bid Site BU001 – Nether, Backhill

The Council does not support allocating the representee's site, which is situated on bid site BU001, for a residential development. Bid site BU001 for 25 self-build plots was not identified as a preferred option in the MIR (AD0038.C, page 6). As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. There are limited water and waste water capacity, which is the major constraint associated with this site. Other than the primary school, the settlement does not have any other services or facilities. Furthermore, intensification of development in this small settlement risks overdevelopment and suburbanisation of the countryside. No change is required.

Auchnagatt

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council confirms that it intends to address NHS Grampian's comment through a non-

notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Land at North of Braemo

Comments supporting this site and the proposed flood mitigation measures are noted. The Council's Flood Prevention Team and/or SEPA can be consulted at the planning application stage to review the proposed mitigation measures. No change is required.

The Council does not agree with removing site OP1. According to the HLA 2019 (AD0022), this site is currently constrained due to marketability. Upon observing the HLAs from 2016 to 2018 (AD0019, AD0020, AD0021), the site OP1 was an effective land. Site OP2 was constrained due to ownership and infrastructure and the same remained in HLA 2019 (AD0038.C, page 13). A bid came forward for this site for 35 homes (BU017), however, in the MIR (AD0038.C, page 8), it was concluded that due to flooding issue, the Flood Prevention Team advised to remove the site from the PLDP 2020. However, the Elected Members of the Buchan Area Committee have advised to alter the decision and to keep the allocation as the same as the LDP 2017 and this is reflected in the Issues and Actions Paper (AD0040.C, page 65). No change is required.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP2 – Land at Annochie Place

Comments from SEPA are noted. No change is required.

The Council disagrees with removing site OP2 for 31 homes. Auchnagatt has several local facilities, including a primary school, shop, village hall and play area, and the number 51 bus service currently operates in the morning and early afternoon. The scale of development is unlikely to reduce air quality and the house type and tenure is not a consideration of the LDP, but its policies require a mix of homes to create a sustainable mixed community. Issues on design and waste water are not a consideration for the LDP at this stage, as these can be considered at the planning application stage. The Council also disagrees there is an access issue, as Annochie Place can be upgraded if necessary.

Only a small part of this site has been in Housing Land Audit since 1995 and the current site was first allocated as site H1 in the LDP 2012 (AD0031.C, page 3). It is partially constrained due to a ransom access strip, which is not a reason to remove this site. The owner is also trying to market the site (Proposed Delivery Programme 2020, page 54 (AD0042), but there have been delays in progressing with the site due to the coronavirus pandemic.

In conclusion, no change is required.

Cruden Bay

Site R1 – Marks the proposed strategic landscaping required for site OP1 and OP2

Comments from SEPA are noted. No change is required.

Site R2 – Safeguarded for a pedestrian path/cycleway/railway line

Comments from SEPA are noted. No change is required.

The Council does not agree with removing site R2. The site is safeguarded for amenity purposes and to protect the unused railway line and aimed to be retained as natural as possible. This site had an active railway line in the past and the aim is to retain these rail lines should they become active in the future. The proposed development is unlikely to have a negative impact on the wildlife and habitat. It is anticipated that the applicant has suitable screening, such as fence at the rear part of the property, to prevent overlooking and if this is not the case, then this can be dealt with at the planning application stage. No change is required.

Site R3 – For potential expansion of the school

Comments from SEPA are noted. No change is required.

Site R4 – For a medical facility

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification in the Flood Risk section, as set out in the List of Non-Notifiable Modifications.

Flood Risk

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address NHS Grampian's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Land at Aulton Road

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP2 – South of Aulton Road

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification in the Flood Risk section, as set out in the List of Non-Notifiable Modifications.

Settlement Map

Comments received on the settlement map are noted. No change is required.

Fetterangus

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Land North of Ferguson Street

While the site is both constrained and effective according to the page 106 of the HLA 2019 (AD0022), planning applications for up to 10 homes have been approved on the western portion of the site, which are being developed, and a planning application for 26 homes has been submitted for the eastern portion of the site, which is pending (APP/2020/2360). This would bring the total number of homes to 36, if approved. Access will be taken from the western part of the site that is under construction and from Pitfour Crescent to the east. The allocation boundary has not been amended to reflect the homes built, which is consistent with other sites in the PLDP. No change is required.

The Council does not agree to removing the need for a masterplan for site OP1 and OP2. A masterplan will ensure that good design shall be achieved across both sites and appropriate access arrangements would be in place to serve both sites. Furthermore, having a Masterplan would deliver good neighbourhoods by delivering appropriate community facilities and infrastructure to serve both sites. No change is required.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP2 – Land Adjacent to Playing Fields

The Council does not agree with removing site OP2. This site is well located in relation to the settlement, and the topography of the site is flat and would allow a natural expansion to the west. Site OP2 is recognised to be a continuation of site OP1, as a masterplan is required for sites OP1, OP2 and R1. It is noted that a planning application has been submitted for site OP2 (planning application reference: APP/2020/2360), however, a masterplan would ensure that good design and adequate access arrangement. A bid was also submitted during the call for sites, which demonstrates the landowner's continued interest in developing this site (known as bid site BU025). No change is required.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council confirms that it intends to address HES's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Longside

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable

modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Land off Station Terrace

The Council does not agree with removing site OP1. Longside is an appropriate location for new homes, as it is located between larger settlements at Peterhead and Mintlaw, is near Longside Airfield, and has a number of local facilities, including a school and shops. A regular bus service currently operates between Peterhead and Stuartfield/Maud (number 66 and 66A). However, it is accepted that there is very limited pavement on the existing road, which is why the allocation summary states, “The existing Auchlee Farm Road needs to be upgraded to an adoptable standard, with full footway provision and a new junction on Station Road which meets an adoptable standard, including visibility requirements. Further formal footway connections to the Formartine and Buchan Way should be agreed”. Furthermore, the Council’s Roads Development will be consulted at the planning application stage and a Transport Statement is required to ensure that detailed information is provided on how the pavements would be delivered within the existing and new development. No change is required.

The Council confirms that it intends to correct the street name reported by a representee through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications. The Strategic Environmental Assessment (AD0045.A, page 25) has correctly stated the number of homes site OP1 is allocated for, which is 30 (see Appendix 8.7, Table 8.7.2: Assessment of Site-specific Allocations, Designations, and Alternative Bids – Buchan, page 390). Site OP1 includes part of bid site BU029, which was proposed for 50 homes, and is considered in a supporting SEA document. No change is required.

The Council agrees with altering the boundary of site OP1, but not to the extent of bid site BU029, as the bid site is considered too large and it would double the settlement north of the South Ugie Water. Enlarging the site would take account of the flood risk to the south of the site, and the site area for neighbouring properties varies between 500sqm to 1300 sqm. Increasing the number of homes is not supported to address concern with access, traffic congestion and education provision. At present, the area of the site is 2ha. If the Reporter is minded, to make an amendment, then the Council recommend that site OP1 could be modified to increase its area to 3ha (this is referred to as new site N015, Revised site OP1, Land off Station Terrace).

The Council confirms that it intends to address SEPA’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP2 – Land off Inverquhomery Road

The Council confirms that it intends to address SEPA’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Longside Airfield

General

For consistency, as part of the site is within several pipeline consultation zones, the Council agrees that a new section on Oil and Gas Pipelines should be added to the PLDP. The Council confirms that it intends to address the representee's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Longside Airfield

The alteration to the site layout of OP1 is done in an error. The Council agrees that part of site OP1 should be reduced to exclude the northern runway, as proposed in bid site BU041, and the Draft Proposed LDP 2019 (AD0093, page 29) that accompanied the MIR. If the Reporter is minded, to make an amendment, then the Council recommend that site OP1 to be altered and follow the site layout submitted in bid BU041. In addition to this, the boundary of the Longside Airfield Settlement Statement to recommended to be altered accordingly and alter Appendix 1 Employment Land Allocations, Table 2 to Longside Airfield 124.86ha.

The land to the west (within the allocation site) bears the same weight and same conditions as the land allocated for development within the south. The development is not expected to expand to the west of the allocated site. However, in the future, if a planning application is lodged for further development to the west, this shall be processed and determined by the Development Management team. No change is required.

The support regarding restricting allocation to Class 6 (storage and distribution) uses has been noted and the Council agrees to adding text to the allocation summary noting that part of the site is within the Health and Safety Executive (HSE) pipeline consultation zone. The MIR (AD0038.C, page 78-79) and Issues and Actions Paper (AD0040.C, pages 124-125) recommended that the allocation summary referenced the HES's pipeline consultation zone, but this was excluded in error. The Council confirms that it intends to address the representee's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Maud

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address NHS Grampian's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Land at Castle Road

The Council does not support the removal of site OP1. This site was previously allocated as a much smaller site, OP2 Land at Castle Road East, for 32 homes in the LDP 2017. The relevant statutory bodies such as education, Scottish Water and NHS are fully aware of this allocation and taken this allocation into consideration in their long-term plans. Scottish Water, NHS Grampian and Aberdeenshire Council's Education Department had no objection to the allocation in the PLDP. The Council's Roads Development raised no concern regarding traffic congestion and infrastructure constraints. No change is required.

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP2 – Land West of Castle Terrace

The Council does not support the removal of site OP2. This site was previously allocated as a much larger site, OP1 Land at Castle Road, for 75 homes in the LDP 2017. The relevant statutory bodies such as education, Scottish Water and NHS are fully aware of this allocation and taken this allocation into consideration in their long-term plans. Scottish Water, NHS Grampian and Aberdeenshire Council's Education Department had no objection to the allocation in the PLDP. The Council's Roads Development raised no concern regarding traffic congestion and infrastructure constraints. No change is required.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP3 – Land at Bank Road East

Comments from SEPA are noted. No change is required.

Mintlaw

Vision

The Council confirms that it intends to address Scottish Government Planning and Architecture Division's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Flood Risk

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site BUS1 – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

The comment from the representee regarding the importance of the improvement of A90(T)/A952 Toll of Birness junction has been noted. No change is required.

The PLDP outlines the plan to upgrade the Toll of Birness within the Mintlaw Settlement Statement. This detailed plan of this development would be dealt with by the Development Management Team at the planning application stage. The Planning and Environment Service does not get involved with cost, the physical implementation of the site and the funding involved. The SPP (AD0012) and Circular 3/2012 Planning obligations and good neighbour agreements (AD0002) states that the LDP should identify infrastructure requirements and “the potential implications for the use of planning obligations”. Developer obligations aim to ensure that the Planning and Environment Service delivers all information required to the developer for a project and may take responsibility to ensure that it is paid. The Planning and Environment Service has no control of how the money collected via developer obligations are spent. This is dealt with outwith the Planning and Environment Service, which remains independent of the entire Developer Obligations process. The Delivery Programme 2020 (AD0042) would be able to provide a timescale of this development once discussion commences on delivering this development.

The Toll of Birness was raised during the consideration of the PPP (APP/2017/2547) for the Mintlaw OP1 site. Transport Assessments had identified a capacity issue and demonstrated a link between development within Mintlaw and the Toll of Birness junction. It has been identified that the roundabout needs to be delivered after 200 homes are built on site OP1. However, the Delivery Programme or Development Planning and Management Transport Appraisal Guidance (DMTAG) Report mentions that any upgrade of Toll of Birness is not economically viable. The developer is yet to propose to upgrade the junction and therefore, no timescale has been agreed, however, the developer drew up an indicative solution with an estimated cost of around £980,000. The development would be led by a private individual or organisation, therefore, the Planning and Environment Service cannot control the cost of this development (AD0127). The Planning and Environment Service can control the stage it should be delivered. The site is located on the Transport Scotland network therefore, detailed discussions need to be in place with Transport Scotland. The Delivery Team who are part of the Planning Service divided the cost by the remaining allocated houses in Mintlaw, to come up with a per unit cost and this would apply to future development of the allocated sites in Mintlaw. This agreement was put in place by the Planning and Environment Service, Transportation and Developer Obligations. As it stands, the timescale, cost and delivery are yet to be decided. The PLDP highlights when this junction needs to be delivered, i.e., when more than 200 homes are built on site OP1. It is not possible to state the cost of development and timescale of delivery in the PLDP because it is a private led development, and an agreement is not in place with the developer and Transport Scotland.

In conclusion, no change is required.

Site OP1 – Land at Nether Aden

The Council notes the concerns regarding provision of infrastructure on this site. A planning application would ensure that the development proposal adheres to the approved masterplan and is consequently delivered. The Planning and Environment Service ensures that open space is being delivered, however, play equipment is optional and not monitored. The Roads Development Service ensures that safe paths (i.e., well-lit paths) are provided to ensure the safety of users and this is dealt with at the planning application stage. The representee raised concern regarding the safety of pedestrians walking on narrow roads where there is no pavement. These types of development are classed as “urban realm”. No change is required.

The location and size of the retail facilities to be delivered within site OP1 has been agreed. All necessary documents such as a Retail Impact Analysis will be assessed during the determination of relevant planning application(s). The SPP (AD0012, paragraph 71) states that where “a retail and leisure development with a gross floorspace of over 2,500m² is proposed outwith a town centre and contrary to a development plan”, a retail impact analysis (or similar) should be undertaken. Therefore, the Planning and Environment Service does not think that a Retail Impact Assessment is required for an individual retail space that is less than 2,500m². No change is required.

The Council confirms that it intends to address SEPA’s comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP2 – Land at Northwoods

Comments from SEPA are noted. No change is required.

The Council does not agree to reducing the allocation from 600 to 380 homes. The allocation total of 600 homes reflects the agreed Development Framework (AD0076) and Masterplan (AD0086). The site boundaries have not been adjusted within the site being carried forward and thereby totals are also representative of completed units within the allocated areas. Housing completions are set out within Appendix 6 Housing Land Allocations. Details on the calculation of the housing land supply and contributions to the allowances is provided in the Schedule 4 Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations. No change is required.

The Planning and Environment Service does not have a say or control over public transport; however, in terms of public transport infrastructure; infrastructure such as bus stops are permitted development (unless the site is within a conservation area) and would not require planning permission. The A952 is deemed to be more suitable to provide public infrastructure due to the design and layout of the road and this is an existing bus route. The Balring Road is narrow and unsuitable for the frequent movement of traffic. Furthermore, it is unlikely to be in the best interest of a public transport organisation to re-route a bus service. The service operating on the A952 is at a close proximity to the site, therefore, adding additional infrastructure is deemed more suitable. No change is required.

There is a line of trees set to the east of the site, forming a small woodland. This area is protected as P7, therefore, any development on site OP2 would not have any detrimental impact on the woodland. No change is required.

Site OP3 – Former Artlaw Crescent/Nether Aden Road

Comments from SEPA are noted. No change is required.

Site OP4 – Land South of Sutherland Drive

Comments from SEPA are noted. No change is required.

Site OP5 – South of Nether Aden Road

Site OP5 is an extension to site OP1 and the masterplan (AD0091) for site OP1 includes this site. Site OP1 is currently under construction. Therefore, it is considered that it would not be a rational decision to remove site OP5 from the Mintlaw Settlement Statement. No change is required.

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP6 – Land North of Balring Road

Comments from SEPA are noted. No change is required. The Council does not agree with relaxing the allocation summary to allow for tree loss along Balring Road to upgrade this road. The rows of trees make a significant contribution to the character of Mintlaw, and lead towards the former Aden House designed landscape. Solutions, such as retaining the trees as part of the central reservation of a new road can be considered. The suggested wording would weaken the Council's preferred position, which is to retain these mature trees. No change is required.

There has been discussion during the planning application stage to provide public transport infrastructure on Balring Road, however, the site was deemed unsuitable because no suitable turning point can be provided at a close proximity. Furthermore, Stagecoach, the only public transport provider around the area is unlikely to provide a service on this route. The A952 is deemed to be more suitable to provide public infrastructure due to the design and layout of the road and this is an existing bus route. The discussion on adding additional bus stop on the A952 and upgrading the road to meet this requirement is ongoing. The A952 is already a bus route, therefore, adding additional infrastructure is deemed more suitable. No change is required.

In the allocation summary for site OP6, wording is in place to ensure that the mature trees along Balring Road and to the north of the site are protected. The site does not share a boundary with the A952; therefore, no woodland would be affected as a result of this development. No change is required.

Non-Allocated Site – Bid Site BU033 – Land East of OP3

The Council does not support allocating bid site BU033 currently. Bid site BU033 is set to the east of OP3 and it is considered to be an extension of site OP3. In the MIR, the site was considered as a Future Opportunity Site (AD0038.C, page 35). It was not allocated in the PLDP as only sites that will be delivered in this new Plan period will be allocated. Furthermore, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land

Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. The Planning and Environment Service would welcome further consideration of the site in the next Plan period, given that site OP3 will have been built, or under construction, during the preparation of the next Plan. No change is required.

Non-Allocated Site – Bid Site BU048 – Land at Longside Road, north east of Mintlaw School

This site was allocated as a Future Opportunity Site in the Main Issues Report for a medical facility in Mintlaw and in the Issues and Actions Paper (AD0040.C, page 87), NHS Grampian welcomed the inclusion of site BU048 in the Mintlaw Settlement Statement. However, the Council do not believe there is a need for Future Opportunity Sites to be identified in the Plan. Given that paragraph 4.20 of SDP (AD0016) identifies that there is no requirement to include “Strategic Reserve” in the Local Development Plan, Aberdeenshire Council has chosen not to do so, therefore, the site was removed from the PLDP. The Planning and Environment Service has no objection to the proposal and recommends the allocation of the site as a reserved site and to amend the boundary of Mintlaw settlement accordingly. However, neighbour notification was not sent out for this development. Therefore, If the Reporter is minded, to make an amendment, then the Council recommends the following:

- Include the site in the Mintlaw Settlement Statement;
- Alter the boundary of the settlement of Mintlaw by including the site within the settlement boundary;
- Add a row in the “Reserved Land” table; and
- Insert “R2 – For a medical facility”.

New Deer

General

The PLDP and the Settlement Statement is written in a manner for the general public to understand, however, does not include a stamp to that effect because it is a statutory document. There is a glossary available (PDF format) which defines various technical terms. The words “vision” and “aspiration” are general words, and the New Deer Settlement Statement focuses on the vision and aspiration of New Deer for the next 10 years. No change is required.

Vision

The Council confirms that there was an error on a road name. The “A991” should be the “A981”. Therefore, the Council confirms that it intends correct this error through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The core path commences at the junction of Main Street and the road located north of the public hall, afterward the path splits into two, one route finishes at the A948 (east of New Deer) and the latter ends at an unclassified road (opposite Culsh House Care Home). The detailed map of this core path can be viewed in Paths and Outdoor Access, Core Path Plan (AD0161). No change is required.

The purpose of protecting a site is to protect the land from development, but this excludes essential infrastructure such as roads or paths. The Vision not only sets out what is currently in a settlement, but future aspirational projects. In this case, the reason for highlighting a new link road through site P2 is to create a safer route at The Brae. No change is required.

Site R1 – For a 2m wide strip of land to allow for a footway link to the New Deer showground

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address NHS's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Land at Fordyce Road

Comments from SEPA are noted. No change is required.

Site OP2 – Land at Auchreddie Road East

Comments from SEPA are noted. No change is required.

Policy H2 Affordable Housing ensures that affordable homes are provided. Within the allocation text, it is stated that "The site will contribute towards affordable housing in line with Policy H2 Affordable Housing. This should be delivered as part of the early phases of development and be integrated into the design of the development to provide a mix of house types and sizes to meet local need" (AD0041.A, page 336). Developer Obligations ensures that affordable homes are agreed during the planning application process and this is how affordable homes are integrated into an early phase of development. No change is required.

Site OP3 – Land at Auchreddie Croft

Support for the site OP3 allocation has been noted, as are comments from SEPA. No change is required.

A bid site BU027 was submitted for 30 homes on site OP3 and this proposed reduction has been accepted by the Planning and Environment Service (AD0038.C, page 39). The site area is approximately 1.74ha. The site can accommodate 30 homes without resulting in overdevelopment. Pedestrian permeability ensures that ease of movement is provided within the development and this is achieved via a Planning Permission in Principle or a masterplan. The LDP does not enter into detailed information regarding public transport infrastructure as this is dealt with at the planning application stage, if required. No change is required.

The Council does not agree with removing site OP3. This site is well located in relation to the settlement and would allow a natural expansion to the south. A bid was also

submitted during the call for sites, which demonstrates the landowner's continued interest in developing this site (known as bid site BU027). No change is required.

Non-Allocated Site – Bid Site BU021 – Land South of Fordyce Terrace

The Council does not support allocating bid site BU021 for 40 homes. This bid site was not identified as a preferred site in the MIR (AD0038.C, page 39). Bid site BU021 is set to the south east of the settlement and set on a higher topography. The Officer's recommendation was not favoured for this site because "The protection of the vista towards the church from the A948 remains important for the character of the community and is a protected site designated in the Aberdeenshire Local Development Plan 2017", despite the topography being set at a lower level. The setting of the church and numerous listed buildings surrounding the site would have a detrimental impact from this development. It is acknowledged that the site is currently used for agricultural purposes, however, due to the distance from dense development, the site must be protected from urban sprawl. Furthermore, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. No change is required.

Non-Allocated Site – New Site N018 – Land at Auchreddie Croft

The Council does not support allocating new site N018 for a residential development. The proposed site is set south of site OP3. The site was not put forward as a development bid so was not considered as such at the MIR stage, nor subject to site assessment and public consultation. The representation does not include any site details, nor supporting information such as an environmental assessment to allow a detailed evaluation of the suitability of the proposal. The site plan alone does not provide enough information to come to a decision. In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 - Shaping Homes and Housing – Housing Land Supply, Policy H1 Housing Land and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. No change is required.

Old Deer

Site R1 – For a community purpose (cemetery extension)

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications and add in the Flood Risk section.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Land at Abbey Street

Comments from SEPA are noted. No change is required.

The support from the representee has been noted. In the MIR (AD0038.C, page 48), it

can be noted that the site was allocated for 15 homes as the site could accommodate the proposed number of homes. However, this was overturned because more emphasis was given on the setting of the surrounding area and the area falls within “Old Deer Conservation Area”. In the MIR (AD0038.C, page 48), it is stated that “there is a small risk of impact on the setting of listed buildings to the south east”. Priority has been given to protect the listed building and the additional 5 homes is more likely to have a negative impact on both the visual and setting of the listed building. Therefore, the proposed number of homes has been retained as 10 homes as per Aberdeenshire Local Development Plan 2017. In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. No change is required.

Site OP2 – St Drostan's Eventide Home

Comments from SEPA are noted. No change is required.

Rora

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Land at The Park

Comments from SEPA are noted. No change is required.

Settlement Plan

A planning application was granted in April 2015 and no progress has been made thereafter. The planning permission has lapsed; therefore, it is not necessary to modify the boundary of the settlement. No change is required.

Stuartfield

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site P2 – To protect the pond and open space as amenities for the settlement and to protect the area as a significant contribution to the character of the place

The Council notes the request to protect the water supply and sluice gate of Quartlehouse Mill, but as this is an access and maintenance issue, and not a LDP matter, the Council does not agree to their request. Furthermore, the purpose of site P2 is to protect the pond and area of open space as amenity space, and its sense of place. The water from this pond is channelled under the road to Waulkmill, Quartlehouse and would have no amenity or place value. As such, there is no need to extend site P2. No change is required.

Site R1 – For a sustainable drainage system, Site R2 – For sports, recreation and

community facilities and Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – North of Knock Street

Comments from SEPA are noted. No change is required.

It is noted that the junction to the access road for the sewage works in Stuartfield is unsuitable for heavy vehicles because the access is too narrow, and the site is close to a B listed building. This access road passes very close to the B listed building and continues onto the sewage works to the east. It is also noted that there is support by Scottish Water to alter the access road, but a planning application would need to be submitted. However, the Council has identified an error in the Settlement Plan that shows two site P7's, and the Settlement Features table. The narrow strip referred to as site P7 should be identified as a reserved site R3, and the Settlement Features table amended to include site "R3. For a link road between the B9030 and site OP1." The Council confirms that it intends to address these through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council does not agree to increasing the number of homes on site OP1 from 75 to 100 homes. The argument has been placed that the current built rate is less than 6 homes and more likely to be 3 homes per annum. However, the HLA 2020 (AD0023, page 29), which provides an accurate picture on what has been built in the previous year and provides a forecast of the number of homes that shall be built in the coming years, shows that the future build rate has only been reduced from 6 to 5 units per annum and is scheduled to be completed in 2027. The information is gathered from the developer/landowner and amended accordingly on a yearly basis.

The increase of 25 homes could also increase pressure on Stuartfield Primary School. The School Roll Forecast 2019 (AD0095) shows the capacity of Stuartfield Primary School rising to 99% capacity by 2024. Officers were advised by the Council's Education Department not to allocate additional homes on this site. The Education Department only provide a forecast for the next 3 years and are unable to provide a response on the capacity beyond 3 years. Therefore, it was agreed by the Planning and Environment Service not to increase the allocation of site OP1 to 100 homes and risk creating additional pressure on the primary school. The Council's Education Department would be consulted at the planning application stage and Policy RD2 Developer Obligations would apply.

In addition to the above, the increase of 25 homes within the same land area may mean the plot sizes would be smaller. The newly built homes blend in with existing housing estates and it would be advantageous to retain similar size homes and layout of the plots. Furthermore, the masterplan for this site has been agreed for 75 homes, and as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area.

In conclusion, no change is required.

The Council does not agree with reducing the allocation of site OP1 from 75 to 43 homes. The allocation total of 75 homes reflects the agreed masterplan, granted in 2013 (AD0080). Several planning applications have come forward on parts of the site since then. The site boundaries have not been adjusted with the site being carried forward and thereby totals are also representative of completed units within the allocated area. Housing completions are set out within Appendix 6 Housing Land Allocations. Details on the calculation of the housing land supply and contributions to the allowances is provided in the Schedule 4 Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations.

The current waste water treatment works has limited capacity, and the Settlement Statement states under 'Strategic drainage and water supply' that a growth project shall be initiated once development meets Scottish Water's five growth criteria (e.g. planning permission has been approved). Therefore, matters regarding the capacity of the waste water treatment works for this site is not an issue for the LDP.

In conclusion, no change is required.

Non-Allocated Sites – LDP 2017 Site OP2 – North of Windhill Street and Bid Site BU007 – Land to the West of Stuartfield

The Council does not support allocating LDP 2017 site OP2 and bid site BU007 for 25 homes or bid site BU007 for 20 homes. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. No evidence has been provided by the representee that demonstrates why site OP2 is not commercially viable for development. Site OP2 has been removed from the PLDP, but the area of this site has been retained within the settlement boundary to allow for infill development.

Bid site BU007 was considered suitable as a future opportunity site in the MIR, but this was withdrawn at PLDP stage because in response to the MIR (AD0038.C, page 71), it is noted that the Scottish Government objected to the allocation of "Future Opportunity Sites". Furthermore, due to the capacity issues affecting the primary school in Stuartfield, it is not recommended to allocate the site in the PLDP. Bid site BU007 is 1.45 hectares and is located adjacent to the OP2, sharing its boundary to the west, but allocating both sites is likely to put a major strain on the primary school roll. However, it is noted that the Council's Education Department forecasts the school roll for up to 3 years, so there may be an opportunity to submit a bid during the review of the next LDP. According to the SEPA flood map, the north east part of site BU007 falls within a flood risk zone, but the Council acknowledges that the overall area affected is minimal.

In conclusion, no change is required.

Non-Allocated Site – Bid Site BU006 and BU007 – Land to the West of Stuartfield

The Council does not support allocating bid site BU006 for 60 homes. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area.

Site BU007 was allocated as a Future Opportunity Site in the Main Issues Report for 20 homes as it was considered to be a logical extension given the number of homes proposed and the site area is much smaller than the proposed BU006 (AD0038.C, page 71). However, the Council do not believe there is a need for Future Opportunity Sites to be identified in the Plan. Given that paragraph 4.20 of SDP (AD0016) identifies that there is no requirement to include “Strategic Reserve” in the Local Development Plan, Aberdeenshire Council has chosen not to do so, therefore, the site was removed from the PLDP. Nonetheless, it is claimed that the site area is 4.1 hectares, but when measured by Officers, the site area is 6.2 hectares. Therefore, this site is larger than claimed and development covering this area would not be a logical extension. The density of the site of 25 homes per hectare does not apply to the Rural Housing Market Areas and the reason behind this is explained in the Shaping Homes and Housing policy in the PLDP.

It is noted that parts of bid site BU006 are within SEPA’s flood risk area, as drains run through the site, especially to the north and adjacent to the LDP 2017 OP2 site. Therefore, the overall size of the area that falls within the flood risk zone is large and would require a larger site to deliver the proposed number of homes. Nonetheless, a development of 60 homes would be considered as overdevelopment for the scale of the settlement. Sites at risk from flooding should be avoided, especially when no Flood Risk Assessment has been provided.

This proposal would also put pressure on the capacity of Stuartfield Primary School and there may be limited opportunities to further extend Stuartfield Primary School as it is already on a small site. The results of any school re-zoning will not be known until the next school roll forecasts are published. It could also have a negative impact on the trees and the small pocket of woodland to the west.

In relation to existing sites, for site OP1, the HLA 2019 (AD0022, page 28) states that 43 homes remain to be built, and this is reduced to only 39 homes in the HLA 2020 (AD0023, page 29). The former OP2 site is proposed as infill in the PLDP and can accommodate 5 homes. In addition to this, planning policy P3 Infill Developments within Settlements and Householder Developments (including home and work proposals) allows infill developments within settlement boundaries subject to meeting other relevant policies and appropriate infrastructure. In conclusion, no change is required.

Non-Allocated Site – Bid Site BU016 – Land South of Quartale – House Farm

The Council does not support allocating bid site BU016 for one home and the remainder of the site retained as site P1 with landscaping and footpaths to create a gateway feature to the settlement. Site P1 has been designated to protect the setting of Stuartfield, and control development in the area, regardless of its features and value. It also plays a role in forming the character of the settlement by providing an invisible boundary of the settlement. As such, the site remaining as agricultural land is appropriate.

The representee has not set out in detail how they would enhance the protected status of site P1, which measures 1.2ha (excluding the existing house on the site) or the proposed location of the house. If it assumed to be on the site of the refused planning application, this measures 0.1 hectares, making it a large site compared to adjacent properties. It is also unlikely that an additional house will improve the gateway into Stuartfield, which already has a gateway feature with the pond at site P2.

In conclusion, no change is required.

The representee has however, highlighted that an existing house, which was approved, lies within site P1. This house has been included in error and the Settlement Plan should be amended to exclude this property from site P1. If the Reporter is minded, to make an amendment, then the Council recommend to exclude the house from site P1.

Reporter's conclusions:

Preliminary matters

1. My examination of the proposed plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the provisions of the proposed plan, or which simply make comments that do not seek modifications to the proposed plan. Therefore, unless these relate to an issue which is unresolved, they are not addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as 'non-notifiable modifications' to settlement statement matters covered in issue 21. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Ardallie

Health and care facilities

3. NHS Grampian seeks a modification to the settlement statement in respect of medical facilities to serve the residents of Ardallie. I agree that the health and care facilities bullet point should be amended to more accurately reflect the improvements required to support new development in Ardallie. A modification is recommended based on the wording provided by NHS Grampian.

Non-allocated Bid Site BU001: Nether, Backhill

4. Ardallie is a small settlement. With the recent closure of the primary school, there are no local facilities in the village. The council notes that new development in Ardallie is constrained by limited capacity in water and waste water treatment infrastructure. Allocated site OP1, on which residential development has commenced, promotes the development of 10 self-build houses and six small business units. When complete, the development would more than double the number of houses presently located in the village. The representee seeks a modification to the proposed plan to allocate site BU001 for residential use as an extension to allocated site OP1, through which vehicular access could be taken. Alternatively, it states the site could be developed separately, although it does not suggest how access could be taken. Whilst a number of houses is not specified in the representation, the council refers to 25 self-build houses in the Main Issues Report (2019).

5. In its response to allocated site OP1, I note SEPA requires the provision of a single waste water treatment facility to serve the site as a whole in order for development to proceed. While it is unclear if such a solution would be available to serve the development of site BU001, whether the site can be accessed or indeed accommodate

the number of houses proposed, I agree with the council that further residential development in Ardallie would erode its essential character and lead to the suburbanisation of the countryside. Furthermore, as we conclude elsewhere in this report, sufficient land has been identified in the Rural Housing Market Area to meet identified needs. No modification to the proposed plan is required in response to the representation.

Auchnagatt

Flood risk

6. SEPA has requested an additional bullet point to provide additional information in relation to sites OP1 and R1. I agree that this information would be provide useful guidance to prospective developers. I recommend that the proposed plan is modified, as set out below.

Health and care facilities

7. NHS Grampian seeks a modification to the settlement statement in respect of medical facilities to serve the residents of Auchnagatt. Whilst I note that a health and care facilities bullet point is included in other settlement statements in the proposed plan, none is provided in the Auchnagatt settlement statement. As such, the owners/ developers of sites OP1 and OP2 or other interested parties have not had the opportunity to comment on this requirement.

8. Policy RD2.14 in the proposed plan states that it may be appropriate to seek contributions towards health and care facilities. Whilst NHS Grampian has indicated that that there is a need for additional capacity at existing medical facilities or a new health centre at Ellon, I have no information before me to demonstrate that financial contributions from development at Auchnagatt would meet the tests of Circular 3/2012. I consider that the wording suggested by NHS Grampian should be amended to indicate that there may be a requirement for contributions towards the relevant health and care faculties. A modification to this effect is recommended.

Site OP1: land north of Braemo

9. A representation seeks the removal of the site from the proposed plan; it is considered to be constrained by a lack of market interest and the need for additional infrastructure to support new development. Despite lying within an area of flood risk, the council considers that the site should remain a feature of the plan.

10. I have considered the matters raised in representations and the council's position set out in the Main Issues Report and the Issues and Actions paper. On balance, I consider that the site should remain part of the plan; there appears to be a willingness on the part of the landowner to bring forward the site for development; and, in this regard, discussions have taken place with the council and a prospective developer. Based on the evidence before me, I consider it reasonable to conclude that 16 homes on this site would be deliverable by 2032.

11. The representation from SEPA indicates that the site is at significant fluvial flood risk. However, it does not object to the allocation, provided the allocation summary is amended to convey the extent of the flood risk. It has suggested wording to add to the plan, which I consider sufficient to address the flood risk issue. Subject to the modification suggested

by SEPA, I conclude that the allocation should be retained in the plan.

Site OP2: land at Annochie Place

12. A representation seeks the removal of the site from the proposed plan; as it is constrained by ownership issues and a lack of market interest. Another representation cites the absence of facilities in the village to support a development of the scale envisaged. It is also considered that development would adversely affect amenity.

13. The council explains that the site is partially constrained due to the existence of a ransom strip; it is not clear whether this relates to Annochie Place or the B9030, where a vehicular access to the land presently exists. Reference to this matter is expressed in the singular which implies that the site is accessible from one point or the other. Furthermore, the connection through the site, as sought by the proposed plan, could be achieved by a footpath/cycleway rather than a road. Whichever solution is preferred, I consider the site to be accessible.

14. With regard to other matters, I note that; a growth project would be initiated to create additional capacity at the waste water treatment works once all relevant criteria is met; Auchnagatt primary school is operating below capacity, which is predicted to be the case up to 2025 (the end forecast period); there is a range of amenities in Auchnagatt; and, a local bus service serves the village. Finally, I note that the Delivery Programme (2020) states that the landowner is intent on marketing the site; an exercise delayed by the consequences of the pandemic. The site is not identified as contributing towards the strategic development plan allowance for the Rural Housing Market Area in the period up to 2032. However, if the identified constraints can be overcome, development could contribute to meeting housing needs. Taking these matters together, I conclude that the site should remain a feature of the plan. No modification is required.

Cruden Bay

Flood risk

15. SEPA has requested additional wording in the flood risk bullet point. I agree that this amendment would be appropriate in the interests of consistency. I recommend that the proposed plan is modified as set out below. This modification also addresses SEPA's comments in relation to sites R4 and OP2.

Health and care facilities

16. NHS Grampian seeks a modification to the settlement statement in respect of medical facilities to serve the residents of Cruden Bay. I agree that the health and care facilities bullet point should be amended to more accurately reflect the improvements required to support new development in Cruden Bay. A modification is recommended based on the wording provided by NHS Grampian.

Site R2: pedestrian path/cycleway/railway line safeguard

17. In the context of a plan that seeks to promote walking, cycling and the creation of safe and convenient active travel opportunities, I agree that site R2 should be retained; the route follows the line of a dismantled railway (which the plan seeks to protect for future transportation projects) and is intended to link to strategic landscape proposals (site R1) required in respect of allocated site OP1 (land at Aulton Road).

18. While I note the concerns expressed in Mr and Mrs Findlater's representation, the proposal is longstanding and a feature of the existing plan. Having walked along other active travel routes in the area, I am confident that a path can be created that safeguards and enhances, where possible, nature conservation interests. I note the council's commitment to engage with those who share a common boundary with the line of the proposed path as and when proposals come forward. No modification to the proposed plan is required in response to the representation.

Site OP1: Land at Aulton Road

19. SEPA has indicated that the last three sentences in the third paragraph of the allocation summary are incorrect. I agree that the text should be amended to more accurately reflect the position regarding flood risk. A modification is recommended below.

Fetterangus

Flood risk

20. The amendment suggested by SEPA would provide useful information in relation to the source of flood risk. It also sets out clearly the requirement for sites OP2, OP3 and R1 to be supported by flood risk assessments and for a buffer strip to be provided on the eastern boundary of R1. I recommend that the proposed plan is modified as set out below.

Site OP1: land north of Ferguson Street

21. I do not agree that the estimated capacity of the site should be reduced as sought by a representee; it is suggested that the site is constrained by ownership and access issues. However, the council explains that the eastern part of the site is currently the subject of a planning application for 26 houses, while the western part benefits from a planning permission for up to 10 houses; some of which are under construction. In light of the extant permission and building work; ongoing consideration of a live planning application; a requirement for vehicular access and pedestrian links to be created between the two parts, there is every likelihood of the site being developed as a whole. Furthermore, the 16 homes on the site identified as constrained in 2019 are not being relied upon to meet the strategic development plan allowance for the Rural Housing Market Area in the period up to 2032. No modification to the proposed plan is required in response to the representation.

22. SEPA has requested that the third paragraph of the allocation summary is reworded as it is not aware of any watercourses at or around the site boundaries. A modification is recommended to remove the inaccurate text.

Site OP2: land adjacent to playing fields

23. Site OP2 is identified as constrained on ownership grounds in the 2019 and 2020 housing land audits. I agree with the council that the site could come forward as an extension to the western part of site OP1, which is under construction. The submission of a bid proposal and a planning application in 2020 suggests that the ownership constraint has been resolved. Whilst there is a need to upgrade drainage infrastructure to serve new development, there is no evidence to suggest that this cannot be achieved. Neither do I consider that the site is unattractive in development terms for the reasons expressed

by the council. Based on the evidence before me, I consider it reasonable to conclude that the site would be deliverable by 2032.

24. I agree that the proposed plan should be modified to address the comments of Historic Environment Scotland with regard to the setting of two schedule monuments located to the west of the site. I have, however, amended the text suggested by the council to more accurately reflect the changes sought in Historic Environment Scotland's representation. I also agree that the amendments suggested by SEPA would provide clarity in relation to flood risk matters. Modifications are recommended below.

Masterplan

25. Finally, I consider it appropriate to guide the development of sites OP1, OP2 and R1 through the preparation of a masterplan; given the need to co-ordinate development, provide strategic landscaping and shared access. No modification is required.

Longside

Flood Risk

26. The amendments sought by SEPA would correct inaccuracies in the flood risk bullet point. I recommend that the proposed plan is modified as set out below.

Site OP1: land at Station Terrace

27. Two representations seek the removal of the site from the proposed plan; while a third seeks an extension to its eastern boundary to allow the site to accommodate the number of houses envisaged. The council argues that the site should remain part of the plan and should be enlarged to take account of flood risk measures along the site's southern boundary, but not to the extent suggested.

28. I have inspected the site and note the concerns of local residents. The council's assessment of the site acknowledges that vehicular access and drainage require to be upgraded to support its development. I also note the comments about biodiversity; while new development could have adverse effects, those effects could be mitigated by the introduction of buffer strips. Also, biodiversity interests could be enhanced by the creation of green networks. The council's assessment also acknowledges the potential of the site to flood. SEPA has not objected to the allocation in principle and seeks modifications that highlight the risk of flooding and need for development proposals to be supported by a risk assessment. On the basis of the council's assessment, SEPA's advice and the guidance to prospective development contained in the proposed plan, I conclude that the site should be retained. A modification based on that suggested by SEPA is recommended below.

29. With regard to the line of the site's eastern boundary, I note that the council is content to extend the boundary to take account of land required to mitigate flood risk, and has invited me to modify the proposed plan accordingly. However, in the absence of detailed assessments, I consider that the boundaries of the site should remain as that shown on the settlement statement map; this was the basis on which the proposed plan was published for consultation and to which people have responded. I also consider that the estimated capacity of the site should remain at 30 houses; in practice, the capacity of the site will be informed by the findings of the required flood risk, landscape and transport assessments. No modification to the proposed plan is required in response to the

representation.

30. Finally, I recommend a modification below to correct the council's error in referring to Station Road instead of Station Terrace in the supporting text on page 316.

Site OP2: Land off Inverquhomery Road

31. SEPA has indicated that the site may be at risk of surface water flooding and has suggested a modification to the allocation summary. I agree that a modification is required in the interests of accuracy and clarity.

Longside Airfield

Oil and gas pipelines

32. Shell UK Limited seeks modifications to the proposed plan to acknowledge that part of the settlement lies within a Health and Safety Executive consultation distance associated with one or more oil and gas pipelines in the vicinity. To address this matter, I agree with the council that a new section on oil and gas pipelines should be added to the settlement statement. For completeness, this matter should also be addressed in the allocation summary for OP1 (Longside Airfield). Modifications to this effect are recommended below.

OP1: Longside Airfield

33. A representee seeks a modification to the settlement statement map to amend the site boundary of proposal OP1 to exclude the airfield's northern runway and land immediately to the south; which is currently used by North East Aviators and Buchan Aero Club. The council acknowledges that it has included the runway and adjoining land within the allocation in error and is content to amend its boundaries to that shown in the Main Issues Report, Map 1, page 77 (site BU041). Given that the runway and adjoining land is in active use, I agree that the proposed plan should be modified. Accordingly, I recommend that the settlement statement map and relevant entry in Appendix 1 (employment land allocations), Table 2, are modified.

34. I also recommend below a modification in respect of SEPA's concern that radioactive material may be present on the site, given its past use as a military airfield, and its requirement for development proposals to be accompanied by a groundwater drainage assessment.

Maud

Flood Risk

35. SEPA has indicated that the information provided in the flood risk bullet point in the proposed plan is incorrect. I agree that a modification is required to more accurately reflect the position in relation to flood risk.

Health and care facilities

36. NHS Grampian seeks a modification to the settlement statement in respect of medical facilities to serve the residents of Maud. I agree that the health and care facilities bullet point should be amended to more accurately reflect the improvements required to

support new development in Maud. A modification is recommended based on the wording provided by NHS Grampian.

Site OP1: land at Castle Road

37. A representation seeks the removal of the site from the proposed plan on the basis that local services in Maud are inadequate to support new development. However, the council states that there are no capacity constraints in the required essential infrastructure to support new development, noting that NHS Grampian, Scottish Water, nor the council's education and roads services, have objected to the inclusion of the site in the proposed plan. Furthermore, the council's Issues and Actions Paper notes that discussions have commenced with a developer to bring forward a major application for the development of the site and that a Proposal of Application Notice has been lodged to this effect. No modification to the proposed plan is required in response to the representation.

38. For the avoidance of doubt, I note that Mrs Simpson refers to sites OP1 and OP2 in her representation, as shown in the existing local development plan; the council has addressed her concerns as though they relate to the sites as shown in the proposed plan, which combines the sites to form one new allocation (OP1). Mrs Simpson's representation makes no reference to site OP2 (land west of Castle Terrace), as shown in the proposed plan.

39. SEPA has requested that additional text is added to the allocation summary in relation to the provision of a buffer strip around the ponds and the opportunity to restore and enhance the straightened watercourse. These are matters which are included in the allocation summaries for other sites, where relevant. I agree that the proposed plan should be modified in this regard.

Site OP2 : Land West of Castle Terrace

40. SEPA is concerned that the allocation summary for this site does not accurately reflect the strategic flood risk assessment. It is wrong to indicate that flood risk can be mitigated solely through tree planting. I agree that the wording of the last three sentences in the allocation summary should be replaced to clarify the position regarding flood risk and measures to mitigate that risk. I recommend a modification below based on the wording provided by SEPA.

Mintlaw

Flood Risk

41. SEPA has indicated that the information provided in the flood risk bullet point on page 326 of the proposed plan is incorrect. I agree that a modification is required to more accurately reflect the position in relation to flood risk on sites OP1, OP2, OP3, OP5 and BUS2. I agree that the reference to site R1 should be deleted, as there is no watercourse on or adjacent to the site. I recommend that the proposed plan be modified as set out below

Services and infrastructure

42. Transport Scotland seeks clarity on the measures to upgrade the A90(T) / A952 Toll of Birness junction, its cost and means of delivery, including whether financial contributions will be sought from prospective developers. The council states that the

proposed plan identifies the need to upgrade the junction and that contributions will be required to ensure its delivery. It adds, the details of the improvements required, the contributions to be sought and the timing of their delivery will be a matter for individual planning applications to address.

43. I agree with Transport Scotland that the proposed plan, as it stands, fails to meet the expectations of Scottish Planning Policy (2014), paragraph 275, insofar as it does not identify essential transport infrastructure required to support new development in Mintlaw. In particular, it fails to provide details of the nature and scale of the improvements required at the Toll of Birness junction, how contributions would be secured and how the improvements would be delivered, in accordance with Scottish Planning Policy 2014 and Circular 3/2012. In order to address these matters, and the wider issues raised by Transport Scotland in respect of the council's overall approach to the provision of infrastructure and developer obligations, a further information request was issued (FIR007). My conclusions below focus on junction improvements at Toll of Birness and their implications for allocated sites in Mintlaw, while wider issues, including the preparation of supplementary guidance on developer obligations and affordable housing, are addressed in Issue 12 (Responsibilities of Developers).

44. To understand the nature and scale of the interventions presently being considered at the Toll of Birness junction, the council has directed me to a draft NESTRANS Regional Transport Strategy 2040 (2020). The strategy describes the actions relating to the Ellon to Peterhead and Fraserburgh route as:

- the dualling of the Ellon bypass to Toll of Birness, including upgrades to roundabouts;
- junction upgrade at Toll of Birness to an at-grade roundabout; and,
- provision of sections of 2+1 lanes on the A90(T) North and A952 between Toll of Birness and Peterhead & Fraserburgh.

45. The council adds, the draft regional transport strategy has been submitted to the Scottish Ministers and is being considered with other projects for inclusion in the second Strategic Transport Projects Review (STPR2). As such, and as a trunk road project, the expectation is that Transport Scotland will lead, programme and deliver the required junction improvements at Toll of Birness. The council would, however, expect to secure financial contributions from development proposals assessed as having an impact on the strategic transport network.

46. On the basis of Transport Scotland's response to our further information request, I find that there is a misunderstanding on the council's part regarding the role of Transport Scotland and its consideration of junction improvements at the Toll of Birness junction within the context of the STPR2. Transport Scotland explains that it does not fund improvements required to the trunk road network to address the impacts of new development; its primary role is to maintain the safe and efficient operation of the trunk road network. As such, it states that the council and/or developer(s) will be required to lead, fund and deliver improvements to the trunk road, should mitigation be required to address the impacts of new development. It adds, local authorities elsewhere in Scotland have mechanisms in place to manage improvements to the trunk road network, which are required to be delivered by developers.

47. With regard to the at-grade improvements at Toll of Birness, Transport Scotland states that the proposal is included in a package of options to improve road safety at the

junction and that it is presently being appraised as part of STPR2. It adds, while the timing and delivery of any recommended interventions is unknown, should interventions be required prior to the identification of funding by Scottish Government, they can be brought forward through other funding initiatives by local authorities, developers or regional transport partnerships. As a matter of fact, I consider that this position should be reflected in the settlement statement.

48. At my request, the council has provided text that could be included in the plan to highlight capacity constraints in the strategic road network and its consequences for new development on allocated sites in Mintlaw. Whilst the suggested text highlights that all sites in Mintlaw could be required to contribute to improvements to the Toll of Birness junction, it fails to mention the currently understood capacity constraint identified in a transport assessment prepared in support of proposals to develop allocated site OP1 (land at Nether Aden). The assessment recommended that an at-grade roundabout should be delivered at the junction, once development on site OP1 has reached 200 houses. A condition attached to the planning permission in principle for site OP1 (APP/2017/2547) effectively caps the amount of residential development to 200 houses, until improvement works are undertaken (unless it can be demonstrated that additional houses would not have an unacceptable impact upon traffic flows).

49. Transport Scotland has indicated that this limit of 200 houses would also have implications for the programming of other sites in Mintlaw, beyond those which have extant planning permissions, are awaiting the conclusion of legal agreements, or can demonstrate to the council's satisfaction would have only a negligible impact on the operation of the junction. I agree with Transport Scotland that the settlement statement should refer to the limitations this transport constraint may have for the programming and delivery of development in Mintlaw.

50. In order to address these matters in as much detail as is possible through this examination, I recommend a modification to insert three additional paragraphs into the vision section of the settlement statement. I also recommend a new strategic transport bullet point based on the council's suggested wording to indicate that all sites would be expected to contribute to improvements to the Toll of Birness junction, if an impact is demonstrated. However, I have not included the suggested reference to 'sites which do not currently have with full planning permission' as I consider this to be ambiguous with regard to the implications for site OP1 which has planning permission in principle and any new applications on sites which currently have permission. I anticipate that further consideration will be given to the nature of the required improvements works and the details of developer contributions through the preparation of Supplementary Guidance on: developer obligations and affordable housing, which is a recommended modification in Issue 12. It is my understanding that information on how, when and by whom these improvements are to be delivered will be provided through the Delivery Programme, which will be the subject of regular updates.

51. As a result of these changes, the wording of the bullet point on local transport infrastructure in the proposed plan requires to be amended. A modification is recommended based on the wording suggested by the council. I have not included the suggested sentence that 'the scale and nature of any contributions will be determined through a Transport Assessment undertaken by the developer' in either of the amended transport infrastructure bullet points, as I consider that these matters should first be addressed in the Supplementary Guidance.

Site OP1: land at Nether Arden

52. The council's suggested additional text to the allocation summary of site OP1 is considered by Transport Scotland to lack the necessary detail regarding the limitations on development in Mintlaw. In order to provide the clarity sought by Transport Scotland, I consider that additional information should be provided in the allocation summary to reflect the planning permission in principle granted in April 2019 (APP/2017/2547). As I have already indicated, there is a limit on the number of houses which can be built in advance of improvements to the Toll of Birness junction. Furthermore, the planning permission is the subject of a legal agreement which secures developer contributions towards addressing the infrastructure capacity constraints at the Toll of Birness junction. I recommend a modification below.

Site OP2: land at North Woods

53. Transport Scotland has specifically indicated that the limit of 200 houses, which has been applied to the planning permission for site OP1, was also intended to apply to the future development of the OP2 allocation. In order to reflect Transport Scotland's position, I recommend a sentence is added to the allocation summary for OP2 to explain that the capacity constraint at the Toll of Birness junction may have implications for development timescales, beyond what already has permission.

54. Despite the frustrations of Ms Chalmers with the slow delivery of infrastructure to support new development at North Woods, I agree with the council that the matters raised lie beyond the scope of the local development plan. Also, it would be inappropriate to delay the forward planning of one part of a site until development in another is complete. I note that the council has responded to this matter under site OP1 (Nether Aden), whilst the representation submitted by Ms Chalmers refers to site OP2 (North Woods). Nonetheless, the response of the council and my conclusions remain as stated above. No modification to the proposed plan is required in response to the representation.

55. A representation seeks the reduction of the site capacity from 600 to 380 houses to reflect the number of completions recorded in the housing land audit (2019). The council has explained that its approach in relation to housing allocations is to refer to the total capacity of the site and not the number of houses to be built from 2019 onwards. Table 3 in Appendix 6 indicates that in 2019, 95 homes were built on allocation OP2 with a remaining capacity of 505. I find these figures to be consistent with the housing land audit 2019.

56. The representee is correct to point out that allocation OP2 is not expected to be completed within the plan period. However, as the site forms part of the 2019 base supply, its expected contribution towards meeting the strategic housing land requirement up to 2032 would have been taken into account in the preparation of the strategic development plan. A modification to Appendix 6 is recommended in Issue 5, which explains that the figures shown in the 'LDP' allocation column of Tables 2 and 3 in the proposed plan may include homes built before 2019 and/or which are not anticipated to be built until after 2032. No specific modification is required to allocation OP2.

57. I note the comments in respect of public transport and active travel to serve sites OP2 and OP6. However, I agree with the council that improved public transport infrastructure is better located on North Street (A952), which I note is an existing bus

route. As I observed at my site inspection, Balring Road is quite narrow and requires vehicles to pass with caution. No modification is required.

Site OP5: land south of Nether Arden Road

58. A representation seeks the removal of the site from the proposed plan; arguing the site is constrained by market conditions and that there is little prospect of it being developed during the plan period. The council states that the site should remain part of the proposed plan, noting it is an extension to site OP1 and that its future development has been addressed through the preparation of a masterplan to ensure its integration with site OP1.

59. The site is one of a number of sites identified as constrained in the 2019 housing land audit, which the council considers can be delivered by 2032. Whilst the site forms an extension to site OP1, the approved development framework suggests that it could be accessed directly from Nether Aden Road to the north. On this basis, development on site OP5 could come forward in advance of the completion of allocation OP1.

60. Given its location immediately adjacent to allocated site OP1, that it forms part of a wider master planned area and is located within the existing built up area, I consider that it is reasonable for the proposed plan to allocate site OP5 for housing. However, as I indicate above, major development (beyond 200 homes) in Mintlaw is likely to be constrained until such time as the A90/ A952 'Toll of Birness' junction is improved. For this reason, I am not certain that housing on the site would be deliverable by 2032. As such, it would be unreasonable to identify it as contributing towards the strategic development plan allowance for the Rural Housing Market Area. A modification is therefore required to remove the allocation from the list of sites that contribute towards meeting the strategic housing land requirement. The implications of this change for the overall housing land provision are addressed in Issue 5 (shaping homes and housing). No modification is required to the Mintlaw settlement statement.

61. As noted by SEPA, the final sentence of the third paragraph of the allocation summary repeats the requirement to retain woodland planting expressed in the second paragraph. I recommend a modification below to delete this sentence.

Site OP6: land north of Balring Road

62. I note that the planning application for the formation of a business park on land adjacent to Balring Cottage, which forms part of site OP6 (APP/2016/2264), was supported by an arboricultural assessment and tree removal and protection plans; the application has subsequently been granted planning permission in principle. I also note that the creation of a site access and the minor re-routing of the Balring Road requires a limited number of trees to be removed. However, the majority of trees, which broadly form a line along the north and south boundaries of the site, are to be retained. This requirement is reflected in the settlement statement text. No modification to the proposed plan is required in response to the representation.

Non-allocated Bid Site BU033 (land east of Site OP3)

63. Whilst the council acknowledges that the site has development potential, as an extension to site OP3, it does not support its allocation in the proposed plan at the present time. I note that the site was promoted as a potential future opportunity site at the Main

Issues Report stage. However, the council has explained that it decided not to identify housing allocations, beyond that required to meet the strategic development plan allowance for the period up to 2032. Non-site specific representations on this matter are addressed in Issue 2. We conclude that the approach taken by the council is consistent with the strategic development plan and there is no basis for a modification requiring the identification of future opportunity sites. Furthermore, it is concluded in Issue 5, that there is no requirement for additional housing land to be allocated to meet the strategic development plan allowance for the Rural Housing Market Area in the period up to 2032.

64. In addition, as noted in the Main Issues Report, the site is prominently located on rising ground at the edge of Mintlaw. I agree with the council that its development would require significant boundary planting to mitigate the visual impact of development. Despite the positive qualities of the site noted in the representation, I do not consider that the proposed plan should be amended to include the site. No modification is required.

Non-allocated Bid Site BU048 (land at Longside Road)

65. NHS Grampian seeks the allocation of land to the east of Mintlaw for a new medical facility. Its representation explains that an early draft of the proposed plan identified site BU048 for this purpose but it was not included in the proposed plan as published. The representation also explains that, due to accommodation pressures at the existing medical facility, a suitable site requires to be identified within the lifetime of the plan. Whilst not centrally located, the council is content for the proposed plan to be modified to reserve site BU048 for a medical facility. It points out that neighbour notification has not been carried out in respect of the proposal.

66. I agree that the proposed plan should be modified to allocate site BU048 for the development of a medical facility, as sought by NHS Grampian. Although a specific neighbour notification exercise has not been undertaken, the site's suitability to accommodate a medical facility has been assessed as part of the strategic environmental assessment of the proposed plan. It concluded that there would be an overall neutral impact on the environment should it be developed. Also, the site is located on a bus route providing good accessibility from within and beyond Mintlaw. The site was also included as an officers' preference in the Main Issues Report, which represents the main consultation stage of the plan. There were no concerns raised in responses to the Main Issues Report and the proposal received the support of the council's elected members, as noted in the Issues and Actions paper.

67. My own observations are that the site is similar in size to that developed for a medical facility in Crimond; which is also located on the edge of the settlement, on a bus route and accessed directly from an 'A' road. The site also appears sufficiently large to provide any boundary treatments necessary to safeguard the amenity of neighbouring residential properties and mitigate the visual impacts of new development. The strategic environmental assessment notes that the site is not located within a flood risk area. It adds that a small burn is located to the north of the site and that mitigation measures, for example, a SuDS scheme and/ or buffer strips may be required to prevent future flooding events. However, this would not prevent the site being reserved for a medical facility. On this basis, I recommend a series of modifications below to the settlement statement namely; alter the boundary of the settlement; amend the table of settlement features by introducing site 'R2'; and, reserve the site for a medical facility.

New Deer

Vision

68. I note the comments regarding the vision statement, including the error in referring to the A981 as the A991. Also, while I broadly agree with the council on the matters raised, I consider that it would be helpful to the reader to clarify that the 'path network' forms part of the council's Core Path Plan. I recommend a modification below. The aspiration to create a link between the A981 and the A948 needs no further explanation.

Health and care facilities

69. NHS Grampian seeks a modification to the settlement statement in respect of medical facilities to serve the residents of New Deer. I agree that the health and care facilities bullet point should be amended to more accurately reflect the improvements required to support new development in New Deer. A modification is recommended based on the wording provided by NHS Grampian.

Site OP2: Land at Auchreddie Road East

70. A representee asks how the provision of affordable housing on a site which is intended to be developed on a plot-by-plot basis can be secured and the means by which it can be delivered in the early phases of development. I have not been presented with any evidence regarding the planning history of the site. However, the council points to the provisions of policy H2 of the proposed plan, which allows for affordable housing contributions to be met by a broad range of housing tenures, including private rented accommodation. It also allows contributions in exceptional circumstances to be met off-site.

71. As such, I accept that the type of affordable housing to be secured on individual sites and the timing of its delivery is a matter for discussion within the context of a planning application. No modification to the proposed plan is required in response to the representation.

Site OP3: Land at Auchreddie Croft

72. A representation seeks the removal of the site from the proposed plan; citing that it is constrained due to poor marketability. However, although wholly contained within the site shown in the existing plan, the proposed plan promotes a smaller site with a reduced capacity (30 houses). Given the characteristics of the site, I agree with the council that its development for 30 houses would not result in its overdevelopment. Those with control over the site state that wayleaves have been secured for access, sewage and surface water run-off. I note that the revised site proposals came forward during the 'call for sites' which, as suggested by the council, indicates continued interest in bringing the site forward for development. Furthermore, in response to a request for further information (FIR008), the council has provided an explanation of a range of measures that it employs to assist the deliverability of sites subject to marketability constraints. On this basis, I consider that the site should remain a feature of the proposed plan. No modification is required.

Non-allocated Bid Site BU021: land south of Fordyce Terrace

73. I agree with the council that the site should not be included in the proposed plan; it is an important feature in the townscape, over which views of the church and other listed

buildings can be enjoyed when seen from the south. As noted at my site inspection, the land rises markedly at its north-west corner, which, if built upon, could obscure views of the terrace. Furthermore, as we conclude elsewhere in this report, sufficient land has been allocated in the Rural Housing Market Area to meet identified needs in the period to 2032. No modification to the proposed plan is required in response to the representation.

Non-allocated New Site N018: land Auchreddie Croft

74. I agree with the council that the site should not be included in the proposed plan. Notwithstanding the comments of the representee; the site was not promoted at the time of the council's 'call for sites'; its possible development has not been considered in the context of the Main Issues Report nor assessed as part of the strategic environmental assessment of the proposed plan; or consulted upon. Neither has the representee provided information necessary to make an informed decision on its suitability for residential development. No modification to the proposed plan is required in response to the representation.

Old Deer

Reserved Land R1 – Cemetery extension

75. SEPA has requested that a sentence be added to the description of site 'R1' to acknowledge the need for a detailed groundwater assessment, given the likely connectivity between the site and the Cock Burn. I agree with the council that this text would be more appropriate as a bullet point in a new flood risk section. I recommend that the proposed plan is modified as set out below.

Site OP1: land at Abbey Street

76. Whilst the site may be sufficiently large to accommodate 15 houses, the council has resolved to maintain the estimated capacity at 10 houses. Given the site's location within the Old Deer Conservation Area, the potential for new development to effect the setting of listed buildings, and in the absence of detailed assessments, I agree with the council's position on this matter. No modification is recommended.

Rora

Site OP1: land at The Park

77. A representation seeks a modification to the boundaries of the site to accord with a planning permission for residential development granted in 2015. The council explains that the planning permission has lapsed. On this basis, I agree with the council that there is no justification to amend the site boundaries as shown on the settlement statement map. No modification is required.

Stuartfield

Flood Risk

78. Site P6 is an area of protected open space and no development is proposed. I agree with SEPA that the site should not be included in the flood risk bullet point. I recommend that the proposed plan is modified as set out below.

Site P2 (pond)

79. I agree with the council that the matters raised in the representation regarding the continuity of water supply to Quartalehouse are not matters for the local development plan. As the council notes, the purpose of the designation is to safeguard the pond and open space as amenities for the settlement. No modification to the proposed plan is required in response to the representation.

Site OP1: land north of Knock Street

80. The representations in respect of the site variously seek modifications to increase and decrease the capacity of the site. The urgent provision of a link road from the B9030 to site P7 is also sought. The council explains that the development of the site is guided by a masterplan, based on the provision of 75 houses, and is the subject of several planning permissions. It adds, the local primary school is nearing capacity and there is limited capacity at the waste water treatment plant to serve new development beyond that programmed.

81. While the masterplan notes that the site could accommodate more than 75 houses, I consider that it would be ill-advised to increase its estimated capacity in the knowledge that further development could place undue pressure on essential infrastructure. I do, however, accept that school roll forecasts can vary year-on-year and that the smaller the school the more significant variations can be. I also accept that capacity constraints at the waste water treatment plant could be addressed through a growth project, should the required criteria be met. In the absence of proposals to address known capacity constraints and detailed assessments to support new development, I agree with the council that the estimated capacity of the site should remain as that shown in the proposed plan.

82. With regard to the link road, the council has indicated that an additional 'reserve land' designation 'R3' has been omitted from the proposed plan in error. The supporting text to proposal OP1 notes the potential to provide a further point of access to the site via a new link road shown as reserved land on the proposals map. Whilst the settlement statement map identifies the land required for the link road, it is incorrectly labelled 'P7' on the map. As there are no representations seeking the correction of this error, it is not a matter for this examination. It would be for the council to consider whether the error can be addressed through a non-notifiable modification.

83. A representee seeks a further modification to state that the link road should be completed 'as a matter of urgency'. While I appreciate the representee's desire to see works completed as soon as possible, this matter is beyond the council's direct control. No modifications to the proposed plan are required in response to representations relating to the site.

Non-Allocated Bid Sites: BU006, BU007, OP2 - located west of Stuartfield

84. A number of representations seek the allocation of land located immediately west of Stuartfield for residential development; site BU006 (60 houses), which incorporates sites OP2 and BU007; site BU007 (25 houses), which incorporates site OP2; and, OP2, which is promoted in the existing plan for the development of 5 houses. The proposed plan does not allocate site OP2 for development as it is considered too small to be commercially viable. However, the proposed plan settlement boundary remains

unchanged from that shown in the existing plan, which would allow for infill development proposals to come forward.

85. I have considered the arguments for and against the allocation of additional land for residential development in Stuartfield. In particular, I note the council officers' support for site BU007 as a future development opportunity. Notwithstanding the merits or otherwise of each site, it would appear that until such time as capacity constraints at the local primary school are resolved, further development beyond that programmed in Stuartfield will be constrained. While the council's response implies that this matter is being addressed through a catchment review, it does not indicate when that exercise will be completed. Furthermore, there appears limited opportunity for the school to expand on its current site. I consider that it would be inappropriate to allocate land for development in the knowledge that it would be constrained and incapable of being made effective in the plan period.

86. While I accept that there may be alternative drainage options available to developers, there is limited capacity at the waste water treatment plant. Also, parts of site BU006 lie within a flood risk area. Finally, as we conclude in Issue 5 of this report, sufficient land has been allocated in the Rural Housing Market Area to meet identified needs in the period up to 2032.

87. Taking all these matters together, I conclude that sites BU006, BU007 and OP2 should not be included in the proposed plan. No modification to the proposed plan is required in response to the representations.

Non-Allocated Site: BU016: land south of Quartalehouse Farm

88. A representation seeks the allocation of land for one house; which extends to 1.2 hectares. The land lies within the settlement boundary. The intention would be to retain land beyond the proposed house for landscaping and footpaths and in so doing create a 'gateway' feature to the village.

89. Although located within the settlement boundary, the land is presently in agricultural use and forms part of 'protected land' site P1; the purpose of which is to "protect the setting of the settlement as a significant contribution to the character of the place." For these reasons, I agree with the council that the site should not be included in the proposed plan. As noted by the council, and as I observed at my site inspection, the pond and floral displays a short distance beyond the site, provide a fitting 'gateway' feature to the village.

90. The representee draws attention to fact that a single house has been built on land within the designated protected land, which the council explains has been included in the P1 designation in error. Whilst the council is content to modify the settlement statement map to exclude the existing housing from the designation, this has not been requested in the representation. It is therefore not a matter for this examination. It would be for the council to consider whether the error can be addressed through a non-notifiable modification.

Reporter's recommendations:

Modify the local development plan by:

Ardallie

1. Replacing the health and care facilities bullet point on page 283 of the Ardallie settlement statement with:

“Health and care facilities: All residential development must contribute towards the creation of additional capacity at existing medical facilities or a new health centre in Cruden Bay. Contributions towards the expansion of existing pharmacy facilities or within a new facility may also be required.”

Auchnagatt

2. Adding the following second bullet point under the heading ‘Flood risk’ of the Auchnagatt settlement statement on page 284:

“• A significant part of site OP1 lies within an indicative 1:200 year flood risk area (SEPA mapping). A small watercourse runs adjacent to the site. A Flood Risk Assessment will be required to support proposals on site OP1 and its associated SUDS scheme on site R1.”

3. Replacing the first sentence of the bullet point under ‘strategic drainage and water supply’ in the Auchnagatt settlement statement on page 284 with:

“The existing waste water treatment plant is at capacity.”

4. Adding the following new bullet point under the heading ‘Services and Infrastructure’ in the Auchnagatt settlement statement on page 285:

“Health and care facilities: Residential development may be required to contribute towards the creation of additional capacity at existing medical facilities or a new health centre in Ellon.”

5. Replacing the fourth sentence of the second paragraph of the allocation summary for OP1 (land at North of Braemo) in the Auchnagatt settlement statement on page 285 with the following four sentences:

“The SEPA Indicative Flood Maps show 30% of the site to be at risk of flooding from the Ebrie Burn. In addition, the small watercourse that flows along the north-east boundary of the site has caused flooding to nearby houses in the past. A Flood Risk Assessment will be required to determine the capacity of the site and inform site layout options. Any areas of the site found to be at risk of flooding will not be suitable for development and will be required to be retained as greenspace, which should be integrated with the development as amenity space and blue/ green corridor. A SUDS scheme for the site should be provided on ‘reserved land’ to the south-east (site R1).”

Cruden Bay

6. Replacing the flood risk bullet point in the Cruden Bay settlement statement on page 297 with the following two bullet points:

“• Parts of Cruden Bay are in an area that is potentially vulnerable to flood risk as identified by the National Flood Risk Assessment. Parts of the settlement may be at risk from coastal flooding. Flood Risk Assessment may be required;

• Due to the presence of a small watercourse running through or adjacent to sites OP2 and R4, a Flood Risk Assessment may be required.”

7. Adding the following new bullet point under the heading ‘Services and Infrastructure’ in

the Cruden Bay settlement statement on page 298:

“• Health and care facilities: All residential development must contribute towards the creation of additional capacity at existing medical facilities or a new health centre in Cruden Bay. Contributions towards expansion of existing pharmacy facilities or within a new facility may be required.”

8. Replacing the last three sentences of the third paragraph in the allocation summary for OP1 (land at Aulton Road) in the Cruden Bay settlement statement on page 298 with:
“Due to potential flood risk from the Water of Cruden, a Flood Risk Assessment may be required to support development proposals that lie beyond the area covered by the existing Masterplan and planning permission.”

Fetterangus

9. Replacing the flood risk bullet point in the Fetterangus settlement statement on page 301 with:

“• Due to the presence of a small watercourse running through or adjacent to sites OP2, OP3 and R1, Flood Risk Assessments may be required to support development proposals. A buffer strip will be required along the minor watercourse on the eastern boundary of site R1”

10. Replacing the third paragraph of the allocation summary for OP1 (land north of Ferguson Street) in the Fetterangus settlement statement on page 303 with:
“Strategic landscaping will be required to reduce the visual impact of development at the northern and southern boundaries of the site.”

11. Replacing the third paragraph of the allocation summary for proposal OP2 (land adjacent to playing fields) in the Fetterangus settlement statement on page 304 with:
“New development should not adversely affect the setting of Fetterangus Church and Symbol Stone; both of which are scheduled ancient monuments located a short distance to the west of the site. New development, through its siting and design, must be sensitive to its surroundings and incorporate landscaping at its western boundary to screen the development from view. Historic Environment Scotland should be consulted at an early stage in the preparation of development proposals for the site.”

12. Replacing the fourth paragraph of the allocation summary for proposal OP2 (land adjacent to playing fields) in the Fetterangus settlement statement on page 304 with:
“Strategic landscaping will be required, particularly adjacent to the watercourses on the northern and southern boundaries of the site, to reduce the visual impact of new development and flood risk. A Flood Risk Assessment may be required. Enhancement of the straightened watercourses through re-naturalisation and removal of any redundant features will require to be investigated.”

13. Deleting the third sentence in the fifth paragraph of the allocation summary for proposal OP2 (land adjacent to playing fields) in the Fetterangus settlement statement on page 304.

Longside

14. Replacing the bullet point under the heading ‘Flood Risk’ of the Longside settlement statement on page 315 with the following three bullet points:

“• Parts of Longside are shown to be at risk from flooding, as shown on SEPA’s Indicative Flood Risk Map. Flood Risk Assessments may be required to support development proposals;

- Due to a watercourse located near to site OP1, a Flood Risk Assessment may be required;

- Due to surface water issues at site OP2, a Flood Risk Assessment may be required.”

15. Replacing the fourth and fifth sentences in the first paragraph of the allocation summary for OP1 (land off Station Terrace) in the Longside settlement statement on page 316 with:

“No development should occur below 22.05 metres AOD. Buffer strips will be required to mitigate flood risk and landscape impact and should be positively integrated into the open space.”

16. Replacing ‘Station Road’ with ‘Station Terrace’ in the first sentence of the second paragraph of the allocation summary for OP1 (land off Station Terrace) in the Longside settlement statement on page 316.

17. Replacing the fourth and fifth sentences of the allocation summary for OP2 (land off Inverquhomery Road) in the Longside settlement statement on page 316 with:

“A Flood Risk Assessment may be required due to surface water flooding events.”

Longside Airfield

18. Adding the following new bullet point under the heading ‘Services and Infrastructure’ to the Longside Airfield settlement statement on page 318:

- Oil and Gas Pipelines: Part of the settlement lies within a Health and Safety Executive (HSE) consultation distance associated with one or more oil and gas pipelines in the vicinity. Proposed development within the consultation distance must comply with the requirements of Policy P4: Hazardous and potentially polluting developments and contaminated land, and with the HSE ‘Land Use Planning Methodology.’”

19. Adding the following new second sentence to the third paragraph of the allocation summary for OP1 (Longside Airfield) in the Longside Airfield settlement statement on page 318:

“Part of the site lies within a Health and Safety Executive pipeline consultation zone. All development proposals must accord with the requirements of Policy P4 (hazardous and potentially polluting developments and contaminated land) and comply with the Health and Safety Executive’s ‘Planning Advice for developments near Hazardous Installations.’”

20. Deleting the words ‘*the development will be required to demonstrate that it will have no adverse effect on ground or surface water.*’ from the second paragraph of the allocation summary for OP1 (Longside Airfield) in the Longside Airfield settlement statement on page 318 and replacing them with:

“it will be necessary for development proposals to be supported by assessments of the potential for radioactive substances being present on the site and groundwater drainage measures.”

21. Amending the Longside Airfield settlement map on page 319 to exclude the northern runway (the site boundary should match that as shown on page 77 of the Main Issues

Report 2019).

22. Amending the title of the allocation summary for OP1 (Longside Airfield) in the Longside Airfield settlement statement on page 318 to show that the site extends to 124.86 hectares.

23. Amending Appendix 1 (employment land allocations), Table 2 on page 98, columns entitled 'Allocation (hectares)' and 'Local Growth Area (RHMA), to record the allocation of land at Longside Airfield as 124.86 hectares.

Maud

24. Replacing the flood risk bullet point in the Maud settlement statement on page 320 with:

“• Due to the presence of small watercourses running through and adjacent to the sites, a Flood Risk Assessment may be required for sites OP1 and OP2.”

25. Replacing the health and care facilities bullet point in the Maud settlement statement on page 321 with:

“• Health and care facilities: All residential development must contribute towards the creation of additional capacity at existing medical facilities in Maud or New Pitsligo.”

26. Adding the following sentence after the fourth sentence in the second paragraph of the allocation summary for OP1 (land at Castle Road) in the Maud settlement statement on page 321:

“A buffer strip will be required along watercourses in or around the site, and around the pond adjacent to the northern boundary.”

27. Amending the second paragraph of the allocation summary for OP1 (land at Castle Road) in the Maud settlement statement on page 321 by moving the last two sentences of the text to form a new third paragraph.

28. Replacing the last three sentences of the second paragraph of the allocation summary for OP2 (land west of Castle Terrace) in the Maud settlement statement on page 322 with:
“A Flood Risk Assessment will be required. Areas shown to be at risk of flooding will be unsuitable for development. A buffer strip will be required along the length of the watercourse adjacent to the site, which should be integrated positively into the site. Opportunities to restore and enhance straightened watercourses should be investigated.”

Mintlaw

29. Amending the vision statement in the Mintlaw settlement statement on page 324 to add the following three paragraphs after the first paragraph:

“The Scottish Government is giving consideration to a package of measures to improve road safety on the A90(T), including improvements at the Toll of Birness junction to an at-grade roundabout. The timing of decisions on which projects will be taken forward and their subsequent delivery is not yet known. Furthermore, these measures are not intended to deliver improvements necessary to mitigate the impact of new development on the operation of the junction.

Until the Toll of Birness junction is upgraded, new development in Mintlaw may be

restricted. There is a limit on the number of houses which can be built and occupied in Mintlaw until such time as the A90(T) / A952 Toll of Birness junction has been improved and its capacity increased. This constraint is addressed in the current planning permission for site OP1, but may also have implications for other allocated sites in Mintlaw.

In the meantime, if improvements to the junction are required to mitigate the effects of new development, other funding initiatives should be explored. This matter is considered further in Supplementary Guidance on Developer Obligations and Affordable Housing.”

30. Amending the table of ‘Settlement Features’ of the Mintlaw settlement statement on page 325 by adding a new entry under ‘Reserved Land’ to read:

“R2 – for a medical facility.”

31. Replacing the flood risk bullet point in the Mintlaw settlement statement on page 326 of the proposed plan with the following two bullet points:

- Parts of sites OP1, OP2, OP3 and OP5 may be at risk of flooding, as identified on the SEPA Flood Maps or because they have a small watercourse running through or adjacent to the site. Flood Risk Assessments may be required.

- Due to the presence of a small watercourse, any further development at site BUS2 may require to be supported by a Flood Risk Assessment. A buffer strip will be required and opportunities to restore and enhance the straightened watercourse should be investigated.”

32. Inserting the following new first bullet point in the services and infrastructure section of the Mintlaw settlement statement on page 326:

- Strategic transport infrastructure: All sites in Mintlaw will be required to make a contribution towards an upgrade of strategic infrastructure at the A90(T) / A952 Toll of Birness junction, if an impact is demonstrated. Further information is provided in Supplementary Guidance on Developer Obligations and Affordable Housing, and in the Delivery Programme.”

33. Replacing the ‘local transport infrastructure’ bullet point in the services and infrastructure section of the Mintlaw settlement statement on page 326 with:

- Local transport infrastructure: All new development may be required to contribute to improvements to the primary road network, including local road widening, footway extensions, upgrades and crossing facilities, cycle infrastructure and public transport provision.”

34. Adding the following new second paragraph to the allocation summary of site OP1 (land at Nether Eden) in the Mintlaw settlement statement on page 327:

“Planning permission in principle (APP/2017/2547) for mixed use development was granted in April 2019. This includes a condition which indicates that only 200 houses can be built until such time as the A90(T) / A952 Toll of Birness junction has been improved and its capacity increased (unless it can be demonstrated that additional houses would not have an unacceptable impact on traffic flows). A legal agreement between the council and the developer requires financial contributions towards the improvement of the junction”.

35. Adding the following sentence to the end of the first paragraph of the allocation summary of site OP2 (land at Northwoods) in the Mintlaw settlement statements on page 328:

“The identified capacity constraint at the A90(T) / A952 Toll of Birness junction may have implications for development timescales, beyond existing permissions.”

36. Deleting the final sentence of the third paragraph of the allocation summary for OP5: South of Nether Aden Road in the Mintlaw settlement statement on page 329.

37. Amending the entry for Mintlaw OP5 in the relevant table in Appendix 6 to show that the site does not contribute towards the strategic development plan allowance for the Rural Housing Market Area. (Note: a revised version of Appendix 6, incorporating all the recommended modifications, is provided at the end of this report.)

38. Amending the settlement boundary, as shown on the Mintlaw settlement statement Key Map and Map 2, on pages 331 and 333, respectively, to include bid site BU048 and label as site ‘R2’.

New Deer

39. Deleting the fourth sentence of the vision statement in the New Deer settlement statement on page 334 and replacing with the following text:

“It is proposed to extend the path network in the village and along the A981, as shown in the council’s Core Path Plan.”

40. Replacing the health and care facilities bullet point in the New Deer settlement statement on page 335 with:

“Health and care facilities: All residential development must contribute towards the creation of additional capacity at existing medical facilities in Maud or New Pitsligo.”

Old Deer

41. Adding a new sub-heading and bullet point to the Old Deer settlement statement on page 344 to read:

“Flood Risk

- Due to likely hydraulic connectivity between site R1 and the Cock Burn, a detailed groundwater assessment will be required to assess its suitability as an extension to the cemetery.”

Stuartfield

42. Deleting reference to site P6 from the list of sites noted under the flood risk bullet point on page 383 of the Stuartfield settlement statement. The bullet point should then read:

“Flood Risk

- Parts of sites OP1, R1 and R2 are located adjacent to...”

Issue 22	Ellon	
Development plan reference:	Proposed LDP, Appendix 7C Formartine, Page 419-434	Reporter: Malcolm Mahony
Body or person(s) submitting a representation raising the issue (including reference number):		
PP0006 Sara Reid PP0164 Glenda Simpson PP0201 Alan Healy PP0272 Scottish Water PP0392 Linda Anderson PP0578 Scottish Government Planning and Architecture Division PP0823 Scotia Homes Ltd PP0866 The Gypsy/Traveller Community PP0878 The Woodland Trust Scotland PP0911 Stewart Milne Homes PP1027 Piero Pintus PP1136 Carol Wright PP1219 Scottish Environment Protection Agency PP1241 Nestrans PP1300 NatureScot (Scottish Natural Heritage) PP1338 CHAP Group (Aberdeen) Ltd PP1343 Historic Environment Scotland		
Provision of the development plan to which the issue relates:	Ellon Settlement Statement	
Planning Authority's summary of the representation(s):		
<p><u>Site R1 – Reserved for a new cemetery</u></p> <p>Scottish Environment Protection Agency (SEPA) has commented that they have no further flooding, strategic drainage or water supply issues with the designation summary for site R1 (RD0214.B) (PP1219).</p> <p><u>Site R2 – Reserved for the existing Formartine and Buchan Way route and for a future potential railway route</u></p> <p>SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the designation summary for site R2 (RD0214.B) (PP1219).</p> <p>A representee has objected to the reserved site and stated that this site is in close proximity to the Formartine and Buchan Way which is used extensively and development would go against Aberdeenshire Council's priorities that seek to "encourage active lifestyles and promote well-being with a focus on obesity and mental health" and to "protect our special environment, including tackling climate change by reducing greenhouse gas emissions as this is a well-used resource for local leisure activities". Development of a railway line is non-</p>		

sensible at this time and would cause visual and noise pollution as well as effecting existing access to local amenities (PP0006).

A representee has objected to a future railway owing to the proximity of existing properties to the reserved line causing safety concerns for children, risks associated with chemicals e.g., freight trains from industrial sites, noise and structural damage due to vibrations from heavy trains, and quality of life of nearby residents (PP0201).

A representee has requested that the reserved site be removed. It is in very close proximity to properties and the proposal would generate noise and disturbance with trains passing so close which would be detrimental to their well-being and which would most likely affect property valuations. Since the closing of the line there have been new developments of private residences also in very close proximity and therefore would not be the ideal proposal (PP0392).

Site BUS – Safeguarded for business uses

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the designation summary for site BUS (RD0214.B) (PP1219).

Flood Risk

SEPA has requested that the 'Flood Risk' section is amended to be made more succinct on flood risk assessments and buffer strips as, except for the BUS site, the allocation texts contain further information (RD0214.B) (PP1219).

SEPA has requested adding site CC1 to the second 'Flood Risk' bullet point and removing the fourth bullet point that is dedicated to site CC1 to reduce repetition (RD0214.B) (PP1219).

Services and Infrastructure

Nestrans has expressed their support on the commentary provided in the 'Strategic transportation' and the 'Local transport infrastructure' sections. The Draft Regional Transport Strategy (RTS) 2040 contains actions seeking the dualling of the A90(T) north of Ellon to the Toll of Birness, and improvements to existing roundabout junctions on this route (RD0227.A). No modification sought (PP1241).

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Scottish Water has requested an amendment to the wording in the 'Strategic drainage and water supply' section to reflect that a Drainage Impact Assessment may be requested (PP0272).

The Scottish Government has stated that the text under 'Local transport infrastructure' does not make reference to the A90(T)/B9005 roundabout. Whereas the Development Planning and Management Transport Appraisal Guidance (DPMTAG) concluded that the Ellon southern bypass/distributor road option with deliverable mitigation identified in the Ellon Traffic Modelling Study (ETMS) will mitigate the impact of development and is the preferred option. The ETMS included improvements to the A90(T)/A948 roundabout in the reference

case; and improvements modelled to the A90(T)/B9005. Additionally, Transport Scotland has been involved in discussions with the Council and developer which concluded that OP1 would deliver the A90/A948 improvements in their entirety. If this position has changed and developer contributions from other developments will be required, this should be clearly stated in the PLDP (PP0578).

Site OP1 – Cromleybank

The representee has expressed their support for the continued allocation of site OP1 for mixed-use development. The representee considered that the site is critical to delivering the scale of housing in the Formartine area anticipated by the Strategic Development Plan (SDP) and the delivery of affordable housing targets. The representee is supportive of the provision of the east-west link road, the boundary amendments to the OP1 site and the encouragement of a gateway feature for access from the B9005. No modification sought (PP0823).

Historic Environment Scotland (HES) welcomed the revised boundary for the OP1 site, which now excludes the Category A Listed Old Bridge and its immediate setting. HES support the need for strategic landscaping and associated flood risk management (RD0266.A). No modification sought (PP1343).

SEPA has commented that for site OP1, the allocation text could be made to be more succinct (RD0214.B) (PP1219).

The representee has requested a re-routing of the east-west link road. The requested modification is on the basis that the road will have a detrimental impact on the amenity of nearby residential properties, privacy, visual amenity and result in noise impacts. The road will impact on wildlife in the area. It will take away people coming into Ellon, impacting on the local economy. The western part of the proposed road is unnecessary as access to the new development can be taken from existing roads (Hillhead Road, South Road). If a bypass is needed it should be more meaningful, not have pinch points, and join to the existing roundabout on the A90. The bypass route should start before Wineburn when heading east towards Ellon to avoid the dangerous corner and incline on the A920, avoid the burns and field adjacent to Fortree Farm track. The representee has included an Appendix (RD0017.A) in their submission which provides further detail to support their position (PP0164).

The representee has highlighted the impact Covid-19 has had on the economy and queries what the residual impact will be on the demand for new homes (PP0164).

NatureScot has requested amending or removing wording in the allocation summary for site OP1 in Ellon so as to avoid suggesting that planning controls on construction and operation are necessary to mitigate adverse impacts on the integrity of the Sands of Forvie Special Area of Conservation (SAC). NatureScot advised that while planning controls on construction and operation may be required by the Council, this mitigation is not necessary to avoid an adverse effect on the integrity of this site (RD0255.B) (PP1300).

A representee has requested that the preferred option for the crossing of the River Ythan should be made by a bridge and not the bypass. Kellie Pear should also be connected onto the A90 as it was prior to the construction of Ellon Academy, and it would allow some cars to access to the south which is already congested at peak times. Based on the information

presented, all exits from the proposed development join with South Road which multiplies the problem of congestion. The bypass is only beneficial for a small amount of people and does not improve access to Ellon as a resident or help to travel to Aberdeen or Peterhead. The costs associated with the length of road required need also to be taken into consideration against a 20m bridge. Additionally, the representee states that it is worth noting that as shown on the masterplan, the smaller of the two blocks of housing does not even connect to the bypass (PP1027).

A representee has requested that the scale of residential development proposed for site OP1 (980 homes, a new primary school and associated facilities, and 2ha employment land) is reduced, and 150 units is transferred to CC1 (for 10,000sqm of retail space and leisure uses) to create an opportunity site for mixed use development, or that 150 homes are allocated on site CC1 in addition to site OP1. The representee argues that site OP1 has been zoned since 2012 and has not delivered any housing, the number of homes is considered excessive, and the Housing Land Audit (HLA) 2019 identifies that the majority of the allocation will not be delivered until after 2026, which does not ensure an adequate supply of housing land and therefore conflicts with Scottish Planning Policy (SPP) paragraph 119. Aberdeenshire Council must bring forward additional sites to meet housing need in Ellon. The representee has included a number of Appendices (RD0173.A-RD0173.E) in their submission which provides further detail to support their position (PP0911).

The Scottish Government has stated that the allocation summary text for site OP1 does not take into consideration that an appropriate transport appraisal in the form of the DPMTAG has been undertaken and concluded what mitigation is required to deliver the development. It is also not consistent with the results of this Assessment Report which identified the A90(T)/A948 and A90(T)/B9005 junctions required improvements and an east-west link road between these should be provided; nor with discussions that have already taken place surrounding developer mitigation with the Council and the developer in relation to OP1. As such, the PLDP and Delivery Programme are inconsistent in the requirements for developers and do not contain the specific transport infrastructure required to facilitate and mitigate the impact of development on the safe and efficient operation of the trunk road within Ellon (PP0578).

Objection is made by the Woodland Trust Scotland to the inclusion of OP1 as it is likely to cause damage and/or loss to areas of ancient woodland. Removal of woodland is contrary to SPP paragraphs 216 and 218. It is also contrary to the Control of Woodland Removal Policy (RD0161.A) (PP0878).

Site OP2 – Former Academy and Academy Annex Site

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification required (PP1219).

The woodland area on the Schoolhill Road, side of the site should be retained, which is part of the OP2 Former Academy site in Ellon. This area is used as a pathway to woodland on the northwest side of the sites. It is an integral part of the natural infrastructure of Ellon. Protection would be consistent with treatment of woodland elsewhere such as on OP1 and OP3 (PP1136).

Site OP3 – Hillhead Drive

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP3 (RD0214.B). No modification required (PP1219).

Site OP4 – Balmacassie

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP4 (RD0214.B). No modification required (PP1219).

The representee has sought clarification on whether the provision of a Gypsy/Traveller site on site OP4 at Ellon, which is allocated for 29ha employment land, is still included in the Local Development Plan as there is no specific reference made. The representee noted that there are no timescales for the provision of a Gypsy/Traveller site on OP4 and queries if the provision of a Gypsy/Traveller site depends on the development of the area/land (PP0866).

NatureScot has suggested that a masterplan requirement may be appropriate for this large (29ha) employment land allocation (RD0255.B) (PP1300).

Site CC1 – Waterton

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site CC1 (RD0214.B). No modification required (PP1219).

The representee has expressed their support for the continued identification of CC1 in the PLDP for 10,000sqm of retail space and leisure uses at Waterton, but has requested that the site is allocated for an opportunity site for a mixed-use development, comprising 150 homes, retail use and a riverside park. The representee argued that the introduction of housing on this site would create a more logical, appropriate, and sustainable development, rather than purely retail. It reduces the reliance on the private car by providing housing close to other services and employment areas, where there are good connections to public transport, and is next to the Park and Ride. A mixed-used development would also have less of a landscape and visual impact than the proposed sole retail use of the site. The southern and western sections of the site offer an attractive environment for housing, with access to a riverside park, while the eastern side is appropriate for the retail/commercial uses given its proximity and visibility from the A90. It lies within the settlement boundary of Ellon, bound on two sides by development (including residential) and on the third by the A90. It is therefore well contained and relates well to Ellon and would not extend the settlement boundary any further. Surface water flooding can be resolved using SuDS and at 30dph it would not constitute as overdevelopment, which is appropriate in a Strategic Growth Area. The representee has requested that if the Council does not support the modification to site CC1 to a mixed-use site with 150 homes, that the CC1 site remains allocated for retail and leisure uses. The representee has included a number of Appendices (RD0173.A- RD0173.E) in their submission which provides further detail to support their position (PP0911).

A representee has requested that the scale of residential development proposed for site OP1 (980 homes, a new primary school and associated facilities, and 2ha employment land) is reduced, and 150 units is transferred to CC1 (for 10,000 sqm of retail space and leisure uses) to create an opportunity site for mixed use development, or that 150 homes is

allocated on site CC1 in addition to site OP1. Refer to discussion above in section OP1 – Cromleybank for the representee’s justification for the requested modification (PP0911).

Non-Allocated Site – Bid Site FR063 – Site 1 adjacent to Golf View and Bid Site FR064 – Site 2, Adjacent to Golf View

A representee has requested that bid sites FR063 and FR064 be allocated for 51 and 32 homes on the basis that there is local political and community support to bring forward much needed development in Ellon where other sites have not brought forward development. The representee disputes the decision to not include these sites on account of likely impacts on congestion on the A90(T) junctions with the B9005 and A948. Strategic modelling of the road impact on the A90 is not complete and needs to take account of the changes resulting from the AWPR/B-T road infrastructure works. It is not possible to arrive at a conclusion about what, if any, mitigation is required. The development would have less of an impact on the A90 than existing and proposed sites to the north. The representee is concerned that there is insubstantial and misleading information which led to the Infrastructure Services Committee (ISC) decision to not support the sites. There was late disclosure of the Roads and Transportation Services’ concerns and the basis on which they were founded is unacceptable. The Service’s recommendations were premature and unfounded. It is also questioned whether the use of Google Live Traffic flow information is appropriate for determining whether to allocate a development. It is considered that events in the Council’s process prejudiced a fair discussion at ISC, and there was ambiguity and uncertainty leading to the ISC decision which went against the unanimous support of the Area Committee to include the sites for housing. Bid sites FR063 and FR064 should be included on the basis that these are modest, deliverable and sustainable, providing much needed choice, and fit with the overall planning strategy. The strategic location of these site within the Aberdeen to Peterhead Strategic Growth Area (SGA) and Energetic Corridor is a key consideration. The sites’ backdrop of the golf course and mature trees to the south, existing homes to the west, and the approved cemetery development to the north would ensure successful integration into the surrounding area. The sites are not prominent at the edge of the settlement, there is good connectivity and access arrangements have been considered in a masterplan. As a result of the recent pandemic, new development such as FR063 and FR064 will assist in the provision of much needed infrastructure, contribute towards affordable housing and boost the economy. It is considered the DPMTAG Report is not a final Report, and it is therefore not appropriate that decisions should be made based on unknown outcomes. Nevertheless, in respect of both of these sites, if it was deemed necessary for mitigation on the trunk road network, proportionate contributions would be applicable. The representee has argued that bid sites FR063 and FR064 should be allocated on the basis that the PLDP falls short by not allocating sufficient deliverable land which is contrary to both national planning advice and the key aim of delivery in the PLDP. There is an estimated shortfall of 483 units in Aberdeen Housing Market Area (AHMA) and 1261 in Rural Housing Market Area (RHMA). The recommended increase in housing allowances in the Strategic Development Plan (SDP) 2020 provides further justification to allocate these sites, and it is noted that sites were removed at the Main Issues Report (MIR) 2019 stage. It is a misconception there are enough deliverable sites, with larger strategic sites not being brought forward for development such as Cromleybank. The representee has included an Appendix (RD0265.A) in their submission which provides further detail to support their position (PP1338).

Modifications sought by those submitting representations:

Site R2 – Reserved for the existing Formartine and Buchan Way route and for a future potential railway route

Modify the PLDP to remove Site R2 Reserved for the existing Formartine and Buchan Way route and for a future potential railway route (PP0006, PP0201 and PP0392).

Flood Risk

Modify the PLDP to amend the text to replace the second 'Flood Risk' bullet point from, "Parts of sites OP1, OP3 and BUS are located adjacent to the Scottish Environment Protection Agency's (SEPA) indicative 1 in 200 flood risk area or have a small watercourse running through or adjacent to the site. A detailed Flood Risk Assessment will be required to accompany any future development proposals for these sites and an appropriate buffer strip will be required adjacent to the existing watercourse which should be integrated positively into the development." to "Parts of sites OP1, OP3, CC1 and BUS are located adjacent to the SEPA Indicative 1 in 200 flood risk area or have small watercourses running through or adjacent to the site. A Flood Risk Assessment will be required, and buffer strips will be required alongside the watercourse." (PP1219).

Modify the PLDP to amend the text to remove the fourth 'Flood Risk' bullet point which reads, "Site CC1 is located adjacent to the SEPA's indicative 1 in 200 flood risk area and has a large watercourse (River Ythan) adjacent to the site and a small watercourse running through or adjacent to the site (Broomies Burn). A detailed Flood Risk Assessment will be required to accompany any future development proposals for these sites and an appropriate buffer strip will be required adjacent to the existing watercourses" from the 'Flood Risk' section (PP1219).

Services and Infrastructure

Modify the PLDP to amend text under 'Strategic drainage and water supply' to insert an additional final sentence, "A Drainage Impact Assessment may be required" (PP0272).

Modify the PLDP to clarify the position regarding whether developer contributions from other development will be required in relation to the A90/A948 improvements or whether the OP1 site would deliver these specific improvements in its entirety and clearly state this within the PLDP, under the section 'Local transport infrastructure' (PP0578).

Site OP1 – Cromleybank

Modify the PLDP to amend the allocation summary of site OP1 to be more succinct (PP1219).

Modify the PLDP to re-route the Ellon east-west road link from the B9005 at the junction with the A90 trunk road to the A930 at Wineburn (to start before Wineburn as you drive east towards Ellon) (PP0164).

Modify the PLDP to provide clarification on the need for new housing at OP1 (PP0164).

Modify the PLDP to amend the allocation summary of site OP1 to remove the sixth paragraph that reads, "The Ythan Estuary, Sands of Forvie and Meikle Loch SPA are located to the southeast of the site and the site is likely to have an impact on the qualifying

species indirectly through recreation pressures, land take for development, drainage and impact on geese grazing areas. However, planning controls on construction and operation will work to mitigate these impacts." (PP1300).

Modify the PLDP to amend the allocation summary of site OP1 to state that the crossing of the River Ythan should be made by a bridge (PP1027).

Modify the PLDP to amend site OP1 to an allocation for 830 homes, a new primary school and associated facilities, and 2ha employment land and allocate the residual 150 homes to site CC1 to create an opportunity site for a mixed-use development, or alternatively allocate 150 homes on site CC1 to create a mixed-use development in addition to the 980 homes allocated on site OP1 (PP0911).

Modify the PLDP to amend the Ellon Settlement Statement, the allocation summary for site OP1 and the Delivery Programme to provide consistent information to developers and stakeholders on the specific trunk road mitigation requirements for Ellon. This should include the nature and scale of improvements required and associated cost, the mechanism whereby such contributions will be gathered, and when and by whom improvements will be delivered in accordance with SPP and Circular 2/2013 Planning Obligations and Good Neighbour Agreements (PP0578).

Modify the PLDP to remove site OP1 (PP0878).

Site OP2 – Former Academy and Academy Annex Site

Modify the PLDP to amend the allocation summary of site OP2 to add wording stating that the woodland area on Schoolhill Road, included as part of site OP2, should be retained (PP1136).

Site OP4 – Balmacassie

Modify the PLDP to amend the allocation summary of site OP4 to clarify whether a Gypsy/Traveller site is still included on site OP4 for 29ha of employment land, and if the provision of a Gypsy/Traveller site depends on the development of the area/land (PP0866).

Modify the PLDP to amend the allocation summary for site OP4 to include a requirement for a masterplan (PP1300).

Site CC1 – Waterton

Modify the PLDP to amend site CC1 to an opportunity site for mixed-use development, comprising 150 homes, retail use and a riverside park and extend the boundary to the edge of the River Ythan (PP0911).

Modify the PLDP to amend site OP1 to an allocation for 830 homes, a new primary school and associated facilities, and 2ha employment land and allocate the residual 150 homes to site CC1 to create an opportunity site for a mixed-use development, or alternatively allocate 150 homes on site CC1 to create a mixed-use development in addition to the 980 homes allocated on site OP1 (PP0911).

Non-Allocated Site – Bid Site FR063 – Site 1 adjacent to Golf View and Bid Site FR064 –

Site 2, Adjacent to Golf View

Modify the PLDP to include sites FR063 and FR064 for residential development (PP1338).

Summary of responses (including reasons) by planning authority:

Site R1 – Reserved for a new cemetery

Comments from SEPA are noted. No change is required.

Site R2 – Reserved for the existing Formartine and Buchan Way route and for a future potential railway route

Comments from SEPA are noted. No change is required.

The R2 allocation reserves land for a possible new railway and station, should it be required in the future. The Regional Transport Strategy (RTS) states that a study into the feasibility of reopening the former Formartine and Buchan line to Fraserburgh and Peterhead was undertaken. Although the study concluded that demand was unlikely to be sufficient to justify the significant capital cost and revenue would not be sufficient to cover operational costs, the RTS states that alignments should be protected in case substantial changes happen in the future. As such the reserved status of the site is in line with the requirement as stated in the RTS and provides a clear presumption against development that may compromise the ability to reinstate the railway line (see Draft Regional Transport Strategy 2040, New Lines, AD0024, page 29). Concerns raised regarding the impact a railway line would have on the surrounding amenity would be assessed and taken into account were the project to be progressed. Impact on property values is not a material planning concern. No change is required.

Site BUS – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

Flood Risk

Taking into consideration SEPA's comments regarding the 'Flood Risk' section requiring to be more succinct, the Council considers it appropriate to amend the wording accordingly. The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Taking into consideration SEPA's comments regarding adding site CC1 to the second 'Flood Risk' bullet point and removing the fourth bullet point which is dedicated to site CC1, the Council consider it appropriate to amend the wording accordingly to reduce repetition. The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Support expressed for the 'Strategic transportation' and 'Local transport infrastructure' sections is noted. No change is required.

Comments from SEPA are noted. No change is required.

Taking into consideration Scottish Water's comments on the 'Strategic drainage and water supply' section which requests additional wording to state that a Drainage Impact Assessment may be requested, the Council considers it appropriate to amend the wording accordingly. The Council confirms that it intends to address Scottish Water's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council notes the comments raised by the Scottish Government regarding the text under 'Local transport infrastructure' does not make reference to the A90(T)/B9005 roundabout. In consultation with the Council's Transportation Service, the Council have been advised that the requirement to assess and identify the transport mitigations associated with the OP1 site needs to remain suitably flexible so that these can be assessed against the prevailing transport conditions and policies at the time the development site comes forward to planning (AD0134). The DMPTAG analysis has highlighted where traffic pressures are likely to arise and the underlying modelling has provided potential road-based mitigations based on current (pre-Covid) traffic flows and in the absence of any emerging NTS policies taking effect. It has also provided sufficient confidence that the PLDP allocation is deliverable and that measures do exist that can address trunk road impacts as required (AD0043). However, our view remains that fixing specific road-based mitigations at this stage is likely to stifle innovative transport and integrated land use solutions that would better reflect the emerging National Transport Strategy, particularly the Sustainable Travel Hierarchy and the Council would wish for that opportunity to remain open to the developer, rather than it being suppressed from the start. In practical terms, the current policy aims expressed through SPP and the emerging NTS are likely to be better served if the Council allow an opportunity to reallocate the significant costs associated with the mitigations identified through the DPMTAG modelling, which will provide additional road capacity but deliver nothing more than reduced traffic queues for about 40 minutes in a typical weekday, into improved on-site facilities that reduce the need to travel overall – facilities for home/localised working is a good example at the present time. Any such measures would still require to be taken forward through a Transport Assessment or Transport Strategy for the site, and this would still need to address the specific infrastructure capacity issues highlighted in the DPMTAG traffic modelling. No change is required.

Site OP1 – Cromleybank

Support expressed for site OP1 is noted. No change is required.

Support expressed from HES for the revised boundary of OP1 and the stated requirement for strategic landscaping and associated flood risk management is noted. No change is required.

The Council does not consider that amendment to the allocation summary is required in light of SEPA's comments as sufficient text is contained within the allocation summary and further information would be contained at the planning application stage. No change is required.

An east-west link road or vehicular bridge across the River Ythan is required to ensure the local road network provides the necessary capacity to accommodate the traffic generated by the development at OP1. The route for the east-west link road is indicative of the route that the link road may take, however the finalised route would be confirmed through the planning

application process once a Transport Assessment has been undertaken. Potential impact on amenity and wildlife would be considered at the planning application stage and would require to be in line with Policy P1 Layout, Siting and Design and Policy E1 Natural Heritage (AD0041.A). No change is required.

As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

The Council notes the comments from NatureScot. In consultation with the Council's Environment Service, the Council have been advised that the text in relation to the impact on the SPA is appropriate and should remain in the allocation summary (AD0130). The Council acknowledge NatureScot's comments in relation to the removal of reference to the Sands of Forvie SAC, as this is designated for its vegetation of which the OP1 site is not likely to impact upon. However, the allocation summary does not make reference to the protection of the Sands of Forvie SAC and only makes reference to the Ythan Estuary, Sands of Forvie and Meikle Loch SPA. As such, no change is required.

An east-west link road or vehicular bridge across the River Ythan is required to ensure the local road network provides the necessary capacity to accommodate the traffic generated by the development at OP1. The east-west link road is the preferred option, however, one of the options is required to be progressed for delivery of the OP1 site. No change is required.

The allocation of 980 homes on the OP1 site is considered appropriate and the removal of 150 homes from the OP1 site to create a mixed-use development at site CC1 is not supported. Site CC1 was subject to a bid (FR031) received in response to the Council's call for sites in 2018. Bid site FR031, a mixed-use development including 150 homes, retail and a riverside park, was not identified as a preferred option in the MIR 2019. The MIR stated that the site was not considered suitable for residential development due to the business land surrounding the site (see MIR 2019, Appendix Formartine, AD0038.D, page 38). Responses received to the MIR 2019 consultation indicated a preference to see bid site FR032 developed. However, it was considered that development of the CC1 site for residential use may place restrictions on the deliverability and operation of the existing CC1 site, and that as proposed, FR031 was not considered to be an appropriate addition to the settlement at this time and would have negative landscape impacts (see MIR Issues and Actions Papers, AD0040.D, Issue 71 Ellon, pages 38-39). The conclusions regarding the site becoming a mixed-use development are still pertinent and it is not considered that site CC1 should be amended. Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

The Council notes the comments raised by the Scottish Government stating that the allocation summary text for site OP1 does not take into consideration that an appropriate transport appraisal in the form of the DPMTAG has been undertaken and concluded what mitigation is required to deliver the development. In consultation with the Council's Transportation Service, the Council have been advised that the requirement to assess and identify the transport mitigations associated with the OP1 site needs to remain suitably flexible so that these can be assessed against the prevailing transport conditions and policies at the time the development site comes forward to planning (AD0134, email from

Transportation). The DMPTAG analysis has highlighted where traffic pressure is likely to arise and the underlying modelling has provided potential road-based mitigations based on current (pre-Covid) traffic flows and in the absence of any emerging NTS policies taking effect (AD0043). It has also provided sufficient confidence that the PLDP allocation is deliverable and that measures do exist that can address trunk road impacts as required. However, our view remains that fixing specific road-based mitigations at this stage is likely to stifle innovative transport and integrated land use solutions that would better reflect the emerging National Transport Strategy, particularly the Sustainable Travel Hierarchy and the Council would wish for that opportunity to remain open to the developer, rather than it being suppressed from the start. In practical terms, the current policy aims expressed through SPP and the emerging NTS are likely to be better served if the Council allow an opportunity to reallocate the significant costs associated with the mitigations identified through the DPMTAG modelling. This will provide additional road capacity but deliver nothing more than reduced traffic queues for about 40 minutes in a typical weekday, into improved on-site facilities that reduce the need to travel overall – facilities for home/localised working is a good example at the present time. Any such measures would still require to be taken forward through a Transport Assessment or Transport Strategy for the site, and this would still need to address the specific infrastructure capacity issues highlighted in the DPMTAG traffic modelling. If the Reporter is minded, to make an amendment, then the Council recommend that paragraph 2 of the allocation summary for site OP1 could be modified to read, “A Development Framework has been agreed for this site. A number of access points to the site will be required from South Road (B9005). Previous traffic modelling has indicated that either a vehicular bridge across the River Ythan and/or an east-west link road from the B9005 at its junction with the A90 trunk road to the A920 at Wineburn will be required to ensure the local road network provides the necessary capacity to accommodate the traffic generated by the development. An updated Transport Assessment will be required to finalise the mitigation requirements alongside potential alternative innovative transport and land use solutions that seek to reduce the need to travel and consequently the overall impact of traffic both within Ellon, particularly on the A920 Riverside Road/B9005 South Road Corridor, and on the A90 trunk road between the A90/B9005 and the A90/A948 junctions. Any such measures will need to be fully assessed and justified in a new Transport Assessment, which should be updated to reflect current traffic conditions on the A90 at Ellon, and within Ellon since the opening of the AWPR and Balmedie – Tipperty dualling schemes. Development phasing also needs to be considered alongside the delivery of any strategic road network proposals for the A90 between Ellon and Peterhead/Fraserburgh. Sustainable communities are to be encouraged, and key to this will be active travel and facilities provided within the site aimed at reducing the overall need to travel. Public transport into the site is expected, particularly to and from the retail centre and Academy. Permeability within the development for active travel is required, and connectivity to the rest of the Ellon green-blue network is expected in this development with opportunities existing to link into the path network along the river”, to better reflect the Council’s position.

No ancient woodland is present on the OP1 site and any proposed removal of woodland will require to be in accordance with Policy PR1 Protecting Important Resources. No change is required.

Site OP2 – Former Academy and Academy Annex Site

Comments from SEPA are noted. No change is required.

The Council notes the representee’s comments regarding the woodland area on part of the

OP2 site. However, part of this site currently has planning permission for 40 homes and the principle of removing these trees was accepted as part of the agreed masterplan for the site (AD0058, Decision Notice). Planting is proposed within the site to replace the trees so there would be no net loss of tree cover and although the trees have general biodiversity value, this is not significant due to being amenity planting rather than woodland. It is considered that this can therefore be compensated through the planting of appropriate native tree and shrub species in the site landscaping. As noted above, this site now has an agreed masterplan and has planning permission for 40 homes and the Council notes the following non-notifiable modification has been made to the PLDP to update factual references since the PLDP was agreed.

Site OP3 – Hillhead Drive

Comments from SEPA are noted. No change is required.

Site OP4 – Balmacassie

Comments from SEPA are noted. No change is required.

With regard to the comments regarding the requirement of a masterplan and provision for a gypsy/traveller transit site on the site, if the Reporter is minded, to make an amendment, then the Council recommend that the allocation summary for site OP4 could be modified to include a requirement for a masterplan with any specific reference made to the provision for a gypsy/traveller transit site.

Site CC1 – Waterton

Comments from SEPA are noted. No change is required.

Support expressed for site CC1 (10,000m² retail and leisure uses) is noted. However, the allocation of 980 homes on the OP1 site is considered appropriate and the removal 150 homes from the OP1 site to create a mixed-use development at site CC1 is not supported. Site CC1 was subject to a bid (FR031) received in response to the Council's call for sites in 2018. Bid site FR031, a mixed-use development including 150 homes, retail and a riverside park, was not identified as a preferred option in the MIR 2019. The MIR stated that the site was not considered suitable for residential development due to the business land surrounding the site (see MIR 2019, AD0038.D, Appendix Formartine, page 38). Responses received to the MIR 2019 consultation indicated a preference to see bid site FR032 developed. However, it was considered that development of the CC1 site for residential use may place restrictions on the deliverability and operation of the existing CC1 site, and that as proposed, FR031 was not considered to be an appropriate addition to the settlement at this time and would have negative landscape impacts (see MIR Issues and Actions Papers, AD0040.D, Issue 71 Ellon, pages 38-39). The conclusions regarding the site becoming a mixed-use development are still pertinent and it is not considered that site CC1 should be amended. Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site FR063 – Site 1 adjacent to Golf View and Bid Site FR064 – Site 2, Adjacent to Golf View

The Council does not support allocating bid sites FR063 and FR064 for residential development. The representee's comments are noted. Bid sites FR063 and FR064 were received in response to the Council's call for sites in 2018 and were not identified as preferred options in the MIR 2019 (see MIR 2019, AD0040.D, Appendix Formartine, pages 38-39). However, the Formartine Area Committee (FAC) agreed an additional recommendation at their special meeting on 10 September 2019 to include bid sites FR063 and FR064 in the Settlement Statement for Ellon (see Formartine Area Committee Minute 10/09/2019, AD0141, Issue 71 Ellon, pages 9-10). Following comments provided by the Transportation Service raising concerns regarding the sites likelihood to impact on congestion arising on the A90(T) junctions with the B9005 and the A948, Infrastructure Services Committee (ISC) agreed not to allocate bid sites FR063 and FR063 at their meeting on 3 October 2019 (see Infrastructure Services Committee Minute 03/10/2019, AD0151, Errata – Issue 71 Ellon, page 15). FAC subsequently considered the sites at their Committee meeting on the 29 October 2019 on the basis that there had been circulated a Report dated 10 October 2019 by the Director of Infrastructure Services which advised the Committee of the recommendations adopted by ISC on the two sites, on the basis of late information provided by the Transportation Service as part of the DPMTAG. At their meeting, FAC agreed that the Committee maintain support for the inclusion of bid sites FR063 an FR064 and request that the appropriate decision-making body give fresh consideration of the Officer recommendations in relation to the bid sites in light of the comments provided by FAC at their meeting on 29 October 2019 (see Formartine Area Committee Minute 29/10/2019, AD0143, Item 8 Aberdeenshire Proposed Local Development Plan 2021 – Consideration Of Main Issues Report Submission – Bid Sites FR063 and FR064 – Adjacent To Golf View, Ellon, pages 3-5). At their meeting of 28 November 2019, ISC subsequently considered the views of FAC of 20 October 2019 and agreed to uphold the decision of ISC at its meeting on 3 October 2019, not to recommend to Aberdeenshire Council bid site FR063 and FR064 for inclusion in the PLDP (see Infrastructure Services Committee Minute 28/11/2019, AD0152, Item 7 Aberdeenshire Proposed Local Development Plan 2021 – Consideration Of Main Issues Report Submissions Formartine Bid Sites FR063 (Site 1 Adjacent to Golf View, Ellon) and FR064 (Site 2 Adjacent To Golf View, Ellon, pages 7-8). Aberdeenshire Council subsequently agreed not to include bid site FR063 and FR064 in the PLDP (see Aberdeenshire Council Minute 05/03/2020, AD0104, Bid site FR063 and FR064 at Auchterellon Farm, Ellon, pages 11-12).

The allocation of bid sites FR063 and FR064 remains to be considered an inappropriate allocation. The works that would be required to allow the development of the sites would include substantial works to the A90(T) at two locations, including re-modelling of the bridge over the River Ythan. The sites would be undeliverable without increasing congestion at the two A90(T) roundabouts and it is considered that these sites are premature to any solution that may be promoted to resolve congestion on the A90(T). It is acknowledged that the current version of the regional transport model (Aberdeen Sub Area Model 14) is currently being developed to reflect observed travel patterns following the opening of the AWPR, however the conclusions reached in the DPMTAG are based on what was the most up to date information available at the time. This includes the Google Live Traffic flow information which was subsequently validated by Officers on site (see DPMTAG Assessment Report, AD0043, Section 5.5 Ellon, page 44). It is still the opinion of the Council that it would be improper to ask a developer for contributions to aid in resolving an existing congestion problem where no design solution is proposed as this could be construed as 'land banking', a matter not considered acceptable by the Scottish Government.

The DPMTAG Report shows that settlements such as Fraserburgh and Peterhead have a substantially lower percentage of their population commuting south to Aberdeen City than the percentage of the population of Ellon making this journey (see DPMTAG Assessment Report, AD0043, Section 5.2 Identification of Settlements, page 34). As such, it is not considered that bid sites FR063 and FR064 will have less of an impact on the A90 than sites to the north, as the data show that individuals residing in Ellon are more likely to commute to Aberdeen City, hence the sites would put further pressure on the A90.

Although it is stated by the representee that access arrangements have been considered in a masterplan, the risk of development being stalled by third parties still exists. Additionally, it remains the view of the Council that these sites are not an appropriate extension for Ellon. It is considered that the bid sites would breach the brow of the hill and would result in a prominent and exposed site that compromises Ellon's natural landscape capacity. Housing is not an appropriate neighbour for a cemetery, given the scale of the housing development in comparison to that of the adjacent cemetery. Furthermore, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as "non-notifiable modifications" in relation to the settlement statement matters covered in Issue 22. However, where such matters arise from representations made to the proposed plan, they require to be considered in the examination. I therefore address these as appropriate below.

Site R2 – reserved for the existing Formartine and Buchan Way route and for a future potential railway route

3. The proposed plan reserves land on the western side of Ellon for a possible new railway line and station. This linear site used to form part of the Formartine and Buchan railway. The draft Regional Transport Strategy refers to a study which found that, at that time, demand was insufficient to justify promoting a scheme to re-open the line through to Fraserburgh and Peterhead. However, the alignment should be protected in case substantial changes occurred in the future. The reserved status would create a presumption against development which would comprise the ability to reinstate the line in the longer term. The current use as a walking route is also protected.

4. A number of residents adjacent to the way have expressed concerns at the potential environmental effects, including on residential amenity, and health and safety matters of a railway route. These would depend on the details of any proposal and would require to be

carefully assessed were the project to be progressed.

5. General support for public transport initiatives is contained in Scottish Planning Policy. I have not been informed of any reasons which would, in principle, rule out reservation of the land for a future potential railway use. No modification is required.

Flood risk

6. The Scottish Environment Protection Agency (SEPA) requests amendments to the text of the second flood risk bullet point (page 420). I agree with SEPA and the council that this would be more succinct. SEPA also requests removal of the fourth flood risk bullet point (page 421), which I consider is justified as it repeats information set out under site CC1. I recommend appropriate modifications.

Services and infrastructure

7. I agree with Scottish Water's request for amended wording in the Strategic Drainage and Water Supply bullet point regarding the possible need for Drainage Impact Assessments, as this would improve clarity. A modification is recommended.

8. It is common ground that transport mitigations would be required for additional traffic movements arising from the allocation of sites in Ellon for over 1,000 new homes, 31 hectares of employment land, 10,000 square metres of retail and leisure, and some mixed use development. This would include impacts on the A90 trunk road at its junctions with the A948 and the B9005 and on the town centre. Transport Scotland is not satisfied that the proposed plan meets the requirements of Scottish Planning Policy in clearly setting out what transport mitigations would be required in relation to the sites allocated in Ellon, as well as how they would be funded and by whom.

9. The Development Planning and Management Transport Appraisal Guidance (DPMTAG) assessment together with the Ellon Traffic Modelling Study have identified possible road-based mitigations, and Transport Scotland supports the conclusions of those studies. However, the council wants more flexibility to allow for the reallocation of resources away from highway solutions and towards innovative transport and integrated land-use solutions to reduce the need to travel overall, such as facilities for home/localised working.

10. In response to requests for further information (FIR007 and FIR010), Transport Scotland remained concerned at the lack of clarity in the proposed plan, and in the council's proposed revised text, over whether mitigations are expected towards one or both of the trunk road junctions and whether these would be delivered by sites individually or through a combined contribution mechanism. In that respect, it referred to pre-application discussions between the prospective developer of site OP1 Cromleybank, the council and Transport Scotland, which concluded that the OP1 development would deliver the A90/B9005 improvements in their entirety, but would not be expected to contribute to the A90/A948 junction improvements. As this is not reflected in the proposed plan, it was not clear whether that remained the council's position. Similarly, the council's stance on an application for development at OP4 Balmacassie (since withdrawn) had failed to resolve questions as to how and where the full mitigation required at the A90/A948 junction would be delivered, and this had not been clarified in the proposed plan. It was not clear how the council's reliance on an updated Transport Assessment for OP1 would allow the identification of cumulative impacts or the establishment of appropriate contribution

mechanisms, nor how these matters could be resolved through a subsequent development management process. Transport Scotland also considered that the conclusions of the DPMTAG assessment should be identified and recognised, even if the site developers subsequently seek to identify alternative innovative solutions to address the transport impacts.

11. Although these issues remain unresolved, I am satisfied that the two studies mentioned in paragraph 9 demonstrate that there are measures available which could achieve the necessary mitigation. This means that the plan allocations are in principle acceptable.

12. However, Transport Scotland's concerns in Ellon form part of a wider concern regarding transport infrastructure and developer obligations throughout the plan area. This is discussed in Issue 12, where we recommend modifications requiring the council to prepare statutory supplementary guidance on these matters. For the reasons set out by Transport Scotland, I consider that such guidance should provide further information on the transport measures required to mitigate development in Ellon. It is my understanding that information on how, when and by whom these are to be delivered will be provided through the Delivery Programme, which will be the subject of regular updates. I recommend a sentence be added to the strategic transportation and local transport infrastructure bullet points in the settlement statement on this matter.

13. It is also appropriate that the plan should make reference to the conclusions of the DPMTAG assessment and the Ellon Traffic Modelling Study in order to provide a basis for discussions on mitigation measures. A modification to the vision section is recommended.

Site OP1 – Cromleybank

14. This allocation, in the southeast quarter of Ellon, is for 980 homes, a primary school and associated facilities, together with two hectares of employment land.

15. The proposed east-west link road between the B9005 and the A920 at Wineburn is intended to ensure that the local road network has the capacity to accommodate the extra traffic generated by development at site OP1, rather than just to facilitate access, and has been assessed as part of a transport appraisal. The route is indicative so the detail of its alignment, including its effects on amenity, the environment and access to properties, would require to be considered at planning application stage and to accord with policies including those on layout, siting, design and natural heritage. The options of constructing a bridge over the River Ythan versus an east-west link road are at a conceptual stage and I have insufficient information to consider them in this examination. No modification is required.

16. The impact of the Covid-19 pandemic on the demand for new homes is discussed in Issue 2.

17. A representation requests alteration of the OP1 allocation by transferring 150 homes to site CC1 because: OP1 has not delivered any homes since its zoning in 2012, the majority of the allocation is not expected to be delivered until after 2026, which would not ensure an adequate housing supply, and the number of homes proposed at Cromleybank is excessive. However, I see that both the 2019 and 2020 housing land audits indicate that housing will be delivered from this site throughout the plan period. Matters related to the speed of delivery of homes in general is discussed in Issue 5. Transferring allocations to a different

site within the same settlement would not necessarily result in speedier delivery. Moreover, as I conclude below, the proposal for mixed use development on site CC1 is not appropriate. No modification is required.

18. The transport matters relating to this site are covered in paragraphs 8 to 13 above.

19. The site OP1 allocation summary refers to the potential for development to impact on the qualifying species of birds at the Ythan Estuary, Sands of Forvie and Meikle Loch Special Protection Area (SPA). A representation from NatureScot stated that the measures indicated in the summary were not required to protect the SPA. The council queried this advice. However, in its response to a request for further information, NatureScot has clarified that appropriate drainage provision and a construction method statement are not required to avoid an adverse effect either on the Sands of Forvie Special Area of Conservation or on the Ythan Estuary, Sands of Forvie and Meikle Loch Special Area of Conservation (SAC). It recommends that the allocation summary for site OP1 should be amended accordingly. This advice is based on detailed analysis, which concluded that the impact of drainage and construction works on the relevant bird species would not have an adverse effect on the integrity of either the SPA or the SAC. In the light of NatureScot's explanation, I recommend the appropriate modification.

20. Woodland Trust Scotland maintains that the OP1 allocation is likely to cause damage to or loss of an area of ancient woodland within its boundaries near the academy and should be deleted from the proposed plan. The Trust was requested to supply a plan and supporting information to establish the exact location and status of the area of ancient woodland it was referring to, but no response was received. The council provided additional wording to be included at the end of the penultimate sentence of the allocation summary, namely: "The ancient woodland site should be protected against loss or detrimental impact in any future planning applications." It also pointed out that all woodland is subject to protection under Policy E1 Natural Heritage, Nature Conservation Sites and Policy PR1 Protecting Important Resources, Trees and Development of the plan and that for any proposals involving the removal of trees or woodland, the Scottish Government's Control of Woodland Removal Policy would apply. I am satisfied that the policies cited, together with the suggested additional text, would provide adequate protection to ancient woodland on the site and recommend a modification accordingly.

Site OP2 – Former Academy and Annex

21. The former academy and annex constitute a centrally located split site which is allocated for mixed use options including housing, affordable housing, community uses and office space. The objection seeks retention of the woodland element of the site as being part of the natural infrastructure of the town and allowing access to woodland to the northwest of the site. However, I am informed that the site has an agreed masterplan and that part of the site has planning permission for 40 homes; replacement tree and shrub planting is required by the masterplan. At the time of my visit, work to clear trees on the former academy site was underway. It is therefore clear that decisions have already been taken which mean that I am unable to recommend any modification.

Site OP4 – Balmacassie

22. Balmacassie is a greenfield site at the north-east edge of the town which is allocated for 29 hectares of employment land.

23. Paragraph P1.2 in the proposed plan suggests that master plans are appropriate for employment sites of over two hectares. The pending planning application referred to in the allocation summary in the proposed plan has now been withdrawn. I agree with NatureScot that a masterplan would be appropriate, given the size, location and characteristics of site OP4. A modification to this effect is recommended.

24. The Gypsy/Traveller Liaison Officer requests clarification on whether the allocation of land for a gypsy/traveller site within site OP4, as in the current local development plan, is still included, noting that no specific reference is made in the proposed plan and no timescale for its provision is indicated. The liaison officer also queries whether provision of the site depends on prior development of the employment land.

25. The position is that, in the absence of any reference to a gypsy/traveller site on this site in the proposed plan, it is not included. Whilst the council's response suggests a modification to the allocation summary for site OP4 to include a requirement for a masterplan "with any specific reference made to the provision for a gypsy/traveller transit site", I am unable to make that change. The representation is expressed as a request for clarification rather than for inclusion of a gypsy/traveller site, and to insert the reference to a transit site at examination stage would deprive any interested party of the opportunity to make representations on this matter. No modification is required.

Site CC1 - Waterton

26. At site CC1, Stewart Milne Homes requests the addition of 150 homes (or a transfer from site OP1) and a riverside park to create a mixed use development alongside the allocated 10,000 square metres of retail and leisure uses.

27. The council is concerned that residential use could place restrictions on the deliverability and operation of the existing CC1 site and limit the scale of retail and leisure uses sought. It could also have a negative effect on landscape character as the land currently contributes to the natural green network along the River Ythan and protects the setting of the B-listed buildings at Boat of Fechil Croft, and would represent overdevelopment.

28. I agree with the council's arguments, noting that the "vision site layout" submitted by the developer would remove a large portion of the site from retail and leisure uses in a location suited to those uses by its relationship to the road network. Furthermore, it would extend the housing beyond the CC1 site towards the river, to the detriment of the setting of this attractive stretch of water.

29. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. Sites in Ellon could potentially contribute to meeting this shortfall. However, for the reasons set out above, I conclude that site CC1 (part) should not be allocated. There are other sites available to meet the identified shortfall, as explained in issue 5. No modification is required.

Non-allocated Bid site FR063 – Site 1 adjacent to Golf View and Bid site FR064 – Site 2 adjacent to Golf View

30. Bid sites FR063 and FR064, for 51 and 32 homes respectively, stand on the northern edge of the town beyond a golf course. As I confirmed on site, development of these sites would cross the brow of the hill to the north of Ellon, resulting in a prominent, exposed site projecting into open countryside, and taking development out of the landscape which currently provides visual containment to the town. The proposed cemetery on adjacent land would not justify housing infill behind it. The McDonald Golf Club course and its associated tree belts provide an appropriate boundary on this side of the town.

31. Based on traffic modelling exercises, the council considers that the proposed development would impact on traffic congestion at the A90 junctions with the B9005 and the A948, and require re-modelling of the bridge over the River Ythan. I have seen no traffic assessment to alleviate these concerns.

32. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. Sites in Ellon could potentially contribute to meeting this shortfall. However, for the reasons set out above, I conclude that bid sites FR063 and FR064 should not be allocated. There are other sites available to meet the identified shortfall, as explained in issue 5. No modification is required.

Reporter's recommendations:

Modify the local development plan by:

1. Adding the following after the third sentence in the third paragraph of the Vision section in the settlement statement on page 419:

“Additional traffic movements arising from the sites allocated in Ellon will require transport mitigations to address their impact on the A90 trunk road at its junctions with the A948 and the B9005 and on the town centre. The Development Planning and Management Transport Appraisal Guidance (DPMTAG) assessment and the Ellon Traffic Modelling Study have identified potential mitigations. However, the council would also consider alternative innovative transport and integrated land use solutions to address the relevant impacts.”

2. Replacing the second bullet point in the Flood Risk section on page 420 with the following:

“Parts of sites OP1, OP3, CC1 and BUS are located adjacent to the SEPA Indicative 1 in 200 flood risk area or have small watercourses running through or adjacent to the site. A Flood Risk Assessment will be required and buffer strips will be required alongside the watercourse.”

3. Deleting the fourth bullet point in the Flood Risk section on page 421.

4. Adding a new sentence at the end of the strategic transportation bullet point on page 421 to read:

“Further information on the transport measures required to mitigate development in Ellon, and how, when and by whom these will be delivered is provided in Supplementary Guidance on Developer Obligations and Affordable Housing, and the Delivery Programme.”

5. Adding a new sentence at the end of the local transport infrastructure bullet point on page

421 to read:

“Further information on the transport measures required to mitigate development in Ellon, and how, when and by whom these will be delivered is provided in Supplementary Guidance on Developer Obligations and Affordable Housing, and the Delivery Programme.”

6. Adding the following sentence at the end of the strategic drainage and water supply bullet point on page 421:

“A Drainage Impact Assessment may be required.”

7. Adding the following wording at the end of the fourth paragraph of the allocation summary for site OP1 (Cromleybank) on page 423:

“In any future planning applications, the ancient woodland site should be protected against loss or detrimental impact.”

8. Removing the last paragraph of the allocation summary for site OP1 (Cromleybank) on page 423.

9. Adding the following new third sentence to the allocation summary for site OP4 (Balmacassie) on page 426:

“A Masterplan will be required.”

Body or person(s) submitting a representation raising the issue (including reference number):		
PP0007 Elaine Freitag PP0135 Jane Waters PP0272 Scottish Water PP0353 Tom Sanders PP0448 Charlie Weir PP0533 Anne Wolrige Gordon PP0554 Tommy Hart PP0665 Stewart Milne Homes PP0749 John Dolman PP0758 Stewart Milne Homes PP0838 Graham Pryor PP0898 Graham Pryor PP0936 Derek Ball PP1129 Martin Hirst PP1144 John Dolman PP1151 William Ritchie PP1152 Rebecca Ritchie PP1179 Neil Strachan PP1180 The University of Aberdeen PP1219 Scottish Environment Protection Agency PP1300 NatureScot (Scottish Natural Heritage)		
Provision of the development plan to which the issue relates:	Newburgh Settlement Statement	
Planning authority's summary of the representation(s):		
<p><u>General</u></p> <p><u>Distributor Road</u></p> <p>Support was received for the distributor road to reduce the impact on Main Street, but the Vision and the allocations need to align and be clear about how the distributor road can be delivered. There is also uncertainty as to how the allocations can help facilitate the distributor road unless there is a joined-up approach with developers and landowners. The residential part of OP1 has been developed and it is unclear how OP2 would link with the distributor road. The only way of securing the distributor road would be through mass allocation to the west and north of Newburgh with a requirement for a joint Development Framework otherwise it is unlikely to be delivered (PP0554).</p> <p>Concerns were raised over the safety of the possible distributor road as vehicles will be</p>		

approaching the proposed junction at speed which is located near a sharp left-hand bend and the area close to the bridge would be considered unsafe as it would be difficult for cars to pass each other (PP0448). The safety is not only for vehicles but also for pedestrians (PP0353, PP0448, PP0936, PP1129 and PP1151). It was also noted as a safety concern that additional traffic will be directed towards the primary school (PP1129).

Comments have been received noting that the road would lead to a significant loss of countryside for the community (PP0353, PP0898 and PP1152), habitat for wildlife (PP0448), views of the countryside (PP0448) and also the loss of an important community amenity (PP0353, PP0448, PP0838, PP0898 and PP1152). It was also noted that the benefits to alleviating traffic from Main Street would be disproportionate to the environmental impacts of the road (PP0533). Additionally, the distributor road would encourage future development that would threaten the shape and scale of Newburgh (PP0898).

The location of the proposed route was queried by a number of representees (PP0353, PP0448, PP0936 and PP1144), particularly the proximity to the three dwellinghouses at the proposed junction (PP0353 and PP0448).

It was suggested that the location of the new distributor road should be consistent with what was presented to Formartine Area Committee in December 2012. This route should be of the standard of an A-class road which could potentially proceed along the current B9000 to the junction with the A90. An intersection on the A90 with the B9000 could be possible if required in the future (PP1144).

Representees have indicated that the route of the road should be set in stone rather than being indicative (PP0533 and PP0554), and it should be clearly marked through the OP3 site where the start of it will be (PP0554).

The consultation process that was undertaken to decide the route of the distributor road was noted as a concern (PP0448 and PP0936), particularly contact being made with the houses at the proposed junction (PP0448). It has also not been indicated if other routes were discussed and no reference is made to why the proposed route is being used over any alternative (PP0448).

Concerns have been raised that the purpose of the link road seems to be to take traffic north, however anyone going to Peterhead will use the A90 so limits the amount of traffic that will use this road. It therefore does not appear that the road would fulfil the objective of taking traffic away from the centre of the settlement (PP0353, PP0448 and PP0936).

A representee requested that when referencing the road, it should be referred to as a bypass rather than a distributor road or a link road (PP1144).

Further Expansion

Support has been received for the location of the new development being located at the western edge to avoid traffic on Main Street and easier access to the Aberdeen Western Peripheral Route (AWPR) (PP0554).

Newburgh has expanded a lot and any further expansion would result in the feeling of a town rather than a village which should be avoided (PP0838). It is noted by a representee

that the proposed scale of housing is disproportionate to the size of the existing settlement and would have an adverse impact on the local coastal environment, including the National Nature Reserve (NNR) and species. There is a lack of recreational spaces for existing residents and those potentially moving into the settlement (PP0135).

Vision

The first comment in the Vision about transforming the area into a high-quality lifestyle, leisure and global business location is not correct and the Vision is misguided. The statement relating to the existing services not being able to be sustained without new development and the community are in favour of new development to the west of the settlement are untrue, this would increase disturbance for existing residents (PP1129).

Site P1 – To protect the play area and pond as an amenity for the settlement

Increasing the P1 allocation would hamper future development of the Culterty House site, where a sensitive development would provide full restoration of the pond with all ecological benefits that would ensue. Foveran Community Council support the development of the site which is currently an eyesore. Redevelopment would see three houses being required to enable the restoration works required (PP1179 and PP1180). The opportunity to redevelop and provide ecological value, biodiversity enhancement of the pond would be undermined by the extension of the P1 site which is unnecessary and unreasonable. There is also no justification for the extension in the Main Issues Report (MIR) or the Issues and Actions paper (PP1180). The two representees have included a number of Appendices (RD0204.A- RD0204.B and RD0205.A- RD0205.B) in their representations which provides further detail to support their positions.

Site BUS – Safeguarded for business uses

SEPA has confirmed that they have no further flooding, strategic drainage, or water supply issues with the designation summary for site BUS (RD0214.B) (PP1219).

Flood Risk

Scottish Environment Protection Agency (SEPA) has requested that the first and second bullet points in the 'Flood Risk' section are merged together. They have also requested that the third bullet point is amended to remove reference to SEPA's indicative flood map for sites OP1, OP2, OP3 and BUS (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' and water supply (RD0214.B) (PP1219).

Scottish Water has confirmed that additional text needs to be added to the 'Strategic drainage and water supply', "Scottish Water will initiate a growth project, should demand from committed development exceed available capacity and will instigate this on receipt of the 5 Growth Criteria from a developer. A Drainage Impact Assessment may be requested. Private treatment works are unlikely to be authorised but engagement with SEPA is advised to discuss further. Early engagement with Scottish Water is strongly encouraged." (PP0272).

Site OP1 – West of Airyhall View

SEPA has confirmed that they have no further flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B) (PP1219).

A representee has noted that the landowner will not let the site come forward for the uses allocated and the inclusion of non-residential development on the site would make for bad planning. It was also noted by the representee that they were not involved in the earlier masterplanning process (PP0007).

A representee has requested that the text in the allocation summary for OP1 relating to access and transportation is removed. It is argued that the provision of a link between the B9000 and A975 is unnecessary if the northern link is developed and would serve little purpose (PP0749).

Site OP2 – Knockhall Road

SEPA has confirmed that they have no further flooding, strategic drainage, or water supply issues with the allocation summary for site OP2 (RD0214.B) (PP1219).

This site should be removed from the Proposed Local Development Plan (PLDP) because it is inconsistent with the shape and identity of the village, additionally it will increase traffic on School Road which will be an obstruction for Foveran Primary School. The site would also have a negative impact on the local landscape and disturbance to wildlife (PP0838).

Site OP3 – Land North of School Road, Mill of Newburgh

SEPA has confirmed that they have no further flooding, strategic drainage, or water supply issues with the allocation summary for site OP3 (RD0214.B) (PP1219).

Support has been received for the allocation of 160 homes on the OP3 site however, there is a request for the boundary to be extended as far as the burn to the north in order to create a better residential development. Errors made in the MIR and the allocation summary text for the site justify the need to extend the boundary to the north. The increase in site size would not increase the capacity as it would be used as a buffer to the watercourse and parkland to add character to the development, so ensuring a high-quality residential environment (PP0758).

The OP3 site should be removed from the PLDP as the site would increase the population in Newburgh leading to an education constraint (PP1151). The site is also inconsistent with the shape and identity of the village, it will increase traffic on School Road, and would have a negative impact on the local landscape and disturbance to wildlife (PP0838).

This site being allocated for 160 homes will have a detriment on education provision with limited capacity and space for improvements on the existing school site. There is no support for works being carried out on the adjacent playing fields as this would lose valued open space. Investment in the existing school would not make marked improvements therefore a new school should be provided with this site (PP0554).

NatureScot has suggested amending or removing wording in the allocation summary for

site OP3 to avoid suggesting that appropriate drainage provision and a Construction Method Statement are necessary to mitigate an adverse effect on the integrity of the Sands of Forvie Special Area of Conservation (SAC). NatureScot has advised that while appropriate drainage provision and a Construction Method Statement may be required by the Council, this mitigation is not necessary to avoid an adverse effect on the integrity of the Sands of Forvie SAC (RD0255.B) (PP1300).

Non-Allocated Site – Bid Site FR027 – Land South West of Red Inch Circle

A representee has requested that bid site FR027 be allocated for up to 80 homes and a potential link road to the A975. This site is in a sustainable location, constraint free and can be delivered in the short term. The site has an approved masterplan from 2013, and through the preparation of this, full site assessments were carried out. The very south of the site is prone to flooding however, no housing development would be located on the flooding zone, and there would be open space between the housing and the flooding area, thus making the issues of flooding raised through the Main Issues Report (MIR) and Issues and Actions Papers irrelevant. It is highlighted by the representee that neither SEPA nor the Council’s Flood Prevention Team have an objection to the site (PP0665).

The site would be able to deliver the provision of the link road which is a community aspiration. It should also be noted that a number of constraints were noted in the MIR and Issues and Actions papers, but these were discussed at the preparation of the masterplan and were not raised as issues including road access, landscaping and a buffer strip for the watercourse. None of these should be regarded as discussions having been had with the Council’s Roads Team, screening would be provided and also a phase 1 habitat survey has already been carried out. The need for new housing and the link road outweighs the fact that the site is located on prime agricultural land and that the loss of prime agricultural land would be marginal. Additionally, another constraint noted is education capacity and this is recognised as a constraint but can be mitigated through developer obligations. The representee has included an Appendix (RD0103.A) in their representation which provides further detail to support their position (PP0665).

Modifications sought by those submitting representations:

General

Distributor Road

Modify the PLDP to amend the settlement Vision and the allocation summaries for sites OP1, OP2 and OP3 so that it all aligns and refers to the western bypass (PP0554).

Modify the PLDP to provide clarification as to how the distributor road can be delivered (PP0554).

Modify the PLDP to remove reference to a distributor road (PP0353, PP0533, PP0838, PP0898, PP0936, PP1129, PP1151 and PP1152).

Modify the PLDP to amend the location of the distributor road to bring it closer to Newburgh and be consistent with the layout which was at Formartine Area Committee in 2012 and shown in representee’s response. The road should also be of an adequate width (PP1144).

Modify the PLDP to provide more information about the distributor road within the Newburgh Settlement Statement (PP0448).

Modify the PLDP to ensure public consultation is undertaken in relation to the location of the distributor road and for wider awareness (PP0448).

Modify the PLDP to assess if any alternative route can be observed and state this in the allocation summary (PP0448).

Modify the PLDP to refer to a “by-pass” as opposed to a “distributor road” (PP1144).

Further Expansion

Modify the PLDP to amend the Newburgh Settlement Statement so that no further opportunity sites are allocated for housing (PP0838).

Modify the PLDP to allocate further opportunity sites as protected land or for developments promoting active transport, cycling routes and ‘green’ development such as community composting rather than housing (PP0135).

Vision

Modify the PLDP to amend the settlement Vision by deleting the statement, “... transforming the area into a high-quality lifestyle, leisure and global business location.” (PP1129).

Modify the PLDP to clarify how the statements relating to existing services and new development have been made, discussion should have happened with residents (PP1129).

Site P1 – To protect the play area and pond as an amenity for the settlement

Modify the PLDP to remove the proposed extension to the protected site and revert back to the 2017 LDP boundary (PP1179 and PP1180).

Flood Risk

Modify the PLDP to amend the first and second bullet points by merging them to read, “... National Flood Risk Assessment. Parts of the settlement may also be at risk from coastal flooding. Flood Risk Assessments ...” (PP1219).

Modify the PLDP to amend the first sentence of the third ‘Flood Risk’ bullet point to read, “Sites OP1, OP2, OP3 and BUS have small watercourses running through ...” (PP1219).

Services and Infrastructure

Modify the PLDP to amend wording in the ‘Strategic drainage and water supply’ section to read, “Scottish Water will initiate a growth project, should demand from committed development exceed available capacity and will instigate this on receipt of the 5 Growth Criteria from a developer. A Drainage Impact Assessment may be requested. Private treatment works are unlikely to be authorised but engagement with SEPA is advised to

discuss further. Early engagement with Scottish Water is strongly encouraged.” (PP0272).

Site OP1 – West of Airyhall View

Modify the PLDP to remove site OP1 (PP0007).

Modify the PLDP to amend the allocation summary for site OP1 to remove the statement, “access and transport provision, including a link road between the B9000 and the A975 must be provided on the site.” (PP0749).

Site OP2 – Knockhall Road

Modify the PLDP to remove site OP2 (PP0838).

Site OP3 – Land North of School Road, Mill of Newburgh

Modify the PLDP to amend the boundary of the OP3 site to extend the site to the north for parkland and retain allocation for 160 homes (PP0758).

Modify the PLDP to remove site OP3 (PP0838 and PP1151).

Modify the PLDP to replace the existing education requirement to the requirement to include a new school on the site for allocation summary OP3 (PP0554).

Modify the PLDP to amend or remove the following wording in the allocation summary for site OP3 in Newburgh, "Appropriate drainage provision will be required to demonstrate that no impact will result on the nearby Special Protection Area and Special Area of Conservation sites." and "The Sands of Forvie SAC; Ythan Estuary, Sands of Forvie and Meikle Loch SPA and Buchan Ness to Collieston Coast SPA are located to the northeast of the settlement. The site may have a disturbance to geese, recreational impacts on tern colonies, and the erosion of dunes. Any future masterplan or planning application will need to contain a Construction Method Statement to take account of the potential impacts to the qualifying interests of the Ythan Estuary, Sands of Forvie and Meikle Loch SPA and RAMSAR." (PP1300).

Non-Allocated Site – Bid Site FR027 – Land South West of Red Inch Circle

Modify the PLDP to include bid site FR027 for 80 homes and potential link road to the A975 (PP0665).

Summary of responses (including reasons) by planning authority:

General

Distributor Road

Support for the distributor road is noted. The Newburgh distributor road is a long-term aspiration with no detailed design work to determine the exact route of the road. This means that it would be inappropriate to show the route as anything but indicative. No change is required.

In order for the aspiration of the distributor road to be delivered, detailed design work would be required which would look at potential routes to ensure that a number of concerns raised by representees are addressed including, safety concerns, location of the road, ensuring it meets its purpose and also looking at the impact the proposed route would have on the local environment. No change is required.

Additionally, this design and engineering work would allow for alternative options to be considered to ensure that the route selected is the best fit for the settlement. During the work required to outline the detailed location of the distributor road there would be public consultation meaning that members of the public would get a further opportunity to comment on the proposal for a key piece of infrastructure for the settlement. No change is required.

The Council confirms that it intends to address the representee comment concerning consistency of terminology through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Further Expansion

Support for new development being located at the western edge of Newburgh is noted.

Newburgh is located in the Aberdeen Housing Market Area (AHMA) within a local growth and diversification area. In accordance with the Aberdeen City and Shire Strategic Development Plan (2020), the settlement is appropriate for a level of growth related to local needs (AD0016, page 23, and paragraph 3.45). There has been only one new allocation made through the PLDP, the OP3 site which is seen to meet local needs within the settlement. Each allocation made in the Plan has been through multiple assessments including the Strategic Flood Risk Assessment, Strategic Environmental Assessment, Development Planning and Management Transport Appraisal Guidance, and the Habitats Regulations Appraisals to ensure the most appropriate sites are allocated for development. No change is required.

Concerns regarding the lack of recreational spaces are noted. There are however policies in the LDP where any new development over 50 homes are generally expected to devote 40% of the site to good quality open space (AD0041.A, page 49, paragraph P2.2). This should ensure that new recreational areas are provided along with any new development. No change is required.

Vision

The Vision itself remains unchanged from the LDP 2017 and is considered to remain appropriate. The area is included within the Energetica Corridor where there is a principal aim relating to transforming the area into a high-quality lifestyle, leisure and global business location. Therefore, the statements in the Vision remain appropriate as they are an aspiration for Newburgh. No change is required.

Site P1 – To protect the play area and pond as an amenity for the settlement

The area of the protected land has been extended from the boundary of the LDP 2017 to include the whole natural area. Even though the area has been extended and caused concern to representees, the area was and remains to be covered by relevant policies

within the LDP to protect the natural nature of the site. It is noted by the respondent that there is a desire to make improvements to the pond areas. The extension of the designation to cover the full area would not prohibit these works to the ponds as this work would be in keeping with the designation of maintaining and preserving the area. No change is required.

Site BUS – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address Scottish Water's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – West of Airyhall View

Comments from SEPA are noted. No change is required.
