The comments in relation to the delivery of the site are noted. However, the site is noted to have no constraints within the 2019 Employment Land Audit (AD0018, page 30). The site is therefore considered to be established and marketable land. Constraints for the Employment Land Audit include the option of ownership but as noted this has not been selected. No change is required.

Masterplanning is a collaborative process, but it is acknowledged that this process was completed a number of years ago as the masterplan was agreed by Committee in 2013. Proposed Policy P1 Layout, Siting and Design introduces a new measure for masterplans. The policy states at paragraph P1.2 that once a masterplan is agreed that it shall remain valid for a period of 5 years, unless planning permission for the development has been granted and implemented (AD0041.A, page 47, paragraph P1.2). This would then allow further engagement to be had by landowners, developers and residents on any future masterplan for the area. No change is required.

In terms of access requirements these would have been looked at through the masterplanning process. Additionally, these will be looked at in more detail when an application for development is submitted to the Planning Authority. It is not considered that it would be appropriate to remove these requirements from the Plan without any substantial justification, therefore no change is required.

Site OP2 – Knockhall Road

Comments from SEPA are noted. No change is required.

The concerns regarding the OP2 site are noted however, this is a committed site and is currently under construction. At the end of 2019 there were 27 completions on the site, with planning permission in place for the remainder of the site, APP/2014/1408. Therefore, the site is considered established in terms of planning and is noted as effective in the Housing Land Audit 2019 (AD0022, page 64). In relation to the issues raised about landscape and roads these would have been considered through the Development Management process when the planning application was submitted. It should be noted that the application was refused by the Planning Authority at Formartine Area Committee, as the site did not comply with Policy 9 Developer Contributions and SG Developer Contributions² as there was infrastructure that could not sustain the development. There was no evidence that the proposal reflected the principles of the Energetica policy and also did not comply with Policy 8 Layout, siting and design as the application did not accord with the approved masterplan. The application was subsequently granted on appeal to the Scottish Ministers, PPA-110-2252, (see appeal decision notice, AD0069, page 1-17). The suitability of the site for development was accepted during the Examination of the LDP 2012 (AD0032) and the more recent planning application appeal decision. No change is required.

Site OP3 – Land North of School Road, Mill of Newburgh

Comments from SEPA are noted. No change is required.

Support for the allocation is noted. The request for the boundary of the site to be extended to the north however, is not supported. It is noted that the reason for the request is to ensure a high-quality residential environment as the area would be used as a buffer to the watercourse and as parkland. Due to the size of the allocation boundary, the number of homes allocated was already increased to ensure the density of the allocation was appropriate and to ensure best use of the land. Increasing the allocation boundary would again, result in underdevelopment of the site. Through the masterplan process the open space should be considered as part of the process which should in turn help to ensure that the site results in the best form of placemaking. No change is required.

Concerns about the allocation of this site are noted. The issues being raised through the submissions in terms of education and road infrastructure are both issues which would be looked at in more detail through the masterplanning process and also through any planning application that is submitted. A request for a new school to be provided within the area is noted, however, any decision on this would need to be reviewed along with other primary education provision capacities within the existing network. The size of the allocation on OP3, generally would not equate to the requirement of a new school however, this discussion along with the discussion of the other constraints would happen at the masterplanning process. No change is required.

The Council note the comments from NatureScot in relation to the Sands of Forvie SAC. In consultation with the Council's Environment Service, the Council have been advised that the text in relation to the impact on the SPA is appropriate and should remain in the allocation summary (AD0130). However, the Council would not object to the removal of reference to the Sands of Forvie SAC as this site is designated for its vegetation of which the OP3 site is not likely to impact upon. As such, if the Reporter is minded, to make an amendment, then the Council recommend that the last sentence of the third paragraph of the allocation summary could be amended to remove the reference to the Sands of Forvie SAC and that the first sentence of the fifth paragraph of the allocation summary could be

amended to remove the reference to the Sands of Forvie SAC.

Non-Allocated Site – Bid Site FR027 – Land South West of Red Inch Circle

The Council does not support allocating bid site FR027 for 80 homes and a potential link road to the A975. It is noted that there has been justification given by the representee as to why the site should be included within the LDP and further information was provided to the points raised through the Issues and Actions Papers. With this being said however, it is not felt that the justification provided to deal with the constraints outweighs the impact the site would have. It is acknowledged that education capacity issues can be dealt with through developer obligations, but other constraints cannot be justified effectively. The site would result in the loss of prime agricultural land. The justification provided that there is need for the housing and link road is not considered to be appropriate justification for the loss of this resource. No change is required.

As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the AHMA. No change is required.

Reporter’s conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.
2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” in relation to the settlement statement matters covered in Issue 23. However, where such matters arise from representations made to the proposed plan, they require to be considered in the examination. I therefore address these as appropriate below.

Distributor road

3. In its schedule 4 response and in response to a further information request, the council explains that the Indicative North Distributor Road around the north-west sector of the village reflects a long-term community aspiration whose delivery is not expected within the timeframe of the proposed plan. Whereas the function of a traditional distributor road is principally to facilitate the movement of motor traffic, this route is envisaged as a “primary street”, whose purpose would also include serving housing areas and other local functions. Because of this status, no viability studies have been undertaken. It is seen as a way to reduce local traffic through the village centre. Provision of the first stretch of the “primary street” is a requirement included in the allocation summary for site OP3 (land north of School Road, Mill of Newburgh). Later stages of the “primary street” would require to be incorporated into additional housing allocations around the north-west sector of the village, subject to future negotiations with the community and key stakeholders. Such allocations would be expected to be brought forward through a future local

development plan.

4. In view of the above explanation, I consider that it would be inappropriate to depict the route in more detail on the plan. Safety, design and environmental concerns would be addressed at project stage. As each section of the street would be integral to future housing allocations, public funding and cost-benefit issues would not arise.

5. However, the site allocation summary requires to be amended to clarify the council's intentions along the lines of paragraph 3 above. The settlement map should be amended to label the route as "possible future primary street linking B9000 with A975". The southern section of the route should be shown entirely within site OP3, to accord with the council's explanation. I recommend appropriate modifications below.

Further expansion

6. With regard to the scale of expansion in Newburgh and its impact on local character and environment, the village lies within a Local Growth and Diversification Area identified in the Aberdeen City and Shire Strategic Development Plan 2020, where growth is to be related to local needs. Newburgh is also one of the settlements in which the proposed plan (paragraph 5.14) has included additional developments to promote the Energetica Corridor. As such, the council has assessed the level of growth to be appropriate and has carried out a range of assessments which it considers justify the proposed allocation of one new site (OP3) for 160 units.

7. In the Strategic Environmental Assessment, the site is assessed to have neutral or positive scores for all environmental receptors. In the Main Issues Report, the site was preferred by officers, subject to the resolution of constraints including education provision and potential impact on the A90(T) Newburgh junction. NatureScot has not objected to the proposed expansion as impacting adversely on the coastal environment. In the vision section of the settlement statement, the council reports that the community is in favour of new development to the west of the settlement. Whilst the scale of expansion has been subject to objections, there are also representations in support of expansion.

8. The alleged lack of recreational spaces would be addressed by policies in the plan which require developments over 50 homes to devote 40% of the site to good quality open space. I note that sites OP2 (Knockhall Road) and OP3 (Land north of School Road, Mill of Newburgh) both have a capacity of over 50 homes. The village has good access to very attractive coastal areas.

9. For the above reasons, I agree with the council that the scale of expansion proposed for Newburgh is appropriate for the plan period. No modification is required.

Vision

10. Aspects of the vision statement for Newburgh are challenged. However, the vision of the proposed plan remains unchanged from the current adopted plan and reflects the aims of the Energetica Corridor, within which Newburgh stands. The Main Issues Report indicated that the community was in favour of any new development being to the west of the village. The relatively small number of representations on this topic does not suggest widespread opposition to the vision for the settlement. As explained in paragraph 3 above, the proposed "primary street" would not be funded by public money. No

modifications are necessary.

Site P1/ Culterty House site

11. Compared to the current plan, the proposed plan extends the area of protected land (site P1) to include the whole natural area as an amenity for the village. A representation on behalf of the University of Aberdeen, which owns the site, maintains that the extended area of protection would hamper restoration of the site for its cultural and ecological interest, including the two ponds. This work would require enabling development, comprising restoration of Culterty House (currently boarded up) and the erection of two new houses, one of which would be located within the garden to the south of Culterty House (now overgrown). The latter would therefore fall within the area now proposed for protection.

12. There seems to be no public access into Site P1 at present. Its amenity value seems limited by that and by lack of management of the open/treed/pond areas together with the run-down appearance of the site. This is undesirable as it is located within the village and next to the main road. It seems likely that the ponds will degenerate without active management, especially as they may have been designed by the university to allow brackish water to collect at high tides for research purposes. A proposal along the lines of that described in the development appraisal submitted with the representation offers the prospect of reviving the amenity and ecological value of the site along with public recreation, whereas extending the protection area offers no prospect of funding to effect improvements. I note that these proposals have the support of the community council.

13. For those reasons, I recommend that the area of protection should revert to the area shown in the existing local development plan. A modification is recommended.

Flood Risk

14. The Scottish Environment Protection Agency's (SEPA) requests for textual changes and removal of reference to its indicative flood map for sites OP1, OP2, OP3 and BUS are appropriate in the interest of clarity and I recommend modifications accordingly.

Services and infrastructure

15. Scottish Water requests additional text, which is accepted by the council. I agree that the text provides helpful information and I recommend modifications accordingly.

Site OP1 – West of Airyhall View

16. Site OP1 is an open field between a housing estate and a small area of houses and light industry. It is proposed to roll forward its allocation in the current local development plan for community facilities and 0.8 hectares of employment land. The owners of the site are opposed to employment use on their land, stating that they were not consulted in the 2013 masterplanning process that led to the allocation of site OP1. They consider that it would be bad planning for their dwelling and the two others to be adjacent to non-residential uses on site OP1, as well as having an industrial allocation to the west.

17. I consider that there would be scope for these issues to be addressed within the layout of a future masterplan, as would be required given that the validity of the existing

one has expired. As to the owners' unwillingness to release the land for the allocated uses, the council argues that the site is listed in the 2019 Employment Land Audit as having no constraints, which includes having no ownership constraints, and is therefore considered as established and marketable land.

18. I am aware that this site contributes to the employment land allocation in Local Growth and Diversification Areas, where it is expected that an appropriate amount of business land will be identified and maintained. In the circumstances, it is not unreasonable for the council to take the view that the land should retain its allocation for community and employment land, even if the current position on ownership constraints has changed.

19. The allocation is to include part of a link road between the B9000 and the A975. A representation opposes this as being unnecessary if the northern link is developed. The link road requirement derives from the 2013 masterplan process and its removal would require clear justification (including that a northern link would remove the need for a link to the south), which the representation does not provide. That issue could be revisited through any future masterplan process.

20. No modification is required.

Site OP2 – Knockhall Road

21. Planning permissions have been issued for all of this site, and part is under construction. It would therefore not be appropriate for me to recommend changes to address the matters raised in representations.

Site OP3 – Land north of School Road, Mill of Newburgh

22. This land to the west of the settlement is newly allocated for 160 homes. A representation on behalf of the prospective developer seeks to extend the site northwards as far as a burn to allow for a parkland setting, a buffer to the burn and the establishment of a defensible boundary.

23. The council considers that attributes such as these should be achieved within the existing allocation boundaries through a masterplanning process. As it has already increased the number of homes to ensure an appropriate density of development and best use of the land, it considers that extension of the site would again result in underdevelopment.

24. The addition of a sizeable area of land would run counter to the council's plan-wide approach to housing densities and I agree that the setting and boundary treatment could be achieved through masterplanning, whilst the distance from the burn would obviate the need for a buffer in that location. No modification is required.

25. Objections to the allocation of site OP3 on the basis that it would put pressure on the capacity of the existing primary school cite lack of space for improvements on the existing school site and oppose use of the adjacent playing fields as losing valued open space. The council considers that it can deal with this issue through the planning application and masterplanning processes. I note that the housebuilder representation in support of this site refers to the likelihood of a need for developer contributions towards education

provision. Given that there are many different ways to address education provision, I have no reason to consider that a solution would not be forthcoming.

26. Other concerns regarding landscape issues, the impact of the development on wildlife and increased traffic on School Road would be addressed in any planning application and masterplanning process.

27. In its response to a request for further information, NatureScot has clarified its advice to indicate that appropriate drainage provision and a construction method statement are not required to avoid an adverse effect either on the Sands of Forvie Special Area of Conservation or on the Ythan Estuary, Sands of Forvie and Meikle Loch Special Area of Conservation. This advice is based on detailed analysis which concluded that the impact of drainage and construction works on the relevant bird species would not have an adverse effect on the integrity of the SPA site integrity. In the light of that explanation, I recommend an appropriate modification.

Non-allocated Bid Site FR027 - Land south west of Red Inch Circle

28. Site FR027 comprises fields to the south of Newburgh which occupy a fairly prominent location sloping down to the A975. It was identified in the 2012 local development plan for later development to be promoted by a future development plan process, and was the subject of a masterplan for housing approved by the council in 2013. This included the bid site together with land to the west and north west. The housing element of Phase 1 of the masterplan, for 40 houses, has been built and stands to the north of the site.

29. For the proposed local development plan, the land is being promoted by Stewart Milne Homes for up to 80 units, and would potentially include a link road from the B9000 (via Marshall Road) to the A975 with the purpose of reducing traffic flows on the main street through the village.

30. The representation states that: the site is in a sustainable location; it can be developed in the short term; it can deliver a link road; education capacity can be dealt with through developer contributions; neither SEPA nor the council's flood protection team nor the council's roads team objected to development of the site in connection flood risk or road access when consulted on the approved masterplan; a phase 1 habitat survey has confirmed that the land is of low ecological value with no protected species; the site is not located in an area of landscape significance; landscape mitigation would be provided; the development would include biodiversity enhancements; and the loss of prime agricultural land would be marginal given that such designations cover most of Aberdeenshire.

31. The council accepts the argument set out in the representation regarding education capacity. However, it identifies other constraints in the Main Issues Report and the Issues and Action paper, namely: visual prominence; impact on the landscape setting of the village; flood risk on the lower lying areas; potential to impact on protected species; access from the A975; loss of largely prime agricultural land; and lack of alignment with community preferences for expansion to the west of the settlement. Although these constraints were addressed in further information submitted by the promoter (as outlined above), the council remains unpersuaded that the impacts of development would justify an allocation for housing. Moreover, it does not support the provision of a link road in this location in the short term and considers that sufficient housing land has been allocated in

the plan as proposed.

32. I consider that development of this site would represent a substantial extension into open countryside and would, cumulatively with OP3, represent the addition of a large number of houses over the plan period in a relatively small settlement with limited local facilities and services. Newburgh is located within a Local Growth and Diversification Area where the Strategic Development Plan (in paragraphs 3.45 and 3.47) requires that levels of growth in individual settlements should relate to local needs and that proposals for growth beyond local needs would require to be justified against the vision, aims, strategy and targets of the plan. That justification has not been provided. The proposal would result in loss of prime agricultural land, which policy PR1 indicates can only be justified where it is required to meet strategic housing needs and there are no reasonable alternatives; that does not apply here.

33. Matters relating to the overall housing provision in the proposed plan are covered in Issues 2 and 5 of our examination. For the reasons set out in schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. I accept that bid site FR027 could potentially contribute to meeting this shortfall, if allocated. However, given the availability of other sites to meet the strategic development plan allowance for the Aberdeen Housing Market Area which do not have the disadvantages outlined above, I do not consider the allocation of this site to be justified. No modification is required.

Reporter's recommendations:

Modify the local development plan by:

1. Amending the first sentence of the second paragraph of the vision section on page 454 to read:

“The community is in favour of any new development being located to the west of the settlement and have an aspiration of a future vehicular route which would by-pass the village centre.”

2. Amending the first and second bullet points of the Flood Risk section on page 455 to read as one bullet point:

“• Parts of Newburgh are in an area potentially vulnerable to flood risk as identified by the National Flood Risk Assessment. Parts of the settlement may also be at risk from coastal flooding. Flood Risk Assessments may be required.”

3. Amending the first sentence of the third bullet point of the Flood Risk section on page 455 to read:

“Sites OP1, OP2, OP3 and BUS have small watercourses running through or adjacent to the sites, or are at risk from surface water flooding.”

4. Amending the ‘Strategic drainage and water supply’ bullet point of the Services and Infrastructure section on page 455, to read:

“Scottish Water will initiate a growth project should demand from committed development exceed available capacity and will instigate this on receipt of the 5 Growth Criteria from a developer. A Drainage Impact Assessment may be requested. Private treatment works are unlikely to be authorised but engagement with SEPA is advised to discuss further. Early engagement with Scottish Water is strongly encouraged.”

5. Replacing the final sentence of the first paragraph of the allocation summary for site OP3 (land north of School Road, Mill of Newburgh) on page 458 with:
“Placemaking requirements will be required in the form of a masterplan for the site that includes provision of a “primary street” on the western side of the site.”
6. Replacing the first sentence of the second paragraph of the allocation summary for site OP3 (land north of School Road, Mill of Newburgh) on page 458 with:
“Development of this site will support the first section of a vehicular link between the B9000 and the A975 to the north of Newburgh. Whereas the function of a traditional distributor road is principally to facilitate the movement of motor traffic, this route is envisaged as a “primary street”, whose purpose would also include serving housing areas and other local functions. Subject to future negotiations with the community and key stakeholders, later stages of the “primary street” would be incorporated into additional housing allocations around the north-west sector of the village within a future local development plan. When complete, the route is intended to reduce vehicular traffic through the village centre.”
7. Deleting the last sentence of the third paragraph of the allocation summary for site OP3 (land north of School Road, Mill of Newburgh) on page 458.
8. Deleting the final paragraph of the allocation summary for site OP3 (land north of School Road, Mill of Newburgh) on page 458.
9. Relabelling the “Indicative north distributor road” in the settlement plan on page 459 to read:
“Possible future primary street linking B9000 with A975”.
10. Amending the line of the possible future primary street in the settlement plan on page 459 so that its southern end joins the B9000 within the boundary of site OP3.
11. Amending the boundary of P1 in the settlement plan on page 459, so that it reverts to the boundary as shown in the 2017 local development plan.

Issue 24	Oldmeldrum	
Development plan reference:	Proposed LDP, Appendix 7C Formartine, Page 460-469	Reporter: Malcolm Mahony
Body or person(s) submitting a representation raising the issue (including reference number):		
<p>PP0021 Joan Young PP0190 Richard Hay PP0242 Dougald Robertson PP0266 Richard Bice and Sandra Sim PP0271 Bob Driscoll and Dorothy Driscoll PP0272 Scottish Water PP0507 Susan Lawie PP0593 Graeme Webster PP0748 Hallam Land PP0755 Kirkwood Homes PP0767 Richard Bice and Sandra Sim PP0770 Paul Gray and Pamela Gray PP0811 Mrs Young PP0815 John Pirie PP1044 c a s e Consulting Limited PP1045 c a s e Consulting Limited PP1134 Meldrum, Bourtie and Daviot Community Council PP1219 Scottish Environment Protection Agency PP1300 NatureScot PP1321 The Church of Scotland General Trustees PP1343 Historic Environment Scotland</p>		
Provision of the development plan to which the issue relates:	Oldmeldrum Settlement Statement	
Planning authority's summary of the representation(s):		
<p><u>General</u></p> <p>Meldrum, Bourtie and Daviot Community Council has listed priorities for the settlement as follows: a requirement for bungalows and affordable housing, developer obligations to be allocated to education and healthcare, development in the northeast of the settlement to be addressed collectively with regards to the requirement for a pedestrian crossing and connectivity between newly allocated sites as well as links to other settlements (PP1134).</p> <p>Meldrum, Bourtie and Daviot Community Council has objected to a lack of employment land allocations within Oldmeldrum (PP1134).</p> <p>A representee has questioned the competency of increasing the densities of allocated sites within Oldmeldrum given the constraints of these sites (PP0593).</p>		

Site P1 – To protect the recreational area and cemetery as amenities for the settlement and for contribution to the character of the place

Meldrum, Bourtie and Daviot Community Council has requested that the space adjacent to the Pleasure Park at site P1 becomes a protected site as this would be an important community asset, particularly in relation to the proposed allocation of site OP5 (PP1134).

Site R1 – For a potential long-term future expansion of Meldrum Academy

Scottish Environment Protection Agency (SEPA) has sought an addition within the allocation text for R1 to include a requirement for a Peat Survey and Phase 1 Habitat Survey and mention that peaty gleys and mixed habitat are likely to be present onsite (RD0214.B) (PP1219).

Site R2 – For a future Community Church and Site R3 – For a future Transport Interchange

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R2 or R3 (RD0214.B). No modification sought (PP1219).

Site BUS – Safeguarded for business uses

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site BUS (RD0214.B). No modification sought (PP1219).

Flood Risk

SEPA has sought the addition of OP3 and OP5 to the first bullet point in the 'Flood Risk' section as being within its list of being within the indicative 1 in 200-year flood risk area, or having a small watercourse running through or by the site and whereby a Flood Risk Assessment is required (RD0214.B) (PP1219).

SEPA has sought more 'succinct' wording in the second 'Flood Risk' bullet point by means of referencing the Meadow Burn specifically (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has requested amending the 'Strategic drainage and water supply' bullet point to provide clear transparency to potential developers the significant waste water treatment issues in Oldmeldrum. They note that whilst the Proposed Plan text states a technical solution is still being sought by Scottish Water, as a result of low dilution availability in the receiving waters, a private treatment plant built to an adoptable standard will not be acceptable for the same reason (RD0214.B) (PP1219).

Scottish Water request that under the 'Strategic drainage and water supply' bullet point, additional sentences are added after the third sentence in this section, which state: "Strategic Drainage Impact Assessment is ongoing and an anticipated upgrade to the network would be required. Any development interested in developing in the Oldmeldrum catchment area must engage directly with Scottish Water as soon as possible to discuss

build out plans.” (PP0272).

Site OP1 – Land North of Distillery Road

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

A representee has expressed support for the proposed retention of site OP1 and related Church under site R2. The reference to an approved masterplan is welcomed and it is acknowledged that there is a pending planning application. No modification sought (PP1321).

Meldrum, Bourtie and Daviot Community Council has indicated that they agree with the allocation summary in that a second access point is a requirement for this development, due to the large amount of traffic from both the proposed housing and community facility requiring access and egress to this site. No modification sought (PP1134).

Representees have objected to the site for a number of reasons including:

- The increased density of 88 homes represents overdevelopment of the site (PP1045, PP1134 and PP1321).
- There is a lack of an adequate second access point at present allocation numbers (PP0593, PP1045 and PP1321).
- There is a pending application, which is deemed likely to be approved before the Proposed Plan is adopted, will help to facilitate the delivery of a new community church and that the proposed density is unrealistic (PP1321).
- The additional 38 houses allocated for this site should be allocated elsewhere in the Formartine area of the Aberdeen Housing Market Area (PP1045).
- Meldrum, Bourtie and Daviot Community Council also commented that the site allocation should include a new primary school given the surrounding new housing (PP1134).
- The requirement for a second access point for the delivery of further development beyond the existing consent should be removed, as it is not required or possible (PP1321).

Site OP2 – Coutens

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219).

Meldrum, Bourtie and Daviot Community Council has stated that the allocation should be for housing only and not include reference to employment land as there is no employment land nearby the site (PP1134).

Representees have raised concerns that the proposed density of the site would not be appropriate for the character of the area (PP0021 and PP0811) and a representee has specifically stated that the increase in density is speculative given the lack of any planning history since the inclusion of the site within the Housing Land Audit in 2013 (PP1044). Another representee has questioned the deliverability of this allocation which has been allocated since 2013 but has had no planning application come forward on the site. The representee has included an Appendix (RD0091.A) in their submission which provides

further detail to support their position (PP0593).

Representees have raised concerns that the associated increase in traffic from the allocated site will impact local road safety specifically in relation to the proposed use of Coutens Drive. Additionally, it is considered that the site will impact local residential amenity and that local infrastructure will not be sufficient to serve the allocation at this site (PP0021 and PP0811).

A representee has raised concerns with the adequacy of Gas Street to serve the development safely. Development of this site would require the developer to upgrade Gas Street to take into account increased usage (PP0507).

Historic Environment Scotland (HES) has commented that OP2 is located within the boundary of the Battle of Barra site and while impacts upon archaeological remains dating to the battle are expected to be low, the impact upon the special qualities of the battlefield should be assessed further. Significant impacts on the understanding and appreciation of the battlefield landscape are unlikely but any potential impacts on key landscape characteristics and cumulative impacts should still be assessed with mitigation enhancement considered in line with Historic Environment Scotland guidance (RD0266.A) (PP1343).

Site OP3 – Land south of Millburn Road

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP3 (RD0214.B). No modification sought (PP1219).

Site OP4 – Land at Chapelpark

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP4 (RD0214.B). No modification sought (PP1219).

Meldrum, Bourtie and Daviot Community Council has indicated support for the hub, road widening and allocation for 62 houses as part of the allocation at this site. No modification sought (PP1134).

NatureScot has stated that OP4 should include the requirement for active travel provision in order to contribute to better connectivity to existing paths and promote safe active travel (RD0255.B) (PP1300).

Site OP5 – Newbarns

SEPA has requested that the allocation statement should refer specifically to a phase 1 Habitat Survey. It also requested that the allocation summary should include an additional requirement for a Peat Survey due to 50% of the site possibly being underlain with peat (RD0214.B) (PP1219).

A representee has stated that if proposed site OP5 is supported, significant changes are required to be made to the roadways to accommodate the proposed development (PP0266).

A representee has stated that any potential impacts in terms of road development

requirements and drainage requirements must be fully explored for OP5. The representee raises specific concerns regarding road safety, of which additional development would emphasise the issue. It is also stated that the pros and cons of the proposal are not highlighted within the allocation summary (PP0190).

A representee has objected to the proposed access from Newbarns as it is private and not in the same ownership as the wider site and should therefore be removed and that there is potential for traffic congestion at this point also (PP0767).

Representees have raised concerns that existing housing at Newbarns defines the settlement's boundary and the Planning Committee commented at the time that there would be no further development in this area and that the allocation should be removed (PP0767 and PP0266) or part reduced (PP0767). The representee has indicated that in order to reduce the site, the greenfield land at the west of the site is removed from the proposed OP5 site to allow for local greenfield land to remain as an aspect for the properties at Newbarns and Park Lane. This would retain some of the rural character, afford the community an area of green space to utilise and retain some of the natural habitat (PP0767).

A number of representees have objected to site OP5 (PP0242, PP0266, PP0271, PP0767 and PP0770) for the reasons set out below:

- Objection to the site was on the basis that the density of the allocation is not appropriate for the location when taking account of the OP4 site (PP0242).
- Concern that the associated increase in traffic from the allocated site will impact local road safety (PP0266, PP0271, PP0770 and PP0767).
- Concern the increase in traffic will impact the pedestrian safety for those using the park (PP0271), and in particular at the vehicular access onto the A947 (PP0190, PP0242 and PP0271).
- The anticipated increase in traffic in terms of impacts of noise and pollution (PP0767).
- Concern that residents of this allocated site will need to cross the A947 to get to the town's central services which poses a safety risk while traffic calming measures on the A947 would affect traffic flow (PP0242 and PP0266).
- There are concerns over the adequacy of local services and infrastructure (including primary/secondary schools, medical centre/dentist, police and fire service) to serve the proposed numbers at this allocation (PP0242, PP0767, PP0770 and PP0266).
- There is no need for this site to be allocated until sites OP1, OP2 and OP3 have been developed and impacts assessed and asserted that there is no proof of demand for further houses (PP0266).
- Objected to the site as there is no public benefit to the proposed allocation at this site and that there are other more preferable alternative sites (PP0271).
- Concerns over the loss of greenfield land which is considered unnecessary, and the associated impact upon local character (PP0266, PP0770 and PP0767) and the impact on local wildlife (PP0266, PP0767 and PP0770).
- Concerns of the impact on the green belt (PP0770).
- The allocation will impact local residential amenity (PP0271 and PP0767).

Site OP6 – West of Coutens

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP6 (RD0214.B). No modification sought (PP1219).

Representees, including Meldrum, Bourtie and Daviot Community Council, have sought clarity as to whether the site should be allocated for employment land as the site is possibly open space associated with the adjacent housing development (PP0815 and PP1134).

A representee has raised concerns regarding the adequacy of Gas Street to serve the development safely. Development of this site would require the developer to upgrade Gas Street to take into account increased usage (PP0507).

A representee has objected to site OP6 on the grounds that there was no bid for employment land on site OP6. It was stated that the employment land being located amongst housing (site OP2) and the R1 site is too detached from other employment land in the settlement (BUS) and bid site FR110 would have been more appropriate in that regard (PP0815).

A representee has stated that the allocation should be for housing only and not include reference to employment land as there is no employment land nearby the site and an alternative site within the settlement should be found for employment allocation (PP1134).

Non-Allocated Site – Bid Site FR062 – Site 2, Newbarns

A representee has objected that there were inconsistencies in accepting bid site FR061 (OP5) but not FR062, including the presumption against development due to prime agricultural land and issues relating to accessibility and implications for future roadways. The positive aspects of FR062 were not acknowledged. These include the fact that the site allows for better co-ordination and flexibility, the deliverability of the site and the support from the Community Council to support a larger site which provides opportunities to extend the Pleasure Park. The site would not be visible in the wider landscape. Development would augment existing links to the Pleasure Park and connect these links to the north of the settlement. Existing points of access could serve the site. There is an existing pedestrian crossing over the main road. The representee has included an Appendix (RD0131.A) in their submission which provides further detail to support their position (PP0755).

Meldrum, Bourtie and Daviot Community Council stated that FR062 should be allocated for 146 houses alongside OP5 Newbarns so the entire area can be consistently and sympathetically developed as a whole (PP1134).

Non-Allocated Site – Bid Site FR073 – Land at Parkside Piggery

Meldrum, Bourtie and Daviot Community Council support the decision made to not take forward site FR073 but would like to draw attention to the proximity of the A947 and a bus route to this site. No modification required (PP1134).

Non-Allocated Site – Bid Site FR083 – Land at Colpy Roundabout

Meldrum, Bourtie and Daviot Community Council has indicated that this site FR083 should be used for an employment land allocation and not as a reserved site for housing due to

the proximity to existing employment land and demand (PP1134).

Non-Allocated Site – Bid Site FR088 – Land at Parcock Quarry

Meldrum, Bourtie and Daviot Community Council has indicated that there is no reason why this small development should not have been allocated as bungalows are needed and infrastructure is in place. If allocated however, it should not set a precedent for other building to take place on the other side of the relief road (PP1134).

A representee objected to the failure to identify bid site FR088 for an allocation for 10 homes even though infrastructure is in place. Additionally, that the site is brownfield and in a desirable location with minimal landscape impacts which lends itself to bungalow style housing which are identified as being required by the Community Action Plan. The site was previously supported by the Council and the Community Council. A development at this location is considered to benefit biodiversity while the site is also ready to be delivered and includes access, service ducts and a pedestrian crossing which meet standards and is well connected by core paths. Assessment of FR088 in the Main Issues Report was inaccurate, that there is no woodland on the site while there are no issues of ground contamination from a small-scale quarry and the comment relating to the site being outwith the settlement’s boundary is not adequate justification for not allocating the site (PP0593).

Non-Allocated Site – Bid Site FR110 – Site 1, Land Adjacent to B9170

Meldrum, Bourtie and Daviot Community Council stated that FR110 should be allocated as an opportunity site for employment use as the surrounding land has been developed for employment use. Allocating FR111 for a bypass would also help employment land (PP1134).

A representee has stated that FR110 should replace the allocation for employment land at site OP6 (PP0815).

Non-Allocated Site – Bid Site FR111 – Site 2, Land Adjacent to Millburn Road & B9170

A representee has objected to the failure to identify bid site FR111 for an allocation for 350 homes. The site has good access to the town centre (paths and bus routes) and employment sites and can enhance green corridors and biodiversity. The site was identified as a Reserved Housing Site in the Main Issues Report as having merit. Issues relating to the Barra Battlefield, access issues and education could be dealt with appropriately subject to consultation with Historic Environment Scotland with regards to the battlefield. Due to the pandemic HES input has not been possible prior to submitting the representation to the consultation. The representee has included an Appendix (RD0126.A, RD0126.B and RD0126.C) in their submission which provides further detail to support their position (PP0748).

Meldrum, Bourtie and Daviot Community Council sought the addition of a southern bypass through bid site FR111 in order to help the surrounding employment land (PP1134).

Modifications sought by those submitting representations:

General

Modify the PLDP to include reference to a requirement for bungalows and affordable housing, requirement for developer obligations to be allocated to education and healthcare and requirement for improved connectivity to areas outwith the allocated site (PP1134).

Modify the PLDP to allocate more employment land in Oldmeldrum, in particular to allocate alternative employment bid sites in place of site OP6 (PP1134).

Modify the PLDP to include more sites allocated for housing which can be readily delivered and are free from constraints (PP0593).

Site P1 – To protect the recreational area and cemetery as amenities for the settlement and for contribution to the character of the place

Modify the PLDP to include the allocation of open space situated adjacent to the Pleasure Park, P1, as a protected site (PP1134).

Site R1 – For a potential long-term future expansion of Meldrum Academy

Modify the PLDP to include within the allocation text for R1 a requirement for a Peat Survey and Phase 1 Habitat Survey and mention that peaty gleys and mixed habitat are likely to be present on site (PP1219).

Flood Risk

Modify the PLDP to amend the first 'Flood Risk' bullet point to read, "Parts of OP2, OP3, OP5, OP6 and R1 are within ..." (PP1219).

Modify the PLDP to amend the second 'Flood Risk' bullet point to, "Part of the BUS site is within the 1 in 200-year flood risk area of the Meadow Burn. A Flood Risk Assessment will be required. Buffer strips will be required along the Burn which should be integrated positively into the development. Morphological improvements to the Burn may be required." (PP1219).

Services and Infrastructure

Modify the PLDP to amend the 'Strategic drainage and water supply' bullet point to state, "Oldmeldrum Waste Water Treatment Works has limited capacity. Scottish Water are investigating options for a growth project but until a technical solution is found this cannot be confirmed. All new development in Oldmeldrum must connect to the public waste water network and therefore, until a growth project is implemented, development during the Plan period may be limited." (PP1219).

Modify the PLDP to amend the 'Strategic drainage and water supply' bullet point to state, "There is insufficient capacity at Oldmeldrum Waste Water Treatment Works (WWTW). Scottish Water is investigating options to accommodate the anticipated flow from the growth of Oldmeldrum. Strategic Drainage Impact Assessment is ongoing and an anticipated upgrade to the network would be required. Any developer interested in developing in the Oldmeldrum catchment area must engage directly with Scottish Water as soon as possible to discuss build out plans." (PP0272).

Site OP1 – Land North of Distillery Road

Modify the PLDP to reduce the proposed allocation from 88 units to 50 units (PP1045, PP1134 and PP1321) and identify a new site within the AHMA Local Growth Area for the removed shortfall (PP1045).

Modify the PLDP to remove the reference to the requirement for a second point of access for OP1 beyond the existing consent (PP1321).

Modify the PLDP to include the allocation of a primary school within the OP1 site (PP1134)

Site OP2 – Coutens

Modify the PLDP to amend site OP2 to an allocation for only residential use and remove employment land from the area (PP1134).

Modify the PLDP to reduce the proposed allocation from 85 units to 50 units (PP0811, PP0593 and PP0021).

Modify the PLDP to delete the contribution of 35 houses from the OP2 allocation and reduce the LDP allocation to 50 houses. Identify a new site for 35 houses within the Formartine AHMA Local Growth Area (PP1044).

Modify the PLDP to remove the secondary access at Coutens Drive for OP2 (PP0021 and PP0811).

Modify the PLDP to include a requirement to upgrade Gas Street with regards to OP2 (PP0507).

Modify the PLDP to note within the allocation summary that any potential impacts on key landscape characteristics including cumulative impacts require further assessment with respect to HES Battlefield guidance. Mitigation and enhancement measures are also required to be set out (PP1343).

Site OP4 – Land at Chapelpark

Modify the PLDP to add the following text at the end of the second paragraph, "Provision for active travel is required, including a link to the nearby recreational path (Den of Gownor track). This should also seek to coordinate with any provision for OP5 to the south." (PP1300).

Site OP5 – Newbarns

Modify the PLDP to amend the third sentence in the first paragraph for site OP5 to, "A Flood Risk Assessment and Phase 1 Habitat Survey will be required." (PP1219).

Modify the PLDP to add a new fourth sentence in the first paragraph for site OP5 to state, "Due to the possibility of a significant amount of peat on the site, a Peat Survey will also be required." (PP1219).

Modify the PLDP to clarify road development requirements for site OP5 (PP0266).

Modify the PLDP to clarify road development requirements and drainage requirements for site OP5 (PP0190).

Modify the PLDP to exclude a requirement for OP5 to be served by the privately owned access from Newbarns (PP0767).

Modify the PLDP to remove part of OP5 to include buffer of open space adjacent to existing homes (PP0767).

Modify the PLDP to remove site OP5 (PP0242, PP0266, PP0271, PP0767 and PP0770).

Site OP6 – West of Coutens

Modify the PLDP to clarify whether OP6 can be allocated for employment land or if it is considered open space tied to the adjacent housing development (PP0815 and PP1134).

Modify the PLDP to amend the allocation summary for site OP6 to include a requirement to upgrade Gas Street (PP0507).

Modify the PLDP to remove site OP6 and allocate site FR110 for employment use instead (PP0815).

Modify the PLDP to remove site OP6 or reallocate the site for residential use and allocate land for employment use elsewhere in the settlement (PP1134).

Non-Allocated Site – Bid Site FR062 – Site 2, Newbarns

Modify the PLDP to include site FR062 for 146 homes (PP0755 and PP1134).

Non-Allocated Site – Bid Site FR083 – Land at Colpy Roundabout

Modify the PLDP to include site FR083 for an opportunity site for employment land (PP1134).

Non-Allocated Site – Bid Site FR088 – Land at Parcock Quarry

Modify the PLDP to include site FR088 for 10 homes (PP0593 and PP1134).

Non-Allocated Site – Bid Site FR110 – Site 1, Land Adjacent to B9170

Modify the PLDP to include bid site FR110 - Site 1 as an opportunity site for employment land (PP1134).

Modify the PLDP to remove site OP6 and allocate site FR110 for employment instead (PP0815)

Non-Allocated Site – Bid Site FR111 – Site 2, Land Adjacent to Millburn Road and B9170

Modify the PLDP to include site FR111 for 350 homes (PP0748).

Modify the PLDP to include a southern bypass for site FR111 (PP1134).

Summary of responses (including reasons) by planning authority:

General

The priorities listed by Meldrum, Bourtie and Daviot Community Council for the settlement are noted. Within the Vision it is noted that new housing is a key aspiration for the settlement. Under Policy H2 Affordable Housing there is a provision that all new development must include 25% affordable housing within the allocation (AD0041.A page 42). Additionally, Policy P1 Layout, Siting and Design notes that the design of new developments should be adaptable through a balance of building types, tenures and sizes (AD0041.A page 48). Both of these capture the first priority of the Community Council. No change is required.

In terms of the priority in relation to Developer Obligations this is captured within the Services and Infrastructure section of the Settlement Statement as it details what Developer Obligations are required as a result of new development. Also, the priority relating to connectivity is something that again, is required through Policy P1 Layout, Siting and Design as there is a requirement for new development to be well connected including through means of active travel (AD0041.A page 48). No change is required.

Meldrum, Bourtie and Daviot Community Council's concern about the lack of employment land opportunities within the settlement is noted. However, the new OP6 allocation provides 3.2 hectares of employment land opportunities and there are also some infill opportunities on the BUS site. This is considered to be an appropriate level of allocation given the update of employment sites as from 2014 to 2019 there were only 1.12 hectares developed, (see Employment Land 2018/2019, AD0018, page 36). The OP6 allocation was previously allocated as OP2 in the LDP 2017 for 50 homes and 4.2ha employment land. The OP2 site (as per the LDP 2017) has been split into two opportunity sites – with site OP2 (as per the PLDP) allocated for residential use as per bid FR068, albeit with an increased density, and the remainder of the former LDP 2017 OP2 site has been allocated for employment use as site OP6. No change is required.

In relation to the query on densities of allocated sites, this is something that is calculated to ensure best use of land and not result in either overdevelopment or underdevelopment. As noted through Policy H1 Housing Land the numbers are indicative but higher densities than noted would only be considered where there are no negative impacts on infrastructure, open space and residential amenity as a result (AD0041.A, page 41). No change is required.

Site P1 – To protect the recreational area and cemetery as amenities for the settlement and for contribution to the character of the place

Site P1 has been identified as a protected site to protect the recreational area and cemetery as amenities for the settlement and for contribution to the character of the place. The site was identified in the LDP 2017 and has been taken forward into the PLDP. The space adjacent (to the east) to the Pleasure Park is open fields that are outwith the settlement boundary and are not considered to be a type of open space that would usually

require to have a protected designation. With regards to the proposed OP5 site, in line with Policy P2, all new development must be accompanied by adequate public open space and the provision and location of open space will be considered during the masterplan phase (AD0041.A). No change is required.

Site R1 – For a potential long-term future expansion of Meldrum Academy

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site R2 – For a future Community Church, Site R3 – For a future Transport Interchange and Site BUS – Safeguarded for business uses

The comments from SEPA are noted. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

The Council confirms that it intends to address Scottish Water's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications. Very similar comments were noted by SEPA but are addressed through the non-notifiable modification from Scottish Water.

Site OP1 – Land North of Distillery Road

The comments from SEPA are noted. No change is required.

Supportive comments for the allocation are noted. No change is required.

Land for the proposed church has been reserved as site R2 and does not form part of the developable site area of site OP1. The allocation density was increased in size to avoid underdevelopment of the site and be in keeping with the densities of the properties surrounding the site. It is acknowledged that there is a planning application, APP/2019/1555, pending on the site which is for less than the proposed allocation but as at 1 February 2021 is still a pending application it would not be prudent to make recommendations prematurely to reduce the allocation, it is therefore considered appropriate to keep the allocation for 88 homes. In light of this, it is not considered necessary to allocate the additional 38 homes elsewhere in the Formartine area of the Aberdeen Housing Market Area. There were a number of concerns relating to this development including access. These issues would be looked at again in more detail in relation to any planning application on the site and discussions would be undertaken with stakeholders to ensure an appropriate decision was reached. No change is required.

The Community Council note that the allocation should include a new primary school. Information received from the Council's Education Service and contained within the 'Services and Infrastructure' section of the Plan is that any new development would need to contribute towards additional primary school capacity. There is also no commitment

within the Council's Capital Plan 2016-2032 to put funds towards the building of a new primary school within Oldmeldrum (AD0099, page 2). It would therefore not be a deliverable requirement to include a new primary school within the allocation at this stage. No change is required.

Site OP2 – Coutens

The comments from SEPA are noted. No change is required.

This allocation is a new allocation solely for housing. The housing element of the allocation previously formed part of a mixed-use allocation in the 2012 and 2017 LDP. The site was split into the separate allocations for housing and employment uses to give greater transparency to the residents within the settlement as to what development will happen where within the site. The site is still subject to a masterplan, which is required to show how the development on the OP2 and OP6 sites will be linked. The allocation density was increased in size from that of the original bid submission to avoid underdevelopment of the site, however as noted through Policy H1 Housing Land, the numbers are indicative (AD0041.A). The Council note that the site is marketability constrained in terms of the HLA 2019 (AD0022, page 65). However, given that the site is now a separate allocation than the employment element, the Council believe it is appropriate to continue to identify it in the PLDP. Through its allocation and subsequent inclusion in the associated Delivery Programme, the Council's Delivery Team would be able to facilitate any discussion required between parties and work with them to bring the site forward. No change is required.

Any impacts on the amenity of neighbouring properties will be addressed at a planning application stage with proposals being assessed against relevant policies within the Plan. Additionally, issues relating to infrastructure, including roads would be assessed at the planning application stage through consultation with the relevant stakeholders. No change is required.

The Council confirms that it intends to address HES's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP3 – Land south of Millburn Road

The comments from SEPA are noted. No change is required.

The Council note that this site is now completed and for clarity, there is no need to allocate the site in the Plan. If the Reporter is minded, to make a change, the Council would recommend removing the OP3 allocation, remove the allocation summary, update the associated maps and Table 1 and 2 of Appendix 6.

Site OP4 – Land at Chapelpark

The comments from SEPA are noted. No change is required.

Supportive comments for the allocation are noted. No change is required.

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP5 – Newbarns

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council note the representee's concerns regarding road safety and the impact on the local road network from the proposed development. The Council also note the requests that road development and drainage solutions are to be fully explored for the site and the concern regarding the proposed access which the representee has stated is private. However, any issues relating to infrastructure, including roads, access arrangements and drainage would be assessed at the planning application stage through consultation with the relevant stakeholders. With regard to the concern that the allocation summary does not provide the pros and cons of the site, the function of the allocation summary is not to weigh up the positives and negatives of the site. The PLDP sets out allocations and identifies what is expected as part of each allocation. No change is required.

The site was agreed to be allocated at the Special Meeting of Formartine Area Committee in September 2019 and has been carried forward into the PLDP and allocated as such (AD0141). The Council note the representee's request to reduce the site to exclude the greenfield land. However, in line with Policy P2, all new development must be accompanied by adequate public open space and this may make a significant contribution to green-blue networks in communities (AD0041.A). The provision and location of open space will be considered during the masterplan phase. As such it is not considered that the site should be reduced and land at the west of the site removed. No change is required.

The allocation is considered to be in an appropriate location and relates well to the new development on the OP4 allocation. Within the allocation summary for the site there is a requirement for strategic landscaping as well as a carefully considered design of the site to mitigate the impact on the setting of the listed building and providing an edge to the development. This will also help to mitigate landscape character impact. No change is required.

The density of the site is in keeping with the other allocations within Oldmeldrum in order to ensure that there is not underdevelopment or overdevelopment of the site. One of the key themes through the Vision of the Plan is that there is demand for new housing within the settlement which is why there are a number of allocations within the settlement. There is a steady number of housing completions showing demand remains within the settlement, albeit there were no completions in 2020 due to the restrictions from Covid-19, as in 2019 there were 28 houses completed and it is anticipated that 23 will be completed this year and an increase in 2022, (see the Housing Land Audit, AD0022, page 28). The site will bring public benefit as there will be 25% of the allocation providing affordable houses within the settlement which is something that is considered to be needed within the settlement as noted by the Community Council. No change is required.

Any impacts on the amenity of neighbouring properties will be addressed at a planning application stage with proposals being assessed against relevant policies within the Plan. Additionally, issues relating to infrastructure, including roads, access, schools and drainage would be assessed at the planning application stage through consultation with the relevant stakeholders. Concerns relating to the loss of greenfield land, impact on

character and wildlife are noted. These considerations are looked at through the site assessment stage when a development bid is considered for development. These impacts will also be considered again, at a planning application stage when the planning application is assessed against the relevant policies within the Plan. The concern relating to impact on the green belt is noted, however Oldmeldrum is not located near the green belt and as such the proposed site is not considered to have an impact on the green belt. No change is required.

Site OP6 – West of Coutens

The comments from SEPA are noted. No change is required.

The site was allocated within the 2012 LDP (part of the site), and in the 2017 LDP as a mixed-use allocation for both housing and employment land. This is not a new allocation, the change that has occurred is to split the housing and employment uses into separate allocations to give greater transparency to the residents within the settlement as to what development will happen where within the site. The site is still subject to a masterplan, which is required to show how the development on the OP2 and OP6 sites will be linked. Careful designing of the site will ensure that the development of the site works with the surrounding areas. Any impacts on the amenity of neighbouring properties and any potential road improvements would be addressed at a planning application stage with the proposal being assessed against the relevant policies within the Plan. Additionally, it is not considered that bid site FR110 is an appropriate replacement for site OP6 – please refer to the response on bid site FR110 as set out below. No change is required.

Non-Allocated Site – Bid Site FR062 – Site 2, Newbarns

The Council does not support allocating bid site FR062 for 146 homes. Support for the site from the Community Council and the representee are noted. The representee notes a number of reasons why the site should become an allocated site. However, as noted within the Issues and Actions Papers, promoting this site alongside the newly allocated OP5 would promote development that was not in scale with the needs of the community in the Plan period (AD0040.D, page 71). The current proposal would also result in underdevelopment on the site. At the Formartine Area Committee meeting in September 2019, the Committee agreed an additional recommendation to include wording within the allocation summary for OP5 to encourage a masterplan between the OP5 site and the FR062 site as a whole on the basis of the work being phased (AD0141, page 3). It is still considered at this time that extra development within Oldmeldrum, other than what is proposed, is not required at this stage. Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site FR073 – Land at Parkside Piggery.

Supportive comments for not allocating bid site FR073 for 10 homes are noted. No change is required.

Non-Allocated Site – Bid Site FR083 – Land at Colpy Roundabout

The Council does not support allocating bid site FR083 for employment land. The comments from Meldrum, Bourtie and Daviot Community Council are noted. Within the Main Issues Report the site was noted as a reserved site for Employment Land, therefore not a site that was being considered for immediate development (AD0038.D, page 73). However, in response to the Main Issues Report consultation, although there was some support from representees, HES and NatureScot both noted concerns with the site. Notably for HES the impact upon the Barra Battlefield and NatureScot note that the site is poorly located to the settlement, (see Issues and Actions Paper, AD0040.D, page 68). The site was therefore not carried through into the Proposed Plan as a site for either immediate or reserved status. No change is required.

Non-Allocated Site – Bid Site FR088 – Land at Parcock Quarry

The Council does not support allocating bid site FR088 for 10 homes. Within the Main Issues Report the site is noted to be an undesirable location for expansion of the settlement and is outwith the logical boundary of the settlement. It is also noted that the site would be inaccessible to a range of local services within Oldmeldrum (AD0038.D, page 74). These concerns are reiterated within the Issues and Actions Paper in response to comments received through the consultation for the Main Issues Report, but it is also noted that it would be very difficult to provide a safe route to school from the site. These concerns remain appropriate and valid to not allocate this site for development.

Additionally, As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site FR110 – Site 1, Land Adjacent to B9170

The Council does not support allocating bid site FR110 for employment land. The site is noted to be well located to existing employment land within the settlement, but it would take development further from the core of the town. It is also noted that the site would be relatively prominent from the B9170 and is of high historical context, (see MIR, AD0038.D, page 74). Comments were then received from HES in response to the Main Issues Report consultation that there was a concern that development on the site would have an impact upon the Barra Battlefield along with landscape impacts, (see Issues and Actions Paper, AD0040.D, page 68). It was therefore decided that the most appropriate thing to do was not to allocate the site even though there is support from the Community Council. This view is still considered to be relevant. Additionally, it is not considered that this site should replace the allocation for employment land at site OP6 due to the reasons set out above and those reasons highlighted in the response section for OP6 – West of Coutens. No change is required.

Non-Allocated Site – Bid Site FR111 – Site 2, Land Adjacent to Millburn Road and B9170

The Council does not support allocating bid site FR111 for 350 homes. Within the Main Issues Report the site was noted as having some merits and was noted as being a reserved site, which was not preferred for immediate development. Through the assessment of the site a number of potential issues were highlighted, including impact on Barra Battlefield, access, education provision and loss of prime agricultural land. It was noted that further information on these constraints and the possibility to resolve them,

particularly the impact on the Battlefield, would be required before the site could be considered preferred (AD0038.D, page 73). Through the Issues and Actions papers it was highlighted that HES were concerned that there would be an impact on the Barra Battlefield and other adverse archaeological impacts should the site be developed (AD0040.D, page 70). Due to these concerns, it was noted that the site should not be identified as a site within the Plan for development.

Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

The request to include the addition of a southern bypass through bid site FR111 is noted, however the aspiration for this piece of road infrastructure is highlighted within the Settlement Statement Vision and this is considered an appropriate location for reference to it. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” in relation to the settlement statement matters covered in Issue 24. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

General

3. Meldrum, Bourtie and Daviot Community Council wishes the plan to refer to the need for the provision of bungalow accommodation and affordable housing in the town. As Aberdeenshire Council points out, policies H2 (Affordable Housing) and P1 (Layout, Siting and Design) address these points by requiring developments to provide a proportion of affordable housing and a balance of building types, tenures and sizes.

4. Similarly, the community council's wish for a significant amount of developer obligation money to be allocated to education and healthcare is addressed under the Services and Infrastructure section of the settlement statement.

5. The other matters which the council has listed as general representations are dealt with under sites OP6 and FR062 below.

6. No modifications are required.

Site R1 – Potential long-term future expansion of Meldrum Academy

7. The Scottish Environment Protection Agency (SEPA) seeks an addition to the allocation text for R1 requiring peat and habitat surveys due to likely on-site conditions. I consider that these requirements are necessary for environmental protection, and recommend a modification.

Flood risk

8. SEPA seeks amendment of the first bullet point in the Flood Risk section of the settlement summary to include OP3 and OP5 as sites vulnerable to flood risk. I consider that this is necessary in the interest of flood safety and recommend a modification.

9. SEPA seeks more precise wording of the second bullet point in the Flood Risk section of the settlement summary by referencing the Meadow Burn specifically. I consider that this is appropriate in the interest of accuracy and recommend a modification.

Services and infrastructure

10. SEPA requests amendment of the strategic drainage and water supply bullet point to make the significant waste water treatment issues in Oldmeldrum clear to potential developers. Developers require to understand that, although Scottish Water is seeking a technical solution, any private treatment plant built to an adoptable standard would not be acceptable on the same basis. Scottish Water suggest alternative wording to address this point. I consider that the suggested amendment is appropriate in the interest of clarity and recommend a modification.

Site OP1 – Land north of Distillery Rd

11. This site, located in a residential area in the north of Oldmeldrum, is allocated for 88 homes. A masterplan for a 50 home development was approved in March 2016, in line with the allocation in the current local development plan. The increase in density identified in the proposed plan would contribute 38 homes towards the strategic development plan allowance in the Aberdeen Housing Market Area.

12. This increase in density has been criticised in several representations as being excessive and unrealistic. Some have pointed to the planning application for 49 dwellings (pending determination at the time the proposed plan was published) as a reason to revert to an allocation of 50 units.

13. Church of Scotland General Trustees, who own the site together with the adjacent land which is reserved for a community church (site R1), argue that it is not realistic for their landholding to support 88 homes, a church, substantial open space and landscaping.

14. Paragraph 4.8 in the strategic development plan states that “land brought forward to housing must be used efficiently”. I note that increased housing densities have been applied to sites throughout the local development plan area to avoid underdevelopment and, as stated in Policy H1 Housing Land, the figures are indicative. The policy leaves scope for lower (or higher) densities to be considered in the light of specific conditions on any site. However, whilst I acknowledge that an indicative density of 88 homes on the site may be appropriate on this site, I note that planning permission has now been granted for 49 homes and the landowner does not support the increased density.

15. I consider that the overall allocation for OP1 should be reduced to 49 homes in order to reflect the recent planning permission and in response to representations. Some subsequent changes are required to the allocation summary to indicate that planning permission has been granted. Modifications to this effect are recommended. The relevant table in Appendix 6: Housing Land Allocations also requires to be modified to deduct allocation OP1 (and 38 homes) from the list of sites identified as contributing towards the strategic development plan allowance. This is because 50 homes on this site form part of the 2019 effective supply. The implications of this change for the overall housing land provision are addressed in Issue 5.

16. The allocation summary in the proposed plan states that a second access point is required to deliver further development beyond the existing consent. This statement has no implications for the access arrangements agreed as part of the planning permission for 49 homes. However, it may be a relevant consideration if revised proposals for an increased number of homes are submitted. I therefore consider it prudent to retain this sentence in the allocation summary. No modification is required.

17. The community council's suggestion that a new primary school should be included in the allocation for this site would not be deliverable as there are no funds committed for a new primary school in Oldmeldrum within the Aberdeenshire Council's Capital Plan 2016-2032. No modification is required.

Site OP2 – Coutens

18. In the adopted plan, a site which combines what is now described as Coutens and West of Coutens allocates a mix of 50 homes and 4.2 hectares of employment land. The proposed plan splits that site into an allocation of 3.2 hectares of employment land on site OP6 (West of Coutens) and 85 homes on site OP2 (Coutens).

19. Representations seek to reduce the allocation from 85 homes to its current figure of 50 homes as the increased density would be out of character in a rural location, would spoil the outlook of existing houses, would increase traffic noise and would not be likely to be matched by expansion of local infrastructure.

20. However, increasing housing density is an authority-wide strategy designed to avoid underdevelopment and is consistent with paragraph 4.8 of the strategic development plan. Our examination has concluded that the council's approach to housing density is appropriate (see Issue 5). I am not persuaded that the increased indicative density proposed at Coutens would be out of character; Oldmeldrum is a comparatively large settlement in mid-Formartine with a mix of housing densities. The actual density of a development on this site would require to be justified in the masterplan for sites OP2 and OP6 against relevant policies of the plan. Protecting the outlook of individual houses is not a planning matter. No evidence is presented of the potential for undue levels of traffic noise or that expansion of local infrastructure would not be commensurate with increases in housing stock.

21. Issues of traffic safety in relation to the use of Coutens Drive as a secondary access to the site and of the amenity of existing residential properties would be assessed against the relevant plan policies as part of the processing of any planning application.

22. The deliverability of the site is questioned, as no planning application has been forthcoming since its allocation in 2013. In the 2019 housing land audit, the site was indicated as effective over the plan period, being shown for development between 2023 and 2026. However, the 2020 audit shows none of the units as being effective over the plan period, and the site as being constrained by marketability. The 2020 housing land audit was undertaken in respect of the site as it stands in the current plan. Aberdeenshire Council argues that because the revised site is now a separate housing allocation housing its allocation should remain and that, through its inclusion in the associated Delivery Programme, the council's delivery team would facilitate discussions between parties to bring the site forward. Additionally, I note that there is interest in the site from an active housebuilder and, from the settlement statement, that meeting the demand for new housing in Oldmeldrum is a key aspiration for the town.

23. Regarding the above matters, no modifications are required.

24. The community council's request that sites OP2 and OP6 should be allocated for housing only is discussed under site OP6 below.

25. Historic Environment Scotland has requested amended text regarding the Battle of Barra Inventory historic battlefield site to require further assessment of potential impacts on the site along with mitigation and enhancement measures. I agree that this should be included as compliant with Historic Environment Scotland guidance, and recommend an appropriate modification.

Site OP4 – Land at Chapelpark

26. The 2019 housing land audit shows 35 homes on site OP4 (land at Chapelpark). This figure was increased in the proposed plan to an indicative capacity of 68 to make more efficient use of the site, with the additional 33 homes contributing to the strategic development plan allowance for the Aberdeen Housing Market Area. In October 2020, an application for the approval of matters specified in condition one of the earlier planning permission in principle was granted for 62 homes (APP/2020/0761).

27. In order to accurately reflect the number of homes expected to be built on this site, the overall allocation for OP4 should be reduced to 62 homes, with 27 of these contributing towards the strategic development plan allowance. Some subsequent changes are required to the allocation summary to reflect the 2020 planning permission. Modifications to this effect are recommended. The relevant figures in Appendix 6: Housing Land Allocations also require to be modified. The implications for this change for the overall housing land provision are addressed in Issue 5.

28. The representation from NatureScot advises that the allocation should include a requirement for active travel provision. I consider that is appropriate in order to align with the aims of the proposed plan.

Site OP5 – Newbarns

29. This is a newly allocated greenfield site for 146 homes on the north-east edge of the settlement, whose development is expected to be phased. It lies to the east of the A947, which is the main road into Oldmeldrum from the north. Most of the town's facilities lie to the west of that road. The north-west boundary of the site lies close to the southern end of

site OP4.

30. The Main Issues Report refers to considerable pressure for employment, retail and housing allocations within Oldmeldrum. As the town centre is densely developed, the report looks for development opportunities on the periphery of the town. Here the Battle of Barra Inventory site is a constraint as its boundary encompasses open land to the south and west of the town. The report concludes that, despite the need for residents to cross the A947 to access services, site OP5 might be the only non-allocated site in the town that could be considered for development. The community council supports development in this location.

31. Paragraph 5.15 of the proposed plan, referring to the locations in Aberdeenshire outwith the Strategic Growth Areas, states that the council has re-evaluated allocations that are currently stalled in Rural Housing Market settlements and increased allocations in Aberdeen Housing Market area towns such as Oldmeldrum and Pitmedden, where growth is more likely. The proposed plan recognises Oldmeldrum as a key settlement in providing services to the surrounding communities including education, retail, healthcare and community services. It enjoys a fairly central location within Formartine, was formerly the main market town for the surrounding countryside and enjoys good transport links.

32. The strategic environmental assessment states that development of the site would result in the loss of prime agricultural land and that the site partly overlaps with an area of carbon-rich soil and peatland. It considers that development in this location is unlikely to have any effect on landscape quality. It considers that a proposal of the scale proposed would lead to increased traffic flow through Oldmeldrum, where air quality is approaching the EU objective level.

33. SEPA requests that the allocation statement includes reference to a Phase 1 habitat survey and a requirement for a peat survey. I consider that those surveys would be appropriate for this large greenfield site where the presence of peat is possible, and recommend a modification to that effect.

34. It is argued that the allocation of 146 houses, when taken together with the OP4 allocation, is excessive compared with the number of existing houses on the east side of the busy A947, giving rise to access problems and placing strain on what are claimed to be inadequate existing services and infrastructure.

35. Some of these concerns, including education provision, could be addressed by requirements for developer contributions to mitigate impacts on infrastructure, in accordance with policy RD2 of the proposed plan. A summary of services and infrastructure requirements for developments in the town is set out on page 462 of the proposed plan. Requirements to address vehicle access arrangements, including a new junction configuration onto the A947, and pedestrian crossing facilities on the A947 are outlined in the site allocation statement for detailed assessment in any planning application against relevant policies of the local development plan. Concerns regarding noise and pollution, residential amenity, local character and local wildlife would also be assessed against those policies. Development on prime agricultural land is generally to be avoided, however, in line with policy PR1 (Protecting Important Resources), its loss, is justified as being required to meet strategic housing needs where there are no reasonable alternatives.

36. Landscape impact was considered in the council's Strategic Environmental Assessment to have a neutral effect. The area is not covered by any landscape designation. It comprises grazing land of pleasant but unexceptional character. Visibility of the site is restricted by the landform, vegetation and lack of significant public viewpoints.

37. A representation seeks the exclusion from the allocation of a boggy woodland area to allow for habitat retention, community ground and to benefit the outlook from houses in Newbarns. However, those matters would be appropriately addressed in a masterplan covering the whole allocation.

38. Several representations argue that development should not extend beyond the existing housing at Newbarns, a position which they say was previously accepted by the planning committee. However, each local development plan requires to look afresh at the allocations appropriate for each settlement, and the council has carried out comprehensive assessments to support this allocation.

39. One representation argues that the allocation should be removed in order to reduce the pace of expansion in Oldmeldrum and avoid services being overwhelmed by unnecessary housing. However, the need for additional housing arises from targets set by the strategic development plan to meet identified needs in each housing market area, as discussed in Issue 5. For the reasons set out in paragraph 31 above, I am satisfied that the level of growth proposed for the town is justified against the vision, aims, strategy and targets of the plan.

40. With regard to other matters raised in representations: benefits of the allocation would include helping to meet targets for new housing and providing affordable housing; the site requires to be assessed on its own merits rather than by comparison with other sites; it does not lie within or near the green belt; land ownership matters cannot be addressed in this examination, and it is not the purpose of an allocation summary to provide the pros and cons of a site.

41. Other than the modification sought by SEPA, no further modification is required.

Site OP6 – West of Coutens

42. In the adopted plan, a site at and west of Coutens allocates a mix of 50 homes and employment land of 4.2 hectares. The proposed plan splits that site into two separate allocations; 3.2 hectares of employment land on site OP6 (West of Coutens); and 85 homes on site OP2 (Coutens).

43. The community council wishes site OP6 to be used for housing because there is no other employment land nearby. Another representation criticises this allocation because there was no bid for employment land here and the allocation is detached from the other employment land in Oldmeldrum at site BUS. However, I consider that this is not, in essence, a new allocation and separation from other employment land is not in itself a reason for rejecting employment use on this land. It follows that there is no need to consider replacement land for employment use.

44. The community council and a local resident are concerned that site OP6 is amenity open space associated with the adjacent 400 house development and should not be allocated for development. However, part of this land was allocated for development in

the 2012 local development plan and the 2017 local development plan and no evidence has been submitted to support the concerns.

45. Given its role as part of the core path network, the possible need for a section of Gas Street to be upgraded, would be assessed against plan policies and Appendix 8: Successful Placemaking Design Guidance, in the processing of any future planning application.

46. As part of the site lies within the boundary of the Battle of Barra Inventory historic battlefield, Historic Environment Scotland advises, that any potential impacts of development on the key landscape characteristics and the cumulative impacts should be assessed, with mitigation and enhancement considered, in line with the battlefield guidance. I agree that this advice should be reflected in the site allocation summary.

47. No modification is required other than the additional advice recommended by Historic Environment Scotland.

Non-allocated Bid Site FR062 – Site 2 Newbarns

48. Bid site FR062 combines site OP5 with the adjoining field to the south. This combined site is promoted for development with up to 200 units, compared with 146 units for OP5 alone. This would include 37 units for affordable housing.

49. The promoter argues that the proposed larger site would allow for better co-ordination and flexibility, together with opportunities to extend the adjacent pleasure park (on site P1), and to improve countryside access. It is claimed that the site is free of constraints and would be able to deliver a steady rate of development. The community council supports the bid proposal so that the entire area can be consistently and sympathetically considered as a whole. The promoter argues that considerations regarding development of this site are similar to those regarding site OP5 and site OP2, both of which are proposed for allocation.

50. I do not accept that the site is free of constraints. Indeed, the strategic environmental assessment refers to a significant loss of prime agricultural land and a partial overlap with an area of carbon-rich soil and peatland. It also refers to constraints relating to water treatment, education, road access, and the need for residents to cross the A947 road to reach local services. However, it anticipates no significant landscape impact.

51. Irrespective of the extent to which these matters might be resolved, I agree with the council that promoting this large site alongside newly allocated site OP5 would be out of scale in the plan period. Moreover, the number of homes proposed would represent underdevelopment, contrary to paragraph 4.8 in the strategic development plan and inconsistent with the approach to other sites in the proposed plan.

52. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. Sites in Oldmeldrum could potentially contribute to meeting this shortfall. However, for the reasons set out above, I conclude that bid site FR062 should not be allocated. There are other sites available to meet the identified shortfall in the strategic development plan allowance for the Aberdeen Housing

Market Area, as explained in issue 5.

53. No modification is required.

Non-allocated Bid Site FR083 – Land at Colpy Roundabout

54. Bid site FR083 is a field to the west of Oldmeldrum which is being promoted for employment use. It lies outwith the A920 relief road, which forms the settlement boundary on this side of the town.

55. The community council considers that it should be allocated as employment land on the grounds of demand and proximity to existing employment land to the east (BUS). Historic Environment Scotland is concerned about the potential impact of development here on the Barra Battlefield site. NatureScot considers that the site is poorly related to the settlement.

56. I have seen no clear evidence of a shortfall of employment land in Oldmeldrum, and note that site OP6 has been allocated for employment in the proposed plan. The potential for development to impact adversely on the Barra Battlefield site counts against allocation of this site, as does the way in which it projects prominently into open countryside beyond an otherwise compact urban form. I also note from the main issues report that the land is constrained by contamination and prime agricultural land status. The strategic environmental assessment considers that the proposal would be likely to have a significant negative impact on the setting of Oldmeldrum and might weaken the sense of place and identity of the settlement.

57. No modification is required.

Non-allocated Bid Site FR088 – Land at Parcock Quarry

58. Bid site FR088 is a former quarry located to the north of the A920 relief road around the northern edge of Oldmeldrum. A development comprising 10 bungalows is proposed on the quarry floor. The site has an existing access road, is close to a pedestrian crossing over the A road, and is partly screened by the landform, including the quarry walls. It is adjacent to two core paths.

59. This proposal is supported by the community council, which wishes to see more bungalows in the town.

60. The site is on a high point overlooking the town. The vehicular access onto the A920 road stands next to a local viewpoint with seating and disabled access. The A920 road separates the site from the town and is subject to a 40mph limit. A pedestrian refuge is provided to aid crossing of the road. The site lies beyond the existing urban boundary, as marked by the line of the relief road. It would be an outlier, poorly related to the urban form and, to the extent that it was visible, have an adverse landscape and visual impact. It is relatively distant from local services and it would be difficult to provide a safe route to school, especially given the nature of the pedestrian crossing.

61. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan

allowance for the Aberdeen Housing Market Area. Sites in Oldmeldrum could potentially contribute to meeting this shortfall. However, for the reasons set out above, I conclude that bid site FR088 should not be allocated. There are other sites available to meet the identified shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area, as explained in issue 5.

62. No modification is required.

Non-allocated Bid Site FR110 – Site 1 land adjacent to B9170

63. Bid site FR110 is a triangular field next to the B9170 road on the southern boundary of Oldmeldrum. It extends beyond an existing industrial estate (Barra Business Park) and is being promoted for employment land.

64. Whilst its location adjacent to existing land in industrial use is appropriate, it is prominent to road users on the B9170 entering and leaving the town from the south and it projects into open countryside. It falls within the Barra Battlefield designated site and Historic Environment Scotland is concerned that development of the site would have an impact on the battlefield site along with landscape impacts. It would be located in the vicinity of an area of fighting and of important places associated with the battle (namely the Bruce Field and the Comyn Lines). Its development would also result in the loss of prime agricultural land.

65. The proposed plan allocates employment land within the town and no need for additional land has been demonstrated.

66. No modification is required.

Non-allocated Bid Site FR111 – Site 2 Land adjacent to Millburn Rd and B9170

67. This is a large site which stretches along the southern edge of the town. It comprises open fields which slope gently down from the south to the Meadow Burn along its northern edge. At its western end, it borders the B9170 and Millburn Road. It is being promoted for 350 homes.

68. The site's merits were recognised in the main issues report, namely good connectivity to the town centre and employment land together with the potential to enhance green corridors and biodiversity. The report noted the site as being reserved for future development and not to be allocated in the proposed plan. The primary reasons were the need to resolve issues around vehicular access, education provision, archaeological impacts – especially on the Battle of Barra Inventory site, and the council's position that in the proposed plan there was an appropriate and sufficient supply of deliverable housing land within the Aberdeen Housing Market Area.

69. The promoter (Hallam Land) proposes two vehicular access junctions into the site from the B9170 and has submitted indicative drawings. I note that the council would prefer an additional vehicular access to the east. However, no resolution on the acceptability of the B9170 access arrangements or the need for an eastern access has been concluded.

70. Hallam Land understands that the education issue raised by the council relates to the

need for additional capacity to accommodate children from the proposed development. This it claims can be achieved by extending existing schools and the company offers to contribute to the proportionate cost of such extensions. I note that policy RD2 states that “contributions will be sought towards the provision of necessary infrastructure” and that site OP5 is also affected by an education capacity constraint. I therefore consider it likely that a solution could be found to address this matter.

71. The strategic environmental assessment states that development of the site would result in the loss of prime agricultural land and that the site partly overlaps with an area of carbon-rich soil and peatland. It considers that development in this location is unlikely to have any effect on landscape quality. It also considers that a proposal of the scale then proposed (200 homes) would lead to increased traffic flow through Oldmeldrum, where air quality is approaching the EU objective level, decreasing air quality.

72. The site falls within the Battle of Barra Inventory site and Historic Environment Scotland expressed concern about potential impacts of development on that site as well as on archaeology in the area. Because of restrictions caused by the Covid-19 pandemic, consultation with Historic Environment Scotland was delayed until after the deadline for representations on the proposed plan. The promoter subsequently submitted outline proposals for the consideration of Historic Environment Scotland and has since requested that the Historic Environment Scotland response be included in this examination. This late information was not accepted because I considered that I had sufficient information and the material offered would not affect my recommendation.

73. The proposed plan allocates land for a total of 413 homes in Oldmeldrum. The addition of 350 homes, as promoted on this site, would be a substantial increase and considerably more than the only newly allocated site in Oldmeldrum, OP5 (Newbarns). Oldmeldrum is located in the Local Growth and Diversification Area where it is expected that growth will be restricted to that meeting local needs unless specifically justified against the vision, aims, strategy and targets of the plan. Whilst I consider that the proposed plan offers special justification for some growth above that meeting local needs (see paragraph 31 above), the proposed additional 350 homes could not be justified in that way.

74. Hallam Land argues that there is a significant shortfall in the proposed plan’s site allocations as intended to meet the housing allowances identified in the strategic development plan for the Aberdeen Housing Market Area. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. Sites in Oldmeldrum could potentially contribute to meeting this shortfall. However, for the reasons set out above, I conclude that bid site FR111 should not be allocated. There are other sites available to meet the identified shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area, as explained in issue 5.

75. The community council refers to benefits arising from allocating site FR111 for a southern bypass, but this is not part of the proposal.

76. No modification is required.

Reporter's recommendations:

Modify the local development plan by:

1. Adding a second sentence to Reserved Land R1 (page 461) to read:

"A Peat Survey and Phase 1 Habitat survey will be required due to the potential presence of peaty gleys and mixed habitat onsite."

2. Replacing the first sentence of the first bullet point under Flood Risk (page 461) with:

"Parts of OP2, OP3, OP6 and R1 are within the Scottish Environment Protection Agency's indicative 1 in 200 year flood risk area, or have a small watercourse running through or adjacent to the site."

3. Replacing the second bullet point under Flood Risk (page 461) with:

"• Part of the site OP3 and the BUS site are within SEPA's indicative 1 in 200 year flood risk area of the Meadow Burn or have a small watercourse running through or adjacent to the site. A Flood Risk Assessment will be required for the BUS site. A Flood Risk Assessment

may be required for OP3. Adequate buffer strips will be required along the river corridor associated with the Meadow Burn which should be integrated positively into the developments. Morphological improvements to the Meadow Burn may be required."

4. Replacing sentences 3 to 5 of the strategic drainage and water supply bullet point under Services and Infrastructure (page 462) with:

"There is insufficient capacity at Oldmeldrum Waste Water Treatment Works (WWTW). Scottish Water is investigating options to accommodate the anticipated flow from the growth of Oldmeldrum. Strategic Drainage Impact Assessment is ongoing and it is anticipated that an upgrade to the network would be required. Any developer interested in developing in the Oldmeldrum catchment area must engage directly with Scottish Water as soon as possible to discuss build out plans."

5. Changing the allocation figure for site OP1 (Land North of Distillery Road) at the top of page 463 as follows:

"Allocation: 49 homes."

6. Deleting the second and third sentences in the first paragraph of the allocation summary for OP1 (Land North of Distillery Road) on page 463 and replacing the fifth sentence with:

"Planning permission has been granted for 37 houses with land set aside for 12 affordable homes (planning application reference APP/2019/1555)"

7. Amending the entry for Oldmeldrum OP1 in the relevant table in Appendix 6 to show that the site does not contribute towards the strategic development plan allowance for the Aberdeen Housing Market Area; to remove the figure '38' from the Local Growth AHMA column; and change the figure in the LDP Allocation column to '49'. (Note – a revised version of Appendix 6, incorporating all the recommended modifications, is provided at the end of this report.)

8. Inserting the following new text after the second sentence of the second paragraph of the allocation summary for OP2 (land south of Millburn Road) on page 464:

"Any potential impacts on key landscape characteristics including cumulative impacts require further assessment with respect to Historic Environment Scotland battlefield

guidance. Mitigation and enhancement measures are also required to be set out.”

9. Changing the allocation figure for site OP4 (Land at Chapelpark) at the top of page 466 as follows:

“Allocation: 62 homes.”

10. Replacing the second and third sentences of the first paragraph in the allocation summary for OP4 (land at Chapelpark) on page 466 with:

“The capacity of the site has been increased to 62 homes to avoid underdevelopment and reflect the approval of a recent application (APP/2020/0761). If the existing permission is not implemented, a masterplan will be required.”

11. Amending the entry for Oldmeldrum OP4 in the relevant table for the Aberdeen Housing Market Area in Appendix 6 to replace ‘33’ with ‘27’ in the second last column and ‘68’ with ‘62’ in the last column. (Note – a revised version of Appendix 6, incorporating all the recommended modifications, is provided at the end of this report.)

12. Adding the following sentences at the end of the second paragraph in the allocation summary for site OP4 (land at Chapelpark) on page 466 as follows:

“Provision for active travel is required, including a link to the nearby recreational path (Den of Gownor track). This should also seek to coordinate with any provision for OP5 to the south.”

13. Replacing the third sentence in the first paragraph of the allocation statement for site OP5 (Newbarns) on page 467 with:

“A Flood Risk Assessment and Phase 1 Habitat Survey will be required.”

14. Adding a sentence after the third sentence in the first paragraph of the allocation summary for OP5 (Newbarns) on page 467 as follows:

“Due to the possibility of a significant amount of peat on the site, a Peat Survey will also be required.”

15. Adding the following sentence after the third sentence in the second paragraph of the OP6 (West of Coutens) site summary on page 468:

“Any potential impacts on the key landscape characteristics of the battlefield site and the cumulative impacts should be assessed, with mitigation and enhancement considered, in line with the battlefield guidance.”

Issue 25	Pitmedden	
Development plan reference:	Proposed LDP, Appendix 7C Formartine, Page 470-475	Reporter: Malcolm Mahony
Body or person(s) submitting a representation raising the issue (including reference number):		
PP0018 Glen Schreuder PP0254 Elizabeth Strachan PP0331 Andrew Strachan PP0383 Claymore Homes PP0384 Claymore Homes PP0410 Paul Walsh PP0469 Julian Slater PP0531 Wendy Campbell PP0566 Udney Community Council PP0667 Stewart Milne Homes PP0677 Stewart Milne Homes PP0678 Stewart Milne Homes PP0713 Graham Stott PP0725 Lindsey Ritchie PP0728 Matthew Stott PP0834 Margaret Coutts PP0895 David Murray Associates Limited PP0909 Pamela Johnstone PP0937 Ross and Emilia Murray PP0955 Karen Leslie and Kenneth Turner PP0959 Andrea Gilmartin PP0990 Oonagh Stewart PP0997 Thomas MacKenzie PP0998 Christina MacKenzie PP1001 Russell and Tracey Gibb PP1014 Claire Woodward PP1156 Allan and Charlotte Hay PP1219 Scottish Environment Protection Agency PP1300 NatureScot (Scottish Natural Heritage) PP1343 Historic Environment Scotland		
Provision of the development plan to which the issue relates:	Pitmedden Settlement Statement	
Planning authority's summary of the representation(s):		
<u>General</u> A representee has indicated that improved amenities should be provided in the settlement given the level of housing proposed in the settlement (PP0018).		

A representee has suggested that the 351 homes proposed across OP1, OP2 and OP3 is excessive unless it were directly linked to the building of a new community school. It is stated that 100 homes would be more appropriate over the next decade (PP0469).

Site R1 – Reserved for a new village hall

A representee has sought clarification on the access route for site R1 for a village hall, querying whether it would be accessed from the medical centre, whether parking would be provided and where the site boundary would be located (PP0018).

A representee has sought the removal of site R1. The representee considers that the site would be better identified for housing rather than a village hall as the site has been identified for a village hall since 2003 with no proposals and that 17-years is ample time for such proposals to be progressed or implemented. However, the representee has questioned whether the site will ever be delivered. In the Main Issues Report (MIR) 2019, bid site FR008 was not identified as an Officer's preference as the development of a village hall was still considered an aspiration and no other site was identified by the developer. However, site OP2 identifies a community hub and therefore an alternative space has been identified and site R1 is surplus to requirements for a village hall. As such, site R1 can be developed for a more appropriate and deliverable land use such as for housing. The site is able to gain access through existing residential development and has a developer to deliver the site. It is also well located and within walking distance of existing facilities, and well located, near to site OP2. The representee states that an alternative to allocating the site for housing could be to identify the site within the settlement boundary as white land so the site would come forward under Policy P3. The representee has included two Appendices (RD0053.A and RD0053.B) in their submission which provides further detail to support their position (PP0384).

Site BUS1 – Safeguarded for business uses

Scottish Environmental Protection Agency (SEPA) has confirmed that they have no further flooding, strategic drainage, or water supply issues with the designation summary for site BUS1 (RD0214.B). No modification sought (PP1219).

A representee has sought the reallocation of the BUS1 site as an opportunity site for residential or mixed-use development. The site is currently occupied by a vacant workshop and is being actively marketed for business, however, there has been no take up and given the economic climate this is unlikely to change. The retainment of the BUS1 designation is constraining the development of the site for any productive purpose. The Council did not support the re-allocation of the site in the Issues and Action Papers but did confirm that part of the site is brownfield and concluded that the removal of a business land allocation of this size would not impact the overall land supply and that if the site was removed, the landowner could develop the brownfield elements for small-scale employment or residential use. At the special meeting of Formartine Area Committee in September 2019, the Minute does not record any queries or objections to the removal of BUS1, however the Minute does record that the Udney Development Trust tabled a plan illustrating preferred options for the settlement however there is no indication that the Committee did not also accept the Officer's recommendations in respect of the removal of the BUS1 designation. The preferred options which have been allocated as opportunity sites in the PLDP are located to the south of the settlement – as such any changes to

BUS1 will not present any conflicts with these sites. At the subsequent Infrastructure Services Committee meeting in October 2019, the Minute does not record any decision with respect to the Officer's recommendation in the Issues and Actions papers to remove BUS1. A pre-application enquiry was submitted seeking feedback on the principle of residential development if the BUS1 site were to be removed and proposals assessed against PLDP Policy R2. Support was indicated for the redevelopment of the site for residential use and as such the representee states that the most appropriate approach to allow it to be redeveloped in accordance with the PLDP would for it to be re-allocated as an opportunity site. With regards to concerns raised by Officers in the Issues and Actions papers, the representee considered that the site has a good relationship with the village and stated that the PLDP could specify the need for a buffer around any development on the site. As such, it is requested that the BUS1 designation is reallocated as an opportunity site for residential or mixed-use development, which would also be in line with Scottish Planning Policy. However, if reallocation of the site is not considered appropriate, then the BUS1 designation should be removed to allow the brownfield elements to be considered under Policy R2. The representee has included a number of Appendices (RD0044.A, RD0044.B and RD0044.C) in their submission which provides further detail to support their position (PP0331).

Flood Risk

SEPA recommends that site OP3 is added to the first 'Flood Risk' bullet point as a Flood Risk Assessment (FRA) is required for the site (RD0214.B) (PP1219).

SEPA requests that the first 'Flood Risk' bullet point removes references to buffer strips as this requirement is covered in the allocation text for site OP1 (RD0214.B) (PP1219).

SEPA requests that site R1 is added to the second 'Flood Risk' bullet point as a FRA is required for this site and have commented that they will object if the requirement for a FRA on site R1 is not included in the 'Flood Risk' section (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Land at Bonnyton Farm

SEPA has confirmed that they have no further flooding, strategic drainage, or water supply issues with the designation summary for site OP1 (RD0214.B). No modification sought (PP1219).

A representee has raised concern regarding site OP1, stating that it received more rejections than approvals and yet it is still going ahead (PP0018).

Udny Community Council has objected to the inclusion of site OP1 in the PLDP and would wish to see it removed. Site OP2 and site OP4 clearly provide ample opportunity for housing development within the settlement. Further development would lead to overdevelopment and reduce the quality of life for the residents. It is stated that the developer has failed to provide the two required points of safe access to the site and the representee does not accept the Reporter's view as expressed in the Notice of Intention

for the site. Concern has been raised as the visibility splays are dependent on a house-owner, the site would lead to an increase in road congestion and the site conflicts with the “Imagine Udney” proposals for a village centre. Furthermore, the site impacts on the amenity of facilities, with a lack of parking which will impact the shop as well as impact the surrounding residential amenity (PP0566).

Site OP2 – Land Southwest of Pitmedden

A representee has highlighted that the PLDP states that part of the site is located within the Health and Safety Executive (HSE) outer consultation zone associated with one or more oil or gas pipelines in the vicinity. The representee states that this is not an impediment to development, and it is noted that the adjacent housing development is also within this consultation zone. The pipeline lies further from this site than the development adjacent and would not pose any restrictions on development and it is also capable of being realigned or encased, thereby permitting development in the immediate vicinity. As required by the Settlement Statement, this would be considered within the design process and presented as part of the planning application. No modification sought (PP0383).

SEPA has requested amendments to the text in the third paragraph of the allocation summary (RD0214.B) (PP1219).

A representee has indicated support for the site OP2 for 219 homes, a primary school and community uses which has the backing of the local community and will ensure a high quality, well-designed, efficient development can be provided. However, objection has been made to the site boundary which does not cover the entire land promoted by the developer and it is requested that the OP2 site boundary is extended to include the entirety of the land holding covering bid sites FR006 and FR007. The requirement of two vehicular points of access to the site, a loop road and a link road cannot be delivered without the entire land holding being allocated as there is not adequate land on the OP2 site for the provision of this. Additionally, with regards to the statement in the allocation summary pertaining to a multipurpose hall on the site – this would be considered through the masterplan for the site and there is adequate land reserved for this. However, the requirement for these uses within the OP2 designation further justifies the identification of the entire land holding. The representee has included a number of Appendices (RD0052.A, RD0052.B and RD0052.C) in their submission which provides further detail to support their position (PP0383).

A representee has considered that the supporting text within the Settlement Statement for site OP2 is extensive and a number of the requirements for the site are standard requirements considered through the course of a planning application. This includes open space provision, community food growing areas, landscaping, housing design, permeability, transport impact, buffer strips, drainage, affordable housing and permeability with adjacent housing developments. Furthermore, a Flood Risk Assessment was carried out by the developer as part of the development adjacent to the medical centre which was deemed acceptable. The OP2 site is further from the Burn than the adjacent development and it is not anticipated that there would be any risk of flooding on the site (PP0383).

Historic Environment Scotland (HES) has welcomed the revised boundary for site OP2 which reduces the site area and moves its western boundary further away from the historic landscape setting of the A Listed Udney Castle. Whilst HES consider this would help mitigate potential adverse impact on the setting of Udney Castle, they urge that appropriate

measures are included to maintain the existing south-east to north-west linear tree belt (RD0266.A) (PP1343).

A number of representees have objected to the allocation of site OP2 (PP0018, PP0667 and PP0678). Concern was raised regarding the proposed OP2 site, with a representee querying the confidence in putting a housing development in this location. Concern was also raised regarding the marketability of the site as existing new homes in the settlement remain unsold (PP0018).

It was also stated that the proposed site for 219 homes is out with the scale of the settlement. It is stated that the Council have unjustifiably increased the number of homes for the site and included the requirement for a primary school and community facilities – however it has not been assessed whether it is deliverable and viable to deliver these additional elements. Additionally, a number of material constraints have been identified with the site and were highlighted in the MIR 2019. The site is located on prime agricultural land, has protected species and the development will result in the loss of mature trees. The representee highlighted that further constraints identified within the MIR included that the site would be visually prominent of which the topography of the site would add to, as well as creating challenges for the creation of Sustainable Urban Drainage systems (SuDS). The site would also require drainage infrastructure to be upgraded. Historic Environment Scotland (HES) objected to the site through the MIR due to the impact on Udney Castle. It is considered that there are less visually prominent sites available within the settlement (PP0667 and PP0678).

The deliverability of the site within the Plan period is raised as a concern, and it is highlighted that SPP (paragraph 119) advises that Planning Authorities should be confident that land can be brought forward for development in the Plan period. The Strategic Environmental Assessment (SEA) for FR007 has been assessed on the basis of 32 homes, rather than 110 homes and concern is raised as to whether appropriate assessment has been carried out. Additionally, the Council's assessment of FR006 determined that the site could accommodate 566 homes – as such on OP3, 676 homes could be potentially be applied for on the site where large allocations should be directed to settlements closer to Aberdeen City (PP0667 and PP678). The representee has included two Appendices (RD0107.A and RD0107.B) in their submission which provides further detail to support their position (PP0678).

A representee has requested that bid site FR096 is allocated as an opportunity site for 90 homes, as a replacement to site OP2. The remaining 129 homes should be allocated to other sustainable locations in Aberdeenshire, such as Westhill, Balmedie and Blackburn. The representee considers that site OP2 is too big for the size of the settlement and that its development would be detrimental to wildlife, particularly protected species. However, the proposed 90 homes on bid site FR096 is commensurate with the scale of the settlement, providing 2-4 bedroomed homes. It is considered that there is capacity at the primary school to accommodate the additional pupils from bid site FR096, whereas site OP2 would require a new primary school. The representee highlights that SPP encourages optimising the use of existing resources which the allocation of bid site FR096 would achieve. It was stated that bid site FR096 also has strong visual containment and would help strengthen the western boundary of the village. The representee has included two Appendices (RD0106.A and RD0106.B) in their submission which provides further detail to support their position (PP0677).

Site OP3 – Mill of Allathan

SEPA has requested that the requirement for a FRA be included in the allocation summary and have stated that they will object if this is not included. Additionally, SEPA has requested that text requiring a buffer strip is included within the allocation summary (RD0214.B) (PP1219).

NatureScot has requested that wording which requires provision for active travel is included in the allocation summary for site OP3 as it is a relatively large allocation, and this would help to promote safe and convenient active travel opportunities in accordance with the PLDP's aims. NatureScot acknowledged that the allocation text already highlights an Access Strategy and Transport Assessment as well as including text regarding connectivity with site OP1, however considers provision for active travel is also encouraged (RD0255.B) (PP1300).

A representee has sought clarification on the proposed location of the OP3 site as it will have an impact of overlooking for the existing homes in Allathan Park and considers that the homes could be built along the roadside of the same field which would not cause issues of overlooking (PP0254).

A representee has commented that if the OP3 site is to be retained, development should be limited to single storey dwellings to prevent overlooking and minimise visual impact (PP0713 and PP0725).

Clarification was sought on whether two additional junctions would be delivered on the B999 between Allathan Park and Allathan Quarry as speeding is already a concern within the settlement (PP0990).

A number of representees have objected to site OP3 (PP0254, PP0410, PP0531, PP0566, PP0713, PP0725, PP0728, PP0834, PP0909, PP0937, PP0955, PP0959, PP0990, PP0997, PP0998, PP1001, PP1014 and PP1156). The following reasons have been cited:

- Other sites which provide clear benefit to the surrounding community are available for development (PP0566), such as OP2 which is a logical extension to the settlement and fits with community aspiration (PP0410, PP0531, PP0728, PP0909, PP0937, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014), as well as provides numerous community benefits (PP0937).
- Alternative viable sites are available (PP0410, PP0531, PP0713, PP0725, PP0728, PP0834, PP0909, PP0937, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014).
- The site does not meet community aspirations (PP0410, PP0531, PP0713, PP0725, PP0728, PP0834, PP0909, PP0937, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014).
- Development bids have previously been rejected (PP0410, PP0531, PP0713, PP0725, PP0728, PP0834, PP0909, PP0937, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014) due to the site's location within the pipeline safety zone – other sites are available without this risk (PP0410, PP0531, PP0713, PP0725, PP0728, PP0909, PP0937, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014), as well as concerns regarding flood risk, unacceptable development of prime agricultural land and landscape impact (PP0410, PP0531, PP0728, PP0909,

PP0937, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014).

- The site constitutes prime agricultural land of which development on is unacceptable (PP0713 and PP0725).
- Due to the location and zoning of the gas pipeline, site layout and design will be restricted (PP0410, PP0531, PP0728, PP0909, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014).
- Physical constraints such as location and topography exist on the site (PP0410, PP0531, PP0713, PP0725, PP0728, PP0909, PP0937, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014), as well as geology constraints (PP0410, PP0531, PP0728, PP0909, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014).
- Concern raised that the development would make land at property neighbouring the site unstable (PP0955).
- There are wayleaves restricting development that require to be addressed (PP0410, PP0531, PP0713, PP0725, PP0728, PP0909, PP0937, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014).
- The site is in close proximity to potentially contaminated land (PP0410, PP0531, PP0713, PP0725, PP0728, PP0909, PP0937, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014).
- The development will impact on the amenity of nearby properties (PP0410, PP0531, PP0566, PP0713, PP0725, PP0728, PP0834, PP0909, PP0937, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014), of which screening would not mitigate against (PP0410, PP0531, PP0909, PP0937, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014) due to the elevation, topography and geology of the site (PP0937).
- The development will impact on privacy of nearby properties (PP0254, PP0410, PP0531, PP0566, PP0713, PP0725, PP0728, PP0909, PP0937, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014).
- Concern was raised regarding the impact the development will have on school capacity/provision (PP0410, PP0531, PP0728, PP0909, PP0937, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014).
- Concern was raised regarding the impact the development would have on local health care provision (PP0937).
- The development would have a considerable impact on local facilities and services (PP0713 and PP0725).
- There is insufficient water and drainage capacity to support the site (PP0410, PP0531, PP0713, PP0725, PP0728, PP0909, PP0937, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014), and a drainage solution would be expensive and complex to overcome (PP0937).
- The development will impact on private waste water drainage in nearby gardens (PP0254, PP0410, PP0531, PP0728, PP0909, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014).
- The development will cause increased surface run-off water from the site leading into nearby properties causing possible flooding (PP0254, PP0410, PP0531, PP0566, PP0713, PP0725, PP0728, PP0909, PP0937, PP0955, PP0959, PP0990, PP0997, PP0998, PP1001 and PP1014), and potential flooding in other parts of the settlement (PP0713 and PP0725).
- Concern was raised regarding flood risk at the north west of the site (PP0410, PP0531, PP0728, PP0909, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014) and the potential flood risk posed by the new bridge (PP0937). A cut-off drain will be required along the west boundary of the site (PP0937).

- The site and the proposed access will impact on road safety (PP0410, PP0531, PP0728, PP0909, PP0937, PP0955, PP0959, PP0990, PP0997, PP0998, PP1001, PP1014 and PP1156) from the creation of a 3rd road junction in close proximity to the entrance to the settlement (PP0410, PP0531, PP0566, PP0713, PP0725, PP0728, PP0909, PP0937, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014). It was queried as to where the second access is to be located (PP0937).
- The site is not required as OP1 and OP2 already constitute overdevelopment (PP0410, PP0531, PP0713, PP0725, PP0728, PP0834, PP0909, PP0937, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014).
- The proposed high density on the site is not acceptable within the context of the settlement (PP0410, PP0531, PP0713, PP0725, PP0728, PP0909, PP0937, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014).
- There is no demand for additional housing in Pitmedden – new homes in the settlement remain unsold and OP1 and OP2 will provide any required housing over the next 2-10 years (PP0410, PP0531, PP0728, PP0909, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014).
- The site would be visually prominent and negatively impact the setting and landscape of the settlement (PP0410, PP0531, PP0713, PP0725, PP0728, PP0909, PP0937, PP0955, PP0959, PP0997, PP0998, PP1001, PP1014 and PP1156).
- The site would compromise the planned village gateway on the south approach (PP0937).
- The development does not work to join Milldale to Pitmedden, and with the proposed OP4 site, Milldale and Cloisterseat will be seen as a new and separate entity (PP0937).
- The bid submission for FR108 contains numerous inaccuracies and omissions (PP0410, PP0531, PP0713, PP0725, PP0728, PP0909, PP0937, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014).
- The site was previously rejected by the Council in 2018 and was not preferred in the Main Issues Report (MIR) 2019. The site received the same recommendation as other sites in the vicinity, and these were not discussed at the Special Meeting of Formartine Area Committee or by the Infrastructure Services Committee in 2019 (PP0410, PP0531, PP0728, PP0834, PP0909, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014).
- Concern has been raised as to why OP3 has been allocated when it was not a recommendation of the Issues and Actions papers, additionally clarification has been sought as to why bid sites FR132 and FR133 have not been allocated when these sites adjoin OP3 and have been deemed unsuitable (PP0410, PP0531, PP0728, PP0909, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014).
- It is queried as to why the proposed development has increased from 30 homes to 68 homes (PP0937 and PP1156), particularly as the site was not included in the Draft LDP (PP1156) and was deemed as the least acceptable (PP0713, PP0725, PP0937 and PP0990).
- The development will impact on wildlife (PP0410, PP0531, PP0713, PP0725, PP0728, PP0909, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014) and biodiversity on the site (PP0410, PP0531, PP0728, PP0909, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014). The north of the site has been returned to its natural state and supports a rich wildlife habitat (PP0937).
- Loss of mature trees along the Bronie Burn for the proposed link to OP1 is raised as a concern (PP0713, PP0725 and PP0937).
- The site does not benefit from solar gain (PP0410, PP0531, PP0713, PP0725,

PP0728, PP0909, PP0937, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014).

- The proposed provision of a link road is not deliverable due to land ownership issues and unfeasible developer negotiations (PP0410, PP0531, PP0713, PP0725, PP0728, PP0909, PP0937, PP0955, PP0997, PP0998, PP1001 and PP1014).
- Concern raised regarding the location of OP1 on which development is due to commence shortly and the impact it will have on the development of OP3 (PP0410, PP0531, PP0728, PP0909, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014).
- Servicing of the site would be difficult (PP0410, PP0531, PP0713, PP0725, PP0728, PP0909, PP0937, PP0955, PP0959, PP0990, PP0997, PP0998, PP1001 and PP1014) and the proposed development would be economically unviable (PP0410, PP0531, PP0713, PP0725, PP0728, PP0909, PP0937, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014).
- The site will cause possible noise pollution (PP0410, PP0531, PP0728, PP0909, PP0937, PP0955, PP0959, PP0997, PP0998, PP1001 and PP1014) and impact on health (PP0254, PP0713 and PP0725). The development will cause pollution during and post construction (PP0937).
- Concern raised that there has been a lack of community involvement and consultation for the future housing development within the settlement (PP0410, PP0531, PP0713, PP0725, PP0728, PP0909, PP0955, PP0959, PP0997, PP0998, PP1001, PP1014 and PP1156).
- Concern that there has been a lack of notification and information provided regarding the proposed development for those living locally (PP1156).

Site OP4 – Land at Cloisterseat

SEPA has confirmed that they have no further flooding, strategic drainage, or water supply issues with the designation summary for site OP4 (RD0214.B). No modification sought (PP1219).

Non-Allocated Site – Bid Site FR008 – Land for public hall OP1 South West of Pitmedden

A representee has sought the removal of site R1 and has requested that bid site FR008 is allocated in the Settlement Statement for 5 homes. The representee considers that the site would be better identified for housing rather than a village hall as the site has been identified for a village hall since 2003 with no proposals and that 17 years is ample time for such proposals to be progressed or implemented. However, the representee has questioned whether the site will ever be delivered. In the Main Issues Report (MIR) 2019, bid site FR008 was not identified as an Officer's preference as the development of a village hall was still considered an aspiration and no other site was identified by the developer. However, site OP2 identifies a community hub and therefore an alternative space has been identified and site R1 is surplus to requirements for a village hall. As such, site R1 can be developed for a more appropriate and deliverable land use such as for 5 homes. The site is able to gain access through existing residential development and has a developer to deliver the site. It is also well located and within walking distance of existing facilities, and well located near site OP2. The representee states that an alternative to allocating the site for 5 homes could be to identify the site within the settlement boundary so the site would come forward under Policy P3. The representee has included two Appendices (RD0053.A and RD0053.B) in their submission which provides further detail to support their position (PP0384).

Non-Allocated Site – Bid Site FR096 – Land at West and North West Pitmedden

A representee has requested that bid site FR096 is allocated as an opportunity site for 90 homes, as a replacement to site OP2. The remaining 129 homes should be allocated to other sustainable locations in Aberdeenshire, such as Westhill, Balmedie and Blackburn. The representee considers that site OP2 is too big for the size of the settlement and that its development would be detrimental to wildlife, particularly protected species. However, the proposed 90 homes on bid site FR0096 is commensurate with the scale of the settlement, providing 2-4 bedroomed homes and affordable homes. It is considered that there is capacity at the primary school to accommodate the additional pupils from bid site FR096, whereas site OP2 would require a new primary school. Bid site FR096 is also within easy and safe walking distance of the village school. The representee highlights that SPP encourages optimising the use of existing resources which the allocation of bid site FR096 would achieve. It was stated that bid site FR096 would allow for a green buffer and would strengthen the existing tree belt and provide a defined edge to the settlement. Additionally, bid site FR096 would allow for strong visual containment and would help strengthen the western boundary of the settlement. It was stated that open space with SuDS could be provided, and there would be no requirement to remove significant areas of woodland. The site is well related to the settlement and is deliverable. It would not have any access issues and would provide a network of paths connecting to the settlement facilities. The representee has included two Appendices (RD0106.A and RD0106.B) in their submission which provides further detail to support their position (PP0677).

Non-Allocated Sites – Bid Site FR132 and Bid Site FR133 – Quarry Field Site, Land at Mill of Allathan Farm, Udney and Quarry Road Site, Land at Mill of Allathan Farm, Udney

A representee has requested that proposed site OP3 (bid site FR108) is expanded to include land contained in bid sites FR132 and FR133 to provide a combined site suitable for mixed-use development. It is stated that a community exercise undertaken established a preference for future development to the south of Pitmedden, with a community wetland park. Additionally, the community wished to see a new community hall and primary school to the west of the B999 – it is acknowledged by the representee that these will be accommodated on the proposed OP2 site, along with new housing. The representee highlighted that bid sites FR108, FR132 or FR133 were not preferred in the MIR, however at the Special Meeting of Formartine Area Committee it was agreed that these sites were to be allocated. However, at the subsequent ISC meeting it was agreed that FR132 and FR133 should not be promoted for development due to the sites impinging significantly on an area restricted by high pressure oil pipelines. The representee considered that this decision was based on inaccurate information and that it is not in line with SPP and that the scale and type of development proposed for the sites are fully compliant with that permitted using the PADHI tool. A fully consultative approach is proposed for the three sites which will form the basis of the community engagement. It is stated that the development would provide local employment opportunities in the centre of the village within short walking/cycling distance of the local population and directly on a bus route. Individual custom build serviced plots will be made available on the site which are in high demand within the UK. Additionally, small-scale, local business space would be provided in a central settlement location. As such an integrated residential and employment site would be the result of this land allocation, which would provide a unique and distinctive sense of place on approach to the settlement from the south. The enlarged OP3 site

would also provide a more sensitive and appropriate range of housing options. The representee has included two Appendices (RD0165.A and RD0165.B) in their submission which provides further detail to support their position (PP0895).

A representee has considered that bid site FR132 is a more superior site than proposed site OP3 and has the added benefit as it would link Milldale to Pitmedden along with the village green and would have no impact on neighbouring properties (PP0937).

A representee has stated that bid site FR133 should be reserved for a recreational park as the quarry is now commercially developed (PP0937).

Modifications sought by those submitting representations:

General

Modify the PLDP to state that an increase in public amenities is required in the settlement (PP0018).

Modify the PLDP to reduce the number of allocated homes in the settlement to 100 homes (PP0469).

Site R1 – Reserved for a new village hall

Modify the PLDP to amend the text for Site R1 to provide clarification on the access route, proposed parking plan and the scale of the R1 site (PP0018).

Modify the PLDP to remove site R1 (PP0384).

Site BUS1 – Safeguarded for business uses

Modify the PLDP to amend site BUS1 to an opportunity site for residential or mixed-use development (PP0331).

Modify the PLDP to remove site BUS1 (PP0331).

Flood Risk

Modify the PLDP to amend the first sentence of the first 'Flood Risk' bullet point to read, "Parts of site OP1 and OP3 are within the Scottish Environment Protection Agency's (SEPA) indicative 1 in 200-year flood risk area, or has a small watercourse running through or adjacent to the site." (PP1219).

Modify the PLDP to amend the second sentence of the first 'Flood Risk' bullet point to read, "A Flood Risk Assessment will be required." (PP1219).

Modify the PLDP to amend the second 'Flood Risk' bullet point to read, "A Flood Risk Assessment will be required for BUS1 and R1. Adequate buffer strips will be required along the watercourses which should be positively integrated into the development." (PP1219).

Site OP1 – Land at Bonnyton Farm

Modify the PLDP to clarify if development on site OP1 is going ahead (PP0018).

Modify the PLDP to remove site OP1 (PP0566).

Site OP2 – Land Southwest of Pitmedden

Modify the PLDP to amend the first sentence of the third paragraph of the allocation summary for site OP2 to read, “Buffer strips will be required adjacent to the watercourses running through the site which should be integrated positively into the development.” (PP1219).

Modify the PLDP to amend the site boundary of site OP2 to include the full extent of bid sites FR006 and FR007 (PP0383).

Modify the PLDP to amend the allocation summary of site OP2 to remove reference to open space provision, community food growing areas, landscaping, housing design, permeability, transport impact, buffer strips, drainage, affordable housing, permeability with adjacent housing developments and the requirement for a Flood Risk Assessment (PP0383).

Modify the PLDP to amend the allocation summary of site OP2 to include appropriate measures to maintain the existing south-east to north-west linear tree belt (PP1343).

Modify the PLDP to amend the third sentence of the third paragraph of the allocation summary to read, “The site may have pockets of localised drainage issues which could be mitigated through the provision of Sustainable Drainage Systems (SuDS).” (PP1219).

Modify the PLDP to remove site OP2 (PP0018, PP0667 and PP0678).

Modify the PLDP to remove site OP2 and allocate bid site FR096 for 90 homes (PP0677).

Site OP3 – Mill of Allathan

Modify the PLDP to amend the allocation summary for site OP3 to include the text, “A Flood Risk Assessment will be required. A buffer strip will be required adjacent to the watercourse on the northern boundary of the site which should be integrated positively into the development.” (PP1219).

Modify the PLDP to amend the allocation summary for site OP3 to include additional text after the penultimate sentence which reads, “Provision for active travel is required.” (PP1300).

Modify the PLDP to provide clarification of the location of site OP3 (PP0254).

Modify the PLDP to amend the allocation summary for site OP3 to include additional text which limits the design of the development on the site to single storey dwellings (PP0713 and PP0725).

Modify the PLDP to provide clarification on the requirement for two additional junctions on the B999 between Allathan Park and Allathan Quarry (PP0990).

Modify the PLDP to remove site OP3 (PP0254, PP0410, PP0531, PP0566, PP0713, PP0725, PP0728, PP0834, PP0909, PP0937, PP0955, PP0959, PP0990, PP0997, PP0998, PP1001, PP1014 and PP1156).

Non-Allocated Site – Bid Site FR008 – Land for public hall OP1 South West of Pitmedden

Modify the PLDP to include bid site FR008 for 5 homes (PP0384).

Non-Allocated Site – Bid Site FR096 – Land at West and North West Pitmedden

Modify the PLDP to remove site OP2 and allocate bid site FR096 for 90 homes (PP0677).

Non-Allocated Sites – Bid Site FR132 and Bid Site FR133 – Quarry Field Site, Land at Mill of Allathan Farm, Udney and Quarry Road Site, Land at Mill of Allathan Farm, Udney

Modify the PLDP to amend site OP3 to include bid sites FR132 and FR133 for a mixed-use development (PP0895).

Modify the PLDP to include site FR132 for a housing development (PP0937).

Modify the PLDP to include FR133 as a reserved site for a recreational park (PP0937).

Summary of responses (including reasons) by planning authority:

General

The representee’s concerns regarding the requirement for improved amenities to be provided within the settlement given the level of housing proposed are noted. However, the ‘Services and Infrastructure’ section and allocation summaries for the proposed sites in the Settlement Statement set out what development may be required to contribute towards to ensure the developments are acceptable in planning terms for all users. No change is required.

The concerns raised stating that the proposed housing on OP1, OP2 and OP3 is excessive unless directly linked to the building of a new community school are noted. Site OP1 (reference OP2 in the LDP 2017) already has planning permission granted on the site, which was granted on appeal in July 2020. The appeal was granted following the registering of a planning obligation, under section 75 of the Town and Country Planning (Scotland) Act 1997, which included a requirement for contributions towards additional classroom capacity at Meldrum Academy. Site OP2 has been allocated for 219 homes, a new primary school and community uses. The proposed school on this site is proposed to be a “community” school, owned and built by the community and proposed to be run by Aberdeenshire Council as outlined in the Imagine Udney Community Plan (see FAC Minutes, AD0141, page 13 and AD0149). However, issues relating to education infrastructure would be looked at in more detail through the masterplan process and also through any planning application that is submitted on site OP2 and site OP3. Any decision on the provision of a new school within the area would require to be reviewed along with other education provision capacities within the existing network. No change is required.

The representee’s concern that 100 homes, rather than the proposed 351 homes, would be more appropriate over the next decade are noted. Pitmedden is located in the

Aberdeen Housing Market Area (AHMA) within a local growth and diversification area. In accordance with the Aberdeen City and Shire Strategic Development Plan (2020), the settlement is appropriate for a level of growth related to local needs (SDP, AD0016, page 23, and paragraph 3.45). The allocated sites are seen to meet local needs within the settlement. Each allocation made in the Plan has been through multiple assessments including the Strategic Flood Risk Assessment (SFRA)), Strategic Environmental Assessment (SEA), Development Planning and Management Transport Appraisal Guidance (DPMTAG), and the Habitats Regulations Appraisals (HRA) to ensure the most appropriate sites are allocated for development. No change is required.

Site R1 – Reserved for a new village hall

This site has been identified as a ‘reserved site’, which means that it is safeguarded for a specific use – in this case a new village hall. The purpose of the reserved site is to reserve the land for this use in the event that development proposals for a new village hall come forward, and so no alternative development is allowed on the site. With regards to the clarification sought from the representee regarding the access to the site and parking provision, this would be addressed and clarified at the planning application stage. The site boundary for the reserved site is indicated on the settlement map within the Settlement Statement for Pitmedden (PLDP, AD0041.F, page 475). No change is required.

The representee’s request for the removal of site R1 is noted. There was a bid received (FR008) on the R1 site for 5 homes, however it was not considered an Officer’s preference in the MIR (MIR 2019, AD0038.D, page 79) as there still remains an aspiration to create a village hall in the community and this location represents an appropriate site on which there are community expectations. It is acknowledged that the OP2 site identifies a community hub, however there is no confirmation that a community hall/hub will be delivered on this site. As such, it is considered to be prudent to retain the safeguarding of the land at site R1 for a village hall as there is not yet a commitment to deliver the community hall on site OP2. It is noted that the ‘Actions’ section of the Issues and Actions Papers state that the existing OP1 site in the LDP 2017 should be retained for the potential use of a community hall (I&A Papers, AD0040.D page 77). However, on consideration at the Special Meeting of Formartine Area Committee, the Committee recommended that the Community Plan as presented by the Udney Development Trust on the day of the Committee was to form the basis of the Settlement Statement for Pitmedden (FAC Minutes 10/09/2019, AD0141, pages 13-14 and Imagine Udney Plan, AD0149). The Community Plan which was presented did not include site OP1 as per the LDP 2017, however indicated that at the location of site R1 within the PLDP, should be the location for a potential new village hall. As such, R1 has been allocated as a reserved site for a new village hall and it is considered that it should be retained as such.

In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Site BUS1 – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

The representee’s request for the reallocation of the BUS1 site as an opportunity site for

residential or mixed-use development is noted. Whilst it was considered that the BUS1 site should be retained in the MIR 2019, following consultation it was considered by Officers in the Issues and Actions Papers (I&A Papers, AD0040.D, pages 78-80) that the BUS1 site's removal would not impact on the overall employment land supply, and that if the site was removed from the Plan, the landowner could develop the brownfield elements on the site for small-scale employment or residential use. However, on consideration at the Special Meeting of Formartine Area Committee, the Committee recommended that the Community Plan as presented by the Udney Development Trust on the day of the Committee was to form the basis of the Settlement Statement for Pitmedden (FAC Minutes 10/09/2019, AD0141, pages 13-14 and Imagine Udney Plan, AD0149). The Community Plan indicated that the BUS1 site was to be retained and this has therefore been reflected in the PLDP. The view is maintained that the site is not well related to the settlement as it is detached and isolated from the main settlement, which would result in a development that conflicts with the built pattern of Pitmedden. However, as the purpose of BUS sites are to safeguard existing business uses of which there are none currently on the site, and given the size of the site, if the reporter were minded, to make an amendment, then the Council recommend that the BUS1 site could be removed from the PLDP and the settlement boundary at this location removed accordingly.

Flood Risk

The Council confirms that it intends to address SEPA's comments through non-notifiable modifications, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Land at Bonnyton Farm

Comments from SEPA are noted. No change is required.

The Council notes the concern of the allocation of site OP1 and Udney Community Council's objection to the proposed OP1 site in the PLDP. The proposed OP1 site is identified as an effective site within the Housing Land Audit 2019 (HLA, AD022, page 66) and is considered to be a deliverable site. The OP1 site was subject to a recently successful planning appeal as part of APP/2019/0753. A road safety audit undertaken by engineers on behalf of the developer confirmed that the proposed arrangement for reopening the junction between Ingleside and the B999 poses no safety problems. The Council's Roads Development Service have also confirmed that the proposed arrangement is acceptable. Additionally, site impacts such as impact on amenity and parking provision were considered under the successful planning appeal APP/2019/0753. The site is identified in the Community Plan as was presented by the Udney Development Trust on the day of the Special Meeting of Formartine Area Committee which was agreed by Councillors to form the basis of the Settlement Statement for Pitmedden (FAC Meeting Minutes 10/09/2019, AD0141, pages 13-14 and Imagine Udney Plan, AD0149). No change is required.

As noted above the site was subject to a recently successful planning appeal as part of APP/2019/0753. As such, the Council notes the following non-notifiable modification has been made to the PLDP to update factual references since the PLDP was agreed.

Site OP2 – Land Southwest of Pitmedden

The representee's comments highlighting that the PLDP states that part of the site is located within the Health and Safety Executive (HSE) outer consultation zone associated with one or more oil or gas pipelines in the vicinity are noted. As acknowledged by the representee and as is required by the Settlement Statement, this matter would be considered within the design process and presented as part of the planning application and considered under Policy P4 Hazardous and Potentially Polluting Development and Contaminated Land of the Plan (AD0041.A). No change is required.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council welcomes the representee's support for site OP2. The representee's request that the site boundary is extended to include the entirety of bid sites FR006 and FR007 is noted. Whilst FR007 was identified as a preferred site in the MIR, FR006 was identified as a reserved site as it was not preferred for immediate development (MIR 2019, AD0038.D, pages 78-79). However, on consideration at the Special Meeting of Formartine Area Committee, the Committee recommended that the Community Plan as presented by the Udney Development Trust on the day of the Committee was to form the basis of the Settlement Statement for Pitmedden (FAC Meeting Minutes 10/09/2019, AD0141, pages 13-14 and Imagine Udney Plan, AD0149). This included the entirety of bid site FR007, and it was further clarified and agreed at Infrastructure Services Committee on 3 October 2019 that the boundary of the FR007 site was to be amended to incorporate some of the FR006 site (ISC Meeting Minutes 03/10/2019, AD0151, page 14). The OP2 site thus reflects what has been indicated in the Community Plan, including a primary school and community facilities, and it is not considered that the OP2 site should be extended further. As this is a proposed new site that sits within the Aberdeen Housing Market Area, a standard density of 25 homes per hectare has been applied to reach the allocation of 219 homes. This excluded the land highlighted within the Community plan for a potential school. In line with Policy H1 Housing Land, the numbers quoted are indicative and at such time as a planning application is submitted for the site, the layout, siting and design may mean that a higher or indeed lower number of dwellings may be come forward, (PLDP, AD0041.A, page 41). The application of a standard density in the Aberdeen Housing Market is intended to provide a degree of certainty for communities on the scale of development that could reasonably be achieved on a site. Further detail on this is provided in the Schedule 4 Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations. Furthermore, as stated by the representee, the site layout for the allocated uses and those uses stated within the allocation summary will be considered during the masterplan stage for the site as will the access requirements and the need and location for the loop and link road. No change is required.

It is considered reasonable and appropriate to leave the allocation text as it stands. This means that at a time when a masterplan comes forward on the site, all of the issues identified within the allocation summary can be discussed. Removing the issues noted by the representee, such as open space provision, community food growing areas, landscaping, housing design, permeability, transport impact, buffer strips, drainage and affordable housing, would potentially pre-empt any discussion with the appropriate Service when a masterplan came forward on the site. The Council notes that the representee states that a Flood Risk Assessment was carried out by the developer as part of the LDP

2017 OP1 site. However, the requirement for buffer strips in the allocation summary is still deemed appropriate due to the presence of watercourses on the site. No change is required.

The Council welcomes HES's support for the boundary for site OP2. The Council notes HES's request to amend the allocation summary to include appropriate measures to maintain the existing south-east to north-west linear tree belt. However, it is considered that the allocation text is reasonable and appropriate as it states that the existing tree belt should be maintained to protect the setting of Udney Castle. Further detail on the protection of the existing tree belt will be considered and determined during the planning application stage and as such the allocation text is considered to be sufficient as it sets out the requirement. No change is required.

Objection to site OP2 is noted. Pitmedden is located in the Aberdeen Housing Market Area (AHMA) within a local growth and diversification area. In accordance with the Aberdeen City and Shire Strategic Development Plan (2020), the settlement is appropriate for a level of growth related to local needs (SDP, AD0016, page 23, and paragraph 3.45) and the proposed allocations are considered appropriate for the settlement. Each allocation made in the Plan has been through multiple assessments including the Strategic Flood Risk Assessment, Strategic Environmental Assessment, Development Planning and Management Transport Appraisal Guidance, and the Habitats Regulations Appraisals to ensure the most appropriate sites are allocated for development.

As detailed above, the OP2 site largely reflects what has been indicated in the Community Plan, including a primary school and community facilities and a standard density of 25 homes per hectare has been applied to reach the allocation on the site. Concerns raised regarding the impact on protected species are noted, however the site was not considered to have an impact when undertaking the SEA. Additionally, the presence of any protected species will be considered during the planning application stage. As stated in the MIR (MIR 2019, AD0038.D, page 78), although the site is categorised as prime agricultural land, the absence of other parcels being available makes a compelling case for Scottish Planning Policy relating to prime agricultural land to be set aside. Additionally, as a form of compensation, it is stipulated within the allocation summary that a proportion of the open space should include community food growing areas. The Council notes the representee's concerns regarding the loss of mature trees. However, the allocation summary states that the existing tree belt should be maintained, additionally any potential loss of trees would be considered at the planning application stage. The allocation summary states that landscaping should be provided to mitigate any adverse landscape character impacts, and whilst the MIR highlighted that there would be challenges to the creation of SuDS, this is not seen as a constraint that cannot be overcome and will be further considered at the planning application stage. The Council notes the representee's comments regarding the required upgrade to drainage infrastructure and requirements pertaining to this are detailed within the 'Strategic drainage and water supply' section of the Settlement Statement. With regards to HES's comments during the MIR stage, as detailed in the Issues and Actions Papers (MIR 2019, AD0038.D, page 74), HES stated that the FR006 site will impact on views from Udney Castle. However, comments from HES on the Proposed Plan state that they support the site boundary of the OP2 site. Additionally, it is considered that the allocation summary has sufficient text which highlights that the site has the potential for an adverse impact on Udney Castle and that the existing tree belt should be maintained to protect its setting. No change is required.

As stated above, each allocation has been through multiple assessments to ensure the most appropriate sites are allocated for development. Although the MIR identified constraints with the site, these are not considered to be constraints that cannot be overcome and will not preclude the development from coming forward. The SEA indicates that site OP2 includes both bid sites FR006 and FR007 for an allocation of 219 homes and as such it is considered that the appropriate assessment has been carried out (AD0045.A). The full extent of FR006 has not been allocated and as detailed above, a standard density of 25 homes per hectare has been applied to reach the allocation of 219 homes on the OP2 site. No change is required.

The Council notes the representee's request to allocate bid site FR096 as an opportunity site for 90 homes, as a replacement for site OP2. However, the Council does not support allocating bid site FR096 or consider the removal of site OP2 to be appropriate. Bid site FR096 was not identified as a preferred option within the MIR (MIR 2019, AD0038.D, page 80). As discussed in the Issues and Actions Papers (I&A Papers, AD0040.D, page 79), while the site is well related to the existing settlement and provides an opportunity to improve links to Pitmedden Gardens, the site is given a high level of protection as a Designated Landscape for Pitmedden House. The development of this site could significantly impact on the setting of the Pitmedden House. No change is required.

Site OP3 – Mill of Allathan

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The location of the site is shown in the Settlement Statement map for Pitmedden (PLDP, AD0041.A, page 475). With regards to the layout, siting and design of the site, this would be considered through the masterplan and subsequent planning application stage, with proposals being assessed against the relevant policies within the Plan. Additionally, as stated within the allocation summary for site OP3, wider transportation requirements are to be determined through a Transport Assessment at the planning application stage at which road infrastructure requirements would be assessed. No change is required.

The Council does not support the removal of site OP3 from the Proposed Plan. The Council notes the concerns raised stating that other alternative sites are available for development and that various constraints exist on the site as highlighted by the representees. Bid site FR108 was not identified as a preferred site in the MIR (MIR 2019, AD0038.D, page 81), but on consideration at the Special Meeting of Formartine Area Committee, the Committee recommended that the Community Plan as presented by the Udney Development Trust on the day of the Committee was to form the basis of the Settlement Statement for Pitmedden (FAC Meeting Minutes 10/09/2019, AD0141, pages 13-14 and Imagine Udney Plan, AD0149). This included bid site FR108. The OP3 site thus reflects what has been indicated in the Community Plan. As this is a proposed new site that sits within the Aberdeen Housing Market Area, a standard density of 25 homes per hectare has been applied to reach the allocation of 68 homes. In line with Policy H1 Housing Land, the numbers quoted are indicative and at such time as a planning application is submitted for the site, the layout, siting and design may mean that a higher or indeed lower number of dwellings may be come forward (PLDP, AD0041.A, page 41).

The application of a standard density in the Aberdeen Housing Market is intended to provide a degree of certainty for communities on the scale of development that could reasonably be achieved on a site. Further detail on this is provided in the Schedule 4 Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations.

Concerns raised regarding physical constraints on the site that may impact the site layout and design are noted. However, this detail would be considered through the masterplan and subsequent planning application stage, with proposals being assessed against the relevant policies within the Plan. Additionally, it is acknowledged that the site is located within proximity to the pipeline safety zone. In this case, the matter would be for further discussion at such a time that detailed proposals come forward for the proposed development and the risk would be managed through Policy P4 Hazardous and Potentially Polluting Development and Contaminated Land of the Plan (PLDP, AD0041.A, pages 50-51).

A number of concerns have been noted with regards to infrastructure, including road access and infrastructure, school provision, surface water, WWTW provision, health care and local services. These are all covered under 'Services and Infrastructure'; which notes what Developer Obligations are required as a result of a development being delivered. These requirements would also be discussed again between the Council's Developer Obligations Team, the developer and any relevant stakeholder upon submission of a planning application. It is therefore not considered to be a barrier to development. Additionally, any impacts on the amenity of neighbouring properties will be addressed at a planning application stage with proposals being assessed against relevant policies within the Plan. It is also noted that the allocation summary states that a Water Impact Assessment will be required for the site.

Concerns regarding the demand for housing in the settlement are noted. However, Pitmedden is located in the Aberdeen Housing Market Area (AHMA) within a local growth and diversification area. In accordance with the Aberdeen City and Shire Strategic Development Plan (2020), the settlement is appropriate for a level of growth related to local needs (SDP, AD0016, page 23, and paragraph 3.45) and the proposed allocations are considered appropriate for the settlement.

Concerns relating to the impact that the site will have on visual impact, the loss of wildlife and contaminated land are aspects that were considered through the site assessment stage of the Plan-making process. Within the allocation summary it is also stated that landscaping and strategic planting should be utilised to mitigate any detrimental effects on landscape character. The Plan has a presumption in favour of retaining woodland on development sites. The impact on any trees on or surrounding the site will require to be in line with Policy PR1 Protecting Important Resources (PLDP, AD0041.A, pages 73-75).

Concerns raised regarding site OP3 not working to join Milldale and Pitmedden are noted. However, the two parts of the settlement are connected at site P3. Future delivery on aspirations for connectivity of the two separate parts of the settlement would be more appropriately considered as part of a future review of the Plan at a time when sites have progressed.

The concerns raised regarding the inaccuracies contained within the bid submission for FR108 are noted, however, the bid submission is submitted by those who are proposing

the site for development and its content is outwith the Council's control.

Concerns raised regarding the reasoning of why FR108 has been allocated as an opportunity site, but the adjoining bid sites FR132 and FR133 have not are noted. Bid sites FR132 and FR133 were not preferred in the MIR (MIR 2019, AD0038.D, page 81). On consideration at the Special Meeting of Formartine Area Committee, the Committee recommended that the Community Plan as presented by the Udney Development Trust on the day of the Committee was to form the basis of the Settlement Statement for Pitmedden (FAC Meeting Minutes 10/09/2019, AD0141, pages 13-14 and Imagine Udney Plan, AD0149), and this included bid sites FR132 and FR133. However as discussed at ISC, 3 October 2019 (ISC Meeting Minutes 03/10/2019, AD0151, page 14), bid sites FR132 and FR133 were not considered appropriate for development – please see discussion under Council's response, section 'Non-Allocated Sites – bid site FR132 and bid site FR133 – Quarry Field Site, Land at Mill of Allathan Farm, Udney and Quarry Road Site, Land at Mill of Allathan Farm, Udney' below for further detail on the non-allocation of these sites.

The representees have highlighted concern that the site would not benefit from solar gain. However, this would be a matter considered through development management procedures, addressed through the masterplan process to ensure an appropriate layout, siting and design of the site is reached.

Concerns regarding land ownership issues in relation to the provision of a link road are noted. However, this matter would be addressed as the site comes forward for development in discussion with the Council's Transportation Service. The Council's Delivery Team would also be able to facilitate any discussions required between parties and work with them to bring the site forward.

With regard to the concerns noted in terms of the impact the proposed development of site OP1 would have on site OP3, it is not anticipated that there would be any adverse impact on site OP3 arising from the development of site OP1. If required, mitigation measures could be put in place at such a time when the site comes forward for development.

Concerns regarding the economic viability of the site are noted. However, the Council has received confirmation from the bid proposer through the bid form that the site is viable.

Additionally, concerns relating to pollution during construction and post construction are noted, however this is something that can be managed through a Construction Traffic Management Plan (CTMP) which is looked at when a planning application is submitted.

With regard to the concern raised that there had been a lack of notification and information provided regarding the proposed development for local residents, engagement activities have been undertaken in line with the relevant statutory requirements as set out in the Participation Statement (AD0044). This includes, but was not limited to, sending out neighbour notification letters to those properties within 20m of proposed development within the PLDP. In light of the discussion above, it is therefore not considered appropriate to remove site OP3. No change is required.

Site OP4 – Land at Cloisterseat

Comments from SEPA are noted. No change is required.

Non-Allocated Site – Bid Site FR008 – Land for public hall OP1 South West of Pitmedden

The Council does not support allocating bid site FR008 for 5 homes. The representee's request to allocate bid site FR008 for 5 homes in the Plan is noted. However, as discussed in the Council's response under 'Site R1', it is not considered that bid site FR008 should be allocated for residential development. As discussed above (refer to section containing the Council's response under 'Site R1'), R1 has been allocated as a reserved site for a new village hall and it is considered that it is prudent and appropriate to retained it as such. In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site FR096 – Land at West and North West Pitmedden

The Council does not support allocating bid site FR096 for 90 homes or consider the removal of site OP2 to be appropriate. The representee's request to allocate bid site FR096 as an opportunity site for 90 homes, as a replacement for site OP2 is noted. Bid site FR096 was not identified as a preferred option within the MIR (MIR, AD0038.D page 80). As discussed in the Issues and Actions Papers (I&A Papers, AD0040.D, page 79), while the site is well related to the existing settlement and provides an opportunity to improve links to Pitmedden Gardens, the site is given a high level of protection as a Designated Landscape for Pitmedden House. The development of this site could significantly impact on the setting of Pitmedden House. Please refer to discussions under "Site OP2 – Land Southwest of Pitmedden" which provide explanation as to the allocation of site OP2 and the density which has been reached for the site. No change is required.

Non-Allocated Sites – Bid Site FR132 and Bid Site FR133 – Quarry Field Site, Land at Mill of Allathan Farm, Udney and Quarry Road Site, Land at Mill of Allathan Farm, Udney

The Council does not support allocating bid sites FR132 (24 homes) and FR133 (employment land) as a mixed-use expansion to site OP3. The representee's request to expand proposed site OP3 (bid site FR108) to include land contained within bid sites FR132 and FR133 to provide a combined site suitable for a mixed-use development is noted. As discussed at ISC, 3 October 2019 see ISC Meeting Minutes 03/10/2019, AD0151, page 14), bid sites FR132 and FR133 impinge significantly on an area restricted by high pressure oil pipelines and these sites should not be promoted for development on the basis of the precedent that inclusion of these sites may set for allocations in other similar areas. Scottish Planning Policy, paragraph 107, states "Proposals for development in the vicinity of major-accident hazard sites should take into account the potential impacts on the proposal and the major-accident hazard site of being located in proximity to one another. Decisions should be informed by the Health and Safety Executive's advice, based on the PADHI tool. Similar considerations apply in respect of development proposals near licensed explosive sites (including military explosive storage sites)". This has been used to justify why development should not occur on some sites, including those at Westhill, Drumoak and Stonehaven and as such, as a principle, the Council would not look to promote development in the vicinity of pipelines.

As discussed in the MIR 2019 (MIR 2019, AD0038.D, page 81), both sites sit on a hillside in a prominent location that would lead to a negative impact on the setting of the

settlement. Whilst the MIR considered that the allocation of bid site FR108 (proposed site OP3) could provide a very small-scale employment allocation without the need to cut into much of the slope at the west side of bid site FR133, it was considered that even this would likely have some negative impact on the setting of the settlement. Additionally, the housing proposed on bid site FR132 was considered to potentially lead to ribbon development. As such it is maintained that these sites would have an adverse impact on the character of the area and are unsuitable for development.

In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

The representee's recommendation that bid site FR133 should be reserved for a recreational park as the quarry is now commercially developed is noted. However, site P4 has been designated "To protect the open space for the creation of a recreational park as an amenity for the settlement and to protect the area as a significant contribution to the character of the place", located to the north of Allathan Quarry. This reflects the Community Plan as presented by the Udney Development Trust on the day of the Special Meeting of Formartine Area Committee, which was agreed to form the basis of the Settlement Statement for Pitmedden (FAC Meeting Minutes 10/09/2019, AD0141, pages 13-14 and Imagine Udney Plan, AD0149). No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as "non-notifiable modifications" in relation to the settlement statement matters covered in Issue 25. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

General

3. A representation argues that, given the level of housing proposed in Pitmedden, improved amenities should be provided in the settlement. However, the Services and Infrastructure section and the allocation summaries for the proposed sites within the Pitmedden settlement statement set out the contributions required from a development towards the provision of services and infrastructure in order that it is acceptable in planning terms. No modification is required.

4. A total of 351 homes is proposed for Pitmedden on sites OP1, OP2 and OP3, and a representation maintains that this would be excessive unless it was linked to the building of a new community school. The requirement in the proposed plan for a new primary

school was associated with the allocation of 219 homes on site OP2. However, my conclusion and recommendation set out below reduce the size of that site and amend the allocation to 100 homes, which would bring the total number of homes proposed for Pitmedden down to 232. For this reason and because no justification for a new school has been provided, I have no basis for recommending a new school.

5. The same representation argues that 100 homes would be more appropriate for the settlement over the next decade. Pitmedden is located within a Local Growth and Diversification Area where it is expected that growth will be restricted to that meeting local needs unless specifically justified against the vision, aims, strategy and targets of the plan. As pointed out in the Main Issues Report, Pitmedden is well located between Oldmeldrum and Ellon and there is fairly significant development pressure due to its accessible location and the existing services within the settlement. At paragraph 5.15 of the proposed plan, the council explains that within the Local Growth and Diversification Area “opportunity has been promoted where there are deliverable options” and that its re-evaluation of currently stalled allocations has led to an increase in allocations in towns such as Oldmeldrum and Pitmedden, where growth is more likely. The representation provides no evidence to support a contrary view and I am satisfied that the proposed scale of growth (as amended) is justified. No modification is required.

Site R1 – reserved for a new village hall

6. Site R1 is a small area in the centre of the village located in front of the medical centre. A representation contends that the site should be reallocated for housing on the grounds that it has been allocated for a village hall since 2003, which is ample time for a scheme to be implemented. Moreover, as the allocation statement for site OP2 (land south-west of Pitmedden) includes the provision of a community hub, it is unnecessary to reserve site R1. It is stated that the site is close to existing facilities in the village, can be accessed through existing residential development and has a developer to deliver the homes.

7. A bid for housing on this site was made and considered in the Main Issues Report 2019, but not accepted for reasons of access, appropriateness of the site and the community expectation for a village hall there. Whilst the OP2 site allocation identifies a community hub, there is as yet no commitment that a community hall will be delivered as part of that development. It is therefore prudent to retain the reservation. No modification is required.

Site BUS1 – safeguarded for business use

8. Site BUS1 lies on the B999 road to the north of the village and separated from it by an intervening field. It backs onto the walled garden of the Pitmedden designed landscape, which is associated with Pitmedden House. A rather dilapidated vacant workshop building stands in a corner of the field.

9. A representation seeks the reallocation of site BUS1 as an opportunity site for development as residential (15 homes) or mixed use (12 homes and 1,000 square metres of commercial land).

10. Consent for a new warehouse was granted in 2015 but this has not been built. The promoter contends that this is due to lack of demand despite marketing through an agent.

However, as the council points out smaller units have not been proposed. I am not convinced that a lack of demand for business use has been demonstrated.

11. The site is situated some 125 metres from the village boundary. For residential use, that makes it somewhat remote from, and not well related to, the existing village. Its development would encourage pressure for housing on the intervening field in an ad hoc way. It would potentially have a negative impact on the setting of the designed landscape and the village. All the same comments would apply to the mixed use proposal. The circumstances around allocation OP4 (land at Cloisterseat) are different from those at site BUS1 and do not allow me to make any direct comparisons. Arguments relating to the council's handling of the proposal prior to publishing the proposed plan are not within the remit of this examination.

12. The council suggests that, as the purpose of BUS sites is to safeguard existing business uses, of which there are none currently on the site, and given the size of the site, it would support an amendment to remove the BUS1 site from the plan, together with the settlement boundary around that location. This, however, would be a significant modification which could have repercussions for interested parties and would deny them the opportunity to have their arguments heard. I therefore decline the council's suggestion. No modification is required.

Flood risk

13. The Scottish Environment Protection Agency (SEPA) recommends that site OP3 is added to the first Flood Risk section bullet point as a flood risk assessment is required for that site. I agree that this should be done in the interest of environmental protection and recommend the appropriate modification.

14. SEPA recommends that the first "Flood Risk" bullet point removes references to buffer strips as this requirement is covered in the allocation text for site OP1. I agree that this should be done in the interest of clarity and recommend that appropriate modification.

15. SEPA recommends that site R1 is added to the second "Flood Risk" bullet point as a flood risk assessment is required for this site, adding that they will object if that requirement is not included. I agree that this should be done in the interest of environmental protection and recommend an appropriate modification.

Site OP1 – Land at Bonnyton Farm

16. Representations wish to see site OP1 removed from the proposed plan. They state that sites OP2 and OP4 constitute ample opportunity for housing development within the settlement and that more would lead to overdevelopment and a reduced quality of life for residents. They argue that the developer has failed to provide the two required points of safe vehicular access to the site. Other concerns relate to visibility splays, road congestion, conflict with the Imagine Udny proposals for the village centre, lack of parking and impact on residential amenity.

17. As the council points out, the site is identified in the housing land audit 2019 as effective and is considered to be deliverable. It now enjoys planning permission as a result of a successful planning appeal, which considered the main concerns. I am therefore satisfied that no modification is required.

Site OP2 - Land south-west of Pitmedden

18. This newly allocated site occupies two fields on the south-western edge of the village. It is allocated for 219 homes, a new primary school and community uses.

19. At Main Issues Report stage, the officers' preference was for bid site FR007 (the eastern part of the site) to be allocated for 110 homes. Bid site FR006 (the remainder of site OP2 plus land to the west) was to be reserved for development beyond the plan period. Following the consultation on the Main Issues Report, officers recommended that only site FR007 be allocated in the proposed plan. Having heard a presentation for the site to be extended to include part of FR006 in line with the community plan, the council decided to allocate the extended site for housing along with the community plan's requirements for a new primary school and community uses. After applying the standard density, the indicative housing capacity increased to 219 homes. The site allocation summary refers to the community's wish that the community hub should be designed to deliver a multipurpose hall. It also indicates that two points of vehicular access will be required, connected internally through a loop road and including a link to the B9000 and B999.

20. The potential developer of the site (Claymore Homes) seeks a substantial western extension of the site, to incorporate the whole of bid site FR006, (19 hectares in total). Claymore Homes maintains that the provision of two vehicular access points, a loop road and a link road cannot be delivered without that additional land; moreover, that the requirement for a multi-purpose community hall on the site further justifies the proposed extension of the site.

21. A representation on behalf of Stewart Milne Homes (the promoter of bid site FR096) questions the deliverability of the site allocation and its viability for the scale of development now proposed. This is on the basis that the original bid proposal did not include a primary school and community facilities, together with a requirement to upgrade drainage infrastructure.

22. In response to a further information request (FIR018), the council has confirmed that development of the scale proposed would require two vehicular links to the existing road network. It states that only one link to the B999 (to the east of the site) would be feasible for reasons of land ownership, and that linking north-westwards to the B9000 would entail building a road outwith the allocated site and through a belt of woodland which runs alongside the B9000. No other route options are available.

23. The council states that the new link road would require removal of a significant number of trees from the woodland which could be to the detriment of protected species. An initial site assessment by the council's ecologists and the North East Biological Records Centre confirmed that the woodland is included in the Native Woodland Survey and that badgers and red squirrels (both protected species) are present on the site. The potential impact of this on the delivery of the site was assessed. The Strategic Environmental Assessment considered that the impact of the allocation on flora, fauna and biodiversity, pre- and post-mitigation, would be neutral. In this regard, I find it surprising that it makes no mention of the native woodland or the protected species. The council expects that further appropriate surveys would be carried out at planning application stage and the results would influence the detail of an application and the mitigation required.

24. The council argues that any long-term growth within the settlement would likely be directed to the west, where a bid proposal indicates an aspiration for growth from the development industry. As such, the link road would serve both the OP2 site and any future development to the west, in line with the Scottish Government's Investment Hierarchy. The council therefore maintains that providing access to development land in the village for the very long term represents an over-riding public benefit, making the link road's impacts on the woodland and protected species justifiable under policy EI.1: Protected Species of the proposed plan.

25. Allocating a site which requires the construction of a road outwith an allocation and outwith the settlement boundary is not normal practice. The potential developer argues that it creates uncertainty for a major development to rely on construction of a road which is not allocated in the local development plan, and that it does not make sound planning or economic sense to exclude the land required to enable delivery of the project. Road building costs are normally supported by the development alongside them. In the case of the north-western link road, this would not be possible as it would lie outside the allocated site. As compensatory tree planting would be required to offset the loss of woodland, additional land would be required. This would be on top of requirements for a primary school and community uses.

26. I consider that all of these are valid concerns and am concerned that they have not been resolved at this time. I therefore conclude that it would be not be appropriate to allocate only part of FR006, as the proposed plan does. However, the option of allocating the whole of bid sites FR006 and FR007 would run counter to the council's stated position that it does not wish to see any further expansion of the site in the proposed plan. I also note that the extended site would not be consistent with the community plan. Moreover, in the light of Circular 6/2013: Development Planning, paragraph 118, I am not satisfied that I have adequate environmental information regarding the extended site, and it is not clear whether the proposal to take access from the north and through the ancient woodland has been subject to public engagement. Without this information and clarity, I am unable to recommend the modification to the site that would be required for its expansion westwards.

27. Based on the above analysis, I consider it necessary to recommend a modification to amend the allocation to site FR007 for 100 homes and a community hub, in line with the officers' recommendation in the Issues and Actions Paper. However, I note that the council wishes to deliver the aspirations of the community plan and recognise that there may be potential for the council, developer and community to work together to address the unresolved matters relating to the development of a larger site, for inclusion in a future local development plan.

28 Allocation OP2 in the proposed plan contributes land for 219 homes towards the strategic development plan allowance for the Aberdeen Housing Market Area. However, given the outcome of my assessment above, this contribution would now be 100 homes. A modification to reflect this change is required in the relevant table in appendix 6. The implications of this deduction for the overall housing land provision are addressed in Issue 5.

29. In its response to my request for further information, the council suggested additional wording to ensure protection for the potential new link from the site to the B999. I consider

that, in view of its importance to enabling the development, a modification to the allocation statement is necessary.

30. The concerns expressed by Historic Environment Scotland with regard to the impact of development on the setting of the category A-listed Udney Castle related to the site as allocated in the proposed plan. Given that the smaller site as now recommended, is located further from the castle, I consider these concerns to be addressed.

31. Much of the site is prime agricultural land (grade 3.1). However, in line with policy PR1 (Protecting Important Resources), I consider that the loss of prime agricultural land may be justified, if it is required to meet strategic housing needs and there are no reasonable alternative sites.

32. The marketability of the site is questioned as some existing new homes in Pitmedden have remained unsold, but this is not supported by comprehensive evidence. As the council points out, there is fairly significant development pressure in the settlement due to its accessible location and the existing services within the village, making it reasonable to assume that the market could support the delivery of the proposed 100 houses over the plan period.

33. In broader terms, I consider that the allocation of site OP2, as modified, would result in a compact urban form with good accessibility to facilities and services in the centre of the village. It would also have the potential for expansion westwards by allocations in future plans – a reference to which should be included in the allocation summary.

34. SEPA requests an amendment to the allocation summary requiring buffer strips next to the watercourses running through the site. I consider that this is appropriate in the interest of environmental protection, and recommend a modification.

35. To address the above conclusions, I recommend modifications to amend the settlement map to reduce the extent of allocation OP2 to align with bid site FR007 and amend the allocation summary as set out below.

Site OP3 – Mill of Allathan

36. SEPA requests that a requirement for a flood risk assessment and for a buffer strip are included in the site allocation statement. I agree that these are required in the interest of the water environment and recommend amendments accordingly.

37. NatureScot requests the addition of wording in the allocation statement to require the provision for active travel. I agree that this would be appropriate for a site of this scale and would accord with the aims of the plan. I recommend an amendment accordingly.

38. Representations express concern over possible overlooking of existing housing in Allathan Park, residential amenity, privacy, visual impact and the location of road junctions. These would be matters to be addressed in a masterplan and subsequent planning application, including a transport assessment.

39. A substantial number of representations sought removal of site OP3 from the plan for a range of reasons. These are set out in the council's summary above.

40. With regard to those representations, the allocation of site OP3 reflects the

community plan submitted to the Formartine Area Committee by the Udney Development Trust and, to that extent, indicates community involvement. Moreover, our examination has concluded that the council's Participation Statement for the proposed plan meets the statutory requirements. The council's justification for the scale of housing allocations in the village is discussed at paragraph 5 above and I am satisfied that the allocation is not excessive. Many of the physical constraints mentioned in the representations (including the pipeline hazard risk) would influence the site layout, design and potentially the capacity of the site. However, these matters could be dealt with in the masterplanning and planning application processes, where they would be assessed against relevant policies of the plan (including Policy P4 – Hazardous and Potentially Polluting Development and Contaminated Land), rather than justifying deletion of the site. The potential impacts of site development on visual impact, wildlife and contaminated land were considered through the Strategic Environmental Assessment, and would be addressed through the requirement for strategic landscape planting together with protection for woodland and trees through the relevant policies in the plan. Potential pollution issues could be dealt with through the imposition of appropriate planning conditions on any approval. The proposed connectivity with site OP1 is a matter for discussion between the parties rather than a reason for removing the allocation. No evidence has been presented to counter the assurance of the bid proposer that the proposal would be viable. Concerns relating to infrastructure (including road access, school provision, surface water, waste water treatment, health care and local services) would be addressed by developer contributions towards items set out in the Services and Infrastructure statement for Pitmedden.

41. Concerns relating to the council's handling of the proposal prior to publishing the proposed plan are not within the remit of this examination.

42. Site OP3 has been identified as contributing 68 homes towards the strategic development plan housing allowance for the Aberdeen Housing Market Area. I do not consider that the matters raised in representation outweigh the benefits in terms of meeting housing need. No modification is required.

Non-allocated bid site FR008 – Land for public hall OP1 south-west of Pitmedden

43. As discussed at paragraphs 6 and 7 above, this bid relates to a small site in the village centre, which the proposed plan reserves for a new village hall. Whilst the allocation of site R1 has not progressed for a number of years, the local community still has clear aspirations for a community hub. The site OP2 allocation includes a community hub, but as yet there is no commitment that it will be delivered as part of that development. It is therefore prudent to retain the reservation. Furthermore, I note that the Main Issues Report did not accept the bid for housing on the site for reasons of access and appropriateness of the site. No modification is required.

Non-allocated bid site FR096 – Land at west and north-west Pitmedden

44. Bid site FR096 comprises two fields at the north-west corner of the settlement extending over some 6.3 hectares and abutting the designed landscape gardens around Pitmedden House, a National Trust for Scotland property, which is open to the public.

45. A representation on behalf of Stewart Milne Homes, which has an option on the site, requests that bid site FR096 is allocated for 90 homes as a replacement for site OP2.

The remaining 129 homes should be allocated to other sustainable locations in Aberdeenshire. It maintains that the bid site is an appropriate size for the settlement whereas site OP2 is too big, would be detrimental to wildlife and would require construction of a new primary school. The bid site would therefore optimise use of existing resources. It would enjoy visual containment, would strengthen the existing tree belt, would provide a defined edge to the settlement, would be within easy and safe walking distance of the primary school and is deliverable.

46. With respect to impact on the setting of Pitmedden House and Gardens, the representation refers back to the last local development plan examination, which it claims concluded that development of the site would not impact on Pitmedden Gardens. This is a misreading of the report. The reporter pointed out that the site assists in maintaining the countryside setting of the gardens and referred to other land in Pitmedden being less sensitive to development. His removal of a protective designation over this and other land was for reasons of consistency and because other policy protection was available. I consider that development on the bid site could potentially impact the setting of the house and gardens. Site FR096 is also further from the village facilities and services than site OP2 and would not be able to meet community aspirations for that site.

47. The outcome of my assessment of allocation OP2 in the proposed plan would reduce the contribution that this site makes to the strategic development plan allowance for the Aberdeen Housing Market Area. However, the implications of this change can be addressed across the Aberdeen Housing Market Area as a whole. It does not necessarily require the allocation of additional land in Pitmedden.

48. Given the disadvantages of bid site FR096 and the availability of suitable sites elsewhere in the Aberdeen Housing Market Area (see Issue 5), I conclude that the alternative option presented by Stewart Milne Homes should not be allocated. No modification is required.

Non-allocated bid sites: FR132 Quarry Field site, Land at Mill of Allathan Farm, Udney and FR133 Land at Mill of Allathan Farm, Udney

49. A representation requests the expansion of proposed site OP3 (Mill of Allathan) to include bid sites FR132 and FR133. The representation arises from a community engagement exercise commissioned by Udney Community Trust with the support of Udney Community Council. This identified a preference for development alongside the B999 road to the south of Pitmedden, illustrated by a plan showing employment land and residential land (24 homes) on the bid sites.

50. The proposal was supported at a special meeting of the Formartine Area Committee, but a later meeting of the Aberdeenshire Council Infrastructure Services Committee decided not to allocate these sites because they impinged significantly on an area restricted by high pressure oil pipelines. The representation contends that this is inaccurate and that the scale and type of development would be compliant with that permitted by the Health and Safety Executive's PADHI tool (as advised in Scottish Planning Policy) because the small scale employment use proposed would fall into the inner consultation zone and the appropriately-sized housing into the middle consultation zone.

51. The proposed sites form a narrow band of development alongside the B999,

projecting some 350 metres into open countryside and linking with a cluster of housing at Milldale. The proposed sites, by contrast, retain a compact layout for the village. The land slopes up from the road, which would make development in this location prominent in the rural setting of Pitmedden. Employment development, in particular, would be likely to require cut and fill, increasing the landscape impact.

52. In order to fully consider the implications of the pipeline consultation zone, I would require input from the pipeline operator and the Health and Safety Executive. However, as there are other reasons why I do not consider the site should be allocated, it is not necessary for me to seek further information from these parties.

53. Whilst the bid sites have benefits including community initiative and providing accessible local employment opportunities, these do not justify the allocation, given the above disadvantages.

54. A representation contends that site FR132 should be preferred to site OP3 (Mill of Allathan) as it would link Pitmedden to Milldale. However, I have concluded that site OP3 is acceptable and that the linking proposals would have disadvantages.

55. A representation suggests that FR133 should be reserved for use as a recreation park because the quarry is now commercially developed. However, as an area to the north of the quarry is designated as a recreational park (P4), this is unnecessary.

56. No modifications are required.

Reporter's recommendations:

Modify the local development plan by:

1. Amending the first "Flood Risk" bullet point on page 471 to read:

"- Parts of site OP1 and OP3 are within the Scottish Environment Protection Agency's (SEPA's) indicative 1 in 200 year flood risk area, or have a small watercourse running through or adjacent to the site. A Flood Risk Assessment may be required."

2. Amending the second "Flood Risk" bullet point on page 471 to read:

"- A Flood Risk Assessment will be required for BUS1 and R1. Adequate buffer strips will be required along the watercourses which should be positively integrated into the development."

3. Amending the allocation for site OP2 (Land south-west of Pitmedden) on page 473 to read:

"Allocation: 100 homes and a community hub."

4. Amending the entry for Pitmedden OP2 in the relevant table in Appendix 6 to replace '219' with '100'. (Note – a revised version of Appendix 6, incorporating all the recommended modifications, is provided at the end of this report)

5. Replacing the second paragraph of the allocation statement for site OP2 (Land south-west of Pitmedden) on page 473 with the following:

"The site requires a vehicular access from the B999, whose route should be protected during any incremental development. This should lead to an internal loop road. Suitable

access arrangements should be discussed with the council in advance of any planning application. Permeability with the housing development adjacent to the medical centre is also required plus connectivity to the existing path network at Bronie Crescent and Seton Terrace. Access and fully permeable connectivity throughout the site are required and the site layout should make provision for potential future expansion to the west. Wider transportation requirements are to be determined through a Transport Assessment that takes all of the proposed allocations into account.”

6. Amending the first sentence of the third paragraph of the allocation statement for site OP2: (Land south-west of Pitmedden) on page 473 to read:

“Buffer strips will be required adjacent to the watercourses running through the site, which should be integrated positively into the development.”

7. Amending the settlement map on page 475 to reduce the extent of allocation OP2 (Land south-west of Pitmedden) to align with bid site FR007 and adjust the settlement boundary accordingly.

8. Inserting a new penultimate sentence in the third paragraph of the allocation statement for site OP3 (Mill of Allathan) on page 474 to read:

“Provision for active travel is required.”

9. Inserting a fourth paragraph in the allocation statement for site OP3 (Mill of Allathan) on page 474 to read:

“A Flood Risk Assessment will be required. A buffer strip will be required adjacent to the watercourse on the northern boundary of the site, which should be integrated positively into the development.”

Provision of the development plan to which the issue relates:	Potterton Settlement Statement
Planning authority's summary of the representation(s):	
<p><u>General</u></p> <p>A representee has commented that Potterton is not part of the Energetica Corridor. No modification sought (PP1155).</p> <p>A number of representees have raised issue with regards to the level of engagement and the engagement/notification process undertaken in terms of the amendment to the green belt and the proposed development sites at Potterton. Representees have raised concerns which included the engagement undertaken by the Council, the bid proposer</p>	

and/or Belhelvie Community Council (PP0087, PP0104, PP0108, PP0109, PP0110, PP0206, PP0207, PP0209, PP0210, PP0212, PP0214, PP0227, PP0228, PP0229, PP0231, PP0232, PP0233, PP0250, PP0270, PP0278, PP0298, PP0356, PP0361, PP0364, PP0365, PP0370, PP0372, PP0373, PP0407, PP0418, PP0419, PP0449, PP0479, PP0505, PP0508, PP0514, PP0518, PP0527, PP0528, PP0546, PP0559, PP0560, PP0586, PP0594, PP0652, PP0695, PP0771, PP0806, PP0824, PP0830, PP0841, PP0850, PP0852, PP0853, PP0854, PP0858, PP0859, PP0860, PP0864, PP0904, PP0912, PP0913, PP0914, PP0915, PP0916, PP0964, PP0970, PP0982, PP0989, PP0995, PP1003, PP1123, PP1135, PP1157, PP1166, PP1167, PP1171, PP1190, PP1243, PP1295, PP1305, PP1326 and PP1397).

The representees have stated that the Main Issues Report (MIR) 2019 contains inaccuracies, specifically within the MIR Vision. It was highlighted that the original settlement of Potterton existed as a shop and four original houses next to it in a row. Manse Road did not exist and as such the original settlement was not located along it. Concerns raised included that this cannot be used to create the settlement's 'sense of place', closer to sites OP1 and OP2 and that this indicated the PLDP's desire to favour that side of the settlement as a central hub allowing for mass development. Concerns were also raised which included an aversion to stating that the settlement has no sense of place or identity, as was suggested by some that it diminishes the experience of living in Potterton whilst marketing the green belt for development. It was highlighted in some instances that the settlement has an active community which the residents take pride in (PP0144, PP0209, PP0210, PP0231, PP0232, PP0273, PP0274, PP0278, PP0336, PP0361, PP0373, PP0527, PP0528, PP0586, PP0594, PP0854, PP0858, PP0859, PP0860, PP0904, PP0913, PP0915, PP1003 and PP1171).

A representee has stated that it is incorrect to state that Manse Road is the main road for the settlement, and that Panmure Road is the main Road (PP0969).

A representee has stated that it is incorrect to state that Potterton has a frequent bus service, as the bus service is not frequent. It was stated that this requires to be removed (PP0969).

A representee has stated that the bid submissions for bid sites FR140 and FR141, received as part of the PLDP's 'Call for Sites', contain inaccurate information regarding the walking distance to the local bus service and the safety implications of active travel (PP0646 and PP0648).

A representee has stated that the bid submissions for bid sites FR140 and FR141, received as part of the PLDP's 'Call for Sites', contain inaccurate information regarding the proximity to Ancient Woodland (PP0647 and PP0648).

A representee has raised concern that the settlement has a lack of public transport provision, which could lead to additional private car use and local road congestion (PP1155).

The representees have sought clarification on the housing requirement, with issues raised such as the impact of the current/future economic context and downturn in the oil industry, that currently there are a substantial number of homes on the market at reduced costs and/or that there is constant halting of phases of new developments (PP0154, PP0206, PP0207, PP0209, PP0210, PP0212, PP0236, PP0237, PP0280, PP0281 and PP1326).

The representees queried Belhelvie Community Council's position that there should not be any development to the west of the settlement due to the link roads at the B999 but had a favoured response for development at the east of the settlement (PP0206, PP0207, PP0209, PP0210 and PP0212).

Belhelvie Community Council have raised concern regarding the addition of approximately 1800 homes in the whole area (including at Belhelvie, Balmedie, Blackdog and Potterton). Concerns related specifically to the pressure that will be put on existing facilities such as Balmedie Primary School, medical and health care facilities, the road infrastructure network and its capacity to cope with the additional traffic and the safety concerns that this level of development would bring, as well as the lack of public transport provision. It was stated that consideration requires to be given to provision of education facilities, health care facilities, upgrades to the road infrastructure and review of existing bus services in the area in light of the proposed developments in the area (PP0962).

Settlement Plan

A representee has requested the removal of the core path as it is located further away from the ancient woodland as is shown on the Settlement Statement map (PP1135).

Vision

Several representees have requested amending paragraph one so that it is like the wording in the Aberdeenshire Local Development Plan 2017 (PP0449, PP0560, PP0610, PP0653, PP0858, PP0859, PP0999 and PP1167). One representee has argued that nothing has changed to justify the removal of the green belt (PP0449, PP0853 and PP0995). Another has stated that this paragraph is inaccurate and does not reflect the character of Potterton or the community's wishes (PP0560, PP0853 and PP0995), and that the previous wording would work to protect the character of the settlement (PP1167). Furthermore, it was stated that the wording dilutes the importance of the Aberdeen green belt (PP0610, PP0832, PP0995 and PP0999). Another representee has stated that the greenbelt should be about protecting the amenity of the village and to conserve its setting (PP0653, PP0832 and PP1295). The representee has included a number of Appendices (RD0153.A and RD0153.B) in their representation which provides further detail to support their position (PP0832).

A representee has requested the removal of the Vision as presented in the PLDP as it contains several incorrect statements and false claims and has requested that the Vision is replaced with amended text which is more in line with previous Local Development Plans. It was stated that reference to the community desire for a new community hall and small business units should be removed as the community have not been consulted on this and that there is no need for business use on green belt designated land (PP0695).

Some representees have requested that 'green belt' should be changed to 'Aberdeen green belt' in the Vision, as it appeared in the LDP 2017 (PP0638, PP0653, PP0832 and PP0999). One representee has argued that the Vision dilutes the protective capacity of the green belt and infers that play parks are sufficient to replace the green belt protected status, and they also note the Reporter's conclusions from the LDP 2017 Examination that supported no change to the green belt (PP0653).

A number of representees have requested that the last sentence of the first paragraph in the Vision is amended to read, "The planning objective for the settlement is to preserve the amenity of the village which shall be achieved through the use of protected designations and the use of the green belt policy." (PP0832 and PP0932).

A representee has sought clarification on the statement within the Vision that reads, "The use of protected land designations and the application of the green belt policy will contribute to preserving the amenity of the settlement" (PP0645 and PP1160), as it was stated that the development of proposed sites at OP1 and OP2 is contradicting this statement (PP1160), and that the Vision does not demonstrate how the proposed sites at OP1 and OP2 will preserve the amenity of the settlement (PP0645).

A number of representees have requested that the words "contribute to" within the last sentence of paragraph one of the Vision are removed and the sentence is changed to, "The planning objective for the settlement is to preserve the amenity of the village, which shall be achieved through the use of protected land designations and through the application of the green belt policy." (PP0638, PP0781, PP0797, PP0798, PP0799, PP0800, PP0801, PP0802, PP0853, PP0856, PP0857, PP0860, PP0904, PP1135 and PP1158). It was stated that the current wording dilutes the importance of the Aberdeen green belt (PP0638 and PP1158) and the vision for Potterton being a rural settlement (PP1158).

Several representees have requested the removal of paragraph two on new community facilities, as the residents have not been consulted (PP0514, PP0552, PP0560, PP0610, PP0638, PP0647, PP0652, PP0781, PP0797, PP0798, PP0799, PP0800, PP0801, PP0802, PP0850, PP0853, PP0854, PP0855, PP0856, PP0857, PP0858, PP0859, PP0860, PP0904, PP0995, PP1135, PP1153, PP1158, PP1160 and PP1401). Others have stated that there is also no allocation or justification for the small business units (PP0514, PP0552, PP0781, PP0797, PP0798, PP0799, PP0800, PP0801, PP0802, PP0824, PP0850, PP0853, PP0854, PP0855, PP0856, PP0857, PP0858, PP0859, PP0860, PP0886, PP0887, PP0904, PP0995, PP1160 and PP1401), no consultation (PP0652), and that the preservation of the green belt and rural area is preferred (PP0853, PP0995 and PP1153).

A number of representees have requested the removal of the word "contemporary" from the third sentence of the first paragraph of the Vision (PP0561, PP0610, PP0638, PP0651, PP0781, PP0797, PP0798, PP0799, PP0800, PP0801, PP0802, PP0854, PP0857, PP0858, PP0859, PP0860, PP0904, PP0963, PP0995, PP1135, PP1157, PP1167 and PP1401). It was not considered that this description was accurate as the settlement is a small, rural community surrounded by long established farmland within the green belt (PP0561 and PP1167), and the rural character of the settlement should be protected (PP1157). Contemporary portrays the settlement as a well-placed location for further development, of which the representee stated it is not (PP0561). Another has argued it implies Potterton has no sense of place and a lack of identity and would diminish the experience of living in Potterton, while encouraging development of the surrounding green belt, and they are concerned that a large-scale development would significantly change its character (PP0651). The description does not fit with the current form and will impact the character of the settlement (PP0610 and PP0638). It was also stated that currently only 1 and 1½ level houses are allowed in the settlement due to historic significance and in order to preserve its historical buildings and rural setting (PP0963).

It was stated that the statement “The settlement is largely contemporary in nature” should be removed from the Vision (PP0932).

It was considered that “contemporary” should be replaced with “rural” in the third sentence of the first paragraph of the Vision as the settlement is typically rural, with strict planning criteria for house builds of bungalows or 1½ storey homes to ensure the retention of its rural character. ‘Contemporary’ is stated to be ambiguous in describing the nature of the settlement, as it is rural. It was also requested that the word “large” is removed from the third sentence of the Vision. It was stated that the housing estates in the settlement are not large and are much smaller than the proposed OP1 site (PP1154).

A representee does not consider that the description of the settlement as mid-20th century to be accurate as this does not consider the individual cottages or wooden clad cottages in the settlement (PP0594).

A representee has requested that the word “shop” is inserted into the fifth sentence of the first paragraph of the Vision after “post office”, as a shop serves the settlement (PP1154). A representee also noted that the village consists of 2 large housing estates and is surrounded by green belt and includes a local shop, post office, public house, playing fields, football pitch, tennis court, community hall and a small selection of business units which should be reflected in the vision statement (PP0824).

A representee has requested that the first two sentences of the Vision are removed and replaced with amended text on the SGA and Energetica (PP0599, PP0744, PP1390 and PP1403) that aligns with Appendix 6, which records OP1 and OP2 as contributing to the new allowances for the SGA (PP0599).

A number of representees have commented that the Vision makes it clear that Potterton is outwith the SGA. No modification sought (PP0607, PP0824 and PP0930).

Some representees consider that reference to the Forsyth Hall Men’s Shed should be removed from the first sentence of the second paragraph of the Vision as this does not exist (PP0560, PP0647, PP0648, PP0824, PP0856, PP0858, PP0859, PP0860, PP0886, PP0887, PP0904, PP0932 and PP1401).

A representee has raised concern that there has been no consultation with residents regarding the desire for a new community hall (PP0932).

Flood Risk

The Scottish Environment Protection Agency (SEPA) has requested that the second ‘Flood Risk’ bullet point is removed, and additional text is incorporated into the first bullet point for consistency. Additionally, SEPA has requested that the text stating the requirement for a buffer strip can be removed to avoid repetition, as this is stated within the allocation summary for site OP2 and is not a requirement for site OP1 (RD0214.B) (PP1219).

A number of representees have noted that the text relating to the watercourse should be changed from “a small watercourse” to “a large watercourse” (PP0781, PP0797, PP0798, PP0799, PP0800, PP0801, PP0802, PP0850, PP0856, PP0860, PP0904 and PP1135).

A representee has requested that the wording within the ‘Flood Risk’ section is changed to

note that the sites are outwith the settlement boundary and not suitable for development. The Aberdeenshire Flood Risk Assessment states that Category 3 Areas outwith settlements are not suitable for additional development. OP1 and OP2 are outwith the boundary of the settlement of Potterton and should not be built. Additionally, the drainage is poor in the area and the SDP recognises that development should avoid areas of flood risk (PP0763).

Two representees have requested the removal of the 'Flood Risk' section as they relate to sites OP1 and OP2, which should be removed (PP0886 and PP0887).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Scottish Water have requested that the 'Strategic drainage and water supply' bullet point is amended to include an additional sentence after the third sentence that reads, "A Drainage Impact Assessment may be requested." (PP0272).

A representee has sought clarification on the capacity of the pumping station serving Potterton, particularly as there are ongoing issues with drainage and run-off within the settlement (PP0369).

Two representees have requested the removal of the 'Strategic transportation' and 'Strategic drainage and water supply' sections as they relate to sites OP1 and OP2, which should be removed (PP0886 and PP0887).

Site OP1 – Land north of Denview Road

Several representees have expressed support for site OP1 (PP0468, PP0471, PP0529, PP0534, PP0535, PP0536, PP0567, PP0568, PP0569, PP0574, PP0576, PP0579, PP0582, PP0583, PP0584, PP0585, PP0637, PP0700, PP0701, PP0702, PP0703, PP0704, PP0705, PP0706, PP0707, PP0708, PP0709, PP0710, PP0711, PP0715, PP0721, PP0729, PP0730, PP0744, PP0757, PP0818, PP0917, PP0919, PP0938, PP0939, PP0958, PP0960, PP0961, PP1005, PP1006, PP1007, PP1015, PP1017, PP1168, PP1242, PP1278, PP1390, PP1395 and PP1403), but stated that the 172 homes are the maximum permitted (PP0468, PP0471, PP0529, PP0534, PP0535, PP0536, PP0567, PP0568, PP0569, PP0574, PP0576, PP0579, PP0582, PP0583, PP0584, PP0585, PP0637, PP0700, PP0701, PP0702, PP0703, PP0704, PP0705, PP0706, PP0707, PP0708, PP0709, PP0710, PP0711, PP0715, PP0721, PP0729, PP0730, PP0757, PP0818, PP0917, PP0919, PP0938, PP0939, PP0958, PP0960, PP0961, PP1005, PP1006, PP1007, PP1015, PP1017, PP1168, PP1242, PP1278 and PP1395).

They also noted that this site:

- complies with the Aberdeen City and Shire Strategic Development Plan (SDP);
- will increase choice and availability of homes as no allocations have been made for over a decade;
- scored well in the Strategic Environment Assessment (SEA);
- lessens traffic in the settlement, especially the B999;
- was supported by the Community Council at the MIR stage;
- will strengthen the green belt;

- will mitigate impact on existing infrastructure;
- will require a Flood Risk Assessment; and
- will sustain the local shop. No modification sought (PP0468, PP0471, PP0529, PP0534, PP0535, PP0536, PP0567, PP0568, PP0569, PP0574, PP0576, PP0579, PP0582, PP0583, PP0584, PP0585, PP0637, PP0700, PP0701, PP0702, PP0703, PP0704, PP0705, PP0706, PP0707, PP0708, PP0709, PP0710, PP0711, PP0715, PP0721, PP0729, PP0730, PP0744, PP0757, PP0818, PP0917, PP0919, PP0938, PP0939, PP0958, PP0960, PP0961, PP1005, PP1006, PP1007, PP1015, PP1017, PP1168, PP1242, PP1278, PP1390, PP1395 and PP1403).

A representee has expressed support for the requirement for Community Facilities to be included on site OP1. The representee has provided further justification in section 2 of their representation. The representee has included a number of appendices (RD0094.A) in their representation which provides further detail to support their position. No modification sought (PP0599).

SEPA has requested that for site OP1, the second and third sentences are removed from the third paragraph in the allocation summary as there appears to be no watercourse present on this site (see RD0214.B) (PP1219).

NatureScot has requested that the allocation summary for site OP1 includes a requirement for active travel provision. NatureScot acknowledged that the allocation summary already refers to the need for a Transport Assessment, however as it is a large allocation the provision of active travel is also encouraged which will help promote safe and convenient opportunities in line with the PLDP's aims (RD0255.B) (PP1300).

A representee raised concern regarding the impact that the proposed development would have on the wildlife that currently live at site OP1 (PP0238).

A representee has noted that a requirement for a community facility has been included on the site despite it not forming part of the bid. Clarification was sought on the viability of the required community facility on site OP1 (PP0671).

Representees have requested that the first three sentences of the allocation summary for site OP1 are removed and replaced with amended text (PP0599, PP0744, PP1390 and PP1403). It was stated that this amended text would provide reassurance for the owners at Woodside Cottage that the amenity of their property, which is subject to a legal agreement to purchase the land, will be taken into account. The representee has provided further justification in section 2 of their representation. Additionally, it was requested that a fuller description of the site's attributes should be articulated in the allocation summary. The representee has included a number of appendices (RD0094.A) in their representation which provides further detail to support their position (PP0599).

A representee has requested the removal of the Ancient Woodland as a provision for open space, as it is private land which does not belong to the developer (PP0932 and PP1401).

A number of representees have sought the removal of site OP1 from the PLDP. Issues raised included:

- concern of the additional traffic created from the development, and the pressure emanating from this on the local road network (including the AWPR) (PP0222, PP0294, PP0366 and PP0367).

- Road infrastructure is inadequate and will adversely affect existing residents (e.g., narrow country lanes, unsafe junction at Potterton Mill, road widening is not guaranteed up to Manse Road and Den Road junctions, and traffic crossing the B999 to enter Panmure Garden would present an increased traffic hazard) (PP1043).
- Potterton has not been identified within the SGA as it has no direct access onto the AWPR (PP1043).
- Noise pollution from the development and the additional traffic (PP0294).
- Lack of planned provision for additional amenities, such as education facilities and health services (PP0222).
- Disturbance during construction, specifically from the noise and pollution produced from the development (PP0222).
- Proximity of the proposed development to the existing homes at Denview Road (PP0294 and PP0845).
- Loss of privacy to properties along Denview Road from the installation of two footpaths and sought clarity on who would maintain the fences and paths (PP0511 and PP0549).
- Impact on visual amenity and the character of Potterton (PP0845).
- New development would overlook existing properties due to the topography (PP0845).
- Loss of green belt land and impact on Ancient Woodland and wildlife (PP0366 and PP0367).
- Loss of ancient woodland (PP0510 and PP0548).
- The proposed two storey houses will cause a dramatic loss of view from the existing houses and appear very odd compared to single storey homes in the existing parts of Potterton (PP0512, PP0550 and PP0845).
- There are already many massive developments taking place or planned to take place near Potterton, such as at Blackdog and Menie, Balmedie (PP0512 and PP0550).
- Potterton has limited facilities (PP0512 and PP0550).
- Development of this scale and form is not appropriate site as Potterton is in with the SGA (PP0845).
- The possibility of the site being contaminated due to the Western Hatton tip (now closed) having a flare stack to burn off methane gas on the boundary of the site (PP0824).
- The waste water trunk sewer will need to be upgraded and the sewerage pumping facility to Belhelvie could lack capacity (PP1043).

A representee has requested that if site OP1 is retained, the developer must propose better protection for the ancient woodland, which avoids its inclusion in the open space for the development, provides for more distance between the development and the ancient woods, and better protection of the ancient woods themselves from human disturbance (PP0510 and PP0548).

A representee sought clarification as to why the proposed houses were being developed on green belt land (PP0294).

A representee has not only requested the removal of site OP1, but that an alternative allocation is made within the Balmedie Primary School catchment area in the Blackdog to Ellon SGA (PP1043).

Site OP2 – Land north West of Denview Road

Several representees have expressed support for site OP2 (PP0468, PP0471, PP0529, PP0534, PP0535, PP0536, PP0567, PP0568, PP0569, PP0574, PP0576, PP0579, PP0582, PP0583, PP0584, PP0585, PP0637, PP0700, PP0701, PP0702, PP0703, PP0704, PP0705, PP0706, PP0707, PP0708, PP0709, PP0710, PP0711, PP0715, PP0721, PP0729, PP0730, PP0744, PP0757, PP0818, PP0917, PP0919, PP0938, PP0939, PP0958, PP0960, PP0961, PP1005, PP1006, PP1007, PP1015, PP1017, PP1168, PP1242, PP1278, PP1390, PP1395 and PP1403), but stated that the 61 homes are the maximum permitted and the development provides connection to the footpath to the south of the site that links Kirkhill Gardens (Middleton of Potterton) with the Stead Inn on Manse Road (PP0468, PP0471, PP0529, PP0534, PP0535, PP0536, PP0567, PP0568, PP0569, PP0574, PP0576, PP0579, PP0582, PP0583, PP0584, PP0585, PP0637, PP0700, PP0701, PP0702, PP0703, PP0704, PP0705, PP0706, PP0707, PP0708, PP0709, PP0710, PP0711, PP0715, PP0721, PP0729, PP0730, PP0757, PP0818, PP0917, PP0919, PP0938, PP0939, PP0958, PP0960, PP0961, PP1005, PP1006, PP1007, PP1015, PP1017, PP1168, PP1242, PP1278, PP1390, PP1395 and PP1403). They also noted that this site:

- complies with the Aberdeen City and Shire Strategic Development Plan (SDP);
- it will increase choice and availability of homes as no allocations have been made for over a decade;
- scored well in the Strategic Environment Assessment (SEA);
- lessens traffic in the settlement, especially the B999;
- was supported by the Community Council at the MIR stage;
- will strengthen the green belt;
- will mitigate impact on existing infrastructure;
- will require a Flood Risk Assessment; and
- will sustain the local shop. No modification sought. (PP0468, PP0471, PP0529, PP0534, PP0535, PP0536, PP0567, PP0568, PP0569, PP0574, PP0576, PP0579, PP0582, PP0583, PP0584, PP0585, PP0637, PP0700, PP0701, PP0702, PP0703, PP0704, PP0705, PP0706, PP0707, PP0708, PP0709, PP0710, PP0711, PP0715, PP0721, PP0729, PP0730, PP0744, PP0757, PP0818, PP0917, PP0919, PP0938, PP0939, PP0958, PP0960, PP0961, PP1005, PP1006, PP1007, PP1015, PP1017, PP1168, PP1242, PP1278, PP1390, PP1395 and PP1403).

A representee has expressed support for site OP2, stating that it has the potential to link the two disparate poles of the settlement. No modification sought. The representee has included a number of Appendices (RD0094.A) in their representation which provides further detail to support their position (PP0599).

SEPA has confirmed that they have no further flooding, strategic drainage, or water supply issues with the allocation summary for site OP2 (see RD0214.B). No modification sought (PP1219).

NatureScot has requested that the allocation summary for site OP2 includes a requirement for active travel provision. NatureScot acknowledge that the allocation summary already refers to the need for a Transport Assessment, however as it is a relatively large allocation the provision of active travel is also encouraged which will help promote safe and convenient opportunities in line with the PLDP's aims (RD0255.B)

(PP1300).

Representees have sought the addition of text to the end of the third sentence regarding the existing footpath between Kirkhill Gardens and the Stead Inn (PP0599, PP0744, PP1390 and PP1403). It was stated that the existing gravel path is well used and should be integrated into the open space and upgraded to retain and increase its suitability for pedestrians and cyclists. Further justification is provided in Section 2 of the representee's submission. Additionally, it was requested that a fuller description of the site's attributes should be articulated in the allocation summary. The representee has included a number of Appendices (RD0094.A) in their representation which provides further detail to support their position (PP0599).

A representee has requested the removal of site OP2 and the identification of an alternative allocation within the Balmedie Primary School catchment area in the Blackdog to Ellon SGA. They argued the site is inappropriate as Potterton has not been within the SGA as it has no direct access onto the AWPR. Road infrastructure is inadequate and will adversely affect existing residents (e.g., narrow country lane, unsafe junction at Potterton Mill, two access are required onto Manse Road, which will need to be widened, and traffic crossing the B999 to enter Panmure Garden would present an increased traffic hazard). The waste water trunk sewer will need to be upgraded and the sewerage pumping facility to Belhelvie could lack capacity (PP1042).

Site OP1 – Land north of Denview Road and Site OP2 – Land north West of Denview Road

A representee has expressed support for site OP1 and site OP2. The representee has included a number of Appendices (RD0094.A) in their representation which provides further detail to support their position. It was noted that:

- the sites reflect the existing housing patterns and are logical extensions to the settlement;
- the sites will help provide open space and will account for wider landscape impacts, biodiversity impact, drainage and historical features as part of the masterplan/planning application process;
- the sites provide opportunities to rationalise traffic bearing roads;
- the sites will work towards achieving the aims of the Energetica Corridor;
- the site's proximity to the AWPR allowing for strategic accessibility;
- the sites will have minimal impact on the green belt;
- the sites provide much-needed growth at the settlement, are strategic and would not impact on large strategic sites in the AHMA;
- the developments will increase choice and availability of homes;
- resultant increased footfall for existing retail and services;
- the Community Council has shown support for the development at this location;
- any site-specific issues/constraints on the sites can be addressed through careful masterplanning as well as engagement;
- education capacity is being considered and provision will be provided;
- upgrades to local infrastructure are being considered and will not constrain delivery of the sites. No modification sought. Further justification is provided in Section 2 of the representee's submission (PP0599).

A representee has stated that the only positive coming out of the proposed developments

are that it would help improve public transport to Aberdeen City. No modification sought (PP0103).

Belhelvie Community Council have stated that they have no substantive objections to proposed sites OP1 and OP2. However, they have acknowledged that there is some objection to the extension of the settlement. It was stated that the Community Council have made attempts to gain a wider view regarding the objections, however, have had no responses other than concern about the volume of homes, the size of the development and the impact on the settlement. No modification sought (PP0962).

A representee has queried whether a decision has already been taken on the inclusion of the proposed site OP1 and site OP2 in the PLDP (PP0586).

A representee has sought clarification on the future capacity of Bridge of Don Academy for additional pupils arising from the proposed developments, as sites OP1 and OP2 do not indicate provision for additional secondary school provision (PP0104).

Two representees have stated that the proposed housing will require a new primary school to be built due to current capacity issues and has sought clarification on the funding of a new school (PP0270 and PP1337) and its location (PP0270).

A representee has sought clarification on whether there would be sufficient water a sewage infrastructure to accommodate additional housing, or whether updates would be required and queries whether this would cause disruptions within the village (PP0104).

A representee has sought clarification on whether the proposed developments will impact the current low crime rates within the settlement (PP0142).

A representee has sought clarification on whether additional policing requirements have been considered due to the increase in population resulting from the developments (PP0229).

A representee has stated that if the development goes ahead, additional trees should be planted in order to retain the rural character and compensate for the loss of view (PP0151).

A representee has sought the inclusion of suitable shrubs, trees and grassy areas at sites OP1 and OP2 on the basis of aesthetics and visual appeal (PP0152).

A representee has sought clarification on whether a new village hall will be incorporated onto the proposed site and has queried what the size of the village hall would be and whether it would be large enough for an indoor bowling facility. It was stated that the indoor bowling facility has been pushed out of the old community centre due to additional nursery school hours (PP0151).

A representee has sought the incorporation of a suitable community centre at sites OP1 and OP2 on the basis of public wellbeing and also to allow the old school building on Langseat Road to be used solely as a nursery (PP0152).

A representee has requested that archaeological remains at the proposed sites require to be protected for historic reasons (PP0151).

A representee has sought the incorporation of footpaths and pavements along both sides of Manse Road running between site OP1 and site OP2 on the basis of ensuring pedestrian safety (PP0152).

A representee has sought clarification on whether the existing roads within the settlement are in such a condition to support the additional traffic produced from the proposed development (PP0172).

A representee has stated that in order to ensure a minimum loss of privacy, the proposed homes must not have windows overlooking any existing properties and that consideration should be given to making the border a green space given the loss of green space the settlement will be faced with (PP0238).

A representee has sought clarification on who will assume the costs of necessary infrastructure enhancements to support the proposed developments (PP0270).

A representee has sought clarification on whether developers would be required to contribute to facilities for community and sports (to be located at Ellon), recreation, waste and recycling and health care facilities (to be located at Balmedie), and if not has queried who will contribute to these facilities (PP0647).

A representee has sought clarification on whether a Flood Risk Assessment will be undertaken for the proposed developments as there was uncertainty regarding this in the PLDP (PP0648).

A representee has sought clarification on whether a Transport Assessment will be undertaken for the proposed developments as there was uncertainty regarding this in the PLDP (PP0648).

Concerns were raised that there has been a lack of consideration for self-build ecological housing which would be of higher aesthetic and sustainability value than the proposed developments (PP270).

A representee has stated that consideration should be given to developing at Balmedie rather than Potterton as there is an abundance of land at Balmedie and construction of access to the AWPR would be easier (PP0484).

A representee has requested that an additional 'Contamination' heading is included in the settlement statement which highlights that the sites are constrained due to contamination (PP0992).

A representee has raised concern that the green belt appears to be narrow in the north of Potterton and has requested that the PLDP considers extending the green belt to the north towards Belhelvie (PP0607).

A representee has expressed concern about access to a site, but they have not specified which one (PP1337).

A representee has objected to sites OP1 and OP2, but has requested the allocation summaries are amended to remove reference to it is enhancing biodiversity, as it will have negative effects (e.g. Forvie Sands) and the words "should be in keeping with other

nearby residential development” and, “should provide connectivity to the existing settlement”, as they are remote from Potterton and its local amenities. In addition, the allocation summary for OP1 should remove reference to Ancient Woodland as it is under separate ownership (PP1135).

A representee has requested that wording in the allocation summary of sites OP1 and OP2 to change “should” to “will be connected” in relation to connectivity with the settlement to strengthen the wording in the allocation summary (PP1295).

A representee has requested that wording in the allocation summary of sites OP1 and OP2 should be amended to remove the word “logical” from the allocation summary when considering the housing extension and replace with a more natural word such as “possible” as this has more neutral connotations (PP1295).

A number of representees have sought the removal of site OP1 and site OP2, however have stated that if the sites are not removed, they should be restricted so that only a small number of homes are developed on the sites and/or that there should be a reduction in development sites (PP0256, PP0257, PP0258, PP0259, PP0260, PP0261, PP0262, PP0263, PP0264, PP0282, PP0283, PP0284, PP0285, PP0286, PP0287, PP0289, PP0291 and PP0292).

A representee has requested reducing the scale of development or changing them to a mixed use. They argue the proposed scale would change Potterton’s character. There are insufficient facilities to support the developments. Roads are too small and there is no cycle infrastructure. They also requested new facilities should be highlighted in the LDP (PP0343).

A representee has requested the removal of proposed sites OP1 and OP2 and sought the reinstatement of the green belt at Potterton, however has considered that the sites have the potential for inclusion within a future Local Development Plan should their identified concerns be resolved (PP0645, PP0646, PP0647, PP0648).

A number of representees have objected to site OP1 and site OP2 (PP0087, PP0091, PP0094, PP0095, PP0096, PP0101, PP0103, PP0104, PP0107, PP0108, PP0109, PP0110, PP0130, PP0131, PP0132, PP0133, PP0134, PP0141, PP0142, PP0143, PP0144, PP0151, PP0153, PP0154, PP0157, PP0160, PP0169, PP0172, PP0203, PP0204, PP0205, PP0206, PP0207, PP0209, PP0210, PP0211, PP0212, PP0214, PP0215, PP0218, PP0220, PP0227, PP0228, PP0229, PP0231, PP0232, PP0233, PP0236, PP0237, PP0238, PP0249, PP0250, PP0255, PP0256, PP0257, PP0258, PP0259, PP0260, PP0261, PP0262, PP0263, PP0264, PP0270, PP0273, PP0274, PP0278, PP0279, PP0280, PP0281, PP0282, PP0283, PP0284, PP0285, PP0286, PP0287, PP0289, PP0290, PP0291, PP0292, PP0298, PP0299, PP0311, PP0312, PP0324, PP0325, PP0336, PP0349, PP0350, PP0351, PP0356, PP0361, PP0362, PP0363, PP0365, PP0368, PP0369, PP0370, PP0371, PP0372, PP0373, PP0406, PP0407, PP0408, PP0409, PP0418, PP0419, PP0449, PP0479, PP0480, PP0483, PP0484, PP0487, PP0488, PP0489, PP0505, PP0508, PP0518, PP0519, PP0527, PP0528, PP0540, PP0546, PP0561, PP0581, PP0586, PP0587, PP0594, PP0607, PP0610, PP0638, PP0645, PP0646, PP0647, PP0648, PP0650, PP0655, PP0671, PP0680, PP0695, PP0771, PP0781, PP0788, PP0797, PP0798, PP0799, PP0800, PP0801, PP0802, PP0805, PP0806, PP0807, PP0819, PP0829, PP0830, PP0833, PP0841, PP0847, PP0848, PP0850, PP0852, PP0853, PP0854, PP0856, PP0857,

PP0858, PP0859, PP0860, PP0862, PP0864, PP0870, PP0872, PP0874, PP0886, PP0887, PP0897, PP0904, PP0912, PP0913, PP0914, PP0915, PP0916, PP0930, PP0932, PP0964, PP0966, PP0967, PP0968, PP0971, PP0982, PP0987, PP0989, PP0992, PP1002, PP1003, PP1123, PP1128, PP1135, PP1146, PP1147, PP1148, PP1149, PP1157, PP1160, PP1161, PP1166, PP1167, PP1171, PP1190, PP1243, PP1295, PP1303, PP1304, PP1305, PP1324, PP1325, PP1326, PP1327, PP1328, PP1329, PP1330, PP1332, PP1333, PP1334, PP1335, PP1336, PP1397 and PP1401). Some of the representees have included appendices (RD0008.A, RD0154.A, RD0250.A and RD0258.A) in their representations which provide further detail to support their position (PP0107, PP0833 and PP1295 and PP1304).

The representees have raised the following concerns and issues regarding proposed sites OP1 and OP2:

- Representees considered that the settlement of Potterton should not be altered and should remain as it is at present (PP0154, PP0160, PP0169, PP0204, PP0205, PP0211, PP0236, PP0237, PP0806).
- A number of respondents have sought clarity as to why this Plan differs from the LDP 2017, which sought to protect Potterton's amenity by maintaining the green belt and that there was no strategic need for new homes, when nothing has changed (PP0449, PP0527 and PP0528).
- A significant number of representees were concerned with regards to the impact on the local community, with concerns including that the sites would bring no benefits to the community, that they do not reflect the community's aspirations, and/or that the community were not aware of the proposed development prior to publication of the Proposed Plan (PP0087, PP0094, PP0095, PP0104, PP0108, PP0109, PP0110, PP0130, PP0131, PP0134, PP0154, PP0157, PP0172, PP0206, PP0207, PP0209, PP0210, PP0212, PP0227, PP0228, PP0231, PP0232, PP0233, PP0236, PP0237, PP0273, PP0274, PP0278, PP0289, PP0290, PP0291, PP0298, PP0324, PP0336, PP0356, PP0361, PP0363, PP0365, PP0369, PP0373, PP0407, PP0449, PP0479, PP0480, PP0527, PP0559, PP0586, PP0594, PP0610, PP0638, PP0647, PP0650, PP0805, PP0806, PP0830, PP0841, PP0850, PP0854, PP0858, PP0859, PP0860, PP0862, PP0864, PP0904, PP0912, PP0914, PP0916, PP0964, PP0982, PP0989, PP1003, PP1128, PP1146, PP1147, PP1148, PP1149, PP1160, PP1161, PP1166, PP1167, PP1171, PP1190, PP1243, PP1304, PP1326, PP1330, PP1333 and PP1336).
- A representee has also noted concern regarding the lack of transparency as to the inclusion of the OP1 and OP2 sites in the plan (PP1243).
- A significant number of representees raised concern with the scale of the proposed development, with concerns relating to matters such as overdevelopment (particularly in the current political and economic context), the density of the sites, an increased population and/or concerns of the potential for future incremental development including the development of additional reserved/future sites. It was stated in some instances that the scale of this increase is not justifiable when other sites are available. Furthermore, concerns raised included that it has not been demonstrated that the developments are small scale as required by SPP, nor do they accord with the examples of small-scale development stipulated in Policy R1

(PP0087, PP0101, PP0103, PP0108, PP0130, PP0131, PP0144, PP0153, PP0154, PP0172, PP0203, PP0204, PP0205, PP0206, PP0207, PP0209, PP0210, PP0211, PP0212, PP0214, PP0215, PP0227, PP0228, PP0229, PP0231, PP0232, PP0233, PP0237, PP0249, PP0250, PP0255, PP0257, PP0258, PP0270, PP0273, PP0274, PP0278, PP0279, PP0282, PP0286, PP0289, PP0291, PP0292, PP0299, PP0312, PP0324, PP0356, PP0361, PP0365, PP0370, PP0373, PP0406, PP0409, PP0418, PP0419, PP0480, PP0484, PP0487, PP0488, PP0505, PP0528, PP0559, PP0586, PP0594, PP0607, PP0610, PP0638, PP0645, PP0647, PP0650, PP0671, PP0680, PP0806, PP0854, PP0858, PP0859, PP0860, PP0864, PP0886, PP0887, PP0897, PP0904, PP0912, PP0913, PP0914, PP0916, PP0932, PP0987, PP1135, PP1146, PP1147, PP1148, PP1149, PP1157, PP1158, PP1160, PP1161, PP1166, PP1171, PP1305, PP1326, PP1333, PP1334, PP1335, PP1336 and PP1401).

- Representees have raised an issue of a sufficient/excessive housing land supply. Concerns related to matters such as current vacant properties and a substantial number of properties currently for sale and a lack of market, demand and/or need for the proposed housing development (particularly as a result of a decline in the oil industry/prices, economic downturn, loss of jobs, political context, Covid-19, ongoing expansion of nearby settlements and/or developments already in the pipeline at bid sites FR037A and FR104). Issues raised also included that there already exists a sufficient number of homes at affordable prices in the settlement of which many have not been able to sell, and the Housing Land Audit (HLA) 2019 shows there is a supply of 7.2 years available, well in excess of the 5-year requirement. It was also raised in some instances that the developments conflict with the HLA 2019 which shows no completions for Potterton from 2020-2030. Concerns also included the devaluation of existing properties and/or the impact on those trying to sell existing homes in the area. Issues raised also included concerns that the PLDP has not accounted for the impacts of Covid-19, and that housing land supply reports (Housing Land Audit 2019) are outdated as they relate to before Covid-19 and the drop in oil price. Further to this, concerns such as the non-delivery of approved housing developments were raised, highlighting the lack of need/demand for the sites, or reserved sites. Additionally, issues relating to the sites being constrained and not meeting the criteria for effective land was noted (PP0087, PP0094, PP0095, PP0096, PP0108, PP0109, PP0110, PP0130, PP0131, PP0144, PP0154, PP0157, PP0172, PP0206, PP0207, PP0209, PP0210, PP0212, PP0220, PP0231, PP0232, PP0236, PP0237, PP0238, PP0256, PP0257, PP0270, PP0278, PP0279, PP0280, PP0285, PP0298, PP0312, PP0336, PP0356, PP0361, PP0362, PP0364, PP0365, PP0368, PP0370, PP0373, PP0407, PP0409, PP0449, PP0527, PP0528, PP0586, PP0587, PP0594, PP0610, PP0638, PP0647, PP0648, PP0650, PP0695, PP0781, PP0788, PP0797, PP0798, PP0799, PP0800, PP0801, PP0802, PP0805, PP0848, PP0850, PP0853, PP0854, PP0856, PP0857, PP0858, PP0859, PP0860, PP0862, PP0864, PP0886, PP0887, PP0904, PP0912, PP0913, PP0914, PP0915, PP0932, PP0982, PP1002, PP1003, PP1146, PP1147, PP1148, PP1149, PP1158, PP1161, PP1166, PP1167, PP1171, PP1190, PP1303, PP1304, PP1326, PP1327, PP1328, PP1333, PP1335 and PP1401).
- Representees have raised concerns that Potterton is outwith the Strategic Growth Area (SGA), and at the time of the 2016 Examination Report, Potterton was excluded from the Strategic Growth Area and concerns raised included that since this time nothing has changed to permit such growth in the area or to justify the removal of the green belt. Additionally, concerns raised included that the scale of

development being proposed is associated with an SGA, however the PLDP advises that the settlement is outwith the SGA. Additionally, concerns raised included that Potterton is not part of the Energetica Corridor, but that the sites have been allocated to promote the Energetica Corridor which is incorrect. Further to this, issues which include that it does not make sense to allocate housing land at Potterton to promote Energetica as there is no employment land allocations within the settlement have been raised, as well as the proposed sites not promoting the vision of Energetica. Additionally, concerns raised included that the sites are not in line with the SDP's spatial strategy as the development does not benefit a wider quality of life, meet the needs of the local community or are not well connected to employment opportunities – leading to a negative impact on local road networks of which the SDP states should be avoided. It has been raised in some instances that at the previous LDP, the Council stated that Potterton was not suitable for allocations due to infrastructure constraints, which the representees stated still exist (PP0231, PP0232, PP0278, PP0356, PP0361, PP0373, PP0418, PP0419, PP0491, PP0505, PP0518, PP0586, PP0594, PP0671, PP0695, PP0781, PP0788, PP0797, PP0798, PP0799, PP0800, PP0801, PP0802, PP0850, PP0852, PP0853, PP0854, PP0856, PP0860, PP0874, PP0886, PP0887, PP0904, PP0913, PP0915, PP0930, PP0932, PP1135, PP1160, PP1167, PP1190 and PP1401).

- A representee has stated that a number of fundamental constraints exist to the development of these sites (PP0680).
- A representee has raised concern that a substantial number of assessments and investigations still require to be undertaken for the proposed developments and as such consultees have not had sight of important information which is integral to the decision making process for these development (PP0648).
- Representees were concerned with regards to the impact on the local landscape, with concerns relating to the impact on character, setting and identity of the settlement and risk of suburbanisation, coalescence and/or sprawl also highlighted. It was also suggested that sites P1 and P3 could be undermined. In addition, concerns such as the proposed housing lacking in character, the level of design quality and no account for vernacular traditions were raised, as well as the impact from development on the character of Milton of Potterton. Concerns raised also included that controls on the design of new housing in the settlement should be in place (in line with the SDP 2014) and that the housing should be low energy. It is argued that Milton of Potterton has its own unique character and sense of place, and site OP1 will swamp Woodside Cottage, affecting its sense of place and character. It was also highlighted in some instances that Potterton is a Landscape Character Area. Issues raised also included concerns regarding the assessment undertaken including within the SEA on the effect of the proposed sites on the Potterton landscape (PP0087, PP0101, PP0103, PP0104, PP0107, PP0108, PP0109, PP0110, PP0130, PP0131, PP0132, PP0133, PP0144, PP0153, PP0154, PP0157, PP0160, PP0169, PP0172, PP0203, PP0204, PP0205, PP0206, PP0207, PP0209, PP0210, PP0211, PP0212, PP0214, PP0215, PP0227, PP0228, PP0229, PP0231, PP0232, PP0233, PP0236, PP0237, PP0255, PP0258, PP0279, PP0282, PP0283, PP0284, PP0285, PP0286, PP0287, PP0289, PP0291, PP0298, PP0299, PP0312, PP0324, PP0336, PP0349, PP0351, PP0361, PP0362, PP0368, PP0369, PP0370, PP0371, PP0373, PP0407, PP0418, PP0419, PP0449, PP0480, PP0483, PP0488, PP0505, PP0518, PP0519, PP0527, PP0540, PP0559, PP0561, PP0586,

PP0594, PP0607, PP0610, PP0638, PP0645, PP0648, PP0650, PP0781, PP0797, PP0798, PP0799, PP0800, PP0801, PP0802, PP0806, PP0807, PP0847, PP0856, PP0858, PP0859, PP0860, PP0870, PP0886, PP0887, PP0897, PP0904, PP0912, PP0914, PP0916, PP0930, PP0932, PP1002, PP1135, PP1146, PP1147, PP1148, PP1149, PP1157, PP1160, PP1171, PP1303, PP1326, PP1328, PP1330, PP1332 and PP1401).

- A representee highlighted that bid site FR120 was refused on the basis of unacceptable impact on the landscape, that it had inappropriate scale and siting, would contribute to urban sprawl in the green belt and cause road network capacity issues. These issues are all relevant to site OP1 and site OP2 and as such should also be refused on these grounds (PP0966). Two representees argue the assessment of bid site FR120 (not preferred) and FR140 and FR141, which were preferred, are inconsistent and contradictory, as the latter sites have more constraints (e.g. flood risk, ancient woodland, green belt land loss, and landscape impact) (PP0886 and PP0887).
- Concerns also related to the settlement becoming a commuter town even more so than at present, rather than a centre of sustainable development (PP0270 and PP0671). It was stated that within the current economic and political context (PP0270), the proposals do not work to promote sustainable mixed communities (PP0270 and PP0671) and will promote car-based journeys (PP0671, PP0680). Any benefits in terms of housing mix and ecological benefits are overstated and alternative sustainable sites within the scale of the settlement are available (PP0671).
- A significant number of representees raised concern regarding the loss of green belt land, with concerns raised such as alternative sites being available that are not green belt designated/are more suitable such as brownfield sites. Additionally, concerns also included that there is no justification or need for the loss of green belt land, which has implications for its long-term integrity; the sites constitute as ribbon development as it is not close to Potterton and is development along a road; that its development will set an unacceptable precedent; that the proposed development and the loss of the green belt is not in line with Scottish Planning Policy (SPP), the green belt policy (including Policy R1), regulations and/or with the community's desires. Suggested alternative locations for development included areas such as at Blackdog, Bridge of Don or Aberdeen City. Concerns such as that a consultative case has not been made for developing the green belt were also raised, as well as concern of the loss of its function as a 'green lung', its function to help mitigate climate change, and/or the loss of its function to provide recreational/wellbeing benefits and supporting biodiversity. Issues raised also included concerns that the amendment to the green belt boundary to account for the sites was not a "minor change" as stated within the Issues and Actions Papers, and that the amendment has gone ahead prior to the proposed green belt review and without sufficient engagement and notification. Furthermore, it was raised in some instances that the proposed development of the green belt does not align with the MIR 2019 preferred or alternative option with regards to the amendments to the green belt boundary. Concerns were also raised such as that the development of the green belt land is contrary to Potterton's planning objectives as stated in the MIR 2019 and is contrary to the 2016 Examination Report which recommended the green belt boundary was to be preserved, with some representees stating that there is no

justification to depart from this recommendation and/or that nothing has changed in recent years to justify the removal of the green belt. Additionally, some representees have highlighted that the importance of the green belt has been highlighted elsewhere by the Council, and a consistent approach is required in this instance also (PP0091, PP0094, PP0095, PP0096, PP0101, PP0103, PP0104, PP0107, PP0108, PP0109, PP0110, PP0132, PP0141, PP0142, PP0143, PP0144, PP0151, PP0153, PP0157, PP0169, PP0172, PP0203, PP0204, PP0205, PP0206, PP0207, PP0209, PP0210, PP0211, PP0212, PP0214, PP0215, PP0220, PP0227, PP0228, PP0229, PP0231, PP0232, PP0233, PP0236, PP0237, PP0249, PP0250, PP0255, PP0256, PP0270, PP0273, PP0274, PP0278, PP0279, PP0280, PP0281, PP0282, PP0283, PP0284, PP0285, PP0286, PP0287, PP0289, PP0290, PP0291, PP0292, PP0298, PP0299, PP0311, PP0312, PP0324, PP0336, PP0356, PP0361, PP0362, PP0364, PP0365, PP0368, PP0369, PP0370, PP0371, PP0372, PP0373, PP0409, PP0418, PP0419, PP0449, PP0479, PP0480, PP0483, PP0484, PP0487, PP0488, PP0490, PP0491, PP0505, PP0508, PP0518, PP0519, PP0527, PP0528, PP0540, PP0546, PP0559, PP0561, PP0586, PP0587, PP0594, PP0607, PP0610, PP0638, PP0645, PP0646, PP0647, PP0648, PP0650, PP0695, PP0771, PP0781, PP0788, PP0797, PP0798, PP0799, PP0800, PP0801, PP0802, PP0805, PP0806, PP0807, PP0819, PP0824, PP0829, PP0830, PP0847, PP0850, PP0852, PP0853, PP0854, PP0856, PP0857, PP0858, PP0859, PP0860, PP0862, PP0870, PP0872, PP0874, PP0886, PP0887, PP0897, PP0904, PP0912, PP0913, PP0914, PP0915, PP0916, PP0930, PP0932, PP0966, PP0982, PP0987, PP0989, PP1002, PP1003, PP1123, PP1128, PP1135, PP1146, PP1147, PP1148, PP1149, PP1157, PP1158, PP1160, PP1161, PP1166, PP1167, PP1171, PP1190, PP1243, PP1303, PP1304, PP1305, PP1324, PP1326, PP1328, PP1329, PP1332, PP1333, PP1334, PP1335, PP1336, PP1397 and PP1401).

- Representees have raised concerns regarding environmental impacts from the development and/or its construction and associated works. Specific concerns such as the impact on wildlife, protected species, woodland/Ancient Woodland (including its use as proposed open space and/or that the Ancient Woodland is private land), grazing/prime agricultural farmland, the Green Network, the green belt, green space and/or local path networks have been raised (with the resultant loss of outdoor recreational opportunities and impact on wellbeing also raised in some instances). Issues including no consideration for the creation of allotments or active travel routes on the green belt were raised. Concerns such as the omission of biodiversity information in the SEA relating to the proximity and impact of the proposed sites to qualifying sites and species has also been raised, as well as additional demand on drainage, water and/or waste facilities leading to environmental contamination. Concerns raised also included that there was no evidence of environmental enhancements provided by the proposed developments, and that there has been insufficient demonstration that the Ancient Woodland will be protected and enhanced as required by SPP and it was highlighted that at the MIR 2019 stage, the Woodland Trust stated that they would not support the site allocations (PP0094, PP0095, PP0104, PP0107, PP0108, PP0109, PP0110, PP0141, PP0142, PP0144, PP0151, PP0153, PP0154, PP0157, PP0169, PP0172, PP0204, PP0205, PP0206, PP0207, PP0209, PP0210, PP0211, PP0212, PP0214, PP0215, PP0227, PP0228, PP0231, PP0232, PP0233, PP0236, PP0237, PP0238, PP0258, PP0261, PP0263, PP0270, PP0273, PP0274, PP0278, PP0279, PP0286, PP0287, PP0291, PP0292, PP0299, PP0311, PP0349, PP0351, PP0356, PP0361, PP0362, PP0369, PP0373, PP0409, PP0418, PP0419, PP0449, PP0479, PP0483,

PP0484, PP0487, PP0488, PP0505, PP0519, PP0527, PP0528, PP0559, PP0581, PP0594, PP0638, PP0646, PP0647, PP0648, PP0671, PP0680, PP0695, PP0781, PP0797, PP0798, PP0799, PP0800, PP0801, PP0802, PP0806, PP0819, PP0830, PP0848, PP0850, PP0853, PP0854, PP0856, PP0857, PP0858, PP0859, PP0860, PP0872, PP0886, PP0887, PP0904, PP0912, PP0913, PP0914, PP0915, PP0916, PP0930, PP0982, PP0989, PP1002, PP1003, PP1123, PP1128, PP1135, PP1146, PP1147, PP1148, PP1149, PP1157, PP1160, PP1161, PP1166, PP1167, PP1171, PP1190, PP1303, PP1326, PP1328, PP1329, PP1330, PP1333, PP1334 and PP1401).

- Representees have highlighted that there are unique historical and archaeological interests at the sites/within proximity of the sites. Issues raised included that the sites have indications of a system of ploughing used in the Middle Ages preserved due to its use as grazing land and/or that there are archaeological remains at/near the sites requiring protection for historical reasons, such as cairns and standing stones, Woodside Cottage (a vernacular building) and Potterton House Designed Landscape (PP0144, PP0151, PP0206, PP0207, PP0209, PP0210, PP0212, PP0231, PP0232, PP0278, PP0361, PP0373, PP0418, PP0419, PP0505, PP0513, PP0551, PP0638, PP0854, PP0858, PP0859, PP0862, PP0886, PP0887, PP0912, PP0914, PP1166, PP1167, PP1171 and PP1190).
- A significant number of representees raised concern relating to the pressure of development on existing local infrastructure, services, facilities and amenities. Particular issues such as concerns of provision of further services, facilities or amenities, the capacity/condition of education facilities (including the extension of education facilities and/or provision of new education facilities), health care provision, water supply, lack of public transport provision (thus increasing car use), impact on local retail (including concerns of retail expansion within the settlement) and/or provision of support facilities, community facilities, recreational facilities and/or facilities for young people were raised. All of the sports and recreational facilities should be retained at least to the current standard whilst considering more. In relation to water supply and impact assessment should be required. Additionally, matters raised included concerns of waste water capacity for the development at Potterton, there are no planned upgrades by Scottish Water (e.g. to upgrade the pumping station at Potterton), as well as the wider south Formartine area including proposed allocated developments at Belhelvie, Balmedie and Newburgh. Also, Scottish Water note that new connections can only be permitted once it is established that there is no existing flood risk to existing residents or assets. With regards to education capacity, concerns such as increasing the school capacity/provision for additional education facilities prior to the approval of the sites within the catchment area were raised, with concerns regarding the impact on children's health and wellbeing raised. Additionally, concerns were raised such as that appropriate infrastructure, services and amenities should be provided in advance/at the outset of projects, rather than at the end or as a provision with no commitment of funds to deliver them. Concerns raised also included that the 2016 Examination Report stated that the threat to the long-term viability of existing services would not be an adequate basis for permitting large-scale growth and that there has been no change since this time to justify the allocation of these sites. Issues raised also included concern that the proposed developments do not demonstrate that the necessary infrastructure investment will be provided for education or drainage in line with SPP, and that the impact on drainage remains to be fully assessed and that there was insufficient demonstration provided that

developers would be required to contribute to additional education capacity. Furthermore, issues raised also included that insufficient demonstration had been provided to show that SPP policy principle 29 would be met as there was uncertainty regarding whether developers would be required to contribute towards education capacity and uncertainty as to how the Council would deliver the necessary infrastructure required by SPP (PP0087, PP0094, PP0095, PP0101, PP0103, PP0104, PP0107, PP0108, PP0109, PP0110, PP0130, PP0131, PP0132, PP0141, PP0142, PP0144, PP0153, PP0154, PP0157, PP0172, PP0203, PP0206, PP0207, PP0209, PP0210, PP0212, PP0215, PP0218, PP0220, PP0227, PP0228, PP0229, PP0231, PP0232, PP0233, PP0236, PP0237, PP0238, PP0249, PP0255, PP0259, PP0260, PP0261, PP0263, PP0264, PP0270, PP0273, PP0274, PP0278, PP0279, PP0280, PP0281, PP0284, PP0286, PP0290, PP0298, PP0299, PP0336, PP0349, PP0350, PP0356, PP0361, PP0362, PP0364, PP0368, PP0369, PP0370, PP0371, PP0372, PP0373, PP0406, PP0418, PP0419, PP0449, PP0479, PP0480, PP0491, PP0505, PP0519, PP0527, PP0528, PP0540, PP0559, PP0581, PP0586, PP0587, PP0594, PP0607, PP0610, PP0638, PP0646, PP0647, PP0648, PP0650, PP0655, PP0657, PP0695, PP0771, PP0788, PP0806, PP0807, PP0824, PP0829, PP0833, PP0847, PP0848, PP0852, PP0853, PP0854, PP0858, PP0859, PP0860, PP0862, PP0864, PP0886, PP0887, PP0904, PP0912, PP0914, PP0916, PP0930, PP0932, PP0967, PP0968, PP0982, PP0987, PP0989, PP1002, PP1123, PP1128, PP1135, PP1146, PP1147, PP1148, PP1149, PP1157, PP1160, PP1161, PP1166, PP1167, PP1171, PP1190, PP1295, PP1304, PP1305, PP1324, PP1325, PP1326, PP1327, PP1328, PP1329, PP1330, PP1332, PP1333, PP1334, PP1335, PP1336, PP1397 and PP1401).

- There was significant concern raised relating to the pressure of development and additional traffic on the local road network (including the AWPR). The AWPR was meant to be a transport corridor not a development corridor. Particular issues such as the current condition of local roads, the delivery of required road improvements, access and egress points for the sites, safety concerns for road users (including impact on active travel), no direct bus links to employment centres and Balmedie, increased traffic/congestion, disturbance from additional traffic and construction traffic, suitability of the road for HGVs, and/or increased car use and carbon emissions/construction contaminants and their impact in terms of climate change and the Council's policy on this were raised. Concerns regarding required additional road maintenance were also raised in some instances. In addition, issues such as concern of the adequacy of the traffic risk assessments within the PLDP were raised as well as the adequacy and accuracy of a Transportation Report completed for bid sites FR140 and FR141 (proposed OP1 and OP2) as part of the developer's MIR response were also raised, including the omission of information relating to quality of the bus services. Issues raised also included concern that the proposed developments do not demonstrate that the necessary infrastructure investment will be provided for transportation in line with SPP, and that the impact on transport remains to be fully assessed. Furthermore, concerns also included that the proposed developments failed to deliver on numerous National Planning Framework (NPF) 3 plans and strategies for environment, climate change and transport, including failure to provide low carbon enhancements due to increased car use, failure to support decarbonisation of transport and a failure to promote active travel (including safe active travel provision and attractive public transport as stipulated in the SDP Vision/Spatial Strategy). Concern also included that the proposed sites are not in line with Policy P1.5 as only at a time

where a Transport Assessment has been undertaken can the Council determine that the sites conform with Policy P1.5 and to inform the Regional Transport Strategy. Issues raised also included concerns regarding the assessment undertaken including the Development Planning and Management Transport Appraisal Guidance (DPMTAG) as the report makes no reference to the proposed developments at Potterton (PP0094, PP0095, PP0101, PP0103, PP0107, PP0108, PP0109, PP0110, PP0130, PP0131, PP0132, PP0141, PP0142, PP0144, PP0157, PP0169, PP0172, PP0203, PP0204, PP0206, PP0207, PP0209, PP0210, PP0212, PP0214, PP0215, PP0218, PP0220, PP0227, PP0228, PP0229, PP0231, PP0232, PP0233, PP0236, PP0237, PP0238, PP0249, PP0259, PP0260, PP0263, PP0270, PP0273, PP0274, PP0278, PP0279, PP0280, PP0282, PP0283, PP0284, PP0285, PP0286, PP0287, PP0289, PP0290, PP0291, PP0292, PP0298, PP0299, PP0312, PP0325, PP0336, PP0349, PP0350, PP0351, PP0356, PP0361, PP0362, PP0363, PP0364, PP0367, PP0368, PP0369, PP0370, PP0371, PP0372, PP0373, PP0408, PP0418, PP0419, PP0449, PP0479, PP0480, PP0483, PP0484, PP0487, PP0488, PP0489, PP0490, PP0505, PP0509, PP0519, PP0527, PP0528, PP0540, PP0547, PP0559, PP0581, PP0586, PP0594, PP0607, PP0610, PP0638, PP0646, PP0647, PP0648, PP0656, PP0671, PP0695, PP0771, PP0781, PP0788, PP0797, PP0798, PP0799, PP0800, PP0801, PP0802, PP0806, PP0807, PP0819, PP0824, PP0829, PP0830, PP0841, PP0847, PP0848, PP0850, PP0852, PP0853, PP0854, PP0856, PP0857, PP0858, PP0859, PP0860, PP0862, PP0886, PP0887, PP0897, PP0904, PP0912, PP0914, PP0916, PP0930, PP0932, PP0968, PP0982, PP0987, PP0989, PP1002, PP1123, PP1128, PP1135, PP1146, PP1147, PP1148, PP1149, PP1157, PP1158, PP1160, PP1161, PP1166, PP1167, PP1171, PP1190, PP1303, PP1304, PP1305, PP1324, PP1325, PP1326, PP1327, PP1328, PP1329, PP1330, PP1332, PP1333, PP1334, PP1335, PP1336 and PP1401).

- A significant number of representees expressed concern that the development would impact on amenity. Particular issues such as the development causing disruption during the construction phase (including impact on health and wellbeing), increased pollution (including environmental and noise), the sites having an impact on privacy and/or the development resulting in a loss of view were raised. Concerns such as that the development would be contrary to the planning objective to preserve the amenity of the settlement were also raised (PP0103, PP0132, PP0134, PP0141, PP0142, PP0153, PP0172, PP0203, PP0204, PP0205, PP0227, PP0228, PP0233, PP0236, PP0238, PP0258, PP0263, PP0270, PP0273, PP0274, PP0279, PP0282, PP0287, PP0290, PP0292, PP0299, PP0312, PP0363, PP0371, PP0409, PP0449, PP0479, PP0483, PP0484, PP0487, PP0488, PP0581, PP0586, PP0594, PP0638, PP0819, PP0847, PP0848, PP0860, PP0870, PP0904, PP0916, PP0982, PP1128, PP1135, PP1146, PP1147, PP1148, PP1149, PP1161, PP1326, PP1332 and PP1401).
- Representees have raised concerns such as that the proposed sites are at risk of flooding from surface water and/or that flood risk requires to be considered in relation to the development as the sites sit within a SEPA Flood Risk Area, that alternative areas should be considered that are not at risk of flooding and/or that the flood risk should preclude the sites' development. Concerns were also raised that surrounding development/properties would be at a risk of flooding if the sites were developed, of flooding on local roads, and/or contamination of Potterton/Millden Burn as the treatment works cannot cope during heavy rain/is not fit for purpose. It was also highlighted in some instance that Potterton has a high

water table. Concerns including that stipulation in the SDP highlights that new developments should not be identified on flood risk sites was also raised. Issues raised also included concerns regarding drainage within the settlement and/or localised impact on watercourses during development. With regards to drainage, concerns raised included that the sites were located on impermeable bedrock adding to poor drainage on the sites (PP0094, PP0095, PP0144, PP0206, PP0207, PP0209, PP0210, PP0212, PP0227, PP0228, PP0231, PP0232, PP0233, PP0238, PP0249, PP0262, PP0263, PP0270, PP0273, PP0274, PP0278, PP0280, PP0287, PP0356, PP0361, PP0364, PP0369, PP0370, PP0372, PP0373, PP0418, PP0419, PP0449, PP0479, PP0487, PP0488, PP0505, PP0527, PP0528, PP0581, PP0586, PP0594, PP0607, PP0610, PP0638, PP0655, PP0695, PP0788, PP0824, PP0833, PP0848, PP0850, PP0852, PP0853, PP0854, PP0856, PP0858, PP0859, PP0860, PP0886, PP0887, PP0897, PP0904, PP0912, PP0914, PP0916, PP0932, PP0967, PP0971, PP0987, PP1002, PP1135, PP1146, PP1147, PP1148, PP1149, PP1157, PP1160, PP1166, PP1171, PP1303, PP1326, PP1330, PP1335 and PP1401).

- Representees have raised concern regarding the impact the proposed development would have on **crime** rate in the settlement and/or the feeling of safety and security of living in a rural community (PP0094, PP0095, PP0103, PP0107, PP0141, PP0172, PP0204, PP0227, PP0228, PP0233, PP0279, PP0407, PP0916, PP0982, PP1157 and PP1161).
- Representees have raised concern that the sites would adversely impact the local economy (PP0087). Additionally, it has been stated that the proposals would not enhance the rural economy (PP0586).
- Representees have highlighted issues including a discrepancy of 53 homes from the site plan in the submitted bid (indicating 180 homes) and the Proposed Plan - which states 233 homes for sites OP1 and OP2 (PP0094, PP0095, PP0214 and PP0356).
- Representees have also requested that elements of the OP1 and OP2 allocation summaries are removed including references to the developments being in keeping with other residential properties, reference to the core path that is in proximity to the sites and the comment about providing connectivity to the existing settlement (PP0781, PP0797, PP0798, PP0799, PP0800, PP0801, PP0802, PP0850, PP0856 and PP0857). Additionally, it is requested that the word “logical” is removed from the allocation summary when considering the housing extension and replaced with a more natural word such as “possible” and that the text relating to connections with the rest of the settlement should be strengthened to “will be connected” (PP1295).
- The proposed sites are too close to Wester Hatton landfill site, with concerns raised such as the site emitting methane gas, making it dangerous to build homes there (PP0449, PP0695, PP0860, PP0886, PP0887, PP0904, PP0932, PP0992 and PP1401).
- Representees have noted that the site could be contaminated (PP0695, PP0788, PP0853, PP0886, PP0887 and PP0992), as highlighted in the Bid Site Assessment of bid sites FR140 and FR141 (PP0695, PP0886, PP0887 and PP0992). Potterton Burn failed its chemical test/was contaminated. Therefore, site OP1 and OP2 will exacerbate this issue (PP0886 and PP0887). Another representee notes that there

should be a new heading within the settlement statement for contamination as the OP1 and OP2 are constrained due to contamination and are therefore unsuitable for development (PP0992).

- The Developer Bid Site forms omits a possible legal right of way at Woodside Cottage Water/Water Well, which has a water pipe running through it (PP0886 and PP0887).

Non-Allocated Site – Bid Site FR037A – Land at Gourdieburn and Non-Allocated Site – Bid Site FR037B – Land at Gourdieburn

A representee has requested that bid site FR037A is allocated in the PLDP for 45 homes and bid site FR037B is allocated in the PLDP for 90 homes, as alternative sites to site OP1 and site OP2. It was stated that these sites provide an appropriate scale of development proportionate to the existing settlement, of which there is a need in Potterton and could be delivered in the short-term. It was stated that the sites would sustain the local services, deliver a range of house types, affordable homes and provide homes for younger generations. The sites have the benefit of a masterplan and have the opportunity to be developed independently or brought forward together via a masterplan. The sites are in close proximity to amenities, employment areas, public transport services and have no built structures or trees. FR037B has a number of mature trees surround the site, but the trees are intended to be retained to contribute to the character of the site. There are no constraints on the sites as there is limited flood risk, limited impact on ancient woodland and wildlife, and opportunity to provide strong landscape boundaries. It was highlighted that the location of the sites at the core of the village provides opportunities to enhance the village setting and deliver a green corridor. It was noted that the sites were deemed suitable by Officers, were reserved in the MIR and Draft PLDP and were deemed suitable for residential development during the LDP 2016 Examination). The representee has included Appendices (RD0109.A and RD0109.B) in their representation which provide further detail to support their position (PP0680).

Non-Allocated Site – Bid Site FR037A – Land at Gourdieburn and Non-Allocated Site - Bid Site FR104 – Land South of Laingseat Road

A number of representees have objected to sites that were supported in the Main Issues Report (MIR) as preferred or reserved sites, specifically bid site FR037A and bid site FR104. Representees echo concerns raised in respect of OP1 and OP2 (PP0236, PP0237, PP0270, PP0279 and PP0349). Some representees raised concerns with their scale affecting the character of Potterton, the road network and facilities are insufficient, increased traffic, impact on crime rates, disruption to the community, property de-valuation, impact on wildlife and/or impact on the green space as well as the green belt for which a consultative case has not been made for its development (PP0270, PP0279, PP0349, PP0350 and PP0351).

Non-Allocated Site – Bid Site FR105 – Land East of Manse Road and Non-Allocated Site - Bid Site FR106 – Land East of B999 and North of Potterton

Two representees have objected to MIR bid sites FR105 for 100 homes and FR106 for 100 homes, stating that this land should remain as green belt (PP0480 and PP0490). Concern has been raised that Potterton has limited access to the main transport routes, as well as limited infrastructure and services to service these sites, the scale of these sites

would be out of character with the settlement, and the benefits of the sites are likely to be minimal (PP0480). Another is concerned with road and pedestrian safety, as road and pedestrian access is proposed onto the single track B999 with no pavements. They added that the planning objective for Potterton is to preserve the amenity of the settlement, which would be through use of the green belt policy (PP0490).

Non-Allocated Site – Bid Sites FR120 – Land North and South of Gourdie Park (Site A) and Bid Site – FR121 – Land North of Gourdie Park (Site B), and Bid Site FR122 – Land North of Gourdie Park (Site C)

A representee has requested the allocation of bid sites FR120, FR121 and FR122 for mixed use and housing for the following reasons:

- They are better located than sites OP1 and OP2 as they avoid ancient woodland and surfacing water flooding, promotes sustainable mixed communities, have less negative impact on local road network, create better cohesion with Potterton.
- They will help to contribute to the overall sense of place in the community.
- They would preserve the amenity of the settlement.
- They would provide local employment needs.
- They would support community facilities and services, as per the vision statement.
- They would create a sustainable and cohesive growth plan for the settlement.
- They received support in the MIR in terms of material benefits.
- They would help to create a formal core to the settlements.
- They will not impact on the landscape setting of Potterton due to its landform, woodland and topography.
- They sit within and not outwith the SGA and their accessibility to Aberdeen makes these sites well located to deliver shortfalls in larger allocations.
- There is a wider need for additional housing in the AHMA and new allocations, as the HLA 2019 states 23% of sites are constrained, which is supported in paragraph 5.4 in the PLDP and Table 1 in Appendix 1 that shows a 432 shortfall. The representee has included Appendices (RD0188.A, RD0188.B and RD0188.C) in their representation which provide further detail to support their position (PP1018).

Modifications sought by those submitting representations:

General

Modify the PLDP to undertake further engagement regarding site OP1 and site OP2 and amendment made to the green belt at Potterton (PP0087, PP0104, PP0108, PP0109, PP0110, PP0206, PP0207, PP0209, PP0210, PP0212, PP0214, PP0227, PP0228, PP0229, PP0231, PP0232, PP0233, PP0250, PP0270, PP0278, PP0298, PP0356, PP0361, PP0364, PP0365, PP0370, PP0372, PP0373, PP0407, PP0418, PP0419, PP0449, PP0479, PP0505, PP0508, PP0518, PP0527, PP0528, PP0546, PP0559, PP0586, PP0594, PP0695, PP0771, PP0806, PP0824, PP0830, PP0841, PP0854, PP0858, PP0859, PP0860, PP0864, PP0904, PP0912, PP0913, PP0914, PP0915, PP0916, PP0964, PP0970, PP0982, PP0995, PP1123, PP1157, PP1166, PP1167, PP1171, PP1243, PP1295, PP1305, PP1326 and PP1397).

Modify the PLDP to amend the MIR 2019 Vision to correct the inaccurate statement that the village was originally located along Manse Road and correct statements that state that the settlement has no sense of place and a lack of identity (PP0144, PP0209, PP0210, PP0231, PP0232, PP0273, PP0274, PP0278, PP0336, PP0373, PP0586, PP0594,

PP0854, PP0860, PP0904, PP0913, PP0915 and PP1171).

Modify the PLDP to address the incorrect statement that Manse Road is the main road for the settlement, and state that Panmure Road is the main road (PP0969).

Modify the PLDP to remove the incorrect statement that Potterton has a frequent bus service (PP0969).

Modify the PLDP to correct the inaccurate information regarding the walking distance to the local bus service and the safety implications of active travel as contained within bid submissions for bid sites FR140 and FR141 (PP0646 and PP0648).

Modify the PLDP to undertake a review of the public transport provision within the settlement (PP1155).

Modify the PLDP to correct the inaccurate information regarding the proximity to Ancient Woodland as contained within bid submissions for bid sites FR140 and FR141 (PP0647 and PP0648).

Modify the PLDP to provide clarification on the housing requirement (PP0154, PP0206, PP0207, PP0209, PP0210, PP0212, PP0236, PP0237, PP0280, PP0281, PP0860, PP0904 and PP1326).

Modify the PLDP to provide clarification on Belhelvie Community Council's position on development to the west and to the east of the settlement (PP0206, PP0207, PP0209, PP0210 and PP0212).

Modify the PLDP to undertake a review of the facilities, services and infrastructure serving the area (PP0962).

Settlement Plan

Modify the PLDP to remove the core path (PP1135).

Vision

Modify the PLDP to amend paragraph one from: "Potterton is a small settlement located within the Aberdeen green belt. It is outwith the Aberdeen to Peterhead Strategic Growth Area. The settlement is largely contemporary in nature, with two large 20th century housing estates forming the majority of the housing. A traditional granite church and large areas of green space form the centre of the settlement and remain key to the settlement's sense of place. The settlement has a limited number of services, although it has a local post office and community hall. The use of protected land designations and the application of the green belt policy will contribute to preserving the amenity of the settlement." to read, "Potterton is a small village set in gently rolling farmland and located in the Aberdeen Housing Market and the Aberdeen Green Belt. Potterton is outwith the Aberdeen to Peterhead Strategic Growth Area. The village is dominated by two large housing estates, one comprising wooden bungalows and the other simple mid-20th century bungalows. A small number of traditional granite style cottages are located along the Main Street, along with a traditional granite church and manse house. All housing is 1 – 1 ½ story. The current settlement is surrounded by green belt, while a large protected

area, including playing fields is located within the settlement. The settlement has a limited number of services typical of a small community, including a local shop/post office, a community hall, a pub, a football pitch, tennis court and pavilion, play parks, a seasonal strawberry farm and business units located in the west of the settlement.” (PP0449, PP0560, PP0610, PP0695, PP0858, PP0859, PP0999 and PP1167).

Modify the PLDP to replace the current vision, as it contains several inaccuracies with the following: “Potterton is a small village set in gently rolling farmland and located in the Aberdeen Housing Market and the Aberdeen Green Belt. Potterton is outwith the Aberdeen to Peterhead Strategic Growth Area. The village is dominated by two large housing areas, one comprising wooden bungalows and the other simple mid 20th century bungalows. A small number of traditional granite style cottages are located along the main street, along with a traditional granite church and manse house. All housing is 1-1/2 story. The village is surrounded by green belt, while a large protected area, including playing fields, is located within the settlement. The village has a limited number of services typical of a small community, including a pub, a community hall, a shop/Post Office, and business units located in the west of the settlement. The planning objective is to preserve the amenity of the village.” (PP0853, PP0856 and PP0995).

Modify the PLDP to amend the first sentence of the first paragraph of the Vision to refer to the ‘Aberdeen Greenbelt’ (PP0638, PP0650, PP0832).

Modify the PLDP to amend the first paragraph from “Greenbelt is contributing to reserving the village amenity with internal features providing protection.”, to read, “Greenbelt protecting the amenity of the village and settlement to conserve the setting” (PP0653 and PP0832).

Modify the PLDP so that the last sentence of the first paragraph in the Vision is amended to read, “The planning objective for the settlement is to preserve the amenity of the village which shall be achieved through the use of protected designations and the use of the Green Belt policy” (PP0832 and PP0932).

Modify the PLDP to provide clarification on the statement within the Vision that reads, “The use of protected land designations and the application of the green belt policy will contribute to preserving the amenity of the settlement” (PP0645 and PP1160).

Modify the PLDP to amend the last sentence of the first paragraph of the vision to remove “contribute to” so that it reads, “The planning objective for the settlement is to preserve the amenity of the village, which shall be achieved through the use of protected land designations and through the application of the greenbelt policy” (PP0638, PP0781, PP0797, PP0798, PP0799, PP0800, PP0801, PP0802, PP0860, PP0904, PP1135, PP1158 and PP1401).

Modify the PLDP to remove paragraph two: “The community have a desire for a new community hall in the settlement to supplement the Forsyth Hall Men’s Shed. Likewise, the Community Council identified a preference for small business units near to the existing business land.” (PP0514, PP0552, PP0560, PP0610, PP0638, PP0652, PP0860, PP0904 and PP1153).

Modify the PLDP to amend the third sentence of the first paragraph to remove reference to the settlement being “contemporary” (PP0561, PP0610, PP0638, PP0651, PP0781, PP0797, PP0798, PP0799, PP0800, PP0801, PP0802, PP0854, PP0857, PP0860,

PP0904, PP0963, PP1135, PP1157 and PP1167).

Modify the PLDP to amend the third sentence of the first paragraph to remove the statement “The settlement is largely contemporary in nature” (PP0932 and PP1401).

Modify the PLDP to amend the third sentence of the first paragraph to replace the word ‘contemporary’ with ‘rural’, and remove the word ‘large’, so the sentence reads, “The settlement is largely rural in nature, with two 20th century housing estates forming the majority of housing” (PP1154).

Modify the PLDP to amend the Vision to correct the inaccuracies that describe Potterton as a predominantly mid-20th century development settlement (PP0594).

Modify the PLDP to amend the fifth sentence of the first paragraph of the Vision to insert the word ‘shop’, to read, “The settlement has a limited number of services, although it has a local post office, shop and community hall” (PP1154).

Modify the PLDP to ensure that the vision notes that “The village consists of 2 large housing estates and is surrounded by green belt and includes a local shop, post office, public house, playing fields, football pitch, tennis court, community hall and a small selection of business units” (PP0824).

Modify the PLDP to amend the Vision to remove the first two sentences, “Potterton is a small settlement located within the Aberdeen green belt. It is outwith the Aberdeen to Peterhead Strategic Growth Area.” and replace with, “Potterton is a small settlement inset within the Aberdeen green belt and the Aberdeen to Peterhead Strategic Growth Area, as well as the Energetica Corridor.” (PP0599, PP0744, PP1390 and PP1403).

Modify the PLDP to remove reference to the community hall and business units in the vision (PP0781, PP0797, PP0798, PP0799, PP0800, PP0801, PP0802, PP0850, PP0854, PP0855, PP0856, PP0857, PP1135, PP1158 and PP1160).

Modify the PLDP to remove reference to the community hall in the Vision (PP0647).

Modify the PLDP to remove reference to business units in the vision (PP0886, PP0887 and PP1401).

Modify the PLDP to remove reference to the Forsyth Hall Men’s Shed in the Vision (PP0560, PP0647, PP0648, PP0824, PP0856, PP0858, PP0859, PP0860, PP0886, PP0887, PP0904, PP0932 and PP1401).

Modify the PLDP to provide clarification on engagement undertaken on the desire for a new community hall within the settlement (PP0932).

Flood Risk

Modify the PLDP to remove the second bullet point from the ‘Flood Risk’ section and incorporate some of the text into the first bullet point to read: “Parts of OP1 and OP2...adjacent to the sites. There are also large areas of surface water flooding on both sites. Flood Risk Assessments will be required” (see RD0214.B) (PP1219).

Modify the PLDP to make reference to 'a large watercourse' instead of 'a small watercourse' (PP0781, PP0797, PP0798, PP0799, PP0800, PP0801, PP0802, PP0856, PP0860 and PP0904).

Modify the PLDP to note under the 'Flood Risk' section that "OP1 and OP2 lie within SEPA's 1 in 200 year flood risk area and are located outwith the boundary of the settlement of Potterton. Therefore these areas are not suitable for development (PP0763).

Modify the PLDP to remove the 'Flood Risk' section (PP0886 and PP0887).

Services and Infrastructure

Modify the PLDP to amend the 'Strategic drainage and water supply' bullet point to add an additional sentence, after the third sentence that reads: "A Drainage Impact Assessment may be requested" (PP0272).

Modify the PLDP to provide clarification on the capacity of the pumping station serving Potterton (PP0369).

Modify the PLDP to remove the strategic transportation and strategic drainage and water supply sections (PP0886 and PP0887).

Site OP1 – Land north of Denview Road

Modify the PLDP to amend the allocation summary for site OP1 to state the 172 homes is the maximum permitted (PP0468, PP0471, PP0529, PP0534, PP0535, PP0536, PP0567, PP0568, PP0569, PP0574, PP0576, PP0579, PP0582, PP0583, PP0584, PP0585, PP0637, PP0700, PP0701, PP0702, PP0703, PP0704, PP0705, PP0706, PP0707, PP0708, PP0709, PP0710, PP0711, PP0715, PP0721, PP0729, PP0730, PP0757, PP0818, PP0917, PP0919, PP0938, PP0939, PP0958, PP0960, PP0961, PP1005, PP1006, PP1007, PP1015, PP1017, PP1168, PP1242, PP1278 and PP1395).

Modify the PLDP to amend the allocation summary for site OP1 to remove the text: "A buffer strip will be required adjacent to the watercourse on the western boundary of the site which should be integrated positively into the development. Enhancement of this straightened watercourse through re-naturalisation and removal of any redundant features will require to be investigated" (see RD0214.B) (PP1219).

Modify the PLDP to amend the allocation summary for site OP1 to include the text: "Provision for active travel is required" after the final sentence in the second paragraph (PP1300).

Modify the PLDP to provide clarification on the impact that the development will have on the wildlife at site OP1 (PP0238).

Modify the PLDP to provide clarification on the viability of the required community facility on site OP1 (PP0671).

Modify the PLDP to remove the first three sentences of the first paragraph from the allocation summary for site OP1 and replace with: "This is a new allocation. The site is a

logical extension to the northeast of the settlement and is located close to local businesses, public transport and existing footpaths. A Masterplan will be required for the delivery of the site which should leave a landscaped buffer around Woodside Cottage.” (PP0599, PP0744, PP1390 and PP1403).

Modify the PLDP to amend the allocation summary for site OP1 to include a fuller description of the site’s attributes and potential (PP0599).

Modify the PLDP to remove the Ancient Woodland as a provision for open space from the allocation summary for site OP1 (PP0932 and PP1401).

Modify the PLDP to remove site OP1 (PP0222, PP0294, PP0366, PP0367, PP0510, PP0512, PP0513, PP0548, PP0550, PP0551, PP0824 and PP0845).

Modify the PLDP to amend the allocation summary of site OP1 to clarify who would maintain the fences and two paths next to properties along Denview Road (PP0511, PP0549).

Modify the PLDP to amend the allocation summary of site OP1 to require the developer to provide a buffer between the development and the ancient woodland and ensure their protection from human disturbance (PP0510 and PP0548).

Modify the PLDP to exclude the ancient woodland from the allocation (PP0510 and PP0548).

Modify the PLDP to provide clarification as to the justification for the proposed development being located in the green belt (PP0294).

Modify the PLDP to remove site OP1 and identify an alternative site with the Balmedie Primary School Catchment area in the SGA (PP1043).

Site OP2 – Land north West of Denview Road

Modify the PLDP to amend the allocation summary for site OP2 to state the 61 homes are the maximum permitted (PP0468, PP0471, PP0529, PP0534, PP0535, PP0536, PP0567, PP0568, PP0569, PP0574, PP0576, PP0579, PP0582, PP0583, PP0584, PP0585, PP0637, PP0700, PP0701, PP0702, PP0703, PP0704, PP0705, PP0706, PP0707, PP0708, PP0709, PP0710, PP0711, PP0715, PP0721, PP0729, PP0730, PP0757, PP0818, PP0917, PP0919, PP0938, PP0939, PP0958, PP0960, PP0961, PP1005, PP1006, PP1007, PP1015, PP1017, PP1168, PP1242, PP1278 and PP1395).

Modify the PLDP to amend the allocation summary for site OP2 to state that the development provides connection to the footpath to the south of the site that links Kirkhill Gardens (Middleton of Potterton) with the Stead Inn on Manse Road (PP0468, PP0471, PP0529, PP0534, PP0535, PP0536, PP0567, PP0568, PP0569, PP0574, PP0576, PP0579, PP0582, PP0583, PP0584, PP0585, PP0637, PP0700, PP0701, PP0702, PP0703, PP0704, PP0705, PP0706, PP0707, PP0708, PP0709, PP0710, PP0711, PP0715, PP0721, PP0729, PP0730, PP0757, PP0818, PP0917, PP0919, PP0938, PP0939, PP0958, PP0960, PP0961, PP1005, PP1006, PP1007, PP1015, PP1017, PP1168, PP1242, PP1278 and PP1395).

Modify the PLDP to amend the allocation summary for site OP2 to include the text: “Provision for active travel is required” after the final sentence in the second paragraph (PP1300).

Modify the PLDP to amend the allocation summary for site OP2 to add text to the end of the third sentence of the first paragraph to read: “A Masterplan will be required for the delivery of the site, which should incorporate and enhance the existing footpath between Kirkhill Gardens and The Stead Inn.” (PP0599, PP0744, PP1390 and PP1403).

Modify the PLDP to amend the allocation summary for site OP2 to include a fuller description of the site’s attributes and potential (PP0599).

Modify the PLDP to remove site OP2 and identify an alternative site with the Balmedie Primary School Catchment area in the SGA (PP1042).

Site OP1 – Land north of Denview Road and Site OP2 – Land north West of Denview Road

Modify the PLDP to provide clarification on whether a decision has already been taken on the inclusion of site OP1 and site OP2 in the PLDP (PP0586).

Modify the PLDP to provide clarification on the future capacity of Bridge of Don Academy for additional pupils arising from the proposed developments at sites OP1 and OP2 (PP0104).

Modify the PLDP to provide clarification of provision of a new primary school within Potterton and its funding arrangement (PP0270 and PP1337) and proposed location (PP0270).

Modify the PLDP to provide clarification on whether there would be sufficient water and sewage infrastructure to accommodate additional housing for sites OP1 and OP2 (PP0104).

Modify the PLDP to provide clarification on the impact that the proposed sites would have on the current crime rate within the settlement (PP0141).

Modify the PLDP to provide clarification on whether additional policing will be required as a result of the increased population from the development (PP0229).

Modify the PLDP to include a requirement at sites OP1 and OP2 for additional trees to be planted in the surrounding area (PP0151).

Modify the PLDP to include a requirement for suitable shrubs, trees, and grassy areas at sites OP1 and OP2 (PP0152).

Modify the PLDP to provide clarification on the delivery and size of a new village hall on site OP1 and OP2 (PP0151).

Modify the PLDP to include a requirement for a suitable community centre at sites OP1 and OP2 (PP0152).

Modify the PLDP to ensure that the archaeological remains at sites OP1 and OP2 are protected (PP0151).

Modify the PLDP to include a requirement for suitable footpaths and pavements along both sides of Main Road running between sites OP1 and OP2 (PP0152).

Modify the PLDP to provide clarification on the current condition of the local road network and whether it would be able to support the proposed development at sites OP1 and OP2 (PP0172).

Modify the PLDP to amend the allocation summary for site OP1 and site OP2 to state that the proposed homes must not have windows overlooking properties and that consideration should be given to making the border a green space (PP0238).

Modify the PLDP to provide clarification on funding/contributions towards infrastructure enhancements to support the developments (PP0270).

Modify the PLDP to provide clarification on funding/contributions towards community, sports, recreation, waste and recycling and health care facilities (PP0647).

Modify the PLDP to provide clarification on whether a Flood Risk Assessment would be undertaken for site OP1 and site OP2 (PP0648).

Modify the PLDP to provide clarification on whether a Transport Assessment would be undertaken for site OP1 and site OP2 (PP0648).

Modify the PLDP to consider self-build ecological housing on site OP1 and site OP2 (PP0270).

Modify the PLDP to direct development to Balmedie rather than Potterton (PP0484).

Modify the PLDP to add a new section to note that OP1 and OP2 are contaminated: "Areas OP1 and OP2 are constrained as contaminated as recorded in the Cadcorp GIS database. Therefore the sites are unsuitable for development" (PP0992).

Modify the PLDP to consider extending the green belt to the north of Potterton towards Belhelvie (PP0607).

Modify the PLDP to ensure access into the site (not specified) is appropriate (PP1337).

Modify the PLDP to amend the allocation summary of site OP1 to remove from the third sentence of paragraph one, "and incorporated into the open space provision as well as the open space enhancing biodiversity." (PP1135).

Modify the PLDP to amend the allocation summary of site OP1 to remove the fourth sentence of paragraph one, "The site should provide connectivity to the existing settlement." (PP1135).

Modify the PLDP to amend the allocation summary of site OP1 to remove the last sentence of paragraph one, "The housing design and layout should be in keeping with other nearby residential development." (PP1135).

Modify the PLDP to amend the allocation summary of site OP2 to remove the fourth sentence of paragraph one, “The site should deliver biodiversity enhancement through the open space provision and should provide connectivity to the existing settlement.” (PP1135).

Modify the PLDP to amend the allocation summary of site OP2 to remove the last sentence of paragraph one, “The housing design and layout should be in keeping with other nearby residential development.” (PP1135).

Modify the PLDP to amend the allocation summary of sites OP1 and OP2 to change “should” to “will be connected” in relation to connectivity with the settlement (PP1295).

Modify the PLDP to amend the allocation summary for sites OP1 and OP2 to remove the word “logical” from the allocation summary when considering the housing extension and replace with a more natural word such as “possible” (PP1295).

Modify the PLDP to amend site OP1 and site OP2 to restrict development on the sites to only small number of homes (PP0256, PP0257, PP0258, PP0259, PP0260, PP0261, PP0262, PP0263, PP0264, PP0282, PP0283, PP0284, PP0285, PP0286, PP0287, PP0289 and PP0291).

Modify the PLDP to reduce the amount of development sites within the settlement (PP0292).

Modify the PLDP to reduce the scale of site OP1 and OP2 or change them to mixed use to include any new facilities (PP0343).

Modify the PLDP to remove site OP1 and OP2 but consider the potential for their inclusion within future Local Development Plans should all concerns be resolved (PP0645, PP0646, PP0647 and PP0648).

Modify the PLDP to remove site OP1 and site OP2 (PP0087, PP0091, PP0094, PP0095, PP0096, PP0101, PP0103, PP0104, PP0108, PP0109, PP0110, PP0130, PP0131, PP0132, PP0133, PP0134, PP0141, PP0142, PP0143, PP0144, PP0151, PP0153, PP0154, PP0157, PP0160, PP0169, PP0172, PP0203, PP0204, PP0205, PP0206, PP0207, PP0209, PP0210, PP0211, PP0212, PP0214, PP0215, PP0218, PP0220, PP0227, PP0228, PP0229, PP0231, PP0232, PP0233, PP0236, PP0237, PP0238, PP0249, PP0250, PP0255, PP0256, PP0257, PP0258, PP0259, PP0260, PP0261, PP0262, PP0263, PP0264, PP0270, PP0273, PP0274, PP0278, PP0279, PP0280, PP0281, PP0282, PP0283, PP0284, PP0285, PP0286, PP0287, PP0289, PP0290, PP0291, PP0292, PP0298, PP0299, PP0311, PP0312, PP0324, PP0325, PP0336, PP0349, PP0350, PP0351, PP0356, PP0361, PP0362, PP0363, PP0364, PP0365, PP0368, PP0369, PP0370, PP0371, PP0372, PP0373, PP0406, PP0407, PP0408, PP0409, PP0418, PP0419, PP0449, PP0479, PP0480, PP0483, PP0484, PP0487, PP0488, PP0489, PP0490, PP0491, PP0505, PP0508, PP0509, PP0518, PP0519, PP0527, PP0528, PP0540, PP0546, PP0547, PP0561, PP0581, PP0586, PP0587, PP0594, PP0607, PP0610, PP0638, PP0645, PP0646, PP0647, PP0648, PP0650, PP0655, PP0656, PP0657, PP0671, PP0680, PP0695, PP0771, PP0781, PP0788, PP0797, PP0798, PP0799, PP0800, PP0801, PP0802, PP0805, PP0806, PP0807, PP0819, PP0824, PP0829, PP0830, PP0833, PP0841, PP0847, PP0848, PP0850,

PP0852, PP0853, PP0854, PP0856, PP0857, PP0858, PP0859, PP0860, PP0862, PP0864, PP0870, PP0872, PP0874, PP0886, PP0887, PP0897, PP0904, PP0912, PP0913, PP0914, PP0915, PP0916, PP0930, PP0932, PP0964, PP0966, PP0967, PP0968, PP0971, PP0982, PP0987, PP0989, PP0992, PP1003, PP1123, PP1128, PP1135, PP1146, PP1147, PP1148, PP1149, PP1157, PP1158, PP1160, PP1166, PP1167, PP1171, PP1190, PP1243, PP1295, PP1303, PP1304, PP1305, PP1324, PP1325, PP1326, PP1327, PP1328, PP1329, PP1330, PP1332, PP1333, PP1334, PP1335, PP1336, PP1397 and PP1401).

Modify the PLDP to reinstate the green belt designation at the location of site OP1 and site OP2 (PP0091, PP0094, PP0095, PP0096, PP0101, PP0103, PP0104, PP0107, PP0108, PP0109, PP0110, PP0132, PP0141, PP0142, PP0143, PP0144, PP0151, PP0153, PP0157, PP0169, PP0172, PP0203, PP0204, PP0205, PP0206, PP0207, PP0209, PP0210, PP0211, PP0212, PP0214, PP0215, PP0220, PP0227, PP0228, PP0229, PP0231, PP0232, PP0233, PP0236, PP0237, PP0249, PP0250, PP0255, PP0256, PP0270, PP0273, PP0274, PP0278, PP0279, PP0280, PP0281, PP0282, PP0283, PP0284, PP0285, PP0286, PP0287, PP0289, PP0290, PP0291, PP0292, PP0298, PP0299, PP0311, PP0312, PP0324, PP0336, PP0356, PP0361, PP0362, PP0364, PP0365, PP0368, PP0369, PP0370, PP0371, PP0372, PP0373, PP0409, PP0418, PP0419, PP0449, PP0479, PP0480, PP0483, PP0484, PP0487, PP0488, PP0490, PP0491, PP0505, PP0508, PP0518, PP0519, PP0527, PP0528, PP0540, PP0546, PP0559, PP0561, PP0586, PP0587, PP0594, PP0607, PP0610, PP0638, PP0645, PP0646, PP0647, PP0648, PP0650, PP0695, PP0771, PP0781, PP0788, PP0797, PP0798, PP0799, PP0800, PP0801, PP0802, PP0805, PP0806, PP0807, PP0819, PP0824, PP0829, PP0830, PP0847, PP0850, PP0852, PP0853, PP0854, PP0856, PP0857, PP0858, PP0859, PP0860, PP0862, PP0870, PP0872, PP0874, PP0886, PP0887, PP0897, PP0904, PP0912, PP0913, PP0914, PP0915, PP0916, PP0930, PP0932, PP0966, PP0982, PP0987, PP0989, PP1002, PP1003, PP1123, PP1128, PP1135, PP1146, PP1147, PP1148, PP1149, PP1157, PP1158, PP1160, PP1161, PP1166, PP1167, PP1171, PP1190, PP1243, PP1303, PP1304, PP1305, PP1324, PP1326, PP1328, PP1329, PP1332, PP1333, PP1334, PP1335, PP1336, PP1397 and PP1401).

Non-Allocated Site – Bid Site FR037A – Land at Gourdieburn and Non-Allocated Site – Bid Site FR037B – Land At Gourdieburn

Modify the PLDP to allocate bid site FR037A for 45 homes and bid site FR037B for 90 homes (PP0680).

Non-Allocated Site – Bid Site FR037A – Land at Gourdieburn and Non-Allocated Site - Bid Site FR104 – Land South of Laingseat Road

Modify the PLDP to remove bid site FR037A and bid site FR104 (PP0236, PP0237, PP0270 and PP0349).

Non-Allocated Site – Bid Site FR105 – Land East of Manse Road and Non-Allocated Site - Bid Site FR106 – Land East of B999 and North of Potterton

Modify the PLDP to remove bid site FR105 and bid site FR106 (PP0480 and PP0490).

Non-Allocated Site – Bid Sites FR120 – Land North and South of Gourdie Park (Site A)

and Bid Site – FR121 – Land North of Gourdie Park (Site B), and Bid Site FR122 – Land North of Gourdie Park (Site C)

Modify the PLDP to allocate bid sites FR120, FR121 and FR122 for mixed use and housing development (PP1018).

Summary of responses (including reasons) by planning authority:

General

The Council notes the representee’s comment that Potterton is not part of the Energetica Corridor. However, Map 17 in the Aberdeenshire Local Development Plan – Supplementary Guidance – Energetica published with the LDP 2017 clearly shows that Potterton is within the Energetica Corridor (AD0034.I, page 20). Please see Schedule 4 – Issue 2 – Section 5 The Spatial Strategy for further discussion on this matter. No change is required.

Comments raised regarding engagement are noted, however these matters have been addressed in drawing up the Conformity with Participation Statement in which it is considered that the Council’s engagement and notification process has been in line with statutory requirements. The conduct of the Community Council in engaging with the community for which it represents is considered to be a separate matter and in terms of the Plan-making process, the Council have engaged with Community Councils as a statutory consultee, including Belhevie Community Council from the outset. With regard to the proposed OP1 and OP2 sites, statutory pre-application consultation will be required by any applicant in bringing the site forward. Please see Report of Conformity with Participation Statement – Full Report for further discussion on this matter. No change is required.

The comments raised regarding the inaccuracies contained within the MIR Vision are noted. However, the Vision within the Potterton Settlement Statement (AD0041.F, page 476), makes no reference to the original settlement being located along Manse Road, this is stated in the MIR only (AD0038.D, page 83) and it is not considered that this description has been used to allow for a central hub allowing for mass development. Furthermore, it is not stated that the settlement has no sense of place or identity – rather the MIR has described the character of the settlement and the key elements contributing to its’ identity and settlement. No change is required.

The Council notes the concerns raised that Potterton does not have a frequent bus service and has a lack of public transport provision, but this has not been stated within the settlement statement for Potterton. However, the Council notes that within the allocation summary for site OP1 and site OP2, there is a requirement for public transport infrastructure, and as such public transport provision would be considered in more detail at the planning application stage. No change is required.

Concerns raised regarding the inaccuracies within the bid submissions for bid site FR140 and FR141 (OP1 and OP2) are acknowledged. However, the bid submissions are completed and submitted by the bid proposer (AD0120 and AD0121), and the Council has no remit over what is included in the bid submissions. Each allocation made in the Plan has however been through multiple assessments including the Strategic Flood Risk Assessment (SFRA), Strategic Environmental Assessment (SEA), Development Planning

and Management Transport Appraisal Guidance (DPMTAG), and the Habitats regulations Appraisal (HRA) to ensure the most appropriate sites are allocated for development. No change is required.

The proposed allocations are considered suitable for the settlement as they are of an appropriate scale and location and provide an appropriate level of growth related to local needs and allow for a strategic planned approach to the settlement. Further detail on the housing land requirement is provided in the Schedule 4 Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations.

The Council have no control over the position taken by Belhelvie Community Council at the MIR stage or the at the Proposed Plan stage of the Plan-making process. It is noted that the Community Council showed support for bid sites FR140 (excluding the eastmost parcel of land) and bid site FR141B and indicated that bid site FR141A and bid site FR104 should be reviewed at the mid-term review (AD0118, page 2). No change is required.

The concerns regarding infrastructure provision raised by Belhelvie Community Council are noted. During the preparation of the Plan and through the site assessment process, the requirements for infrastructure were looked at and subsequently the 'Services and Infrastructure' section of the Settlement Statements were populated. This section highlights what, if any, obligations are required for the different forms of development as a result of the allocated sites being delivered. Developer Obligations are sought towards the provision of the necessary infrastructure. They must fairly and reasonably relate in scale to the proposed development and are needed to make the proposed development acceptable in planning terms, all in line with the policy tests contained in Planning Circular 3/2012 (AD0002). No change is required.

Settlement Plan

Core Paths are not provided for through the LDP process but through a separate statutory process as part of producing a Core Paths Plan. The core path that has been included on the settlement map shows the correct location of the core path at this location as indicated in the Council's Core Paths Plan Maps (AD0186). No change is required.

Vision

The Council notes the requests from representees to amend the settlement statement Vision, for reasons which included that it was not considered to be accurate, does not reflect the character of the settlement or the community's wishes, dilutes the importance of the green belt and of protecting the amenity of the settlement. However, the settlement statement Vision has been produced in consultation with the Community Council through the MIR pre-engagement stage (AD0144.B, pages 3-4). The role of the Community Council is to represent the community. As such, through this process it is considered that the Vision is representative of the community's views and aspirations for the settlement. The concerns raised that the wording in the Vision does not work to protect the character, amenity and setting of the settlement and that it dilutes the green belt's importance is noted. However, the Vision states that "The use of protected land designations and the application of the green belt policy will contribute to preserving the amenity of the settlement" (AD0041.F, page 476). This statement is considered to appropriately work to protect the amenity of the settlement – through highlighting both the protected land designations and the green belt policy. Whilst the previous LDP (LDP 2017) stated this in

the context of it being the planning objective for the settlement, it is not considered that this requires to be stated within the Vision in the PLDP. As stated above, the Vision has been finalised in consultation with the Community Council and as such the statement on the preference for small business units near to the existing business land is considered appropriate. No change is required.

It is not considered necessary to amend “green belt” to “Aberdeen green belt” in the Vision. Whilst the Reporter did not consider that changes to the green belt were necessary at the previous LDP Examination, the proposed sites OP1 and OP2 at Potterton are considered to be suitable for the settlement at this time as they are of an appropriate scale and location and provide an appropriate level of growth related to local needs and allow for a strategic planned approach to the settlement. As a result of this, the green belt boundary has been amended in line with the recommendations in the Issues and Actions Papers relating to Issue 7 Shaping Development in the Countryside, Policy R1 Special Rural Areas, that minor changes to the green belt boundary were to be made to account for any new allocations arising from Settlement Issues and Actions papers, where required (AD0040.D, page 63). No change is required.

The Council notes the concern raised that proposed sites OP1 and OP2 contradict the statement in the Vision that reads, “The use of protected land designations and the application of the green belt policy will contribute to preserving the amenity of the settlement”. However, the purpose of the green belt is not to prevent development but ensure development is directed to the most appropriate locations, to protect the character, landscape setting and identity of settlements and to provide access to open space (AD0012, paragraph 49). It is not considered appropriate to demonstrate within the Vision how the proposed sites will preserve the amenity of the settlement. The sites are considered to be a logical extension to the settlement. No change is required.

It is not considered appropriate to remove the word “contemporary” from the Vision, or to replace it with “rural”. Most of the housing within the settlement is not considered to be traditional as such, and “contemporary” is considered an appropriate description of the settlement itself, even if much of the surrounding area is farmland. It is not considered that the Vision, or the use of “contemporary” implies that the settlement has no sense of place, a lack of identity or encourages development - rather it is deemed that the Vision portrays an accurate depiction of the settlement, including its’ form and character. Furthermore, “large” is considered appropriate to describe the housing estates as major housing developments include 50 or more homes, and both housing estates in Potterton include in excess of 50 homes. The descriptor of 20th century housing estates is also considered to be an accurate description within the Vision. No change is required.

The Council note the representee’s request to include “shop” as one of the services within the settlement. The Council confirms that it intends to address the representee’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

However, the representee’s request to include reference to further services within the Vision are not supported as it is considered that an appropriate level of information regarding services and facilities is already included within the Vision. No change is required.

Comments noting that the Vision makes it clear that Potterton is outwith the SGA are

noted. However, requests to remove the first two sentences of the Vision to be replaced with amended text on the SGA and Energetica are not supported. The current built up extent of Potterton is not included within the SGA, and in drawing up the PLDP, the boundary of the SGA was not amended, however given the location of the proposed OP1 and OP2 sites within the SGA, these sites have been listed in Appendix 6 as contributing to the SGA allowances (AD0041.C, Table 2). No change is required.

Potterton is located within the Energetica Corridor as noted above. If the Reporter is minded to make an amendment, then the Council recommend that the Vision is amended to add an additional sentence in the first paragraph, following the second sentence which reads, "Potterton is within the Energetica Corridor and as such will play an important role in providing housing and employment opportunities in line with the Energetica vision which will contribute to transforming the area into a high quality lifestyle, leisure, and global business location.", to ensure consistency with settlement statements for other settlements within the Energetica Corridor.

Requests to remove reference to the Forsyth Hall Men's Shed as it does not exist are noted. The Council confirms that it intends to address the representee's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

As stated above, the settlement statement Vision has been produced in consultation with the Community Council through the MIR pre-engagement stage at which it was indicated that there was a preference for a Community Hall (AD0144.B, pages 3-4).

Flood Risk

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council does not agree with the request to amend reference from "small watercourse" to "large watercourse" in the first bullet point of the 'Flood Risk' section. SEPA have not requested any amendment to the description of the watercourse in the 'Flood Risk' section in their response to the PLDP. As such, it is not considered that this change would be appropriate. No change is required.

The Council does not agree with the requested amendment to wording within the 'Flood Risk' section to note that sites OP1 and OP2 are outwith the settlement boundary and not suitable for development. As a consequence of the allocation of the proposed sites, the settlement boundary has been amended to include the sites within the boundary of the settlement. It is noted within the 'Flood Risk' section that Flood Risk Assessments will be required for the development of the sites, this will be further dealt with at the planning application stage. SEPA has also not objected to the principle of the sites. As such, it is not considered that these sites are unsuitable for development and issues pertaining to flood risk and drainage will be considered in more detail at the planning application stage. No change is required.

The request to remove the 'Flood Risk' section is noted, however the Council does not agree with the requested modification as the sites are proposed allocations within the PLDP and the 'Flood Risk' section contains important information regarding flood risk on the sites. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address Scottish Water's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

As is stated in the 'Strategic drainage and water supply' section of the settlement statement, "There is insufficient capacity at Balmedie Waste Water Treatment Works to treat all sites allocated at Balmedie, Belhelvie, Newburgh and Potterton. Network investigations may be required by new developments in Potterton. A growth project will be initiated once development meets Scottish Water's five growth criteria". Scottish Water has not requested amendment to this text, apart from an additional sentence stating that a Drainage Impact Assessment may be requested. As such, it is considered that this text is up to date at the time of writing and provides clarification on the capacity of the WWTW serving Potterton. Drainage is not considered to be a constraint to development within the settlement, and as is stated within the allocation summary, early engagement with Scottish Water is encouraged, to ensure any issues are resolved early on in the development process. No change is required.

The request to remove the 'Strategic transportation' and 'Strategic drainage and water supply section' is noted, however the Council does not agree with the requested modification as the sites are proposed allocations within the PLDP. Further to this, other proposals for new development may also be submitted for sites within and adjacent to the settlement outwith proposed sites OP1 and OP2. These will require to be appropriately assessed by the Council, in accordance with the relevant policies of the PLDP. In such instances, developer obligations will require to be sought to ensure that development impacts are mitigated against. No change is required.

Site OP1 Land north of Denview Road

Support for the proposed OP1 site is noted. The request to state that 172 homes are the maximum permitted on the site is also noted however is not considered appropriate. As this is a proposed new site that sits within the Aberdeen Housing Market Area, a standard density of 25 homes per hectare has been applied to reach the allocation of 172 homes. In line with Policy H1 Housing Land (AD0041.A, page 41), the number quoted are indicative and at such time that a planning application is submitted for the site, the layout, siting and design may mean that a higher or indeed lower number of dwellings may come forward. The application of a standard density in the Aberdeen Housing Market is intended to provide a degree of certainty for communities on the scale of development that could reasonably be achieved on a site. Further detail on this is provided in the Schedule 4 Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations. No change is required.

Support for the requirement for community facilities to be included on proposed site OP1 is noted. No change is required.

The Council confirms that it intends to address SEPA's comments regarding the allocation summary for site OP1 through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council confirms that it intends to address NatureScot's comments regarding active travel provision within the allocation summary for site OP1 through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The representee's concerns regarding the impact the site would have on wildlife is noted. However, any potential impact on wildlife on the site would be dealt with at the planning application stage, and any planning application submitted on site would require to be in line with Policy E1 Natural Heritage (AD0041.A, pages 57-58). No change is required.

As stated in the settlement statement Vision, the community have a desire for a new community hall. As such, it was considered that bid site FR140 (proposed site OP1) could accommodate provision of a site for new community facilities as the site is well connected to the rest of the settlement, with a good footpath network (AD0040.D, page 87). No change is required.

The amendments to the allocation text are not supported. The amenity of any neighbouring properties will be accounted for at a planning application stage with proposals being assessed against relevant policies within the Plan. As such, it is not considered that this requires to be stated within the allocation summary. It is also considered that the allocation text contains a sufficient and appropriate amount of information regarding the proposed site and thus a fuller description is not required to be articulated in the allocation summary. No change is required.

Concern regarding land ownership issues in relation to the Ancient Woodland are noted. However, this matter would be addressed as the site comes forward for development in discussion with the Council's Development Management Team. The Council's Delivery Team would also be able to facilitate any discussions required between parties and work with them to bring the site forward. No change is required.

The Council does not support the removal of site OP1. A number of concerns have been noted with regards to infrastructure, including road infrastructure, school provision, WWTW provision, health care and local services. These are all covered under 'Services and Infrastructure'; which notes what Developer Obligations are required as a result of a development being delivered. These requirements would also be discussed again between the Council's Developer Obligations Team, the developer and any relevant stakeholder upon submission of a planning application. It is therefore not considered to be a barrier to development. Additionally, any impacts on the amenity of neighbouring properties will be addressed at a planning application stage with proposals being assessed against relevant policies within the Plan. It is also noted that the allocation summary states that a Drainage Impact Assessment will be required for the site (AD0041.F, page 478). Concerns relating to pollution during and post construction are noted, however this is something that can be managed through a Construction Management Plan (CTMP) which is also looked at when a planning application is submitted. Maintenance of fencing and pathways post completion is not a matter for the PLDP but may be considered as part of any planning application assessment. No change is required.

The concerns raised relating to the impact on the visual amenity and the character of Potterton are noted. However, it is considered that the site is a logical extension of the settlement, and as stated within the allocation summary the housing design and layout should be in keeping with other nearby residential development (AD0041.F, page 478).

Additionally, the layout, siting and design of the site would be required to demonstrate the six qualities of successful places in line with Policy P1 Layout, Siting and Design (AD0041.A, page 47). This would be assessed at the masterplan/planning application stage. The concerns relating to loss of view are noted, however this is not a material planning consideration. No change is required.

Concerns raised regarding Potterton's status within the SGA are noted, as are the issues raised that the settlement has no direct access onto the AWPR is noted. A decision was taken by the Formartine Area Committee historically that Potterton should be specifically excluded from the SGA. However, with improvements to the A90 and the Aberdeen Western Peripheral Route completion, connectivity along the Aberdeen to Peterhead SGA has evolved since this decision and since the time of the 2016 Examination Report. The proposed allocations of site OP1 and site OP2 at Potterton are thus considered to be of an appropriate scale and in an appropriate location. The SGA has not been amended to include additional settlements, but sites allocated still fall within this area. Please see Schedule 4 – Issue 2 – Section 5 The Spatial Strategy for further discussion on this matter. The existing settlement boundary of Potterton is, by road, 2,220m from the A90/AWPR junction. As stated within the allocation summary for site OP1, access onto the C Class Road located to the northeast of the site should be considered. This C Class Road provides access to the Blackdog Junction onto the AWPR. As stated under the 'Strategic transportation' section of the settlement statement, a route assessment of the B999 corridor to Bridge of Don and the C-classified corridor which runs to the northeast of the settlement to the Blackdog Junction, including the AWPR roundabout, should be provided to determine potential improvement works required to accommodate the overall expansion of Potterton. No change is required.

The concerns regarding the loss of green belt land are noted. It is stated in the recommendations in the Issues and Actions Papers relating to Issue 7 Shaping Development in the Countryside, Policy R1 Special Rural Areas, that minor changes to the green belt boundary were to be made to account for any new allocations arising from Settlement Issues and Actions papers, where required (AD0040.D, page 63). In light of this, as it was recommended that FR140 and FR141A (OP1) and FR141B (OP2) both be allocated in the Proposed Local Development Plan in the settlement Issues and Actions Papers, the green belt boundary has been amended to account for these new allocations. The purpose of the green belt is not to prevent development but ensure development is directed to the most appropriate locations, to protect the character, landscape setting and identity of settlements and to provide access to open space (AD0012, paragraph 49). It is maintained that the site is an appropriate extension to Potterton and as discussed above, it is not considered that the proposed site will have an impact on the character of the settlement. Further to this, there is a requirement within the allocation summary for open space provision, which includes preserving and incorporating the Ancient Woodland into the open space as well as enhancing biodiversity. It is considered that whilst the allocation of this site does result in a loss of green belt land, it allows for a strategic and planned approach for the development of a settlement within the green belt. No change is required.

Concerns regarding the possibility of contamination of the site are noted, however this was assessed at the bid site assessment stage of the Plan-making process and is not considered to be a major constraint to the development of the site. If the site was considered to have potential contamination issues, the matter would be for further discussion at such a time that detailed proposals come forward for the proposed

development and the risk would be managed through Policy P4 Hazardous and Potentially Polluting Development and Contaminated Land of the Plan (AD0041.A, pages 50-51). No change is required.

The Plan has a presumption in favour of retaining woodland on development sites in line with Policy PR1 Protecting Important Resources (AD0041.A, page 75). As is stated within the allocation summary, the Ancient Woodland at the east of the site should be preserved, and its incorporation into the open space provision allows for the enhancement of biodiversity on the site. No change is required.

It is not considered that an alternative allocation should be made within the Balmedie Primary School catchment area within the Blackdog to Ellon SGA. The proposed allocation is located within the SGA. Additionally, is considered to be suitable for the settlement as it is of an appropriate scale and location and provides an appropriate level of growth related to local needs, whilst allowing for a strategic planned approach to the settlement. Further detail on the housing land requirement is provided in the Schedule 4 Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations.

In light of the above, the Council does not support the removal of site OP1. No change is required.

Site OP2 – Land north West of Denview Road

Support for the proposed OP2 site is noted. The request to state that 61 homes are the maximum permitted on the site is also noted however is not considered appropriate. As this is a proposed new site that sits within the Aberdeen Housing Market Area, a standard density of 25 homes per hectare has been applied to reach the allocation of 172 homes. In line with Policy H1 Housing Land (AD0041.A, page 41), the numbers quoted are indicative and at such time that a planning application is submitted for the site, the layout, siting and design may mean that a higher or indeed lower number of dwellings may come forward. The application of a standard density in the Aberdeen Housing Market is intended to provide a degree of certainty for communities on the scale of development that could reasonably be achieved on a site. Further detail on this is provided in the Schedule 4 Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations. The request that the development provides connection to the footpath to the south of the site is noted. However, active travel provision will be considered in more detail at the masterplanning and subsequent planning application stage. Specifically, Policy P1 Layout, Siting and Design states that development design will only be approved that demonstrate the six qualities of successful places, one of which requires developments to be well connected (AD0041.A, page 48). No change is required.

Comments supporting the site due to its potential to link the two disparate poles of the settlement are noted. No change is required.

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address NatureScot's comments regarding active travel provision within the allocation summary for site OP2 through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

As noted above, active travel provision will be considered in more detail at the masterplanning and subsequent planning application stage. Specifically, Policy P1 Layout, Siting and Design states that development design will only be approved that demonstrate the six qualities of successful places, one of which requires developments to be well connected (AD0041.A, page 48). With regards to the request that a fuller description of the site's attributes should be articulated in the allocation summary, the Council does not support this request. It is considered that the allocation summary contains a sufficient and appropriate amount of information, and the amount of information contained within the allocation summary is consistent with other allocation summaries throughout the PLDP. No change is required.

The Council does not support the removal of site OP2. Bid site FR141b was identified as a site with future for potential development post 2031 in the MIR and was not preferred for immediate development (AD0038.D, page 85). However, on consideration at the Special Meeting of Formartine Area Committee, the Committee recommended that this site was allocated in the PLDP (AD0141, page 14). It is not considered that an alternative allocation should be made within the Balmedie Primary School catchment area within the Blackdog to Ellon SGA. The proposed allocation is located within the SGA. Additionally, it is considered to be suitable for the settlement as it is of an appropriate scale and location and provides an appropriate level of growth related to local needs, whilst allowing for a strategic planned approach to the settlement. Further detail on the housing land requirement is provided in the Schedule 4 Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations. No change is required.

Concerns raised regarding Potterton's status within the SGA are noted, as are the issues raised that the settlement has no direct access onto the AWPR is noted. A decision was taken by the Formartine Area Committee historically that Potterton should be specifically excluded from the SGA. However, with improvements to the A90 and the Aberdeen Western Peripheral Route completion, connectivity along the Aberdeen to Peterhead SGA has evolved since this decision and since the time of the 2016 Examination Report. As such, the proposed allocations of site OP1 and site OP2 at Potterton are considered to be of an appropriate scale and in an appropriate location. The SGA has not been amended to include additional settlements, but sites allocated still fall within this area. Please see Schedule 4 – Issue 2 – Section 5 The Spatial Strategy for further discussion on this matter. The existing settlement boundary of Potterton is, by road, 2,220m from the A90/AWPR junction. As stated within the allocation summary for site OP2, access onto the unclassified Manse Road should be considered jointly with OP1. Manse Road adjoins the C Class Road at the north of the settlement which provides access to the Blackdog Junction onto the AWPR. As stated under the 'Strategic transportation' section of the settlement statement, a route assessment of the B999 corridor to Bridge of Don and the C-classified corridor which runs to the northeast of the settlement to the Blackdog Junction, including the AWPR roundabout, should be provided to determine potential improvement works required to accommodate the overall expansion of Potterton.

A number of concerns have been noted with regards to infrastructure, including road infrastructure and WWTW provision. These are covered under 'Services and Infrastructure'; which notes what Developer Obligations are required as a result of a development being delivered. These requirements would also be discussed again between the Council's Developer Obligations Team, the developer and any relevant stakeholder upon submission of a planning application. It is therefore not considered to be a barrier to development. No change is required.

Site OP1 – Land north of Denview Road and Site OP2 – Land north West of Denview Road

The Council notes the support expressed for the allocation of the proposed OP1 and OP2 sites. No change is required.

The representee's comments regarding improved public transport to Aberdeen City as a positive result of the proposed development are noted. No change is required.

The comments from Belhelvie Community Council stating that they have no substantive objections to the proposed sites but acknowledge that there is some objection to the extension of the settlement are noted. Additionally, the Community Council's comments regarding their attempts made at engagement are also noted, however the way in which the Community Council engages with its citizens is covered under the Community Council Scheme of Establishment or the Community Council Code of Conduct and is not a matter for the PLDP. No change is required.

Site OP1 and site OP2 are proposed allocations within the PLDP. Site OP1 (bid site FR140 and FR141a) was considered to be an Officer's preference within the MIR 2019 (AD0038.D, page 84), and was recommended to be allocated as an opportunity site for 172 homes and community facilities within the PLDP (AD0040.D, pages 87 and 88). Site OP2 (bid site FR141b) was identified as a site with future for potential development post 2031 in the MIR, however, was not preferred for immediate development (AD0038.D, page 85). However, on consideration at the Special Meeting of Formartine Area Committee, the Committee recommended that the sites (FR140, FR141a and FR141b) were to be allocated in the PLDP (AD0141, page 14). This was subsequently approved at Full Council (AD0104, pages 14 and 15), and therefore the allocation of site OP1 for 172 homes and community facilities and site OP2 for 61 homes forms the settled view of the Council. No change is required.

With regards to concerns regarding education capacity and facilities, contributions are sought towards the provision of the necessary infrastructure, including primary education. Contributions within the LDP must fairly and reasonably relate in scale to the proposed development and be needed to make the proposed development acceptable in planning terms, in line with the policy tests contained in Planning Circular 3/2012 (AD0002). These tests have been carried out when looking through what is required for each of the sites allocated within the LDP. It is worth noting that Policy RD2 Developer Obligations notes that a review will be undertaken of the need for and scale of any contribution in the light of circumstances at the time the planning application is made (AD0041.A, page 92). This will ensure that relevant contributions can be taken to allow for the necessary solution to be implemented. It is noted that Bridge of Don Academy is not forecasted to go over capacity within the next 4 years (AD0095, page 7). As highlighted by a representee, the settlement statement does not indicate requirements for additional secondary school capacity, however the settlement statement has been developed in consultation with the Council's Learning Estates Team and is deemed appropriate. No change is required.

As is stated in the 'Strategic drainage and water supply' section of the settlement statement, "There is insufficient capacity at Balmedie Waste Water Treatment Works to treat all sites allocated at Balmedie, Belhelvie, Newburgh and Potterton. Network investigations may be required by new developments in Potterton. A growth project will be

initiated once development meets Scottish Water's five growth criteria". Scottish Water has not requested amendment to this text, apart from an additional sentence stating that a Drainage Impact Assessment may be requested. As such, it is considered that this text is up to date at the time of writing and provides clarification on the capacity of the WWTW serving Potterton. Drainage is not considered to be a constraint to development within the settlement, and as is stated within the allocation summary, early engagement with Scottish Water is encouraged, to ensure any issues are resolved early on in the development process. No change is required.

The impact on crime rates and additional policing requirements are not a matter considered to be within the remit of the PLDP. No change is required.

The provision of trees, shrubs and grassy areas would be dealt with at the planning application stage when determining the type and provision of open space and landscaping at the sites, in line with Policy P2 Open Space and Access in New Development (AD0041.A, page 49). No change is required.

The OP1 site has been allocated for 172 homes and community facilities, and as such it would be expected that community facilities would be delivered on the site. The specific detail of the community facilities would be determined at the masterplanning/planning application stage. No change is required.

We note the representees concerns that archaeological remains at proposed sites OP1 and OP2 should be protected. However, any impact from the proposed allocations on historic sites was considered through the site assessment stage of the Plan-making process. No change is required.

The provision of footway extensions and active travel routes will be fully considered at the planning application stage. No change is required.

Concerns raised regarding the condition of current road infrastructure are noted. Infrastructure provision is covered under 'Services and Infrastructure'; which notes what Developer Obligations are required as a result of a development being delivered which includes transportation infrastructure. No change is required.

The concern raised regarding the loss of privacy for existing properties near the site is noted, however this would be fully considered at the planning application stage to ensure there is no loss of amenity for nearby properties. Furthermore, as stated within the allocation summaries for proposed sites OP1 and OP2, open space provision is required. No change is required.

Developer Obligations are sought towards the provision of contributions for specific and necessary infrastructure and services that are necessary to make the development acceptable in planning terms for all users. They must fairly and reasonably relate in scale to the proposed development and are needed to address any impact created by the development thus making the proposed development acceptable in planning terms, in accordance with the 5 policy tests contained in Planning Circular 3/2012 (AD0002). With regards to the clarification sought on contributions towards community, sports, recreation, health care and waste and recycling facilities, these are all covered under 'Services and Infrastructure'; which notes what Developer Obligations are required as a result of a development being delivered. These requirements would also be discussed again

between the Council's Developer Obligations Team, the developer and any relevant stakeholder upon submission of a planning application. No change is required.

As stated within the allocation summaries for proposed sites OP1 and OP2, a Flood Risk Assessment will be required to be undertaken as surface water affects a large part of both sites. Further detail on this would come forwards at the planning application stage of the development. No change is required.

As stated within the allocation summaries for proposed sites OP1 and OP2, a Transport Assessment will be required to be undertaken for both sites taking all the settlement allocations into account to determine wider area impacts and accessibility infrastructure requirements associated with the overall expansion of Potterton. Further detail on this would be available at the planning application stage of the development. No change is required.

We note the representee's concern regarding lack of consideration for self-build housing, however the PLDP contains policies that allow for self-build properties, in addition many sites identified in the PLDP would be suitable for bringing forward as self-build. No change is required.

The representee's assertion that consideration should be given to development at Balmedie rather than at Potterton is noted. However, Balmedie has already three strategic allocations for development, whilst Potterton currently has no housing land allocations in the current LDP 2017. The proposed sites at Potterton are considered to be in an appropriate location and of an appropriate scale to allow for a strategic planned approach to the settlement. No change is required.

It is not considered that a new heading within the settlement statement for contamination is appropriate. The addition of a bullet point relating to contamination would not be consistent with other settlement statements, and any issues pertaining to contamination would be addressed at a planning application stage. No change is required.

As is stated in the recommendations in the Issues and Actions Papers relating to Issue 7 Shaping Development in the Countryside, Policy R1 Special Rural Areas, minor changes to the green belt boundary were to be made to account for any new allocations arising from Settlement Issues and Actions papers, where required. It was also stated that commitment should be given to reviewing the green belt in 2022 to inform a mid-term review of the LDP. As such, the representee's request for consideration to extending the green belt to the north towards Belhelvie is premature at this stage of the Plan-making process and would be better considered at such time that a review of the green belt is undertaken. As stated within the Issues and Actions Papers, the review would include public consultation (AD0040.D, page 63). No change is required.

The Council notes the concern raised regarding access to either site OP1 or site OP2. As stated within the allocation summary for both proposed sites, two access points will be required for each site. Access for site OP1 onto the unclassified Manse Road should be considered jointly with site OP2, and access onto the C Class road located to the northeast of the site should be considered. The access arrangements would be further considered through the masterplan and subsequent planning application stage, with proposals being assessed against the relevant policies within the Plan. No change is required.

It is considered reasonable and appropriate to leave the allocation text as it stands. This means that at a time when a masterplan comes forward on the site, all of the issues identified within the allocation summary can be discussed. Removing the issues noted by the representee such as biodiversity enhancements, housing design and connectivity would potentially pre-empt any discussion with the appropriate Service when a masterplan came forward on the site. Further to this, it is not considered appropriate to remove reference to Ancient Woodland. Any matter regarding ownership would be addressed as the site comes forward for development in discussion with the Council's Development Management Team. The Council's Delivery Team would also be able to facilitate any discussions required between parties and work with them to bring the site forward. Additionally, it is not considered appropriate to change the wording from "should" to "will be connected" with regards to connectivity, and the description that the site is a logical extension is considered appropriate. No change is required.

The Council does not support the removal of site OP1 or site OP2 and does not support the reduction in scale of the sites or the change of the sites to mixed use development. The sites are considered to be of an appropriate use and scale, and in an appropriate location and the OP1 site is allocated for housing and community facilities. Furthermore, as these are proposed new sites that sit within the Aberdeen Housing Market Area, a standard density of 25 homes per hectare has been applied to reach the allocation of 172 homes and 61 homes. In line with Policy H1 Housing Land (AD0041.A, page 41), the numbers quoted are indicative and at such time that a planning application is submitted for the site, the layout, siting and design may mean that a higher or indeed lower number of dwellings may come forward. The application of a standard density in the Aberdeen Housing Market is intended to provide a degree of certainty for communities on the scale of development that could reasonably be achieved on a site. Further detail on this is provided in the Schedule 4 Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations. No change is required.

The Council notes the concerns raised by the representees that the settlement should not be altered from the previous LDP. Whilst it was considered at the previous Local Development Plan Examination (AD0036, pages 465-466) that there had not been a change in circumstance from the LDP 2012 to the LDP 2017 to justify a differing approach from that taken in the LDP 2012 which had an absence of allocations, it is considered that the allocations of the proposed sites at Potterton present an appropriate extension to Potterton at this time as the proposed housing will meet local housing needs during the Proposed Plan period. Whilst it is acknowledged that the opening of the AWPR is not necessarily a trigger to permit the expansion of Potterton, the proximity of the sites to the transport corridor allows for improved connectivity to surrounding settlements as well as improved access to the east side of the settlement without bringing excessive traffic through the settlement. The settlement's proximity to Aberdeen City also means the allocations are well-located and appropriate for development. No change is required.

Concerns regarding the impact on the local community and perceptions that the sites would bring no benefit to the local community are noted. We note that the OP1 site includes provision for community facilities, these facilities would not be exclusively for the use of the occupants of the proposed housing. As such, any community facilities coming forward would be considered an asset available for the wider community. With regards to the concerns raised that the proposed sites do not reflect the community's aspirations and that there had been a lack of transparency, notification and information provided regarding the proposed development for local residents, engagement activities have been

undertaken in line with the relevant statutory requirements as set out in the Participation Statement see Report of Conformity with Participation Statement – Full Report for further discussion on this matter. This includes, but was not limited to, sending out neighbour notification letters to those properties within 20m of proposed development within the PLDP. No change is required.

The Council notes the concerns raised regarding the scale of the proposed developments. As these are proposed new sites that sit within the Aberdeen Housing Market Area, a standard density of 25 homes per hectare has been applied to reach the allocation of 172 homes on site OP1 and 61 homes on site OP2. The scale of the proposed sites is therefore considered appropriate. The concern regarding potential for incremental development is noted, however future opportunity sites (or strategic reserve for housing) are not included within the PLDP as detailed within Schedule 4 Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations. As the green belt boundary has been amended to exclude the proposed OP1 and OP2 sites, it is not considered that the sites are required to be small-scale as stipulated by SPP or Policy R1 of the PLDP. The sites are considered to be of an appropriate scale for the settlement at this time and allow for a strategic planned approach to the settlement. No change is required.

Concerns regarding the supply and demand for housing in the settlement are noted. The proposed allocations are considered suitable for the settlement as they are of an appropriate scale and location and provide an appropriate level of growth related to local needs. Further detail on this is provided in the Schedule 4 Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations. It is noted that concern was raised that there was no need for the proposed developments as there are developments already in the pipeline at bid sites FR037A and FR104. However, these sites have not been allocated for development – please see the section “Non-Allocated Site – Bid Site FR037A – Land at Gourdieburn and Non-Allocated Site - Bid Site FR104 – Land South of Laingseat Road” below for further discussion on the non-allocation of these bid sites. The Council notes the issue raised that there exists a sufficient number of homes at affordable prices within the settlement. However, in line with Policy H2 Affordable Housing, it is still expected that the proposed sites will contribute towards affordable housing (AD0041.A, page 42). The Housing Land Audit only considers sites which are already part of the established supply, not those that are being considered to be added to that sum – please see Schedule 4 – Issue 2 – Section 5 The Spatial Strategy for further discussion on this matter. The devaluation of existing properties and the impact on properties currently on the market are not material planning considerations and do not fall under the remit of the PLDP. The PLDP was prepared prior to the Covid-19 pandemic. The PLDP is based on the HLA 2019 on the basis that it reflected the most up to date information available at the time of preparation. Whilst constraints on the sites have been highlighted by representees, it is not considered that any potential constraints on these sites cannot be resolved and as such are not a barrier to developing the sites. No change is required.

Concerns raised regarding Potterton’s status within the SGA are noted. A decision was taken by the Formartine Area Committee historically that Potterton should be specifically excluded from the SGA. However, with improvements to the A90 and the Aberdeen Western Peripheral Route completion, connectivity along the Aberdeen to Peterhead SGA has evolved since this decision and since the time of the 2016 Examination Report which justifies the proposed allocations of site OP1 and site OP2 at Potterton. The SGA has not

been amended to include additional settlements, but sites allocated still fall within this area. The Council can appreciate there may be merit to a review of the settlements within the SGA and whether Potterton will contribute to this, but the Council do not believe this is a matter that will be resolved at this stage of the process. Should the strategic allocations in Potterton be approved, and come forward for development, then the settlement could reasonably be considered to be part of the SGA in a future Plan. Please see Schedule 4 – Issue 2 – Section 5 The Spatial Strategy for further discussion on this matter. The Council notes the comments that Potterton is not part of the Energetica Corridor. However, Map 17 in the Aberdeenshire Local Development Plan – Supplementary Guidance – Energetica published with the LDP 2017 clearly shows that Potterton is within the Energetica Corridor (AD0034.I, page 20). The Council acknowledges that there are currently no employment land allocations within the settlement, however there are a number of business premises on the B999 and given the scale of business development proposed at Blackdog and the scale of housing land allocations required to be identified to 2032, the proposed allocations at Potterton are considered to be appropriate. Please see Schedule 4 – Issue 2 – Section 5 The Spatial Strategy for further discussion on this matter. With regards to concerns that the sites are not in line with the SDP's spatial strategy, the PLDP has been prepared to be consistent with the SDP, this is discussed further in Schedule 4 – Issue 2 – Section 5 The Spatial Strategy. No change is required.

The Council notes the issue raised that infrastructure constraints still exist within the settlement, making Potterton unsuitable for allocations. However, the additional development proposed for the settlement provides a mechanism for these constraints to be resolved and the required improvements are all covered under 'Services and Infrastructure'; which notes what Developer Obligations are required as a result of a development being delivered. No change is required.

The Council notes the concern raised that a number of assessments and investigations still require to be undertaken for the proposed developments. Each allocation made in the Plan has however been through multiple assessments including the Strategic Flood Risk Assessment (SFRA), Strategic Environmental Assessment (SEA), Development Planning and Management Transport Appraisal Guidance (DPMTAG), and the Habitats regulations Appraisal (HRA) to ensure the most appropriate sites are allocated for development. Further assessments including, but not limited to Flood Risk Assessments, Drainage Impact Assessments or Transport Assessments will be undertaken at the planning application stage at which time they will be assessed by the relevant consultees. No change is required.

The Council notes the representees' concerns regarding the impact the proposed sites would have on the landscape, character and setting of Potterton. However, it is considered that the sites are an appropriate extension to Potterton, offering a natural extension to the settlement for residential development. In offering a natural extension to the settlement, it is not considered that the sites will have an impact of sprawl, and while this was highlighted in the MIR 2019 for bid site FR120, this was because bid site FR120 would impact the sense of openness which defines the land to the west of Potterton. Proposed sites OP1 and OP2 are not considered to have this same effect and are in a sense delineated by the C Class Road which runs to the north east of the settlement. There remains a sufficient distance between the proposed sites and Milton of Potterton to negate any concerns of coalescence, suburbanisation or impact on the character of Milton of Potterton. Furthermore, it is not considered that site P1 or site P3 will be undermined by the development of the proposed OP1 and OP2 sites. As is stated within the allocation

summaries for both OP1 and OP2, the housing design and layout should be in keeping with other nearby residential development and specific issues relating to housing design will be considered through the masterplanning and planning application process of which the proposed housing will require, to be in line with Policy P1 Layout, Siting and Design and will also require to demonstrate the six qualities of successful places (AD0041.A, pages 48-49). Furthermore, the proposed development would also require to be in line with Policy C1 using resources in Buildings, which requires all developments to be designed to reduce carbon-dioxide emissions and reduce energy costs (AD0041.A, page 81). The Council notes the concern that the proposed development would have on Woodside Cottage, however, any impacts on the amenity of neighbouring properties will be addressed at a planning application stage with proposals being assessed against relevant policies within the Plan. It is noted that some representees highlighted that Potterton is located within a Landscape Character Area, however, Potterton is not included within Appendix 13 Aberdeenshire Special Landscape Areas of the PLDP and as discussed above it is not considered that the proposed sites would have a significant impact on the landscape setting. It is also considered that appropriate assessment has been undertaken of the sites within the SEA in terms of landscape impact. No change is required.

Bid site FR120 was not identified as a preferred option within the MIR 2019. Whilst the representees consider that site OP1 and site OP2 should be refused on the same grounds that bid site FR120 was dismissed, the Council does not agree with this assertion. The key difference between FR120 and sites OP1 and OP2 is the location of FR120 to the west of the settlement. The western part of the settlement is defined by a sense of openness which would be lost if FR120 were to be developed, and as such it was considered that there would be significant landscape impact. Further to this, the scale of FR120 is considerably larger than the proposed sites OP1 and OP2, and due to the sensitivity of the landscape at the western part of the settlement, it was considered that the scale and siting of the proposal was inappropriate and would cause significant sprawl (AD0038.D, pages 86-87). On the other hand, as discussed above, the landscape impact of the proposed OP1 and OP2 sites is not deemed to be significant. Furthermore, it was considered that placing development to the west of the B999 would divide the settlement, with the potential for road and pedestrian issues (AD0040.D, page 87). It is noted that the proposed OP1 and OP2 sites have constraints on the sites, however it is not considered that the constraints cannot be resolved and are not deemed a barrier to delivering the sites. No change is required.

Concerns raised regarding the settlement becoming a commuter town and the proposals not working to promote sustainable mixed communities are noted. Whilst there are no employment land allocations within Potterton, there is an industrial site located at the south of the settlement and employment opportunities exist on the B999, as well as business development proposed at Blackdog. The settlement is located on a bus route, and public transport infrastructure is required as part of the proposed sites. Furthermore, 'working from home' proposals are also encouraged under Policy P3 Infill Development within Settlements and Householder Developments (including home and work proposals) (AD0041.A, page 50). No change is required.

The concerns regarding the loss of green belt land are noted. It is stated in the recommendations in the Issues and Actions Papers relating to Issue 7 Shaping Development in the Countryside, Policy R1 Special Rural Areas, that minor changes to the green belt boundary were to be made to account for any new allocations arising from

Settlement Issues and Actions papers, where required (AD0040.D, page 63). In light of this, as it was recommended that FR140 and FR141A (OP1) and FR141B (OP2) both be allocated in the Proposed Local Development Plan in the settlement Issues and Actions Papers, the green belt boundary has been amended to account for these new allocations. The purpose of the green belt is not to prevent development but ensure development is directed to the most appropriate locations, to protect the character, landscape setting and identity of settlements and to provide access to open space (AD0012, paragraph 49). It is maintained that the sites are an appropriate extension to Potterton and as discussed above, it is not considered that the proposed site will have an impact on the character of the settlement. Further to this, there is a requirement within the allocation summaries for open space provision, which includes preserving and incorporating the Ancient Woodland into the open space as well as enhancing biodiversity. It is considered that whilst the allocation of these sites does result in a loss of green belt land, it allows for a strategic and planned approach for the development of a settlement within the green belt. We note representees have suggested alternative sites, however insufficient detail has been given to the exact location of alternative sites and what assessment has been made of these sites to determine their appropriateness for development. Locations suggested such as Blackdog already have an opportunity site identified and Bridge of Don and Aberdeen City lie outwith the LDP area. The sites are not considered to be ribbon development; they abut the settlement. Furthermore, the proposed sites are located at the edge of the green belt, and it is not considered that the loss of the green belt at this location will adversely impact the integrity of the green belt designation. With regards to concern that the development of the green belt does not align with the MIR, the MIR is a discussion document intended to front load effective engagement in the Plan-making process. The MIR is not a draft version of the Plan and concentrates on key changes that have occurred since the previous Plan. The MIR is required to identify preferred options and consider reasonable alternatives where these are available (AD0002, para 65-69). Furthermore, the Reporter's recommendations pertaining to earlier examinations of LDPs are not considered to be set in perpetuity. No change is required.

The Council notes the concerns regarding the environmental impacts emanating from the development of the sites, however many of the concerns regarding environmental impacts were considered through the site assessment stage of the Plan-making process. In addition, any impact on wildlife, protected species, woodland and Ancient Woodland would be addressed at a planning application stage with proposals being assessed against the relevant policies within the Plan. It is also worth noting that the allocation summary for site OP1 requires the Ancient Woodland on the site to be preserved and incorporated into the open space provision, and both sites OP1 and OP2 require the open space to enhance biodiversity. Specific details in terms of environmental enhancements and protection of the Ancient Woodland would be addressed at a planning application stage. Furthermore, the provision and type of open space on the sites will be considered at the planning application stage, including whether provision for allotments will be made on the open space. Whilst the sites may currently be used as grazing land, the sites are not identified as being located on Prime Agricultural Land, nor are they within the current Green Network. We note comments raised regarding the omission of biodiversity information in the SEA. However, the assessment of each site has been consistently applied. The SEA shows that all the Potterton allocations and bid sites will have an overall positive or neutral effect post-mitigation. Comments raised in relation to the SEA will be considered under the SEA consultation in the Post-Adoption Statement. The concern regarding the loss of green space and local path networks are noted, however the proposed sites are required to have an adequate amount of open space provision as well as active travel provision.

No change is required.

The concerns highlighting that there are unique historical and archaeological interests at/within proximity to the sites are noted. Any impact from the proposed allocations on historic sites was considered through the site assessment stage of the Plan-making process. Furthermore, no concerns have been raised from Historic Environment Scotland with regard to impact on historic sites/remains or on the Potterton Designed Landscape. Any impact on nearby properties will be considered at the planning application stage. No change is required.

A number of concerns have been noted with regards to infrastructure, including road infrastructure, access, school provision, WWTW provision, water supply, public transport provision, health care and local services and facilities (including community and recreational). These are all covered under 'Services and Infrastructure'; which notes what Developer Obligations are required as a result of a development being delivered. These requirements would also be discussed again between the Council's Developer Obligations Team, the developer and any relevant stakeholder upon submission of a planning application. It is therefore not considered to be a barrier to development. It is also noted that the allocation summary states that a Drainage Impact Assessment will be required for the site (AD0041.F, page 478). With regards to specific concerns regarding waste water capacity at Potterton, as is stated in the 'Strategic drainage and water supply' section of the settlement statement, "There is insufficient capacity at Balmedie Waste Water Treatment Works to treat all sites allocated at Balmedie, Belhelvie, Newburgh and Potterton. Network investigations may be required by new developments in Potterton. A growth project will be initiated once development meets Scottish Water's five growth criteria". Scottish Water has not requested amendment to this text, apart from an additional sentence stating that a Drainage Impact Assessment may be requested. As such, it is considered that this text is up to date at the time of writing and provides clarification on the capacity of the WWTW serving Potterton. Drainage is not considered to be a constraint to development within the settlement, and as is stated within the allocation summary, early engagement with Scottish Water is encouraged, to ensure any issues are resolved early on in the development process. With regards to concerns regarding provision of infrastructure at the start or prior to the start of development projects, infrastructure requirements from sites are addressed at an early stage in negotiation with prospective developers. Legal agreements such as a Section 75 will be put in place where required to mitigate any potential impact from developments. The Council notes the concern raises regarding the viability of existing services not being a basis for permitting large scale development, however at the current time additional development is a mechanism allowing for infrastructure constraints to be resolved – see Schedule 4 Issue 2: Section 5 – Spatial Strategy for further discussion on this. Concerns raised that the proposed developments do not demonstrate necessary infrastructure investment in line with SPP are noted, however the PLDP has been prepared in accordance with SPP. No change is required.

The concern noting that the AWPR was not intended to become a development corridor is noted. However, the proposed sites are considered to be appropriate due to the sites' location in proximity to Aberdeen City, and the connectivity that the completion of the AWPR provides. As is stated within the allocation summaries for sites OP1 and OP2, a Transport Assessment taking all the settlement allocations into account is required to determine wider area impacts and accessibility infrastructure requirements. This will require to be in line with the relevant policies within the Plan. Furthermore, it is also stated

that public transport infrastructure will be required (AD0041.F, pages 478-479). Additionally, measures including air quality have been looked at through the site assessment process and although car dependency may have been a negative, there are other aspects of the developments which will have scored positively making for a balanced decision. Maintenance of road infrastructure post completion is not a matter for the PLDP. Traffic risk assessments will be undertaken at the planning applications stage. The Transportation Report completed as part of the developer's MIR Response (AD0154) is not within the Council's remit, and any inadequacies or inaccuracies contained therein are outwith the Council's control, however, as noted above a Transport Impact Assessment will be required to be undertaken for the sites at the planning application stage. The Plan has been prepared in accordance with the SDP, SPP as well as NPF 3 and is considered to be in line with these policy documents. Concerns related to the content of the DPMTAG are noted. However, the DPMTAG focusses on key settlements and principal sites and the main transport corridors. No change is required.

Any impacts on the amenity of neighbouring properties will be addressed at a planning application stage with proposals being assessed against relevant policies within the Plan. However, loss of view is not considered to be a material planning consideration. Concerns relating to pollution during and post construction are noted, however this is something that can be managed through a Construction Management Plan (CTMP) which is also looked at when a planning application is submitted. No change is required.

The concerns regarding flood risk on the site are noted. It is noted within the 'Flood Risk' section that Flood Risk Assessments will be required for the development of the sites – this will be further dealt with at the planning application stage. SEPA has also not objected to the principle of the sites. As such, it is not considered that these sites are unsuitable for development and issues pertaining to flood risk and drainage will be considered in more detail at the planning application stage. No change is required.

The impact on crime rates and additional policing requirements are not matters considered to be within the remit of the PLDP. No change is required.

The concerns relating to the impact on the local/rural economy are noted. However, it is not considered that Potterton is an agricultural community and it is not considered that the proposed housing would adversely impact the economy of Potterton. No change is required.

The Council notes the concern raised regarding the discrepancy between the site plan in the submitted bid and the number of homes allocated in the PLDP. As these are proposed new sites that sit within the Aberdeen Housing Market Area, a standard density of 25 homes per hectare has been applied to reach the allocation of 172 homes on site OP1 and 61 homes on site OP2. In line with Policy H1 Housing Land (AD0041.A, page 41), the number quoted are indicative and at such time that a planning application is submitted for the sites, the layout, siting and design may mean that a higher or indeed lower number of dwellings may come forward. The application of a standard density in the Aberdeen Housing Market is intended to provide a degree of certainty for communities on the scale of development that could reasonably be achieved on a site. Further detail on this is provided in the Schedule 4 Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations. No change is required.

It is considered reasonable and appropriate to leave the allocation text as it stands. This

means that at a time when a masterplan comes forward on the site, all of the issues identified within the allocation summary can be discussed. Removing the issues noted by the representee such as housing design, core paths and connectivity would potentially pre-empt any discussion with the appropriate Service when a masterplan came forward on the site. Further to this, it is not considered appropriate to replace the word “logical” with “possible”, and the text relating to connectivity with the rest of the settlement is not considered to require strengthening. No change is required.

The Council notes the concerns raised regarding the proximity of the sites to Wester Hatton landfill site and the concerns that the sites could be contaminated. The Wester Hatton landfill site is no longer in use. Issues pertaining to contaminated land were assessed at the bid assessment stage of the Plan-making process, and whilst it was identified that the sites could be on potential contaminated land it is not considered that this presents a significant constraint to development. If the sites were considered to have potential contamination issues, the matter would be for further discussion at such a time that detailed proposals come forward for the proposed development and the risk would be managed through Policy P4 Hazardous and Potentially Polluting Development and Contaminated Land of the Plan (AD0041.A, pages 50-51). It is not considered that a new heading within the settlement statement for contamination is appropriate. The addition of a bullet point relating to contamination would not be consistent with other settlement statements, and as discussed above any issues pertaining to this matter would be addressed at a planning application stage. No change is required.

The concern highlighting that the Developer Bid Site form omits a possible legal right of Way is noted, however any impact from the proposed allocations on right of ways was considered through the site assessment stage of the Plan-making process. No change is required.

Non-Allocated Site – Bid Site FR037A – Land at Gourdieburn and Non-Allocated Site – Bid Site FR037B – Land at Gourdieburn

The Council does not support allocating bid site FR037A for 45 homes or bid site FR037B for 90 homes, as alternative sites to OP1 and OP2. Bid site FR037A was not identified as a preferred option within the MIR (AD0038.D, page 86). As stated within the Issues and Actions Papers (AD0040.D, page 86), development of this site would have an adverse impact on the open character and approach to the settlement from the south and this view is maintained. Bid site FR037B was identified as a possible future opportunity site within the MIR (AD0038.D, page 85). However, as stated in the Issues and Actions Papers (AD0040.D, page 86), development of this site could have a detrimental impact on the character of the Manse and Church buildings from the southern approach to Potterton on the B999, and this view is maintained. As discussed under ‘Site OP1 – Land north of Denview Road and Site OP2 – Land north West of Denview Road’, it is considered that proposed sites OP1 and OP2 should not be removed and are suitable sites for development at this time. As such, it is not considered that bid sites FR037A and FR037B would be appropriate alternative allocated sites. In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site FR037A – Land at Gourdieburn and Non-Allocated Site - Bid

Site FR104 – Land South of Laingseat Road

Objections to bid sites FR037A and bid site FR104 are noted. Bid site FR037A for 45 homes was not identified as a preferred option within the MIR (AD0038.D, page 86). As stated within the Issues and Actions Papers (AD0040.D, page 86), development of this site would have an adverse impact on the open character and approach to the settlement from the south and this view is maintained and as such the site has not been allocated for development. Bid site FR104 for 100 homes and community facilities was identified as a possible future opportunity site within the MIR (AD0038.D, page 84). Although there was merit seen in the site for long term future development (AD0040.D, page 86), future opportunity sites have not been taken forward into the PLDP and as such this site has not been allocated within the Plan. In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site FR105 – Land East of Manse Road and Non-Allocated Site - Bid Site FR106 – Land East of B999 and North of Potterton

Objections to bid sites FR105 and bid site FR106 are noted. Bid site FR105 for 100 homes, employment land and a school site was not identified as a preferred option within the MIR and was considered to be unsuitable for development due to access constraints, a lack of open space provision and viability of the proposed uses on the site (AD0038.D, page 86). This view is maintained and as such the site has not been allocated for development. Bid site FR106 for 100 homes and business land was not identified as a preferred option within the MIR. It was considered that the site was not well connected to the settlement and required pedestrian access would involve significant land raising and the site's prominence would require significant landscaping (AD0038.D, page 86). This view is maintained and as such the site has not been allocated for development. In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Sites FR120 – Land North and South of Gourdie Park (Site A) and Bid Site – FR121 – Land North of Gourdie Park (Site B), and Bid Site FR122 – Land North of Gourdie Park (Site C)

The Council does not support the allocation of bid site FR120, bid site FR121 and bid site FR122 for mixed use development and housing. None of these bid sites were identified as preferred options within the MIR (AD0038.D, pages 86-87). As stated within the Issues and Actions Papers (AD0040.D, page 87), the majority of the settlement is located on the east of the B999. Placing development to the west of the B999 would divide the settlement with the potential for road and pedestrian safety issues and the B999 should continue to function as a road that passes by Potterton and not through it, retaining Panmure Gardens as the main road through the settlement. Other more suitable sites at proposed site OP1 and proposed site OP2 better reflect the built form of the settlement and retain cohesion. This view is maintained and as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of

deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as "non-notifiable modifications" in relation to the settlement statement matters covered in Issue 26. However, where such matters arise from representations made to the proposed plan, they require to be considered in the examination. I therefore address these as appropriate below.

General

3. The status of Potterton within the Energetica Corridor is to be found in the adopted local development plan at Map 17 of the supplementary guidance on Energetica. Regarding the council's engagement with communities, we have concluded that it has consulted on the proposed plan and involved the public in the way it said it would in its participation statement and therefore has met statutory requirements. The conduct of the community council and the content of the main issues report are not matters for this examination.

4. The vision statement for Potterton refers to its limited number of services and the need for additional public transport infrastructure to serve the settlement is acknowledged in the allocation summaries for sites OP1 (land north of Denview Road) and OP2 (land north-west of Denview Road).

5. Concerns regarding inaccuracies within bid statements, the position taken by Belhelvie Community Council on the location of development and criticisms of its public engagement on the proposed plan are outside the scope of this examination, which is limited to the proposed local development plan.

6. The scale of additional housing is discussed under sites OP1 and OP2 below.

7. Belhelvie Community Council is concerned that approximately 1,800 homes are proposed to be built in the area of Belhelvie, Balmedie, Blackdog and Potterton, putting pressure on Balmedie Primary School, medical and health care facilities, the road network and the inadequate public transport provision. It seeks either the extension of the school or construction of a new primary school in the parish, improved medical facilities, upgrades to the road infrastructure and full review of existing bus services. A local resident also argues that additional housing in Potterton would lead to additional private car use and local road congestion because of the infrequent bus services.

8. The Services and Infrastructure section of the settlement statement for Potterton sets out requirements including: a route assessment to determine potential improvement

works, contributions towards additional primary school capacity and contributions towards additional capacity at medical facilities. The developer contributions would be sought through legal obligations in accordance with the council's policies and guidance. The allocation summaries for sites OP1 and OP2 indicate that public transport infrastructure is required and that it should be considered jointly for the sites.

9. No modifications are required.

Settlement plan

10. Core paths are the subject of a separate statutory process as part of producing a Core Paths Plan. No modification is required.

Vision

11. With respect to representations seeking rewording of the vision statement, Aberdeenshire Council produced the vision statement for Potterton in consultation with the community council, whose role it is to represent the community. It makes reference to key aspects of the settlement and key policies applying to it, as well as aspirations expressed by the community council. This examination is tasked with ensuring that the proposed plan is appropriate and sufficient and I am satisfied that the statement meets those tests.

12. The amendment to the green belt boundary to the north of Potterton to allow for housing allocations at sites OP1 (Land north of Denview Road) and OP2 (Land north-west of Denview Road) from the green belt for housing development is contested in several representations.

13. Scottish Planning Policy states that planning authorities, in developing their spatial strategies, should identify the most sustainable locations for longer-term development and, where necessary, review the boundaries of any green belt.

14. As the current green belt circles tightly around the settlement, the proposed plan removes green belt status from roughly 10 hectares of farmland on the northern edge of the built up area to accommodate housing allocations on sites OP1 and OP2. This has been done without a comprehensive review of green belt boundaries because the council states that its resources did not allow for this to take place, prior to publication of the proposed plan. Its Issues and Actions Paper therefore recommended that, in preparing the plan, very minor changes to the green belt boundary should be made to account for any recommendations arising in the paper for amendments to settlement boundaries. The change of boundary at Potterton has been made on that basis.

15. As the council points out, the purpose of green belts is not to prevent development but to ensure development is directed to appropriate locations. Scottish Planning Policy indicates that green belts are intended to support the spatial strategy in three specified ways. Taking these in turn, for the reasons set out below in my examination of sites OP1 and OP2, I am satisfied that they represent an appropriate location for new housing and, by providing for community facilities and affordable housing, they would support regeneration.

16. The sites have the potential to improve the village edge by landscaping and using a

woodland backdrop; the land for development comprises undulating grazing fields without significant landscape or biodiversity merit (other than a triangle of ancient woodland, which would be retained), and, with appropriate attention to detail, could protect and provide access to open space. The surrounding landform, vegetation and existing built development contain this location from wider views.

17. I note that the more sensitive area of green belt to the south of Potterton, which separates it from Aberdeen, would not be affected. There would be incremental change to the green belt, but this would take place in a planned way. Whilst it is not ideal for a green belt boundary to be changed without a comprehensive review process, I consider that this limited amendment is justified and in accordance with Scottish Planning Policy guidelines.

18. The request for an extension of the green belt towards Belhelvie would be a matter for consideration in any subsequent comprehensive review of the green belt and not for this examination.

Flood Risk

19. The Scottish Environment Protection Agency's (SEPA) requests the removal of the second "Flood Risk" bullet point, additional text under the first bullet point, and the removal of text requiring a buffer strip. These are agreed to, in the interest of consistency and to avoid repetition. I recommend a modification accordingly.

20. I am satisfied that SEPA's description of a "small watercourse" in the first bullet point under "Flood Risk" is accurate and requires no change.

21. Sites OP1 and OP2 would sit within the settlement boundary, as amended. SEPA has assessed the allocated sites in relation to flood risk and raised no objection in principle. It would not be appropriate to indicate that these sites were unsuitable for development on the grounds of flood risk. As I do not recommend the deletion of the OP1 and OP2 allocations, there is no justification to remove the "Flood Risk" section.

Services and Infrastructure

22. I agree that a drainage impact assessment should be added as a possible requirement in the Services and Infrastructure section of the settlement statement.

23. With respect to the water treatment works serving Potterton, Scottish Water has indicated that it will initiate a growth project once development meets its criteria, and therefore any drainage constraint to development can be overcome. No change is required.

24. As I do not recommend the deletion of the OP1 and OP2 allocations, there is no justification for removing the Strategic Transportation or the Strategic Drainage and Water Supply sections in the settlement statement. No change is required.

Site OP1 – Land north of Denview Road and site OP2 – Land north-west of Denview Road

25. Site OP1 is a new allocation for 172 homes and community facilities on the north-

eastern edge of the village, comprising open farmland and a triangular area of woodland. The Den Road marks part of the north-eastern boundary of the site. Site OP2 is a new allocation for 61 homes on the northern edge of the village. It comprises an agricultural field located immediately to the west of site OP1 and separated from it by Manse Road. The proposed plan removes these sites from the green belt and extends the settlement boundary to include them.

26. A number of representations claim that new allocations in Potterton are unnecessary because nothing has changed in recent years. However, a new strategic development plan was approved in August 2020. This requires land sufficient for 3,065 homes to be identified in the Aberdeen Housing Market Area (which includes Potterton) for the period up to 2032. In practical terms, recent years have seen access to the strategic road network improved substantially with upgrading of the A90, completion of the Aberdeen Western Peripheral Route (AWPR) and construction of a grade-separated interchange between those two roads, including a link via the Den Road into Potterton. These improvements enable Potterton to capitalise on its proximity to Aberdeen, to industrial developments around Dyce and to the Strategic Growth Area (SGA) corridor, as well as on its position within the Energetica corridor. I am therefore satisfied that the new allocations are justified.

27. Other representations refer to massive developments being planned or underway in nearby settlements as rendering new housing allocations at Potterton unnecessary. However, the same reasoning applies and the council has identified the sites at Potterton to contribute to the “allowance” required by the strategic development plan.

28. It is argued that the OP1 and OP2 allocations should be deleted and replaced by an alternative allocation within the Balmedie Primary School catchment area in order to meet the strategic allowance in the SGA. In Issue 2, we have concluded that the proposed allocations in Potterton do not lie within the Aberdeen to Peterhead SGA, as the council has argued. However, the position taken by the strategic development plan is to provide guidance that allocations within each housing market area should be focussed on SGAs rather than to set any specific target. In practical terms, the housing allocations at Potterton would be provided in a location, which now possesses attributes equivalent to those of settlements within the SGA. I also note that the council, in its schedule 4 response, contemplates including Potterton within the SGA in a future plan.

29. Some representations maintain that the allocations in Potterton would need to comply with policy R1 (Special Rural Areas), which specifies opportunities for small-scale development in the green belt and would therefore disqualify OP1 and OP2. However, because the proposed plan amends the green belt to exclude the relevant land, policy R1 does not apply to the new allocations.

30. Several representations challenge the scale of development proposed for Potterton, including on the basis that it exceeds local needs. Indeed, I note that, in the Issues and Actions Paper, officers advised that with the allocation of site OP1, Potterton would have enough land for local housing needs during the plan period without the allocation of site OP2. However, the Formartine Area Committee decided to add site OP2 to the allocations, apparently after taking into account evidence regarding delivery periods (see below).

31. I consider that this matter needs to be understood in context. I am informed that no

housing allocations have been made in the village for over a decade and during that period its population has declined, with consequent loss of support for local services and facilities. On the other hand, the accessibility of the village has changed significantly in recent years following completion of the AWPR and upgrades to the A90. The Den Road to the north of site OP1 now links directly to the junction of those two roads at a distance of roughly two kilometres, giving easy access to the city and to towns and villages nearby. Whilst Potterton does not lie within a Strategic Growth Area, it is included in the Energetica Corridor and, as stated in paragraph 5.14 of the proposed plan, is one of a number of settlements where smaller developments have been added to promote that designation. Whilst the village has a number of local facilities at present, the addition of new housing and community facilities has the potential to improve the viability of those facilities, and to provide support for others such as the recently approved retail units at the rear of the Stead Inn. The community council has no substantive objections, subject to measures being taken with respect to school provision, medical provision, road infrastructure and bus services. Although recognising that this issue has divided local opinion (with substantial numbers of representations on both sides), I am satisfied that the proposed scale of growth is justified.

32. OP1 and OP2 are proposals of medium size and are not subject to major or intractable constraints. Moreover, it is evident from the number of bid site proposals in Potterton that this is an area of considerable interest to housebuilders. Consequently, the two sites offer the prospect of early delivery to help meet housing need.

33. With regard to the location of the allocations, they would help to create a compact built form and to link the east and west areas of the village. They would be located close to the recently approved retail units adjacent to the Stead Inn and to planned community facilities on site OP1, as well as to other existing facilities in the village. The resulting scale of development should help to improve the viability of these facilities as well as the necessary infrastructure improvements, including to public transport services.

34. The landscape setting of the sites is defined by rising landform to the west, north and east of the allocated land together with the presence of woodland to the north-east. These would have the effect of containing views of any development to the more immediate surroundings. The area around Potterton does not fall within a Special Landscape Area, which involves an assessment of merit, (it is included in a Landscape Character Area but this is simply a description of landscape characteristics with no reference to merit). Concern is expressed at potential harm to the visual amenity and character of the village. However, I consider that development of the sites would offer opportunities for landscaping and internal pedestrian linkages, which could improve those aspects. These would be considered at masterplan and planning application stages, in relation to the relevant policies of the plan.

35. The proposed allocations would result in a compact urban form rather than the sprawl which is alleged. This and the presence of green belt designation on all sides of the village would prevent coalescence with other settlements. Intervening distance, landform and vegetation would protect Mill of Potterton from coalescence or impact on its character. The proposed pattern of development cannot be characterised as ribbon development, as this describes a band of development one property deep lining a road which extends into open countryside.

36. It is contended that additional housing allocations are not needed to meet housing

supply needs because the housing land audit 2019 indicates a supply of land sufficient for 7.2 years, which is well in excess of the five year requirement. This is a matter which we address in Issue 5, to which reference should be made. Furthermore, maintaining a five year effective supply is only part of the overall consideration of housing need. Table 3 in the strategic development plan sets out the housing allowances which require to be met through the allocation of sites in this local development plan.

37. Whilst it is correct that the audit shows no completions for Potterton between 2020 and 2030, the audit only includes sites which are part of the established supply, and not sites which are being considered to be added to the supply. Therefore the proposed allocations do not show up in the future completions columns. As to the contention that the audit takes no account of the impact of the Covid-19 pandemic, the implications of the pandemic on the proposed plan are considered in our conclusions on Issue 002 (The Spatial Strategy), to which reference should be made.

38. It is argued that sites OP1 and OP2 do not satisfy the definition of effective housing land in respect of five criteria in Planning Advice Note 2/2010. Firstly, with respect to ownership, site OP1 includes a parcel of ancient woodland which is stated to be outwith the ownership or control of Barratt, the prospective developer. Barratt would therefore be unable to incorporate the woodland into the open space provision, as required in the allocation statement. Secondly, it is maintained that neither site is free from physical constraints in that they are both subject to flood risk. Thirdly, the council has confirmed that the sites are potentially contaminated, and the Interim Environmental Report for the Main Issues Report indicates that the Potterton Burn adjacent to Milton of Potterton and through Potterton House grounds has tested as contaminated. Fourthly, in relation to marketability, the strength and stability of the housing market in Aberdeenshire is questioned given the impacts of the Covid-19 pandemic, Brexit and over-reliance on oil and gas in the local economy.

39. Last, the representation identifies several infrastructure constraints. The local road network is stated to be in poor condition and lacking capacity, whilst public transport provision is poor. In the Issues and Actions Paper, SEPA recommended that all development be restricted until implementation of the Scottish Water Growth Project, for which there is no firm date. The Balmedie school is forecast to be over capacity by 2024. No medical facilities would result from the allocated sites.

40. Taking the above points in turn, I have been provided with no evidence as to the ownership of the woodland or that the owner is unwilling to release that area to form part of the development. Moreover, Barratt's submission indicates that the woodland would be "safeguarded and integrated within the masterplanning of the site to ensure it remains a key asset to the location". The physical constraints criterion in Planning Advice Note 2/2010 allows that where there is solid commitment to removing the constraint in time to allow development timeously, or the market is strong enough to fund the remedial work required, the site can be regarded as effective. In this case, based on documentation from Barratt, I consider that there is sufficient commitment to remove the flood risk constraint, including by use of sustainable urban drainage systems. The potential of contamination was assessed at site bid stage as not being a major constraint to development of the site, any risk being capable of management through policy P4 (Hazardous and Potentially Polluting Development and Contaminated Land). The argument on marketability is not particular to Potterton and, considering the proximity of the village to the city and to other sources of employment, together with the number of site

bids around the village, claims for its marketability are credible. Improvements to transport infrastructure, including roads and public transport, would be required as determined by a Transport Assessment, taking all the settlement allocations into account. I have no grounds to assume that this would be inadequate or unfeasible.

41. Whilst it is argued that there are already sufficient affordable homes available in the settlement, that claim is not supported by evidence, including to show that there would continue to be sufficient affordable homes throughout the plan period. Moreover, that position does not accord with the assessment of the Aberdeen and Shire Housing Need and Demand Assessment 2017, as discussed in Issue 006 (Shaping Homes and Housing).

42. The proposed plan contains policies which allow for self-build housing and for ecological housing, and some sites within the plan would be suitable for those types of provision.

43. Some representations point to examples of homes in various locations failing to sell over months or years and questioning the need for new allocations. However, the proposed plan is required to allocate sufficient housing land for the full plan period up to 2032 to satisfy the “allowances” set out in the strategic development plan. Over that time, the housing market can be expected to experience changes in demand, but the local development plan must take a longer view.

44. There are concerns that the proposed allocations would bring no benefits to the local community. However, the provision of community facilities as part of the allocation at site OP1 would be for the benefit of all Potterton residents. The 25% provision of affordable housing on each site could help local households on lower incomes. The new housing may require improvements to the local road network, to the benefit of the wider village community. Reversing the recent population decline should increase custom at local facilities, improving their viability. Indeed, the recently approved application for retail units at the Stead Inn cited potential development at sites OP1 and OP2 in its support. Improved links between the Kirkhill and Denvie areas should help to integrate the east and west areas of the village. Furthermore, there is the potential for new landscape planting to improve biodiversity by comparison with that of agricultural fields. Improving the viability of existing services is considered a benefit of new development, rather than a justification for it.

45. There is no evidence that the proposed housing would harm the local/rural economy, as claimed, and the likelihood is that new residents would bring extra custom to local businesses. Housebuilding itself is likely to benefit the local economy by investment and providing jobs.

46. Concerns have been expressed regarding impacts on the local road network from expansion at Potterton. I note that, in its concept masterplan, Barratt North Scotland proposes alterations to the network, including a through road between Manse Road and the Den Road, thereby avoiding a sharp turn at the junction further north on Manse Road. As stated in the strategic transportation section of the settlement statement, road impacts would require to be addressed as part of a route assessment covering the B999 corridor to Bridge of Don and the C-class road corridor north-east of the site to the AWPR junction, which would identify potential improvement works. The location of this site would make it less likely that the traffic generated would go through the village to use the B999. Moreover, for traffic from other parts of the village, it would have the potential for

easy access to the AWPR.

47. Some representations identify shortcomings in the present road network and bus services. However, a Transport Assessment would be required for both sites at planning application stage to determine impacts on the wider area and infrastructure requirements. Road infrastructure provision is covered under the services and infrastructure section of the settlement statement and would be the subject of developer contributions for upgrades, as necessary. It is maintained that increased traffic generated by the development would limit active travel by making roads too unsafe to use. This view does not take account of potential improvements to road safety incorporated into any network improvements or the requirement for active travel provision, which I am recommending.

48. The Development Planning and Management Transport Appraisal Guidance report makes no reference to developments at Potterton because it focusses on key settlements, principal sites and the main transport corridors. Potterton was not selected as a key settlement for that purpose.

49. As surface water affects a large part of both sites, a Flood Risk Assessment would be required, including for any necessary remediation. I note that SEPA has assessed both sites and requested changes to the allocation summaries, but has not objected to the principle of development on the sites. The flood protection measures proposed for site OP1 are criticised for focussing on the site and not on nearby property, notably Woodside Cottage. However, the analysis of the bid document, at Table 1, identified that development of site OP1 offered the opportunity of flood risk alleviation.

50. Scottish Water has been consulted with regard to wastewater treatment and has indicated that a growth project would be initiated once development meets its five growth criteria. It has requested additional text in the strategic drainage and water supply section of the proposed plan to indicate that a drainage impact assessment might be required to address drainage issues. These matters do not therefore represent barriers to development.

51. The fact that the settlement statement does not indicate a requirement for additional secondary school capacity has been questioned. In its schedule 4 response, the council has indicated that the Bridge of Don Academy is not anticipated to go over capacity within the forecast period to 2026. This matter has been assessed by the council's Learning Estates Team, which is satisfied that no requirement is needed in the statement. Nonetheless, policy RD2 (Developer Contributions) states that the need for any contributions will be reviewed at the time of each planning application. This could include contributions towards secondary school provision, if justified.

52. There are no employment land allocations in Potterton itself. However, the presence of significant allocations at Blackdog and easy access to other employment land to the south mean that new housing at Potterton would contribute to the Energetica vision.

53. I do not accept claims that the allocation sites fail to align with the spatial strategy of the strategic development plan. As I have concluded above, they would have the potential to enhance quality of life, help meet the needs of the local community and be well connected to employment opportunities.

54. Transferring Potterton's housing allocations to Balmedie would add to the three

existing strategic allocations in Balmedie and result in an unbalanced provision. Reduction in the scale of the sites or change to mixed use would not be necessary or justified, as such changes would remove or dilute the benefits of the existing allocations as set out above.

55. I consider that the settlement statement is sufficient without specific reference to contamination and that its inclusion would not be consistent with other settlement statements. References in the allocation summaries to biodiversity, housing design, core paths, connectivity and ancient woodland should be retained, in order to inform necessary discussions at masterplan and planning application stages. The amount of detail provided in the allocation summary regarding the gravel path link between Kirkhill Gardens and the Stead Inn, and on the site's merits are sufficient for the purposes of the local development plan. A more detailed description of the masterplan requirements for Woodside Cottage is requested to reassure the owners of the cottage that the amenity of the cottage would be taken into account in any development. However, this is a matter which can be addressed in the masterplan, as can the amenity of other residential properties abutting the site. A request for 61 homes to be set as a maximum capacity on site OP2 would be inconsistent with the rest of the proposed plan, which provides indicative capacity figures on all sites and leaves details of numbers to development proposal stage. I agree with the council that sufficient detail of the site's attributes has been provided in the site allocation summary.

56. With regard to concern that Potterton would become a commuter settlement, a small amount of employment is available within the village, major business development is proposed at Blackdog, a bus route serves the village, and public transport infrastructure is required as part of any development on the two sites. Moreover, working from home is encouraged under policy P3 (Infill Developments within Settlements and Householder Developments (including home and work proposals)) in the proposed plan.

57. With regard to concerns over increased car use and carbon emissions affecting climate change, the council carried out site assessments which it acknowledges weighed car dependency against other, positive, aspects of the sites to achieve a balanced position, as it is entitled to do.

58. The proposed allocations would not result in the loss of any green space usable by the public nor would they impact on local path networks. Instead, they would require provision for open space and active travel. The proposed sites are not located within the Green Network. The Strategic Environmental Assessment showed that both proposed allocation sites would have an overall positive or neutral impact following mitigation.

59. It is claimed that the allocated sites comprise or include prime agricultural land, which should be protected from development. The council asserts that this is not correct, and I note that the agricultural land classification map submitted in support of the claim is small scale and not a field level assessment. However, in line with policy PR1 (Protecting Important Resources), I consider that were there to be any loss of prime agricultural land, it could be justified as being required to meet strategic housing needs where there are no reasonable alternatives.

60. A representation refers to historical and archaeological interests at or near the site including pit alignments and enclosures, a stone circle and signs of medieval ridge and furrow farming. Woodside Cottage is included on the Canmore website as a cottage

(period unassigned). However, Historic Environment Scotland has raised no concerns with respect to historic sites or remains, or to the Potterton House Designed Landscape. The potential for impact on historical and archaeological remains was considered at site assessment stage and any remaining impacts and need for protection would be addressed at planning application stage, subject to planning conditions as relevant.

61. I consider that concerns regarding infrastructure, including roads, public transport, school provision, waste water treatment, health care and local services, could be covered by developer contributions as required by the services and infrastructure section of the settlement statement, which notes developer contributions to be made for improvement of these facilities. In this respect, representations are correct that infrastructure constraints to development still exist but, through requirements imposed in the proposed plan, mechanisms would be put in place to address those constraints. I have no clear evidence to demonstrate that these are not feasible.

62. The details of community facilities and provision for sports, recreation, waste, recycling and health care provision, either on the allocation sites or elsewhere within the parish, would require to be determined at masterplanning and planning application stages, in accordance with the services and infrastructure section of the settlement statement and with policy on developer contributions. The viability of providing a community hall on the site is questioned in one of the representations. However, as the council explains, provision of a site for a hall would address the community's wish and be appropriately located, as development at the site would be well connected to the rest of the settlement, including by the footpath network. Moreover, the requirement for community facilities to be included in the OP1 allocation is supported in the representation on behalf of Barratt North Scotland, who submitted the bid for the site.

63. A construction management plan would address any issues of pollution in connection with construction. The timing of infrastructure requirements would be negotiated between the council and developers where a legal agreement was required to secure that infrastructure. Various investigations and assessments still require to be undertaken for the proposed developments, but these would relate to details of specific schemes and require to be considered later in the planning process, as normal.

64. House design (including vernacular traditions, suburban influences and the sense of place and character of Woodside Cottage), the amenity and privacy of neighbouring properties, the delivery of required road improvements, access points for the sites and road safety, footway extensions and connections, active travel routes, provision of trees, shrubs and grassy areas and the potential for allotments, are matters for consideration at masterplanning and planning application stage, in line with the site allocation summaries and plan policies.

65. The increases in site density over those in the bid submissions reflect the council's consistent approach to apply a standard density of 25 homes per hectare on sites within the Aberdeen Housing Market Area. I consider this approach to be in line with paragraph 4.8 in the strategic development plan, which states that "Land brought forward for housing must be used efficiently". Furthermore, the figures are indicative and would be subject to consideration at planning application stage.

66. The Wester Hatton landfill site near Balmedie is roughly one kilometre from the allocated sites and has been closed for some years. The possibility of contamination on

sites OP1 and OP2 was assessed at bid stage and no major constraint was found. Any remaining contamination issue would be managed at detailed proposals stage through policy P4 on contaminated land.

67. It is argued that the area of ancient woodland within the site is private land outwith the ownership of the proposed developer and that it should be removed as a provision for open space and protected as a sensitive landscape. However, land ownership is not a matter for this examination and the details of land use within the proposed site, including protection of ancient woodland, would be addressed in the masterplan.

68. It is claimed by local residents that development would pose an unacceptable risk to red squirrels, bats, badgers and foxes on or near the allocated sites and that the sites are used as hunting habitat for buzzards and owls. No concern regarding impact on wildlife from development of the sites is expressed in the consultation response from NatureScot. Moreover, the Strategic Environmental Assessment scored the impact on biodiversity, flora and fauna of sites OP1 and OP2 as neutral and did not single out wildlife impacts for reference in its comments column. I have no contrary assessment of the impact of development on wildlife by relevant experts, which would justify the deletion of the sites. At masterplanning and planning application stages, development proposals would be assessed against the relevant plan policies for wildlife and habitat impact, including the need for any mitigation measures.

69. SEPA has requested that references to a watercourse in the allocation summary for site OP1 are removed as there appears to be no watercourse present on the site. In the interest of accuracy, I recommend that this modification is made.

70. NatureScot has requested that the allocation summaries for sites OP1 and OP2 include a requirement for active travel provision. I agree that this would help promote active travel on these allocations and recommend modifications accordingly.

71. Representations are made relating to the council's consultation process. This has been the subject of a separate examination of conformity with the council's participation statement. Through this, we have concluded that the authority consulted on the proposed plan and involved the public in the way they said they would in their participation statement.

72. It is stated that the developers' site bid forms omitted a possible legal right of way in connection with the Woodside Cottage water pipe and water well. However, the council states that any impact on development proposals on rights of way was considered at site assessment stage. It would be for the resident to pursue any legal claims separately from this examination process. Criticisms of documents submitted by developers, maintenance of roads and pathways, and policing matters are not within the remit of this examination. Loss of private view is not in itself a planning consideration.

73. I conclude that allocations OP1 and OP2 should be retained in the plan. Subject to minor amendments in relation to the wording of the allocation summaries, no other modifications are recommended.

Non-allocated bid site FR037A – Land at Gourdieburn, and non-allocated bid site FR037B – Land at Gourdieburn

74. Bid site FR037A (Land at Gourdieburn) is a flat agricultural field of some two hectares on the western edge of Potterton. It lies between the B999 road and Gourdie Park road and is bounded to the west and south by the Blackdog Burn beyond which lie open fields. There is a small area of housing to the north of Gourdie Park road and a car sales unit facing the B road. The proposer (Stewart Milne Homes) has submitted a masterplan for the development of 45 homes on the site. There are also representations objecting to this bid proposal.

75. Bid site FR37B (also described as Land at Gourdieburn) is a gently sloping field of some 4.5 hectares on the southern edge of the village, partly bounded by residential and employment uses and partly by open countryside. The same proposer has submitted a masterplan for 90 homes on the site.

76. The proposer considers that the sites could be developed independently or brought forward together, in place of sites OP1 and OP2.

77. I consider that allocating site FR37A to the west of the B999 would result in housing which would be relatively detached from the rest of the village. The bulk of the village and its facilities lie on the opposite side of the B999. I agree with the council that it is better for the B999 to pass by Potterton rather than through it, to retain the coherence of the present settlement and to avoid potential road and pedestrian safety issues. The site is set in an open landscape where its visual impact would be widespread, especially on the approach by road from the south. Development would have a detrimental effect on landscape character and the site is located within the green belt, where such proposals are contrary to policy.

78. Compared to site FR037A, site FR037B is better integrated with the village and is not divided from facilities by the B999. There are mature trees on some boundaries, although the site is clearly visible from the B999 to the south-west, from where views of the church and manse are currently visible. However, because of its orientation, it would project a finger of development into open countryside, amplifying its visual impact and intruding into the more sensitive area of green belt between Potterton and Aberdeen.

79. For the reasons set out above, I have concluded that allocations OP1 and OP2 are acceptable and together they represent an appropriate level of growth for Potterton in the period up to 2032.

80. Matters relating to overall housing provision in the proposed plan are covered in issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. Sites in Potterton could potentially contribute to meeting this shortfall. However, for the reasons set out above, I conclude that bid sites FR37A and FR37B should not be allocated. There are other sites available to meet the identified shortfall, as explained in issue 5.

81. I am, therefore, not persuaded that either individually or together these sites should be allocated, whether in place of sites OP1 and OP2 or otherwise, and no modification is required.

Non-allocated bid site FR104 – Land south of Laingseat Road; Non-allocated bid site FR105 – Land east of Manse Road and non-allocated bid site FR106 – Land east of B999 and north of Potterton

82. Representations seek the removal of these bid sites. However these sites have not been identified as allocations in the proposed plan and there are no representations seeking their inclusion in the plan. No modification is required.

Non-allocated bid site FR120 – Land north and south of Gourdie Park (Site A); non-allocated bid site FR121 – Land north of Gourdie Park (Site B); and non-allocated bid site FR122 – Land north of Gourdie Park (Site C)

83. These sites are large agricultural fields located to the north and south of Gourdie Park on the west side of the B999 road. FR120 is proposed for 450 homes, 750 square metres of retail and land for education/community facilities. FR121 is proposed for 109 homes, 750 square metres of retail and land for education/community facilities.

84. In this open landscape, development would be prominent from several directions. It would have an adverse effect on the landscape setting and character of Potterton. The sites lie to the west of the B999, and I agree with the council that it is better for the B999 to pass by Potterton rather than through it, to retain the coherence of the present settlement and to avoid potential road and pedestrian safety issues. The retail and education/community uses could change the orientation of the village and increase connectivity problems. The site is located within the green belt, where such proposals are contrary to policy.

85. For the reasons set out above, I have concluded that allocations OP1 and OP2 are acceptable and together they represent an appropriate level of housing growth for Potterton in the period up to 2032.

86. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. Sites in Potterton could potentially contribute to meeting this shortfall. However, for the reasons set out above, I conclude that bid sites FR120, FR121 and FR122 should not be allocated. There are other sites available to meet the identified shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area, as explained in issue 5.

87. No modifications are required.

Reporter's recommendations:

Modify the local development plan by:

1. Replacing the fifth sentence of the first paragraph of the Vision statement on page 476 with:

“The settlement has a limited number of services, although it has a post office, shop and community hall.”

2. Replacing the first sentence of the second paragraph of the Vision statement on page 476 with:

“The community has a desire for a new community hall in the settlement.”

3. Replacing the first bullet point in the Flood Risk section of the settlement statement on

page 476 with:

“Parts of OP1 and OP2 lie within the Scottish Environmental Protection Agency’s (SEPA) indicative 1 in 200 year flood risk area, or have a small watercourse running through or adjacent to the sites. There are also large areas of surface water flooding on both sites. Flood Risk Assessments will be required.”

4. Removing the second bullet point in the Flood Risk section of the settlement statement on page 476.

5. Amending the Strategic Drainage and Water Supply bullet point on page 477 to add the following sentence after the third sentence:

“A Drainage Impact Assessment may be requested.”

6. Adding the following new last sentence at the end of the second paragraph of the allocation summary for site OP1 (Land north of Denview Road) on page 478:

“Provision for active travel is required.”

7. Removing the second and third sentences in the third paragraph of the allocation summary for site OP1 (Land north of Denview Road) on page 478.

8. Adding the following new sentence at the end of the second paragraph of the allocation summary for site OP2 (Land north west of Denview Road) on page 479:

“Provision for active travel is required.”

Issue 27	Turriff	
Development plan reference:	Proposed LDP, Appendix 7C Formartine, Page 500-508	Reporter: Andrew Sikes
Body or person(s) submitting a representation raising the issue (including reference number):		
<p>PP0051 Brian Milne PP0062 James Mann PP0090 David Mitchell PP0177 Mr and Mrs Duncan PP0195 Damian and Claire Butlin PP0416 Rae Gibbs PP0417 Robyn Clark and Daniel Christie PP0442 Scott Davidson PP0485 Marge Davidson PP0520 Robert Paterson PP0596 Aaron Lorimer PP0620 James Ironside PP0621 James Ironside PP0622 James Ironside PP0727 Harbro Ltd PP0940 Kevin Davidson PP1071 c a s e CONSULTING Limited PP1122 Robert Paterson PP1219 Scottish Environment Protection Agency PP1300 NatureScot (Scottish Natural Heritage) PP1331 Linda Grant PP1340 Scott Gove PP1416 Robert Paton</p>		
Provision of the development plan to which the issue relates:	Turriff Settlement Statement	
Planning authority's summary of the representation(s):		
<p><u>Flood Risk</u></p> <p>Scottish Environment Protection Agency (SEPA) has requested for consistency, amendment to the second 'Flood Risk' bullet point to replace reference to buffer strips for site OP1 with stating that Flood Risk Assessments may be required for sites OP1 and OP5 (RD0214.B) (PP1219).</p> <p>SEPA has recommended adding a third 'Flood Risk' bullet point to state that parts of OP3 and R2 are at risk from surface water flooding and a Flood Risk Assessment may be required, for consistency (RD0214.B) (PP1219).</p>		

Site P4 – To protect the open space for recreational use and as forming part of the green-blue network

The area immediately behind the former school, which was formally the school playground, is no longer accessible to the public as a recreational area and should be removed from the designation. The school site has now been sold and is subject to development (PP0596).

Site R1 – For a new cemetery

SEPA has confirmed that they have no issues with the R1 designation (RD0214.B). No modification sought (PP1219).

The R1 site should be included within the settlement boundary and a broader range of uses allowed other than a 'cemetery', for example community facilities. This site should allow for houses along Wellside and Lingasound to be extended along the roadside to screen the new cemetery (PP0621).

Site R2 – Site for the replacement of Markethill Primary School

SEPA has confirmed that they have no issues with the R2 designation (RD0214.B). No modification sought (PP1219).

Site BUS1 – Safeguarded for business uses

SEPA has confirmed that they have no issues with the BUS1 designation (RD0214.B). No modification sought (PP1219).

The BUS1 site should incorporate the land that was identified as OP4 in the 2017 Local Development Plan (LDP), to allow for connectivity to the proposed OP4 site (PP0622).

Site BUS2 – Safeguarded for business uses

SEPA has confirmed that they have no issues with the BUS2 designation (RD0214.B). No modification sought (PP1219).

The site should be removed from the Plan as it is currently occupied by an established business (PP0622).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Adjacent to Wood of Delgaty

Support has been received for the retention of the OP1 site and of the agreed masterplan for the OP1 site within the Plan (PP0620, PP1122), any further alterations of the masterplan would have a detrimental effect to current negotiations with the developer (PP1122) and the requirement to revisit the masterplan might discourage potential developers (PP0620).

SEPA has recommended that the allocation summary for OP1 is amended to state that watercourses on site should, rather than may, be part of the landscaping and open space (RD0214.B) (PP1219).

Changes require to be made to the allocation summary for the OP1 site as reference to community facilities should be removed as this has been removed from the agreed masterplan, along with the possible/future primary school at the request of the Planning Service. It is requested that the requirement for an archaeological survey should be removed as previous assurance had been given that the stone cairn was outwith the development site and would not have to be investigated (PP0620).

A representee notes that 442 of the 450 homes are marketability constrained, with only 31 homes built in the settlement in the last 6 years. The planning permission on site is only for 8 units and has not delivered on site within the 3-year timescale. There is no housebuilder interest. The site is likely to remain constrained throughout the LDP lifetime. The site competes with an existing large-scale allocation in the settlement that has progressed and will be built during the Plan period and no housebuilder will be attracted to OP1 until there is unsatisfied demand. The site has issues with site access and transportation. WWTW issue would require the whole site to have planning permission which there is not demand established for that upfront cost. There is no basis to support confidence that this site will move from the constrained supply within the lifetime of the LDP (PP1071).

Site OP2 – North of Shannocks View

SEPA has confirmed that they have no further flooding, strategic drainage, or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219).

Site OP3 – Adjacent to Bridgend Terrace

SEPA has confirmed that they have no further flooding, strategic drainage, or water supply issues with the allocation summary for site OP3 (RD0214.B). No modification sought (PP1219).

Support is received for the allocation of the OP3 site and the landowner acknowledges the allocation summary text and will carry out the necessary discussions with consultees (PP0940).

Objection was received to the allocation of the OP3 site as the site would spoil the character of the area as it is currently countryside and would look out of place, as it would be in a prominent position and would erode the landscape character and setting of the surrounding area (PP0062, PP0177, PP0416 and PP0417). NatureScot are also concerned about the landscape/visual impact of site OP3 as it relates poorly to the existing main settlement of Turriff. It sits on a flat plateau which is suspended up and physically divorced from the main Burn of Turriff and as the site is challenging no amount of landscape design will improve it (RD0255.B) (PP1300).

The area would cause an unnatural, housing spread into a greenfield area (PP0062 and PP0177) and be contrary to the countryside policies in the Plan (PP0062) and there is no requirement for homes in this area as no employment shall be created from the

development (PP0062).

The development would also cause an increase in traffic in an already busy area and would cause overshadowing, privacy and noise issues for the nearby existing residents (PP0062 and PP0177). NatureScot has requested that consideration is given to how the site will link into and across the Burn of Turriff Valley and the main settlement centre to the north for non-motorised users. Additionally, it is requested by NatureScot that the allocation summary for the OP3 site is amended to include the requirement for active travel provision which will help promote safe and convenient opportunities in accordance with the Plan's aims (RD0255.B) (PP1300).

Additionally, concerns are noted with the increase of water in an already potential flood area, lack of water treatment works and the impact on local water runs and streams, and surface and fluvial flood risk on the surrounding neighbouring properties and for the wildlife (PP0416 and PP0417).

Another representee notes that the site would have a negative impact on the listed building 'Bridgend Farmhouse' as development would erode the countryside surrounding the listed building and change the landscape character of the area. The proposal would overlook and overshadow the listed building (PP0062).

Site OP4 – Adjacent to Broomhill Road/Markethill Industrial Estate

SEPA has confirmed that they have no further flooding, strategic drainage, or water supply issues with the allocation summary for site OP4 (RD0214.B). No modification sought (PP1219).

The requirement for a masterplan for this site would prohibit development and the requirement should be removed from the Plan (PP0622).

Site OP5 – South of Colly Stripe, Smiddyseat Road

SEPA has confirmed that they have no further flooding, strategic drainage, or water supply issues with the allocation summary for site OP5 (RD0214.B). No modification sought (PP1219).

Objection is made to the OP5 allocation as the burn located between the representee's property and the site already floods in heavy rain. The representee has included an Appendix (RD0005.A) in their representation which provides further detail to support their position (PP0051). Another respondent notes the flood risk associated with the site with a particular concern about the run-off from the site to the wildlife in the burn (PP0090).

The site allocation summary for the site should be amended to address issues with density of the site which should be reconsidered, and the area is used for recreation and this should be considered when developing the site (PP0090).

Concerns are noted that due to the elevation that the allocated site would impose on the existing properties it will leave them without privacy and light (PP0051). Another representee highlights that there is a natural dip to access the field at the OP5 site where a burn is located, and additional groundworks would be required which may impact on the drainage of the site (PP1340).

Concerns have been noted regarding the road access to the proposed site as the amount of new traffic in the area would result in a safety risk to residents (PP1331, PP1340 and PP1416) as the road is not wide enough for new traffic, it would need upgraded and widened in order for new development (PP1331 and PP1340). A representee also raised concern that the road at present is inadequate and that the junction separating St Congan's Circle and St Congan's Den is badly designed, and additional traffic will exacerbate the existing safety concerns. Furthermore, the construction of the proposed access road would cause a large amount of disruption to local residents (PP1416). An alternative access to the site should be considered from Smiddyseat Road/Mill of Colp Road (PP1340 and PP1416), which could link into the new distributor road being planned for the east of Turriff. Additional traffic calming measures would also be required for the site including a pedestrian footpath (PP1340). Lack of sewage treatment capacity in Turriff is noted as a constraint to the development of the new allocation (PP1331).

Additionally, a representee notes that part of the land allocated in the OP5 site is garden ground and falls within separate ownership and the site boundary should be amended to reflect this. The representee has included an Appendix (RD0025.A) in their representation which provides further detail to support their position (PP0195).

Site OP6 – Land North of Cornfield Road

SEPA has confirmed that they have no further flooding, strategic drainage, or water supply issues with the allocation summary for site OP6 (RD0214.B). No modification sought (PP1219).

Non-Allocated Site – Bid Site FR074 – Site adjacent to Rosehall

The site should be allocated for residential use as this provides a brownfield development opportunity that is well related to the existing commercial and residential development at Rosehall and is well connected to Turriff. The representee has included an Appendix (RD0122.A) in their representation which provides further detail to support their position (PP0727).

Non-Allocated Site – Site BUS3 (as identified in the LDP 2017) – Safeguarded for a hotel facility

The site should be reinstated in the LDP (PP0442, PP0485, PP0520 and PP0622). The site previously received planning permission for a hotel, but this did not come forward (PP0442 and PP0520), this was not due to the lack of effort and work undertaken behind the scenes (PP0485). Since the lapse of the permission the site has been actively marketed but is limited by the 2017 LDP allocation of a hotel. The site is in a deliverable and prominent location, positioned on the A947 at the edge of the settlement and a future entrance to the OP1 site (PP0442, PP0520 and PP0622) and is thought to be far more suited for business and retail development due to its location (PP0520 and PP0622).

The settlement boundary for Turriff should remain unchanged and include this site within the boundary as per the LDP 2017 (PP0520 and PP0622).

Modifications sought by those submitting representations:

Flood Risk

Modify the PLDP to replace the current text in the second 'Flood Risk' bullet point, "Adequate buffer strips will be required to protect the existing watercourse on site OP1 and due to the presence of a spring close to the site." to "Due to small watercourses running through or adjacent to the site, Flood Risk Assessments may be required for sites OP1 and OP5." (PP1219).

Modify the PDLP to add a third new flood risk bullet point, "Parts of OP3 and R2 are at risk from surface water flooding. A Flood Risk Assessment may be required." (PP1219).

Site P4 – To protect the open space for recreational use and as forming part of the green-blue network

Modify the PLDP to remove the former school playground area adjacent to the school from the P4 designation (PP0596).

Site R1 – For a new cemetery

Modify the PLDP to amend the R1 designation so it is included in the settlement boundary and allow for a broader range of uses (PP0621).

Site BUS1 – Safeguarded for business uses

Modify the PLDP to amend the boundary of the BUS1 site to include the previous OP4 site as per the 2017 LDP (PP0622).

Site BUS2 – Safeguarded for business uses

Modify the PLDP to remove the BUS2 designation (PP0622).

Site OP1 – Adjacent to Wood of Delgaty

Modify the PLDP to amend the fifth sentence in the last paragraph of the OP1 allocation summary to, "Watercourses on site should also ..." (PP1219).

Modify the PLDP to amend the OP1 site allocation summary text to remove the requirement to revisit the masterplan, the requirement for community facilities and the archaeological survey (PP0620).

Modify the PLDP to remove the contribution of 442 homes to the allowances for OP1 Turriff and identify alternative effective allocations in the Local Growth Area of the RHMA, or if marketability constrained, in the AHMA (PP1071).

Site OP3 – Adjacent to Bridgend Terrace

Modify the PLDP to remove the OP3 allocation (PP0062, PP0177, PP0416 and PP0417).

Modify the PLDP to amend the OP3 site and allocation summary by reviewing the landscape and visual impact of the site and how the site will link to the rest of the settlement for non-motorised users (PP1300)

Modify the PLDP to amend the OP3 site allocation summary by adding the following text, "Provision for active travel is required." (PP1300).

Site OP4 – Adjacent to Broomhill Road/Markethill Industrial Estate

Modify the PLDP to remove the requirement for a masterplan on the OP4 site (PP0622).

Site OP5 – South of Colly Stripe, Smiddyseat Road

Modify the PLDP to remove the OP5 allocation (PP0051).

Modify the PLDP to amend the OP5 allocation summary text to address site density, flood risk and the impact on wildlife and loss of recreation area (PP0090).

Modify the PLDP to clarify the impact on the proposed drainage arrangements for the site (PP1340).

Modify the PLDP to clarify infrastructure requirements including the access road and waste water treatment capacity for the development of the OP5 site (PP1331).

Modify the PLDP to amend the OP5 allocation so that an alternative access road is considered and that there is the introduction of traffic calming measures to increase road safety (PP1340).

Modify the PLDP to amend the OP5 allocation so that an alternative access road is considered at Smiddyseat Road (PP1416).

Modify the PLDP to amend the boundary of the OP5 site to remove garden ground (PP0195).

Non-Allocated Site – Bid Site FR074 – Site adjacent to Rosehall

Modify the PLDP to include site FR074 for residential development (PP0727).

Non-Allocated Site – Site BUS3 (as identified in the LDP 2017) – Safeguarded for a hotel facility

Modify the PLDP to include the BUS3 site identified in the LDP 2017 as an opportunity site for business or retail and amend the settlement boundary (PP0442, PP0520 and PP0622).

Modify the PLDP to include the BUS site as identified in the LDP 2017 as a BUS site (PP0485).

Summary of responses (including reasons) by planning authority:

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable

modification, as set out in the List of Non-Notifiable Modifications.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site P4 – To protect the open space for recreational use and as forming part of the green-blue network

The area identified by the representee has been sold by the Council's Property Service to an external party. However, when the land was sold to the respective buyer the area of P4 was identified as an area for recreation and open space, as shown at AD0131. In order to change the designation of the land a development bid should have been submitted to the MIR. This would have then allowed for the appropriate assessments to be carried out to consider what uses, if any, were acceptable on the site. It is therefore deemed appropriate for this land to remain under the current designation of P4. No change is required.

Site R1 – For a new cemetery

Comments from SEPA are noted. No change is required.

The requirements for areas being reserved for a new cemetery are looked at and information on settlements requiring additional areas being reserved is provided by the Council's Landscape Services. Additionally, the request by the representee for the R1 designation to be allocated for another use was considered through the Main Issues Report (MIR) as bid site FR020 for 16 homes. This site was not preferred for an alternative use to the cemetery with issues such as a significant negative visual impact and poor connection to the rest of the settlement noted (AD0038.D, page 106). No change is required.

Site R2 – Site for the replacement of Markethill Primary School

Comments from SEPA are noted. No change is required.

Site BUS1 – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

A bid site, FR004, was submitted to the MIR for the extension to the BUS1 site where it was considered. The site was not preferred for immediate development as it was noted that development on this site should not be considered until the BUS1 site is developed further (AD0038.D, page 106). It was noted that the site would be a well-connected site in the future once further development has been completed on the BUS1 site.

Additionally, it is considered that there is an appropriate supply of employment land within the settlement and the existing allocations/designations should be developed first before considering any future allocations. No change is required.

Site BUS2 – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

The request for the site to be removed is noted however, this is not considered to be necessary. The BUS sites are not allocations for development but are designations to safeguard the area for employment uses. This means that the designation will have no impact on the current employment use. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Adjacent to Wood of Delgaty

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Comments from the representee are noted. No change is required.

As of November 2020, there was no planning application associated with the site. The masterplan for the site was approved in December 2016 and is almost 5 years old. Under policy P1 Layout, Siting and Design, a new measure is introduced for masterplans. The policy states at paragraph P1.2 that once a masterplan is agreed that it shall remain valid for a period of 5 years, unless planning permission for the development has been granted and implemented (AD0041.A, page 47, paragraph P1.2). Therefore, if there is not an implemented consent on the site for the development then the masterplan would need to be reviewed. It is therefore seen as reasonable and appropriate to leave the allocation text as it stands. This means that should a masterplan review be required then all of the issues identified within the allocation summary can be discussed again as the situation could have changed since the initial discussions in 2016. Removing the issues noted by the representee would potentially pre-empt any discussion with the appropriate Service should a masterplan review be required. No change is required.

Additionally, in response to the concerns regarding the housing being constrained is noted. The site is currently constrained within the 2020 Housing Land Audit, but it is worth noting that the constraint is for marketability reasons rather than for anything relating to infrastructure (AD0023, page 113). Marketability is not seen as a reason for the site being removed as markets can change and it is important that there are allocations within the town that meet the local need identified. Please see Schedule 4 Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations for further detail on the delivery and effectiveness of housing allocations. No change is required.

Site OP2 – North of Shannocks View

Comments from SEPA are noted. No change is required.

Site OP3 – Adjacent to Bridgend Terrace

Comments from SEPA are noted. No change is required.

Supportive comments regarding the allocation of the site are noted. No change is required.

The concerns highlighting that there is no requirement for homes in the area are noted. Turriff is located within the Rural Housing Market Area (RHMA) within a local growth and diversification area. In accordance with the Aberdeen City and Shire Strategic Development Plan (2020), the settlement is appropriate for a level of growth related to local needs (AD0016, page 23, and paragraph 3.45). The bid received on the site was for residential use and has been allocated for residential use only. Employment land has been allocated on both the OP1 and OP4 site, and there are two BUS sites within the settlement which have been designated to safeguard employment uses. It is therefore considered that there is an appropriate supply of employment land within the settlement.

The concerns relating to the impact of the site in terms of the countryside, wildlife, and the visual impact of the site are noted. The relevant policies, Section 7 Shaping Development in the Countryside, were considered during the site assessment stage and it is considered that this site is an appropriate site to be included in the LDP. Additionally, careful consideration was given to the site during the site assessment stage and wording was introduced into the Proposed Plan relating to the sensitive nature of the site following comments received from NatureScot at the Issues and Actions stage (AD0040.D pages 102-105). The Council believe that the comments noted within the Proposed Plan sufficiently note the complexity of the site and the sensitivity required in developing this site. However, NatureScot still have concerns regarding the site therefore if the Reporter is minded, to make an amendment, then the Council recommend that the allocation summary for OP3 is modified to insert the following text after the second sentence of the first paragraph: "A Landscape and Visual Impact Assessment may be required".

The comments in relation to active travel provision are noted. The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Any impacts on the amenity of neighbouring properties will be addressed at a planning application stage. Additionally, there were a number of concerns relating to this development including waste water treatment works and flood risk. SEPA have responded to the consultation and have noted that they have no additional comments other than those included within the text of the Proposed Plan. Again, these issues would be looked at again in more detail in relation to any planning application on the site. Waste water Treatment Work (WWTW) capacity would not preclude development taking place on the site. It is noted within the allocation summary that capacity at the WWTW would likely require to be increased to accommodate the development. Early engagement with Scottish Water is encouraged to address these issues at an early stage of the development process of this site. Additionally, issues relating to the impact on listed buildings is noted. The impact of a site on listed buildings is one of the assessments completed during the site analysis. Any impact on a listed building, would also be looked at through any planning application that was submitted for the site as the application would be assessed against the relevant policies in the Plan. No change is required.

Site OP4 – Adjacent to Broomhill Road/Markethill Industrial Estate

Comments from SEPA are noted. No change is required.

There has always been a requirement for a masterplan on this site, however it is noted that the requirement was previously for a joint masterplan for a number of the sites within the area. This has been updated through the PLDP and the requirement is now that this

site needs an individual masterplan. This is due to the size of the site, and the requirements to ensure the best possible planning within the area, which in turn ensures good placemaking and a better environment for residents of Turriff. No change is required.

Site OP5 – South of Colly Stripe, Smiddyseat Road

Comments from SEPA are noted. No change is required.

The objections raised in relation to the site are noted. Flood Risk is one of the concerns noted by representees however the site requires a buffer strip for the burn and may require a Flood Risk Assessment (FRA). This will help to ensure that new development will not have an adverse impact on flooding.

The density of all of the sites, including this one, was assessed at the MIR stage to ensure that the sites equated to the best use of land and placemaking. The density of this site was considered, and remains to be considered, as appropriate for this site.

Any impacts on the amenity of neighbouring properties will be addressed at a planning application stage. Additionally, there were a number of concerns relating to infrastructure for this development including road access and waste water treatment works. Looking at concerns relating to access, the Council's Roads Service has not raised any concerns about the allocation. Any requirement for road improvement work or alternative access options would be a matter for the planning application stage. Waste water Treatment Work (WWTW) capacity would not preclude development taking place on the site. It is noted within the allocation summary that capacity at the WWTW would likely require to be increased to accommodate the development. Early engagement with Scottish Water is encouraged to address these issues at an early stage of the development process of this site. No change is required.

A representee notes that an area of land has been included in the OP5 allocation but is garden ground associated with their house. A copy of the Title Deed was included with the representation to note the boundary of the house and garden affected. It is deemed that it would be appropriate to remove this area of land from the allocation to ensure that the allocation only contains land which is able to be developed. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP6 – Land North of Cornfield Road

Comments from SEPA are noted. No change is required.

Non-Allocated Site – Bid Site FR074 – Site adjacent to Rosehall

The Council does not support allocating bid site FR074 for residential development. The bid site FR074, was reviewed through the MIR in order to assess the suitability of the site for development. Within the MIR it was noted that the site was situated within the countryside resulting in the suburbanisation of the countryside (AD0038.D, page 108). Also, the site is located within the area of Rosehall which is not deemed to be a sustainable location as it would result in high car dependency due to the lack of services. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there

is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. No change is required.

Non-Allocated Site – Site BUS3 (as identified in the LDP 2017) – Safeguarded for a hotel facility

The Council does not support allocating BUS3 for business or retail. Although the site was allocated in the LDP 2017 it was noted through the MIR that the site was proposed to be removed from the next LDP (MIR page 104). The site was not put forward as a development bid in response to the Council's call for sites in 2018 so was not considered as such at the MIR stage, nor subject to site assessment and public consultation. Additionally, it is considered that there is an appropriate supply of employment land within the settlement and the existing allocations/ designations should be developed first before considering any future allocations. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the proposed plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the provisions of the proposed plan, or which simply make comments that do not seek modifications to the proposed plan. Therefore, unless these relate to an issue which is unresolved, they are not addressed in my conclusions.
2. The council has indicated that it intends to make what it refers to as 'non-notifiable modifications' to the settlement statement. However, where such matters arise from representations made to the proposed plan they require to be considered as part of the examination. I therefore address these as appropriate below.

Flood Risk

3. The Scottish Environment Protection Agency (SEPA) seeks modifications to the 'Flood Risk' section of the settlement statement in respect of sites OP1, OP3, OP5 and R2. I agree with SEPA that the modifications sought would ensure that the issue of flood risk is dealt with consistently throughout the plan. The suggested modifications would also identify the sites at risk of flooding. I conclude that the proposed plan should be modified as sought by SEPA. The modifications that I recommend below, however, omit reference to site OP3, as I have concluded that this allocation should be removed from the proposed plan (see paragraphs 21 to 27 below).

Site P4

4. Site P4 is an extensive area of open space/recreational land within a residential area. It is identified as protected land in the existing plan and forms part of the town's green-blue network. The designation has been carried forward to the proposed plan. The land of interest to the representee once served as a playing field associated with Markethill Primary School before it was replaced with new facilities. The removal of the land from the P4 designation is sought on the basis that it is no longer accessible to the public. As I noted at my site inspection, the former school buildings have been removed to leave a large expanse of hardstanding, while fencing bounds the playing field preventing public

access.

5. More widely, I noted that site P4 sits at the heart of the local community. A number of footpaths pass through the site connecting Knockie Road with Market Street to the east and Meadowbank Road to the north, where the replacement school is located. Whilst there are few trees, the protected land provides a reasonably attractive green corridor through the area.

6. The council has provided me with a copy of a land disposal plan prepared to inform the sale of the site. The plan identifies separately the area once occupied by buildings and the former playing field and specifically notes that the playing field forms part of a 'protected land' designation within the existing local development plan. As such, I am satisfied that the representee was aware of the site's protected land designation when buying the land.

7. Until such time as development proposals come forward for the former school site as a whole, I agree with the council that the playing field should remain part of the protected land designation P4. It is an important area of open space/recreational land, albeit that it is not available for public use at present. It also contributes significantly to local amenity and has the potential to contribute further to improved connectivity throughout the area. Furthermore, its designation as protected land is longstanding. These are all matters for a future planning application to consider. No modification is required.

Site R1: new cemetery

8. A representation considers that the Turriff settlement boundary should be extended to incorporate the site of the proposed cemetery. It also suggests, as the proposed cemetery would not occupy the whole of site R1, a wider range of uses should be promoted by the proposed plan, for example, a crematorium, community facilities (sports field), and housing along the site's frontage to screen the cemetery from view. The council states that it has given consideration to the alternative uses suggested, including residential development, and discounted them on the grounds of their potential adverse landscape and visual impacts. Furthermore, the site is somewhat disconnect from the town.

9. Firstly, I note SEPA does not object to the use of site R1 as a cemetery. There is also agreement between the council and landowner on the extent of land required. Secondly, the potential of housing on the site has been assessed and considered by the council in the Main Issues Report (bid site FR020). While I broadly agree with the council that the site is somewhat remote from the town and that any housing development would be visually prominent, I note the site lies directly opposite site OP2 (land north of Shannocks View), which is allocated in the proposed plan for the development of 227 homes. As such, once built upon, the site will not be as isolated from the built up area of the town as the council suggests. However, notwithstanding its merits or otherwise as a housing site, we conclude in Issue 5 that there is no requirement for additional housing land to be allocated to meet the strategic development plan allowance for the Rural Housing Market Area in the period up to 2032. Whilst the council has not responded to the acceptability of other uses highlighted in the representation, I note that the site is located close to community facilities and that extensive leisure and sporting facilities exist on Queen's Road. No modification is required.

Site BUS1: safeguarded for business uses

10. The existing local development plan shows three BUS sites and three business allocations in Turriff, only three of which are included in the proposed plan. A representation seeks an eastward extension of site BUS1, to incorporate the 1.7 hectare site which is identified as allocation OP4 in the existing local development plan and was included as bid site FR004 in the Main Issues Report. Site FR004 is located to the north of allocation OP4 in the proposed plan (identified as allocation OP5 in the existing plan) and is currently in agricultural use.

11. The representee considers that the inclusion of bid site FR004 as part of site BUS1 would allow better connectivity between BUS1 and OP4. As I noted at my site inspection, the estate is for the most part occupied and in active use. However, the eastern portion of site BUS1 remains undeveloped.

12. The council has explained that site FR004 has been allocated as employment land for many years, but there has been no developer interest. Given the availability of some undeveloped land within site BUS1 and allocation OP4 to the south, I agree with the council that it is unlikely to be required during the plan period.

13. I have not been provided with evidence to show how the inclusion of site FR004 would improve connectivity between sites BUS1 and OP4, or that the sites cannot be developed separately. I note that the Main Issues Report indicates that site FR004 may be suitable for development in the longer term, once existing allocations are completed. However, this would be a matter for a future local development plan to address. No modification is required.

Site BUS2: safeguarded for business uses

14. BUS2 is presently occupied by a car showroom/workshop and car parking areas. A representee argues that the designation should be removed as the site has been successfully developed. However, as the council correctly notes, BUS2 is a land use designation that safeguards its future use for employment uses. No modification required.

Site OP1: land adjacent to Wood of Delgaty

15. A representee argues that the site is ineffective and is likely to remain so throughout the lifetime of the plan due to market constraints. He suggests that the site should be removed from the proposed plan and replaced with effective sites of equivalent capacity to address the resulting shortfall. The council comments that the site should remain part of the proposed plan as market conditions can change and that it is important to allocate sites to meet local demand.

16. Table 3, Appendix 6 of the proposed plan identifies site OP1 as contributing 442 houses towards the strategic development plan allowance for the Rural Housing Market Area in the period up to 2032. In response to a further information request (FIR008), the council has indicated that development is unlikely to commence until the completion of site OP2 (land north of Shannocks View) in 2027. It has also indicated that site OP2 has a programmed build-out rate of 30 to 40 homes per year and that the highest build-out rate that could be expected in Turriff would be 40 to 50 homes per year. Taking account of the information provided by the council, I consider it reasonable to expect site OP1 to become effective during the plan period. However, if development was to commence on the site in 2028, with an average completion rate of 40 homes per year, its contribution to

the strategic development plan allowance would only be around 200 homes, not 442 as indicated in the proposed plan. I therefore do not expect the site in its entirety to be deliverable by 2032 and conclude that only 200 homes should be counted as contributing to the strategic development plan allowance.

17. Other than a marketability constraint, I have not been made aware of any other issue that would prevent development coming forward on the site. Also, the landowner states that discussions are ongoing with developers and an approved masterplan is in place to guide its development.

18. For these reasons, I conclude that the site should be retained as a housing allocation and no modification is required to allocation OP1. However, given that only a proportion of the site is expected to contribute towards meeting the strategic development plan allowance in the period up to 2032, a modification to the relevant table in Appendix 6 is required. The implications of deducting 242 homes from the allocations identified as contributing to the strategic development allowance for the Rural Housing Market Area are addressed in Issue 5.

19. Representations seek the removal of the requirement to review the approved masterplan for the site if development has not commenced by the time that the proposed plan is adopted (anticipated second half of 2022). However, in light of the council's response above, the terms of Policy P1 (layout siting and design), and the absence of planning application(s) being lodged to progress development of the site, I consider it reasonable to review the proposals and requirements of the approved masterplan, as deemed appropriate. I note that the masterplan was approved in 2016, meaning that a review is already overdue. No modification required.

20. SEPA seeks a modification to the allocation summary to clarify that watercourses on the site should be used to link open spaces, enhance biodiversity and leisure opportunities; it seeks the use of the word 'should' rather than 'may'. I note that the council is content to modify the proposed plan as sought. Given the context within which the modification is sought, I agree that the final paragraph of the allocation summary should be modified to read 'Watercourses on the site *should* be included in these'.

Site OP3: land adjacent to Bridgend Terrace

21. A number of representees seek the removal of site OP3 from the proposal plan; citing adverse impacts of new development on rural character, residential amenity, nature conservation interests and essential infrastructure. Whilst the council notes local concerns, it comments that the landscape and visual effects of future development and impacts on essential infrastructure would be considered in the context of future planning applications.

22. As I observed at my site inspection, the site occupies a visually prominent location; it sits atop rising farmland at the south-west edge of the town beyond the existing settlement boundary. Mature trees and hedgerow partly screen the site when seen from Bridgend Terrace. The site is clearly visible, however, from Queen's Drive to the north, over the Burn of Turriff river valley, and on the approach to the town along the B9024 from the west, from where it appears apart and somewhat disconnected from the town. Also, when seen from the west, apart from the aforementioned trees and hedgerow, there is little to contain the site. On these matters, I agree with the comments of NatureScot, which considers the site to be visually prominent and poorly related to the settlement. It

adds, given the challenges of developing the site, no amount of landscape design would improve it [development]. I also agree with comments expressed in representations that development would erode the rural character of the area. I note that the strategic environmental appraisal records that development of the site would have an overall negative impact due to its scale and location. It also records the presence of endangered species (red squirrel) on and adjacent to the site.

23. The site has been the subject of development interest in the past. I have not been presented with evidence of that interest and why it was not pursued but note the general comment in the Main Issues Report that a previous proposal was unsympathetic in its approach to sustainability. With regard to the present proposal, the council claims to have carefully considered the potential visual impacts of development and its effects on the countryside, wildlife and a nearby listed building. However, I find nothing in the allocation summary, the Main Issues Report or the Issues and Action Paper, which identifies specific mitigation measures required to address these concerns, those of NatureScot or the findings of the strategic environmental appraisal. Rather, the allocation summary merely lists the assessments required to support a planning application; to which I have been invited to add a requirement for a landscape and visual impact assessment. While the representation lodged by the landowner notes his commitment to address these matters, it does not contain firm proposals to mitigate the impacts of development.

24. On the basis of the evidence before me, the sensitivity of the site and my own observations, I am not convinced that the potential landscape and visual effects of development are capable of being suitably mitigated. As such, I find the requirement for a landscape and visual impact assessment to support future proposals is an inadequate response to the concerns of NatureScot; the site is open and visually prominent and such an assessment should have informed the preparation of the proposed plan. It would be inappropriate to leave consideration of this matter to a future planning application once the principle of development had been established through the plan. Accordingly, I conclude that site OP3 should be removed from the plan on the basis that development would have adverse landscape and visual effects and erode the rural character of this part of Turriff.

25. The site is identified as contributing 40 houses towards the strategic development plan allowance for the Rural Housing Market Area in the period up to 2032. However, for the reasons outlined above, and given the availability of a number of other housing sites in Turriff, I do not consider that the benefits, in terms of meeting housing need, would outweigh the adverse impacts resulting from development on this site.

26. I recommend that the plan is modified to remove allocation OP3 from the Turriff settlement statement, key map and map 1. The settlement boundary for Turriff should revert to that shown in the existing local development plan at this location. A modification to the relevant table in Appendix 6 will also be required to delete the entry for Turriff OP3. The implications of this deletion for the overall housing land provision are addressed in Issue 5.

27. In light of my recommendations above, I do not need to address the representations of SEPA and NatureScot, which sought modifications to the allocation summary.

OP4; land adjacent to Broomhill Road

28. Site OP4 is currently allocated as employment land in the existing local development

plan. Given the site's prominence on the approach to the town, the need for structural landscaping to minimise the visual effect of development, the requirement to co-ordinate access from the A947 with that to serve site OP1, and to safeguard core paths, I consider that it is appropriate to guide the development of the site through the preparation of a masterplan. No modification required.

Site OP5: South of Colly Stripe, Smiddyseat Road

29. A representee seeks the removal of the site from the proposed plan, while others seek modifications to the allocation summary and site boundary. The council argues that the site should remain part of the proposed plan and the issues raised by representees are all matters that can be appropriately addressed at the planning application stage, including site density, vehicular access, drainage and flood risk mitigation.

30. As I noted at my site inspection, Balmellie Road/ Smiddyseat Road divides the site; creating a small triangular parcel of land to the east and a large and more developable area of land to the west. The Colly Stripe (a burn) bounds both parts of the site immediately to the north, beyond which lies relatively new housing. I consider the site well-connected to the settlement, readily accessible, and that development would not give rise to unacceptable landscape or visual impacts. Accordingly, I consider that site OP5 should remain part of the plan.

31. I do, however, note the concerns of residents regarding flood risk, drainage and effects on amenity. On these matters, the allocation summary highlights the need for future development to address flood risk and provide buffer strips adjacent to a restored burn, which should assist in reducing the risk of flooding to lower lying garden grounds to the north and west. It also notes the requirement to address a deficiency in waste water treatment facilities and the council's expectations with regard to the provision of vehicular access and footpaths. Finally, works to address these matters will inform the amount of development appropriate for the site in the interests of safeguarding residential amenity. I agree that these are all matters that can be addressed in detail in the context of a planning application, as suggested by the council. No modification is required.

32. A resident of St Congans Den seeks a modification to the site boundary to exclude an area of privately owned garden ground, as shown in document RD0025.A. The council's response suggests that this is as a result of a mapping error and I agree that the boundary of site OP5 should be amended to exclude the area of rear garden ground. A modification is recommended below.

Rosehall

33. A representation lodged on behalf of Harbro Ltd promotes the development of two sites at Rosehall; one to the west (bid site FR074) and one to the north-east of a cluster of existing houses. Due to an error, the council only considered and assessed one of the sites, namely bid site FR074. The main focus of the representation, however, is land lying to the north-east of Rosehall, which has been the subject of development interest in the past. I consider both sites in turn below, which are subject to the same policy considerations.

Non-allocated Bid Site FR074 – site adjacent to Rosehall

34. The site lies in the countryside. It is separated from Turriff by a significant green corridor through which the River Deveron and Burn of Turriff flow. Although once

recognised as an 'identified settlement' in which organic growth was supported, the council now considers it to be an unsustainable location in which to promote new development; future residents, like existing residents, would be highly dependent on their cars to access services and facilities to meet their daily needs. The representation does not explain why the site should be allocated for residential development or indicate how it might be developed.

35. I agree with the council's assessment of the site; while close to Turriff, the settlement is not well connected to the town, contains no services to support development and would lead to the suburbanisation of the countryside. Also, the strategic environmental assessment comments that its development would have an overall negative impact on the landscape, amongst other things. Furthermore, as we conclude elsewhere in this report, sufficient land has been identified in the Rural Housing Market Area to meet identified needs in the period to 2032. No modification to the proposed plan is required in response to the representation.

Non-allocated Bid Site: land located north-east of Rosehall

36. The site is located to the north-east of Rosehall. It is bound by a number of agricultural and commercial storage buildings to the south, a golf course to the north and west and fields to the east. The representee describes the site as 'brownfield' due to its former agricultural business use. The site received planning permission for a mixed-use development comprising residential, industrial and business uses in 2007. The planning permission subsequently lapsed and the site is not a feature of the existing local development plan. Owing to an administrative error, the site was not appraised as part of the strategic environmental assessment of the proposed plan or Main Issues Report. The representee, however, subsequently addressed the Formantine Area Committee to promote its case; stating that the site's development would meet local housing need.

37. As I note above in relation to site FR074, Rosehall is not well connected to the town, despite the footpath connection through the golf course referred to in the representation. Accordingly, prospective residents would be highly dependent on private cars to access services and facilities to meet their daily needs. Development would also lead to the suburbanisation of the countryside. In addition, as I noted at my inspection, the site is mostly in agricultural use and cannot be regarded as brownfield land. Finally, as we conclude elsewhere in this report, sufficient land has been identified in the Rural Housing Market Area to meet identified needs in the period to 2032. For these reasons, I conclude that the site should not be included in the proposed plan. No modification is required in response to the representation.

Non-allocated Site BUS3 (as identified in the existing plan) – safeguard for hotel

38. The existing local development plan safeguards the site for a hotel (BUS3), which at the time of its preparation reflected an extant planning permission; the planning permission has since lapsed. Accordingly, in the absence of a bid to promote the site for alternative uses, the proposed plan has redrawn the settlement boundary to exclude the site. The co-owners of the site seek modifications to the proposed plan to include the site within the settlement boundary and its promotion for business and retail development; no indicative proposals have been lodged in support of such proposals. Despite being previously allocated for development, the council does not support the representees' proposals, noting that sufficient employment land has been allocated in Turriff. The council does not address the acceptability of retail uses on the site.

39. The site lies at the north-east edge of Turriff immediately adjacent to site OP4, which is allocated for business development. It also lies opposite site OP1, a mixed-use allocation that incorporates employment land. Together, sites OP1 and OP4 allocate 14.5 hectares of employment land in Turriff. On this basis, and given that the site has not been assessed for its suitability for business use as part of strategic environmental assessment of the proposed plan, or proposals presented for public consultation, I agree with the council that it would be inappropriate to allocate the site for business use. No modification is required.

40. With regard to retail use, there is no indication from the representation of the type or form of retail use envisaged. As I noted at my site inspection, the site lies well-beyond the defined Turriff town centre, in which the proposed plan supports new retail development and other frequently visited uses. Retail development promoted elsewhere requires to be supported by a sequential assessment that demonstrates that all town centre, edge of centre and other commercial centre options have been considered and discounted as unsuitable or unavailable. The representation is not supported by such an assessment. Furthermore, as with the suggested business use, a retail use on the site has not been subject to strategic environmental assessment or public consultation. For these reasons, I conclude that the site should not be allocated for retail use. No modification is required.

Reporter's recommendations:

Modify the local development plan by:

1. Replacing the second bullet point under the heading 'Flood Risk' on page 501 with:
 "- Due to small watercourses running through or adjacent to the sites, Flood Risk Assessments may be required for sites OP1 and OP5."

2. Adding the following new third bullet point under the heading 'Flood Risk' on page 501 with:
 "- Parts of site R2 is at risk from surface water flooding. A Flood Risk Assessment may be required."

3. Amending the entry for Turriff OP1 in the relevant table in Appendix 6, to replace the figure '442' with '200' in the second last column titled "Local Growth RHMA". (Note – a revised version of Appendix 6, incorporating all the recommended modifications, is provided at the end of this report.)

4. Replacing the fifth sentence of the final paragraph of the allocation summary for site OP1 (adjacent to Wood of Delgaty) on page 503 with:
 "Watercourses on the site should be included in these."

5. Deleting allocated site 'OP3: land adjacent to Bridgend Terrace' from the Turriff settlement statement on page 504, Key Map on page 506 and Map 1 on page 507, and amending the settlement boundary at this location to that shown in the existing local development plan.

6. Deleting the entry for Turriff OP3, from the relevant table in Appendix 6 for sites in the Rural Housing Market Area. (Note – a revised version of Appendix 6, incorporating all the recommended modifications, is provided at the end of this report.)

7. Amending the boundary of allocation OP5 (South of Colly Stripe, Smiddyseat Road) on the Turiff settlement maps on pages 506 and 508 to exclude the area of garden ground shown on document RD0025.A.

Provision of the development plan to which the issue relates:	Balmedie Settlement Statement Belhelvie Settlement Statement Blackdog Settlement Statement Foveran Settlement Statement Rashierieve Foveran Settlement Statement
Planning authority's summary of the representation(s):	
<p>Balmedie</p> <p><u>General</u></p> <p>A representee has proposed extending the settlement boundary to the northeast, up to site P2 [at North Beach Road]. It was argued that the settlement boundary is not clearly defined in this location, and the boundary shown in the PLDP Settlement Statement is somewhat artificial as there are a number of existing properties to the north east of the settlement that are located between the settlement boundary and the southern edge of site P2. It was suggested that amending the settlement boundary to be contiguous with the southern boundary of site P2 and include two fields provides a more robust settlement boundary, contained within the existing woodland setting and protecting this, while also allowing for modest development within the settlement in close proximity to the village core and services and facilities. Additionally, this benefits Balmedie's status as a key settlement in both the Energetica Corridor and the Aberdeen to Peterhead Strategic Growth Area and providing a different offering to the very large-scale developments proposed to the south and that at Menie to the north. The representee has included two Appendices (RD0007.A and RD0007.B) in their representation which provides further detail to support their position (PP0081).</p> <p>Belhelvie Community Council has raised concerns over the addition of approximately 1,800 homes in the whole Community Council area, Belhelvie, Balmedie, Blackdog and Potterton. They highlighted that this, will place pressure on existing facilities such as Balmedie Primary, medical facilities, lack of public transport and also the road infrastructure network with its capacity to cope with the additional traffic and the safety concerns that it would also bring (PP0962).</p> <p>A representee has highlighted that the only route between settlements mentioned is the proposed Ellon-Balmedie strategic cycle route which is mentioned in Balmedie. Its extension to Bridge of Don is mentioned in Ellon. However, this is not an entirely new construction nor is it off-road for between Foveran Roundabout and Balmedie Junction, it follows the old A90. No modifications sought (PP0884).</p> <p><u>Site R1 – Reserved for community uses</u></p> <p>Scottish Environment Protection Agency (SEPA) has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation for site R1 (RD0214.B). No modification sought (PP1219).</p> <p><u>Flood Risk</u></p> <p>SEPA has requested amending the 'Flood Risk' bullet point for consistency to state that</p>	

small watercourses run through or adjacent to the OP1 and OP3 sites, there is also a surface water flood risk on site OP3, and that Flood Risk Assessments may be required (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Scottish Water has requested that within the 'Strategic drainage and water supply' bullet point that additional text is added after the current sentence to note that a Drainage Impact Assessment may be required (PP0272).

The Main Issues Report (MIR) notes insufficient capacity at Balmedie Waste Water Treatment Works (WWTW) and that Scottish Water will initiate a growth project. The respondent queries as to how the costs of this fall between the developer and the taxpayer (PP0138).

Site OP1 – Land at Balmedie South

SEPA has recommended that for site OP1 that the sentences referring to the FRA and enhancement of watercourses are brought up the paragraph in the allocation text and sit after the sentence referring to the green-blue network (RD0214.B) (PP1219).

A representee has stated that the OP1 site is in shared ownership between ANM Group and Aberdeenshire Council. Support for the Vision and the OP1 allocation is noted and there is a commitment to work together to produce a masterplan in conjunction with OP2 to allow these sites to work towards delivery. A change is requested in terms of text relating to access off Eigie Road. The representee was unaware of any detailed engineering assessment that has been carried out on the feasibility of access from the new trunk road roundabout. Through obtaining planning permission a detailed Transport Assessment would be prepared, which is noted as a requirement in the Settlement Statement. It was stated that including the comment regarding the access is premature and prejudices any outcomes from the engineers (PP1012).

The representee requested a further change to the wording of the allocation summary in relation to transportation and the sentence regarding the bus stops. It was again thought that the current wording prejudices the outcome of the required Transport Assessment and future discussions with the Planning and Transportation Services (PP1012).

A representee notes that the site is a constrained site as noted in the 2019 HLA and has not delivered housing as originally anticipated. The owner/developer declined to participate in the joint masterplan with OP2 which has now separately been masterplanned and has planning permission. There has been no planning application submitted in the past 7 years and it would be inappropriate to be confident in its delivery within the Plan period given the shortfall in delivery of sufficient land in the AHMA, contrary to SPP. The constrained supply at the base date of the Plan should not count towards the allowances and should the constraint be lifted during the Plan period it will become available to augment the new effective allocations (PP1062).

NatureScot has suggested amending or removing wording in the allocation summary for

site OP1 in Balmedie to avoid suggesting that planning controls on construction and operation are necessary to mitigate an adverse effect on integrity of the Sands of Forvie Special Area of Conservation (SAC) and Ythan Estuary, Sands of Forvie and Meikle Loch Special Protection Area (SPA). NatureScot advised that while mitigating drainage impacts through planning controls on construction and operation may be required by the Council, this mitigation is not necessary to avoid an adverse effect on the integrity of these designations (RD0255.B) (PP1300).

Site OP2 – Land South of Chapelwell

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219).

NatureScot has suggested amending or removing wording in the allocation summary for site OP2 in Balmedie to avoid suggesting that planning controls on construction and operation are necessary to mitigate an adverse effect on integrity of the Sands of Forvie Special Area of Conservation (SAC) and Ythan Estuary, Sands of Forvie and Meikle Loch Special Protection Area (SPA). NatureScot advised that while mitigating drainage impacts through planning controls on construction and operation may be required by the Council, this mitigation is not necessary to avoid an adverse effect on the integrity of these designations (RD0255.B) (PP1300).

Site OP3 – Menie

A representee has welcomed the updates made to the allocation summary to reflect the decision of the Council, in September 2019, to resolve to approve the revised development. No modification sought (PP1224).

SEPA has requested that the allocation summary for site OP3 states that a Flood Risk Assessment may be required should development proposals be revised or extant permission lapse (RD0214.B) (PP1219).

A representee has objected to the inclusion of the OP3 site as it is likely to cause damage and/or loss to areas of ancient woodland. Removal of woodland is contrary to SPP paragraph 216 and 218 and also contrary to the control of Woodland Removal Policy (RD0161.A) (PP0878).

Belhelvie Community Council have raised concerns about the potentially heavy volume of construction traffic through the village during the construction phase of the development and increase in commuter traffic through the village upon completion. This would cause health and safety issues within the village and put undue pressure on the south exit to the A90. The development should incorporate a grade separated junction onto the A90 north of Balmedie (PP0962).

A representee has requested, for clarity, deleting the words “the first” from the second last sentence in paragraph two so that it begins with, “As part of this permission, 2 phases (Chapters 1A & 1B) were granted with full details...”, as the exact timing of each phase of the development has not yet been finalised and there is potential for more than one Chapter of housing to be built at a time. The representee noted that Condition 2 of the approval requires a phasing plan to be submitted with the first application for approval of

matters specified in conditions therefore it is considered to be best, and consistent with the approval, to remove any reference to timing of the phases from the statement in the LDP (PP1224).

A representee has disagreed that site OP3 is “environmentally sensitive” and requested this statement is removed from the allocation summary. The Council’s screening opinion for the proposal acknowledged that the site was not a “sensitive area” as defined in regulation 2(1) of the Town and Country (Environmental Impact Assessment) (Scotland) Regulations 2017. It was also suggested that paragraph four of the allocation summary was amended to clarify the position in relation to impacts on the SPA (i.e., no adverse impact) as without doing so could result in misunderstandings in relation to the legal tests set out in the Habitats Regulations (PP1224).

Changes should be made to the allocation summary (fifth paragraph) in relation to affordable housing in the interests of clarity. The current wording could lead to confusion in relation to whether any contribution will be by way of a commuted sum or on-site delivery. The amendment makes it clear that the default position, as requested by the Council’s Infrastructure Services (Housing) Team, will be a commuted sum, while acknowledging the potential to consider on-site delivery as part of phases for which detailed approval is still to be obtained (PP1224).

Non-Allocated Site – Bid Site FR022 – Land at Millden

A representee has requested that bid site FR022 be allocated in the PLDP for 400 homes, site for a primary school, community facilities and mixed employment uses. The site is served by existing and direct access to the grade separate junction on the A90, the existing trunk sewer is located at this junction and Scottish Water have surveyed for a new trunk water main to pass the existing road in West Balmedie, therefore there are no substantial constraints to this site. This is unlike the Potterton allocations, and there will be very limited vehicular impact due to the direct access to the primary transportation route.

There are the beginnings of a settlement in West Balmedie including a school, businesses and residential properties. The Settlement Statement recognises the local community concern on the need to identify a site for school provision. Local community and Councillors expressed concern in two previous LDP consultations about the school. The existing school is nearing the end of its lifecycle and requires maintenance interventions. Existing allocations in the catchment despite the core capacity of the school being exceeded with no possibility of extending due to access/safety constraints.

It is estimated that 1,200 homes in the catchment will be completed during the lifetime of the Plan therefore due to the timescale to deliver a new school there is a need to respond to this requirement within this LDP. Bid site FR022 has direct vehicular access for pupils throughout the catchment with pedestrian/cycle links already in place for Balmedie and links to Potterton and Belhelvie could be formed. Bid site FR022 complies with the principles of SPP paragraph 28 and 29, does not have protected designations and a masterplan is underway with a POAN submitted. Progress on the masterplan has been slowed by the Planning and Environment Service with advice received that there is no mechanism to approve/consider it. Other bids around Balmedie do not have the connectivity to the A90 or are as free from traffic impacts as FR022. Compared to Potterton it is difficult to discern whether any competent assessment of the deliverability of

bid sites have been undertaken. The representee has included an Appendix (RD0193.A) in their representation which provides further detail to support their position (PP1096).

Non-Allocated Site – Bid Site FR089 – Land at Keir Farm

A representee supported the allocation of FR089 as it would likely come forward with a commitment to support commercial and education facilities. The site should be prioritised as it is a more sustainable solution for any existing housing shortage (PP0138).

A representee has raised concern with the non-inclusion of site FR089 Keir Farm. A representation was made in response to the Main Issues Report that there was concern about the delivery of large sites in the Blackdog to Peterhead strategic growth corridor and that FR089 should be allocated rather than reserved, as noted in the Main Issues Report. There are concerns about the delivery of the recently approved 550 homes at Menie. Cromleybank, Ellon has been projected for 980 homes by 2031 despite not having been delivered in a decade. OP1 Balmedie is noted in the 2019 HLA as being constrained but has been allocated for an enlarged capacity. These sites total 1,610 homes meaning that new allocations are essential in this corridor. A masterplan for FR089 was submitted including the possibility of a primary school. The site lies within the bounds of the new B977 which would serve as a long-term defensible boundary. There is an underpass connection beneath the A90 and vehicular connection by the road network via the grade separated junction. The masterplan could deliver a high-quality expansion of the settlement. The site is in single ownership and control and is deliverable, meeting the effectiveness tests within the circular (PP0950).

Non-Allocated Site – Bid Site FR116 – Land at Blairton

Land at Blairton, FR116, was submitted for a bid for development of 1,650 private and affordable residential dwellings on 105.1ha of land was proposed. The site was identified within the Main Issues Report as 'Reserved'. Alongside residential and community uses the development framework identified a mixed-use area. In response to the inadequate allowances, it is requested that the Plan is modified to allocate land at Blairton for both a development in the period 2020 to 2032 of 850 homes, but also as strategic reserve for the remaining 800. This is a deliverable site in the short-term, and with confidence in the investment in the necessary infrastructure will support the delivery of the Spatial Strategy of the SDP. The representee has included an Appendix (RD0178.A) in their representation which provides further detail to support their position (PP0935).

Non-Allocated Site – New N014 – Land at Southfolds Farm

A representee proposed the allocation of a new site for commercial and residential development incorporating bid site FR128. The site can either be developed as a standalone development or together with FR089. It is proposed through the masterplan included with the submission that the commercial development would be on the area subject to noise impact due to the A90(T) and B977 and in an area where it is visually prominent to encourage passing trade. The remainder of the land would be for residential development delivered in phases over the next 10 years. The reasons for not allocating FR089 and FR128 should be reconsidered. Accessibility concerns have been overcome by the completion and opening of the new A90 (T) roundabout. Connectivity with Balmedie can be achieved if the proposed site is developed as a comprehensive expansion of the settlement and supplementing the existing underpass with other

crossings and links. There will be loss of prime agricultural land but only on part of the site, prime land has already been lost in the area due to road works. It is also noted that impact on the landscape character can be addressed by screen planting to overcome visual impact where it is required, otherwise the land is largely hidden from view by the topography. In relation to infrastructure, it is noted that flood risk can be mitigated by SuDS, waste water drainage provision can be achieved by a developer led growth project and education provision can be supported in combination with FR089. The representee has included an Appendix (RD0028.A) in their representation which provides further detail to support their position (PP0202).

Non-Allocated Site – New Site N019 – Land east of North Beach Road

The representee proposed the allocation of 10 homes east of North Beach Road, which could potentially include self-build plots. More development should be considered in Balmedie as it is described as a key settlement in both the Energetica Corridor and the Aberdeen to Peterhead Strategic Growth Area and it will play an important role in delivering strategic housing and employment allowances. There is a need for smaller allocations to ensure a suitable mix of places, including a mix of house types and tenures, which could provide an opportunity for self-build houses, as supported in Garioch Area Committee meeting (on 3 September 2019 it was stated that the Local Development Plan should encourage self-build opportunities, which this site could deliver), the PDLP does not include any small sites in Balmedie, a small allocation would be consistent with the Proposed Strategic Development Plan 2018, which states allocations should be small in nature, and it would have no significant impact on the housing allowances and as the allocations are indicative, actual homes built could be less. N019 scores positively against the Council's site assessment criteria with a number of examples noted. The representee has included two Appendices (RD0007.A and RD0007.B) in their representation which provides further detail to support their position (PP0081).

Belhelvie

General

There is a lack of public transport facilities in Belhelvie. No modification sought (PP1155).

Belhelvie Community Council has raised concerns over the addition of approximately 1,800 homes in the whole Community Council area, Belhelvie, Balmedie, Blackdog and Potterton. They highlighted that, this will place pressure on existing facilities such as Balmedie Primary, medical facilities, lack of public transport and also the road infrastructure network with its capacity to cope with the additional traffic and the safety concerns that it would also bring (PP0962).

Two representees have objected to the removal of the green belt around Belhelvie (PP0236 and PP0255).

Site R1 – Reserved for a future Community Centre

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the R1 designation (RD0214.B). No modification sought (PP1219).

The R1 site reserved for a future community centre is inaccessible to pedestrians. No

modification sought (PP0114).

The designation of the R1 site should be removed as there is planning permission to build a house on the site, APP/2019/0334 (PP0458, PP0605, PP0803 and PP0951). Development of the housing has been delayed due to technical matters with the electricity pole and Covid-19 (PP0605). It is also not seen how this can be a community facility when there is a business on the site that has been there for a number of years which employs local people (PP0606, PP0803 and PP0951). There has also been no contact from the Council with regards to the designation of the site (PP0951).

Flood Risk

SEPA has recommended, for consistency, to add site OP2 to the 'Flood Risk' bullet point as there is an FRA requirement in the allocation text (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Clarification was sought on how costs will be split to fund the growth project at Balmedie WWTW (PP0138).

Scottish Water has requested under the 'Strategic drainage and water supply' bullet point that the following wording is inserted so the third sentence reads, "Scottish Water will initiate a growth project, should demand from committed development exceed available capacity and will instigate this on receipt of the 5 Growth Criteria from a developer. A Drainage Impact Assessment may be requested. Early engagement ..." (PP0272).

It was requested by a representee that the wording is amended in terms of developer obligations to strategic transportation requirements so that they are linked in scale and kind to the proposed development. It is requested to amend wording to change "contributions will be required" to "may be required" and insert at the end of the first sentence "...if this is directly related to the scale of development being proposed and has been confirmed by way of a Transport Assessment of the proposed development" (PP0456).

Site OP1 – East End of Park Terrace

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation/designation summary for site OP1. No modification sought (RD0214.B) (PP1219).

Site OP2 – Land at Cairntack (East)

Support has been expressed for the allocation of site OP1. No modification sought (PP0635).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219).

A number of representees have objected to site OP2. The site will increase the number of cars and create a thoroughfare which would affect public safety (PP0067, PP0138, PP0660 and PP0661). There is also a lack of pavements in and out of the village which would put people at risk (PP0660 and PP0661). There is also poor public transport within Belhelvie meaning people would be mainly car reliant (PP0067, PP0138, PP0660 and PP0661), which in turn will not align with reducing climate emissions (PP0138). It would also be an unsuitable location for affordable housing due to the level of car dependency (PP0660 and PP0661).

There is a lack of amenities in the settlement (PP0067, PP0138, PP0660 and PP0661) and the development would result in the loss of wildlife (PP0067, PP0138, PP0660 and PP0661). Development would also have a negative visual impact on the settlement and would not be proportionate or sympathetic to the needs of the settlement (PP0138, PP0660 and PP0661).

The site will have an impact of additional traffic on Cairn View. Access should be provided from Cairntack Road (PP0114). Work would have to be carried out to improve the roads so they could handle additional traffic and careful consideration would be needed to ensure the most appropriate road design for the new developments (PP0660 and PP0661). Issues of amenity in terms of overshadowing and overlooking are noted as a concern (PP0138, PP0660 and PP0661).

Balmedie Primary School is overcapacity and cannot accommodate further pupils and there is no provision in the PLDP for further school facilities (PP0138, PP0660 and PP0661). Other infrastructure concerns are also raised including surface water flooding issues (PP0138, PP0660 and PP0661), insufficient capacity at the WWTW in Balmedie (PP0660, PP0661) and the impact on the heath centre (PP0660 and PP0661). Additionally, there are no commitments in terms of local infrastructure and amenities from this development (PP0660 and PP0661).

NatureScot has requested that the allocation summary includes a requirement for active travel provision in the context of the shared access strategy with OP1 and OP3, as this would help promote safe and convenient active travel opportunities which is in keeping with the PLDP aims (RD0255.B) (PP1300).

NatureScot has suggested amending or removing wording in the allocation summary so as to avoid suggesting that planning controls on construction and operation are necessary to mitigate adverse effects from drainage, visitor pressure and impact on geese grazing grounds, on the integrity of the Sands of Forvie Special Area of Conservation (SAC) and Ythan Estuary, Sands of Forvie and Meikle Loch Special Protection Area (SPA). NatureScot advises that while mitigating drainage impacts through planning controls on construction and operation may be required by the Council, this mitigation is not necessary to avoid an adverse effect on the integrity of these designations and that the proposal itself would not adversely affect the integrity of these sites (RD0255.B) (PP1300).

Site OP3 – Land to the East of Cairn View

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP3 (RD0214.B). No modification sought (PP1219).

Support has been received for the inclusion of the site, on the basis of the site being a logical extension to the settlement and provides opportunities for open space and landscaping improvements, other public benefits and help meet the planning objectives for Belhelvie. No modification sought (PP0456).

Support has also been received for the site, but it is noted that the OP3 site would more accurately be described as Land at Cairntack (East), therefore swapping the names for OP2 and OP3. The representee has included an Appendix (RD0072.A) in their representation which provides further detail to support their position (PP0456).

A number of representees have objected to site OP3 (PP0027, PP0067, PP0078, PP0138, PP0151, PP0158, PP0167, PP0178, PP0306, PP0317, PP0375, PP0660 and PP0661). It was stated that the site for an additional 49 homes would add too much traffic onto Cairntack Road and affect pedestrian safety (PP0027, PP0078, PP0138, PP0158, PP0167, PP0317 and PP0375). A representee considered that the issue of increased traffic could be resolved through removal of the proposed loop road (PP0138). More infrastructure is required including a corner shop and pavement connectivity to Potterton and Balmedie (PP0375, PP0660 and PP0661). The pavements are also risky during the winter months (PP0375). The development would also affect the character of the settlement (PP0027, PP0138, PP0151, PP0660 and PP0661). Additionally, access should be reconsidered and the loop road at Carin View might be able to resolve the situation and footpaths are required between the sites to allow pedestrian access (PP0158) and would increase the volume of traffic by 200 cars (PP0375).

The site will increase the number of cars and create a thoroughfare which would affect public safety. There is also poor public transport within Belhelvie meaning people would be mainly car reliant (PP0067, PP0078, PP0138, PP0158, PP0167, PP0178, PP0306, PP0317, PP0375, PP0660 and PP0661), thus reducing the sustainability of the development (PP0167) and increasing climatic factors caused by the development (PP0306). It would also be an unsuitable location for affordable housing due to the level of car dependency (PP0660 and PP0661).

The roads between Belhelvie and the A90 are unclassified, narrow and poorly maintained and with the cumulative impact of the development in Belhelvie and Potterton will have a negative impact on the local road network (PP0167) which are prone to flooding and unsuitable for heavy vehicles (PP0375). Work would have to be carried out to improve the roads so they could handle additional traffic and careful consideration would be needed to ensure the most appropriate road design for the new developments (PP0660 and PP0661). Sites in other towns should be prioritised as they have existing transport links to Aberdeen (PP0078).

There are, a lack of amenities in the settlement (PP0067, PP0078, PP0138, PP0158, PP0167, PP0178, PP0306, PP0375, PP0660 and PP0661) and the development would result in the loss of wildlife (PP0067, PP0138, PP0158, PP0167, PP0178, PP0306, PP0660 and PP0661), loss of habitat (PP0306) and the loss of green belt land (PP0151). The development would also result in the loss of irreplaceable prime agricultural land (PP0306). If development does go ahead more tree planting should be required (PP0151). Development would also have a negative visual impact on the settlement and would not be proportionate or sympathetic to the needs of the settlement (PP0138, PP0306, PP0660 and PP0661).

Balmedie Primary School is over capacity and will not be able to support more residents from Belhelvie (PP0078, PP0138, PP0158, PP0178, PP0306, PP0317, PP0375, PP0660 and PP0661). The PLDP needs to highlight a commitment in respect of school facilities (PP0078 and PP0138). It is also unclear if consideration has been given to the increased pressure on pre-school and nursery facilities as a result of the development (PP0078 and PP0375). Issues of amenity in terms of overshadowing and overlooking are noted as a concern (PP0138). Other infrastructure concerns are also raised including surface water flooding issues (PP0138, PP0660 and PP0661), drainage issues (PP0158 and PP0306), insufficient capacity at the Balmedie WWTW and put added pressure on health care (PP0078, PP0167, PP0178, PP0375, PP0660 and PP0661). It is also thought that it is not a suitable location for affordable housing due to there being no employment opportunities within walking/cycling distances and no affordable housing currently exists within the settlement (PP0317).

Aberdeenshire Council was committed to improving the Green Environmental standards of these areas, this proposal would have an extreme adverse effect on the Belhelvie village from the destruction of green areas to the creation of extra roads and drainage systems this project would surely require (PP0178).

NatureScot requests that the allocation summary for site OP3 in Belhelvie includes a requirement for active travel provision in the context of the shared access strategy with OP2, as this would help promote safe and convenient active travel opportunities which is in keeping with the Proposed Plan's aims (RD0255.B) (PP1300).

Site OP1 – East End of Park Terrace, Site OP2 – Land at Cairntack (East) and Site OP3 – Land to the East of Cairn View

Belhelvie Community Council has indicated that they have no signification objection to theses site as it appears a natural extension to the settlement but are aware that some residents are concerned about extending the village due to the lack of services and poor road infrastructure. No modification sought (PP0962).

The three sites would double the size of the settlement (PP0106). The local roads are not adequate for the scale of the development proposed through the OP1, OP2 and OP3 site (PP0041, PP0078, PP0161 and PP0319), particularly in the winter months as the roads are not gritted (PP0161). The sites would also increase parking issues in the area and the bus service is insufficient in the area. It is also noted that a loop-road would not be possible from Cairntack through to Cairn View (PP0041 and PP0138). There is already an increased noise and light pollution from the new dual-carriageway and the roads in and out of the village are only B class (PP0236 and PP0319).

There are also insufficient amenities (PP0041, PP0078, PP0106, PP0161 and PP0319) and infrastructure to support new development including waste water and water supply (PP0041, PP0078 and PP0236), health care (PP0161), and leisure facilities (PP0161). Additionally, there are no local employment opportunities within the settlement (PP0106 and PP0138). This all results in an unsustainable settlement for new development (PP0236).

Development in Belhelvie would destroy the countryside and impact on the wildlife and the open space within the settlement. Brownfield sites should be development before

green belt sites (PP0236).

There are no good roads or bus links to Aberdeen. Other settlements in the area, Potterton and/or Blackdog would be better suited to accommodate new housing developments (PP0106, PP0138 and PP0319). Development in Belhelvie would put pressure on existing services whereas the 500 homes in West Balmedie would likely come with services therefore making it a more sustainable solution for development (PP0660 and PP0661). The sites also do not meet the 'well connected' criteria of successful places (PP0319). Climate change mitigation should be paramount and increasing allocations in Belhelvie will increase commuter traffic contradicting this objective (PP0138, PP0236 and PP0319).

Contributions to local transport infrastructure, primary education, community facilities and sports and recreation must be a requirement of prospective developments (PP0114). It is also unclear if consideration has been given to the increased pressure on secondary and pre-school capacity as a result of the development (PP0138). There is also no commitment to the upgrading of commercial facilities in the PLDP for facilities in the area (PP0138). Balmedie Primary School is at capacity and cannot take new pupils, also the bus stop for pupils is small and could result in safety issues (PP0161 and PP0319).

Blackdog

General

Belhelvie Community Council has raised concerns over the addition of approximately 1,800 homes in the whole Community Council area, Belhelvie, Balmedie, Blackdog and Potterton. They highlighted that this, will place pressure on existing facilities such as Balmedie Primary, medical facilities, lack of public transport and also the road infrastructure network with its capacity to cope with the additional traffic and the safety concerns that it would also bring (PP0962).

The settlement boundary should be amended to include the existing shed accessed from Hareburn Terrace as all other buildings in the area are contained within the boundary. The shed is built but does not appear on the updated map of Blackdog. The area of land has been developed on with associated storage around the building and therefore should not be green belt land. The Report of Handling for approved planning application (APP/2016/1272) on the site notes it has little value due to scale and isolation, without separation between the settlement and countryside, roads and the burn identifying a more obvious boundary, insufficient scale for agricultural purposes and not identified as a habitat value for wildlife (PP0443).

Vision

Nestrans has supported the ongoing development of the cycleway linking to Balmedie (RD0227.A). No modification sought (PP1241).

A representee has objected to the proposed wording in the Vision within the Blackdog Settlement Statement and requested that it is amended to reflect that a planning application for significant expansion of the village has been approved for a new town centre, housing and employment opportunities. The representee has included two Appendices (RD0269.A and RD0269.B) in their representation which provides further

detail to support their position (PP1399).

Site BUS – Safeguarded for business uses

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site BUS (RD0214.B). No modification sought (PP1219).

Town Centre

The representee has sought modification to the Blackdog Settlement Statement map to include the town centre delineated on the settlement plan, rather than only a reference to OP1. The representee has included two Appendices (RD0269.A and RD0269.B) in their representation which provides further detail to support their position (PP1399).

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Land at Blackdog

A representee noted no objections to the OP1 site as it is welcomed by the residents providing that the promised community facilities are provided. No modification sought (PP0962).

SEPA has requested that for the allocation summary replacing the first two sentences of the third paragraph with, "Due the presence of small watercourses running through the site a Flood risk Assessment will be required" to ensure there is consistency with the 'Flood Risk' bullet point (RD0214.B) (PP1219).

The area of land to the west of the new access road to Blackdog contains a small-wooded area of coniferous trees. This area is habitat to a number of birds of prey and should be protected as it adds to the biodiversity of the area whilst also providing a natural sound barrier to the A90. Additionally, the area the south and south east of the existing Blackdog settlement contains mature woods of coniferous trees which provide habitat for indigenous species of birds and mammals, whilst also adding to the visual appeal of the area. This area should be protected as such, and any development of the surrounding land for housing, leisure or retail purposes should be sympathetic to this (PP0002). Existing woodland within the site of OP1 should be protected as an amenity for the settlement as green space is limited within the settlement, not just to preserve wildlife but for people's general health (PP0159).

The OP1 site should be removed from the PLDP as it would result in the loss of woodland habitat, which is home to protected species and enjoyed by locals for recreation. The loss of woodland goes against Government actions to reduce our carbon footprint and

deforestation can affect air quality. Green space is very limited in Blackdog and should be protected, not just to preserve wildlife but to safeguard people's general health, as highlighted during Covid-19. Green space should be protected as it contributes to improving our general health and wellbeing, rather than allowing developers to destroy the landscape (PP0159). Another representee objected to the OP1 site as it would cause destruction of North Wood, and the development would impact on the character of the area and the areas currently used for recreation (PP0267). Additionally, it was noted that affordable housing being built towards the bottom end of North Wood is a flawed suggestion as that would result in a 30-minute walk to a bus stop (PP0267).

The text referring to the gypsy/traveller site should be removed from the allocation summary. There is no local support for the site and the location is not considered appropriate as there is no local employment, education or other community infrastructure so would not meet the requirements set out in Policy H1 (PP0083, PP0086, PP0115 and PP1028). There is also limited public transport access with no access from the centre of the village (PP0083, PP0086 and PP1028). Also, during the original masterplanning process, objections were received regarding the site on the land therefore it should be removed (PP0086). It is also noted that the location would not give the gypsy/traveller community privacy as it would be located next to new homes (PP0267). A representee questions as to whether the gypsy/traveller site still forms part of the allocation as there is no specific mention of the site (PP0866).

A representee has requested that Blackdog town centre is included as part of the allocation for site OP1 and has requested that it is amended to reflect that a planning application for significant expansion of the village has been approved for a new town centre, housing and employment opportunities. The representee highlighted the Council's response given in the Issues and Actions Papers for bid site FR113 which acknowledged Planning Permission in Principle (PPP) had been granted on the site but that the Matters Specified in Conditions (MSC) were still to be submitted and that there is no justification to identify the indicative land uses of the current planning permission within the PLDP. The representee however highlighted that the MSC application was submitted in September 2019 and is nearing determination with further applications to be submitted shortly – the Council cannot refer to a legally binding, extant planning permissions as comprising 'indicative land uses. The representee also highlighted that a PPP is not a material consideration as stated in the Issues and Actions papers, it instead grants planning permission. The representee stated that the Council's position for not including reference to the planning permission on the basis that the development is not in place is illogical and inconsistent with other allocations within the PLDP. The representee highlighted that the purpose of the LDP is to allocate land to reflect its legal planning status which the OP1 allocation fails to do. It was stated that the Council have failed to properly take account of the extant planning permission and in doing so have erred in the advice to Formartine Area Committee and Full Council. Additionally, failure to properly reflect the PPP impacts the delivery of the development as it impacts the certainty of the site which comes from the protection afforded to town centres. Scottish Planning Policy (SPP) provides guidance on promoting town centres (town centre first policy), and paragraph 60 requires the planning system to apply a town centre first policy. SPP also requires a network of centres to be defined. The representee stated that non-inclusion of the definition of Blackdog town centre in the PLDP is contrary to SPP. The representee has included two Appendices (RD0269.A and RD0269.B) in their representation which provides further detail to support their position (PP1399).

Non-Allocated Site – Bid Site FR057 – Land to the west of the A90

The site should be included as a roadside service development opportunity as it is ideally located to service the A90 and AWPR. Whilst it is not connected to Blackdog settlement it is well connected to the local road network. It is a safe and convenient place for people to stop, rest and refuel, currently the nearest services are in Peterhead. Landscape and biodiversity impacts can be mitigated. The representee disagrees with the Council's assessment that development in this location would erode the function of the AWPR as a transport not a development corridor. It is also disputed that there is no justification for removing green belt to accommodate the development (PP0636).

Foveran

General

A representee has raised concerns about the impact of 195 houses on the infrastructure of Foveran and whether all properties will be connected to the mains sewer. It was also questioned if there is an adequate water supply, school facilities and broadband connectivity (PP0112).

Flood Risk

SEPA has recommended that for consistency, amending the 'Flood Risk' text to be more succinct as the allocation texts contain further information on FRA and buffer strips (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has requested that the last sentence in the 'Strategic drainage and water supply' bullet point is removed and replaced with "All development will be required to connect to the public waste water system" as planning permission is likely to be granted and construction started/completed on the Growth Project for Foveran before the Plan is adopted (RD0214.B) (PP1219).

A representee has stated that the Plan acknowledges that primary education in Foveran is likely to be a constraint to future development, however it fails to identify a possible solution to the issue. This is at odds with how the Council has addressed education provision in other settlements, e.g., Turriff identifies and safeguards land for future education provision. The School Roll Forecast (2019) confirms it will exceed capacity by 2023. It is unclear to what extent the projected increase is based on natural growth from existing development and what impact the proposed allocations will exert on roll numbers.

The proposed LDP confirms the school is not easily extendable. The School Roll Forecast also confirms the next closest school (Balmedie) is forecast to exceed capacity in 2023. With the primary schools projected to reach capacity by 2023 the projected levels of housing proposed to be delivered would be constrained relatively early in the Plan period unless a new primary school is delivered. This would result in a failure in the housing land supply, contributing to an anticipated overall shortfall in the wider Aberdeenshire area. It was suggested that the Proposed Plan is deficient in not identifying and safeguarding as reserved land, a suitable location in Foveran for a primary school.

The 'Westfield Masterplan' approved in 2013 indicates a potential area for a new primary school, however this location would not be accessible from the southern part of Foveran without delivery of a burn crossing. OP1 includes strategic reserve which is included in the Employment Land Allocations of the Proposed LDP. The land is safeguarded for long-term employment uses and could not therefore be supported to deliver a new primary school which would be considered contrary to the land uses for which the land is allocated. In not carrying forward FR067 as a preferred site from the MIR, OP2 cannot be delivered unless a southern link road is completed which would provide a second point of access onto the B977.

This means that the required future crossing of the Foveran Burn to provide connectivity between OP1 and OP2 would not be delivered until OP2 is completed. This further reduces the appropriateness of locating a new primary school to the north of the burn. With the majority of housing to the south of the burn, the most logical location for a new school would be to the south. It was suggested that the most appropriate location for a new school would be on land to the south of Blairythan Terrace and to the west of FR067 which has the ability to achieve connectivity to all proposed development sites. The representee has requested the introduction of safeguarding for a new primary school and the Settlement Statement amended to include this which would be delivered by the Council with developer obligations to be sought from all proposed and future housing allocations. A further amendment is requested to recognise the potential to access the proposed primary school from the required link road with indicative routes through FR067 and FR109. It is considered these modifications would remove the constraint caused by education provision and enable Foveran to accommodate future residential and future development to fulfil the objective for the village. The representee has included Appendices (RD0224.A- RD0224.H) in their representation which provides further detail to support their position (PP1236).

Site OP1 – South of Westfield Farm

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

The site should be removed as it would de-value existing property and part of the site is owned by the representee and they will not allow development to come forward on the site (PP0038). Additionally, there are no amenities in Foveran and the development would increase the amount of traffic (PP0038).

The area of the site around the school should not be included in the LDP as it is in separate ownership. The representee has included an Appendix (RD0020.A) in their representation which provides further detail to support their position (PP0182). Additionally, the location of the pedestrian/cycle paths and primary school should be reconsidered due to the impact on livestock (PP0182). The pavement at the houses along Cultercullen Road protrudes into the road making the road too narrow for traffic to pass (PP0182).

Site OP2 – West of McBey Way

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought

(PP1219).

The representee has sought the removal of site OP2, noting that the ground is of poor quality as it is clay which leads to poor quality soakaways and any issues with drainage could lead to their property flooding. There is an issue with surface water in the area as their neighbour's garden is saturated. Concerns are also noted with regards to potential damage to their hedge from the new development (PP0066).

Site OP3 – South of Turin Way

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP3 (RD0214.B). No modification sought (PP1219).

The close proximity of the housing development will affect the present open aspect of the representee's property (PP0113).

Additional houses in OP3 would spoil the rustic charm of the older part of the village. It makes sense to construct new housing along the newer side of the village at OP1 and OP2 where new housing has already been developed. The addition of housing in the older part of the village would ruin privacy and existing properties could be overlooked and reduce the value of homes. Also, there is no infrastructure in place to accommodate the development at OP3 and concerns are noted with regards to sewerage, the capacity of the network sewage and also the low water pressure in the area (PP1025).

Additionally, there is insufficient capacity at the school in Foveran for all of the new development. In order to achieve the best outcome, the continued development of OP1 and OP2 would be better placed to support the construction of a new school. The OP3 site along with the OP4 and OP5 sites would not be enough to warrant a new school or local shop. Priority should be given to the OP1 and OP2 sites before the OP3 site (PP1025).

Site OP4 – Site 2, Land at Blairythan Terrace

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP4 (RD0214.B). No modification sought (PP1219).

Additional houses in OP4 would spoil the rustic charm of the older part of the village. It makes sense to construct new housing along the newer side of the village at OP1 and OP2 where new housing has already been developed. The addition of housing in the older part of the village would ruin privacy and existing properties could be overlooked and reduce the value of homes. Additionally, there is no infrastructure in place to accommodate the development at OP4 and concerns are noted with regards to sewerage, the capacity of the network sewage and also the low water pressure in the area (PP1025).

Additionally, there is insufficient capacity at the school in Foveran for all of the new development. In order to achieve the best outcome, the continued development of OP1 and OP2 would be better placed to support the construction of a new school. The OP4 site along with the OP3 and OP5 sites would not be enough to warrant a new school or

local shop. Priority should be given to the OP1 and OP2 sites before the OP4 site (PP1025).

Site OP5 – Land adjacent to former A90, North of Westfield Road

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP5 (RD0214.B). No modification sought (PP1219).

Site OP3 – South of Turin Way, Site OP4 – Site 2, Land at Blairythan Terrace, and Bid Site FR109 – Land to South West of Foveran

Whilst supporting sites OP3 and OP4, the representee disagreed with the Council's assessment that there would be a cumulative impact of the total number of homes served by Blairythan Terraces from these sites. The decision not to allocate FR067 should be reversed on the basis of an intervening third-party land, and all these sites (part FR109) should be included. The new addition of an 'indicative link road' on land which is in the ownership of the representee should be supported by an appropriate level of development in order to make it viable. It is not good planning to develop land for the purpose of a road alone and the 'indicative link' but should be part of a wider masterplan. A masterplan has been prepared to show how all three sites and the land in ownership of the neighbouring landowner can help deliver this road. Topography may result in an alternative route being required. Inclusion of site FR109 in addition, will help ensure the delivery of an appropriate level of development and infrastructure in this key development area. The representee considered that the overall proposal to include FR067 and part of FR109 is constructive, facilitating the desired link road with built in flexibility to adapt to updated DPMTAG conditions in the future (PP1232).

The representee raised concerns about the delivery of the PLDP given the constrained nature of some sites and considers the key aim of delivery has not been achieved. In Foveran, the indicative road link cannot be delivered without development including FR067 which had been an 'Officers' Preference', and which could assist in maintaining a 5-year housing land supply. Furthermore, additional housing land is required in order to align with the SDP, land was removed at the MIR stage, and by not allocating sufficient deliverable land runs contrary to all national planning advice. There is an under-delivery issue which has been evident for a long period of time, particularly for larger strategic sites, and which is not being recognised by the Council. With reference to the Homes for Scotland analysis there is an estimated shortfall of 483 homes in the AHMA and 1261 homes in the RHMA. As a result of the recent pandemic, delivery of development such as FR067 will assist in the provision of much needed essential infrastructure, contributing towards affordable housing and boosting the economy (PP1232).

Despite numerous communication exchanges, there has been no satisfactory reason or justification provided by the Council as to why there was a change of decision regarding FR067 and why the site could not be included in the PLDP, and where the information came from regarding the intervening third party land. The representee has included an Appendix (RD0220.A) in their representation which provides further detail to support their position (PP1232).

Non-Allocated Site – Bid Site FR109 – Land to South West of Foveran

Foveran OP1, OP2, OP3, OP4 and OP5 are allocated for residential development and if capacities are achievable would contribute 245 new homes. This is a reduction of 49 homes from the 294 identified in the MIR. It was considered that Foveran exhibits significant scope to deliver large housing numbers during the Plan period and beyond in order to take advantage of its strategic position immediately adjacent to the AWPR (PP1234 and PP1235).

Access to sites OP2, OP3 and OP4 should be considered collectively in order to provide a link from the B977 to Blairythan Terrace. The Transport Service has concluded that there is not sufficient capacity in Blairythan Terrace to accommodate the indicative homes at OP2 and the only solution is to construct a link road to connect with the B977. This road indicatively extends through bid sites FR067 and FR109. This road was not identified in the MIR and no earlier opportunity to comment on this. There has been no approach to landowners to establish how this road might be delivered. FR109 was not a preferred site and FR067 was preferred but not carried forward due to third-party land. The third-party land is part of bid site FR109 and is available for development within the Plan period and could play a significant role in alleviating traffic issues. It was stated that the failure to recognise the potential part of FR109 in combination with FR067 to deliver housing to support the cost of the link road is difficult to comprehend. The capacity at Blairythan Terrace is so limited that it would hinder development of 49 homes at FR067 (stated by officers to justify deletion) then it must follow that OP2 with a greater capacity and no access to the north is similarly constrained and should be treated as a non-effective site. Development at OP2 is dependent on the delivery of the indicative link road and if not delivered then OP2 cannot meet the requirement of the proposed LDP to provide two access points. In the absence of a solid commitment to delivery based on a costed scheme for the link road to the B977, OP2 must be treated as constrained and its indicative capacity not included in the effective land supply. This would result in 75 homes being available for allocation elsewhere in Foveran. It was suggested that the allocation of land for residential development could support delivery of the link road. It was also suggested that development on the relevant part of FR109 and FR067 should come forward in advance of development of constrained site OP2. Bid site FR109 could deliver the road and 75 homes, with FR067 capable of delivering 49 homes with a northerly link to Blairythan Terrace. It was suggested that this would enable the identified housing numbers to be met in full, with OP2 reserved for future development once the link road has been completed. A number of assessments are also contrary to assessment of FR109 in the SEA, including air quality, flood risk, waste water capacity and prime land. The representee has included Appendices (RD0222.A- RD0222.K) in their representation which provides further detail to support their position (PP1234).

A representee has stated that Homes for Scotland suggest at the date of adoption of the Plan, if the proposed allocations are taken forward as currently published, there will be a shortfall of 432 homes across the area and the proposed LDP should be modified to allocate more deliverable housing land. This anticipated failure is likely to be exacerbated as there are significant doubts over the effectiveness of some allocations, in addition to unresolved constraints highlighted in previous Housing Land Audits that appear to still apply to some sites. There is an illogical and inconsistent approach to the calculation of indicative densities across the plan area, which are considered to have been inflated to such an extent in several cases (PP1235).

The allocation of bid site FR109 for residential development is an appropriate solution. The land is available, can deliver a link road and a new primary school and the potential to increase housing numbers. Contrary to the assessment of FR109 in the SEA, it is

considered that no quantifiable impact on air quality has been predicted to result from development here and measures could be put in place to mitigate any impact. The representee is also not aware of surface water hotspots and the site is not at risk of flooding as shown on SEPA's 1 in 200-year flood risk map therefore no FRA required. All developments in the settlement are likely to increase travel and emissions which is not an issue particular to FR109 and part of the land is not prime agricultural land and other land in the settlement is classed as 3.1 and so a precedent has been set. All development in the settlement would result in landscape change and a well-designed development would deliver a better solution at this location than the proposed stand-alone link road. A project is in place to upgrade the waste water capacity and the proposal would be facilitated by a new primary school in Foveran on land within the boundaries of FR109 which is a positive impact. It is also noted that coalescence would not occur with Rashierieve Foveran as a result of development here due to the ability to include strategic landscaping on land within the boundaries of FR109 and at Rashierieve Foveran. The representee has included Appendices (RD0223.A- RD0223.H) in their representation which provides further detail to support their position (PP1235).

Non-Allocated Site – Bid Site FR142 – Land West of A90 (Phase 1), North of Blairythan

A representee has requested bid site FR142 be allocated for 150 homes and village centre (retail/nursery) and community uses (potential school relocation/sports centre/ playing fields). The scale is in line with promoted LDP densities, will enhance, develop and connect a mix of uses and diversity that is currently present but disjointed in Foveran. The location and direction of growth promoted is sensible and the site lies within the Strategic Growth Area (PP0837).

The local road network is safer and has increased capacity following the opening of the Balmedie– Tipperty dual carriageway and the reduction of speed limit from 60mph to 40mph. A WWTP growth project has been initiated by Scottish Water (PP0837).

The proposal will further develop and enhance the vision expressed through the 2013 Westfield and Ardgill masterplan and offer the potential to enhance the settlement's role as a service centre and create a well-connected, mixed-use heart to the village that is currently lacking. It will deliver a new village centre with a mix of uses, improved landscaping and footpath connections, land for a relocated primary school/community hub. It would be a self-sufficient balanced community with employment, commercial, community and homeworking units, to the reduction of CO² emissions through energy efficient design and energy from the new anaerobic digester and the overall enhancement of an existing community (PP0837).

Given, the requirement for a pedestrian bridge linking northwards from site OP2 to OP1, the location of existing and future employment land and the location of existing facilities at Westfield that the obvious direction of growth for the settlement is northwards. Therefore, this site would assist in knitting together a genuine mixed-use community in line with the Government and Council's Placemaking agendas by creating new employment opportunities, modern amenities, the efficient use of new infrastructure and the opportunity for a new school with updated facilities. The representee has included an Appendix (RD0155.A) in their representation which provides further detail to support their position (PP0837).

Non-Allocated Site – Bid Site FR143 – Land West of A90 (Phase 2), North of Blairythan

A representee has requested that bid site FR143 is allocated as strategic reserve housing land for 140 homes. The MIR incorrectly stated the site was for 410 homes. The proposal will further develop and enhance the vision expressed through the 2013 Westfield and Ardgill masterplan and create a natural link that is currently missing in Foveran. It would link Enerfield Business Park to Foveran village and using the existing mixed-use employment and retail facilities at Westfield as the centre of the settlement. Its scale is in line with promoted LDP densities, and the site will enhance, develop and connect a mix of uses and diversity that is currently present but disjointed in Foveran. The location and direction of growth promoted is sensible, as it lies within the Strategic Growth Area. The local road network is safer and has increased capacity following the opening of the Balmedie – Tipperty dual carriageway and the reduction of the speed limit from 60mph to 40mph. A WWTP growth project has been initiated by Scottish Water. Given the requirement for a pedestrian bridge linking northwards from site OP2 to OP1, the location of existing and future employment land and the location of existing facilities at Westfield that the obvious direction of growth for the settlement is northwards. Therefore, this site would assist in knitting together a genuine mixed-use community in line with the Government and Council's Placemaking agendas by creating new employment opportunities, modern amenities, the efficient use of new infrastructure and the opportunity for a new school with updated facilities. The representee has included an Appendix (RD0155.A) in their representation which provides further detail to support their position (PP0837).

Rashierieve Foveran

General

It was welcomed that the Proposed LDP has opted to maintain Rashierieve and Foveran as separately identified settlements which is welcomed given the distinctly different character of the two settlements. No modification sought (PP1181).

As noted at the MIR stage, Rashierieve is separate and distinct from Foveran and should be recognised as a community in its own right. However, the efficacy and fairness of denying Rashierieve a defined boundary is questioned and asserted that a defined boundary should be included in the Settlement Statement. The Issues and Actions Paper acknowledges Rashierieve does not have a settlement boundary. It was questioned how a settlement may be identified without having a defined boundary to delineate which policies would apply (countryside/infill). There is an unfair lack of opportunity for infill development afforded to Rashierieve and a settlement boundary should be defined for all identified settlements in the LDP. The representee has included two Appendices (RD0206.A and RD0206.B) in their representation which provides further detail to support their position (PP1181).

Site SR1 – Reserved for strategic employment land

SEPA has confirmed that they have no flooding, strategic drainage or water supply issues with the designation summary of SR1 (RD0214.B). No modification sought (PP1219).

Flood Risk

SEPA has requested that the 'Flood Risk' bullet point removes reference to SEPA's indicative flood risk areas (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has requested amending the 'Strategic drainage and water supply' bullet point on private treatment works to remove reference to SEPA (RD0214.B) (PP1219).

Scottish Water request that under 'Strategic drainage and water supply' the following text is inserted after the third sentence, "The preference would be for a single adoptable waste water treatment works serving the OP1 site with the capacity for SR1 to connect at a future date" (PP0272).

Site OP1 – Land West of Rashierieve Cottages

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

Rashierieve Foveran is considered to play an important role in delivering strategic employment allowances in line with the strategic aims for the area. The Proposed LDP identifies two sites for development both proposed to accommodate employment uses, with one within the forthcoming Plan period and the other as strategic reserve. These are in the adopted Plan. OP1 in the adopted Plan did not include the provision of live/work units as part of the employment allocation but came about as part of bid site FR129 for 4 live/work units and further area of employment land.

However, the proposed allocation of OP1 increases the capacity of live/work units to 8, including the expectation that the site would be a mixed-use allocation including live/work units, this is understood that it is expected to deliver 8 units in addition to other employment uses on the site. The site could be capable of delivering 8 live/work units is a scheme which could still respect the existing plots sizes in the area, however it is clear from the indicative layout submitted with FR129 that the site is not capable of providing these and additional employment without reducing the plot sizes to a degree that they would be markedly different to the established properties along the A90. It is also noted that OP1 is considered to be partially located in SEPA's 1 in-200-year flood risk area but the representee does not agree with this. The flood map appendix confirms the site is not at risk of flooding. Notwithstanding, a small watercourse is located adjacent to the site and therefore it is possible and prudent to maintain a buffer strip from the watercourse as suggest in the Proposed LDP. Such a buffer strip would further reduce the area of land available. It was suggested that OP1 is amended to deliver only 8 live/work units. The expectation to deliver further employment within the boundaries of OP1 would result in smaller plot sizes thereby delivering lower level of amenity for future residents but also resulting in a development whose appearance would be incongruous with its location. The representee has included Appendices (RD0221.A- RD0221.H) in their representation which provides further detail to support their position (PP1233).

Non-Allocated Site – Bid Site FR109 – Land to South West of Foveran

The proposed LDP identifies two sites in Rashierieve Foveran, OP1 and SR1 to accommodate employment uses with one within Plan period and the second as a strategic reserve (PP0894 and PP1233). The proposed LDP requires a generous 20% of land supply for employment from 2018-2032. SR1 contributes to this reserve. The Proposed

LDP also requires landscaping to SR1 to screen employment uses from the residential properties. It was considered that there is merit in safeguarding additional land as a future strategic reserve for employment uses (PP1234). Given the important role of the settlement in meeting strategic employment reserve, and its position in the Strategic Growth Area and Energetica Corridor, it is suggested that further consideration should be given to a future centre of employment (PP0894 and PP1233).

There is significant merit in safeguarding additional land as a future reserve for employment uses and the representee has requested the inclusion of further land to the west of SR1, which was included in bid site FR109 (PP0894, PP1233 and PP1234). The site extends to approx. 5ha and although is classed as prime agricultural land class 3.1, the land is no longer capable of producing the same range of crops or practical to farming following the construction of the AWPR. Notwithstanding, the area of land is relatively small in the wider context and would not constitute a significant loss of prime agricultural land (PP0894 and PP1233).

The proposed LDP identifies the land within SEPA's 1 in 200-year flood risk area, however the representees do not agree with this. SEPA's 1 in 200-year flood map confirms the site is not a risk of flooding (PP0894 and PP1234).

When assessed against other business/employment land allocations in the immediate area, in particular OP1 in West Pitmillan and OP1 Foveran, it is suggested the land west of SR1 in Rashierieve is a more logical proposal for future development with less landscape impact. Foveran OP1 appears dependent on further housebuilding and thus far, there has been no delivery on the site or evidence for demand at this location. Unlike OP1 in Foveran, land west of SR1 in Rashierieve Foveran suffers no constraints. Therefore, its inclusion of additional land for strategic reserve for future employment uses is proposed to meet the long-term objective for the settlement as set out in the MIR (PP0894, PP1233 and PP1234).

Bid site FR109 has not been assessed under the options for the settlement and would highlight the development is unlikely to have an effect on air quality, climatic factors, biodiversity, human health or the historic environment, would not lead to significant pressure on local infrastructure and the introduction of strategic landscaping along AWPR would ensure that coalescence would not occur with Foveran. The representees have included Appendices (RD0164.A- RD0164.G, RD0221.A- RD0221.H and RD0222.A- RD0222.K) in their representations which provides further detail to support their positions (PP0894, PP1233, PP1234).

Non-Allocated Site – Bid Site FR109 – Land to South West of Foveran (part)

The representee has stated that land to the north of SR1 and A975 comprises hardstanding gravel following road construction works and holds limited agricultural value. It is considered the site is capable of accommodating a housing-led mixed-use development with provision of business space, light industry or roadside retail and other commercial uses. At the MIR stage, it was considered that the site deserved inclusion within the settlement boundary and as an allocation as an opportunity to round off the settlement with a well contained site with defined boundaries. The village provides an excellent opportunity for the delivery of strategic employment land due to its position in the Energetica Corridor and Aberdeen to Peterhead Strategic Growth Area. A housing-led mixed-use development would enable the creation of a mixed-community which aligns

with the key objectives of SPP and the SDP. The Settlement Statement acknowledges Rashierieve as ribbon development, however the allocation of the site would allow for greater consolidation of the settlement. When the proposed site is viewed in relation to OP1 and SR1, the representee states that the conclusion that the site is far removed from the remainder of Rashierieve must be questioned. It is maintained that provision should also be made for housing and other associated uses that would help sustain employment allocations. The representee has included two Appendices (RD0206.A and RD0206.B) in their representation which provides further detail to support their position (PP1181).

Modifications sought by those submitting representations:

Balmedie

General

Modify the PLDP to extend the settlement boundary east of North Beach Road in the northeast corner of the settlement to site P2 (PP0081).

Modify the PLDP after undertaking a review of the services and infrastructure for the whole Community Council area (PP0962).

Flood Risk

Modify the PLDP to amend the 'Flood Risk' bullet point to read, "Small watercourses run through or adjacent to the OP1 and OP3 sites. There is also a surface water flood risk on site OP3. Flood risk assessments may be required." (PP1219).

Services and Infrastructure

Modify the PLDP to amend the 'Strategic drainage and water supply' bullet point to add the following text after the third sentence, "A Drainage Impact Assessment may be required." (PP0272).

Modify the PLDP to clarify how the costs of Scottish Water initiating a growth project at Balmedie WWTW falls between the developer and the taxpayer (PP0138).

Site OP1 – Land at Balmedie South

Modify the PLDP to amend the allocation summary for site OP1 to remove the 8th and 9th sentence from the 4th paragraph and amend the allocation summary so that the 6th and 7th sentence, following the sentence on green-blue networks, of the 4th paragraph reads, "A Flood Risk Assessment may be required. Enhancement of the watercourse through re-naturalisation and removal of any redundant features should be investigated." (PP1219).

Modify the PLDP to remove the following sentences from the second paragraph of the OP1 allocation summary, "Access to the site will be taken from Eigie Road. Access from the trunk road roundabout is not considered feasible, therefore two points of access are required from Eigie Road." (PP1012).

Modify the PLDP to change the wording in the allocation summary from "will" in the fifth

sentence of the second paragraph to “may” so it reads as follows, “Bus stops on Eigie Road may require upgrading to full shelters with layby construction and likely crossing facilities.” (PP1012).

Modify the PLDP to remove the contribution of 80 homes to the allowances for OP1 Balmedie and identify an alternative effective allocation in the Blackdog-Ellon SGA (PP1062).

Modify the PLDP to amend or remove the following wording in the allocation summary for site OP1 to avoid suggesting that planning controls on construction and operation are necessary to mitigate an adverse effect on integrity of the Sands of Forvie Special Area of Conservation (SAC) and Ythan Estuary, Sands of Forvie and Meikle Loch Special Protection Area (SPA), "The Sands of Forvie Special Area of Conservation (SAC) and Ythan Estuary, Sands of Forvie and Meikle Loch Special Protection Area (SPA) are located to the northeast of the site. The development could have an effect indirectly through drainage on geese grazing areas, however planning controls on construction and operation will help towards mitigating impacts." (PP1300).

Site OP2 – Land South of Chapelwell

Modify the PLDP to amend or remove the following wording in the allocation summary for site OP2 to avoid suggesting that planning controls on construction and operation are necessary to mitigate an adverse effect on integrity of the Sands of Forvie Special Area of Conservation (SAC) and Ythan Estuary, Sands of Forvie and Meikle Loch Special Protection Area (SPA), "The Sands of Forvie SAC and Ythan Estuary, Sands of Forvie and Meikle Loch SPA are located to the northeast of the site. Planning controls on construction and operation will help towards mitigating impacts for the development on these sites." (PP1300).

Site OP3 – Menie

Modify the PLDP to amend the allocation summary for site OP3 to add the following text to the last paragraph of the allocation text, “A Flood Risk Assessment may be required should development proposals be revised or extant permission lapse.” (PP1219).

Modify the PLDP to remove site OP3 (PP0878).

Modify the PLDP to amend the allocation summary for site OP3 to include the requirement of a grade separated junction onto the A90 north of Balmedie (PP0962).

Modify the PLDP to amend the allocation summary of OP3, so that the second last sentence in paragraph two, removes “the first” and instead starts with, “As part of this permission, 2 phases (Chapters 1A & 1B) were granted with full details ...” (PP1224).

Modify the PLDP to amend the fourth paragraph of the allocation summary of OP3 to read, “The site is in close proximity to the Foveran Links Site of Special Scientific Interest. The proposed development is identified as likely to impact on pink footed geese of the Ythan Estuary, Sands of Forvie and Meikle Loch SPA although it has been concluded, in accordance with SNH advice that the proposal will not adversely impact on the integrity of the SPA. Protected species and ecological surveys will be required to be carried out and where appropriate, mitigation or ongoing monitoring measures should be in place,

including provision for repeat survey work during construction.” (PP1224).

Modify the PLDP to amend the allocation summary of OP3 to amend the fifth paragraph to read, “Contributions towards the provision of a new primary school within the Balmedie area, appropriate community facilities and affordable housing are required. It is expected that the site will contribute towards affordable housing in line with Policy H2 Affordable Housing. The agreed position is that Infrastructure Services (Housing) are seeking to secure a 25% affordable housing contribution in the form of a commuted payment in order to address the local housing need in the Ellon Academy catchment area. For Chapters 1A and 1B the Housing Service are seeking a commuted sum to be paid in instalments upon the completion of the 20th, 40th, 60th and 73rd open market unit. Other Chapters will also require a 25% contribution and would be by further financial contributions. However, there is scope for the consideration of on-site delivery of affordable housing units which meets local housing need. This would require to be assessed prior to any future AMSC applications. Delivery of any future on-site affordable housing should be integrated into the design of the development to provide a mix of house types and sizes to meet local need. Hard and soft landscaping schemes are necessary, and a compensatory planting scheme will be required. A Woodland Biodiversity Action Plan should be completed.” (PP1224).

Non-Allocated Site – Bid Site FR022 – Land at Millden,

Modify the PLDP to allocate bid site FR022 for 400 homes, site for a primary school, community facilities and mixed employment uses (PP1096).

Non-Allocated Site – Bid Site FR089 – Land at Keir Farm

Modify the PLDP to allocate bid site FR089 for 500 homes (PP0138).

Modify the PLDP to allocate bid site FR089 for 600 homes, a new primary school and associated uses and infrastructure (PP0950).

Non-Allocated Site – Bid Site FR116 – Land at Blairton

Modify the PLDP to allocate bid site FR116 for 1,650 private and affordable residential dwellings (PP0935).

Non-Allocated Site – New Site N014 – Land at Southfolds Farm

Modify the PLDP to allocate land at Southfolds Farm for commercial and residential development (PP0202).

Non-Allocated Site – New Site N019 – Land east of North Beach Road

Modify the PLDP to allocate land east of North Beach Road to the northeast of the settlement for 10 self-build homes (PP0081).

Belhelvie

General

Modify the PLDP to allow for a review of the services and infrastructure needs to be undertaken for the area (PP0962).

Modify the PLDP to reinstate the green belt designation (PP0236 and PP0255).

Site R1 – Reserved for a future Community Centre

Modify the PLDP to remove the R1 designation (PP0458, PP0605, PP0606, PP0803 and PP0951).

Flood Risk

Modify the PLDP to amend the 'Flood Risk' bullet point to read, "Areas adjacent to OP1 and OP2 are identified as being located within an area of high risk of surface water flooding. A Flood Risk Assessment will be required." (PP1219).

Services and Infrastructure

Modify the PLDP to clarify how costs will be split to fund the growth project at Balmedie WWTW (PP0138).

Modify the PLDP to amend the wording under 'Strategic drainage and water supply' to include the following wording at the third sentence, "... and will instigate this on receipt of the 5 Growth Criteria from a developer. A Drainage Impact Assessment may be requested." (PP0272).

Modify the PLDP to amend wording under 'Strategic Transportation' to read, "Contributions may be required for cumulative strategic transportation improvements including interventions on the A90 and in Aberdeen City, if this is directly related to the scale of development being proposed and has been confirmed by way of a Transport Assessment of the proposed development." (PP0456).

Site OP2 – Land at Cairntack (East)

Modify the PLDP to remove site OP2 (PP0067, PP0138, PP0660 and PP0661).

Modify the PLDP to remove the requirement for a loop road between Cairntack Road and Cairn View and access for the OP2 site to be taken from Cairntack Road (PP0114).

Modify the PLDP to insert the following text at the end of the first paragraph in the allocation summary, "Provision for active travel is required, and this should seek to coordinate with any provision for OP1 and OP3." (PP1300).

Modify the PLDP to amend or remove the following wording in the allocation summary for site OP2 in Belhelvie to avoid suggesting that planning controls on construction and operation are necessary to mitigate adverse effects from drainage, visitor pressure and impact on geese grazing grounds, on the integrity of the Sands of Forvie Special Area of Conservation (SAC) and Ythan Estuary, Sands of Forvie and Meikle Loch Special Protection Area (SPA), "The Sands of Forvie Special Area of Conservation (SAC) and Ythan Estuary, Sands of Forvie and Meikle Loch Special Area of Protection (SPA) are located to the northeast of the site. The development would have an effect indirectly

through drainage, visitor pressure and impact on geese grazing grounds. However, planning controls on construction and operation will work to mitigate impacts." (PP1300).

Site OP3 – Land to the East of Cairn View

Modify the PLDP to amend the name of site OP3 to be titled, "Land at Cairntack (East)" and the name of site OP2 to be titled: "Land to the East of Cairn View" (PP0456).

Modify the PLDP to remove site OP3 (PP0027, PP0067, PP0078, PP0138, PP0151, PP0158, PP0167, PP0178, PP0306, PP0317, PP0375, PP0660 and PP0661).

Modify the PLDP to amend the allocation summary for site OP3 to remove the requirement for the loop road from the allocation summary (PP0138).

Modify the PLDP to consider the green environmental standards of this site within the Vision (PP0178).

Modify the PLDP to amend the allocation summary of site OP3 to insert the following text after the penultimate sentence of the first paragraph in the allocation summary, "Provision for active travel is required, and this should seek to coordinate with any provision for OP2." (PP1300).

Site OP1 – East End of Park Terrace, Site OP2 – Land at Cairntack (East) and Site OP3 – Land to the East of Cairn View

Modify the PLDP to remove sites OP1, OP2 and OP3 (PP0041, PP0161 and PP0255).

Modify the PLDP to remove the OP1, OP2 and OP3 allocations (in favour of development in other locations such as Bridge of Don and Balmedie (PP0319).

Modify the PLDP to prioritise development in West Balmedie for 500 homes rather than development in Belhelvie if there is a shortage of housing (PP0660 and PP0661).

Modify the PLDP to make the developer obligations of new development a requirement (PP0114).

Modify the PLDP to reconsider the education provision and commercial provision of the OP1, OP2 and OP3 allocations (PP0138).

Modify the PLDP to reconsider the climate change mitigation of the OP1, OP2 and OP3 allocations (PP0138).

Blackdog

General

Modify the PLDP to allow for a review of the services and infrastructure needs to be undertaken for the area (PP0962).

Modify the PLDP to amend the settlement boundary of Blackdog to include developed land adjacent to Blackdog Croft and amend the green belt boundary to exclude the site

(PP0443).

Vision

Modify the PLDP to amend the Blackdog Settlement Statement 'Vision' so it reads as follows, "Blackdog is a small settlement located on the boundary between Aberdeenshire and Aberdeen City Council. Due to its proximity to Aberdeen, a planning application for significant expansion of the village has been approved for a new town centre, housing and employment opportunities. This recognises its roles in both the Aberdeen to Peterhead Strategic Growth Area (SGA) and the Energetica Corridor. In line with the vision of Energetica Corridor, it is expected that new development in Blackdog will contribute to transforming the area into a high quality, sustainable lifestyle, leisure and global business location. Additionally, the strategic significance of Blackdog is recognised in the large mixed-use allocation. Key planning objectives for this settlement are to meet the need for strategic housing and employment land delivering 600 new homes and 13 hectares of employment land, and to develop a new town centre. The community has an aspiration to provide early provision of a cycle link to Balmedie, and early provision of facilities such as a school, hall or football pitches is still being considered. Public transport provision is likely to significantly improve in tandem with the delivery of the Blackdog town centre and the 600 houses planned." (PP1399).

Town Centre

Modify the PLDP to amend the Blackdog Settlement Statement to include the Blackdog town centre boundary on the Settlement Statement map (PP1399).

Site OP1 – Land at Blackdog

Modify the PLDP to amend the allocation summary for site OP1 to replace the first two sentences of the third paragraph to read, "Due to the presence of small watercourses running through the site a Flood Risk Assessment will be required." (PP1219).

Modify the PLDP to amend site OP1 to include an area of protected land to the west of the new access road to Balmedie which is currently included as part of the OP1 site (PP0002).

Modify the PLDP to amend the Settlement Statement for Blackdog to include an area of protected land to the south and south east of the OP1 site (PP0002).

Modify the PLDP to amend the Settlement Statement for Blackdog to ensure the existing woodland within the settlement becomes protected land (PP0159).

Modify the PLDP to remove site OP1 (PP0159 and PP0267).

Modify the PLDP to amend the allocation summary for site OP1 to remove reference to the gypsy/traveller site (PP0083, PP0086, PP0267 and PP1028).

Modify the PLDP to relocate the gypsy/traveller site from the OP1 site to another suitable location (PP0115).

Modify the PLDP to clarify as to whether the gypsy/traveller site is still included as part of the OP1 allocation (PP0866).

Modify the PLDP to include a new town centre as part of the allocation for the OP1 site and amend the Blackdog Settlement Statement allocation title and allocation summary so it reads as follows, “OP1: Land at Blackdog Allocation: 600 homes, 4ha employment land and 7ha strategic reserve, new town centre. Future development of the site should seek to develop in line with the two Planning Permission in Principle approvals which are consistent with the agreed masterplan which was approved by the Formartine Area Committee in February 2013. There is Planning Permission in Principle (planning application reference APP/2016/0766) for a mixed-use development comprising a town centre, that includes a regional food hall, retail, leisure and other class 3 uses; business and industrial uses (classes 4, 5 and 6); alterations to access from A90 roundabout, local access, landscaping, car parking, cycle and pedestrian facilities and low carbon infrastructure. A further Planning Permission in Principle (planning application reference APP/2016/0767) for a residential development of 550 homes, education and community uses and associated infrastructure has also been approved on the southern part of the site. Land for a gypsy/traveller transit site will be required to be made available on part of the site, prior to the development of the fourth phase, as outlined in the masterplan. It is expected that the site will contribute towards affordable housing in line with Policy H2 Affordable Housing. This should be delivered as part of the early phases of development and be integrated into the design of the development to provide a mix of house types and sizes to meet local need. Infrastructure proposals and development trigger points have been agreed through the planning consent and these are coming forward through subsequent Matters Specified in Conditions applications. The Transport Assessment and Street Engineering Report/Quality Audit will be required to be reviewed with each phase of development. OP1 lies within an area potentially vulnerable to flood risk as identified by the National Flood Risk Assessment. Flood Risk Assessments will be required. Buffer strips will be required adjacent to the watercourses which should be positively integrated into the development. Enhancement of the watercourses through re- naturalisation and removal of any redundant features should be investigated. The development should be sensitively constructed and have adequate Sustainable Drainage Systems as it has the potential to affect the conservation objectives and natural features of a locally important designated site. The Blackdog to Bridge of Don LNCS includes important coastal habitats and is popular with sea ducks in the winter and breeding birds. The site is located adjacent to contaminated land at the Blackdog Farm Landfill site, remediation measures may be required.” (PP1399).

Non-Allocated Site – Bid Site FR057 – Land to the west of the A90

Modify the PLDP to include bid site FR057 as an opportunity site for a commercial roadside service (PP0636).

Foveran

General

Modify the PLDP to ensure that there is adequate infrastructure provided to support the development of OP1-OP5 in Foveran (PP0112).

Flood Risk

Modify the PLDP to amend the ‘Flood Risk’ bullet point to read, “Parts of sites OP1, OP2

and OP3 are located adjacent to the SEPA indicative 1 in 200-year flood risk area or have a small watercourse running through or adjacent to the site. A Flood Risk Assessment may be required.” (PP1219).

Services and Infrastructure

Modify the PLDP to amend the ‘Strategic drainage and water supply’ bullet point to remove the last sentence that reads, “Foveran is within a SEPA Waste Water Drainage Consultation Area therefore site investigations will be required” and replace it with “All development will be required to connect to the public waste water system.” (PP1219).

Modify the PLDP to identify the potential for a new primary school at land to the west and south of Blairythan Terrace and safeguard it as reserved land with the potential to access this from the required link road, with the indicative route across bid sites FR067 and FR109 (PP1236).

Site OP1 – South of Westfield Farm

Modify the PLDP to remove the OP1 allocation (PP0038).

Modify the PLDP to amend the allocation to remove land in different ownership and to address the relocation of the path network (PP0182).

Modify the PLDP to amend road standards so as to avoid having large pavements and narrow roads in developments (PP0182).

Site OP2 – West of McBey Way

Modify the PLDP to remove site OP2 (PP0066).

Site OP3 – South of Turin Way

Modify the PLDP to either remove site OP3 or amend the allocation to minimal development and a substantial landscaping belt (PP0113).

Modify the PLDP to prioritise development at sites OP1 and OP2 rather than site OP3 (PP1025).

Site OP4 – Site 2, Land at Blairythan Terrace

Modify the PLDP to prioritise development at sites OP1 and OP2 rather than site OP4 (PP1025)

Site OP3 – South of Turin Way, Site OP4 – Site 2, Land at Blairythan Terrace, and Bid Site FR109 – Land to South West of Foveran

Modify the PLDP to allocate bid site FR067 and part of bid site FR109 for housing (PP1232).

Modify the PLDP to clarify the removal of bid site FR067 (PP1232).

Non-Allocated Site – Bid Site FR109 – Land to South West of Foveran

Modify the PLDP to allocate bid site FR109 for residential development to meet the shortfall in the housing land supply (PP1235).

Modify the PLDP to amend the indicative link road by extending the indicative route in a southerly direction, amend site OP2 to be reserved for future development and allocate additional land for residential development to the south of bid site FR067 and the west and southwest of proposed sites OP3 and OP4 (this would include land part of the wider FR109 bid site) (PP1234).

Non-Allocated Site – Bid Site FR142 – Land West of A90 (Phase 1), North of Blairythan

Modify the PLDP to allocate bid site FR142 at Foveran North for 150 homes and village centre (retail/nursery) and community uses (potential school relocation/sports centre/playing fields) (PP0837).

Non-Allocated Site – Bid Site FR143 – Land West of A90 (Phase 2), North of Blairythan

Modify the PLDP to allocate bid site FR143 as strategic reserve housing land for 140 homes (PP0837).

Rashierieve Foveran

General

Modify the PLDP to include a settlement boundary for Rashierieve Foveran (PP1181).

Flood Risk

Modify the PLDP to amend the 'Flood Risk' bullet point to read, "OP1 and SR1 have small watercourses running through or adjacent to the sites. A Flood Risk Assessment may be required." (PP1219).

Services and Infrastructure

Modify the PLDP to amend the last two sentences in the 'Strategic drainage and water supply' bullet point to read, "Any private treatment will require to be built to an adoptable standard. The preference would be for a single waste water treatment works serving the OP1 site with the capacity for SR1 to connect at a future date." (PP1219).

Modify the PLDP to amend the 'Strategic drainage and water supply' bullet point so that the following text is inserted after the third sentence: "The preference would be for a single adoptable waste water treatment works serving the OP1 site with the capacity for SR1 to connect at a future date." (PP0272).

Site OP1 – Land West of Rashierieve Cottages

Modify the PLDP to amend site OP1 (as current boundaries) to be carried forward to deliver 8 live/work units only and remove reference to a mixed-use development (PP1233).

Non-Allocated Site – Bid Site FR109 – Land to South West of Foveran

Modify the PLDP to identify additional land, regarding bid site FR109, to be allocated as strategic employment reserve at SR1 (PP0894).

Modify the PLDP to identify the potential for development for employment uses and strategic landscaping on an additional area of land to the west of OP1 and abutting western boundary of OP1 and amend the Settlement Statement to include key objectives for Rashierieve Foveran, as stated in the MIR, to include: to provide local employment opportunities; and to support economic development in the Energetica Corridor (PP1233).

Modify the PLDP to allocate additional land for residential development to the south of bid site FR067 and the west and southwest of proposed sites OP3 and OP4 in Foveran (this would include land part of the wider FR109 bid site) (PP1234).

Non-Allocated Site – Bid Site FR109 – Land to South West of Foveran (part)

Modify the PLDP to extend the identified settlement boundary of Rashierieve to include a housing/mixed-use allocation at land to the north of SR1 and A975 (PP1181).

Summary of responses (including reasons) by planning authority:

Balmedie

General

Comments from the representee are noted. The settlement boundary includes the housing and their boundaries within the settlement boundary with the P2 allocation to the north of the boundary of the properties. The request for the settlement boundary to be amended is noted to allow for infill development, however, this would have been more appropriately assessed as a development bid. The site was not put forward as a development bid so in response to the Council's call for sites was not considered as such at the MIR stage, nor subject to site assessment and public consultation. In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

The concerns regarding infrastructure provision raised by Belhelvie Community Council are noted. During the preparation of the Plan and through the site assessment process the requirements for infrastructure were looked at and subsequently the 'Services and Infrastructure' section of the Settlement Statements were populated. This section highlights what, if any, obligations are required for the different forms of development as a result of the allocated site being delivered. Developer Obligations are sought towards the provision of the necessary infrastructure. They must fairly and reasonably relate in scale to the proposed development and are needed to make the proposed development acceptable in planning terms, all in line with the policy tests contained in Planning Circular 3/2012 (AD0002). No change is required.

Comments from the representee are noted. No change is required.

Site R1 – Reserved for community uses

SEPA's comments are noted. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

SEPA's comments are noted. No change is required.

The Council confirms that it intends to address Scottish Water's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Developer Obligations are sought towards the provision of contributions for specific and necessary infrastructure and services that are necessary to make the development acceptable in planning terms for all users. They must fairly and reasonably relate in scale to the proposed development and are needed to address any impact created by the development thus making the proposed development acceptable in planning terms, in accordance with the 5 policy tests contained in Planning Circular 3/2012 (AD0002). No change is required.

Site OP1 – Land at Balmedie South

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The concerns regarding the two issues relating to transportation are noted. Discussions have taken place with colleagues in the Council's Transportation and Roads Teams to discuss each of the sites within the LDP to look at access arrangements. The reason that access arrangements are included within the LDP is to ensure that residents within the village can have a full understanding of the likely development and the best access provision is made available in terms of safety. Access from the trunk road was not considered to be feasible due to the associated costs relative to the size of the development. However, if the Reporter is minded, to make an amendment, then the Council recommend that the text relating to access from the trunk road could be removed from the first sentence of the second paragraph of the allocation summary.

In relation to the comment regarding the bus stops, this information has come from the Council's Transportation Service who note the requirement for the improvements as a result of the development. The text within the allocation does not prejudice any outcomes of the Transport Assessment as this will ensure the requirements at the time of any planning application being submitted. No change is required.

The Council does not support the removal of the OP1 site in Balmedie. It is noted within the HLA 2020 that the site is not constrained and is programmed for delivery from 2023 (AD0023, page 55). The development on the site is programmed with low numbers initially but the site is programmed to be completed by 2027. It is not considered that it would be appropriate to remove this site from the Local Development Plan. No change is

required.

The Council notes comments from NatureScot in relation to the Sands of Forvie SAC. In consultation with the Council's Environment Service (AD0130). The Council has been advised that the text in relation to the impact on the SPA is appropriate and should remain in the allocation summary. However, the Council would not object to the removal of reference to the Sands of Forvie SAC as this site is designated for its vegetation of which the OP1 site is not likely to impact upon. As such, if the Reporter is minded, to make an amendment, then the Council recommend that the first sentence of the fifth paragraph could be amended to remove the reference to the Sands of Forvie SAC."

Site OP2 – Land South of Chapelwell

SEPA comments are noted. No change is required.

The Council note the comments from NatureScot in relation to the Sands of Forvie SAC. In consultation with the Council's Environment Service (AD0130). The Council have been advised that the text in relation to the impact on the SPA is appropriate and should remain in the allocation summary. However, the Council would not object to the removal of reference to the Sands of Forvie SAC as this site is designated for its vegetation of which the OP1 site is not likely to impact upon. As such, if the Reporter is minded, to make an amendment, then the Council recommend that the first sentence of the fourth paragraph could be amended to remove the reference to the Sands of Forvie SAC."

Site OP3 – Menie

Comments of support from the representee are noted. No change is required.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.
Comments are noted. However, the site has an approved masterplan. Work has been completed on the site including the golf course, club house and a small country hotel. Additionally, there has been planning permission granted for additional development which is subject to the completion of a Section 75 Agreement. It is also worth noting that issues of trees and woodland have been looked at and a Woodland Biodiversity Action Plan is required to be completed as noted in the allocation summary. No change is required.

Concerns from Belhelvie Community Council about construction traffic is noted. However, this is something that can be managed through a Construction Traffic Management Plan (CTMP) which is looked at when a planning application is submitted. No change is required.

A number of changes have been requested to the wording of the allocation summary text for the site. The first change requested relates to paragraph two of the allocation summary to remove the word 'first' from the sentence in relation to phasing. It is noted that a phasing plan is required to be submitted with the first MSC application to consider the approach to be taken and that the grant of planning permission retains to the named Chapters (or phases), however the Council acknowledges that various and other phases may come forward in a differing order under the Planning Permission in Principle. Therefore, the Council confirms that it intends to address the comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

In addition, the Council confirms that it intends to update factual references since the PLDP was agreed by a non-notifiable modification, as set out in the List of Non-Notifiable Modifications. Specifically, to include reference to the date at which Aberdeenshire Council resolved to grant planning permission at the start of the second paragraph.

With regards to the request to remove wording from the first sentence of the fourth paragraph that states that the OP3 site is environmentally sensitive and to provide clarification on this position in relation to impacts on the SPA and advice received from SNH, the Council does not agree with the requested amendments. The allocation summary highlights the need for mitigation measures to be provided. Notwithstanding the recent amendment to the boundary of the Foveran SSSI, taking a precautionary approach would justify the site being considered to be environmentally sensitive in the context of the development. The Council note that NatureScot (SNH) have made no request seek amendment to this paragraph. If the Reporter is minded, to make an amendment, then the Council recommend that paragraph four of the allocation summary for site OP3 could be modified to include an additional sentence following the third sentence which reads, "All environmental impacts must be carefully considered in line with the relevant policies of the Plan". This would further emphasise that any environmental impacts should be carefully considered.

With regards to the representee's requested changes to the fifth paragraph to include the wording regarding AMSC applications – the Council does not agree with this change as the Council has no control over whether applications will be AMSC or not. Additionally, the representee's request to amend the fifth sentence of the fifth paragraph is not supported. For consistency with other allocation summaries (see OP1 Chapleton), 'Future' Chapters is considered to be the preferred terminology and the addition of 'financial' in the fifth sentence when referring to contributions is also not supported as this terminology is restrictive and does not allow for future flexibility. The representee's requested changes to the 8th and 9th sentences are noted. The Council considers that the removal of the eighth sentence would be reasonable as this would allow for future flexibility as at present, the allocation summary is stating the current position, which may change in the future. Additionally, the addition of 'any' and 'on-site' to the ninth sentence is considered a reasonable amendment as this provides further clarity in the allocation summary. The Council also considers that the first sentence of the fifth paragraph could be modified to read "Contributions towards the provision of a new primary school within the Balmedie area, appropriate community facilities and affordable housing are required in accordance with any Section 75, as agreed" to ensure clarity. Additionally, the Council considers that the third, fourth, fifth, sixth and seventh sentence of the fifth paragraph could be removed from the allocation summary. It is considered that the level of detail is not required as much of it sits within the legal document (Section 75) and therefore does not require to be repeated within the allocation summary. Furthermore, the Council considers that although this is the agreed position at this time, development would require to adhere to the policies contained within the Plan as detailed within the Section 75 agreement. As other allocation summaries within the PLDP do not contain this level of detail, it is considered appropriate to remove these sentences to ensure consistency throughout the PLDP.

In light of the above, if the Reporter is minded, to make an amendment, then the Council recommend that the wording in the fifth paragraph of the allocation summary could read as follows:

“Contributions towards the provision of a new primary school within the Balmedie area, appropriate community facilities and affordable housing are required in accordance with any Section 75, as agreed. It is expected that the site will contribute towards affordable housing in line with Policy H2 Affordable Housing. However, there is scope for the consideration of on-site delivery of affordable housing units which meets local housing need. This would require to be assessed prior to any future applications. Delivery of any future on-site affordable housing should be integrated into the design of the development to provide a mix of house types and sizes to meet local need. Hard and soft landscaping schemes are necessary, and a compensatory planting scheme will be required. A Woodland Biodiversity Action Plan should be completed.”

Non-Allocated Site – Bid Site FR022 – Land at Millden

The Council does not support allocating bid site FR022 for 400 homes, site for a primary school, community facilities and mixed employment uses. The site is detached from Balmedie and is not considered a suitable extension to Balmedie at this time. As noted within the Main Issues Report, it is still not considered that there has been sufficient work to support that this would be a deliverable site (AD0038.D, page 11). Issues raised through the Main Issues Report and the Issues and Action Paper remain valid and it is not considered that it is necessary or appropriate to allocate this land for development. Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site FR089 – Land at Keir Farm

The Council does not support allocating bid site FR089 for 500 homes or for 600 homes, a new primary school and associate uses and infrastructure. As acknowledged within the Main Issues Report the site is well located to the settlement of Balmedie but is separated from the settlement by the A90 (T). It was also identified that there were a number of infrastructure constraints that would be required to be overcome in order for the development to be deliverable (AD0038.D, page 9). Providing connectivity to the rest of Balmedie through means of active travel remains a concern along with issues of education provision. At this stage it is not considered appropriate to allocate this land for development.

As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site FR116 – Land at Blairton

The Council does not support allocating bid site FR116 for 1,650 homes. As acknowledged within the Main Issues Report the site is within the countryside between the settlement of Balmedie and the OP3 allocation. There are a number of constraints that would require to be overcome including education provision and road access. Although it was noted within the MIR that the proposal could deliver a well-connected place to live which continues the existing pattern of the settlement (AD0038.E, page 10). However, at

this stage it is not considered that it is necessary or appropriate to allocate this land for development.

As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – New Site N014 – Land at Southfolds Farm

The Council does not support allocating new site N014 for commercial and residential development. Part of the site was not put forward as a development bid so was not considered as such at the MIR stage, nor subject to site assessment and public consultation. The representation does not include supporting information such as an environmental assessment to allow a detailed evaluation of the suitability of the proposal. The areas of land that were proposed through the MIR stage, FR089 was not preferred for immediate development and FR128 was not identified as an Officer's preference (AD0038.D, page 5-11).

In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – New Site N019 – Land east of North Beach Road

The Council does not support allocating new site N019 for 10 self-build homes. The site was not put forward as a development bid so was not considered as such at the MIR stage, nor subject to site assessment and public consultation. The representation does not include supporting information such as an environmental assessment to allow a detailed evaluation of the suitability of the proposal. In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Belhelvie

General

Comments from the representee are noted. No change is required.

The concerns regarding infrastructure provision raised by Belhelvie Community Council are noted. During the preparation of the Plan and through the site assessment process the requirements for infrastructure were looked at and subsequently the 'Services and Infrastructure' section of the Settlement Statements were populated. This section highlights what, if any, obligations are required for the different forms of development as a result of the allocated site being delivered. Developer Obligations are sought towards the provision of the necessary infrastructure. They must fairly and reasonably relate in scale to the proposed development and are needed to make the proposed development acceptable in planning terms, all in line with the policy tests contained in Planning Circular

3/2012. No change is required.

Concerns regarding the removal of the green belt are noted. However, the area surrounding Belhelvie is not identified as green belt (AD0041.B, Appendix 4 Boundaries of the Green Belt, page 119). This means that the area surrounding Belhelvie is classed as countryside. The impact upon the countryside is one of the considerations within the site assessments to ensure that there would not be a significant negative impact from the development taking place. It should also be noted that within the allocation summary for sites OP2 and OP3, landscaping is mentioned in both of these to ensure that it softens the impact of development on the surrounding countryside (AD0041.F, Belhelvie Settlement Statement, page 403). No change is required.

Site R1 – Reserved for a future Community Centre

SEPA's comments are noted. No change is required.

Comments from the representee are noted. No change is required.

The R1 site has been identified through early engagement in the LDP process with Belhelvie Community Council highlighting an aspiration for a new community centre in Belhelvie in this location. The aspiration for a community centre is also noted within the Vision for the settlement. It is noted by the representee that the site should be removed from the Plan due to having planning permission on the site for a house, however no alternative site has been identified within the settlement in order to meet the aspirations of the community. Removal of the site would therefore not be desirable. Additionally, neighbour notification letters were sent out for all reserved and opportunity sites identified within the LDP so the owner of the land in question should have been aware of the reserved status through the means of this process. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

SEPA's comments are noted. No change is required.

Developer Obligations are sought towards the provision of contributions for specific and necessary infrastructure and services that are necessary to make the development acceptable in planning terms for all users. They must fairly and reasonably relate in scale to the proposed development and are needed to address any impact created by the development thus making the proposed development acceptable in planning terms, in accordance with the 5 policy tests contained in Planning Circular 3/2012 (AD0002). No change is required

The Council confirms that it intends to address Scottish Water's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Contributions are sought towards the provision of the necessary infrastructure. Contributions within the LDP must fairly and reasonably relate in scale to the proposed

development and be needed to make the proposed development acceptable in planning terms, all in accordance with the policy tests contained in Planning Circular 3/2012 (AD0002). These tests have been carried out when looking at what is required for each of the sites allocated within the LDP. Although, it is worth noting that Policy RD2 Developer Obligations notes that a review will be undertaken of the need for and scale of any contribution in the light of circumstances at the time the planning application is made (AD0041.A, page 92). Early discussion between developers and Aberdeenshire Council is encouraged to ensure matters are dealt with in a timely way. No change is required.

Site OP1 – East End of Park Terrace

SEPA's comments are noted. No change is required.

Site OP2 – Land at Cairntack (East)

Support for the allocation is noted. No change is required.

SEPA's comments are noted. No change is required.

A number of concerns have been noted with regards to infrastructure, including road access, additional traffic flows, primary school, surface water, WWTW provision and health care. These are all covered under 'Services and Infrastructure'; which notes what Developer Obligations are required as a result of a development being delivered. These requirements would also be discussed again between the Council's Developer Obligations Team, the developer and any relevant stakeholder upon submission of a planning application. It is therefore not considered to be a barrier to development. Additionally, any impacts on the amenity of neighbouring properties will be addressed at a planning application stage with proposals being assessed against relevant policies within the Plan.

Concerns relating to the impact that the site will have on visual impact and the loss of wildlife are both aspects that were considered through the site assessment stage of the Plan-making process. Within the allocation summary there is also note that through the development of the site that landscaping should be used to soften the impact of development on the surrounding countryside and define the settlement boundary. Lack of amenities is also noted as an issue against development on the site however there is a community aspiration for a community centre. It is also noted that the village is in close proximity to Balmedie which is a key settlement within the Corridor and acts as an amenity for smaller surrounding settlements.

It is noted that there are concerns regarding affordable housing in the settlement due to car dependency. Access to services is considered when looking at affordable housing proposals and it has shown that affordable housing does not necessarily relate to car ownership. Additionally, measures including air quality have been looked at through the site assessment process and although car dependency will have been a negative, there are other aspects of the development which will have scored positively making for a balanced decision.

Issues relating to public transport are noted however, due to the settlement's location within the Strategic Growth Area there is a requirement for a level of housing to meet the needs of the area. In light of the above, it is not considered that site OP2 should be

removed. No change is required.

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council note the comments from NatureScot in relation to the Sands of Forvie SAC. In consultation with the Council's Environment Service, the Council have been advised that the text in relation to the impact on the SPA is appropriate and should remain in the allocation summary (AD0130). However, the Council would not object to the removal of reference to the Sands of Forvie SAC as this site is designated for its vegetation of which the OP1 site is not likely to impact upon. As such, if the Reporter is minded, to make an amendment, then the Council recommend that the first sentence of the third paragraph could be amended to remove the reference to the Sands of Forvie SAC."

Site OP3 – Land to the East of Cairn View

SEPA's comments are noted. No change is required.

Support for the allocation is noted. No change is required.

The names provided for the allocation were provided through the development bid process and were submitted by landowners/developers. It is acknowledged that the names could be swapped however in terms of simplicity and readability for residents within the settlement it is not proposed to change the allocation names. No change is required.

A number of concerns have been noted with regards to infrastructure, including road access, additional traffic flows, pavements, primary school, surface water, WWTW provision and health care. These are all covered under 'Services and Infrastructure'; which notes what Developer Obligations are required as a result of a development being delivered. These requirements would also be discussed again between the Council's Developer Obligations team, developer and any relevant stakeholder upon submission of a planning application. It is therefore not considered to be a barrier to development. Additionally, any impacts on the amenity of neighbouring properties will be addressed at a planning application stage with proposals being assessed against relevant policies within the Plan. No change is required.

Concerns relating to the impact that the site will have on visual impact, the loss of wildlife and destruction of green areas are all aspects that were considered through the site assessment stage of the Plan-making process. Concerns regarding the removal of the green belt are noted. However, the area surrounding Belhelvie is not identified as green belt (AD0041.B, Appendix 4 Boundaries of the Green Belt, page 119). This means that the area surrounding Belhelvie is classed as countryside. Additionally, concerns of impact on prime agricultural land are noted. Site OP3 however is not located on land classed as prime agricultural land as defined within Policy PR1.5 Prime Agricultural Land (AD0041.A, page 74). The impact upon the countryside is one of the considerations within the site assessments to ensure that there would not be a significant negative impact from the development taking place. In order to provide some mitigation to landscape impact and impact on character of the settlement, within the allocation summary there is also note that through the development of the site that landscaping should be used to soften the impact of development on the surrounding countryside and

define the settlement boundary.

Lack of amenities is also noted as an issue against development on the site however there is a community aspiration for a community centre. It is also noted that the village is in close proximity to Balmedie which is a key settlement within the Corridor and acts as an amenity for smaller surrounding settlements.

It is noted that there are concerns regarding affordable housing in the settlement due to car dependency. Access to services is considered when looking at affordable housing proposals and it has shown that affordable housing does not necessarily relate to car ownership.

Issues relating to public transport are noted however, due to the settlement's location within the Strategic Growth Area there is a requirement for a level of housing to meet the needs of the area. Measures including air quality have been looked at through the site assessment process and although car dependency will have been a negative, there are other aspects of the development which will have scored positively making for a balanced decision. In light of the above, it is not considered that site OP3 should be removed. No change is required.

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – East End of Park Terrace, Site OP2 – Land at Cairntack (East) and Site OP3 – Land to the East of Cairn View

Comments from Belhelvie Community Council are noted. No change is required.

As for both the OP2 and OP3, allocation concerns have been noted with regards to infrastructure, including road access, additional traffic flows, primary school, surface water, WWTW provision and health care. These are all covered under 'Services and Infrastructure'; which notes what Developer Obligations are required as a result of a development being delivered. These requirements would also be discussed again between the Council's Developer Obligations Team, developer and any relevant stakeholder upon submission of a planning application. It is therefore not considered to be a barrier to development. Issues relating to public transport are noted however, due to the settlement's location within the Strategic Growth Area there is a requirement for a level of housing to meet the needs of the area. In addition to this, contributions are sought through the Services and Infrastructure section of the Settlement Statement for public transport infrastructure. Additionally, any impacts on the amenity of neighbouring properties will be addressed at a planning application stage with proposals being assessed against relevant policies within the Plan.

Concerns relating to the impact that the sites will have visually, and the loss of wildlife are both aspects that were considered through the site assessment stage of the Plan-making process. Concerns regarding the removal of the green belt are noted. However, the area surrounding Belhelvie is not identified as green belt (AD0041.B, Appendix 4 Boundaries of the Green Belt, page 119). This means that the area surrounding Belhelvie is classed as countryside. The impact upon the countryside is one of the considerations within the site assessments to ensure that there would not be a significant negative impact from the development taking place. Within the allocation summary for sites OP2 and OP3, there is

also note that through the development of the site landscaping should be used to soften the impact of development on the surrounding countryside and define the settlement boundary. Lack of amenities is also noted as an issue against development on the site however there is a community aspiration for a community centre. It is also noted that the village is in close proximity to Balmedie which is a key settlement within the Corridor and acts as an amenity for smaller surrounding settlements. It is also noted that Balmedie and Blackdog offer employment opportunities for smaller surrounding settlements. The Council note concerns regarding development being better suited in other nearby settlements, however, due to Belhelvie's location within the Strategic Growth Area, there is a requirement for a level of housing to meet the needs of the area which will be met through the proposed allocations in the settlement.

Measures including air quality have been looked at through the site assessment process and although car dependency will have been a negative, there are other aspects of the development which will have scored positively making for a balanced decision. It is noted that there are concerns regarding affordable housing in the settlement due to car dependency. Access to services is considered when looking at affordable housing proposals and it has shown that affordable housing does not necessarily relate to car ownership. No change is required.

Blackdog

General

The concerns regarding infrastructure provision raised by Belhelvie Community Council are noted. During the preparation of the Plan and through the site assessment process, the requirements for infrastructure were looked at and subsequently the 'Services and Infrastructure' section of the Settlement Statements were populated. This section highlights what, if any, obligations are required for the different forms of development as a result of the allocated site being delivered. Developer Obligations are sought towards the provision of the necessary infrastructure. They must fairly and reasonably relate in scale to the proposed development and considered necessary to make the proposed development acceptable in planning terms, all in accordance with the 5 policy tests contained in Planning Circular 3/2012. No change is required.

Although the development has been built through the planning permission it is not felt that it is necessary to alter the settlement boundary to include this land within it. Extending the settlement boundary to include this full area which is the subject of the planning permission could allow for infill development which would not be desirable in this location. No change is required.

Vision

Nestrans comments are noted. No change is required.

The wording that is currently within the Vision for Blackdog notes the importance of the settlement meeting strategic housing and employment land through the development of the OP1 site. More detail on the progress of the OP1 site can be found in the allocation summary text for the site. It is not considered that it is necessary to repeat this within the Vision. No change is required.

Site BUS – Safeguarded for business uses

SEPA's comments are noted. No change is required.

Town Centre

The request for the town centre to be included in the Settlement Statement map is noted. However, Policy B1 Town Centre Development sets out the guidelines for development relating to town centres. The policy is in place to ensure appropriate development happens within the designated town centres. It is, therefore, felt that the request is premature, and it would be more appropriate to review this later in the development of Blackdog. No change is required.

Flood Risk

SEPA's comments are noted. No change is required.

Services and Infrastructure

SEPA's comments are noted. No change is required.

Site OP1 – Land at Blackdog

The comment in support of the allocation is noted. No change is required.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The LDP contains policy PR1 Protecting Resources in which there is a section on Trees and Woodland which has a presumption in favour of retaining woodland on development sites. There is also a requirement through this policy that compensatory planting is required to be undertaken when trees are required to be removed on sites (AD0041.A, page 75). Additionally, Blackdog has an agreed masterplan for the OP1 site which shows the locations for new development, including affordable housing, but also the areas to become open space as well as the areas that are to remain as amenity areas for the settlement, including the wooded area to the south of the settlement and other existing wooded areas (AD0079, Blackdog masterplan, page 43). Further to this, Planning Application (APP/2020/0349) was recently approved at Formartine Area Committee subject to a Section 75 agreement for the next phase of the housing development for 284 homes. This application has no impact on the trees and woodland within the settlement. No change is required.

Comments in concern of the gypsy/traveller site are noted. A number of concerns have been raised to note that there are no facilities within Blackdog which is a requirement under Policy H1 for sites. However, as noted within the Blackdog masterplan, the site is not proposed until the 4th phase of the employment land development. This indicates that the facilities noted as a requirement for a gypsy/traveller site would exist (AD0079, page 37). Proximity to housing is also noted as a concern but again through the agreed masterplan the site is not located directly beside housing but is located near the employment element of the proposal. As stated in the allocation summary, land for a gypsy/traveller site will be required to be made available on part of the site, prior to the

development of the fourth phase, as outlined in the masterplan. No change is required.

As noted above, the request for the town centre to be included in the Settlement Statement map is noted. However, Policy B1 Town Centre Development sets out the guidelines for development relating to town centres. The policy is in place to ensure appropriate development happens within the designated town centres. It is, therefore, felt that the request is premature, and it would be more appropriate to review this later in the development of Blackdog. No change is required.

Non-Allocated Site – Bid Site FR057 – Land to the west of the A90

The Council does not support allocating bid site FR057 for commercial roadside services. As noted within the Issues and Actions Paper the site is undesirable and could result in infill opportunities if the site was to be included within the settlement boundary of Blackdog. The land is also part of the green belt and functions well for its purpose with no justification for removing green belt land in this location when a facility of this nature along with service facilities, could be provided within the OP1 allocation in Blackdog and there are also other facilities to the south of the proposed site that can provide this offer. Nestrans have also advised through the Issues and Actions paper that they do not foresee a need for roadside services in this location, (see Issues and Actions Paper, AD0040.D, page 22). No change is required.

Foveran

General

Concerns upon the impact that new development will have on infrastructure is noted. However, contributions are sought towards the provision of the necessary infrastructure, including primary education. Contributions within the LDP must fairly and reasonably relate in scale to the proposed development and be needed to make the proposed development acceptable in planning terms, in line with the policy tests contained in Planning Circular 3/2012. These tests have been carried out when looking through what is required for each of the sites allocated within the LDP. It is worth noting that Policy RD2 Developer Obligations notes that a review will be undertaken of the need for and scale of any contribution in the light of circumstances at the time the planning application is made (AD0041.A, page 92). This will ensure that relevant contributions can be taken to allow for the necessary solution to be implemented. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Education capacity is a complex issue and needs to be looked at in the context of the development corridor. A number of potential solutions are available but are all very reliant on the nature and build out rates of development within the overall corridor. A solution

would be informed as development progresses and begins to be delivered within the corridor through liaison with the Councils Learning Estates Team.

Additionally, contributions are sought towards the provision of the necessary infrastructure, including primary education. Contributions within the LDP must fairly and reasonably relate in scale to the proposed development and be needed to make the proposed development acceptable in planning terms, in line with the policy tests contained in Planning Circular 3/2012 (AD0002). These tests have been carried out when looking through what is required for each of the sites allocated within the LDP. It is worth noting that Policy RD2 Developer Obligations notes that a review will be undertaken of the need for and scale of any contribution in the light of circumstances at the time the planning application is made (AD0041.A, page 92). This will ensure that relevant contributions can be taken to allow for the necessary solution to be implemented. No change is required.

Site OP1 – South of Westfield Farm

SEPA's comments are noted. No change is required.

There is an agreed masterplan for the site and the first phase of development on the site is very nearly complete with only 1 unit remaining. The site boundary as detailed within the LDP is reflective of the site boundary within the agreed masterplan where it is noted in section 2 of the document that there are no land ownership issues within the masterplan area (AD0085, South of Westfield Farm masterplan, page 6). It is therefore, not considered as appropriate to amend the boundaries of the allocation. No change is required.

Additionally, any impacts on the amenity of neighbouring properties, including roads and pavements will be addressed at a planning application stage with proposals being assessed against relevant policies within the Plan. No change is required.

Site OP2 – West of McBey Way

SEPA's comments are noted. No change is required.

Comments relating to drainage issues from the representee are noted. However, SEPA have commented and note that they have no further comments to make on the site and are content with the text within the allocation summary. The text within the allocation summary notes that a Flood Risk Assessment may be required and that a buffer strip will be required. These measures are put in place to ensure that the development of the new allocation can be looked at in terms of flooding both on-site and off-site as a result of the development. Issues relating to the amenity of properties neighbouring the proposed development would be dealt with at the planning application stage with proposals being assessed against relevant policies within the Plan. No change is required.

Site OP3 – South of Turin Way

SEPA's comments are noted. No change is required.

Any impacts on the amenity of neighbouring properties will be addressed at a planning application stage with proposals being assessed against relevant policies within the Plan. The Council note the concerns raised regarding the impact the site would have on the

character of the settlement and existing homes, however, the allocation summary states that landscaping would be expected to the south of the site to minimise visual impact on the approach to the settlement, and also to the north to minimise any impact on homes there. Additionally, a number of concerns have been noted with regards to infrastructure, including primary school capacity, surface water and WWTW provision. These are all covered under 'Services and Infrastructure'; which notes what Developer Obligations are required as a result of a development being delivered. These requirements would also be discussed again between the Council's Developer Obligations Team, the developer and any relevant stakeholder upon submission of a planning application. It is therefore not considered to be a barrier to development. No change is required.

Site OP4 – Site 2, Land at Blairythan Terrace

SEPA's comments are noted. No change is required.

Any impacts on the amenity of neighbouring properties will be addressed at a planning application stage with proposals being assessed against relevant policies within the Plan. The Council note the concerns raised regarding the impact the site would have on the character of the settlement and existing homes, however any development on the site would require to be assessed against Policy P1 Layout, Siting and Design and would require demonstrating the six qualities of successful places. Additionally, a number of concerns have been noted with regards to infrastructure, including primary school capacity, surface water and WWTW provision. These are all covered under 'Services and Infrastructure'; which notes what Developer Obligations are required as a result of a development being delivered. These requirements would also be discussed again between the Council's Developer Obligations Team, the developer and any relevant stakeholder upon submission of a planning application. It is therefore not considered to be a barrier to development. No change is required.

Site OP5 – Land adjacent to former A90, North of Westfield Road

SEPA's comments are noted. No change is required.

Site OP3 – South of Turin Way, Site OP4 – Site 2, Land at Blairythan Terrace, and Bid Site FR109 – Land to South West of Foveran

Support for the inclusion of sites OP3 and OP4 is noted. No change is required.

The Council does not support allocating bid site FR067 for housing or a link road. Although bid site FR067 forms a logical extension to the settlement the site it would be better placed to follow development that is newly allocated in the settlement at OP3 and OP4. Adding this allocation into Foveran at this time would cumulatively result in over development of the settlement within the Plan period. With regards to the link road, it is shown as indicative at this time, and it would be expected that its exact route would be considered through the joint Access Strategy for sites OP3 and OP4. No change is required.

Also, as noted below it is not considered that FR109 is a suitable extension to Foveran at this time. It is considered that there is an appropriate amount of housing and employment allocations, some existing and some new allocations, for the settlement to play its function as part of the Strategic Growth Network. The site would be detached from the settlement

until the new allocations at sites OP3 and OP4 were built out which would be undesirable. As noted within the Main Issues Report, the site would form a significant extension to the settlement and the development is not seen to be of a scale that is suitable for Foveran, particularly giving that there are already new allocations proposed within the settlement (AD0038.D, page 48). No change is required.

It is not considered that there is a shortfall within the Housing Land Supply, which would require the site to be allocated which as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. More information can also be found in Issue 5 regarding the Housing Land Supply calculations. No change is required.

Non-Allocated Site – Bid Site FR109 – Land to South West of Foveran

The Council does not support allocating bid site FR109 for residential development. It is not considered that FR109 is a suitable extension to Foveran at this time. It is considered that there is an appropriate amount of housing and employment allocations, some existing and some new allocations, for the settlement to play its function as part of the Strategic Growth Network. The site would be detached from the settlement until the new allocations at sites OP3 and OP4 were built out which would be undesirable. As noted within the Main Issues Report, the site would form a significant extension to the settlement and the development is not seen to be of a scale that is suitable for Foveran, particularly given that there are already new allocations proposed within the settlement (AD0038.D, page 48). With regard to the indicative link road, this route is indicative at this time with no detailed design work undertaken to determine the exact route of the road. The route has been shown on the Settlement Statement map to provide a visual representation of the statement included in 'Local transportation infrastructure' section of the Settlement Statement. Additionally, with regards to the access to OP2, as stated within the allocation summary, proposals for a link across the Foveran Burn through OP1 in line with the site masterplan are required to form a loop road from Blairythan Terrace and provide two points of access to the B977.

It is not considered that there is a shortfall within the Housing Land Supply, which would require the site to be allocated which as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. More information can also be found in this paper regarding the Housing Land Supply calculations. No change is required.

Non-Allocated Site – Bid Site FR142 – Land West of A90 (Phase 1), North of Blairythan

The Council does not support allocating bid site FR142 for 150 homes and village centre (retail/nursery) and community uses (potential school relocation/sports centre/playing fields). The site is not considered to be a suitable extension to the settlement at this time. It is detached from the rest of the development within Foveran and would not help to contribute towards a village core. It is also noted through the Main Issues Report that the development would erode the character of the original form of the settlement (AD0038.D, page 48). These concerns remain valid and appropriate. Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping

Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site FR143 – Land West of A90 (Phase 2), North of Blairythan

The Council does not support allocating bid site FR143 for strategic reserve housing land for 140 homes. The scale of the proposed development, when viewed in conjunction with current development in Foveran and a future related phase of development included as a separate bid, would create an unnatural extension to the north which would erode all the character of the original form of the settlement. These concerns were noted through the Main Issues Report (AD0038.D, page 48), and the Issues and Actions Papers (AD0040.D, page 49). It is maintained that this development would form an unnatural extension to Foveran and should not be included as an allocation. Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Rashierieve Foveran

General

The comment in support is noted. No change is required.

As noted within the Issues and Actions Paper, Rashierieve, while included as a Settlement Statement within the Proposed Local Development Plan, does not have a settlement boundary. Rashierieve is a small grouping of four houses, car sales garage, a vet referral and engineering company. This grouping does not have a community function at present and therefore does not meet the criteria of a “settlement” within the Local Development Plan (AD0041.A, page 91). It is therefore not necessary or appropriate to amend the Plan to give Rashierieve a defined settlement boundary. No change is required.

Site SR1 – Reserved for strategic employment land

SEPA’s comments are noted. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

The Council confirms that it intends to address SEPA’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications. Scottish Water made similar comments, but it is felt that the modification sought by SEPA covers both stakeholders’ views.

Site OP1 – Land West of Rashierieve Cottages

SEPA's comments are noted. No change is required.

The OP1 site is allocated for '8 live/work residential units' within the PLDP. Within the Policies associated with live/work units, it notes under Policy B2 Employment/Business Land that home/work proposals may be appropriate on land identified for mixed use development depending on the criteria set out in Policy P3 (AD0041.A, page 26). Policy P3 Infill Developments within Settlement and Householder Developments (including home and work proposals) states that "We encourage 'working from home' proposals if they do not cause significant loss of amenity to neighbouring properties through noise, traffic movements or other nuisance, and do not change the overall character of the property's use as a single dwelling" (AD0041.A, page 50).

It is therefore considered acceptable for the reference to a mixed-use development to remain within the allocation summary text as the allocation will be delivering both housing and employment uses through the live/work units. Additionally, the only reference within the allocation summary with direct reference to employment uses is to note that these should be screened from existing residential dwellings within the settlement. No change is required.

Non-Allocated Site – Bid Site FR109 – Land to South West of Foveran

The Council does not support allocating bid site FR109 for strategic employment reserve; development for employment uses and strategic landscaping; and residential development. The site was considered through the Main Issues Report and also through the Issues and Actions Papers (AD0038.D, MIR page 48 and AD0040.D, Issues and Actions page 49). The site was considered to be of a scale that would result in a significant extension resulting in the coalescence of Foveran and Rashierieve Foveran which was not seen to be acceptable. The site within Rashierieve Foveran would be segregated by the A975 meaning that the site would be detached from the rest of the settlement which would result in an undesirable location for extension to Rashierieve Foveran. Furthermore, it is considered that the Settlement Statement Vision sufficiently sets out the key objectives for the settlement.

Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site FR109 – Land to South West of Foveran (part)

The Council does not support allocating bid site FR109 for extending the identified settlement boundary of Rashierieve to include a housing/mixed-use allocation at land to the north of SR1 and A975. The land in question is not considered to be a suitable location for expansion of the settlement due to the fact that the site would be segregated from the rest of the development by the A975. It is therefore, not considered to be a sustainable and suitable location for further development within the settlement. Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” in relation to the settlement statement matters covered in Issue 28. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Balmedie

General

3. The settlement boundary at Balmedie is drawn tightly around the northern edge of the built up area using property boundaries and sometimes roads. I consider that it is clear on the ground and logical. The proposed extended boundary, by contrast, would take in a block of open ground and some scattered dwellings, projecting out into open countryside. I see no merit in that proposal. As the council points out, the intention of the proposal to allow for infill development is considered below as non-allocated new site N019.

4. The concerns raised by Belhelvie Community Council regarding pressure on existing facilities and services from the proposed addition of around 1,800 homes in the community council area are addressed by the requirements set out in the Services and Infrastructure section of the Balmedie settlement statement. These detail the types of development which will require to contribute towards specified services and infrastructure, and the mechanisms for initiating infrastructure improvements.

5. No modifications are required.

Flood Risk

6. I agree that the flood risk bullet point should be amended, as requested by the Scottish Environment Protection Agency (SEPA), in the interests of clarity and consistency. A modification is recommended.

Services and Infrastructure

7. Scottish Water has indicated that a drainage impact assessment may be required for development proposals. I agree that a reference to this should be included in the strategic drainage and water supply bullet point. A modification is recommended.

8. The council has explained that developer contributions are sought towards the infrastructure required to support development, in line with the policy tests set out in Scottish Government circular 3/2012. It is not the role of the local development plan to explain the funding arrangements for Scottish Water growth projects. No modification is

recommended.

Site OP1 – Land at Balmedie South

9. The reordering of the sentences in the fourth paragraph of the allocation summary, as suggested by SEPA, would be logical. A modification to this effect is recommended.
10. As there is a difference of opinion between the council and potential developers as to the potential viability of a direct access to the site from the trunk road roundabout, it would be prudent to leave this option open. A modification to this effect is recommended.
11. It is reasonable for the council to specify a standard of provision for bus stops serving this housing, employment and commercial site. A high standard as indicated would promote use of public transport, in accordance with the relevant plan outcome on page 15 of the proposed plan.
12. The housing land audit 2020 indicates that the site is no longer constrained. The agreed programming shows that 50 homes are expected to be completed by 2027. I consider it reasonable to assume that the additional 30 homes proposed on the site would be deliverable by 2032. No modification is required.
13. In a response to a request for further information (FIR014), NatureScot has clarified its advice that planning controls on construction and operation to mitigate drainage impacts are not necessary to avoid an adverse effect on the integrity of the Sands of Forvie Special Area of Conservation or of Ythan Estuary, Sands of Forvie and Meikle Loch Special Protection Area. This advice is based on detailed analysis which concluded that the impact of drainage and construction works on the relevant bird species would not have an adverse effect on the integrity of the protected areas. In the light of that explanation, I recommend an appropriate modification.

Site OP2 – Land south of Chapelwell

14. In a response to a request for further information (FIR014), NatureScot has clarified its advice that planning controls on construction and operation to mitigate drainage impacts are not necessary to avoid an adverse effect on the integrity of the Sands of Forvie Special Area of Conservation or of Ythan Estuary, Sands of Forvie and Meikle Loch Special Protection Area. This advice is based on detailed analysis which concluded that the impact of drainage and construction works on the relevant bird species would not have an adverse effect on the integrity of the protected areas. In the light of that explanation, I recommend an appropriate modification.

Site OP3 - Menie

15. Although site OP3 already has planning permission, I agree with SEPA that it would be helpful to explain the circumstances in which a flood risk assessment may be required, in the event that development proposals are revised or the existing permission lapses. A modification based on SEPA's suggested wording is recommended.
16. With regard to the protection of ancient woodland within the site, the council has taken account of the presence of this woodland in granting planning permission for mixed development, which is subject to an approved masterplan. The council's considerations

included a compensatory tree planting scheme and adjustments to the site layout to avoid impact on the ancient woodland. The allocation summary requires completion of a Woodland Biodiversity Action Plan. I agree, however, with the council's suggestion for additional wording in the allocation summary on this matter, and recommend an appropriate modification.

17. The concerns expressed by Belhelvie Community Council regarding the potential impact of construction traffic passing through Balmedie village would be addressed in the planning application process, which can require a Construction Traffic Management Plan. With regard to the request for a grade-separated junction on the A90 to cope with additional commuter traffic generated by the developments, potential roads improvements would have been considered in the planning application process and should not be revisited in this examination. No modification is required.

18. The allocation summary for site OP3 summarises its planning history since an application for outline planning permission was submitted in 2006. A representation requests a minor amendment to clarify that the two phases (Chapters 1A and 1B) with full permission may not necessarily be the first to be delivered. I agree to the suggested modification in the interest of clarity. The other updates to factual references proposed by the council do not relate to representations and are therefore not a matter for this examination.

19. It would avoid any confusion in relation to the Habitats Regulations, for the fourth paragraph of the site allocation statement to refer to the need for development on the site to take full account of any potential impact on the nearby Foveran Links Site of Special Scientific Interest and on other environmentally designated sites in the wider area. In its response to my request for further information (FIR014), NatureScot confirmed that appropriate drainage provision and a construction method statement were not required specifically to avoid an adverse effect on the integrity of the Sands of Forvie Special Area of Conservation or of the Ythan Estuary, Sands of Forvie and Meikle Loch Special Protection Area, whether for their goose populations or for other birds of interest in relation to those designations. It went on to state that such measures might nevertheless be considered best practice. As to disturbance during construction or even complete loss of habitat resulting from development, this would not result in an adverse effect on site integrity. The second sentence of the fourth paragraph is therefore not appropriate. The representation on behalf of the owners of site OP3 also seeks deletion of the third sentence of the fourth paragraph, but gives no reasons for that proposed amendment. Taking those comments into account, I recommend appropriate modifications.

20. In response to requested changes to the fifth paragraph of the allocation summary, I agree that the council has no control over whether future applications would be for approval of matters specified in conditions or otherwise, terminology should be consistent throughout the proposed plan, and reference to contributions being financial would be restrictive. Removal of the eighth sentence would allow for future flexibility and the proposed changes to the ninth sentence would improve clarity. The council's additional suggestions for change go beyond the matters raised in the representation. I recommend modifications accordingly.

Non-allocated Bid Site FR022 – Land at Millden

21. Bid site FR022 is proposed for 400 homes, a primary school site, community

facilities and mixed employment uses. It is being promoted as having direct access from the A90, lack of traffic impact on the existing settlement, no sewerage or water constraints, a much needed site for a primary school, some existing development, pedestrian/cycle links, no protected designations, and a masterplan in preparation.

22. This large site is detached from Balmedie and divided from it by the A90 road. It would be distant from facilities and services in the village, discouraging active travel and integration with the existing community. Development on this site would constitute a prominent incursion into open countryside. It would change the character of the village and its sense of place. At main issues report stage, the council stated that it had not seen evidence that it would be a deliverable site, and I have not been made aware that further evidence has been forthcoming. The site is subject to a number of environmental and other constraints.

23. Housing is the predominant use in the bid submission and accordingly I have focussed my assessment on this use in the first instance. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. Sites in Balmedie could potentially contribute to meeting this shortfall. However, for the reasons set out above, I conclude that bid site FR022 should not be allocated. There are other sites available to meet the identified shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area, as explained in Issue 5.

24. Given my conclusions on housing, I have not sought to undertake a detailed assessment of the other proposed uses in bid FR022. However, I agree with the council that insufficient information has been provided in relation to the justification for and impacts of the other uses shown in the supporting masterplan. No modification is required.

Non-allocated Bid Site FR089 – Land at Keir Farm

25. Bid site FR089 is proposed for 500-600 homes, a primary school and associated uses. It is argued that this is an effective and deliverable site, which should be allocated in response to concern about the delivery of large sites elsewhere in the Blackdog to Peterhead Strategic Growth Area.

26. This large site lies immediately to the west of the existing built up area, but is separated from it by the A90. Whilst an existing narrow underpass at the northern end of the site would allow for pedestrian and cycle access into the village centre and its facilities, vehicular access would be via the A90 junction and the B977 road to the west. This would present an obstacle to integration with the existing settlement. There are other infrastructure constraints which would require to be resolved in relation to watercourses, woodland, active travel, education facilities and safe access to school.

27. Concerns over the slow delivery of homes on existing strategic sites are discussed in Issue 5, and we conclude that there is no justification to identify additional housing allocations for the period up to 2032 on that basis.

28. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, we conclude that

there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. Sites in Balmedie could potentially contribute to meeting this shortfall. However, for the reasons set out above, I conclude that bid site FR089 should not be allocated. There are other sites available to meet the identified shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area, as explained in Issue 5.

29. Given my conclusions on housing, I have not undertaken a detailed assessment of the other uses proposed in bid FR089. No modification is required.

Non-Allocated Bid Site FR116 – Land at Blairton

30. Bid site FR116 lies in countryside between Balmedie and the OP3 allocation and is promoted for 1,650 homes, community uses and a mixed use area; 850 of the homes would be developed within the plan period and the remainder in future years. It is conceived as a distinct village with pedestrian links to Balmedie. Vehicular links would be via the Old Aberdeen Road. The proposal is to include education provision, green transport links and enhanced biodiversity with an ecological park adjacent to the dunes.

31. The proposal would lie to the east of the A90 and therefore not be subject to the barrier of a trunk road. However, matters of concern remain, including landscape and visual impacts on the North East Aberdeenshire Coast Special Landscape Area, impacts on natural heritage, the potential need for recreational management, public transport provision, education provision, and traffic impact on the village. The area is prime agricultural land. I also note that NatureScot has advised that careful consideration be given to how the proposal would relate to surrounding development as it appears to be leading to coalescence (presumably between Balmedie and the Menie development) and to large scale suburban development.

32. Housing is the predominant use in the bid submission and accordingly I have focussed my assessment on this use in the first instance. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, we conclude that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. Whilst sites in Balmedie could potentially contribute to meeting this shortfall, there is no justification for a proposal of 850 homes in the plan period, with a further 800 homes identified as a strategic reserve. For the reasons set out above, I conclude that bid site FR116 should not be allocated. There are other sites available to meet the identified shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area, as explained in Issue 5.

33. Given my conclusions on housing, I have not undertaken a detailed assessment of the other elements of the proposal. No modification is required.

Non-Allocated Bid Site FR128 and New Site N014 – Land at Southfolds Farm

34. New site N014 incorporates bid site FR128. There is no representation promoting bid site FR128 on its own. The site comprises two parcels close to, and to the west of the new grade-separated junction on the A90. The small parcel (bid site FR128) which is closer to the junction is promoted for commercial use, where it would be visually prominent to passing trade, and the larger parcel is for residential use. It could be

considered independently or together with bid site FR089 (land at Keir Farm).

35. As part of this site was not put forward as a development bid, it was not considered at main issues report stage, and therefore not subject to site assessment and public consultation. There is no environmental assessment for the part of the site proposed for housing. The main issues report included a proposal for 20 homes on the small parcel of land now proposed for commercial uses. Officers did not support this proposal, and commercial uses are now being promoted, as an alternative to housing, due to noise from the A90. Limited information has been provided regarding the nature of the proposed uses and no assessments have been submitted in relation to their impact on the transport network or on existing or town centres, in line with policy B1.

36. In the circumstances, I do not have the information required to make a proper assessment of the merits of this proposal. Moreover, this site is not required to meet housing needs, as alternative sites are available to meet the identified shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area (see Issue 5). I conclude that bid site FR128 and new site N014 should not be allocated.

37. No modification is required.

Non-Allocated New Site N019 – Land east of North Beach Road

38. New site N019 comprises a site to the north of the village promoted for 10 self-build homes. It is associated with the representation assessed above at paragraph 3 for extension to the settlement boundary. It was not put forward as a development bid and so was not considered at main issues report stage, nor was it subject to site assessment and public consultation. There is no supporting information such as an environmental assessment.

39. In the circumstances, I do not have the information required to make a proper assessment of the merits of this proposal. Moreover, this site is not required to meet housing needs, as alternative sites are available to meet the identified shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area (see Issue 5). I conclude that bid site N019 should not be allocated.

40. No modification is required.

Belhelvie

General

41. The concerns raised by Belhelvie Community Council regarding pressure on existing facilities and services from the proposed addition of around 1,800 homes in the community council area are addressed by the requirements set out in the services and infrastructure section of the Belhelvie settlement statement. These detail the types of development which will require to contribute towards specified services and infrastructure, and the mechanisms for initiating infrastructure improvements.

42. Two representations object to the removal of green belt land around Belhelvie. However, the area around the settlement is not designated as green belt, but classified as countryside. Impact on countryside is one of the considerations in site assessments. In

that respect, allocations OP2 and OP3 require perimeter landscape planting to soften the impact of development on the countryside and to define the settlement boundary.

43. No modifications are required.

Site R1 – Reserved for a future community centre

44. Site R1 lies at the northern end of Belhelvie and is occupied by a stone building currently used as a body repair shop with an informal parking area in front. The site has planning permission for the erection of a dwellinghouse and a representation asks for the site reservation to be deleted, explaining that building work has been delayed while an electricity service pole is moved, but is due to start shortly.

45. The council explains that the community council expressed an aspiration for a community centre on this site, that no alternative location has been identified in the village and that the landowner should have been aware of the status of the land from neighbour notification letters.

46. As the council has recently granted consent for an alternative use on the land, there is no justification for retaining the reserved status. An alternative site will need to be found, but that is not a matter which can be resolved by this examination. I therefore recommend appropriate modifications.

Flood Risk

47. SEPA has requested that site OP2 be added to the flood risk bullet point in the interests of consistency. However, given my recommendation below to delete allocation OP2 from the proposed plan, this change is not required.

Services and Infrastructure

48. As I have already indicated in relation to the Balmedie settlement statement, it is not the role of the local development plan to explain the funding arrangements for Scottish Water growth projects. No modification is recommended.

49. Scottish Water has requested some amendments to the strategic drainage and water supply bullet point to explain the circumstances in which it will initiate a growth project and to indicate that a drainage impact assessment may be required. Notwithstanding my recommendations in relation to sites OP2 and OP3, I consider that this information may be useful to potential developers. I recommend a modification to this effect.

50. There is considerable overlap between matters raised by Scotia Homes in relation to contributions towards strategic transport in Belhelvie and general representations on developer contributions addressed under Issue 12. A number of modifications are recommended in Issue 12 which I consider would address the concerns raised by Scotia Homes. These include changing the word “will” to “may” in relation to the requirement for contributions, the inclusion of the five tests set out in paragraph 14 of planning circular 3/2012 in policy RD2 and the requirement to prepare statutory Supplementary Guidance on developer obligations and affordable housing.

51. Insufficient information has been provided in the proposed plan to explain the

required transport infrastructure and justification for developer contributions in relation to specific proposals. Furthermore, the council has explained in its response that it undertakes a review of the need for and scale of any contribution in the light of circumstances at the time the planning application is made. Within this context and in the interests of consistency, I consider that the word “will” should be changed to “may” in the first and third sentences of the strategic transportation bullet point. Modifications to this effect are recommended.

Site OP2 – Land at Cairntack (East) and site OP3 – Land to the east of Cairn View

52. OP2 and OP3 are newly allocated sites for 41 homes and 49 homes, respectively, on adjacent fields to the east of the village. The allocations are expected to include affordable housing but do not make provision for any local services or community facilities.

53. The community council has commented that, although they have no significant objection to these developments as they appear to be a natural extension to the village, they are aware that some residents object in principle to extending the village due to a lack of facilities and the poor road infrastructure.

54. Representations and my site visit have indicated that Belhelvie is a small settlement with no local shops, a little local employment, no community centre (and, in view of my recommendation on site R1, no site for one), a limited bus service, poor active travel provision, including poor pavements and lack of off-road footpaths, and no facilities for teenagers other than a playing field. The additional housing is the only new development proposed in the village. Adding the proposed number of new homes is unlikely to generate significant improvements to services and infrastructure within the village. Under the services and infrastructure section of the settlement statement, the developer contributions which are required towards facilities nearly all relate to Balmedie or Ellon, to both of which there are no direct bus services (other than for school buses). The proposed development is therefore likely to lead to increased car dependency, contrary to one of the plan’s outcomes, and fails to address both the lack of community facilities and the council’s planning objective to help contribute to the overall sense of place in the community. I also note that the strategic environmental assessment summarised the sites as having an overall negative impact.

55. Despite its location within the Aberdeen to Peterhead Strategic Growth Area and the Energetica Corridor, I consider that Belhelvie is not suited to the expansion as proposed. Whilst the allocations contribute to meeting the strategic development plan allowance for the Aberdeen Housing Market Area, I do not consider that the benefits, in terms of meeting housing need, would outweigh the adverse impacts resulting from development on these sites.

56. I recommend that the plan be modified to delete allocations OP2 and OP3 from the Belhelvie settlement statement and map. The settlement boundary for Belhelvie should revert to that shown in the existing local development plan. A modification to the relevant table in appendix 6 will also be required to delete the entries for Belhelvie OP2 and OP3. The implications of these deletion for the overall housing land provision are addressed in Issue 5. Changes to the allocation summaries for these sites, requested by NatureScot and others, would not be required.

Blackdog

General

57. The concerns raised by Belhelvie Community Council regarding pressure on existing facilities and services from the proposed addition of around 1,800 homes in the community council area are addressed by the requirements set out in the services and infrastructure section of the Balmedie settlement statement. These detail the types of development which may be required to contribute towards specified services and infrastructure, and the mechanisms for initiating infrastructure improvements. No modification is required.

58. A representation requests an extension of the green belt boundary at the southern end of Blackdog. Scottish Planning Policy recommends that amendments to greenbelt boundaries are made as a result of a comprehensive review of boundaries throughout the green belt; not in an ad hoc way as is being sought here. The council generally draws settlement boundaries tightly around concentrated built up areas and areas which are planned for development, but excluding scattered buildings and clusters, as it has done at the southern end of Blackdog. The present settlement and green belt boundaries conform to those practices and require no modification.

Vision

59. I agree with the council that there is no need to repeat material from the allocation summary for site OP1 in the Vision for Blackdog.

Town Centre

60. This matter is covered under site OP1 below.

Site OP1 – Land At Blackdog

61. I agree that the amendment requested by SEPA would be consistent with the flood risk bullet point. A modification to this effect is recommended.

62. Paragraph 133 of Scottish Planning Policy requires development plans to address any identified need for sites for Gypsy/Travellers. It goes on to state that, where there is a need, LDPs should identify suitable sites for these communities. In response to a further information request (FIR002), the council has explained that a need for additional pitches/sites for Gypsy/Travellers is identified through the housing needs and demand assessment 2017 and the Grampian Gypsy/Traveller Accommodation Needs Assessment 2017. The required provision within allocation OP1 at Blackdog would help meet this need and is consistent with Scottish Planning Policy.

63. The council has explained that the requirement to make provision for a Gypsy/Traveller site at Blackdog is included in the legal agreement attached to the planning permission for the site. It has also indicated that the master plan shows the site located near the employment element of the proposal, not housing. I agree with the council that, by the time the site is provided, a range of local facilities is expected to be available in Blackdog. No modifications are required.

64. Representations have been made urging the retention of woodlands around Blackdog for reasons of habitat, visual amenity, local character, carbon sequestration, air quality, recreation and noise attenuation. Planning permissions in principle have been granted for the area covering site OP1 and are accompanied by an approved masterplan which covers these woodland areas. The masterplan indicates that some of the woodlands are to be retained and others removed for development. The scope of this examination does not include recommending amendments to an approved masterplan. No modifications are required.

65. The approved masterplan for site OP1 includes an economic centre featuring a landmark building to incorporate a regional food hall, hotel and retail units with direct access off the (then proposed) A90/A96 Blackdog junction. Adjacent to this is a village centre comprising a primary school, public amenities and local shops. In December 2017, planning permission in principle was granted for development on the northern half of site OP1 for “mixed use development comprising town centre including regional food hall, retail, leisure and Class 3 uses; ...”. The approved drawings include plans indicating the location of the town centre. The permission has an extended validity of 10 years and is therefore extant.

66. Despite the 2017 consent, the Vision statement in the proposed plan does not mention town centre status for the proposed development on OP1, referring instead to development of a “new village centre”. The allocation summary refers to the 2017 consent, including development of a town centre. But Appendix 2, which lists the town centres within the plan area, does not include Blackdog.

67. From its comments in the main issues report, the issues and actions paper and its schedule 4 response, the council does not dispute town centre status in itself, but rather considers that it should not apply until the development is implemented.

68. Town centre status is important because of the level of policy protection it affords. The allocation summary requiring that “future development of the site should seek to develop in line with the agreed masterplan” would not safeguard town centre status, as the council claims, because the masterplan does not refer to a town centre. Scottish Planning Policy envisages that development plans will support new town centres (page 18, footnote 33) and requires that development plans should define a network of centres, including emerging or new centres (paragraph 61). Clearly, this is necessary as development plans are forward-looking documents and not simply recording the existing position, and to provide the assurance required by developers to commit investment in major schemes. There is no necessity for any application for approval of matters specified in conditions to come forward before the uses granted in the planning permission in principle can be recognised in the proposed plan. The network of centres in Aberdeenshire is set out in Appendix 2; Retail Centres of the proposed plan, which lists town centres as either principal town centres or other town centres. The Blackdog centre, as described in the planning permission, would meet the description of a principal town centre given in Appendix 2.

69. For these reasons, I consider that the Vision statement should refer to the development of a new town centre. The reference in the allocation summary to development being in line with the agreed masterplan should be deleted as it has been superseded by planning permission in principle approvals for the northern and southern

parts of the site, which were accepted as justified despite varying from aspects of the masterplan. Furthermore, Blackdog should be listed in Appendix 2: Retail Centres as a principal town centre – a modification to this effect is included in Issue 3.

70. For the effective operation of policy B1: Town Centre Development, the Blackdog settlement map should indicate the boundary of the proposed town centre. I note that the location of the town centre uses is depicted on the Masterplan Delivery plan, as approved by the planning permission in principle. A modification is recommended.

Non-allocated Bid Site FR057 – Land to the west of the A90

71. This large green belt site occupies a triangle of land south of the A90/A92 junction and is promoted for roadside services. Whilst it is claimed that the nearest services would be in Peterhead, I agree with the council that an equivalent facility could be provided within the OP1 allocation at Blackdog without losing green belt land. The land functions well for its green belt purpose and its development would represent a prominent incursion into open land between Blackdog and Aberdeen eroding their character and landscape setting and identity. Its weak southern boundary could encourage pressure for further development. I also note that Nestrans do not foresee a need for roadside services in this location. No modification is required.

Foveran

General

72. The services and infrastructure section of the settlement statement sets out where new developments will be expected to contribute to sewerage, water, school provision and other services. No modification is required.

Flood Risk

73. I agree with SEPA that there is repetition in the information provided in the flood risk bullet and the allocation summaries for sites OP1 – OP3. It would be appropriate to make the flood risk bullet point more concise. A modification is recommended.

Services and Infrastructure

74. The information provided in the strategic drainage and water supply bullet point refers to a Scottish Water growth project due for completion in 2021. I agree with SEPA that the text should be updated to reflect that the project will be completed before the adoption of the plan. I recommend a modification based on the wording provided by SEPA.

75. The representation promoting a site for a new primary school on land to the south of Blairythan Terrace is addressed under non-allocated bid site FR109 below.

Site OP1 – South of Westfield Farm

76. The ownership of parts of site OP1 is contested by local residents. However, land ownership issues do not generally fall within the remit of the examination. In this case, I note that the council relies on the statement within the masterplan for sites OP1 and OP2 that all the land falls within the ownership of a single family, commenting that

development of the first phase on OP1 was nearly complete at the time of writing. I have no substantive basis to take a different view.

77. The allocation is said to be inappropriate as it would bring development to a settlement with no amenities. However, the masterplan indicates land for a school extension or a replacement community campus school, safer routes to school, a village centre and shop, land for employment uses, amenity open space, and a path network connecting to the wider countryside.

78. Concerns about residential amenity, road capacity, road design, footways and impact on livestock would be addressed in the course of planning applications on the land.

79. No modifications are required.

Site OP2 – West of McBey Way

80. A representation seeks the removal of site OP2 due to concerns regarding drainage, flooding and potential damage to a hedge. I note that SEPA has not raised any matters in relation to allocation OP2 and that drainage and flood risk are addressed in the allocation summary and other relevant sections of the settlement statement. I agree with the council that detailed impacts of development on neighbouring properties would be considered at planning application stage. I do not consider that these matters would justify the deletion of this housing allocation. No modification is required.

81. Site OP2 forms part of the effective land supply in the 2019 housing land audit. Whilst it is expected to contribute towards meeting the housing land requirement for the Aberdeen Housing Market Area in the period up to 2032, it is not an allocation identified to meet the strategic development plan housing allowances.

82. I note that the site is identified as constrained in the 2020 housing land audit for physical and infrastructure reasons. I understand that this relates to a restriction on the number of homes that can be accessed from Blairythan Terrace. However, the allocation summaries for sites OP1 and OP2 refer to the provision of a bridge across the Foveran Burn, which would provide a second access to site OP2 from the north. Furthermore, the settlement map shows an indicative link road between site OP2 and sites OP3/OP4, which may also provide a longer term access solution.

83. Representations promoting bid sites FR067 and FR109 suggest that site OP2 should be reserved for future development, rather than identified as a housing allocation. Whilst I acknowledge that there are currently constraints to development, this site is not a new allocation. If the access constraint can be overcome during the plan period, there would be no reason to delay development. I do not consider it necessary or appropriate to identify this site as a reserved allocation.

84. I conclude that no modifications are required in relation to allocation OP2. The other matters raised in the representations relating to bid site FR067 and FR109 are addressed below.

Site OP3 – South of Turin Way and Site OP4 – Site 2, Land at Blairythan Terrace

85. The strategic environmental assessment has considered the effect in principle of development at these sites on landscape and visual matters. More detailed concerns regarding residential amenity, visual impact and village character would be addressed at planning application stage with assessment against policy P1 (Layout, siting and design). Primary school capacity, surface water and waste water treatment are covered under the services and infrastructure section of the settlement statement, which sets out contributions required for developments. Support for additional school capacity would come from the numbers of children housed in all of the opportunity sites allocated in the proposed plan, rather than just those in OP3 and OP4. The impact of development on house values is not a planning matter.

86. I conclude that sites OP3 and OP4 should be retained in the plan, with no change to the indicative number of houses proposed. No modifications are required.

Non-allocated bid site FR067 – Site 3, Land at Blairythan Terrace. Non-allocated bid site FR109 – Land to south-west of Foveran (northern part only). Site OP3 – South of Turin Way. Site OP4 – Site 2, land at Blairythan Terrace

87. The above combination of sites, under two ownerships, has been promoted in response to the officers' withdrawal of preferred status for bid site FR067 at main issues report stage on the grounds that Blairythan Terrace has insufficient capacity to support traffic generated by FR067 in addition to existing development and development approved on site OP2 (West of McBey Way). As the remaining capacity on Blairythan Terrace is for only 30 dwellings, development of the full allocation of 75 units on OP2 would require either road access north through site OP1, which includes the proposed road bridge over the Foveran Burn, or a new link road south-east to the B777. Since OP2 is constrained on access grounds and cannot contribute to the effective supply, it should be replaced by the above sites.

88. I agree with the representations that for the indicative link road to pass through two agricultural fields with no allocations would present little incentive for its construction. Nor would it be good planning to sever fields, some with prime agricultural land status, solely for access to housing sites.

89. On behalf of the two owners, a concept masterplan has been submitted which shows a link road running through proposed housing development on bid site FR067 and the northern part of bid site FR109, and then via allocations OP3 and OP4 to the B777. Whilst this would address the link road issue, it would involve the development of an additional 124 - 154 homes in Foveran: 49 units on FR067 and 75 - 105 units on the northern part of FR109 (the representations present different figures for FR109).

90. With respect to the argument for a replacement allocation, the housing land requirements identified in the strategic development plan include a generosity allowance to provide an element of flexibility in ensuring that housing supply targets are met. As site OP2 does not contribute towards the strategic development plan allowances, I do not consider that a potential delay to the development of the site would require the identification of a replacement allocation. Even if additional land was required, this would be a matter for the Aberdeen Housing Market Area as a whole. I conclude that the fact that site OP2 is constrained in the 2020 housing land audit would not in itself justify the allocation of bid sites FR067 and FR109.

91. I agree that the allocation of bid site FR067 and part of FR109 may provide an access solution to assist the delivery of site OP2, by providing a link road from the south-east. However, this potential benefit requires to be assessed within the context of other potential impacts. In that respect, the bid sites are greenfield land, including prime agricultural land, where development would extend the village into open countryside and have landscape impacts. I also note that the proposal would represent an additional 124 -154 units over the 245 units allocated in the proposed plan. There would be waste water treatment and school provision constraints, albeit these could potentially be overcome.

92. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. Sites in Foveran could potentially contribute to meeting this shortfall. However, for the reasons set out above, I conclude that bid sites FR067 and FR109 (part) should not be allocated. There are other sites available to meet the identified shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area, as explained in Issue 5.

93. No modification is required.

Non-allocated Bid Site FR109 – Land to south-west of Foveran

94. This is a 60 hectare site whose proposed 580 housing units are considered low density by the council. It would create a linear swathe of development stretching south as far as Rashierieve Foveran, but severed by the recently completed A90 upgrade. It would project over a kilometre into open countryside, potentially resulting in visual coalescence of two distinct settlements and significant landscape impact. Development would involve the loss of prime agricultural land over part of the site.

95. The council considers that housing and employment allocations in the proposed plan would be sufficient for Foveran to play a role as part of the Strategic Growth Area, and that the scale of development proposed in this bid would be excessive. I consider that the allocations are acceptable and together represent an appropriate level of growth for Foveran in the period up to 2032. I note that the proposed units would be more than double those already allocated in the proposed plan and be considerably in excess of the 49 units recommended by officers at main issues report stage as appropriate for the settlement, but subsequently withdrawn for road access reasons.

96. The representation states that the site would include provision of a site for primary education, but I note that the masterplan for the allocated sites OP1 and OP2 offers land either for expansion of the existing school or for a new campus in a more central location. The bid also offers land to assist in the delivery of the southern link road identified in the proposed plan. However, because the plan describes that southern link as a protected future route, there is no requirement to allocate further land in the proposed plan to facilitate its delivery.

97. There would be waste water treatment and school provision constraints, albeit these could potentially be overcome. The strategic environmental assessment, which is challenged by the bid site promoter, comments that the site has an overall mixed impact, but scores negatively due to the scale of development, proximity to existing settlement,

infrastructure required and impact on water quality and landscape.

98. The site is being promoted as compensating for the shortfall in housing land which Homes for Scotland argue will result if the allocations in the proposed plan are not supplemented. In this regard, matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. Sites in Foveran could potentially contribute to meeting this shortfall. However, for the reasons set out above, I conclude that bid site FR109 should not be allocated. There are other sites available to meet the identified shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area, as explained in Issue 5.

99. No modification is required.

Non-Allocated Bid Site FR142 – Land West of A90 (Phase 1), North of Blairythan

100. Site FR142 lies to the north of OP1, which has been partly built and has the same developer. It is promoted for 150 homes, a village centre and community uses, with a view to developing the vision in the masterplan for sites OP1 and OP2. However, it would extend development further from the existing village core. Some of the proposed community facilities are the same as included in the masterplan for OP1 and OP2. The site is categorised as prime agricultural land and is within a waste water hotspot. There would be a primary education provision constraint, albeit this could potentially be overcome.

101. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. Sites in Foveran could potentially contribute to meeting this shortfall. However, for the reasons set out above, I conclude that bid site FR142 should not be allocated. There are other sites available to meet the identified shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area, as explained in Issue 5.

102. No modification is required.

Non-Allocated Bid Site FR143 – Land West of A90 (Phase 2), North of Blairythan

103. Site FR143 lies to the north of FR142, with 140 homes promoted as a second phase to that scheme. As such, it implies an addition to the 150 homes proposed in the first phase. It would take development even further from the existing village core and be difficult to relate to the village form. The site is categorised as prime agricultural land and is within a waste water hotspot.

104. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. Sites in Foveran could potentially contribute to meeting this shortfall. However for the reasons set out above, I conclude that bid site FR143 should not be allocated. There are other sites available to meet the

identified shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area, as explained in Issue 5.

105. No modification is required.

Rashierieve Foveran

General

106. Rashierieve Foveran is a small group of dwellings and businesses without a community function, which does not meet the criteria for settlement status. It would not therefore be appropriate to indicate a settlement boundary in the proposed plan.

107. I agree with the council that the existing settlement statement for Rashierieve is sufficient without the addition of key objectives derived from the Main Issue Report.

108. No modifications are required.

Flood Risk

109. SEPA has not explained why it considers that the reference to its flood maps should be deleted. However, the council agrees with the suggested change and I have no reason to take a different view. A modification is recommended.

Services and Infrastructure

110. The representation from Scottish Water does not suggest any alternative or additional wording to the strategic drainage and water supply bullet point. I consider that the amendment requested by SEPA would provide clarification regarding any proposal for private waste water treatment. A modification is recommended.

Site OP1 – Land West of Rashierieve Cottages

111. The allocation description for site OP1 is for “8 live/work residential units”. The subsequent reference to “a mixed-use allocation including live/work units” in the allocation summary is therefore confusing. It can be read as a requirement for both mixed-use and live/work units, a combination which could be difficult to accommodate satisfactorily on the site. From the council’s response, it is clear that the allocation description reflects its intentions, so I recommend an appropriate modification.

Non-Allocated Bid Site FR109 – Land to South West of Foveran

112. An area of some five hectares to the west of site SR1 is promoted for additional land as a future reserve for employment uses, to include landscape screening alongside the A90. The proposed land is greenfield, highly visible from the new road and would need to be screened. The proposed plan has allocated a strategic reserve of employment land to meet needs beyond 2032, which includes site SR1 in the Aberdeen to Peterhead Strategic Growth Area. Table 1 in appendix 1 of the proposed plan demonstrates that the strategic development plan’s employment land targets for the period 2021 – 2032 and the strategic reserve are met for the Aberdeen to Peterhead Strategic Growth Area. There is no requirement for the council to reserve more land.

113. An area of some four hectares to the west of site OP1 is promoted to be allocated for employment uses and strategic landscaping. The proposed land is greenfield, highly visible from the new A90 road and would need to be screened. The proposed plan allocates a generous supply of employment land for the period 2021-2032 to meet the strategic target. There is no requirement for the council to allocate more land.

114. No modifications are required.

Non-Allocated Bid Site FR109 – Land to South West of Foveran (part)

115. Land to the north of SR1 and the A975 is promoted for a housing-led mixed use development with business space, light industry, roadside retail and other commercial uses. It is open land which would be divided from the existing ribbon of development at Rashierieve by the A975, would be highly visible from the new A90 road and would extend out into the countryside. The proposed plan allocates a generous supply of employment land for the period 2021-2032 to meet the strategic target. There is no requirement for the council to allocate more than this.

116. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. Sites in Rashierieve Foveran could potentially contribute to meeting this shortfall. However, for the reasons set out above, I conclude that bid site FR109 (part) should not be allocated. There are other sites available to meet the identified shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area, as explained in Issue 5.

117. No modifications are required.

Reporter's recommendations:

Modify the local development plan by:

Balmedie

1. Replacing the bullet point in the flood risk section of the Balmedie settlement statement on page 391 with:

“- Small watercourses run through or adjacent to the OP1 and OP3 sites. There is also a surface water flood risk on site OP3. Flood risk assessments may be required”

2. Adding the following sentence after the third sentence in the strategic drainage and water supply bullet point in the Balmedie settlement statement on page 391:

“A Drainage Impact Assessment may be required.”

3. Replacing the first two sentences of the second paragraph in the allocation summary for OP1: Land at Balmedie South in the Balmedie settlement statement on page 392 with: “At least two points of access to the site are required.”

4. Reordering the last five sentences in the fourth paragraph of the allocation summary for OP1: Land at Balmedie South in the Balmedie settlement statement on page 392 to read: “A Flood Risk Assessment may be required. Enhancement of the watercourse through re-

naturalisation and removal of any redundant features should be investigated. A 250mm water main runs through the site. Scottish Water should be contacted by the developer to ascertain whether a mains diversion is possible. Scottish Water has indicated that a Drainage Impact Assessment will be required.”

5. Deleting the final paragraph of the allocation summary for OP1: Land at Balmedie South in the Balmedie settlement statement on page 392.

6. Replacing the second sentence of the second paragraph in the allocation summary for OP3: Menie in the Balmedie settlement statement on page 394 with:

“As part of this permission, two phases (Chapters 1A & 1B) were granted with full details, providing community facilities, some holiday accommodation and 82 dwellinghouses.”

7. Replacing the penultimate sentence in the final paragraph of the allocation summary for OP3: Menie in the Balmedie settlement statement on page 394 with:

“A Flood Risk Assessment may be required should development proposals be revised or extant permissions lapse.”

8. Replacing the first two sentences of the fourth paragraph in the allocation summary for site OP3: Menie in the Balmedie settlement statement on page 395 with:

“Development on the site requires to take full account of any potential impact on the nearby Foveran Links Site of Special Scientific Interest and on other environmentally designated sites in the wider area.”

9. Replacing the eighth and ninth sentences of the fifth paragraph of the allocation summary for site OP3: Menie in the Balmedie settlement statement on page 395 with:

“Delivery of any future on-site affordable housing should be integrated into the design of the development to provide a mix of house types and sizes to meet local need.

10. Adding the following sentence at the end of the fifth paragraph of the allocation summary for site OP3: Menie in the Balmedie settlement statement on page 395:

“The ancient woodland site should be protected against loss or detrimental impact in any future planning applications.”

Belhelvie

11. Replacing the fourth sentence of the Vision statement for Belhelvie on page 400 with: “This contribution will be proportionate to the size of the existing community and will be provided through the allocated site.”

12. Deleting the R1 designation for a future community centre from the Belhelvie settlement statement on page 400 and map on page 404.

13. Replacing the first and second sentences in the strategic transportation bullet point in the Belhelvie settlement statement on page 401 with:

“Contributions may be required for cumulative strategic transportation improvements including interventions on the A90 and in Aberdeen City. Allocated site OP1 will need to consider access and connectivity.”

14. Replacing the third sentence in the strategic transportation bullet point in the Belhelvie settlement statement on page 401 with:

“Development may be required to contribute towards improved public transport

infrastructure and the proposed Ellon – Balmedie strategic cycle route”.

15. Replacing the last two sentences of the strategic drainage and water supply bullet point in the Belhelvie settlement statement on page 401 with:

“Scottish Water will initiate a growth project should demand from committed development exceed available capacity and will instigate this on receipt of the 5 Growth Criteria from a developer. A Drainage Impact Assessment may be requested. Early engagement with Scottish Water is encouraged.”

16. Deleting allocations OP2 and OP3 from the Belhelvie settlement statement on page 403 and map on page 404 and amending the settlement boundary to revert to that shown in the existing local development plan.

17. Removing sites OP2 Belhelvie and OP3 Belhelvie from the relevant table in Appendix 6 Housing Land Allocations. (Note – a revised version of Appendix 6, incorporating all the recommended modifications, is provided at the end of this report.)

Blackdog

18. Replacing the second sentence of the first paragraph of the Vision section in the Blackdog settlement statement on page 405 with:

“Due to its proximity to Aberdeen, a planning application for significant expansion of the settlement has been approved for a new town centre, housing and employment opportunities.”

19. Replacing the last sentence of the first paragraph of the Vision section in the Blackdog settlement statement on page 405 with:

“As such, it is important for this settlement to meet the need for strategic housing and employment land in the Strategic Growth Area by delivering 600 new homes and employment land, providing improved local facilities and developing a new town centre on site OP1.”

20. Replacing the second, third and fourth sentences of the first paragraph in the allocation summary for site OP1: Land at Blackdog in the Blackdog settlement statement on page 407 with:

“Planning permission in principle (reference APP/2016/0766) has been granted on the northern part of site OP1: Land at Blackdog for a mixed use development, comprising: a town centre that includes a regional food hall, retail, leisure and other class 3 uses; business and industrial uses (classes 4, 5 and 6); alterations to access from the A90 roundabout; local access, landscaping, car parking, cycle and pedestrian facilities, and low carbon infrastructure. On the southern part of the site, planning permission in principle (reference APP/2016/0767) has been granted for 550 homes, education and community uses, and associated infrastructure.”

21. Replacing the first two sentences of the third paragraph in the allocation summary for OP1: Land at Blackdog in the Blackdog settlement statement on page 407 with:

“Due to the presence of small watercourses running through the site, a Flood Risk Assessment will be required.”

22. Adding to the settlement map for Blackdog (page 408), the boundary of the town centre as granted in planning permission reference APP/2016/0766 and indicated in the approved plan drawing reference 15033GA Version Number B Masterplan Delivery.

Foveran

23. Replacing the flood risk bullet point in the Foveran settlement statement on page 435 with:

“Parts of sites OP1, OP2 and OP3 are located adjacent to the SEPA indicative 1 in 200 flood risk area or have a small watercourse running through or adjacent to the site. A Flood Risk Assessment may be required.”

24. Replacing the last sentence in the strategic drainage and water supply bullet point in the Foveran settlement statement on page 435 with:

“All development will be required to connect to the public waste water system.”

Rashierieve Foveran

25. Replacing the bullet point in the flood risk section of the Rashierieve Foveran settlement statement on page 481 with:

“- OP1 and SR1 have small watercourses running through or adjacent to the sites. A Flood Risk Assessment may be required.”

26. Replacing the last two sentences in the strategic drainage and water supply bullet point in the Rashierieve Foveran settlement statement on page 481 with:

“Any private treatment will require to be built to an adoptable standard. The preference would be for a single waste water treatment works serving the OP1 site with the capacity for SR1 to connect at a future date.”

27. Replacing the second sentence of the first paragraph in the allocation summary for site OP1: Land west of Rashierieve Cottages in the Rashierieve Foveran settlement statement on page 482 with:

“Future road access will be a vital consideration for the site.”

Issue 29	Large Settlements AHMA (Formartine) – Methlick and Tarves	
Development plan reference:	Proposed LDP, Appendix 7C Formartine, Page 449-453 Proposed LDP, Appendix 7C Formartine, Page 491-495	Reporter: Malcolm Mahony
Body or person(s) submitting a representation raising the issue (including reference number):		
<p>Methlick PP0111 Neil and Sarah Purdie PP0180 David Foster PP0344 Bill Adie PP0345 Methlick Community Council PP0352 Stuart Kennedy PP0506 James Young PP0809 Arthur Owen Ball PP1046 c a s e CONSULTING Limited PP1047 c a s e CONSULTING Limited PP1048 c a s e CONSULTING Limited PP1219 Scottish Environment Protection Agency PP1300 NatureScot (Scottish Natural Heritage)</p> <p>Tarves PP0120 Michael J Mountford & Iain F Mathers PP0272 Scottish Water PP1165 Steven Moir PP1219 Scottish Environment Protection Agency</p>		
Provision of the development plan to which the issue relates:	Methlick Settlement Statement Tarves Settlement Statement	
Planning Authority's summary of the representation(s):		
<p>Methlick</p> <p><u>General</u></p> <p>A representee has raised concern regarding the allocations proposed in Methlick and has queried whether following a review, with the high number of homes proposed to be allocated, if the housing numbers are cut, they are in reality still above the original plan. Additionally, it was queried whether the high numbers of proposed homes in the Proposed Local Development Plan (PLDP) mean no development will proceed (PP0352).</p> <p>Two representees note no issue with development happening in Methlick but raised concern with the scale of the development proposed and requests that the allocations within Methlick are reviewed to reduce the scale (PP0345 and PP0352). The PLDP includes all four sites with a total of 103 homes allocated (PP0345). The representee indicated that during a meeting with Aberdeenshire Council in 2017, it was raised that 30</p>		

homes would be too many for the settlement. Even if the development were introduced over a 10-year period it would still have a dramatic impact on the settlement (PP0345 and PP0352). There are concerns raised that three of the sites will require access off Sunnybrae (B9170) (PP0345). There will be increased traffic in the area and an increased risk of accidents on Sunnybrae. The increased traffic will also have an impact on the Category B listed bridge across the river Ythan. The increased number of houses will have an impact on a number of services in the settlement including Haddo Medical Practice, Methlick School, Meldrum Academy (PP0345 and PP0352) and also on the water supply and waste water drainage (PP0345).

A representee has raised concern that the PLDP indicates a far greater number of houses are planned in the settlement than that which was indicated in the Main Issues Report (MIR) 2019 for bid sites FR014, FR040, FR046 and FR047. Concerns were raised that the level of housing proposed would impact on infrastructure and services. It was stated that there is insufficient capacity at Methlick sewage and treatment works and that the local primary and secondary schools are forecast to be over capacity in 2022 and no plan is in place to resolve this. Additionally, concern was raised that there is no medical facility in the settlement, and that there is no mention of the impact that the new development in the settlement will have on the medical surgery serving Methlick which is already overstretched. There is no pharmacy or dentist within the settlement. Furthermore, it was stated that public transport is poor, and concerns were raised regarding increased traffic, higher CO2 emissions and detrimental impact on the roads increasing risk of accidents, as well as concern of surface water flooding which will be increased as a result of the proposed development if no mitigation measures are implemented. Appropriate action is required to be taken to ensure that the concerns raised regarding infrastructure and service provision are addressed to accommodate the proposed development in the settlement (PP0180).

Flood Risk

Scottish Environment Protection Agency (SEPA) has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Cottonhillock

A representee was supportive of additional housing in the settlement as long as it is built in a controlled manner. This would then help support the rest of the services in the settlement as over the last few years services have been lost including the surgery, banks and some elements of education on offer at Methlick School. No modification sought (PP0344).

SEPA recommended for site OP1, amending the third sentence in the second paragraph to state that a buffer strip shall be provided along the ephemeral watercourse route (RD0214.B) (PP1219).

A representee has requested the removal of the OP1 site and that its 20-home contribution to the allowances is removed. It is stated that an alternative effective allocation should be identified in the Formartine Aberdeen Housing Market Area. This is on the basis that site is infrastructure and marketability constrained, has had no planning application lodged to deliver the site over the past 7 years, and constraints relate to capacity of waste water treatment works (WWTW) and possible water main reinforcement which will not be resolved without valid planning permission. The representees states that the Council should not rely on a site that has not advanced and that existing constrained sites should not count towards the allowances. This approach to housing delivery is incompetent given the substantial shortfall in allocations to satisfy Scottish Planning Policy (SPP). The representee considers that a precautionary approach should be taken, and a new alternative site should be allocated (PP1048).

Site OP2 – West of Black Craigs

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219).

A representee was supportive of additional housing in the settlement as long as it is built in a controlled manner. This would then help support the rest of the services in the settlement as over the last few years services have been lost including the surgery, banks and some elements of education on offer at Methlick School. No modification sought (PP0344).

Support was expressed for the inclusion of OP2 as an allocation for 8 houses within Methlick. It was stated that detailed planning applications on the site have recently been pursued and granted for the erection of housing on a plot-by-plot basis and work has commenced – this demonstrates a commitment to deliver the site and evidences demand for housing at this location. The proposed OP2 allocation also provides additional flexibility for the developer for the layout through the inclusion of additional land to the north. The representee stated that there are no unresolvable constraints such as topography, drainage and school provision, and no adverse impacts would be posed to the nearby woodland. The site is well connected to the settlement. The representee has included a number of Appendices in their representation (RD0009.A, RD0009.B and RD0009.C) which provides further detail to support their position. No modification sought (PP0111).

A representee has raised concern that only one affordable home would be allocated across the new proposed allocations. Affordable housing is greatly lacking in Methlick (PP0180).

A representee requested amendment of the OP2 allocation to remove 3 homes as the existing allocation has permission for 5 homes maximising the use of the steep sloping site. The planning permission has been extended suggesting marketability may be a constraint in future (PP1047).

Site OP3 – Land at Sunnybrae Croft

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP3 (RD0214.B). No modification

sought (PP1219).

A representee was supportive of additional housing in the settlement as long as it is built in a controlled manner. This would then help support the rest of the services in the settlement as over the last few years services have been lost including the surgery, banks and some elements of education on offer at Methlick School. No modification sought (PP0344).

A representee raised concern that only one affordable home would be allocated across the new proposed allocations. Affordable housing is greatly lacking in Methlick (PP0180).

Site OP4 – Site adjacent to Belmuir Lodge

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP4 (RD0214.B). No modification sought (PP1219).

A representee was supportive of additional housing in the settlement as long as it is built in a controlled manner. This would then help support the rest of the services in the settlement as over the last few years services have been lost including the surgery, banks and some elements of education on offer at Methlick School. No modification sought (PP0344).

NatureScot requested that the allocation summary for site OP4 in Methlick includes a requirement for active travel provision, as it would contribute towards better linking the proposal to the core part of the settlement, it is a large allocation (63 homes) and it would help promote safe and convenient active travel opportunities (in keeping with the PLDP's aims) (RD0255.B) (PP1300).

A representee raised concern that only one affordable home would be allocated across the new proposed allocations. Affordable housing is greatly lacking in Methlick (PP0180).

A representee objected to site OP4 for the allocated 63 homes and requests a reduction in the size of the allocation to 12 homes. It is stated that OP2 has a supported planning application for 5 homes, therefore 63 is an unrealistic allocation for OP4. The density would be aesthetically unacceptable next to the adjacent allocation and would be out of character in a small rural settlement. It would be difficult to provide 2 road access points, and there is no capacity at the waste water treatment works for the scale of development. Given the substantial shortfall in allocations necessary to satisfy Scottish Planning Policy (SPP), the site capacity is unrealistic and overstated. Sites should be delivered in locations where demand exists where housing figures are attainable (PP1046).

A representee has queried whether the site is consistent with paragraph E2.1 Landscape and E1.6 Protected Species (PP0506).

Objection has been received to the inclusion of OP4 for 63 homes (PP0506 and PP0809), which was not supported in the MIR 2019 as bid sites FR046 and FR047 (PP0809). The representee stated that the site is not suitable for development due to its topography and landscape impact, highlights that there are waste water constraints and states that there are other sites in the settlement to adequately meet the housing need and are more preferable in planning terms (PP0809).

A number of concerns are noted regarding the negative impacts that site OP4 would have on the settlement. These include that the local primary and secondary school are nearing maximum capacity and the detrimental effect the site would have on the settlement's sense of place (PP0506 and PP0809), as well as to the character, resulting in a loss to local people, visitors, and the settlement (PP0809). The representee has included an Appendix (RD0148.A) in their representation which provides further detail to support their position (PP0809).

The information contained within the Strategic Environmental Assessment (SEA) is noted as evidence to support the representee's comments in objecting to OP4. These include support for the comments raised in both of the landscape and cultural heritage sections which note negative impacts that the OP4 site would have to the area. It is also noted that the OP4 site could increase localised flooding to properties downstream through surface water run off as well as affecting the private water supplies and causing pollution to a nearby burn (PP0506). Additionally, it is noted that a large number of species including badgers and bats are frequently seen on the site and it is queried whether a wildlife/habitat survey has been completed. The representee raises concern of the negative impact that the site will have on the habitat and wildlife in the local area (PP0506 and PP0809). The representee has included an Appendix (RD0148.A) in their representation which provides further detail to support their position (PP0809).

The OP4 allocation should be removed due to issues with privacy as the new development is elevated therefore looking directly into existing housing and also it would completely change the character of the settlement. It is also noted and accepted that new development in the short term would increase noise and water pollution during construction, but there is concern over the lasting impact of this in what currently is a peaceful location (PP0506).

It is noted that there is no demand for additional housing in the settlement as there are empty properties around the settlement. The settlement, including the local amenity and local facilities and services, does not need to be sustained or supported by further housing (PP0506).

Tarves

General

A representee has requested a minor extension to the settlement boundary at Bain's Park. It is stated that the representee is considering adding a sunroom onto their property, which would reduce the space in the rear of their garden. It is considered that the land beyond the north of their garden fence is wasteland and as such proposes an extension of 10-15 metres to the settlement boundary to allow an extension of their garden (PP1165).

Flood Risk

SEPA has requested that the 'Flood Risk' bullet point removes the last part of the second sentence stating the requirement of Sustainable Urban Drainage Systems (SuDS), as all developments in the Plan require SuDS and not just because of flood risk (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Scottish Water has requested an amendment to the wording in the 'Strategic drainage and water supply' section to reflect that a Growth Project has been initiated and that early engagement with Scottish Water is advised (PP0272).

Site OP1 – The Grange

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

Site OP2 – Braiklay Park

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219).

A representee considers that bid site FR009 should be allocated in the PLDP and the settlement boundary should be extended to accommodate the site. Bid site FR009 should be allocated as an additional opportunity site, or in place of the OP2 site. Meeting local housing need is important within Tarves and this is reflected in Scottish Planning Policy which requires a generous supply of land in each of the housing areas. It is argued that the supply for housing is not being met in Tarves as none of the 2017 LDP allocations have been delivered. The OP2 site was identified as constrained due to marketability in the Housing Land Audit (HLA) 2019 and as such there is merit in removal of this site and allocation of bid site FR009 in its place. The representee has included a number of Appendices (RD0013.A, RD0013.B and RD0013.C) in their representation which provides further detail to support their position (PP0120).

Site OP3 – Land at Braiklay Croft

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP3 (RD0214.B). No modification sought (PP1219).

Non-Allocated Site – Bid Site FR009 – Land North of Bain's Park

Bid site FR009 is not allocated in the PLDP, however, objection was submitted for the development of 10-13 home development on this site. This site is located on the most northerly point of the settlement, hence unsuitable for development, given there are other allocated sites in Tarves. No modification sought (PP1165).

A representee considers that bid site FR009 should be allocated in the PLDP and the settlement boundary should be extended to accommodate the site. Bid site FR009 should be allocated as an additional opportunity site, or in place of the OP2 site. The site was noted as being suitable for development in the Main Issues Report 2019 and was even increased in numbers from 10 houses to 13 houses. The site is in a logical area for small scale expansion and is considered to be a brownfield site as it was previously developed.

Development of brownfield land is encouraged by SPP, paragraph 40. This site should therefore have been considered prior to the development of greenfield land in Tarves.

The development would be sympathetic and in line with the Settlement Statement and would round off the settlement and remain sympathetic with the distinctive character and the conservation area. In the MIR the Council noted that it would be suitable to increase the number of units from 10 to 13 units. This is supported and is in line with Policy H1 to deliver at a density of 35 homes per hectare. It is also in line with SPP (paragraph 2 and 29) to make efficient use of the land. The site would support local services which are located within walking distance of the site. This includes Tarves Primary School, which Officers, at the MIR stage, noted that the site would overcome capacity issues through developer obligations.

Meeting local housing need is also important within Tarves and this is reflected in SPP which requires a generous supply of land in each of the housing areas. It is argued that the supply for housing is not being met in Tarves as none of the 2017 LDP allocations have been delivered. It was noted in the Action Programme that the OP1 site was refused planning permission in November 2018 and the HLA. Additionally, the OP2 site was identified as constrained due to marketability in the HLA and as such there is merit in removal of this site and allocation of bid site FR009 in its place.

Ribbon development was raised as a concern at the MIR stage, however Council Officers accepted that development potential to the north was exhausted therefore no further development would take place beyond this site. It was concluded that the site would be consolidated as part of the settlement. It was also argued that the field boundaries could contain development which would be further enhanced by landscaping and planting becoming a defensible boundary to the settlement. The scale of the development is in keeping with the development to the south and is well served by public transport on the B999 which is 280m from the site, allowing the site to be accessed by sustainable means and not solely reliant on private cars. This conforms to the sustainability principles. The representee has included a number of Appendices (RD0013.A, RD0013.B and RD0013.C) in their representation which provides further detail to support their position (PP0120).

Modifications sought by those submitting representations:

Methlick

General

Modify the PLDP to clarify the justification for the proposed allocated sites in the settlement and clarify whether they will be delivered (PP0352).

Modify the PLDP to amend all sites to reduce the number of homes proposed in the settlement from 103 to 30 homes (PP0345).

Modify the PLDP to review the proposed allocated sites in the Methlick Settlement Statement (PP0352).

Modify the PLDP to ensure that appropriate infrastructure and service provision is in place to accommodate the proposed development in Methlick (PP0180).

Site OP1 – Cottonhillock

Modify the PLDP to amend the third sentence in the second paragraph of the OP1 allocation summary to, “A buffer strip shall be provided along the ephemeral watercourse route and shall be integrated positively into the development” (PP1219).

Modify the PLDP to remove site OP1 and remove the 20 homes contribution to the allowances and identify an alternative effective allocation in the Formartine AHMA (PP1048).

Site OP2 – West of Black Craigs

Modify the PLDP to allocate additional affordable housing on site OP2 (PP0180).

Modify the PLDP to amend site OP2 to an allocated site for 5 homes (PP1047).

Site OP3 – Land at Sunnybrae Croft

Modify the PLDP to allocate additional affordable housing on site OP3 (PP0180).

Site OP4 – Site adjacent to Belmuir Lodge

Modify the PLDP to amend the allocation summary for site OP4 to include the following text, “Provision for active travel is required” (PP1300).

Modify the PLDP to allocate additional affordable housing on site OP4 (PP0180).

Modify the PLDP to amend site OP4 to an allocated site for 12 homes and identify an additional allocation for 52 homes on the Formartine part of the Aberdeen Housing Market Area (AHMA) (PP1046).

Modify the PLDP to clarify that site OP4 is compliant with paragraphs E2.1 Landscape and Policy E.6 Protected Species (PP0506).

Modify the PLDP to remove site OP4 (PP0506 and PP0809).

Tarves

General

Modify the PLDP to extend the settlement boundary at Bains Park by 10-15 metres (PP1165).

Flood Risk

Modify PLDP to amend the ‘Flood Risk’ bullet point text to read, “Part of OP3 is at risk of surface water flooding. A Flood Risk Assessment may be required.” (PP1219).

Services and Infrastructure

Modify the PLDP to amend the wording under ‘Strategic drainage and water supply’ to

replace the second sentence, "If required, a growth project will be initiated by Scottish Water once one development meets their five growth criteria" with "Growth project has been initiated by Scottish Water. Early engagement with Scottish Water is advised" (PP0272).

Site OP2 – Braiklay Park

Modify the PLDP to remove site OP2 and allocate bid site FR009 for housing in its place and include the site within the settlement boundary (PP0120).

Non-allocated site – Bid Site FR009 – Land North of Bain's Park

Modify the PLDP to include bid site FR009 for housing and include the site within the settlement boundary (PP0120).

Summary of responses (including reasons) by planning authority:

Methlick

General

Sites OP1, OP2 and OP3 have been assessed as deliverable sites and a good fit for the settlement and adequate to meet the current housing demand (AD0038.D, MIR 2019, pages 58-62). The OP4 site (FR046 and FR047) was not identified as a preferred option in the MIR, however it was agreed at the Special Meeting of Formartine Area Committee on 10 September 2019 that all bid sites should be included in the Settlement Statement for Methlick (AD0141, Formartine Area Committee Meeting Minutes from 10 September 2019, page 11). Bid sites FR046 and FR047 have been combined into a single opportunity site (OP4) due their overlapping boundaries, and as this is a proposed new site that sits within the Aberdeen Housing Market Area, a standard density of 25 homes per hectare has been applied to reach the allocation of 63 homes. In line with Policy H1 Housing Land, the numbers quoted are indicative and at such time as a planning application is submitted for the site, the layout, siting and design may mean that a higher or indeed lower number of dwellings may be come forward (AD0041.A, page 41). The application of a standard density in the Aberdeen Housing Market is intended to provide a degree of certainty for communities on the scale of development that could reasonably be achieved on a site. Further detail on this is provided in the Schedule 4 Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations.

The 'Services and Infrastructure' section and allocation summaries for the sites in the Settlement Statement sets out what development may be required to contribute towards to ensure the development is acceptable in planning terms for all users. Additionally, any impacts on the amenity of nearby properties will be addressed at a planning application stage. In terms of the concerns regarding access and increased traffic, the Council's Roads Service has not raised any concerns regarding the allocations and any requirement for road improvement work or alternative access options would also be a matter for consideration at the planning application stage. No change is required.

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Cottonhillock

Support for the additional proposed housing in the settlement is noted. No change is required.

Taking into consideration SEPA's comments regarding the buffer strip required on OP1 along the ephemeral watercourse route, the Council consider it appropriate to amend the wording accordingly. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council does not support the removal of site OP1 or the removal of the 20-home contribution to the allowances. Site OP1 was allocated in the LDP 2017 for 20 homes and bid site FR034 for 20 homes was a preferred option in the MIR (AD0038.D, MIR, pages 60-61). SEPA has not objected to the wording in the Settlement Statement under Services and Infrastructure for sewage works. It is also noted that a growth project will be initiated once development meets Scottish Water's five growth criteria and that the developer must contact Scottish Water early in the planning process to initiate a growth project. As such, it is considered that this issue can be resolved, and that infrastructure is not a constraint that cannot be overcome. Additionally, the Council do not consider that marketability would be a constraint that could not be overcome. The site is located within the AHMA, in which marketability is not considered to be a constraint that would impede development coming forward on the site. Additionally, there is an existing effective allocation within the settlement (existing site OP2), on which development has commenced. In light of this, the Council would consider that the constraints on OP1 identified by the representee would be easily overcome within the plan period and as such the site should remain in the PLDP. No change is required.

Site OP2 – West of Black Craigs

Comments from SEPA are noted. No change is required.

Support for the additional proposed housing in the settlement is noted. No change is required.

The Council note the support for site OP2 from the representee. No change is required.

The Council note the representee's concern of the lack of affordable housing in Methlick, however the allocation summary clearly states that "It is expected that the site will contribute towards affordable housing in line with Policy H2 Affordable Housing. This should be delivered as part of the early phases of development and be integrated into the design of the development to provide a mix of house types and sizes to meet local need". As such, all new housing developments of four or more homes must include 25% of the serviced plots for affordable housing according to the definitions in the current Housing Need and Demand Assessment (i.e., housing made available at a cost below full market value, to meet this identified need) (AD0025, HNDA, page 54). No change is required.

The Council note the representee's request regarding the removal of 3 homes on site OP2. It is noted that the site was an Officer's preference in the MIR due to reasons of good connectivity and the existing open space network which could be extended (AD0038.D, MIR, page 60). However, following consultation on the MIR, it was stated within the Issues and Actions Papers that the existing OP2 site should be removed and retained as white land within the settlement boundary (AD0040.D, Issues and Actions Papers, page 59). On consideration at the Special Meeting of Formartine Area Committee, the Committee recommended that site FR014 should be allocated and this was reflected in the PLDP as agreed by Full Council on 5 March 2020 (AD0104, Full Council Minutes 2020, pages 14 and 15). The boundary of the OP2 site has thus been extended to accommodate an additional 3 homes on the site. Currently the 5 homes are contributing to the 5-year effective supply as per the HLA 2019 (AD022, HLA 2019, page 64). Please see Schedule 4 Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations for further detail on the delivery and effectiveness of housing allocations. No change is required.

Site OP3 – Land at Sunnybrae Croft

Comments from SEPA are noted. No change is required.

Support for the additional proposed housing in the settlement is noted. No change is required.

The Council note the representee's concern of the lack of affordable housing in Methlick, however the allocation summary clearly states that "It is expected that the site will contribute towards affordable housing in line with Policy H2 Affordable Housing. This should be delivered as part of the early phases of development and be integrated into the design of the development to provide a mix of house types and sizes to meet local need". As such, all new housing developments of four or more homes must include 25% of the serviced plots for affordable housing according to the definitions in the current Housing Need and Demand Assessment (i.e., housing made available at a cost below full market value, to meet this identified need) (AD0025, HNDA, Page 54). No change is required.

Site OP4 – Site adjacent to Belmuir Lodge

Comments from SEPA are noted. No change is required.

Support for the additional proposed housing in the settlement is noted. No change is required.

Taking into consideration NatureScot's comments regarding active travel provision on the site to contribute towards connectivity, the Council consider it appropriate to insert the additional requirement. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council notes the representee's concern regarding the lack of affordable housing in Methlick, however the allocation summary clearly states that "It is expected that the site will contribute towards affordable housing in line with Policy H2 Affordable Housing (AD0041.A, page 42). This should be delivered as part of the early phases of development and be integrated into the design of the development to provide a mix of house types and sizes to meet local need". As such, all new housing developments of

four or more homes must include 25% of the serviced plots for affordable housing according to the definitions in the current Housing Need and Demand Assessment (i.e., housing made available at a cost below full market value, to meet this identified need) (AD0025, HNDA, page 54). No change is required.

Methlick is located in the Aberdeen Housing Market Area (AHMA) within a local growth and diversification area. In accordance with the Aberdeen City and Shire Strategic Development Plan (2020) (SDP), the settlement is appropriate for a level of growth related to local needs (AD0016, page 23, and paragraph 3.45). There have been only two new allocations made through the Proposed Plan and one existing allocation extended slightly which is seen to meet local needs within the settlement. Each allocation made in the Plan has been through multiple assessments including the Strategic Flood Risk Assessment, Strategic Environmental Assessment, Development Planning and Management Transport Appraisal Guidance, and the Habitats Regulations Appraisals to ensure the most appropriate sites are allocated for development. The Council's Roads Service has not raised any concerns about the allocation. Any requirement for road improvement work or alternative access options would be a matter to be considered at the planning application stage. Waste water treatment work (WWTW) capacity would not preclude development taking place on the site. It is noted within the Services and Infrastructure section of the Settlement Statement that a growth project at the WWTW would likely require to be initiated once development meets Scottish Water's five growth criteria. Early engagement with Scottish Water is encouraged to address these issues at an early stage of the development process of this site. No change is required.

The OP4 site (FR046 and FR047) was not identified as a preferred option in the MIR, however it was agreed at the Special Meeting of Formartine Area Committee on 10 September 2019 that all bid sites should be included in the Settlement Statement for Methlick (AD0141, Formartine Area Committee Meeting Minutes from 10 September 2019, page 11). Bid FR046 and bid FR047 have been combined into one opportunity site (OP4) due their overlapping boundaries, and as this is a proposed new site that sits within the Aberdeen Housing Market Area, a standard density of 25 homes per hectare has been applied to reach the allocation of 63 homes. This ensures an efficient use of land in line with SPP (AD0012, page 9). In line with Policy H1 Housing Land, the numbers quoted are indicative and at such time as a planning application is submitted for the site, the layout, siting and design may mean that a higher or indeed lower number of dwellings may be come forward, (AD0041.A, page 41). The application of a standard density in the Aberdeen Housing Market is intended to provide a degree of certainty for communities on the scale of development that could reasonably be achieved on a site. Further detail on this is provided in the Schedule 4 Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations. The Council note that the representee highlights that there is no capacity at the waste water treatment works for the scale of the development, however as stated in the settlement statement, a growth project will be initiated once development meets Scottish Water's five growth criteria.

The Services and Infrastructure section and allocation summaries of the Settlement Statement sets out what development may be required to contribute towards to ensure the development is acceptable in planning terms for all users. The allocation summary states that good design principles should be used to mitigate landscape impact which would lessen the landscape character impact as well as the impact on the settlement's sense of place. Additionally, any proposed development on the site will be required to comply with Policy E2 Landscape, (AD0041.A, page 59). It is also stated that a Flood Risk

Assessment may be required for the development. The Council note the representee's concerns regarding impact on habitat and wildlife, however any planning application submitted for the site would require to be in line with Policy E1 Natural Heritage, (AD0041.A, page 57). Furthermore, the design and layout of the proposed development would be assessed at the planning application stage to ensure that there is no undue impact on nearby residential amenity, in line with Policy P1 Layout, Siting and Design, (AD0041.A, page 47). No change is required.

Methlick is located in the Aberdeen Housing Market Area (AHMA) within a local growth and diversification area. In accordance with the Aberdeen City and Shire Strategic Development Plan (2020), the settlement is appropriate for a level of growth related to local needs (AD0016, page 23, and paragraph 3.45) and the proposed allocations are considered appropriate for the settlement. No change is required.

Tarves

General

As part of forming the PLDP, settlement boundaries were updated from the LDP 2017 to reflect the built-up area such as to include developments from planning applications and to include any new proposed allocations. As the boundary at the rear of the gardens at Bain's Park reflect the built-up area and no approved planning applications exist to suggest a change to the settlement boundary should be undertaken, it is not considered appropriate to amend the settlement boundary at this time. No change is required.

Flood Risk

Taking into consideration SEPA's comments regarding SUDs, the Council consider it appropriate to amend the wording accordingly. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Taking into consideration Scottish Water's comments regarding amendment to the wording to reflect that a Growth Project has been initiated, the Council consider it appropriate to amend the wording accordingly. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – The Grange

Comments from SEPA are noted. No change is required.

Site OP2 – Braiklay Park

Comments from SEPA are noted. No change is required.

Comments regarding the allocation of bid site FR009 in addition, or in place of site OP2

are noted. The site was an Officer's preference in the MIR, and it was considered that it could be delivered during the Plan period and consolidated as part of the settlement alongside other recent developments seen in the settlement (AD0038.D, MIR 2019, page 97). Following consultation on the MIR, it was stated within the Issues and Actions Papers that FR009 should be allocated for 13 homes and reference to brownfield development removed to avoid confusion and contradiction with previous decisions and that education and drainage issues could be dealt with through specific planning applications (AD0040.D, Issues & Actions Papers, page 98). On consideration at the Special Meeting of Formartine Area Committee, the committee recommended that site FR009 should not be allocated and this was reflected in the PLDP as agreed by Full Council on 5 March 2020 (AD0104, Full Council Minutes 2020, pages 14 and 15). As such, whilst Officers saw merit in allocating the site, Councillors resolved to agree that the site was not needed in the PLDP. Furthermore, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Site OP3 – Land at Braiklay Croft

Comments from SEPA are noted. No change is required.

Non-allocated site – Bid Site FR009 – Land North of Bain's Park

The Council does not support allocating bid site FR009 for housing. The objection to the development of this unallocated site is noted. No change is required.

Comments regarding the allocation of bid site FR009 in addition, or in place of site OP2 are noted. The site was an Officer's preference in the MIR, and it was considered that it could be delivered during the Plan period and consolidated as part of the settlement alongside other recent developments seen in the settlement (AD0038.D, page 97). Following consultation on the MIR, it was stated within the Issues and Actions Papers that FR009 should be allocated for 13 homes and reference to brownfield development removed to avoid confusion and contradiction with previous decisions and that education and drainage issues could be dealt with through specific planning applications (AD0040.D, page 98). On consideration at the Special Meeting of Formartine Area Committee, the Committee recommended that site FR009 should not be allocated and this was reflected in the PLDP as agreed by Full Council on 5 March 2020 (AD0104, Full Council Minutes 2020, pages 14 and 15). As such, whilst Officers saw merit in allocating the site, Councillors resolved to agree that the site was not needed in the PLDP. Furthermore, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make

comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” in relation to the settlement statement matters covered in Issue 29. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Methlick

General

3. I consider that my conclusions and recommendations below address the concerns expressed regarding the scale of development in Methlick and its implications for local services.

Site OP1 – Cottonhillock

4. Site OP1 is identified as constrained on marketability and infrastructure grounds in the 2019 and 2020 housing land audits. The site represents phase two of a recently developed site to the north-west. Comments recorded in the 2019 audit note that the market was slow for phase one and that a growth project for a waste water treatment plant is required.

5. The strategic drainage and water supply bullet point on page 449 of the settlement statement explains the steps to be taken to overcome the drainage constraint. I agree with the council that this is a constraint that can be overcome during the plan period.

6. I consider that the site is well positioned in relation to local facilities and existing housing to the north-east and north-west. The ongoing development of site OP2 and promotion of sites OP3 and OP4 suggests that there is market interest in this settlement. Based on the evidence before me, I consider it reasonable to assume that a development of 20 homes can be delivered within the plan period. No modification is required.

7. The amendment suggested by the Scottish Environment Protection Agency (SEPA) would provide clarity on the position of the required buffer strip. A modification is recommended.

Site OP2 – West of Black Craigs

8. The council has indicated that planning permission has been granted for five homes on part of the site. The extension to the site can accommodate an additional three homes which have been identified as contributing towards the strategic development plan allowance for the Aberdeen Housing Market. The site is under construction and no evidence has been provided to indicate that there is a marketability constraint. The requirement for affordable housing is addressed in the allocation summary. I would expect the provision of affordable housing to be in line with policy H2 Affordable Housing. No modifications are recommended.

Site OP3 – Land at Sunnybrae Croft

9. As with allocation OP2, the requirement for affordable housing is addressed in the allocation summary and I would expect the provision of affordable housing to be in line with policy H2 Affordable Housing. No modification is required.

Site OP4 – Site adjacent to Belmuir Lodge

10. Site OP4 occupies a prominent location in the centre of this attractive small village, whose setting in the Ythan valley is key to its sense of place. It was not recommended for allocation in the main issues report, particularly because of its visual prominence and because the steeply sloping site would necessitate that access was made by cutting through the hill, thereby altering the landscape setting of the site. Furthermore, the site allocation summary acknowledges a visual impact on the category-B listed Methlick Bridge. The strategic environmental assessment stated that the site had an overall negative impact (post-mitigation) due to factors including the topography of the site and cultural heritage. NatureScot has noted that the steep gradients would make the site challenging to develop without significant landscape and visual impacts. The main issues report also advised that the allocation was not required to meet local housing demand, and that the community considered development of around 30 homes would be appropriate for the village. The allocations at sites OP1, OP1 and OP3 are for a total of 40 units. The OP4 allocation is for 63 units.

11. It is claimed that protected species use the site for feeding and to access nests, etc. But I note that the strategic environmental assessment considers that impact on biodiversity, flora and fauna would be neutral. Other constraints are referred to in reports and representations, but these could potentially be overcome by site design, planning conditions and developer contributions.

12. I agree with the points set out in paragraph 10 above, and am not persuaded that the adverse landscape and visual impacts and the related effects on the character of the village could be overcome by site design, landscape planting or otherwise, and thereby development would be contrary to policy E2: Landscape of the proposed plan. This leads me to conclude that the allocation is not appropriate for reasons of landscape and visual impact, as confirmed by my site inspection. Whilst the allocation contributes to meeting the strategic development plan allowance for the Aberdeen Housing Market Area, I do not consider that the benefits in terms of meeting housing need would outweigh the adverse impacts resulting from development on this site.

13. For these reasons, I recommend that the plan be modified to delete allocation OP4 from the Methlick settlement statement and map. The settlement boundary for Methlick at this location should revert to that shown in the existing local development plan. A modification to the relevant table in appendix 6 will also be required to delete the entry for Methlick OP4. The implications for this deletion for the overall housing land provision are addressed in Issue 5. No other modifications are required for Methlick.

Tarves

General

14. I agree with the council's approach of updating settlement boundaries in its preparation of the proposed plan to reflect planning permissions and other changes. To do so in the absence of any planning permission would be to imply a decision which has

not been made. No modification is required.

Flood Risk

15. I agree with SEPA that sustainable drainage systems would be required, regardless of whether or not there is a risk of flooding. The suggested amendment is therefore justified and I recommend a modification accordingly.

Services and Infrastructure

16. I agree with Scottish Water that the wording of the strategic drainage and water supply should be amended to indicate that a growth project has already been initiated to increase capacity at Tarves waste water treatment works. A modification is recommended.

Site OP2 – Braiklay Park

17. Site OP2 was allocated in the 2017 local development plan. However, its inclusion in the proposed plan is questioned on the basis that it was identified in the Housing Land Audits for 2019 and 2020 as constrained on the basis of marketability. We have concluded in Issue 2 that the principle of using constrained sites towards the strategic development plan “allowances” is consistent with paragraph 4.18 of that plan. However, it is necessary to understand why the council considers that the site can be delivered by 2032.

18. The council states that only those constrained sites which were the subject of bid submissions indicating that the site can come forward within the plan period were allocated in the proposed plan. This is a small site, allocated for 15 homes, in a characterful village with good facilities. On my site visit, I noted that site OP1 (The Grange) for 113 homes, community facilities and employment land is now under construction on the opposite side of Duthie Road to site OP2. In these circumstances, it seems reasonable to assume that site OP2 could be delivered by 2032. No modification is required.

Non-allocated Bid Site FR009 – Land North of Bain’s Park

19. Bid site FR009 for 13 homes is located at the north-western corner of Tarves beyond the settlement boundary. It is being promoted either in place of site OP2 or in addition to the allocated sites in the village. In view of my conclusion on site OP2, it is not required to replace that site. Its alleged brownfield status has been contested and I agree that its temporary use for storage during recent construction of the adjacent housing at Bain’s Park does not necessarily confer brownfield status. The site projects into open countryside, is widely visible and is more distant from the village centre than other housing sites in the settlement.

20. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. Sites in Tarves could potentially contribute to meeting this shortfall. However, for the reasons set out above, I conclude that bid site FR009 should not be allocated. There are other sites available to meet the

identified shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area, as explained in issue 5.

21. No modification is required.

Reporter's recommendations:

Modify the local development plan by:

1. Replacing the third sentence in the second paragraph of the allocation summary for OP1: Cottonhillock in the Methlick settlement statement on page 450 with:

“A buffer strip shall be provided along the ephemeral watercourse route and shall be integrated positively into the development.”

2. Deleting allocation OP4: Site adjacent to Belmuir Lodge, Methlick from the Methlick settlement statement and map on pages 452 and 453 and amending the settlement boundary to that shown in the existing local development plan at this location.

3. Removing site OP4, Methlick, from the relevant table in Appendix 6 (Housing Land Allocations) and amending the total figures accordingly (Note – a revised version of appendix 6, incorporating all the recommended modifications, is provided at the end of this report.)

4. Deleting the words “as well as Sustainable Drainage Systems” from the flood risk bullet point in the Tarves settlement statement on page 491.

5. Replacing the last two sentences of the strategic drainage and water supply bullet point in the Tarves settlement statement on page 492 with:

“A growth project has been initiated by Scottish Water. Early engagement with Scottish Water is advised.”

Planning authority's summary of the representation(s):

Barthol Chapel

Flood Risk

Scottish Environmental Protection Agency (SEPA) has requested, for consistency, adding a new 'Flood Risk' section, which states that a Flood Risk Assessment may be required for site OP1 (RD0214.B) (PP1219).

Services and Infrastructure

Scottish Water has sought inclusion of additional text to the 'Strategic drainage and water supply' section (PP0272).

SEPA have requested that the 'Strategic Drainage and water supply' section be change so that the first sentence is replaced with the following wording for consistency, "There is no public waste water infrastructure in Barthol Chapel." And request the remaining text in this bullet point is removed and added to the OP1 allocation text." sought changes to the text to the 'Strategic drainage and water supply' section (RD0214.B) (PP1219).

NHS Grampian has objected to the failure to make reference to the need for health care facilities under the 'Services and Infrastructure' section. Additional text under this heading has been requested (PP1223).

Site OP1 – Land at Barthol Chapel

SEPA has requested additional text is included to state that a Flood Risk Assessment is potentially required (RD0214.B) (PP1219).

Collieston

Site R1 – To allow the development of community-based enterprises around Slains Kirk Building and the existing community centre

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation/designation summary for site R1 (RD0214.B). No modification sought (PP1219).

A representee stated that they did not object to the inclusion of site R1 but that any development that includes ground works should not be planned on or close to the area of The Rivie, which overlooks the cliff, as it has caused landslip at No. 10 The Cliff and No. 2 (PP0128).

A representee has requested the removal of site R1 as they own the site (PP0230).

Flood risk

SEPA has requested, for consistency, that the following text is added to the bullet point, "Flood Risk Assessments may be required." (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has requested that a new statement on the 'Strategic drainage and water supply' is added to the 'Services and Infrastructure' section with the inclusion of further text (RD0214.B) (PP1219).

A representee has stated that the 'Services and Infrastructure' section is not relevant to the settlement as it refers to contributions towards facilities but there are no allocations in the settlement which will lead to housing to contribute (PP1117).

Cultercullen

Services and Infrastructure

SEPA has requested that a new statement in the section 'Strategic drainage and water supply' is added to the 'Services and Infrastructure' section and the capacity of infrastructure in this settlement is confirmed with Scottish Water (RD0214.B) (PP1219).

A representee has noted that the 'Services and Infrastructure' section is not relevant as it refers to contributions from residential developments towards the provision of various facilities. No residential allocations are identified in the settlement and no development impacts will require to be mitigated by way of contributions (PP1407).

Hattoncrook

Non-Allocated Site – Bid Site FR023 – West Hattoncrook

A representee has requested the allocation of bid site FR023 for 30 homes as there is a shortfall of allocations in the AHMA, the settlement benefits from street lighting, reduced speed limit, a bus route and local shop, the site can be developed without impacting the nearby pipeline safety corridor and can be serviced in terms of foul water. The representee has included an Appendix (RD0271.A) in their representation which provides further detail to support their position (PP1410).

Tipperty

Flood Risk

SEPA has sought changes to the text to the 'Flood Risk' section, recommending that the first 'Flood Risk' bullet point is amended to state that parts of Tipperty are at risk of surface water flooding and fluvial flooding from the Tarty Burn and that Flood Risk Assessments may be required. Additionally, SEPA has requested that should site OP2 stay within the Plan, the second 'Flood Risk' bullet point is simplified for consistency and that an additional third 'Flood Risk' bullet point is added (RD0214.B) (PP1219).

Services and Infrastructure

SEPA have no issues with the 'Strategic drainage and water supply' bullet point in the 'Services and Infrastructure' section (RD0214.B). No modification sought (PP1219).

Site OP1 – Land East of Tipperty Industrial Estate

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

A representee has noted that the Forties Pipeline passes through the eastern edge of the allocated site. It welcomes the reference to the presence of the pipeline and requests that this is maintained (PP0981).

Site OP2 – Land to the South of Tipperty Industrial Estate

A representee has noted that the Forties Pipeline passes through the eastern edge of the allocated site. It welcomes the reference to the presence of the pipeline and requests that this is maintained (PP0981).

SEPA has indicated that they would object to this allocation in its current form unless its boundary is amended to exclude the areas expected to flood, and its access through the floodplain is removed, or a detailed Flood Risk Assessment is submitted in support of the site prior to it being allocated (allowing sufficient time for a review and validation assessment). SEPA note that they objected previously at a bid consultation and MIR stage, and argues that at least half of the site includes the functional floodplain of the Tarty Burn and development of the site would be contrary to Scottish Planning Policy (SPP). It could also increase flood risk to nearby areas, and the proposed access is in a floodplain,

which is likely to reduce the capacity of the floodplain (RD0214.B) (PP1219).

SEPA has requested that the allocation summary removes reference to accessing the OP2 site from the A90, as it is on a functional floodplain. SEPA has argued that any development within the Tarty Burn corridor would inhibit the Burn taking its natural course in the long term and objection is lodged to any development proposal that did not include the natural river corridor within the buffer required for this watercourse. As such, access from the A90 south of Newark Cottage is not likely to be appropriate (RD0214.B) (PP1219).

Udny Green

Flood risk

SEPA have no issues with the 'Flood Risk' section (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA have no issues with the 'Strategic drainage and water supply' bullet point in the 'Services and Infrastructure' section (RD0214.B). No modification sought (PP1219).

Site OP1 – Opposite Bronie House

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

Udny Station

Flood risk

SEPA have no issues with the 'Flood Risk' section (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA have no issues with the 'Strategic drainage and water supply' bullet point in the 'Services and Infrastructure' section (RD0214.B). No modification sought (PP1219).

Site OP1 – Woodlea East

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

Two representees have objected to the allocation of OP1 and suggested bid site FR021 as a replacement (PP1032 and PP1414). The OP1 site is deemed to have unacceptable options for vehicular access and has been tested through the planning system and found to fail (PP1032). The site came into the Housing Land Audit in 2013 and had a detailed planning application in 2017 for 25 houses which was refused by Formartine Area Committee. The application was then appealed to Scottish Ministers who dismissed the appeal. A subsequent planning application was withdrawn by the developer due to

difficulties of obtaining the required visibility splays. Connectivity to the remainder of the settlement is also not possible. The site is simply too small to accommodate the development and there is no viable access point to the site (PP1414).

Non-Allocated Site – Bid Site FR021 – South West of Udney Station

A representee has objected to the allocation of OP1 and suggested bid site FR021 as a replacement. FR021 is deemed to be well connected within the settlement and suitable to deliver housing and employment land while improving connectivity between the settlement and Cultercullen Primary School. It is noted by the representee as having interest from a local developer. FR021 is considered by the representee to benefit from a wooded backdrop. Access into the site can be suitably engineered alongside new bus stops and development at this site would act as a gateway to the settlement. The representee has included an Appendix (RD0189.A) in their representation which provides further detail to support their position (PP1032).

West Pitmillan

Flood Risk

SEPA have no issues with the 'Flood Risk' section (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

Scottish Water has requested additional text is added in the 'Strategic drainage and water supply' statement to state that early engagement with Scottish Water is advised (PP0272).

SEPA has requested minor rewording of the 'Strategic drainage and water supply' statement (RD0214.B) (PP1219).

Site BUS – Safeguarded for business uses

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site BUS (RD0214.B). No modification sought (PP1219).

Site OP1 – West Pitmillan

SEPA has requested the following wording is added at the start of the second paragraph, "A Flood Risk Assessment may be required due to the possible presence of culverted watercourses on the site." (RD0214.B) (PP1219).

Whitecairns

General

A representee has requested that a small path at Whitecairns should be implemented to enable foot access as it is difficult to walk on the B999. A small path along this stretch would allow access to Belhelvie, Balmedie, Potterton and Newmachar. This would be welcomed by residents with the reduction in speed and volume of traffic with vehicles opting for alternative routes such as the AWPR. The representee has included an

Appendix (RD0257.A) in their representation which provides further detail to support their position (PP1302).

Additionally, the representee has requested extending the 50mph zone through Whitecairns to include Smiddyside (see plan) as the current 50mph zone stops few meters away due to having limited visibility and exiting in fast moving traffic. The representee has included an Appendix (RD0257.A) in their representation which provides further detail to support their position. (PP1302).

Non-Allocated Site – Bid Site FR097 – Land North of Drovers Place

This site has not been given due consideration as the main reasons for not zoning development at this location is that vehicular journeys will be essential for residents, one of the nearby schools is nearing capacity, and that the site is visually prominent. It is argued that it is not visually prominent due to the tree shelter belt surrounding the site. This can be further widened, enhanced and lengthened as required, including alongside the public road on the southern boundary. The school roll at Balmedie is nearing capacity, with high numbers of housing development allocations proposed for the village, but as school bus travel is required then pupils can be taken to Newmachar which is almost the same distance away, or to other schools. The proposed development would create a loop which would be safe for the bus to come into the settlement and leave without having to reverse – at present it pulls into the junction which is not safe. Although vehicular journeys would be required, this is not seen as particularly disadvantageous to the site comparable with other settlements that have been given high numbers of housing allocations such as Foveran, which also has no amenities other than a primary school. Whitecairns is on a regular bus route which would be strengthened by the allocation of development. Whitecairns is also close to the AWPR, meaning shorter commutes to other employment areas, and taking vehicles off narrow 'back roads' is critical for wider road safety. The MIR mentioned drainage issues however the existing drainage arrangements for the settlement could be expanded. The Community Council have been consulted and has intimated its support for the proposals. The site could also be extended to allow for a mixed-use housing and employment site. The representee has included an Appendix (RD0056.A) in their representation which provides further detail to support their position (PP0399).

Ythanbank

Services and Infrastructure

Scottish Water has requested additional text for the 'Strategic drainage and water supply' statement (PP0272).

SEPA has requested replacing the text of the 'Strategic drainage and water supply' statement for consistency (RD0214.B) (PP1219).

Site OP1 – Michaelmuir Croft

SEPA has requested the following is added to the allocation text, "A single waste private water treatment plant, built to an adoptable standard, will be required for this site." (RD0214.B) (PP1219).

A representee has raised concerns in relation to traffic safety issues, as cars exceed the

speed limit when driving past the proposed OP1 site. The settlement has two sharp corners, and concern was raised regarding the access at the proposed OP1 site. Concern was also raised regarding pedestrians using this part of the road to access Shallowplough Woods and further traffic from the proposed development emerging onto the road increasing safety risk. It was considered that traffic calming measures should be introduced and an extended 30mph speed limit area implemented with an extension of the pavement to the same point (PP0243).

A representee has requested that site OP1 is removed. This is on the basis that the proposed development of 5 homes would require homes to be built in a non-linear fashion to the road which contradicts the ribbon development pattern in the settlement. Concern was raised of the increased risk of accidents as the development is located on a blind bend and that speeding is an existing issue in the settlement. Additionally, concern was raised regarding drainage and potential flooding on the site. The representee has suggested that if development is to be considered in this area, then it should be for a maximum of 2 homes and on the roadside to complement the existing linear ribbon pattern of development in the settlement (PP0174).

Non-Allocated Site – New Site N020 – Site 1, Land west of the Unclassified Road from Ythanbank to Mill of Schivas, Non-Allocated Site – New Site N021 – Site 2, Land west of the Unclassified Road from Ythanbank to Mill of Schivas and Non-Allocated Site – New Site N022 – Land east the Unclassified Road from Ythanbank to Mill of Schivas

A representee has requested that additional housing sites be identified in Ythanbank, proposing a total of 6 additional homes across 3 sites. Site N020 proposes 3 homes, site N021 proposes 2 homes, whilst site N022 proposes 1 home. It is stated that these sites offer a logical continuation and opportunity for self-build plots. Additionally, the areas would provide large gardens with good distances between buildings and open views of the countryside. The proposal would also meet community aspirations as outlined in the Settlement Statement Vision. The representee has included two Appendices (RD0019.A and RD0019.B) in their representation which provides further detail to support their position (PP0181).

Modifications sought by those submitting representations:

Barthol Chapel

Flood Risk

Modify the PLDP to include a new 'Flood Risk' section that reads, "Due the presence of a small watercourse a Flood Risk Assessment may be required for site OP1." (PP1219).

Services and Infrastructure

Modify the PLDP to amend the 'Strategic drainage and water supply' section to add after the first sentence, "A single waste water treatment plant of sufficient capacity is required to serve all properties within the development and shall be of a standard that can be adopted by Scottish Water." (PP0272).

Modify the PLDP to replace the first sentence in the 'Strategic drainage and water supply' bullet point from, "There are no waste water treatment works for Barthol Chapel" to "There

is no public waste water infrastructure in Barthol Chapel.” (PP1219).

Modify the PLDP to include a new statement on Health and care facilities that reads, “Health and care facilities: All residential development must contribute towards the creation of additional capacity at health facilities in Fyvie/Oldmeldrum Medical Group to allow for additional capacity.” (PP1223).

Site OP1 – Land at Barthol Chapel

Modify the PLDP to move the last three sentences in the ‘Strategic drainage and water supply bullet point’ to the allocation summary of site OP1, “A single waste water treatment plant of sufficient capacity is required to serve all properties within the development and shall be of a standard that can be adopted by Scottish Water. Single individual waste water discharges would not be permitted. Early engagement with Scottish Water is advised.” (PP1219).

Collieston

Site R1 – To allow the development of community based enterprises around Slains Kirk Building and the existing community centre

Modify the PLDP to remove site R1 (PP0230).

Flood Risk

Modify the PLDP to add a new sentence to the ‘Flood Risk’ section to read, “Flood Risk Assessments may be required.” (PP1219).

Services and Infrastructure

Modify the PLDP to include a new statement on ‘Strategic drainage and water supply’ to read, ‘Strategic drainage and water supply’: Due to the presence of a designated bathing water beach at Collieston, any development will require to connect to the public waste water network.” (PP1219).

Modify the PLDP to remove the ‘Services and Infrastructure’ section from the Settlement Statement (PP1117).

Cultercullen

Services and Infrastructure

Modify the PLDP to include a new statement on ‘Strategic drainage and water supply’ with the capacity of infrastructure in this settlement confirmed with Scottish Water (PP1219).

Modify the PLDP to remove the ‘Services and Infrastructure’ section from the settlement statement (PP1407).

Hattoncrook

Non-Allocated Site – Bid Site FR023 – West Hattoncrook

Modify the PLDP to include bid site FR023 for 30 houses (PP1410).

Tipperty

Flood Risk

Modify the PLDP to amend the first 'Flood Risk' bullet point from, "A small watercourse and the Tarty Burn present increased risk of flooding. A Flood Risk Assessment may be required" to "Parts of Tipperty are at risk of surface water flooding and fluvial flooding from the Tarty Burn. Flood Risk Assessments may be required." (PP1219)

Modify the PLDP to amend the second 'Flood Risk' bullet point from, "Approximately 50% of site OP2 is at risk from flooding from the Tarty Burn which is at 'Bad' status due to its poor physical condition which should be addressed through any development on the site. Development should not commence in the area at flood risk and a Flood Risk Assessment will be required to accurately determine the developable area and floor levels.

Enhancement of this straightened watercourse through naturalisation and removal of any redundant features should be investigated, and a buffer strip provided to allow sufficient space for the Burn to naturally realign. This may need to be up to 50% of the site" to "Approximately 50% of site OP2 as at risk of flooding from the Tarty Burn. A Flood Risk Assessment will be required to determine the developable area and finished floor levels." (PP1219).

Modify the PLDP to amend the 'Flood Risk' section to include a new third bullet point that reads: "A Flood Risk Assessment will be required for OP1 site, large areas of which experience surface water flooding." (PP1219).

Site OP2 – Land to the South of Tipperty Industrial Estate

Modify the PLDP to remove site OP2, unless the site boundary is amended to exclude the areas at risk of flooding and the access is amended, or a detailed Flood Risk Assessment is undertaken to ascertain flood risk (PP1219).

Modify the PLDP to remove the statement in the allocation summary for site OP2 that states that access will be taken from the A90 (PP1219).

Udny Station

Site OP1 – Woodlea East

Modify the PLDP to remove site OP1 (PP1032 and PP1414).

Non-Allocated Site – Bid Site FR021 – South West of Udny Station

Modify the PLDP to allocate bid site FR021 for 40 homes and business land in place of site OP1 (PP1032).

West Pitmillan

Services and Infrastructure

Modify the PLDP to amend the 'Strategic drainage and water supply' statement to add a new sentence at the end to read, "Early engagement with Scottish Water is advised." (PP0272).

Modify the PLDP to amend the 'Strategic drainage and water supply' statement to change the last sentence from, "All sites in West Pitmillan will connect ..." to "All sites in West Pitmillan to connect ..." (PP1219).

Site OP1 – West Pitmillan

Modify the PLDP to amend the allocation summary of site OP1 to include at the start of paragraph two, "A Flood Risk Assessment may be required due to the possible presence of culverted watercourses on the site" (PP1219).

Whitecairns

General

Modify the PLDP to identify a provisional core path of network path along the B999 (PP1302).

Modify the PLDP to extend the 50mph zone through Whitecairns (PP1302).

Non-Allocated Site – Bid Site FR097 – Land North of Drovers Place

Modify the PLDP to allocation bid site FR097 in the LDP for 30 homes (PP0399).

Modify the PLDP to allocate bid site FR097 in the LDP for 30 homes plus additional land for employment (PP0399).

Ythanbank

Services and Infrastructure

Modify the PLDP to amend the 'Strategic drainage and water supply' statement to include, "A single adoptable waste water treatment plant of sufficient capacity should be pursued, and investigation into ground water pollution may be required." (PP0272).

Modify the PLDP to amend the 'Strategic drainage and water supply' statement from, "There is no public waste water treatment works in Ythanbank. There is water available, however early engagement with Scottish Water is advised. The Scottish Environment Protection Agency (SEPA) will need to be consulted and full authorisation and relevant licensing sought for private treatment. Early discussions with SEPA may be required as approval of individual waste water discharges is unlikely. A single adoptable waste water treatment plant of sufficient capacity should be pursued, and investigation into ground water pollution may be required" to "There is no public waste water infrastructure in Ythanbank. There is water available, however, early engagement with Scottish Water is advised." (PP1219).

Site OP1 – Michaelmuir Croft

Modify the PLDP to add text to the allocation summary to read, “A single waste private water treatment plant, built to an adoptable standard, will be required for this site.” (PP1219).

Modify the PLDP to introduce traffic calming measures for site OP1, including a reduction in the speed limit to 30mph and an extension of the footpath (PP0243).

Modify the PLDP to remove site OP1 and if further development is to be considered in the settlement, a maximum of 2 homes should be allocated on the roadside (PP0174).

Non-Allocated Site – New Site N020 – Site 1, Land west of the Unclassified Road from Ythanbank to Mill of Schivas, Non-Allocated Site – New Site N021 – Site 2, Land west of the Unclassified Road from Ythanbank to Mill of Schivas and Non-Allocated Site – New Site N022 – Land east the Unclassified Road from Ythanbank to Mill of Schivas

Modify the PLDP to allocate N020 for 3 homes (PP0181).

Modify the PLDP to allocate N021 for 2 homes (PP0181).

Modify the PLDP to allocate N022 1 home (PP0181).

Summary of responses (including reasons) by planning authority:

Barthol Chapel

Flood Risk

The Council confirms that it intends to address SEPA’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

The Council notes Scottish Water’s comment, but their modification to the ‘Strategic drainage and water supply’ statement is the same as it is written in the PLDP. The last three sentences in the ‘Strategic drainage and water supply’ bullet point will be moved to the allocation summary of site OP1 in light of SEPA’s comments. No change is required.

The Council confirms that it intends to address SEPA’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council confirms that it intends to address NHS Grampian’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Land at Barthol Chapel

The Council confirms that it intends to address SEPA’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Collieston

Site R1 – To allow the development of community-based enterprises around Slains Kirk

Building and the existing community centre

Comments from SEPA are noted. No change is required.

Comments on ground works are noted, but given the scale of this designation, it is not a matter for the LDP and can be considered at such time as a detailed proposal comes forward. No change is required.

The Council notes the comments regarding land ownership at Slains House, but no map or plan was provided with the representation to clarify their landownership. Site R1 was identified to reflect the community's aspiration to protect land to allow community-based enterprises around the disused Slains Kirk Building and the existing community centre (MIR, AD0038.D, page 24). In addition, as part of the pre-MIR engagement with community councils, there was a request to include Slains House and the converted steading (see Formartine Community Council's notes, AD0144.A, page 7). A planning application was approved in 2009 for a community hall that covered land to the east of the road within site R1 (APP/2008/2856). This resulted in a large extension of the settlement boundary from the LDP 2017. As it is not known where all the community-based proposals will go, it was necessary to reserve a large site and protect the coastal setting of Collieston from other development. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Whilst there are no allocated sites identified within the settlement boundary, proposals for new development may still be submitted for sites within and adjacent to the settlement, which will require to be appropriately assessed by the Council, in accordance with the relevant policies of the PLDP. In such instances, developer obligations will require to be sought to ensure that development impacts are mitigated against. No change is required.

Cultercullen

Services and Infrastructure

The Council confirms it has liaised with Scottish Water (AD0139), and that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Whilst there are no allocated sites identified within the settlement boundary, proposals for new development may still be submitted for sites within and adjacent to the settlement which will require to be appropriately assessed by the Council in accordance with the relevant policies of the PLDP. In such instances, developer obligations will require to be sought to ensure that development impacts are mitigated against. No change is required.

Hattoncrook

Non-Allocated Site – Bid Site FR023 – West Hattoncrook

The Council does not support allocating bid site FR023 for 30 homes. This site was not identified as a preferred site in the MIR (MIR, AD0038.D, page 126). Services in Hattoncrook are limited to a small shop, the scale of the development would be an excessive increase in the size of the settlement (currently 16 homes), and it would have a detrimental impact on the wider landscape and setting of the settlement. Furthermore, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Tipperty

Flood Risk

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Land East of Tipperty Industrial Estate

Comments from representees, including SEPA are noted. No change is required.

Site OP2 – Land to the South of Tipperty Industrial Estate

Comments from representees are noted. No change is required.

The Council notes SEPA's objection due to flooding concerns affecting half the site but does not agree with removing this site. This site is next to Tipperty Industrial Estate and it is within the Energetica Corridor, which is an important initiative to co-locate employment, residential and leisure uses. This proposal will help to enhance the employment opportunities in this location. Safeguards for flooding are proposed in the allocation summary, which states a Flood Risk Assessment will be required. This can be examined further at the planning application stage. It is noted that the site plan that was submitted for this site as part of the Call for Sites bid submission (as bid site FR070) does not show their site at risk from 1 in 200 and 1 in 100-year flood events (bid submission FR070 Land South of Tipperty Industrial Estate, AD0119, 'LDP - Site Plan'). No change is required.

It is accepted that the statement on access in the allocation summary is misleading. A non-notifiable modification is proposed to state that access will be taken from the A90 through Tipperty Industrial Estate, which is not at risk from flooding. This is set out in the List of Non-Notifiable Modifications.

Udny Green

Flood Risk, Services and Infrastructure and Site OP1 – Opposite Bronie House

Comments from SEPA are noted. No change is required.

Udny Station

Flood Risk and Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Woodlea East

Comments from SEPA are noted. No change is required.

The Council does not support the removal of site OP1. The Council's Transportation Service did not object to the initial planning application (APP/2017/0489) on this site. It was refused planning permission due to insufficient information and the most recent planning application on this site (APP/2020/1629) is pending determination. The Council's Transportation Service has yet to comment on this planning application. The MIR Issues and Actions Paper notes the main issue for this site was creating an appropriate design layout that imported the employment land (MIR Issues and Actions paper, AD0040.D, pages 108 to 110). This employment element has been removed in the PLDP and the site is proposed for only 35 homes. Considering the continued interest to develop this site and removal of the employment requirement, no change is required.

Non-Allocated Site – Bid Site FR021 – South West of Udny Station

The Council does not support allocating bid site FR021 for 40 homes and business land. This site was identified as a reserved site in the MIR, but it is not suitable for immediate development (MIR, AD0038.D, page 112). However, there are concerns regarding its scale, as it would result in overdevelopment and double the size of Udny Station, and it would be a prominent extension to the settlement when there has not been a need identified. In response to the MIR, NatureScot expressed concerns with the large size of the bid site FR021, as it would reduce cohesion of this small settlement and extend development outwith the subtle confines of the broad hill land to the east. They also recommended the majority of the site should be left undeveloped (MIR Issues and Actions Paper, AD0040.D, pages 108 to 110). In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

West Pitmillan

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

The Council confirms that it intends to address Scottish Water's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site BUS – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

Site OP1 – West Pitmillan

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Whitecairns

General

The comments from the representee are noted. Whitecairns currently does not have a settlement statement within the plan as there are no protected or opportunity sites, and it is not proposed that this will change. The request to identify a small path along the B999 and extending the 50mph zone is therefore not something that the LDP can achieve. No change is required.

Non-Allocated Site – Bid Site FR097 – Land North of Drovers Place

The Council does not support allocating bid site FR097 for 30 homes, plus additional land for employment. It was noted in the Main Issues Report that even though the development relates well with the existing houses within Whitecairns the scale of the development would not be an acceptable extension to Whitecairns. Concerns were also raised with regards to the visual impact, education provision and the unsustainable location for development, (MIR, AD0038.D, page 129). These concerns remain valid and it is not considered appropriate to allocate land for development in this location. Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Ythanbank

Vision

The Council notes the following non-notifiable notification has been made to the PLDP to update the fourth sentence of the second paragraph of the Vision to remove reference to the 'Community Council' and make reference to only the 'community' for consistency with the rest of the PLDP.

Services and Infrastructure

The Council notes Scottish Water's comment, but their modification to the 'Strategic drainage and water supply' statement is the same as it is written in the PLDP. However, the Council proposes to amend this statement in light of SEPA's comment as a non-

notifiable modification, which includes adding a reference to a single private waste water treatment plant to site OP1 (see below).

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Michaelmuir Croft

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The concerns raised regarding traffic and pedestrian safety issues associated with site OP1 are noted. However, site access and road infrastructure are both issues which would be looked at in more detail through any planning application that is submitted on the site. Additionally, the 'Services and Infrastructure' section of the Settlement Statement states, under 'Local transport infrastructure', that "all development may be required to contribute towards footway extensions, upgrades and crossing facilities, cycle infrastructure and public transport provision". As such, as discussed above, at a time when a planning application is submitted on this site, it will be assessed as to whether any of these services and infrastructures will be required. No change is required.

The Council note the representee's request for the removal of site OP1. Whilst the bid for this site (FR019) was submitted for 4 homes, for consistency across the PLDP, only development of 5 homes or more are proposed to be allocated in settlements (Issues and Actions papers, AD0040.D, page 115). However, as stated in policy H1, capacities of sites are based on an indicative capacity at this stage (PLDP, AD0041.A, paragraph H1.3, page 41). With regards to the concern raised regarding the pattern of development, the Council do not consider the site to be contradictory to the settlement pattern. The site offers a logical continuation to the existing settlement pattern and the allocation summary states that the house design should be in keeping with the existing character of the village and recent development patterns and as such the Council do not consider that site OP1 would compromise the current development pattern in the settlement. Concerns regarding infrastructure such as road infrastructure, drainage and flooding would be looked at in more detail through any planning application that is submitted on the site. The Council note that the allocation summary also states that appropriate drainage solutions may be required to mitigate against any surface water flooding. No change is required.

Non-Allocated Site – New Site N020 – Site 1, Land west of the Unclassified Road from Ythanbank to Mill of Schivas, Non-Allocated Site – New Site N021 – Site 2, Land west of the Unclassified Road from Ythanbank to Mill of Schivas and Non-Allocated Site – New Site N022 – Land east the Unclassified Road from Ythanbank to Mill of Schivas

The Council does not support allocating new site N020 for 3 homes; new site N021 for 2 homes; and new site N022 for 1 home. Allocations made within the plan are not generally considered for less than 5 houses. Additionally, these sites were not put forward as development bids so were not considered as such at the MIR stage, nor subject to site assessment and public consultation. The representation contains site location plans but does not include any supporting information such as an environmental assessment to allow a detailed evaluation of the suitability of the proposal. In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and

sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” in relation to the settlement statement matters covered in Issue 30. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Barthol Chapel

Flood Risk

3. The Barthol Chapel settlement statement in the proposed plan does not include a flood risk section. I agree with the Scottish Environment Protection Agency (SEPA) that this is necessary as a flood risk assessment may be required for site OP1. A modification is recommended.

Services and Infrastructure

4. SEPA has requested amendments to the strategic drainage and water supply bullet point. I note that the wording suggested by Scottish Water is the same as that included in the proposed plan. I consider that the first sentence of this bullet point should be reworded in the interests of consistency. I agree that the remaining text should be moved to the allocation summary for OP1, as this is the site it refers to. Modifications to this effect are set out below.

5. NHS Grampian objects to the absence of a health and care facilities bullet point in the Barthol Chapel settlement statement. Policy RD2.14 in the proposed plan indicates that it may be appropriate to seek contributions towards health and care facilities. Whilst NHS Grampian has indicated that there is a need to create additional capacity at health facilities in the Fyvie/Oldmeldrum Medical Group, it has not been demonstrated that financial contributions from development at Barthol Chapel would meet the tests of Circular 3/2012. I consider that it would be helpful to make prospective developer aware of the potential need for contributions towards health and care facilities. However, the wording suggested by NHS Grampian should be amended to indicate that such contributions ‘may’ be required rather than ‘must’. A modification to this effect is recommended.

Site OP1 – Land at Barthol Chapel

6. The changes requested by SEPA in relation to flood risk and strategic drainage and

water supply are addressed in the sections above. No further modifications are required.

Collieston

Site R1 - To allow the development of community-based enterprises around Slains Kirk Building and the existing community centre

7. I note the concerns raised regarding ground stability on reserved site R1. I agree with the council that this is not a matter which requires to be addressed through the local development plan.

8. As I have not received any documentation regarding the extent of the land ownership associated with Slains House, I have no basis for considering the removal of site R1. No modification is required.

Flood Risk

9. In the interests of consistency, I consider that the flood risk bullet point should also indicate that flood risk assessment may be required. A modification is recommended.

Services and Infrastructure

10. I agree with the council that a services and infrastructure section is necessary. Whilst there are no allocations identified in the plan, planning applications may be submitted in or adjacent to Collieston. No modification is required.

11. The Collieston settlement statement in the proposed plan does not include a bullet point on strategic drainage and water supply. I agree that the wording suggested by SEPA is necessary, given the presence of a designated bathing water beach. A modification is recommended.

Cultercullen

12. There is also no strategic drainage and water supply bullet point in the Cultercullen settlement statement. In response to SEPA's representation, the council has consulted Scottish Water who have indicated that there is limited capacity at the existing waste water treatment works. Scottish Water would initiate a growth project if required, once development meets their five growth criteria. A modification is recommended to include this information in the plan.

13. As with the Collieston settlement statement, whilst there are no allocations identified in the plan, planning applications may be submitted in or adjacent to Cultercullen. I agree with the council that a services and infrastructure section is necessary. No modification is required.

Hattoncrook

Non-Allocated Bid Site FR023 – West Hattoncrook

14. Bid site FR023 is a large field on the edge of the small cluster of buildings which comprises West Hattoncrook. It is being promoted for 30 homes, either in its entirety to

meet what is claimed to be a housing land shortfall of several thousand houses in the Aberdeen Housing Market Area, or in two phases for 8 and 22 units.

15. The site projects into open countryside and is visible over a wide area, having an adverse landscape impact. Prime agricultural land would be lost. Its development for 30 homes would be inappropriate in relation to this small cluster of 18 or so dwellings, which has few community facilities and is severed by the A947. As such, it is not a sustainable location for the proposed development. Phasing would not alter those considerations.

16. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. Whilst the bid site lies within that housing market area, for the reasons set out above, I conclude that bid site FR023 should not be allocated. There are other sites available to meet the identified shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area, as explained in issue 5. No modification is required.

Tipperty

Flood Risk

17. I agree that the first bullet point in the flood risk section should be amended to more fully describe the nature of the flood risk. A modification is recommended.

18. SEPA has objected to the allocation of site OP2 (land to the south of Tipperty Industrial Estate) for employment land at Tipperty in its current form for reasons of flood risk. It says the site should not be allocated until the boundary is changed to exclude the functional floodplain of the Tarty Burn or until a detailed flood risk assessment has been validated. Otherwise, it is contrary to Scottish Planning Policy. Development could also increase flood risk elsewhere and reduce the capacity of the flood plain. In addition to flood risk, approximately 50% of the site lies within the natural river corridor of the Tarty Burn, which is currently at bad status in the River Basin Management Plan, due to poor hydromorphology. Any development within this corridor would further inhibit the Burn from taking its natural course in the long term. SEPA indicates that the findings of a future flood risk assessment might require it to confirm that the site is not suitable for development and therefore object to the principle of development at planning application stage.

19. The council has responded that the whole site should remain as an allocation and a flood risk assessment is already required in the allocation statement. It quotes the promoter's statement in its Call for Sites submission that the site is not shown in 1:200 or 1:100 year flood events in SEPA flood risk map.

20. As it stands, the proposed allocation is contrary to Scottish Planning Policy, given that most of the site lies within the functional flood plain of the Tarty Burn. Moreover, sites should not be allocated where there is doubt as to whether a significant proportion, or possibly all, of the site is unsuitable for development. The council has not provided any reasons which would over-ride these policy and practical objections. With respect to the proportion of the site subject to high risk of flooding, I prefer the expert opinion of SEPA to the promoter's statement.

21. In its response to a further information request (FIR015), SEPA has provided a plan for site OP2 showing an amended boundary, which would exclude the areas expected to flood. As this would overcome the problems identified by SEPA and would achieve compliance with Scottish Planning Policy, I am recommending that the boundary of allocation OP2 be amended to align with that shown on SEPA's plan, with the caveat that a flood risk assessment will be required to confirm the scope of development at the site. As SEPA points out, this assessment could further reduce the scope of development at the site. Modifications will also be required to the allocation summary and the entry for Tippetty OP2 in table 2 in appendix 1 (employment land allocations) to accurately reflect the reduced site area.

22. I accept that SEPA's other objection regarding the location of the access point could potentially be satisfied by the council's suggestion for an access through the adjacent industrial estate, or by access through site OP1 (Site 1, land east of Tippetty Industrial Estate).

23. As these changes would mean that the Tarty Burn floodplain no longer fell within the site boundary, the second bullet point under Flood Risk and the second paragraph of the allocation summary would no longer apply.

Udny Station

Site OP1 – Woodlea East

24. Planning permission has recently been granted for the erection of 43 residential units and two business units on site OP1. I therefore consider it appropriate to retain the allocation in the plan. No modification is required.

Non-allocated bid site FR021 – South-west of Udny Station

25. Bid site FR021 for 40 homes is promoted as a replacement for site OP1. In view of my comments on OP1, there is no need for a replacement allocation. The bid site is much larger than OP1 and, as the council points out, its development would double the size of the settlement. It would project prominently into open countryside with adverse landscape implications. No need for further expansion of the settlement has been demonstrated. No modification is required.

West Pitmillan

Services and Infrastructure

26. SEPA and Scottish Water have both requested amendments to the strategic drainage and water supply bullet point. I consider that these changes would provide clarification on this matter and recommend modifications accordingly.

Site OP1 – West Pitmillan

27. SEPA has indicated that there may be culverted watercourses in the site. I therefore agree that it would be prudent to indicate that a flood risk assessment may be required. A modification is required.

Whitecairns

General

28. Identifying a path along the B999 and extending the speed limit fall outwith the scope of local development plans and this examination.

Non-Allocated Bid Site FR097 – Land North of Drovers Place

29. Bid site FR097 is promoted for 30 homes and employment land. Existing tree belts would screen any development from three sides. It would, however, represent a large extension to a small cluster of buildings which has no community facilities and would therefore be highly dependent on vehicular journeys. As such, it is not a sustainable location for development. The suggestions about use of a bus loop would be dependent on agreement with operators, which cannot be assumed. As the representation indicates, if the bid site were developed, there could be pressure for the remainder of the land within the tree belts to be developed for employment use, with the same disadvantage of lack of local facilities. Waste water treatment, water quality and education provision are constraints, albeit they could possibly be overcome. I note the favourable response from the community council, but am satisfied that the proposed site does not meet the plan's aspirations, particularly for sustainable communities. No modification is required.

Ythanbank

Services and Infrastructure

30. SEPA and Scottish Water have both requested amendments to the strategic drainage and water supply bullet point. I consider that these changes would provide clarification on this matter and recommend a modification to this effect.

Site OP1 – Michaelmuir Croft

31. SEPA has suggested additional text to explain the waste water treatment requirements for this site. I agree that this information would be helpful and recommend a modification on this matter.

32. The traffic, road safety, drainage and flooding issues raised in relation to Site OP1 would be considered in detail when any planning application was submitted. The allocation for five homes is indicative and based on a standard applied throughout the plan area. The site allocation summary expects that recent development patterns will be respected. No modification is required.

Non-Allocated New Sites - N020 Site 1, Land west of the unclassified road from Ythanbank to Mill of Schivas; N021, Site 2, Land west of the unclassified road from Ythanbank to Mill of Schivas; and N022, Land east of the unclassified road from Ythanbank to Mill of Schivas.

33. Each of these sites is promoted for fewer than five houses, whereas the plan does not generally consider allocations of this size. As they were not submitted as development bids, they were not considered at main issues report stage nor were they subject to site

assessment and / or public consultation. No environmental assessment or other supporting information to allow a detailed evaluation has been submitted. As such, I am not in a position to consider allocation of these sites. No modifications are required.

Reporter's recommendations:

Modify the local development plan by:

Barthol Chapel

1. Adding a new sub-heading: "Flood Risk" with the following new bullet point to the Barthol Chapel settlement statement on page 398:

"- Due to the presence of a small watercourse, a Flood Risk Assessment may be required for site OP1."

2. Replacing the strategic drainage and water supply bullet point in the Barthol Chapel settlement statement on page 398 with:

"- There is no public waste water infrastructure in Barthol Chapel."

3. Inserting the following new last bullet point in the services and infrastructure section of the Barthol Chapel settlement statement on page 398:

"- Health and care facilities: Residential development may be required to contribute towards the creation of additional capacity at health facilities in Fyvie/Oldmeldrum Medical Group".

4. Inserting the following new second paragraph to the allocation summary for OP1: Land at Barthol Chapel, Inverurie in the Barthol Chapel settlement statement on page 399:

"A single waste water treatment plant of sufficient capacity is required to serve all properties within the development and shall be of a standard that can be adopted by Scottish Water. Single individual waste water discharges would not be permitted. Early engagement with Scottish Water is advised."

Collieston

5. Adding the following new second sentence to the flood risk bullet point in the Collieston settlement statement on page 410:

"Flood Risk Assessments may be required."

6. Adding the following new second bullet point to the services and infrastructure section of the Collieston settlement statement on page 410:

"- Strategic drainage and water supply: Due to the presence of a designated bathing water beach at Collieston, any development will require to connect to the public waste water network."

Cultercullen

7. Adding the following new second bullet point to the services and infrastructure section of the Cultercullen settlement statement on page 412:

"- Strategic drainage and water supply: There is limited capacity at the existing waste water treatment works. Scottish Water will initiate a growth project if required, once development meets their five growth criteria."

Tipperty

8. Replacing the first bullet point in the flood risk section of the Tipperty settlement statement on page 496 with:

“Parts of Tipperty are at risk of surface water flooding and fluvial flooding from the Tarty Burn. Flood Risk Assessments may be required.”

9. Deleting the second bullet point in the Flood Risk section of the settlement statement for Tipperty on page 496.

10. Amending the allocation description for site OP2 (land to the south of Tipperty Industrial Estate) (page 498) with the revised site area, as per modification 14 below.

11. Amending the entry for Tipperty OP2 in table 2 in appendix 1 (employment land allocations) to reflect the revised site area for this allocation.

12. Replacing the third and fourth sentences in the first paragraph of the allocation summary for OP2 (land to the south of Tipperty Industrial Estate) on page 498 with:
“Access will be taken from the existing industrial estate or via site OP1 (Site 1, land east of Tipperty Industrial Estate). A Flood Risk Assessment will be required to accurately determine the developable area of the site and floor levels.”

13. Deleting the second paragraph of the allocation summary for OP2 (land to the south of Tipperty Industrial Estate) on page 498.

14. Amending the settlement map on page 499 to adjust the extent of allocation OP2 (land to the south of Tipperty Industrial Estate) to align with the triangular area shown by the red line on the map supplied with SEPA’s response to Further Information Request FIR015. (The settlement boundary should be adjusted accordingly.)

West Pitmillan

15. Replacing the word ‘will’ with ‘to’ in the last sentence of the strategic drainage and water supply bullet point in the West Pitmillan settlement statement on page 515 to read:
“All sites in West Pitmillan to connect to the public sewerage system in Foveran once the growth project is complete.”

16. Adding the following new sentence to the end of the strategic drainage and water supply bullet point in the West Pitmillan settlement statement on page 515:
“Early engagement with Scottish Water is advised.”

17. Adding the following new first sentence to the second paragraph in the allocation summary for OP1: West Pitmillan in the West Pitmillan settlement statement on page 516:
“A Flood Risk Assessment may be required due to the possible presence of culverted watercourses on the site.”

Ythanbank

18. Replacing the text in the strategic drainage and water supply bullet point in the Ythanbank settlement statement on page 520 with:

“There is no public waste water infrastructure in Ythanbank. There is water available, however, early engagement with Scottish Water is advised.”

19. Adding the following new last sentence to the allocation summary for OP1:

Michaelmuir Croft in the Ythanbank settlement statement on page 521:

“A private single waste water treatment plant, built to an adoptable standard, will be required for this site.”

NHS Grampian have objected to the failure to reference the need for health care facilities under the Services and Infrastructure section (PP1223).

Site OP1 – Land to the North/West of Teuchar Road

A representee has requested that the area surrounding the BT building is protected to allow for ease of access to the BT building (PP0293).

SEPA commented that allocation summary for OP1 could be more succinct (RD0214.B) (PP1219).

A representee has expressed support for site OP1 and potentially an increase in proposed numbers, but has requested the removal of the following:

- Text relating to constraints affecting the site until post-2031 and required phasing as there is no evidence for this;
- Text relating to the potential suitability of self-build plots as it is likely that any developer would develop the whole site together and type of delivery would be assessed through submission of a planning application;
- Text relating to the requirement for supporting studies such as surveys and assessments as these would be addressed through the planning process;
- Text relating to a requirement for a combined access strategy as the two bid sites are now combined; and
- Text relating to conclusions that the developable area of the site may be smaller than the allocation as this can be addressed through the planning process. The representee has included a number of Appendices (RD0051.A, RD0051.B and RD0051.C) in their submission which provides further detail to support their position (PP0382).

A number of representees have objected to site OP1 (PP0075, PP0200, PP0248, PP0293, PP0816 and PP1113). Reasons cited include:

- Development of 60 homes is considered to be too much for the scale of the settlement which has insufficient local business to support the allocation. Fewer houses may be acceptable (PP0075).
- Development will affect local wildlife, put pressure on capacity of the local school, affect local services which are currently strained, affect the capacity of the public sewer, flooding issues and due to the increase in traffic which will have safety and residential amenity impacts (PP0200 and PP0248).
- Development will compromise privacy (PP0200, PP0248, PP0816 and PP0293) and affect the amenity of existing residents along Main Street (PP0200).
- The site cannot be accessed by vehicles safely (PP0248 and PP0293) or accessed by pedestrians via the lane adjacent to the shop safely with further concerns about security of the use of this lane for the shop and possible impacts on deliveries for the shop (PP0816).
- The allocation is not a realistic marketable prospect that that the proposed numbers should be allocated elsewhere (PP1113).

Daviot

General

Representees have agreed with the decision not to allocate any sites for housing in Daviot as the settlement is sensitive to further development in terms of infrastructure and character (PP0098) with specific comment also relating to the marketability of further houses at the present time (PP0171). No modification sought (PP0098 and PP0171).

Meldrum, Bourtie and Daviot Community Council has agreed with the PLDP that there are no allocated sites for housing in Daviot as there is insufficient infrastructure to accommodate the bid sites and development would affect the character of the settlement. No modification sought (PP0058 and PP1134).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

A representee has stated that the 'Services and Infrastructure' section for Daviot should be removed as there are no housing allocations in the settlement that would result in developer contributions (PP1072).

Non-Allocated Sites – Bid Site FR018 – West of Wellpark and Bid Site FR101 – Land West of Daviot

A representee has agreed with the decision not to allocate bid sites FR018 and FR101 – a view which the representee considered to be consistent with the majority of local Daviot residents. It was considered that bid sites FR018 and FR101 would change the character of the settlement, with 42 additional homes felt to be disproportionate with the scale of the settlement – particularly within the current economic context. The development of both bid sites would require the development of Prime Agricultural Land and concern was raised regarding the safety of pedestrians and road users. It was stated that there is insufficient capacity at the waste water treatment works for additional development. Additionally, it was noted that the Scottish Government did not allow for the development across the road from bid site FR101 to go ahead two years ago. No modification sought (PP0171).

Fyvie

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site R1 – For a public transport mini-interchange hub and Site R2 – For access associated with OP1

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summaries for sites R1 and R2 (RD0214.B). No modification sought

(PP1219).

Site OP1 – North East of Peterwell Road

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

Historic Environment Scotland (HES) has commented that the impact of development on the allocated site OP1 on archaeological finds for the Battle of Fyvie battlefield is likely to be low but the potential impact on the battlefields special qualities requires further assessment. Impacts on the understanding of the battlefield landscape are unlikely but potential impacts on key landscape characteristics and cumulative impacts should still be assessed, with mitigation and enhancement considered in line with guidance (RD0266.A) (PP1343).

Garmond

Flood risk

SEPA has requested the removal of the 'Flood Risk' section (RD0214.B) (PP1219).

Services and Infrastructure

SEPA requested the removal of the last sentence from the 'Strategic drainage and water supply' statement (RD0214.B) (PP1219).

A representee has stated that the 'Services and Infrastructure' section should be removed because there are no housing allocations in the settlement that would result in developer contributions (PP1092).

Kirkton of Auchterless

Flood Risk

SEPA requested the removal of the 'Flood Risk' section as all developments require SuDS not just because of flood risk (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has requested additional text is added to the 'Strategic drainage and water supply' statement on the feasibility of private water systems (RD0214.B) (PP1219).

NHS Grampian has objected to the failure to reference the need for health care facilities under the Services and Infrastructure section. They have proposed alternative text (PP1223).

Site R1 – For a playpark and Site R2 – For a new car park

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summaries for sites R1 and R2 (RD0214.B). No modification sought (PP1219).

Site OP1 – Kirkton of Auchterless

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

Rothienorman

Flood Risk

SEPA has requested that the second 'Flood Risk' bullet point is removed, as the requirements for site OP2 are in the allocation summary do not require to be highlighted in the 'Flood Risk' section to be consistent with the rest of the Plan (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has requested that additional text which states that there is limited capacity at Rothienorman waste water treatment works is added to the 'Strategic drainage and water supply' section, to ensure consistency with the rest of the Plan (RD0214.B) (PP1219).

Site OP1 – Site to West of Blackford Avenue

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

A representee has stated that within the Issues and Actions Papers for Rothienorman, SEPA highlighted that there is limited capacity at Rothienorman Waste Water Treatment Works and as such a developer would require to initiate a growth project with Scottish Water to develop the site in whole. The representee states that this comment was not actioned and therefore SEPA's comments require to be included within the PLDP for the relevant proposals (PP0030).

A representee has highlighted that the Main Issues Report 2019 stated that "...waste capacity are current constraints that would require to be resolved before the site could come forward but do not prohibit the site from being identified as a preferred option" and that "waste water treatment capacity is currently constrained". The representee considers that this needs to be noted for the relevant proposals within the PLDP (PP0030).

Site OP2 – Site West of Forge Road

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219).

A representee has stated that within the Issues and Actions Papers for Rothienorman, SEPA highlighted that there is limited capacity at Rothienorman Waste Water Treatment Works and as such a developer would require to initiate a growth project with Scottish Water to develop the site in whole. The representee states that this comment was not actioned and therefore SEPA's comments require to be included within the PLDP for the relevant proposals (PP0030).

A representee has highlighted that the Main Issues Report 2019 stated that "...waste

capacity are current constraints that would require to be resolved before the site could come forward but do not prohibit the site from being identified as a preferred option” and that “waste water treatment capacity is currently constrained”. The representee considers that this needs to be noted for the relevant proposals within the PLDP (PP0030).

St Katherines

Services and Infrastructure

Scottish Water has requested replacement text under the ‘Strategic drainage and water supply’ statement (PP0272).

SEPA has requested the removal of the first four sentences of the ‘Strategic drainage and water supply statement and replaced with alternative text (RD0214.B) (PP1219).

Site OP1 – Cromlet Park West

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

A representee has requested to increase the allocation of OP1 to 15 homes to reflect planning permission and there is sufficient demand (PP0662).

A representee has requested the removal of site OP1 as there is insufficient services to support the allocation in the settlement and the vehicular access from the A947 is not safe (PP0173).

Site OP2 – Land North of St Katherines

Representees have indicated their support for the allocation of 35 houses at OP2 as an application for 15 houses will be approved subject to Section 75 being signed and there is developer interest (PP0393 and PP0662). Additional comments from one of the representees also stated that further housing will help with high infrastructure costs, that the housing will help with the Fyvie school roll and that a new junction is proposed on the A947 to improve safety (PP0390).

Representees have indicated their support for the allocation of business land at OP2 as there is interest in uptake (PP0393) and it will provide local work (PP0390 and PP0662).

SEPA has requested text is added to the allocation summary on the need for a private waste water treatment plant (RD0214.B) (PP1219).

Representees have requested the removal of site OP2, one of which stating that the housing allocation in Fyvie is sufficient to support the school roll and noting the Reporter’s conclusions for not supporting under the previous plan (PP1094) with the other stating that there are insufficient services to support the allocation in the settlement and the vehicular access from the A947 is not safe (PP0173). A representee has included an Appendix (RD0191.A) in their representation which provides further detail to support their position (PP1094).

A representee has requested the removal of site OP2’s employment land allocation as it is

deemed not to be viable, there is insufficient infrastructure to support it and it would be incongruous with surroundings (PP0173).

Woodhead

Flood risk

SEPA has requested the addition of a 'Flood Risk' section (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has requested a statement on 'Strategic drainage and water supply' is added to this section for consistency stating there is no public waste water infrastructure in Woodhead (RD0214.B) (PP1219).

A representee has stated that the 'Services and Infrastructure' section should be removed because there are no housing allocations in the settlement that would result in developer contributions (PP1058).

Modifications sought by those submitting representations:

Cuminestown

Vision

Modify the PLDP to review the description of shops and the transport system in the Vision (PP0293).

Flood Risk

Modify the PLDP to reword the Flood Risk bullet point from, "Parts of OP1 are susceptible to flooding. A Flood Risk Assessment will be required." to "Parts of OP1 are susceptible to fluvial flooding from the Teuchar Burn. A Flood Risk Assessment will be required." (PP1219).

Services and Infrastructure

Modify the PLDP to include a new statement on health and care facilities to read, "Health and care facilities: All residential development must contribute towards the creation of additional capacity at health facilities in Turriff Medical Practice to allow for additional capacity." (PP1223).

Site OP1 – Land to the North/West of Teuchar Road

Modify the PLDP to include protected area around BT building if allocation OP1 is agreed (PP0293).

Modify the PLDP to make the allocation summary more succinct (PP1219).

Modify the PLDP to increase allocation from 60 to 70 homes (PP0382).

Modify the PLDP to remove reference within the allocation summary relating to the constraints of the site until post-2031 and required phasing (PP0382).

Modify the PLDP to remove reference within the allocation summary relating to potential suitability of self-build plots (PP0382).

Modify the PLDP to remove reference within the allocation summary relating to a requirement for supporting studies such as surveys and assessments (PP0382).

Modify the PLDP to remove reference within the allocation summary relating to a requirement for a combined access strategy (PP0382).

Modify the PLDP to remove reference within the allocation summary relating to conclusions that developable area of the site may be smaller than the allocation (PP0382).

Modify the PLDP to reduce allocation OP1 from 60 to 10 homes (PP0075).

Modify the PLDP to remove site OP1 (PP0200, PP0248, PP0293, PP0816 and PP1113) and identify an alternative opportunity site elsewhere (PP1113).

Modify the PLDP to remove pedestrian use of the lane adjacent to the shop for site OP1 (PP0816).

Daviot

Services and Infrastructure

Modify the PLDP to remove the 'Services and Infrastructure' section for Daviot (PP1072).

Fyvie

Site OP1 – North East of Peterwell Road

Modify the PLDP to include a requirement for an assessment of potential impacts from development on key landscape characteristics and cumulative impacts with regards to the Battle of Fyvie battlefield (PP1343).

Garmond

Flood Risk

Modify the PLDP to remove the 'Flood Risk' section (PP1219).

Services and Infrastructure

Modify the PLDP to remove the last sentence of the 'Strategic drainage and water supply' bullet point (PP1219).

Modify the PLDP to remove the 'Services and Infrastructure' section (PP1092).

Kirkton of Auchterless

Flood Risk

Modify the PLDP to remove the 'Flood Risk' section (PP1219).

Services and Infrastructure

Modify the PLDP to add the following text to the 'Strategic drainage and water supply' statement, "Private systems may not be feasible due to unsuitable site conditions." (PP1219).

Modify the PLDP to include a new statement on health and care facilities to read, "Health and care facilities: All residential development must contribute towards the creation of additional capacity at health facilities in Fyvie/Oldmeldrum Medical Group to allow for additional capacity." (PP1223).

Rothienorman

Flood Risk

Modify the PLDP to remove the second 'Flood Risk' bullet point which states, "A buffer strip will be required adjacent to the watercourse on the eastern boundary of the OP2 site which should be integrated positively into the development. Enhancement of this straightened watercourse through re-naturalisation and removal of any redundant features will require to be investigated." (PP1219).

Services and Infrastructure

Modify the PLDP to amend the 'Strategic drainage and water supply' statement to include a new additional first sentence that reads, "There is limited capacity at Rothienorman Waste Water Treatment Works." (PP1219).

Site OP1 – Site to West of Blackford Avenue

Modify the PLDP to amend the allocation summary for site OP1 to include the wording, "It is required to initiate a growth project with Scottish Water in order to develop the full site. Waste water treatment capacity is currently constrained." (PP0030).

Modify the PLDP to amend the allocation summary for site OP1 to take cognisance of waste water treatment constraints that require to be resolved prior to the site coming forward for development (PP0030).

Site OP2 – Site West of Forgue Road

Modify the PLDP to amend the allocation summary for site OP2 to include the wording, "It is required to initiate a growth project with Scottish Water in order to develop the full site. Waste water treatment capacity is currently constrained." (PP0030).

Modify the PLDP to amend the allocation summary for site OP2 to take cognisance of waste water treatment constraints that require to be resolved prior to the site coming

forward for development (PP0030).

St Katherines

Services and Infrastructure

Modify the PLDP to amend the 'Strategic drainage and water supply' statement to include between the first and fifth sentences, "A single waste water treatment plant sufficient to accept waste water from all properties within the development will be a Scottish Environmental protection Agency (SEPA) requirement. The waste water treatment plant is to be of a standard that can be adopted by Scottish Water. It is unlikely SEPA would approve any proposals for single individual waste water discharges." (PP0272).

Modify the PLDP to remove the first four sentences of the 'Strategic drainage and water supply' that currently reads as, "There is no public waste water treatment works in St Katherines. A single waste water treatment plant sufficient to accept waste water from all properties within the development will be a Scottish Environment Protection Agency (SEPA) requirement. The waste water treatment plant is to be of a standard that can be adopted by Scottish Water. It is unlikely SEPA would approve any proposals for single individual waste water discharges." and replace with "There is no public waste water infrastructure in St Katherines." (PP1219).

Site OP1 – Cromlet Park West

Modify the PLDP to increase allocation of OP1 from 5 homes to 15 homes (PP0662).

Modify the PLDP to remove OP1 allocation (PP0173).

Site OP2 – Land North of St Katherines

Modify the PLDP to amend the allocation summary of site OP2 to read, "A single waste water treatment plant, built to an adoptable standard, will be required for this site. It will be preferable for the provision of one treatment plant to service both OP1 and OP2." (PP1219).

Modify the PLDP to remove OP2 allocation (PP0173 and PP1094).

Woodhead

Flood Risk

Modify the PLDP to add a 'Flood Risk' section with the following text, "Parts of Woodhead are susceptible to surface water flood risk. Flood Risk Assessments may be required." (PP1219).

Services and Infrastructure

Modify the PLDP to add a 'Strategic drainage and water supply' statement that reads, 'Strategic drainage and water supply': There is no public waste water infrastructure in Woodhead." (PP1219).

Modify the PLDP to remove the 'Services and Infrastructure' section (PP1058).

Summary of responses (including reasons) by planning authority:

Cuminestown

Vision

The Council notes the issues raised by the representee. The Vision presents a snapshot in time, and statements can become out of date at any time. The Council accepts there is only one shop, although there is a hairdresser. The Council confirms that it intends to address this comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

However, the Council disagrees amending the text regarding public transport. Bus services for Turriff and the wider area stop in Cuminestown, but services may be reduced with the coronavirus pandemic. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site BUS – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address NHS Grampian's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Land to the North/West of Teuchar Road

The Council note the representee's request that the area surrounding the BT building is protected for its ease of access. However, access arrangements will be an issue considered during the planning application stage. No change is required.

Support for site OP1 is welcomed, but with potential flood issues affecting the site, increasing the allocation is not supported. In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

The Council agrees with making the allocation summary more succinct and removing the statement which states that part of the site could not be delivered to post 2031, the need for a combined access strategy and on the statement on the developable area of the site, as this is unknown. However, the Council does not agree with removing the reference to

the assessments required as this is highlighted in other site allocations where there could be potential issues, e.g. flooding. Additionally, the Council does not agree with removing reference to self-build plots as the site presents opportunities for this, however it is considered that the allocation text relating to self-build plots could be made more succinct. If the Reporter is minded, to make an amendment, then the Council recommend that the allocation summary of site OP1 could be modified to read as follows:

“This is a newly allocated site. The layout should complement the linear pattern of the settlement and a masterplan will be required. The masterplan should consider merits of incorporating opportunities for self-build plots into the site. The delivery of the site should ensure ecological benefits such as informal recreational development along the Teuchar Stank, for example, and the provision for an active travel route. Phasing should begin with development along the Teuchar Road. Improved footway provision to an adoptable standard is required on the B9170 Auchry Road linking to the existing network. Pedestrian permeability to Main Street should also be provided. Footway provision will be required on Teuchar Road linking the site to the existing network.

Due to the Teuchar Burn running through the site, a Flood Risk Assessment will be required. A buffer strip will be required adjacent to the watercourse which should be positively integrated into the development and would be an opportunity to enhance the riparian habitat. The buffer strip will need to allow sufficient space for restoration of the burn. Enhancement of the watercourse through re-naturalisation and removal of any redundant features should be investigated. An Archaeological Survey and Drainage Impact Assessment may also be required.

It is expected that the site will contribute towards affordable housing in line with Policy H2 Affordable Housing. This should be delivered as part of the early phases of development and be integrated into the design of the development to provide a mix of house types and sizes to meet local need.”

The Council does not support the removal of site OP1. It complements the linear pattern of the settlement and is therefore a logical extension. The allocation of 60 homes is considered an appropriate scale for the settlement. It replaces site OP1 that was allocated for 50 homes in the Aberdeenshire Local Development Plan 2017 (LDP 2017). It is not likely to affect existing services and facilities in the settlement, as the school roll will have taken account of the former site OP1, but developer obligations can be sought if there is a need. Impact on wildlife is noted, but the land is currently farmed and a buffer strip along the Teuchar Skank watercourse is required. There is also the opportunity to enhance this watercourse, which has been straightened. There are multiple access opportunities into this site from the north and south, and the need for pedestrian links in the allocation summary. The issue of marketability is subjective, and this is a new site. Issues on privacy can be considered at the masterplan and/or planning application stage, but as the site slopes down towards the Teuchar Skank, it is not an issue for the LDP to consider. No further changes are required.

Daviot

General

Comments from the representees are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Whilst there are no allocated sites identified within the settlement boundary, proposals for new development may still be submitted for sites within and adjacent to the settlement, which will require to be appropriately assessed by the Council, in accordance with the relevant policies of the PLDP. In such instances, developer obligations will require to be sought to ensure that development impacts are mitigated against. No change is required.

Non-Allocated Sites – Bid Site FR018 – West of Wellpark and Bid Site FR101 – Land West of Daviot

The Council does not support allocating bid site FR101. Comments from the representee are noted. No change is required.

Fyvie

Flood Risk, Services and Infrastructure, Site R1 – For a public transport mini-interchange hub and Site R2 – For access associated with OP1

Comments from SEPA are noted. No change is required.

Site OP1 – North East of Peterwell Road

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address Historic Environment Scotland's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Garmond

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Whilst there are no allocated sites identified within the settlement boundary, proposals for new development may still be submitted for sites within and adjacent to the settlement, which will require to be appropriately assessed by the Council, in accordance with the relevant policies of the PLDP. In such instances, developer obligations will require to be sought to ensure that development impacts are mitigated against. No change is required.

Kirkton of Auchterless

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council confirms that it intends to address NHS Grampian's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Sites R1 – For a playpark, Site R2 for a new car park and Site OP1 – Kirkton of Auchterless

Comments from SEPA are noted. No change is required.

Rothienorman

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Site to West of Blackford Avenue

Comments from SEPA are noted. No change is required.

The Council notes the representees comments regarding additional wording relating to the limited capacity at the waste water treatment works at Rothienorman, a growth project requiring to be initiated and current constraints requiring to be resolved prior to development coming forward. However, comments received from SEPA confirm that they have no issues with the allocation text for site OP1 with regards to flooding, strategic drainage or water supply. SEPA has requested additional text is added to the 'Strategic drainage and water supply' section which the Council intends to address through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications. The Council considers that this text will sufficiently address the representee's concerns regarding any capacity concerns at the waste water treatment works for Rothienorman. No change is required.

Site OP2 – Site West of Forgue Road

Comments from SEPA are noted. No change is required.

The Council notes the representees comments regarding additional wording relating to the limited capacity at the waste water treatment works at Rothienorman, a growth project requiring to be initiated and current constraints requiring to be resolved prior to development coming forward. However, comments received from SEPA confirm that they have no issues with the allocation text for site OP2 with regards to flooding, strategic

drainage or water supply. SEPA has requested additional text is added to the 'Strategic drainage and water supply' section which the Council intends to address through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications. The Council considers that this text will sufficiently address the representee's concerns regarding any capacity concerns at the waste water treatment works for Rothienorman. No change is required.

St Katherines

Services and Infrastructure

The Council notes Scottish Water's comment, but their modification to the 'Strategic drainage and water supply' statement is the same as it is written in the PLDP. The second, third and fourth sentences in the 'Strategic drainage and water supply' bullet point will be removed and a shorter statement on a single waste water treatment plant will be added to the allocation summary of site OP2 in light of SEPA's comments. No change, in light of Scottish Water's comments, is required.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Cromlet Park West

Comments from SEPA are noted. No change is required.

This site received Full Planning Permission on 09/12/2019 for 15 homes. In light of the approved planning application (APP/2019/0175) and for clarity, the Council considers that the allocation could be updated to reflect the approved consent for 15 homes. As such, if the Reporter is minded, to make an amendment, then the Council recommend that the allocation for site OP1 could be modified to an allocation for 15 homes and Table 1 and Table 2 of Appendix 6 updated so as site OP1 in St Katherines reflects the allocation for 15 homes. Additionally, in light of the recent approved consent and the requirement for a bus layby and village gateway, if the Reporter is minded, to make an amendment, then the Council recommend that the first paragraph of the allocation summary for site OP1 could be modified to read:

"This site was previously allocated as site OP1 in the LDP 2017. The site has Full Planning Permission for 15 homes (planning application reference APP/2019/0175). Access to the site will require to be provided to OP2 and the unclassified road running along the southern boundary of the site. A new adoptable footway will require to be provided to the A947 and the provision of a bus layby and village gateway. Active travel links should also be provided from within the development to the surrounding countryside to increase sustainable travel within Aberdeenshire, and in particular with the services in the neighbouring village of Fyvie. The design of the homes on the site should be respectful to the setting of the village and to neighbouring housing styles".

The Council does not agree to removing this allocation. It currently has planning permission for 15 homes and its purpose is to support services in other settlements, including Fyvie Primary School, which has a falling school roll (see School Roll Forecast 2019, AD0110, page 5). The Council's Transportation Service has not objected to this allocation but identified the need for all development to contribute to speed reducing measures, a new access on the A947 and providing an adoptable footway to the A947 bus

stops. This is highlighted under the 'Services and Infrastructure' section in the Settlement Statement. No change is required.

Site OP2 – Land North of St Katherines

Support for the site is welcomed. No change is required.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The OP2 site (bid site FR098) was not identified as a preferred option in the MIR, however it was agreed at the Special Meeting of Formartine Area Committee on 10 September 2019 that the bid site was to be included in the Settlement Statement for St Katherines (see Special Meeting of FAC 10/09/2019 Meeting Minutes, AD0141, page 15). Concerns raised regarding a lack of services and infrastructure available to support the allocation of both housing and employment are noted. However, the 'Services and Infrastructure' section and allocation summaries of the Settlement Statement sets out what development may be required to contribute towards to ensure the development is acceptable in planning terms for all users, and any issues relating to infrastructure would be assessed at the planning application stage. Furthermore, access arrangements and any impact on surrounding amenity would also be considered at the planning application stage. No change is required.

Woodhead

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Whilst there are no allocated sites identified within the settlement boundary, proposals for new development may still be submitted for sites within and adjacent to the settlement, which will require to be appropriately assessed by the Council, in accordance with the relevant policies of the PLDP. In such instances, developer obligations will require to be sought to ensure that development impacts are mitigated against. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the proposed plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the provisions of the proposed plan, or which simply make comments that do not seek modifications to the proposed plan. Therefore, unless these relate to an issue which is unresolved, they are not addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as 'non-notifiable modifications' to the settlement statement. However, where such matters arise from representations made to the proposed plan they require to be considered as part of the examination. I therefore address these as appropriate below.

Cuminestown

Vision

3. A representation seeks a modification to the vision statement to correctly note that the settlement is served by one shop. The representation also challenges the statement that the settlement is served by regular public transport. The council is content to modify the statement to make reference to there being one shop in Cuminestown rather than a number. However, it maintains its position regarding public transport services, adding that the frequency of services may be reduced as a consequence of the pandemic.

4. As I noticed at my site inspection, there is indeed just one shop in Cuminestown; a local convenience store located on main B9170. In the interests of accuracy, I agree that the proposed plan should be modified as suggested by the council. I also noticed that the settlement is served by a regular bus service. Although services are not particularly frequent, the local bus operator provides a regular service. No modification is required in response to this aspect of the representation.

Flood Risk

5. In the interests of consistency and accuracy, I agree with the Scottish Environment Protection Agency (SEPA) that the settlement statement should be modified to reflect the nature of the flood risk at site OP1. I therefore recommend a modification to the 'flood risk' bullet point below as sought by SEPA.

Services and Infrastructure

6. NHS Grampian seeks a modification in respect of developer contributions towards medical facilities in Turriff. I note that the council agrees that the settlement statement should be modified as requested. Policy RD2 (paragraph RD2.14) in the proposed plan states that it may be appropriate to seek contributions towards health and care facilities. Whilst NHS Grampian has indicated that there is a need for additional capacity at health facilities in Turriff Medical Practice, it has not been demonstrated that financial contributions from development at Cuminestown would meet the tests of Circular 3/2012. I note that the inclusion of a health and care facilities bullet point would be consistent with other settlement statements. However, I consider that the wording suggested by NHS Grampian should be amended to indicate that there may be a requirement for contributions towards the creation of additional health care capacity in Turriff, in line with policy RD2. A modification to this effect is recommended below.

Site OP1 (land north-west of Teuchar Road)

7. A representee argues that the site is ineffective, should be removed from the proposed plan and an alternative site identified to address the shortfall in the strategic development plan allowance for the Rural Housing Market Area. In addition, a number of representations from local residents seek the removal of the site from the proposed plan; citing adverse impacts of development on amenity, nature conservation interests and

essential services. They also highlight the site's tendency to flood. Conversely, a representation on behalf of the landowner seeks modifications to the allocation summary to better reflect development intentions for the site, including an increase in the site allocation to 70 houses. While the council considers that the site should remain part of the proposed plan, it comments that the allocation summary could be modified to correct and address the concerns of the landowner. It considers, however, the allocation of the site for 60 houses appropriate.

8. I have not been presented with specific evidence to demonstrate that the site is incapable of being made effective, despite its tendency to flood and the limitations in drainage infrastructure to support new development. The settlement strategy notes the requirement for development proposals to be supported by flood risk and drainage assessments, among others, to address these matters. It also notes the requirement for developers to engage with Scottish Water.

9. With regard to the long-term lack of demand for new housing in Cuminestown, as we discuss in Issue 2 (paragraph 23), simply removing allocations with a marketability constraint from the proposed plan and replacing them with sites in marketable locations would not be consistent with the spatial strategy of the strategic development plan, nor that of the proposed plan. My observation is, subject to flooding and drainage issues being resolved, the allocated site appears more readily developable than that at Chapel Brae West; it is well-located and accessible; provides opportunities to connect and integrate with the existing settlement pattern; and, would incorporate an enhanced and re-naturalised watercourse within the overall development of the site. For these reasons, I consider that the site should remain part of the proposed plan.

10. The landowner argues that the site is deliverable and capable of being developed as a whole; not as two separate sites as first proposed. As such, the landowner seeks modifications to the allocation summary to remove references to part of the site being long-term constrained requiring development to be phased, the provision of self-build plots and a combined access strategy. With the exception of retaining a reference to the provision of self-build plots, the council is content to amend the allocation summary and has suggested alternative text for my consideration. On the basis of the supporting information that accompanies the representation and my site inspection, I am satisfied that the site is capable of being developed as a whole and, as such, a combined access strategy would not be required. I do, however, consider it appropriate to retain reference to self-build plots as this is a form of housing specifically promoted by the proposed plan. In the absence of detailed assessments, I also consider it appropriate to retain the site allocation at 60 houses. I recommend a modification below to the allocation summary based on the text provided by the council.

11. I consider the site sufficiently large to ensure that the amenity of existing residents is safeguarded; the matters of concern can be addressed through the preparation of the required masterplan and subsequent planning applications.

Daviot

12. The proposed plan does not identify any development opportunities in Daviot. As such, a representee suggests that the whole section entitled 'Services and Infrastructure' should be deleted from the settlement statement. However, I agree with the council that development proposals may nonetheless come forward within or adjacent to the settlement, which will require to be assessed for their impact on existing services and

infrastructure. In such circumstances, it is appropriate for the plan to identify mitigation measures that may be required to address the effects of new development. No modification required.

Fyvie

OP1 (land north-east of Peterwell Road)

13. Historic Environment Scotland (HES) notes that the Inventory of Historic Battlefields identifies allocated site OP1 as lying within the battlefield boundary of the Battle of Fyvie (BLT22) of 1644. While the potential impact of development on any archaeological remains dating back to the battle is likely to be low, it adds that the potential impact of development on the special qualities of the battlefield should be assessed. The council is content to amend the allocation summary by adding a sentence on this matter. In this regard, I consider that the proposed plan should be modified to highlight the need for an assessment to be undertaken in accordance with guidance set out HES' Historic Battlefields guidance. I recommend a modification below that more accurately reflects the advice and requirements of HES.

Garmond

14. The proposed plan does not identify any development opportunities in Garmond. As such, a representee suggests that the whole section entitled 'Services and Infrastructure' should be deleted from the settlement statement. However, as with a similar representation in respect of Daviot, development proposals may nonetheless come forward within or adjacent to the settlement, which will require to be assessed for their impact on existing services and infrastructure. In this regard, I did notice a number of potential infill development opportunities during my inspection. In such circumstances, it is appropriate for the proposed plan to identify mitigation measures that may be required to address the effects of new development. No modification is required.

15. SEPA states that the settlement statement incorrectly identifies the need for a flood risk assessment to accompany development proposals in Garmond. Similarly, the strategic drainage and water supply statement contains an incorrect statement attributed to SEPA. In each case, SEPA seeks the removal of the incorrect advice from the proposed plan. Given that there appears to be no risk of flooding in Garmond and SEPA does not require to be consulted on drainage matters, I recommend that the settlement statement is modified to remove the incorrect statements, as sought.

Kirkton of Auchterless

16. SEPA seeks modifications to the 'Flood Risk' and 'Services and Infrastructure – strategic drainage and water supply' sections of the settlement statement; to remove an unnecessary reference to the provision of SuDS and clarify why it may be necessary to upgrade the St Donan's Cottages Sceptic Tank, respectively. With regard to the first matter, SEPA rightly notes that all development is required to incorporate SuDS, not just that which is affected by flooding. I agree that placing such a statement under the title 'flood risk' is misleading and should be removed. On the second matter, I agree that the addition of the suggested sentence makes clear that the upgrade of the sceptic tank is required as private systems may not be suitable due to ground conditions in the settlement. I recommend the modifications sought by SEPA below.

17. NHS Grampian seeks a modification to the settlement statement in respect of medical

facilities in Fyvie/ Oldmeldrum that serve the village. I note that the council agrees that the settlement statement should be modified, as requested. Policy RD2.14 in the proposed plan states that it may be appropriate to seek contributions towards health and care facilities. NHS Grampian has indicated that there is a need for additional capacity at health facilities in Fyvie/ Oldmeldrum Medical Group. However, it has not been demonstrated that financial contributions from development at Kirkton of Auchterless would meet the tests of Circular 3/2012. Whilst the inclusion of a health and care facilities bullet point would be consistent with other settlement statements, I consider that the wording suggested by NHS Grampian should be amended to indicate that there may be a requirement for contributions towards the creation of additional health care capacity in Fyvie/ Oldmeldrum. A modification to this effect is recommended.

Rothienorman

18. SEPA highlights that the advice contained in the second bullet point under the heading 'Flood Risk' is also found in the allocation summary for allocated site OP2. It adds, in the interests of consistency the bullet point should be removed. SEPA also seeks a modification to the 'Strategic drainage and water supply' bullet point to note that there is limited capacity at the Rothienorman waste water treatment works. With regard to the first point, as a site specific matter and in the interests of consistency, I agree that the bullet point under 'Flood Risk' should be removed from the proposed plan. With regard to the second point, the limited capacity at the waste water treatment works to serve new development is a matter of fact that would be helpful to a prospective developer in the preparation of proposals. For these reasons, I agree that the settlement statement should be amended as sought by SEPA and recommend modifications below.

19. The recommended modifications discussed above also address the matters raised by Mr Simpson with respect to sites OP1 (site to west of Blackford Avenue) and OP2 (site west of Fogue Road). No further modifications are required.

St Katherines

Services and Infrastructure

20. Scottish Water's suggested wording for the strategic drainage and water supply bullet point is the same as that in the proposed plan. However, SEPA has requested a modification to replace the first four sentences with "There is no public waste water infrastructure in St Katherines", in the interests of consistency. I note that the council is content to make the changes suggested by SEPA. I agree that such an amendment would be appropriate, in line with the approach taken in other settlement statements and my suggested modification to remove allocation OP2. I recommend a modification to this effect.

Site OP1 (Cromlet Park West)

21. Since the preparation of the proposed plan, planning permission has been granted for the development of 15 houses on site OP1. The council agrees that the capacity of the site allocation should be updated to reflect this position. It also suggests some amendments to the allocation summary to refer to the transport and environmental improvements required as part of this permission.

22. I agree that as planning permission has been granted for 15 homes, the capacity of

the site shown in the plan should be increased. The 2019 housing land audit, which forms the base supply for this plan, includes five homes on this site. Consistent with changing the capacity of this allocation, I consider that the additional 10 homes should be identified as contributing towards the strategic development plan allowance for the Rural Housing Market Area in the period up to 2032. A change would be required to Appendix 6 to show the change in the overall capacity of site OP1 St Katherines and 10 homes counting towards the strategic development plan allowance for the Rural Housing Market Area. The implications of this change for the overall housing land provision are addressed under Issue 5.

23. As the site has the benefit of planning permission, there is no justification to delete the allocation. The information provided in the services and infrastructure section of the settlement statement in the proposed plan indicates how any impacts on existing services would be addressed. I consider that the additional text, which the council has suggested be inserted into the allocation summary for OP1, would be helpful to explain the transport improvements to be delivered as part of the planning permission. However, given my recommendation below in relation to site OP2, I have amended the sentence which refers to providing access to this site. Modifications on these matters are set out below.

Site OP2 (land north of St Katherines)

24. I note that the site has been the subject of development interest in the past and its allocation for housing and employment uses considered as part of the examination of the existing plan; which recommended that the site should be removed from the plan. I also note that the strategic environmental appraisal of the proposed plan concludes that development of the site would give rise to negative landscape impacts which would be difficult to mitigate. In addition, the Issues and Actions Paper sets out the reasons why the site should not be allocated for development, noting in particular the lack of service provision to support new development and adverse landscape effects. The Main Issues Report reiterates these concerns and adds that the lack of service provision would result in any development being highly car dependent. Despite these concerns, the Formantine Area Committee resolved to promote the site for housing and employment use in the proposed plan.

25. Within the context described above, representations strongly argue that the site should be removed from the proposed plan. In doing so, one representee directs me to the reporter's conclusions set out in the examination report of the existing plan to support his contention that the site should also be removed from the proposed plan. The landowner explains that its allocation for development would help address the high infrastructure costs associated with the development of site OP1, which he states should be regarded as a first phase of development.

26. Having reviewed the submissions, my observation is that the context within which the site is being promoted is broadly the same as that which was in place at the time of the existing plan's preparation and examination. These can be summarised as follows; national and development plan policy promote patterns of development that reduce the need to travel and ensure that walking, cycling and public transport are available as attractive choices; the promotion of brownfield land as a first opportunity for development, wherever possible; a small settlement set in open countryside where residents depend on their cars to access public services and essential amenities; and, weak market demand for housing. A notable difference is the approval of detailed planning permission for 15 houses on site OP1 in December 2020. At the time of my site inspection in March 2022 work had yet to

commence.

27. Despite the approval of planning permission for housing on site OP1, I consider site OP2 unsuitable for housing and employment uses. Firstly, as I indicate above, the site is open and exposed when viewed from the north and west. Although the allocation summary makes reference to the need for significant landscaping to mitigate the effects of development, I agree with the conclusions of the strategic environmental appraisal concludes, that such effects would be difficult to mitigate.

28. Secondly, development of the site would be inconsistent with the policy principles of Scottish Planning Policy 2014 (paragraph 270) and the development plan (strategic development plan, paragraph 2.3 and existing local development plan, page 7). Given its location, residents and employees of any future development on the site would be highly dependent on their cars for transport. I note that the development of site OP1 includes the provision of a footpath to a new north-bound bus lay-by on the A947 to access the half-hourly bus services that serve the village. However, I do not consider that such measures address the fundamental issue that the site is poorly located in relation to essential services and facilities.

29. Thirdly, in this instance, I place little importance on the argument that the development of the site would help sustain primary school facilities in Fyvie. My reading of the 2019 roll is that Fyvie primary school has one of the larger rolls in the Turriff Academy catchment area and that this is set to continue over the forecast period. Furthermore, although the roll at Fyvie primary school is set to fall, this is in the context of a general reduction in all rolls of primary schools that feed into the Academy. Finally, the proposed plan allocates site OP1, land north-east of Peterwell Road, Fyvie for 30 houses, which this examination considers acceptable and will assist in sustaining school facilities in the village.

30. Taking all these matters together, I conclude that development of site OP2 would give rise to adverse landscape effects and erode the rural character of the area. There is also a lack of services to support new development, which would inevitably lead to residents and employees being highly reliant on private cars for transport.

31. The site is identified as contributing 35 houses towards the strategic development plan allowance for the Rural Housing Market Area in the period up to 2032. The allocation would also provide one hectare of employment land. However, as the site is not located within a strategic growth area, it is not required to contribute to the employment land targets set out in the strategic development plan.

32. For the reasons outlined above, I do not consider that the benefits, in terms of meeting housing need or land for employment purposes, would outweigh the adverse impacts resulting from development on this site.

33. I recommend that the plan be modified to delete allocation OP2 from the St Katherines settlement statement and map. The settlement boundary for St Katherines should revert to that shown in the existing local development plan at this location. A modification to the relevant tables in Appendix 1 (employment land allocations) and Appendix 6 (housing land allocations) will also be required to delete the entry for St Katherines OP2. The implications of this deletion for the overall housing land provision are addressed in Issue 5.

34. In light of my recommendations above, I do not need to consider the representation from SEPA in relation to site OP2.

Woodhead

35. SEPA seeks modifications to the settlement statement to add text relating to flood risk and public waste water infrastructure. As statements of fact, I consider that the addition of text sought by SEPA on these matters would be helpful to the reader of the proposed plan. I recommend modifications below.

36. The proposed plan does not identify any development opportunities in Woodhead. As such, a representee suggests that the whole section entitled 'Services and Infrastructure' should be deleted from the settlement statement. However, as with a similar representations seeking the removal of guidance in settlement statements where no sites are promoted for development, proposals may nonetheless come forward within or adjacent to the settlement which will require to be assessed for their impact on existing services and infrastructure. In such circumstances, it is appropriate for the proposed plan to identify mitigation measures that may be required to address the effects of new development. No modification required.

Reporter's recommendations:

Modify the local development plan by:

Cuminestown

1. Amending the word 'shops' to 'shop' in the fourth line of the vision paragraph in the Cuminestown settlement statement on page 414.

2. Replacing the Flood Risk bullet point in the Cuminestown settlement statement on page 414 with:

"• Parts of site OP1 are susceptible to fluvial flooding from the Teuchar Burn. A flood risk assessment will be required."

3. Adding the following new bullet point to the services and Infrastructure section of the Cuminestown settlement statement on page 414:

"• Health and care facilities: Residential development may be required to contribute towards the creation of additional capacity at Turriff Medical Practice."

4. Replacing the allocation summary for site OP1 in the Cuminestown settlement statement on page 415 with:

"OP1: Land to the north-west of Teuchar Road. Allocation: 60 homes

This is a newly allocated site. The layout should complement the linear pattern of the settlement. A masterplan will be required, which should consider the merits of incorporating opportunities for self-build plots into the development of the site. The development should also incorporate ecological benefits, for example, informal recreational development along the Teuchar Stank and the provision of an active travel route. Phasing should begin with development along the Teuchar Road. New and improved footway provision to an adoptable standard is required on the B9170 Auchry Road and Teuchar Road with links to the existing network. Pedestrian permeability to Main Street should also

be provided.

Due to the Teuchar Stank running through the site, a Flood Risk Assessment will be required. A buffer strip adjacent to the watercourse should be provided and positively integrated into the development. The buffer strip should allow sufficient space for the watercourse to be restored through its re-naturalisation. The removal of any redundant features should be investigated and opportunities to enhance the riparian habitat should be explored. An Archaeological Survey and Drainage Impact Assessment may also be required.

It is expected that the site will contribute towards affordable housing in line with Policy H2 Affordable Housing. This should be delivered as part of the early phases of development and be integrated into the design of the development to provide a mix of house types and sizes to meet local need.”

Fyvie

5. Deleting the second sentence of the first paragraph of the allocation summary for site OP1 (land north east of Peterwell Road) in the Fyvie settlement statement on page 442 and replacing it with four new sentences. The beginning of the first paragraph would then read:

“This is a new allocation. The site lies within the Battle of Fyvie battlefield boundary, as shown on the Inventory of Historic Battlefields. While the potential impact of development on archaeological remains dating back to the battle is likely to be low, the potential effects of development on the special qualities of the battlefield should be assessed. The assessment should consider the effects of development on key landscape characteristics, including cumulative effects. If necessary, development proposals should include appropriate mitigation and enhancement measures in accord with Historic Environment Scotland’s Historic Battlefields guidance. New development may also affect the setting of Fyvie Castle Inventory Garden and Designed Landscape. However, site OP1...”

Garmond

6. Deleting the ‘Flood Risk’ title and bullet point in their entirety from the Garmond settlement statement on page 444.

7. Deleting the final sentence of the ‘Strategic drainage and water supply’ bullet point under the heading ‘Services and Infrastructure’ from the Garmond settlement statement on page 444.

Kirkton of Auchterless

8. Deleting the ‘Flood Risk’ title and bullet point in their entirety from the Kirkton of Auchterless settlement statement on page 446.

9. Adding the following new second sentence to the ‘Strategic drainage and water supply’ bullet point under ‘Services and Infrastructure’ in the Kirkton of Auchterless settlement statement on page 446:

“Private systems may not be feasible due to unsuitable ground conditions.”

10. Adding the following new heading and bullet point under ‘Services and Infrastructure’ in the Kirkton of Auchterless settlement statement on page 446:

“Health and care facilities: Residential development may be required to contribute towards

the creation of additional capacity at the Fyvie/ Oldmeldrum Medical Group facilities.”

Rothienorman

11. Removing the second bullet point under the heading ‘Flood Risk’ from the Rothienorman settlement statement on page 484.

12. Adding the following sentence to the beginning of the ‘strategic drainage and water supply’ bullet point under ‘Services and Infrastructure’ in the Rothienorman settlement statement on page 485:

“There is limited capacity at Rothienorman Waste water Treatment Works.”

St Katherines

13. Replacing the first four sentences of the ‘strategic drainage and water supply’ bullet point under the heading ‘Services and Infrastructure’ in the St Katherines settlement statement on page 488 with:

“There is no public waste water infrastructure in St Katherines.”

14. Replacing the title and first paragraph of the allocation summary for OP1 (Cromlet Park West) in the St Katherines settlement statement on page 489 with:

“OP1: Cromlet Park West
Allocation: 15 homes

This site was previously allocated as site OP1 in the LDP 2017. The site has Full Planning Permission for 15 homes (planning application reference APP/2019/0175). Access to the site will be from the unclassified road running along the southern boundary of the site. A new adoptable footway will require to be provided to the A947 and the provision of a bus layby and village gateway. Active travel links should also be provided from within the development to the surrounding countryside to increase sustainable travel within Aberdeenshire, and in particular with the services in the neighbouring village of Fyvie. The design of the homes on the site should be respectful to the setting of the village and to neighbouring housing styles.”

15. Amending the entry for St Katherines OP1 in the relevant table in Appendix 6 to increase the site capacity to 15 and add 10 homes to the “Local Growth RHMA” column. (Note – a revised version of Appendix 6, incorporating all the recommended modifications, is provided at the end of this report.)

16. Deleting allocation OP2 Land north of St Katherines from the St Katherines settlement statement on page 489 and map on page 490 and amending the settlement boundary to revert to that shown on page 345 in the existing local development plan.

17. Deleting the entry for St Katherines OP2 from table 2 in Appendix 1 Employment Land Allocations on page 99.

18. Deleting the entry for St Katherines OP2 from the relevant table in Appendix 6 Housing Land Allocations. (Note – a revised version of Appendix 6, incorporating all the recommended modifications, is provided at the end of this report.)

Woodhead

19. Adding a new 'Flood Risk' heading after the final paragraph of the 'Natural and Historic Environment' section and bullet point in the Woodhead settlement statement on page 518 to read:

"Flood Risk

- Parts of Woodhead are susceptible to surface water flood risk."

20. Adding the following new 'Strategic drainage and water supply' bullet point and text to the 'Services and Infrastructure' section in the Woodhead settlement statement on page 518:

"Strategic drainage and water supply: There is no public waste water infrastructure in Woodhead."

Issue 32	Blackburn	
Development plan reference:	Proposed LDP, Appendix 7D Garioch, Page 528-531	Reporter: Sinéad Lynch
Body or person(s) submitting a representation raising the issue (including reference number):		
<p>PP0005 Kevin Cowieson PP0009 Andrew Mckeown PP0010 Carol Ogston PP0011 Michael and Lorraine Burns PP0017 Caroline Woodford PP0044 Ian Woolley PP0047 Gareth Lean PP0054 Laura Simpson PP0056 Keith Smith PP0252 Marshall Farms Ltd PP0253 Marshall Farms Ltd PP0277 David Ross PP0301 Roger Twist PP0335 Mr and Mrs Thomson PP0883 Julian Mercer PP0934 Stewart Milne Homes PP0976 Goldrose No 2 Ltd PP1126 CHAP Group (Aberdeen) Ltd PP1219 Scottish Environment Protection Agency PP1241 Nestrans</p>		
Provision of the development plan to which the issue relates:	Blackburn Settlement Statement	
Planning authority's summary of the representation(s):		
<p><u>Site R1 – For allotments/community growth space</u></p> <p>Two representees have indicated support for the inclusion of site R1. Development of the site for allotments would meet an aspiration of the community and go some way to meeting the shortfall of community growing space available in the locality (PP0047 and PP0883).</p> <p>Scottish Environment Protection Agency (SEPA) has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation of R1 (RD0214.B). No modification sought (PP1219).</p> <p>A number of representees object to inclusion of site R1 (PP0005, PP0009, PP0010, PP0011, PP0017, PP0044, PP0054, PP0056, PP0277, PP0301 and PP0335). A range of reasons were cited including that:</p>		

- There are concerns surrounding site delivery in terms of access, accessibility and parking (PP0005, PP0009, PP0010, PP0011, PP0017, PP0044, PP0054, PP0056, PP0277, PP0301 and PP0335), particularly in terms of access to Scottish Water's pumping station (PP0009, PP0011, PP0044 and PP0054).
- The area is significantly important open space and is used by dog walkers and as a children's play area (PP0009, PP0010, PP0017, PP0044, PP0054, PP0056, PP0277, PP0301 and PP0335).
- The steep topography and existing group conditions make the site unsuitable for allotments (PP0005, PP0017, PP0044, PP0054, PP0056, PP0277, PP0301 and PP0335).
- There would be adverse impact on neighbouring residential amenity (PP0005, PP0009, PP0044, PP0054 and PP0056).
- It is not clear how the existing path network would be affected (PP0005, PP0009 and PP0017).
- There are mature trees within the site (PP0009).
- The proposed use may impact upon local drainage arrangements (PP0017, PP0044, PP0301 and PP0335).
- The site lacks services to support allotments, i.e., water and electricity (PP0044).
- Allotments are old fashioned and not required (PP0054).
- The site is not sustainable (PP0301).
- There is insufficient information provided in the Proposed Local Development Plan (PLDP) (PP0005).
- The site should be reinstated as protected land as per the Local Development Plan (LDP) 2017 (PP0009, PP0017 and PP0044).
- An alternative site for allotments could be established at Burn Park adjacent to the river as there is plenty space there and it is away from residential areas. This area could also benefit from being tidied up (PP0010).
- Provision for allotments should be delivered as part of site OP1 (PP0017, PP0044 and PP0301).

Site BUS – Safeguarded for business uses

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation of BUS, (RD0214.B). No modification sought (PP1219).

Flood Risk

SEPA request that for consistency the additional text is added to the second 'Flood Risk' bullet point to state that a Flood Risk Assessment may be required (RD0214.B) (PP1219).

Services and Infrastructure

Nestrans has confirmed that they are attempting to get clarity from Transport Scotland on their proposals for an update of the A96 in Blackburn (RD0227.A). No modification sought (PP1241).

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Caskieben

A representee has expressed support for the inclusion of site OP1 for 240 homes. The site is in the most appropriate location for housing within the settlement, as accepted through previous Local Development Plan-making processes, the Main Issues Report (MIR) and now the Proposed Local Development Plan (PLDP). The higher number of homes allocated is welcomed, given that Blackburn is within a Strategic Growth Area (SGA), on the basis that final numbers will be determined through detailed consideration in line with housing policy. The representee has included two Appendices (RD0036.A and RD0036.B) in their representation which provides further detail to support their position (PP0253).

SEPA has recommended that reference to the Black Burn is removed in the allocation as the western part of the site is over 100m away from the Black Burn and is replaced with text requiring a buffer strip (RD0214.B) (PP1219).

Three representees believe that site OP1 should be removed on the basis that it is not deliverable and has remained largely constrained since its allocation in 2012 (PP0934, PP0976 and PP1126). Another option suggested would be to reallocate site OP1 as a reserved site, until it can be demonstrated that the known (ownership) constraint has been overcome, but this is on the proviso that an alternative site is allocated to cover the lost housing numbers from the effective land supply (PP1126).

A representee questions the rationale of increasing the capacity of site OP1 from the 150 homes stated in the development bid to 268 homes. Concern is expressed that using a broad-brush method to artificially increase its capacity is at odds with the Council's focus on allocating sites that are capable of delivery within the period of the PLDP (PP1126).

Non-Allocated Site – Bid Site GR005 – Land at Kinellar Estate

A representee requests that bid site GR005 be allocated for 50 homes, employment land and community uses. The representee has indicated that the landowners at both bid sites GR005 and GR033 are interested in working together to ensure the future of Blackburn is properly masterplanned for a high quality, sustainable community. The bid site would provide sufficient capacity to meet future housing need and deliver services and infrastructure in the settlement, relieving pressure on existing facilities identified in the Settlement Statement. Westward expansion of Blackburn is logical as it is adjacent to employment uses, could be phased adjacent to the existing settlement boundary, can accommodate a mix of uses contributing to sustainability of the town, existing core path on bid GR033 provides connectivity and there are constraints to development at all other sides of the settlement. The site is within the 1.6km accessibility threshold for walking/cycling to facilities contained in Planning Advice Note (PAN) 75, with core paths and bus services within 400m and is not more remote than OP1; Historic Environment Scotland (HES) has not objected to the allocation and potential impact on the listed building would be addressed by any masterplan; OP1 is also on prime agricultural land; protected species would be protected with new landscape planting opportunities and woodland can be retained with buffer strips incorporated similar to OP1. The presence of the Health and Safety Executive (HSE) consultation zone does not preclude the development of employment, facilities and open space on this site. The sites have appropriate topography, have defensible boundaries, do not flood, waste water treatment works (WWTW) has a growth project triggered, school has capacity, no requirement for access onto the trunk road, provide more natural green space, and would not be out of character in the landscape. The representee has included an Appendix (RD0180.A) in their representation

which provides further detail to support their position (PP0976).

Non-Allocated Site – Bid Site GR033 – Land at Hillhead of Glasgoego

Two representees requests that bid site GR033 be allocated for 300 homes (PP0934 and PP0976). It is argued that the site should be included to address the shortfall in housing land supply and provide effective land in accordance with the Strategic Development Plan (SDP) Spatial Strategy. The site supports and benefits from existing services and employment available in Blackburn and will deliver a high-quality development in the right location. Constraints associated with the site can be overcome or suitably mitigated. The representee has included an Appendix (RD0177.A) in their representation which provides further detail to support their position (PP0934).

Non-Allocated Site – Bid Site GR085 – Land East of Cairntradlin

A representee requests that bid site GR085 be allocated for 108 homes. It is argued that GR085 fits with Scottish Planning Policy (SPP) principles, will assist in meeting a predicted housing land allocation shortfall likely to occur in the LDP 2021 period, is deliverable in the short-term and is not encumbered by any development constraints. The housing would take cognisance of the HSE pipeline consultation zones and the site will not be split due to the Transco pipeline like other bids. It is contained by a natural bowl like landscape, and it follows the existing pattern of housing development in Blackburn making it an appropriate expansion of the settlement. The representee highlights that Blackburn is located immediately north of the A96 and within the Aberdeen to Huntly SGA, and it is the closest settlement to Aberdeen making it a prime location for further housing allocations. The Council has previously acknowledged that the Aberdeen to Huntly SGA, has not performed as anticipated with delivery of housing, and it will not be affected by the dualling of the A96. Blackburn boasts several local facilities, as well as an industrial estate, but that new housing will be needed to support them, reporting that the school role is forecast to decline in the future. The representee disagrees with the MIR assessment of site GR085 that it would elongate the settlement. There is little difference between this site and OP1 in terms of walking distances. Site GR085 relates well to, and benefits from strong connections to the existing settlement services and centre. The Strategic Environmental Assessment (SEA) of OP1 and GR085 are similar, but that it could be argued that site GR085 could have a more positive than site OP1 post mitigation, particularly in terms of landscape. The representee has included a number of Appendices (RD0196.A, RD0196.B and RD0196.C) in their representation which provides further detail to support their position (PP1126).

Non-Allocated Site – Bid Site GR088 – Land North of Site P5, Caskieben

A representee requests that bid site GR088 be allocated as a Future Opportunity Site (FOP) to come forward if there is demand for further housing during the Plan period. It is argued that there is clear demand for further housing in Blackburn due to its proximity to Aberdeen City and being within an SGA. This demand is evidenced by allocation of site OP1, with land to the northwest of OP1 being a logical location for future housing. The representee highlights that Planning Officers' comments made within the MIR regarding landscape and visual impact, flood risk, and detachment from the settlement can be addressed. The site was supported by Officers at the MIR stage and there is no reason why the site could not be identified as a FOP/reserved site. The representee has included two Appendices (RD0035.A and RD0035.B) in their representation which provides further detail to support their position (PP0252).

Modifications sought by those submitting representations:

Site R1 – For allotments/community growth space

Modify the PLDP to remove site R1 (PP0005, PP0011, PP0054, PP0056, PP0277 and PP0335).

Modify the PLDP to remove site R1 and reinstate protected land designation (PP0009, PP0044 and PP0301).

Modify the PLDP to remove site R1 and reserve land at Burn Park for allotments (PP0010).

Modify the PLDP to remove site R1 and include land for allotments as part of site OP1 (PP0017, PP0044 and PP0301).

Flood Risk

Modify the PLDP to include the following text to the second 'Flood Risk' bullet point, "A Flood Risk Assessment may be required." (PP1219).

Site OP1 – Caskieben

Modify the PLDP to remove the third sentence in the first paragraph, "A buffer strip is required to preserve the nature conservation value of the Black Burn and the woodlands of the "Sycamores" and Caskieben Road." and the seventh sentence "Enhancement of the Black Burn through re-naturalisation and removal of any redundant features, requires to be investigated." and replace with "A buffer strip will be required adjacent to the small watercourse that runs through the site which should be integrated positively into the development. The buffer strip will need to allow sufficient space for restoration of the straightened watercourse. Enhancement and removal of any redundant features will require to be investigated." (PP1219).

Modify the PLDP to remove site OP1 (PP0934, PP0976 and PP1126).

Modify the PLDP to reallocate site OP1 as a FOP/reserved site (PP1126).

Modify the PLDP to clarify the rationale of increasing the capacity of site OP1 from the 150 homes stated in the development bid to 268 homes (PP1126).

Non-Allocated Site – Bid Site GR005 – Land at Kinellar Estate

Modify the PLDP to include bid site GR005 for 50 homes, employment land and community uses (PP0976).

Non-Allocated Site – Bid Site GR033 – Land at Hillhead of Glasgoego

Modify the PLDP to include bid site GR033 for 300 homes (PP0934 and PP0976).

Non-Allocated Site – Bid Site GR085 – Land East of Cairntradlin

Modify the PLDP to include bid site GR085 for 108 homes (PP1126).

Non-Allocated Site – Bid Site GR088 – Land North of Site P5, Caskieben

Modify the PLDP to include bid site GR085 as a FOP/ reserved site for housing (PP0252).

Summary of responses (including reasons) by planning authority:

Site R1 – For allotments/community growth space

Support expressed for site R1 is noted along with comments from SEPA.

The Council notes that there are concerns surrounding the proposed allocation. The designation summary makes it clear that until such time as the proposed allotments/community growing space comes forward that the site should be maintained as open space. A number of matters raised by representees could be addressed through Development Management procedures at such time as a detailed proposal comes forward. Detailed assessment has not been undertaken by Officers as to the suitability of other locations proposed by representees. As such, it is not considered appropriate to suggest an alternative site for allotments at this stage. Aberdeenshire Council believes it appropriate to reserve the site as proposed. No change is required.

Should the Reporter be minded, to make an amendment to reinstate the protected land designation and not identify an alternative site within the settlement, then the Council recommend that the Settlement Statement Vision could be modified to read, “To meet a community aspiration development of allotments/community growing space of an appropriate scale and location within the settlement may be supported should a suitable site be identified during the Plan period.”

Site BUS – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA’s comment through a non-notifiable modification, as set out in the list of Non-Notifiable Modifications.

Services and Infrastructure

Comments from Nestrans and SEPA are noted. No change is required.

Site OP1 – Caskieben

Support expressed for site OP1 is noted.

The Council confirms that it intends to address SEPA’s comment through a non-notifiable modification, as set out in the list of Non-Notifiable Modifications.

The Council acknowledges that site OP1 has been allocated since 2012 but has yet to be delivered. However, the Council maintains that the preference, at this time, is to focus development towards, the east of the settlement (see MIR Issues and Actions Papers,

Issue 96 Blackburn, AD0040.E, page 8). Progress has been made in that the ownership constraint is no longer applicable to the site (see HLA 2019, AD0022, page 69). Should the site not come forward during the early part of the Plan period, the Council would, at that point, be minded, to pursue alternative site(s) including undertaking necessary studies and discussions with relevant stakeholders to establish if and where development should be directed in Blackburn. For the meantime, efforts will be made by the Council's Planning and Environment Service Delivery Team to facilitate delivery of the OP1 site. No change is required.

The site capacity has been amended to better reflect the scale of development that could be reasonably achieved on the site. In the Aberdeen Housing Market Area, the Council have applied a standard density of 25 homes per hectare to existing undeveloped opportunity sites as well as new sites. At the time of the MIR, applying this density to site OP1 resulted in a possible development of 268 homes. However, following consideration of responses to the MIR, an area of land was removed from the developable area which had the effect of reducing the available capacity to 240 homes (see MIR Issues and Actions Papers, Issue 96 Blackburn, AD0040.E, page 8-10). The allocation capacity is indicative and further consideration will be required at such time as a development proposal comes forward. No change is required.

Non-Allocated Site – Bid Site GR005 – Land at Kinellar Estate

The Council does not support allocating bid site GR005 for 50 homes, employment land and community uses. Bid site GR005 was not identified as preferred option in the MIR 2019 (see MIR 2019, Appendix Garioch, AD0038.E, page 10). Indication that the landowners of bid sites GR005 and GR033 would be willing to work together to deliver development is noted and is welcomed by the Council. However, as outlined in the Issues and Actions Papers (AD0040.E, page 8-10), concern exists from both HES and NatureScot (Scottish Natural Heritage). It is maintained that it is not appropriate to allocate bid site GR005 in the LDP. In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site GR033 – Land at Hillhead of Glasgoego

The Council does not support allocating bid site GR033 for 300 homes. Bid site GR033 was not identified as a preferred option in the MIR 2019 (see MIR 2019, Appendix Garioch, AD0038.E, page 10). As noted above and outlined in the Issues and Actions Papers development for the forthcoming Plan period should be focused on the eastern side of the settlement, (AD0040.E, page 8-10). Following delivery, or any substantial removal of site OP1 following a future review of the LDP, consideration should be given as to the appropriateness for development allocation(s) to the west of the settlement. Future allocation of site GR033, or part thereof, will require further consideration as part of a future Plan review to establish need for such an allocation and to ensure that constraints can be overcome and/or suitably mitigated against. For the time-being however, it is not deemed appropriate to allocate site GR033 in the LDP. In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site GR085 – Land East of Cairntradlin

The Council does not support allocating bid site GR085 for 108 homes. Bid site GR085 was not identified as a preferred option in the MIR 2019 (see MIR 2019, Appendix Garioch, AD0038.E, page 10). It is maintained that development at this location would elongate the settlement away from the settlement core. As noted above, and within the Issues and Actions Papers, our preference at this stage is to focus development to the east of the settlement followed, potentially, by development to the west. Promotion of sites to the north of the settlement is our least preferred option at this time (see MIR Issues and Actions, AD0040.E). In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site GR088 – Land North of Site P5, Caskieben

Bid site GR088 was identified as a reserved option in the MIR 2019 (see MIR 2019, Appendix Garioch, AD0038.A, page 9). As outlined in the Issues and Actions Papers FOP sites/ strategic reserve housing land have not been identified in the PLDP (AD0041.A, page 86-87). As such there is no need to identify bid site GR088 as a FOP site. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Reporter’s conclusions:

Preliminary matters

1. The examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.
2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” in relation to the Blackburn settlement statement. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Site R1 – For allotments/community growth space

3. Site R1 is an area of landscaped open space accessed from established residential areas to the south and east. It lies on the north-western edge of Blackburn, with open countryside to the north and west. The site incorporates parts of the existing footpath network in the area and at the time of my site inspection appeared well used as open space for recreation. It is identified in the existing plan as designated protected land, “to conserve the landscape/setting, which contributes to the green network”.

4. There are a number of representations seeking the removal of the allocation, based on

concerns regarding the loss of open space, footpaths, landscaping, accessibility and parking issues. Alternative locations for allotments/community growing space have been suggested, including at site OP1 (Caskieben).

5. I agree that, as an assessment of potential sites has not been undertaken for the settlement, it would not be appropriate to identify a site-specific allocation at this stage in the plan process.

6. The council has suggested that allocation R1 could be deleted, with the site reverting to a protected land designation. In addition, the council has suggested that a general aspiration for allotments/community growing space could be added to the vision section instead. I am satisfied that the suggested amendments to the site allocation and the vision section would provide an appropriate approach to the future provision of allotments/community growing space and allow potential sites to be considered in consultation with the local community. I also agree that site R1 should revert to a protected land designation, “to conserve the landscape/setting, which contributes to the green network”, as shown in the current local development plan. Modifications to this effect are set out below.

Flood Risk

7. The Scottish Environment Protection Agency (SEPA) has requested that additional text is added to the second ‘Flood Risk’ bullet point to state that a flood risk assessment may be required. I consider that the modification requested by SEPA would provide clarification on flood risk matters for allocation BUS and OP1. A modification on this matter is recommended.

Site OP1 – Caskieben

8. Site OP1 Caskieben is a large open site located to the south-east of the settlement. At the time of my site visit, it was in agricultural use. The site is bound to the east and north by substantial trees and planting, to the south and west by established residential development and the Black Burn and to the north/north-west by further agricultural land, which is the subject of bid proposal GR088.

9. The site is allocated for 240 homes, 190 of which would contribute towards meeting the strategic development plan allowance for the Aberdeen Housing Market Area.

10. There have been a number of representations objecting to the continued allocation of this site and suggesting alternatives in or adjacent to Blackburn. The representations note that the site has been allocated since 2012 and has been identified as constrained in the housing land audits carried out since then. The constraint was noted as being one of ownership, which may limit transport access options for the site. A representee questions the rationale of increasing the capacity of site OP1 from the 150 homes stated in the development bid.

11. The council advises that the ownership constraint has been resolved and that the site is expected to begin to deliver homes in the early part of the plan period. The site capacity reflects the standard density applied to sites within the Aberdeen Housing Market Area and changes to the developable area of the site.

12. I find that this approach to site density is consistent with paragraph 4.8 in the strategic development plan, which states that “land brought forward for housing must be used efficiently”. The exact number of houses to be built on the site will be decided at planning application stage. No substantive evidence has been provided to show that the assumed density cannot be delivered on this site. No modification is required.

13. I am satisfied that the constraint relating to ownership has been resolved, and the owner of the site indicates that discussions are taking place with a housebuilder, with the intention of delivering the site within the plan period. I note that the submissions relating to both allocated and bid sites in Blackburn refer to the strong demand for housing in this location and the need for homes in Blackburn. I consider that this demand should contribute towards enabling the delivery of site OP1, now that the ownership constraint has been resolved.

14. I note the representation from SEPA, which recommends removal of the reference to the Black Burn, as the site boundary for OP1 is over 100 metres from the burn itself. SEPA has suggested alternative wording for inclusion in the allocation summary, which I agree would more accurately address matters relating to the small watercourse, which runs through the site. Modifications are recommended below.

Non-Allocated Bid Site GR088 – Land North of Site P5, Caskieben

15. A representation seeks to have bid site GR088 allocated in the plan as a future opportunity site for 50 homes. The council had identified the site as a reserved option in the Main Issues Report. However, at the proposed plan stage, the council decided not to include future opportunity (or reserved) sites.

16. Representations relating to the principle of identifying future opportunity sites in the plan are addressed under Issue 2. This concludes that, whilst the strategic development plan allows the plan to make provision for sites for the period 2033 – 2040, there is no requirement to do so. We therefore find that the council’s decision not to include future opportunity sites in this plan is in accordance with the strategic development plan.

17. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, we conclude that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area.

18. The allocation summary for site OP1 refers to possible future expansion to the northwest, and this is to be incorporated into the layout, design and siting of development on site OP1. This suggests that development on bid site GR088 may be supported in future, if required. However, as no evidence has been provided to suggest that the site would be deliverable in the period up to 2032, I do not consider that bid site GR088 could be relied upon to address the shortfall in housing land in the Aberdeen Housing Market Area. No modification is required.

Non-Allocated Bid Site GR085 – Land East of Cairntradlin

19. A representation has been submitted seeking an allocation for residential development on land east of Cairntradlin. This site lies to the north of the settlement and straddles the B979, with the majority of the site lying to the west of the road. At the time of

my site inspection, the site appeared to be in agricultural use.

20. The site lies adjacent to the northern settlement boundary of Blackburn, with established residential development to the south. To the north, east and west of the proposed site is agricultural land and open countryside.

21. The supporting information submitted for bid site GR085 addresses matters relating to proximity to local facilities, site opportunities and constraints and provides an indication of development parameters. It states that the site is free from constraints, is being promoted by an established house builder, and could deliver up to 108 homes in the plan period.

22. The strategic environmental assessment identifies mainly neutral effects, with the exception of the loss of prime agricultural land and a Health and Safety pipeline consultation zone. I am satisfied that, in line with Policy PR1 (Protecting Important Resources), the loss of prime agricultural land may be justified if required to meet strategic housing needs and there are no reasonable alternative sites. The representation advises that by concentrating development to the west of the site, it is possible to minimise the impact of the Transco pipeline.

23. At the Main Issues Report stage of the plan preparation process, the council did not support the allocation of the site, as it was considered remote from the key services and the centre of the village. The constraints in the form of the loss of prime agricultural and the pipeline were noted.

24. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, we conclude that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. I acknowledge that this site could potentially contribute to meeting this shortfall.

25. However, given the availability of other sites to meet the strategic development plan allowance for the Aberdeen Housing Market Area (see Issue 5), I do not consider that the loss of prime agricultural land would be justified. Furthermore, I have insufficient information before me to reach a conclusion on the implications of the pipeline consultation zone. I therefore conclude that this site should not be identified as a housing allocation. No modification is required

Non-Allocated Bid Site GR005 – Land at Kinellar Estate

26. This site is the subject of a representation which suggests that it could be developed in conjunction with bid site GR033 which lies to the west, north and east of GR005. The representation seeks a mixed use development for the site, including 50 homes, employment and community uses.

27. Bid site GR005 lies to the west of Blackburn, and to the north-west of the Kinellar roundabout and the A96. It comprises the Category B listed Kinellar House and grounds, with substantial wooded areas and a designed landscape.

28. The representation states that the site lies adjacent to allocated and existing employment land; it is logical westward expansion of Blackburn; it is free from constraints;

Historic Environment Scotland has not objected to the proposal; there are no landscape issues and the woodland would be retained; and it is a viable alternative to site OP1. It advises that the pipeline only impacts a small corner to the west of the site which could be addressed through appropriate land uses.

29. The strategic environmental assessment identifies mainly neutral and negative effects. The loss of a small area of prime agricultural land, the Health and Safety pipeline consultation zone, the impact on Kinellar House and the scheduled ancient monument are noted. At the Main Issues Report stage, the council did not support the allocation of the site, as it was considered that there could be a negative impact on Kinellar House and the wider designed landscape.

30. Whilst the representation suggests that there has been no objection from Historic Environment Scotland, I note (from the Issues and Actions Paper) that both Historic Environment Scotland and NatureScot had raised concerns regarding the proximity of Kinellar House. These concerns relate to the potential impact of development on both the house and the designed landscape. No evidence has been submitted with the representation to show how these concerns could be addressed.

31. Based on the information before me, I conclude that that development on this site would have a detrimental impact on Kinellar House and its designed landscape. Given the availability of other sites to meet the strategic development plan allowance for the Aberdeen Housing Market Area, I do not consider that meeting housing need would outweigh the negative environmental effects. No details have been provided in relation to the scale, siting or nature of employment or community uses to allow me to assess these.

32. I conclude that this site should not be allocated. No modification is required.

Non-Allocated Site Bid Site GR033 – Land at Hillhead of Glasgoego

33. Representations seek the allocation of bid site GR033 for 300 homes and associated infrastructure in this plan. The site lies to the west of Blackburn, on land to the north of the B979 and a business allocation. To the north of the site is open countryside, to the east is established residential development and the new primary school, and to the west is Kinellar House and its designed landscape and woodlands. At the time of my site inspection, the site appeared to be in agricultural use.

34. The representee has submitted a comprehensive indicative development strategy illustrating the potential phasing and delivery of the site. A Transport Appraisal has been carried out, which has identified options for access, and information has been provided to address the constraints identified by the council. The representations emphasise the track record of delivery from the house builder promoting this site.

35. The representations suggest that site OP1 remains constrained and that there is significant unmet demand for housing in Blackburn that will remain unmet unless an alternative site is allocated in this plan.

36. The strategic environmental assessment identifies mainly neutral effects arising from the proposed development, with the exception of the loss of prime agricultural land and the Health and Safety pipeline consultation zone.

37. At the Main Issues Report stage of the plan preparation process, the council did not support the allocation of the site, as it was considered that the scale of development proposed was too great and there would be a potential loss of trees. I note that the extent of site GR033 has been reduced in response to the council's comments at Main Issues Report stage. However, the Issues and Actions Paper concludes that there are still a number of constraints and development in this plan period should be focussed on the eastern edge of Blackburn and site OP1.

38. The council has indicated that, should site OP1 fail to progress, then consideration could be given to changing the strategy for Blackburn to allow development to the west of the settlement. However, the evidence before me suggests that site OP1 would be deliverable in the plan period and therefore a change in strategy would not be justified at this time.

39. I conclude that housing development on this site could potentially be accommodated with limited environmental impact. However, it would result in a significant westward extension of the settlement involving the loss of prime agricultural land, which would not be justified, given the availability of other sites to meet the strategic development plan allowance for the Aberdeen Housing Market Area. I note that the representee is confident that the potential pipeline constraint can be overcome. However, the position of the Health and Safety Executive on this matter is unknown and I have insufficient information before me to reach a view on this matter.

40. In conclusion, I agree with the council that the allocation of this site would not be justified at this time. No modification is required.

Reporter's recommendations:

Modify the local development plan by:

1. Inserting the following new second paragraph to the introductory vision section on page 528:
"To meet a community aspiration, development of allotments/community growing space of an appropriate scale and location within the settlement may be supported, should a suitable site be identified during the Plan period."
2. Inserting the following new entry under the protected land section of the settlement features table on page 528:
"P9 To conserve the landscape/setting, which contributes to the green network."
3. Deleting the reserved land section (including reservation R1) from the settlement features table on page 528.
4. Replacing the R1 designation with protected land designation P9 on the Blackburn settlement map on page 531.
5. Adding the following sentence to the second bullet point of the flood risk section on page 528:
"A Flood Risk Assessment may be required."
6. Removing the third sentence (A buffer strip.....Caskieben Road) in the first paragraph of

the allocation summary for OP1 Caskieben on page 530.

7. Replacing the existing seventh sentence (Enhancement of the Black Burn... investigated) in the first paragraph of the allocation summary for OP1: Caskieben on page 530 with the following three sentences:

“A buffer strip will be required adjacent to the small watercourse which runs through the site and which should be integrated positively into the development. The buffer strip will need to allow sufficient space for restoration of the straightened watercourse.

Enhancement and removal of any redundant features will require to be investigated.”

Issue 33	Insch	
Development plan reference:	Proposed LDP, Appendix 7D Garioch, Page 551-554	Reporter: Sinéad Lynch
Body or person(s) submitting a representation raising the issue (including reference number):		
<p>PP0019 John Stuart Murrial Ltd PP0092 Diana Barnard PP0093 William John Blackwood PP0194 Hayden Charles Killoh PP0272 Scottish Water PP0472 Scotia Homes and Drumrossie Developments PP0473 Scotia Homes and Drumrossie Developments PP0618 Mr and Mrs Dix PP0863 Bennachie Community Council PP1219 Scottish Environment Protection Agency PP1241 Nestrans</p>		
Provision of the development plan to which the issue relates:	Insch Settlement Statement	
Planning Authority's summary of the representation(s):		
<p><u>General</u></p> <p>Nestrans has indicated that they are undertaking option appraisal work aiming to improve accessibility at Insch Railway Station. They are also seeking improvements to rail services at Insch as part of a second phase of Aberdeen to Inverness improvements. No modification sought (RD0227.A) (PP1241).</p> <p>Bennachie Community Council (BCC) has requested that a network of safe recreation routes be planned to link communities in the BCC area is included in the PLDP (PP0863).</p> <p><u>Vision</u></p> <p>A representee has requested the wording from the LDP 2017 regarding the household waste and recycling centre be reinstated. It is not appropriate for the existing site to continue in operation, and the Council should provide alternative facilities for Insch that would accommodate both existing and future requirements. The HWRC at Market Street is not an appropriate location, has an adverse impact on residential amenity of nearby residents and does not meet SPP in terms of sustainability. This has not been properly followed through in terms of the Council's Waste Strategy, and the Reporter's recommendations from the last LDP ignored. It is misleading to promote the Insch HWRC as the "Market Street car park" (PP0618).</p>		

Site R1 – For environment and access improvements

Scottish Environment Protection Agency (SEPA) has confirmed that that they have no flooding, strategic drainage or water supply issues with the designation summary for site R1 (RD0214.B). No modification sought (PP1219).

A representee stated that development of any type on site R1 would have an impact on neighbouring property. The area to the east of the site should not be used as an access point due to flood risk and noise. It was noted that there are existing boundary issues, subject to legal action. The representee has included an Appendix (RD0024.A) in their representation which provides further detail to support their position (PP0194).

Site R2 – For a town park

SEPA has confirmed that that they have no flooding, strategic drainage or water supply issues with the designation summary for site R2 (RD0214.B). No modification sought (PP1219).

Site R3 – For the enhancement of the walkways

SEPA has confirmed that that they have no flooding, strategic drainage or water supply issues with the designation summary for site R3 (RD0214.B). No modification sought (PP1219).

Site R5 – For town centre environmental improvements

SEPA has confirmed that that they have no flooding, strategic drainage or water supply issues with the designation summary for site R5 (RD0214.B). No modification sought (PP1219).

Site R6 – For a replacement primary school

A representee has requested that site R6 be relocated elsewhere. Development would affect the view of Dunnydeer Hillfort. The road infrastructure would not cope, Denwell Road has no parking and is in the main route into Insch from the A96. The crossroads at the end of Denwell Road/Drumrossie Street is already unable to cope with traffic flow. It is considered that the site is inappropriate for a new larger school (PP0092).

SEPA have noted that they have not been invited to comment on the site previously in the Plan process. There is a small watercourse through the centre of the site and on the north west boundary, and Valentine Burn is on southern boundary. A FRA may be required and buffer strips will be required alongside the watercourses. Enhancement of the straightened watercourses and removal of any redundant features will require to be investigated. This is why the text was requested to be added into the 'Flood Risk' section. No change is required.

Flood Risk

SEPA has requested the second bullet point of the 'Flood Risk' section is amended to remove the reference to SEPA and the Shevock and add site R4 to note that a detailed flood study by Aberdeenshire Council has confirmed that sites OP1 and R4 are at

significant risk of flooding (RD0214.B) (PP1219).

SEPA also request the third 'Flood Risk' bullet point is amended to remove the reference to SEPA and state that a Flood Risk Assessment (FRA) will be required for site R4. SEPA reports that a recent flood study for Inch has shown that both the existing hospital and the site for the extension are at high risk of flooding and this risk will increase in future because of climate change. States, unless flood prevention measures are brought forward to give long-term protection to Inch, then a relocation of the hospital may be a more sustainable approach in the long-term. Any development on this site must demonstrate it will not increase flood risk to neighbouring properties and be constructed to be flood resistant (RD0214.B) (PP1219).

Additionally, SEPA requests a new 'Flood Risk' bullet point is added to state that a Flood Risk Assessment may be required for sites OP3, R6 and BUS, buffer strips will be required along with enhancement of any straightened watercourses and removal of any redundant features will require to be investigated (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Scottish Water has requested that the following text be inserted under 'Strategic drainage and water supply', "There is currently sufficient capacity at Inch Waste Water Treatment Works. A Drainage Impact Assessment may be required to address network issues. Early engagement with Scottish Water is recommended." (PP0272).

Site OP1 – Land at North Road

SEPA has indicated that they wish to object to site OP1 unless the allocation summary states that if the extant permission lapses it is unlikely any further development proposal would be permissible due to new flood risk information being provided by the Council Flood Study for Inch. SEPA has suggested further consultation would be required with the Council's Flood Risk and Coast Protection Team as the detailed Flood Study has concluded that the site is at higher risk than was presented in the developer's Flood Risk Assessment (RD0214.B) (PP1219).

Two representees, including BCC, have objected to inclusion of site OP1. Reasons cited include:

- Development would cause overlooking and affect privacy and property value (PP0093).
- Development would impinge on the view of Dunnydeer (PP0093).
- No consideration has been made of how the boundary wall would be addressed (PP0093).
- Flood risk issues, details of which were not known at the time of the previous LDP (PP0863).
- The site could create potential traffic congestion problems associated with the planned road junction, and the operation of the railway level crossing on the B9002, the detail of this issue was unknown at the time of the previous LDP. BCC has identified a potential increase in traffic volume going through Inch associated with either of the options for the planned dualling of the A96, which would exacerbate

predicted traffic congestion problems in Insch associated with the planned junction required for site OP1, the detail of this issue was unknown at the time of the previous LDP (PP0863).

Site OP2 – Hillview South Road

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219).

Site OP3 – North of Insch Business Park

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP3 (RD0214.B). No modification sought (PP1219).

Non-Allocated Site – Bid Site GR015 – South of Insch Railway Station

Concerned that bid GR015, which was a designated as a reserved site in the MIR 2019, is not allocated in the PLDP. Site GR015 would see the natural growth of Insch in a southerly direction and provide approximately 60 homes with 25% as affordable housing, employment land, and much needed parking at Insch Railway Station, which is supported by Network Rail and would enhance sustainable transport linkages. In addition, it would provide green space for allotments, a defensible boundary and linkages to North Road, railway station and village facilities. The proposer is keen to promote volunteer and community interests, e.g. a farm shop/coffee shop. The MIR 2013 noted the site is well located but would be considered more favourable if there was a mixed element, which this proposal now provides. This site allows for the long-awaited improvements to Insch Railway station, which is considered one of the least accessible stations in Scotland and is one of the Planning Objectives for the village, notably “to improve accessibility at Insch Railway Station”. A Nestrans study identified parking to the south of Platform 1 as an option (PP0019).

Concerns have been raised about the GR015 site due to the lack of access to the station from the south side. The site is detached from the rest of the settlement and lacks direct vehicular access from within the settlement. Network Rail and Nestrans recently secured funding to provide DDA-compliant access linking the existing northern station building and car park with the southern platform. The planned enhancements further amplify the case that development on GR015 should not be supported. No modification sought. (PP0472).

Non-Allocated Site – Bid Site GR029 – Land at Drumrossie West, Drumrossie and Denwell Farm

A representee has requested that bid GR029 be allocated for a phased housing-led mixed-use development with retail/commercial, community uses, open space/landscaping and associated infrastructure (598 homes and 175sqm ground floor retail/commercial unit). All or part of the allocation should be included in the 2021 LDP. The proposed phasing in the masterplan has been updated since the development bid and MIR stages with the first phase situated on GR029a north of a recent development. The phasing was amended to allow for a more compact pattern of development in the initial phases and would allow for a linear park through the site. If allocations were to be made, they should follow the suggested phasing of the masterplan (PP0473).

Part of the site was preferred at the MIR stage for future housing (GR029a and GR029c), but no part of the site is included in the Proposed Plan as it was noted there was no intention to reserve future opportunity sites as the Strategic Development Plan considers there is sufficient allocations in the Rural Housing Market Area. Inch is in the Strategic Growth Area (SGA) where previously in the settlement statement there was an objective to meet housing need for the wider SGA, but this was removed from the PLDP and no new housing allocated. This is unacceptable as it is not going to solve the lack of affordable housing in the area and Huntly has delivered no housing for the wider SGA (PP0473).

Inch is an attractive area for housing with good connections with the A96 which has a project by the Scottish Government to dual. There are improvements being made to both the railway station and the line infrastructure at the station. Both of these will increase the capacity for regional travel. The conclusions of the Issues and Actions Papers are not accepted as it notes that GR029 does not merit allocation as there is sufficient housing allocations elsewhere in the RHMA. Each area has different needs, and some areas are better suited for development so the RHMA should not be seen as one area. The Issues and Actions paper consider that there is little justification for new housing but at the 2017 LDP the Reporter considered that there was significant and continuing demand for new housing in Inch. Since the 2012 LDP there has been a limited release of housing land. Therefore, the comment that Inch needs to consolidate from recent development is not accepted (PP0473).

Capacity issues at the Primary School are noted by the developer and discussions have happened with the Education Service and the Delivery Team. Site R6 is reserved for a new school and this site would be able help deliver the school in a gradual manner. Consultations have happened with the Council's Developer Obligations Team to discuss the options of capacity. Inch has excellent community provisions which could be enhanced by additional development (PP0473).

Due to the proposed phasing of the site is proposed at a similar pace to the recent growth of the town and the questioning of this in the MIR is not accepted. The impact on the townscape and landscape would be mitigated through phasing with the layout and design being of high quality with a strong commitment to extensive green and open space to help minimise impact. The recent housing to the west was completed by the same developer which was commended at the Design Awards. Strategic landscaping is proposed to further minimise the visual impact of the development and promoting biodiversity enhancement. There will be loss of prime agricultural land, but it is considered acceptable in terms of SPP as the development forms an essential component of the Settlement Strategy which was acknowledged by the Reporter in 2017. There may be increased traffic, and this was noted as a concern by respondents to the MIR. Access to and through the development have been planned with the intention of mitigating against congestion in local traffic circulation. Any further mitigation would be considered as part of a planning application. Also, there is an undersupply of affordable housing perceived to be an issue in Inch by the Council and local community, but the site would provide affordable housing in accordance with relevant policies in the Plan. The representee has included a number of Appendices (RD0075.A – RD0075.I) in their representation which provides further detail to support their position (PP0473).

Non-Allocated Site – Site OP2 (as identified in the LDP 2017) – Land at South Road

A representee has requested that site OP2 from the 2017 LDP be re-allocated in the LDP.

Insch has good connections by road and rail which is an advantage in terms of marketability potential. The site is in a logical location for future expansion of the Insch Railway Station platform and other facilities and with suitable means of access as existing. The site presents an opportunity for the remediation of brownfield land. The site OP2 in the 2017 LDP is not proposed to be carried forward in its current allocation as a Planning Permission in Principle (APP/2014/1334) was refused on the site. The OP2 site, as per the 2017 LDP, is the ideal place to provide infrastructure for the railway station and should be carried forward into the 2021 LDP as a reserved/ safeguarded site for the expansion of car parking at the station and any other infrastructure deemed necessary for the continued viability of the station. The representee has included a number of Appendices (RD0074.A – RD0074.E) in their representation which provides further detail to support their position (PP0472).

Modifications sought by those submitting representations:

General

Modify the PLDP to include the idea for a network of recreation routes in the BCC area be added to the proposed LDP as an aspiration or Vision statement to cover the BCC area (PP0863).

Vision

Modify the PLDP to revert the wording regarding the household waste and recycling centre back to what it appeared like in the 2017 LDP to state, "A site for a new household waste and recycling centre is required. The Council is in the process of identifying a site suitable for a new centre." (PP0618).

Site R1 – For environment and access improvements

Modify the PLDP to ensure that the area to the east of the R1 site is not used as an access point. (PP0194).

Site R6 – For a replacement primary school

Modify the PLDP to remove site R6 and identify a more suitable location for the site (PP0092).

Flood Risk

Modify the PLDP to remove text in the second 'Flood Risk' bullet point, "SEPA has indicated that site OP1 is at significant risk of flooding from the Shevock." and replace with "A detailed Flood Study, by Aberdeenshire Council, has confirmed the sites OP1 and R4 are at significant risk of flooding." (PP1219).

Modify the PLDP to amend text for the third 'Flood Risk' bullet point to read, "SEPA has indicated that a further detailed Flood Risk Assessment will be required for site R4 which will need to demonstrate any development proposed is designed to be capable of remaining fully operational and accessible during an extreme flooding event and will not increase flood risk elsewhere." (PP1219).

Modify the PLDP to add a new 'Flood Risk' bullet point, "Due to the presence of small watercourses running through or adjacent to the site, a Flood Risk Assessment may be required for sites OP3, R6 and BUS. Appropriate buffer strips will be required alongside the watercourses. Enhancement of any straightened watercourses and removal of any redundant features will require to be investigated." (PP1219).

Services and Infrastructure

Modify the PLDP to add wording under 'Strategic drainage and water supply' to read, "Early engagement with Scottish Water is recommended." (PP0272).

Site OP1 – Land at North Road

Modify the PLDP to add the following text to the allocation summary for site OP1, "If the extant permission lapses it is unlikely any further development proposal would be permissible due to new flood risk information being provided by the Council's Flood Study for Inch." (PP1219).

Modify the PLDP to remove site OP1 (PP0093 and PP0863).

Non-Allocated Site – Bid Site GR015 – South of Inch Railway Station

Modify the PLDP to include Bid Site GR015 to be allocated for 60 homes, employment land and parking for Inch Railway Station (PP0019).

Non-Allocated Site – Bid Site GR029 – Land at Drumrossie West, Drumrossie and Denwell Farm

Modify the PLDP to include bid site GR029 as an opportunity site for a phased housing-led mixed-use development with retail/commercial, community uses, open space/landscaping and associated infrastructure (598 residential units and 175sqm ground floor retail/commercial unit) (PP0473).

Non-Allocated Site – Site OP2 (as identified in the LDP 2017) – Land at South Road

Modify the PLDP to allocate the site classified as OP2 in the 2017 LDP for an amended use as safeguarded/reserved for expansion of Inch Railway Station, car parking or any other associated infrastructure (PP0472).

Summary of responses (including reasons) by planning authority:

General

Comments from Nestrans in relation to accessibility at Inch Station and improvements to rail services are noted. No change is required.

The aspiration for a network of paths connecting the area within the Community Council area is noted. This is something that would have been better to have been introduced as an idea earlier in the process to allow people to comment on the specific proposal. It would seem that it would be more appropriate for this to come through a Local Place Plan which in turn could then be introduced into a future LDP. The Local Place Plan regulations are still to be released by the Scottish Government, but local place plans are a way of a

community highlighting what they would like to see in their area which future LDPs would need to take cognisance of, this forming part of the Town & Country Planning (Scotland) Act 2019. No change is required.

Vision

The text in the LDP 2017 Vision related to identifying a site for a new Household Waste Recycling Centre (HWRC) is outdated and is no longer required following a review of all HWRCs. The Council's Waste Strategy initially proposed to close the site in Inch and not replace it, however, during the public consultation on the Strategy, the final Strategy retained the Inch site at reduced opening hours. The Waste Strategy was approved by the Infrastructure Services Committee in January 2019 (AD0112). Inch is well served by HWRCs in nearby towns such as Inverurie and Huntly whose sites are open 7-days a week. No change required.

Site R1 – For environment and access improvements

SEPA comments are noted. No change required.

Concerns regarding the use of the R1 site are noted. Any impacts on the amenity of neighbouring properties will be addressed at a planning application stage with proposals being assessed against relevant policies within the Plan. Additionally, concerns were raised in relation to flood risk, SEPA have commented to note that they have no flood risk issues with the site, therefore no change is required.

Site R2 – For a town park, Site R3 – For the enhancement of the walkways and Site R5 – For town centre environmental improvements

SEPA comments are noted. No change required.

Site R6 – For a replacement primary school

SEPA comments are noted. No change required.

Concerns regarding the location of a new school are noted. The site has been identified in the Plan since the 2012 LDP (AD0031.E, page 14-15) and remains to be the Council's position to have this land for the option for a new school. Issues relating to roads and transportation would be assessed when a planning application was submitted to ensure that an appropriate and safe solution was agreed. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the list of Non-Notifiable Modifications.

Services and Infrastructure

SEPA comments are noted. No change required.

The Council confirms that it intends to address Scottish Water's comment through a non-notifiable modification, as set out in the list of Non-Notifiable Modifications.

Site OP1 – Land at North Road

Concerns relating to the OP1 site are noted. Any impacts on the amenity of neighbouring properties will be addressed at a planning application stage with proposals being assessed against relevant policies within the Plan. Additionally, issues relating to infrastructure, including roads and flood risk would be assessed at the planning application stage through consultation with the relevant stakeholders. Also, as noted within the Housing Land Audit 2019 the site is effective with programmed completions of housing units until 2025 (AD0022, page 122). It is therefore considered to be appropriate to maintain the allocation of the OP1 as the issues raised within the representations can be addressed at the planning application stage. No change is required.

Site OP2 – Hillview South Road and Site OP3 – North of Insch Business Park

SEPA comments noted. No changes required.

Non-Allocated Site – Bid Site GR015 – South of Insch Railway Station

The Council does not support allocating bid site GR015 for 60 homes, employment land and parking for Insch Railway Station. Bid site GR015 was not identified as preferred option in the MIR 2019 (see MIR 2019, Appendix Garioch, AD0038.E, page 36) due to uncertainty over identifying a solution to providing access to the southern platform of the railway station. As such it is not clear whether the solution, included as part of bid GR015, would be taken forward. Until such time as this matter is resolved it is not considered appropriate to allocate the bid in the Proposed LDP. In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site GR029 – Land at Drumrossie West, Drumrossie and Denwell Farm

The Council does not support allocating bid site GR029 as an opportunity site for a phased housing-led mixed-use development with retail/commercial, community uses, open space/landscaping and associated infrastructure (598 residential units and 175sqm ground floor retail/commercial unit). Bid site GR033 was not identified as preferred option in the MIR 2019 (see MIR 2019, Appendix Garioch, AD0038.E, page 36). Part of bid GR029 was identified as a reserved option in the MIR as a possible future opportunity site (FOP). On the basis that the LDP 2021 is no longer expected to show FOPs on the Settlement Statement maps, there is no need to reserve any part of this site for future development. In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. As such it is not necessary to allocate any part of bid GR029 in the Proposed LDP. No change is required.

Non-Allocated Site – Site OP2 (as identified in the LDP 2017) – Land at South Road

The Council does not support allocating Site OP2 (as identified in the LDP 2017) for an

amended use as safeguarded/reserved for expansion of Inch Railway Station, car parking or any other associated infrastructure. The OP2 site, as identified in the 2017 LDP, was not carried forward into the PLDP due to the basis of non-delivery. The site remains within the settlement boundary of Inch which allows for an infill opportunity on the site should a suitable proposal come forward. Any infill proposal that comes forward would be determined against relevant policies in the Plan.

It is noted that the representee would like to retain an allocation on the site boundary of OP2 as defined in the 2017 LDP but to change what the site is allocated for. It has been requested that the site be reserved/safeguarded for an expansion to Inch Railway station car park and associated infrastructure. These proposals could still be considered without the need to safeguard or reserve the site specifically for the purpose at this stage. Should, in the future, there be a critical or strategic need for this land to be reserved then a development bid could be submitted to a future LDP. Additionally, although this site was previously included in the LDP it was for an alternative use. No development bid was submitted for its new use at the call for sites stage and therefore it was not considered as such at the MIR stage, nor subject to site assessment and public consultation. It is therefore not seen as appropriate to safeguard the site for the uses proposed. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of this plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.
2. The council has indicated that it intends to make what it refers to as "non-notifiable modifications" in relation to the Inch settlement statement. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

General

3. The Bennachie Community Council has made a representation seeking linkages between communities in the area by safe cycling and walking routes.
4. Paragraph 228 in Scottish Planning Policy states that "local development plans should safeguard access rights and core paths, and encourage new and enhanced opportunities for access linked to wider networks." I agree with the council that the local development plan is not a framework or tool to promote footpaths, cycleways and active travel networks within and between settlements. There are other council documents, such as the Core Path Plan and the Outdoor Access Strategy, which would fulfil this role. However, the local development plan does protect existing routes, promote good access from new development to these routes and, where appropriate, promote the enhancement or extension of existing routes as part of development proposals. No modification is required.

Vision

5. A representation seeks to have the wording from the 2017 local development plan reinstated in this plan. The 2017 plan states that a new household waste and recycling centre is required and the council is in the process of identifying a site suitable for a new centre. A new facility to replace the existing one is sought elsewhere in Insch.

6. The proposed plan states (page 553) that all development in Insch will be required to comply with standards for recycling and waste facilities, and that development may be required to contribute towards strategic recycling and waste infrastructure that benefit residents within its catchment. I note Insch is served by facilities at Huntly and Inverurie. The council's Waste Strategy, which was adopted in 2019, has reduced the opening hours of the facility in Insch but it remains open.

7. I find that, in terms of waste, the 2019 Waste Strategy provides a more up to date position than the 2017 local development plan. It is appropriate for this to be reflected in the proposed plan. As there is no requirement for an alternative facility for Insch in the strategy, I am satisfied that no modification is needed to the plan.

Site R1 – For environment and access improvements

8. Site R1 is an area of open space to the south of the town centre, bi-sected by the Shevock burn. It is identified in the proposed plan as reserved land site R1, for environment and access improvements.

9. A representation advises that there is currently a legal dispute regarding a boundary issue relating to land which forms part of R1. In addition, concern is raised regarding the potential for flooding of the subject property on Rannes Street, should development take place. A modification is sought which would ensure that the eastern part of R1 is not used for access.

10. Matters relating to boundary disputes cannot be addressed in a local development plan. Should the outcome of any such dispute affect the current parameters of site R1, then the site could be amended in the next local development plan. I note that when consulted, the Scottish Environment Protection Agency (SEPA) did not raise concerns regarding flooding on site R1, but the potential flood risk associated with adjacent site R4 is discussed further below. As there is not a firm development proposal for the site, it is not yet clear where exactly access would be.

11. The concerns raised in the representation, about the potential impact on existing residential development in the area, are site-specific matters that are more appropriately addressed at planning application stage. Designation R1 reserves the land for environment and access improvements, not built development. I would expect the impact of any future proposals (including access arrangements) on the amenity, character and appearance of the area to be assessed against relevant policies such as policy P1 (Layout, Siting and Design) and P2 (Open Space and Access in New Development). No modification to the plan is required.

Site R6 – For a replacement primary school

12. Site R6 lies to the north of the town and is intended to accommodate a new primary school to replace the existing school. The site has been identified for a new primary

school since the 2012 local development plan. A representation has requested that the proposed new school be located elsewhere, due to concerns reading the loss of views of the Dunnydeer hillfort and traffic concerns. Appropriate developer contributions are also a concern.

13. The impact of development proposals on amenity, character and appearance of the area, including traffic and road safety would be assessed in relation to relevant policies such as policy P1 (Layout, Siting and Design) and policy P2 (Open Space and Access in New Development). Views from private households are not a planning matter. Appropriate contributions would be sought from qualifying development towards education provision in the area. I am satisfied that site R6 remains suitable for the provision of a new primary school. No modification to the plan is required.

Flood Risk

14. SEPA has requested an amendment to the flood risk section on page 552 of the plan. The amendment would address the finding of the recent Inch flood study undertaken by the council and which concluded that allocated sites in Inch would need to be considered in terms of resilience to flooding and climate change. The council agrees with the representation. I find that the proposed modifications would add clarity to the plan and the position on flood risk in the settlement. A modification to the flood risk section is set out below.

Services and Infrastructure

15. Scottish Water has requested that text be inserted into the ‘Strategic drainage and water supply’ bullet point on page 552 to address capacity and engagement matters and the potential requirement for Drainage Impact Assessments. I am satisfied that the proposed additional text would add clarity to the plan and a modification is recommended.

Site OP1 – Land at North Road

16. Three representees are objecting to site OP1 in the proposed plan. The site is located to the south-west of the town and at the time of my site visit appeared to be in use as private open space. The proposed plan refers to an existing planning consent for 48 homes and associated infrastructure, which the plan anticipates would be delivered from 2020.

17. One of the representations relates to the potential impact the allocation might have on the amenity of a nearby private residence, in terms of overlooking, privacy, views of Dunideer fort and a boundary issue. These are generally matters that can be addressed at planning application stage, when proposals would be assessed against relevant policies such as policy P1 (Layout, Siting and Design) and policy P2 (Open Space and Access in New Development). In this case, planning permission has already been granted for development on this site. Views from private households and boundary disputes are not planning matters.

18. The community council has submitted a detailed objection to the OP1 allocation, seeking its removal from the plan. A number of the concerns raised relate to the planning consent for 48 homes on the site and the associated infrastructure to deliver those homes. As the site is allocated in the existing local development plan, has planning permission, and

is identified as effective in the 2020 housing land audit, I consider that it is appropriate and reasonable to include allocation OP1 in the proposed plan.

19. In relation to traffic, the objection from the community council relates in part to traffic and roads matters already approved in the planning consent. I find that the local development plan is not the appropriate forum in which to continue to debate these matters. As there is a valid road construction consent in place, it is not possible to modify the plan to reflect the requested change.

20. SEPA and the community council have raised concerns regarding the outcomes of the detailed flood study for Inch. As set out in the above recommended modification to the flood risk section of the settlement statement, the study concludes that site OP1 is at a higher risk of flooding than previously anticipated.

21. SEPA has suggested that text be added to the allocation summary for OP1 to state that "If the extant permission lapses, it is unlikely any further development proposal would be permissible due to new flood risk information being provided by the Council's Flood Study for Inch." The council has not responded specifically to this aspect of SEPA's representation.

22. Given the significant implications that SEPA's requested wording would have for allocation OP1, if the existing permission were to lapse, a request for further information (FIR021) was issued to SEPA and the council seeking clarification on this matter.

23. The council confirmed that the March 2016 planning consent for 48 homes has been implemented. Furthermore, an additional flood risk assessment has been submitted with a more recent application to demonstrate that flood risk can be mitigated with appropriate SuDS design, riparian buffers and layout and floor levels.

24. Allocation OP1 reflects the planning permission for 48 homes, which was granted prior to the recent flood study, and has been implemented. It would therefore not be appropriate to include the wording originally suggested by SEPA, as this would only apply if this permission had lapsed.

25. However, in its response to the further information request, SEPA has provided further advice on flood risk matters in relation to site OP1. This states that "safe access and egress to the site would need to be demonstrated and existing surface water flooding issues on and adjacent to the site would need to be addressed", which may limit the developable area. I consider this information would be relevant, if revised proposals are submitted for the site. Consistent with the recommended modification to the flood risk section, I also consider that the allocation summary should make prospective developers aware of the potential implications of the recent flood study. Modifications to this effect are recommended.

Non-Allocated Bid Site GR015 – South of Inch Railway Station

26. Bid site GR015 is located to the south of the town, and immediately south of the railway station. At the time of my site inspection, the site appeared to be in agricultural use. The representation is promoting the site for 60 homes to be delivered in two phases, with 0.35 hectares of employment land and a new car park for Inch railway station. The bid submission indicates that the site was considered to be well located in a main issues

report in 2013, when the addition of employment/business land was suggested. The site has not been allocated in any local development plan.

27. The council has explained that the site was identified as a reserved option at the Main Issues Report stage because of the uncertainty over identifying a solution to providing access to the southern platform of the railway station. The representation wishes the site to be identified as a future opportunity for development in the next plan period. However, the council decided not to identify future opportunity sites in the proposed plan.

28. Issue 2 of this examination addresses general representations regarding the identification of future housing opportunity sites. This concludes that, whilst the strategic development plan allows local development plans to identify additional strategic reserves beyond 2032, there is no requirement to do so. I am satisfied that the council's decision not to identify future housing opportunity sites is in accordance with the strategic development plan.

29. I note that Nestrans has advised that options for improving accessibility at Inch station are currently being explored. Including site GR015 in the plan with an allocation for 60 homes and employment land may be premature, as it is not known if any part of the site would be required to deliver car parking and accessibility improvements to the stations. Furthermore, even if the site could be developed in the period up to 2032, the allocation of the site at this time is not needed to meet strategic housing or employment land requirements. No modification to the plan is required.

Non-Allocated Bid Site GR029 – Land at Drumrossie West, Drumrossie and Denwell Farm

30. A representee seeks the allocation of bid site GR029 for a phased housing-led mixed-use development with retail/commercial, community uses, open space/landscaping and associated infrastructure (total 598 homes and 175 square metres ground floor retail/commercial unit). Supporting information, including an updated indicative masterplan and phasing, was submitted with the representation. An allocation is sought for either site GR029a or GR029c in this local development plan for up to 200 homes, with the balance of the site and site GR029b being reserved for future development.

31. The strategic environmental report assessed the whole of site GR029 as having some negative effects, including the loss of prime agricultural land. At the Main Issues Report stage, one of either site GR029a or site GR029b was identified as being 'reserved' but not preferred for immediate development. In the Issues and Actions Paper, it was noted that future opportunity sites were not being identified in the plan.

32. The loss of prime agricultural land is noted, but I am satisfied that in line with Policy PR1 (Protecting Important Resources), the loss of prime agricultural land may be justified if required to meet strategic housing needs and there are no reasonable alternative sites.

33. Matters relating to overall housing provision in the proposed plan are covered in issues 2 and 5. I note that Inch is located within the Rural Housing Market Area. For the reasons set out in the schedule 4 for issue 5, it is concluded that sufficient housing land has been identified to meet the strategic development plan allowance for the Rural Housing Market Area in the period up to 2032. The site is therefore not required to meet a strategic housing need and the loss of prime agricultural land would not be justified.

34. Issue 2 of this examination addresses general representations regarding the identification of future housing opportunity sites. This concludes that, whilst the strategic development plan allows local development plans to identify additional strategic reserves beyond 2032, there is no requirement to do so. I am satisfied that the council's decision not to identify future opportunity sites is in accordance with the strategic development plan. Within this context, I find that site GR029b and any balance of sites GR209a and GR029c should not be identified as future opportunity sites in this plan. No modification to the plan is required.

Non-Allocated Site OP2 (as identified in the LDP 2017) – Land at South Road

35. Site OP2 at South Road is allocated in the 2017 local development plan for 12 homes, but is not included in the proposed plan on the basis of non-delivery. At the time of my site visit, the site appeared to be in use as a commercial yard with a number of commercial buildings towards the rear of the site. I note that the site is within the settlement boundary and is brownfield in nature.

36. The representation is seeking an allocation of former site OP2 as reserved land for the provision of car parking and any other infrastructure necessary to support the continued viability of the railway station.

37. I note that submissions for this site and the proposed new allocation were not made at the bid or Main Issues Report stages of the plan preparation. The site has not been the subject of a strategic environmental assessment, nor has it be subject to any form of key agency or public consultation. Notwithstanding the information provided in support of the bid, I am unable to fully assess the merits or otherwise of the site at this time. However, as indicated by the council, a redevelopment proposal could potentially come forward as an infill opportunity, subject to assessment against relevant policies in the plan and material considerations.

38. No modification to the plan is required.

Reporter's recommendations:

Modify the local development plan by:

1. Replacing the second flood risk bullet point on page 552 with:

“• A detailed flood study by Aberdeenshire Council has confirmed that sites OP1 and R4 are at significant risk of flooding.”

2. Replacing the third flood risk bullet point on page 552 with:

“• SEPA has indicated that a further detailed Flood Risk Assessment will be required for site R4, which will need to demonstrate any development proposed is designed to be capable of remaining fully operational and accessible during an extreme flooding event and will not increase flood risk elsewhere.”

3. Adding the following new fourth flood risk bullet point on page 552:

“• Due to the presence of small watercourses running through or adjacent to the site, a Flood Risk Assessment may be required for sites OP3, R6 and BUS. Appropriate buffer strips will be required alongside the watercourses. Enhancement of any straightened watercourses and removal of any redundant features will require to be investigated.”

4. Adding the following new final sentence to the strategic drainage and water supply bullet point on page 552:

“Early engagement with Scottish Water is recommended.”

5. Adding the following sentence to the end of the allocation summary for OP1: Land at North Road on page 553:

“The Inch flood study, which was undertaken after the granting of planning permission, may have implications for development on this site. Safe access and egress to the site would need to be demonstrated, and existing surface water flooding issues on and adjacent to the site would need to be addressed, in any subsequent planning applications. This may reduce the developable area.”

Issue 34	Inverurie and Port Elphinstone

Provision of the development plan to which the issue relates:	Inverurie and Port Elphinstone Settlement Statement
Planning authority's summary of the representation(s):	
<p><u>General</u></p> <p>It is noted that greater consideration should be given to promoting tourism given the downturn in the oil and energy sector (e.g. no allocations for a caravan park, self-catering, town centre improvements, transport interchange and connectivity) (PP0223).</p> <p>A representee has raised concern that while core paths have been allocated through Keithhall Estate there is no connectivity at the south end, and the Council encourage a dangerous walk from the South Lodge to the cemetery (PP0223).</p> <p>The Settlement Statement lacks a strong commitment to promote walking, cycling and public transport which needs to form a crucial part to reduce vehicular transport. It is necessary for developers to incorporate footbridges and underpasses as an integral part of their plans. This essential infrastructure is not mentioned. The current wording of the Inverurie and Port Elphinstone Settlement Statement does not show sufficient commitment in paragraph P2.6 of Policy P2, Open Space and Access in New Development. The Settlement Statement needs strengthened so developers must make connections within Port Elphinstone and from the new Crichton development. Within the Settlement Statement there is a statement which mentions the aspiration of routes for walking and cycling to neighbouring communities, but this does not take account of the advice in Appendix 8 of the Proposed Local Development Plan (PLDP) which states there is a need for well-connected places not just an aspiration. Appendix 8 also notes about walkable neighbourhoods which the Inverurie and Port Elphinstone Settlement Statement does not indicate how this will be achieved. This particular statement is particularly weak for Port Elphinstone because it is not noted as having a centre despite the shops and school (PP0782).</p> <p>There is a need to ensure that Thainstone and Port Elphinstone are kept separate by protected areas and not merged by development. Policy should ensure there is no erosion</p>	

of undeveloped land between major settlements (PP0733).

A representee notes that they consider the limited housing market in Inverurie is due to a small number of developers having a 'monopoly', with sites being slow in coming forward, and the town's progress hindered by delays in the A96 dualling (PP0760).

No developments that require access to the A96 at Thainstone or Port Elphinstone roundabouts should be approved unless a comprehensive traffic model and assessment can demonstrate that traffic increase can be accommodated, and that any improvements will be paid for by developers. A traffic solution had been promised by the Council but as yet not implemented, and yet the developments at Crichtie and Thainstone Agricultural Centre remain in the LDP (PP0733).

Major developments included in the LDP since 2012 that have not progressed should be identified for removal from the LDP in the 5-year review. These include Crichtie, Kintore East and Woodland Croft developments. Out of date masterplans should be reviewed (PP0733).

Vision

The PLDP lacks vision, ambition and is a repeat of the LDP 2017. It is argued there are many existing and future derelict sites that require input and a positive approach from planners (e.g. St Andrews School, Gordon House, Market Place School, Harlaw Centre, Blythwood, the health centre, town hall and town centre) (PP0223).

It is queried why the Vision statement refers to Keithhall Estate as contributing to the town's open and green spaces when it is outwith the settlement boundary, without any allocation or consideration given to its potential development, enhancement, or protection (PP0223).

A new grade separated interchange on the A96 will be insufficient to accommodate the extra traffic caused by the number of new houses in the Crichtie development and its distance from the centre of Inverurie and Port Elphinstone. The LDP does recognise that the Scottish Government will dual the A96 between Inverness and Aberdeen but stronger wording in the Settlement Statement will assist Council Officers to protect existing public access routes including rights of way (PP0782).

Site P8 – To protect the landscape buffer/setting as forming part of the green-blue network

Site P8 should be extended south to cover the adjacent flood plain and protect the landscape setting of the green-blue network (P17). The representee argues this would ensure consistency with any protection afforded to the flood plain on the south side of the River Don (PP1313).

Site P9 – To protect the playing fields as forming part of the green-blue network

Site P9 should be extended north to cover the strip of undesignated land between P9 and P17 as protected land, as implied in the ALDP 2017. States it is illogical to have a strip of unprotected land between the River Don and the Protected Land at Davidson Field, part of the flood plain (PP1313).

Site P10 – To protect the playing fields as forming part of the green-blue network

A representee notes that Blythwood is subject to planning consent on site P10 and the logic of this site is queried (PP0223).

Site P15 – To protect the Uryside Riverside Park

There is a need to improve connectivity at the west end of Uryside Park as the Council has not undertaken works to improve Howford Bridge. It is reported that monies have already been paid by the developer for this work (PP0223).

Site P18 – To protect the golf course as an amenity for the settlement and forming part of the green-blue network

This site should be extended to cover the golf practice area, which is currently shown as agricultural land (PP0223).

Site P19 – To protect the football pitches and grounds

Representees have noted that if any part of Harlaw Park is re-zoned as protected land it would inhibit and curtail any plans of Inverurie Loco Works Football Club to enhance and contribute to the community of the Garioch area and beyond (PP0032, PP0572 and PP0843).

It is noted that the site should remain as part of the town centre. Representees, including Inverurie Community Council have noted that changing the area to a protected site would devalue the football club and hinder continued development of facilities by not allowing it to have tangible assets against which to borrow capital (PP0050, PP0068, PP0071, PP0080, PP0089, PP0427, PP0731, PP0831, PP0861, PP0941, PP1016, PP1124, PP1172, PP1173 and PP1220). A representee, PP0861, has included an Appendix (RD0156.A) in their representation which provides further detail to support their position. Concerns were also raised that the change was made without consultation being undertaken with the football club (PP0071, PP0193, PP0731, PP0831, PP1124, PP1172, PP1173 and PP1220). The proposed amendment was not present in earlier drafts of the PLDP (PP1220).

There has been little opportunity provided to bring forward a proposal under the terms of the existing mixed-use allocation and as such it is premature to reallocate this site (PP0193, PP0223, PP0427 and PP0875). Protecting this site as open space will restrict potential development in the town centre (PP0223).

The current zoning for mix used development is considered appropriate for a site which lies adjacent to the defined town centre. Even with mixed use, the facility has protection from Sports Scotland who require the replacement of facilities lost with equivalent or better facilities in a suitable location. Proposed paragraph P3.1 allows for sites which can contribute to house and employment land requirements. Given the location of the site adjacent to town centre, existing residential and employment uses it would be more appropriate to retain the existing zoning or white land to fulfil the objective of this policy (PP0843).

The general public do not have access to the site, and it should not be considered as open space (PP0193, PP0223, PP0941, PP1124 and PP1172), and is surrounded by fencing

(PP0427) and is not considered open space as defined by proposed paragraph PR1.6 (PP1016). The decision to protect the site appears to be on the basis of the Open Space Audit but this has not been made available to the public nor to the Councillors when arriving at the proposed zoning. There is sufficient open space in Inverurie and as such no need to protect the football grounds (PP0193, PP0427, PP0820 and PP0843). The site should be able to come forward as an infill opportunity due to its proximity to the town centre and the fact that there is a desire for the Football Club to relocate to larger grounds in any case (PP0193). Protecting this area would also lead to treating this area differently to other football grounds in Banff and Pitmedden (PP1016).

Any new development surrounding the site should contribute open space to the park. No modification sought (PP0032).

Site P26 – To protect an area of open space forming part of the green-blue network

A representee queries the contribution of site P26 protected area in front of Anderson's at the main A96 roundabout and why the landscaped area to the northwest has been excluded (PP0223).

Site R1 – For transport interchange

Scottish Environment Protection Agency (SEPA) has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R1 (RD0214.B). No modification sought (PP1219).

Nestrans has noted that the boundary is less extensive than previously defined boundaries for a proposed transport interchange at this location. Nestrans recognises the importance of identifying the preferred route for the A96 dualling around Inverurie and has supported the dualling project within the draft Regional Transport Strategy (RTS). Nestrans are also seeking improvements to rail services north of Inverurie as part of a second phase of Aberdeen to Inverness improvements (RD0227.A) (PP1241).

Site R2 – For an extension to Ury Riverside Park

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R2 (RD0214.B). No modification sought (PP1219).

Representees have stated that site R2, has not been agreed by the landowners and that it can only be delivered in conjunction with new development on part of site R2 that is outwith the flood plain (PP0223 and PP0983). Additionally, it was not highlighted that the site R2 would be classified as protected through the Plan. Developing the site would create better infrastructure, at Howford Bridge upgrade and also allowing Uryside Park expansion improvement, including bridge crossings. No modification sought (PP0991).

Site R3 – To enable development of community and education facilities

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R3 (RD0214.B). No modification sought (PP1219).

The site should be extended to include the existing buildings, games hall and the new sports and recreation facilities attached to the school (PP0223).

Site R4 – For community uses

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R4 (RD0214.B). No modification sought (PP1219).

The need for the site for community use is questioned as the site was originally allocated to replace St Andrews Special School. However, the school now forms part of the Inverurie School Campus (PP0223).

Site BUS1 – Safeguarded for business uses

Representees have requested that the northwest of the boundary of the site is amended to exclude a residential area at Versatile Square (PP0008 and PP0223).

Site BUS2 – Safeguarded for business uses

A representee objects to proposed development at BUS2 on the basis that the existing buildings combined with the trees behind the Strathburn Hotel have already contributed to a deterioration in television reception. Additionally, the representee is concerned that there is already a large number of seagulls nesting in the Burghmuir Circle area and if further places to nest are provided, they will become even more vicious and noisier (PP1339).

Site SR1 – Reserved for strategic employment land

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site SR1 (RD0214.B). No modification sought (PP1219).

Flood Risk

SEPA has requested the addition of a new 'Flood Risk' bullet point for sites OP5, OP3, OP13 and OP16 as they will require a Flood Risk Assessment due to a watercourse or surface water flooding (RD0214.B) (PP1219).

SEPA has requested adding a new 'Flood Risk' bullet point for site OP4 as it requires a Flood Risk Assessment due to a recent detailed flood study by Aberdeenshire Council (RD0214.B) (PP1219).

SEPA has requested adding a new 'Flood Risk' bullet point for all the BUS sites in order to be consistent with the SFRA, as they may require a Flood Risk Assessment due to surface water flood risk areas and/or are adjacent to watercourses. They also add, it should state a requirement for buffer strips and re-naturalisation of watercourses (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Scottish Water has requested that under the bullet point for 'Strategic drainage and water supply' Insert after this sentence, "There is currently available capacity at Inverurie Waste Water Treatment Works. A Drainage Impact Assessment may be requested." (PP0272).

It is imperative that the LDP and Delivery Programme outline the specific required infrastructure that developments will be required to provide in order for development to be delivered. The Council should set out a clear position on what trunk road infrastructure is needed to support development within the Plan, in addition to how, when and by whom it will be delivered. The Plan should detail that sites OP5 and OP6 are required to deliver a new grade separated junction on the A96(T) to replace the current A96 Crichie and A96 Port Elphinstone roundabouts. This wording should be consistent throughout the Plan and its accompanying documents. Consented sites OP5 and OP6 have been identified as delivering the A96 Crichie grade separated junction. However, sites OP9 and OP10 have also been linked to the delivery of this junction within the DPMTAG Assessment Report. OP10 has consent and does not contain any conditions requiring it to deliver or contribute to the A96 Crichie grade separated junction. Therefore, the Plan needs to be clear regarding which sites are to contribute to, or deliver, the trunk road infrastructure needed to support development within the Plan, including the new A96 grade separated roundabout. It should also outline how, when and by whom the infrastructure is to be delivered for sites OP5 and OP6 (PP0578).

Transport Scotland is very concerned over the current capacity issues on the A96(T) in Inverurie and that new sites are being proposed with no information on the potential impact and potential mitigation measures. Sites OP15 and OP16 should have been appraised as part of the DPMTAG based appraisal to determine impact and mitigation. Therefore, it is recommended text is included within sites OP15 and OP16 that a cumulative appraisal is required to be undertaken including both sites, utilising the data from the DPMTAG Report which accompanied the Proposed Plan to determine any potential impact to the A96(T) and identify if any mitigation is required to deliver the additional sites. It is considered the PLDP and Delivery Programme are not consistent in relation to the information included on transport infrastructure required to facilitate and mitigate development within Inverurie (PP0578).

The Settlement Statement for Inverurie and Delivery Programme details a confusing landscape of mitigation measures, which also do not link to the outcomes of the DPMTAG Report. It is recognised the infrastructure measures required to mitigate development in Inverurie are complex. A number of developments currently benefit from planning permission that require delivery of trunk road mitigation; some of these developments are currently in breach of planning conditions relating to these improvements whilst others require these improvements to be in place before they can proceed. Other developments require to deliver mitigation schemes that were agreed prior to the Scottish Government's decision to progress the A96 scheme, however it is recognised that until the preferred alignment of the A96 Scheme around Inverurie is confirmed, there remains a degree of uncertainty as to what the future infrastructure needs to serve development will be (PP0578).

The DPMTAG based appraisal concludes for Inverurie; "allocations OP9 and OP10 (2021 LDP designations for Axis Business Centre and Thainstone) should be linked to the provision of the grade separated junction" at Crichie. Also; "there remains concerns regarding the available capacity on the network at Inverurie". However, the LDP Settlement Statement does not link sites OP9 or OP10 to the delivery of the grade separation of Crichie, with site OP10 already having consent. The LDP does not link site OP9 to the provision of the grade separated junction either, instead detailing the site will require to assess network capacity at A96 Port Elphinstone and A96 Thainstone

roundabouts. This contradicts the DPMTAG Report. The Delivery Programme details that after 300 units a new grade separated junction for Crichtie has to be designed. It is not clear whether this is linked to sites OP5 and OP6, the 2021 LDP designations for development at Crichtie. The Delivery Programme also details “delivery of a grade separated junction on the A96 at Port Elphinstone roundabout” in one entry and then a “new grade separated junction to replace Thainstone and Post Elphinstone roundabouts” in another. This is confusing as it is one roundabout proposed to replace both current at grade roundabouts which is the responsibility of sites OP5 and OP6 to deliver. Contrary to SPP, the DPMTAG appraisal did not include the potential impact of the new development sites OP15 and OP16. Comments submitted by Transport Scotland in response to the appraisal in February 2020 requested that the cumulative impact of these new sites and those that are unconsented in Inverurie be considered and identify any potential mitigation measures that may be required within the Plan (PP0578).

However, the DPMTAG based appraisal did not include the new sites within the appraisal yet concluded “there remains concerns regarding the available capacity on the network at Inverurie”. Consequently, the LDP has not identified the potential impact on the safe and efficient operation of the trunk road network resulting from additional development. This is of significant concern to Transport Scotland given the uncertainty over trunk road capacity highlighted in the LDP DPMTAG Assessment Report that accompanied the Proposed Plan; and the inconsistency between the mitigation measures outlined within that appraisal, different parts of the Proposed Plan and the Delivery Programme. The Plan is not clear on what mitigation is required to be delivered by whom, when or by what means in accordance with SPP. To date Transport Scotland has had to seek stand-alone mitigation for development in lieu of a holistic approach (PP0578).

Site OP1 – Conglass

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

Site OP2 – Former Garioch Health Centre

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219).

A representee disagrees with allocation of retail facilities on site OP2, which includes a health centre. It is argued that there are vacant retail units within the town, and that a longer-term vision needs to be applied, taking account of the economy and needs of the community (PP0223).

Site OP3 – Land at Harlaw Park

SEPA requests that for site OP3, if a new ‘Flood Risk’ bullet point is not added for this site, additional text is added to its allocation summary to state the reason for the Flood Risk Assessment is due to surface water flood risk (RD0214.B) (PP1219).

The site has been in the audit since 2011 and its ownership is constrained. Permissions on site have lapsed and there are potential contamination issues. The site is unlikely to be appropriate for 50 homes as supported accommodation. There is no reason for confidence that the constrained site will deliver during the Plan period (PP1082).

Site OP4 – Phase 2 Portstown

SEPA requests that the allocation summary states that should extant permission lapse, any future developments will have to take account of the latest Council Flood Study for Inverurie (RD0214.B) (PP1219).

Site OP5 – Crichtie (Residential and Community)

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP5 (RD0214.B). No modification sought (PP1219). A representee has objected to the inclusion of OP5 as it is likely to cause damage and/or loss to areas of ancient woodland. Removal of woodland is contrary to SPP paragraphs 216 and 218. It would also be contrary to the Control of Woodland Removal Policy. The representee has included an Appendix (RD0161.A) in their representation which provides further detail to support their position (PP0878).

The allocation summary for OP5 Crichtie correctly acknowledges that the site was previously allocated as site OP4 in the LDP 2017, and that a Development Framework (February 2013) and Masterplan (June 2013) were both approved for the site. However, it directs that both documents 'will need to be reviewed if development has not commenced on this site at the date of adoption of this Local Development Plan. The Aberdeenshire Council Development Plan Scheme 2019 predicts this as being Summer 2021. The representee takes issue with this and request that the requirement to review the Development Framework and Masterplan be removed (PP1290).

PPIP (APP/2013/0267) for 737 homes, business and industrial development, community facilities including a primary school was approved, subject to conditions, in December 2018. Condition 1 of that consent states: 'unless otherwise agreed in writing by the Planning Authority, details of the specified matters listed below shall be submitted for consideration by the Planning Authority before the expiration of 5 years from the date of the grant of the permission.' The condition is clear that the PPIP would not lapse until December 2023, which is some time after the summer 2021 anticipated adoption date of the proposed Plan. Therefore, it is wholly inappropriate for the proposed Plan to include a requirement for the development at Crichtie to review both Development Framework and Masterplan when there is a PPIP that can be implemented. It should also be noted that since the approval of the PPIP Dandara have worked with Aberdeenshire Council to prepare a layout for the development of the site. An MSC application was submitted in June 2019 and is currently pending determination. Once this application has been approved development will commence on site (PP1290).

The determination of the MSC is anticipated well in advance of the proposed Plan being adopted. This negates any perceived requirement in the proposed Plan for the Development Framework and Masterplan to be reviewed. The Development Framework and Masterplan were prepared at great cost by Dandara and both Dandara and Aberdeenshire Council spent time ensuring the documents would aid in the delivery of a quality development. These documents identify the key principles for the urban form and design of the development and there have been no changes to the principles adopted that would warrant a revisit. The principles of both documents have been followed in the preparation of the layout submitted by the current MSC application. It is evident that there is no need for the Development Framework and Masterplan to be revisited and the

requirement in the proposed Plan for them to be reviewed upon adoption of the proposed Plan should be removed (PP1290).

The supporting text to site OP5 goes on to state that, 'Cycling and pedestrian permeability to be provided and a formal route provided linking to the existing networks in Inverurie and Port Elphinstone crossing the A96'. This wording has changed from the wording in the current LDP which states, 'Pedestrian and cycling linkages will be required, particularly to ensure accessibility between the site and the existing built-up areas of Port Elphinstone'. Pedestrian and Cycle linkages are further covered by the approved PPIP for the site which directs in condition 1 C(ii) that 'a new foot and cycle path connection between the site (including from the area defined as Phases 1 and 2 on Fig 6.1: Indicative Phasing Plan as contained in the approved masterplan) and Riverside Park via the A96 (T) Don Bridge underpass' there is no requirement within the condition for this to be a formal route and the wording of the proposed Plan should be amended to reflect that; as it is in the current LDP (PP1290).

It is also noted that 'Transport Assessment updates should be provided in line with development phases'. The representee highlights that a Transport Assessment was approved during the determination of the PPIP. Condition 4 of the PPIP states: 'The overall development on the site (whether the subject of approval of matters specified in conditions or full planning permission) shall not exceed the following upper limits, unless otherwise agreed in writing by the Planning Authority an unless a revised Transport Assessment is submitted to and approved by the Planning Authority which demonstrates that the proposed revised upper limits would not generate a greater number of trips on the road network outwith the site: (a) Class 1 (retail) development on the site shall not exceed 1,500 square metres gross floor area; (b) Class 4 (business) development on the site shall not exceed 24,200 square metres gross floor area; (c) Class 5 (general industrial) development on the site shall not exceed 11,800 square metres gross floor area; (d) Class 6 (storage or distribution) development on the site shall not exceed 11,600 square metres gross floor area; (e) Class 9 (houses) development on the site shall not exceed 737 units. There is no limit on the floor space for education and ancillary uses not specified above. The above Classes are as defined in the Town and Country Planning (Use Classes) (Scotland) Order 1997 as amended. Reason: To restrict the scale of development to that identified in the Transport Assessment; minimise interference with the safe and free flow of traffic on the trunk road and wider road network, and to be consistent with the requirements of Scottish Planning Policy.' As such there is no requirement for additional Transport Assessments to be undertaken unless the upper limits cited in Condition 4 are breached. The proposed Plan should be amended to reflect that. The allocation summary for site OP5 fails to take into consideration the approved PPIP and currently pending MSC application for the site and should be amended to reflect that. The representee has included an Appendix (RD0245.A) in their representation which provides further detail to support their position (PP1290).

It is requested that the woodland and flood plain, located north of the Old Kemnay Road, currently in OP5, to be designated as protected land. It is argued this would not conflict with the approved Planning Permission in Principle on this site, the strip of woods and flood plain in the OP5 area have the quality to be designated as protected land, and it has the potential to add significantly to the future positive environment of the settlement (PP1313).

A representee also requests the linked area of broadleaved woodland south of Lynndale on Old Kemnay is added to the Protected Land designation in site OP5. It would not prejudice

the Crichtie development proposals, and the woodland has the quality to warrant it be designated as protected land to enhance the future amenity value of the settlement and provide access for people in the area (PP1313).

Site OP6 – Crichtie (Employment)

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP6 (RD0214.B). No modification sought (PP1219).

A representee has questioned the deliverability of site OP6 for 23.7ha employment land as this site has been allocated since 2012 and it is identified as constrained in the 2019 Employment Land Audit (PP0413).

A representee objects to the change of description in the development brief for site OP6 Crichtie (Employment), Inverurie and Port Elphinstone Settlement Statement. A proposed requirement includes a formal footway/cycleway connection made across the A96 into Port Elphinstone and Inverurie and it is requested to be removed. A condition was attached to the permission of planning application G/APP/2013/0267 (Planning Permission in Principle (PPIP)) which states that there would be delivery of a foot and cycle connection to Port Elphinstone at the outset of the development. The PPIP prevents the employment land from coming forward until such time as the Grade Separated Interchange (GSI) is delivered. There is no need to make this route formal in the Proposed LDP or in the approved planning application. The wording in the Proposed Plan should be amended to reflect this (PP1289).

In the development brief for OP6 Crichtie (Employment), it is stated that ‘an updated Transport Assessment should be provided as development comes forward’. A Transport Assessment was submitted and approved as part of the approved PPIP for the wider Crichtie development and there is no requirement to update this unless upper floor limits are breached. The Proposed Plan should be amended to reflect this (PP1289).

The development brief for OP6 Crichtie (Employment) should state the following, “This site was previously allocated as site E1 in the 2012 LDP and OP11 in the 2017 LDP, although the site boundaries have since been amended. It is located on the western side of the A96 to the immediate south of site OP5. A Development Framework and Masterplan including the site was approved in 2013, and the development must accord with these documents, which identify key principles for the urban form and design of the development. The development must make provision for 5 ha of high-quality business use. The site must contribute proportionally towards major improvements in relation to the Thainstone and Port Elphinstone roundabouts/junctions, including the construction of a new grade separated interchange on the A96 to replace the Thainstone and Port Elphinstone roundabouts. Full SuDS implementation and adequate buffer zone provision will be required to take account of the small watercourse which runs through the site.” The representee has included an Appendix (RD0244.A) in their representation which provides further detail to support their position (PP1289).

The supporting text for site OP6 states that “Formal footway/cycleway connections made across the A96 into Port Elphinstone and Inverurie”. A number of conditions associated with the PPIP addresses issues that were highlighted in the allocation summary including the foot and cycle connection to Port Elphinstone and that no more than 300 homes can be built until the GSI. It is also noted that there is no requirement in either the previous LDP’s

or the approved PPIP for this route to be formal. The wording in the Proposed Plan should be amended to reflect this. The supporting text for OP6 requests that 'An updated Transport Assessment should be provided as development comes forward'. The representee confirms that a Transport Assessment was submitted and approved as part of the approved PPIP for the wider Crichton development. As such there is no requirement for additional Transport Assessments to be undertaken unless the upper limits cited in Condition 4 are breached. The Proposed Plan should be amended to reflect that. To conclude the supporting text for sites OP6 fails to take into consideration the approved PPIP and currently pending MSC application for the site and should be amended to reflect that. The representee has included an Appendix (RD0246.A) in their representation which provides further detail to support their position (PP1291).

Site OP7 – Uryside Phase 2

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP7 (RD0214.B). No modification sought (PP1219).

Site OP8 – Former Hatchery

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP8 (RD0214.B). No modification sought (PP1219).

There are concerns that the final plans for site OP8, which has planning permission, does not provide a sufficient number of and size of trees and shrubs to provide screening along the southern boundary. The existing mature trees on site OP8 have been removed when they were meant to be retained as per the original planning permission to provide screening/privacy. The representee has included an Appendix (RD0030.A) in their representation which provides further detail to support their position (PP0219).

Site OP9 – Adjacent to Axis Business Centre

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP9 (RD0214.B). No modification sought (PP1219).

A representee supports the allocation of site OP9 for 1.5ha of business land, as the site is ideally located for business development, adjacent to the existing business centre, has no constraints to development, and, subject to demand, it is envisaged it will come forward in the next Plan period. The representee has included an Appendix (RD0064.A) in their representation which provides further detail to support their position. No modification sought (PP0412).

Site OP10 – Thainstone

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP10 (RD0214.B). No modification sought (PP1219).

Site OP11 – Pineshaw, Port Elphinstone

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP11 (RD0214.B). No modification sought (PP1219).

The respondent objects to the allocation of 54 homes at the site and raises concern at this increase from 25 units as allocated in the LDP 2017. The respondent states that there is no justification for this increase in housing units and states that the site is not suitable for 54 units and should be reduced to 25 units as per the LDP 2017 (PP1293).

The respondent also objects to the proposed wording in the Proposed LDP allocation summary for OP11 and seeks modification to the wording. The respondent seeks modification to the allocation summary to include reference to OP6 as they consider the site should also be designed to integrate with OP6. The respondent seeks modification to the allocation summary to maintain the requirement for the site to contribute proportionally towards the delivery of the foot and cycle connections to Port Elphinstone as it is stated that OP11 is set to benefit from delivery of the foot and cycle connections that will be delivered as part of OP5 Crichton development, which are also required to facilitate development at OP11. It is therefore contended that OP11 should be required to make proportional contributions towards these improvements, which they will benefit from and as such this should be referenced in the Proposed Plan. The respondent highlights that the requirement for the site to contribute proportionally towards major improvements in relation to the Thainstone and Port Elphinstone roundabouts/junctions, including construction of a new GSI on the A96 to replace the Thainstone and Port Elphinstone roundabout has been removed from the allocation summary. The respondent considers that the site, particularly if allocated for 54 units, will likely utilise improvements made to the surrounding road network. As such the respondent requests that the requirement for OP11 to contribute proportionately towards major improvements in relation to the Thainstone and Port Elphinstone roundabouts/junctions, including the construction of a new GSI on the A96 to replace the Thainstone and Port Elphinstone roundabouts, remains in the Proposed LDP. The respondent states that the expectation that the site will contribute towards affordable housing in line with Policy H2 Affordable Housing is unacceptable and seeks modification to the wording of the allocation summary to explicitly state that the site will contribute to the delivery of affordable housing. The representee has included an Appendix (RD0248.A) in their representation which provides further detail to support their position (PP1293).

Site OP12 – North Street, Inverurie

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP12 (RD0214.B). No modification sought (PP1219).

Site OP13 – Kirkwood Commercial Park, Thainstone

SEPA recommend that the allocation text removes '(FRA)' for consistency (RD0214.B) (PP1219).

Site OP14 – Land Northeast of Thainstone Roundabout

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP14 (RD0214.B). No modification sought (PP1219).

The site should be retained as per its current use in the LDP 2017 for business use. The proposed alternative use of a halting site is not justified and there is no evidence of need (PP0313, PP0592, PP0733, PP0828 and PP0867). The use is not compatible with the surrounding employment uses, and there has been no appropriate consultation (PP0313, PP0592 and PP0828), and it is unclear how the site was allocated as there was no bid

(PP0828 and PP0867). There are access issues, and the ambiguity of where the site should be delivered within the wider employment area creates uncertainty that affects marketability and the potential for investment in the Thainstone/Crichie employment area. The allocation of the halting site could impact on the marketability of other sites within the business area and will provide no confidence of positive investment of BUS 1-8 which are safeguarded for business use (PP0828). It is also queried how the Council will overcome the drainage and technical constraints to deliver the site (PP0828). Concerns are also noted as to when the site will be delivered as no timescales been set for delivery (PP0866). A representee has included an Appendix (RD0090.A) in their representation which provides further detail to support their position (PP0592).

The proposal also contradicts Policy B2, Employment and Business Land as the site is not included in Appendix 7 (PP0592 and PP0828). A representee also queries why access to OP14 is via BUS6, as this is land across the opposite side of the access road to the Kirkwood Commercial Park. Additionally, it is queried if site OP14 was previously part of BUS6 in the 2017 LDP (PP0313). A requirement for a comprehensive traffic assessment should be added to demonstrate traffic can be accommodated at the roundabouts and that any improvements are paid for by the developer (PP0733). It is also noted that the proposed tree planting would not provide an appropriate solution (PP0828). Additionally, the site is poorly located for a halting site as it is incompatible with the neighbouring uses and the Council should set out a process of seeking to identify a suitable gypsy/traveller site using clear criteria and appropriate consultation (PP0828). The representee has included an Appendix (RD0152.A) in their representation which provides further detail to support their position (PP0828).

Site OP15 – Land West of Bennachie View Care Home

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP15 (RD0214.B). No modification sought (PP1219).

In respect of the uncertainty of the route of the A96, the approach the Council has taking in delaying land is noted however the allocation of OP15 is objected to. The rationale of having land in this location rather than the more sustainable location of the site at Souterford is challenged (PP0697, PP0698 and PP0699). The site would also further extend the settlement along the A96. It is also noted that the land is on a north facing slope meaning it has poor solar gain and is partially within a designated historic battlefield. Most of the above points were noted by Council Officers in the response to the previous ALDPs MIR (PP0699). Another representee also notes that the sites are located at the edge of the settlement, remote from services, not supporting the town centre, not lowering the carbon footprint and therefore not providing sustainable development. More housing development is needed in Inverurie that will better connect with and sustain facilities in Inverurie (PP0760).

NatureScot requests that the allocation summary for site OP15 in Inverurie and Port Elphinstone includes a requirement for active travel provision, as it is a large allocation (130 homes) and it would help promote safe and convenient opportunities (in accordance with the Proposed Plan's aims) (RD0255.B) (PP1300).

Site OP16 – Land West of Conglass Cottages

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues

with the allocation summary for site OP16 (RD0214.B). No modification sought (PP1219).

In respect of the uncertainty of the route of the A96 the approach the Council has taking in delaying land is noted however the allocation of OP16 is objected to. The rationale of having land in this location rather than the more sustainable location of the site at Souterford is challenged (PP0697 and PP0698). Another representee also notes that the sites are located at the edge of the settlement, remote from services, not supporting the town centre, not lowering the carbon footprint and therefore not providing sustainable development. More housing development is needed in Inverurie that will better connect with and sustain facilities in Inverurie (PP0760).

NatureScot has requested that the allocation summary for site OP16 in Inverurie and Port Elphinstone includes a requirement for active travel provision, as it is a large allocation (50 homes), the allocation summary already says, "Access and connectivity should be integrated with site OP1. Footway links require to include a crossing on Burghmuir Drive", and it would help promote safe and convenient opportunities (in accordance with the Proposed Plan's aims) (RD0255.B) (PP1300).

Non-Allocated Site – Bid Site GR027 – Site A, Land West of Blackhall Road

Part of GR027 is within the settlement boundary within the 2017 LDP as P15 and was in the 2012 LDP as R3 to allow for the relocation of St Andrews School. It has been highlighted that the relocation of the school is no longer a requirement, but the Proposed Plan still continues to identify the land as R4 for undefined community uses. The only prospect of community uses coming forward would be part of a wider sustainable residential-led development which is why the land at GR027 should be reserved for future growth. FOPs should be introduced to provide clarity to communities and help to ensure that there is a 5-year land supply even if some allocations fail to deliver. The representee has included two Appendices (RD0186.A and RD0186.B) in their representation which provides further detail to support their position (PP1010).

Non-Allocated Site – Bid Site GR028 – Site B, Mains of Blackhall, West of Blackhall Road

The site has the capability to accommodate appropriately phased development immediately adjacent to the existing settlement boundary and address the housing requirements set by the SDP. At the MIR stage the lack of clarity over the level of housing required in Inverurie was raised by the client and it was noted that at that point the MIR focused on already allocated sites. There was a change at the Proposed Plan stage where Officers deemed it appropriate to allocate additional sites. The response, therefore, in the Issues and Actions Paper, for not allocating this site being that there was not a strategic need to allocate a site of this scale, is a misrepresentation of facts.

A substantial portion of the site is a former farm complex which therefore presents a brownfield redevelopment opportunity which is in line with SPP which actively encourages the re-use or redevelopment of brownfield land. This was previously acknowledged by the Reporter. One of the sites that has been allocated is OP15 which is on the fringe of the settlement, immediately adjacent to the A96, visually prominent and substantially detached from the town centre leading to reliance on the private car. Conversely the site (GR028) is a natural infill site more readily absorbed into the landscape, brownfield redevelopment opportunity, opportunities to link into recent and ongoing development and would make a positive place making contribution and Officers' perception that it does not relate well to the

existing urban form are refuted. The density was promoted at 100 homes to take account of the land that would need to be kept free due to the overhead powerlines and just because it is not developed at the density of 25 houses per hectare should not be a reason to disregard the allocation of the site. The site Neighbours on to employment land OP10 and in line with paragraph 40 of SPP. It is logical and sustainable to site residential use in close proximity to employment land to minimise the need to travel therefore constitutes towards the right development in the right place as advocated by paragraph 15 of SPP (PP1010).

Non-Allocated Site – Bid Site GR057 – Land at East Balhalgardy Farm (Bid 1), Bid Site GR058 – Land at East Balhalgardy Farm (Bid 2) and Bid Site GR059 – Land at East Balhalgardy Farm (Bid 3)

A representee has objected to an effective embargo on greenfield housing allocations in the Blackburn to Inverurie Strategic Growth Area pending confirmation of the preferred route of the A96. Dualling of the A96 is a strategic project that is not intended to provide capacity for housing in particular areas. None of the routes under consideration impact directly upon this site. East Balhalgardy provides a logical extension to the OP3 site allocated in the current, adopted local plan, is within a short walk of the Uryside Primary school and would facilitate the extension of the Uryside Park. The submitted LVIA demonstrates that development of the site would not have an adverse impact on the Harlaw battlefield or monument. It is contended that there is an effective housing land shortfall within the Aberdeen Housing Market Area and this site would contribute to meeting this. The representee has included two Appendices (RD0235.A and RD0235.B) in their representation which provides further detail to support their position (PP1279).

Non-Allocated Site – Bid Site GR061 – Land North and East of St, James Walk and Bid Site GR062 – Land at St James Place

A representee has objected to an effective embargo on greenfield housing allocations in the Blackburn to Inverurie Strategic Growth Area pending confirmation of the preferred route of the A96. Dualling of the A96 is a strategic project that is not intended to provide capacity for housing in particular areas and that it is for the LDP to ensure that housing can be delivered along with the necessary infrastructure. None of the routes being considered conflict with these sites. It is contended that there is an effective housing land shortfall within the Aberdeen Housing Market Area and this site would contribute to meeting that. The flood risk on part of the site is noted however the numbers have been calculated assuming that this land would not be developed. 80% of the site is well above the flood plain and can be developed without constraint. In terms of visual impact, it is assumed that a development of this scale would go through the masterplanning process and be subject to a detailed visual impact assessment and strategic landscape planning. The representee has included two Appendices (RD0236.A and RD0236.B) in their representation which provides further detail to support their position (PP1280).

Non-Allocated Site – Bid Site GR091 – Land at Souterford and Lofthillock

Land at Souterford has previously been assessed for residential development but has not been allocated due to a number of reasons including the focus on securing a grade separated interchange. The land currently allocated has not sufficiently affected several key issues for Inverurie including affordable housing and land for a new primary school. The land is sustainable and is consistent with the Spatial Strategy set out in the SDP. It is

acknowledged that the SDP notes that development in the area is likely limited due to the consideration of the bypass, but non-allocation of the land is against the SDP Housing Land Allowance as the current buffer of 1000 will be reduced to just 80 given the Report included in the Examination of the SDP.

Allocating this land will restore the level of housing land supply. There is a real issue with affordable housing within Inverurie and although there seems to be a large amount of allocations, they are not delivering the 25% affordable units meaning there is an under supply of affordable housing. This is already a major concern of the town and needs to be addressed. This site would deliver 25% affordable homes and a further 10% accessible homes which would help towards the issue identified. The allocations in Inverurie are dominated by two developers so this site would provide housing choice for residents. The new school at Uryside has opportunities to extend and it is noted that the school roll will go beyond capacity. The site at Souterford would provide land for a two-stream school and be able to provide contributions for the delivery of the school as there is no opportunity for further contributions from the granted development at Uryside/Portstown. The location of the A96 has no bearing on the suitability of the land for housing and a new primary school. The representees have included a number of Appendices (RD0118.A- RD0118.B and RD0119.A- RD0119.C) in their representations which provides further detail to support their position (PP0697 and PP0698).

Non-Allocated Site – Bid Site GR117 – Land North of Lochter Drive, Uryside (Phase 3)

There is a strategic argument to include this site as an allocation. The Phase 3 expansion of the existing housing development can be delivered alongside the previously allocated sites OP7 and OP8 in the LDP 2017. It should be identified as an allocation for 500 housing units in the future phases of the LDP to ensure that there is a ready supply of housing in a logical location. A phase 3 expansion of an existing housing development provides a demonstrably available and realistic prospect to serve future housing needs. The landscape can accommodate further housing with minimal impact. The identification of A96 dualling options provide certainty for at least the southern portion of the proposed site to be allocated. It can be programmed alongside the adjacent housing allocations at Uryside. Therefore, the proposed site would be a continuation of the previous phases and not a standalone site. An extension of an existing allocation provides several benefits. The Council have taken a precautionary approach until the preferred route for dualling the A96 has been selected – the identification of options provides some certainty. Flooding, tree loss, impact on listed building could all be addressed through masterplanning and careful design. The representee has included an Appendix (RD0251.A) in their representation which provides further detail to support their position (PP1296).

Non-Allocated Site – Bid Site GR131 – Land at Braeside Farm and Thainstone

A representee requests that sites 'a' and 'b' within bid site GR131 are included in the LDP for 13 hectares of employment or strategic reserve employment land. States that sites 'a' and 'b' of bid GR131 are well located to extend the existing business park operations at Thainstone, that Thainstone is an important regional business destination, and while the phased expansion of the commercial park is underway, it is important that there is future provision for growth, particularly as the Local Development Plan is being promoted as a ten-year Plan. Also, the sites represent deliverable development sites that can assist in delivering the employment land requirement for the Aberdeen to Huntly Strategic Growth Area and assist with meeting the requirements of the PSDP 2018. The proposed sites are

a natural extension to the key employment and commercial hub that already exists at Thainstone, there are no constraints, and the PLDP should be allowing for future growth in this LDP (PP0413).

It is also requested that all, or part, of site 'c' within bid GR131 is identified as strategic reserve employment. The PLDP does not identify sufficient strategic reserve land to satisfy the PSDP, which requires 28 hectares of strategic reserve land in the Aberdeen-Huntly SGA, as what was SR1 is now part of OP10 and delivery of OP6 and SR1 is uncertain. However, this site would ensure that the opportunity for future economic growth is provided for both at Thainstone and to meet the wider needs of the growth corridor. The site is a natural extension to the key employment and commercial hub that already exists at Thainstone, there are no constraints, and the PLDP should be allowing for future growth in this LDP. The representee has included an Appendix (RD0065.A) in their representation which provides further detail to support their position (PP0413).

Non-Allocated Site – Bid Site GR137 – Land East of Rothienorman Road, Howford

Bid site GR137 should be allocated as a mixed-use site for 109 homes and extension to Uryside Riverside Park. Changing of the proposed site to a mixed-use site will allow for the expansion of Uryside Park whilst at the same time providing a small housing development that could contribute proportionally towards the required improvements of the infrastructure network as well as the Howford Bridge crossing on the B90001 over the River Ury. Development would allow for footpaths and cycle connectivity to be made between the riverside park and development sites at OP3 and BUS1 (PP0524 and PP0991).

None of the potential routes for the A96 dualling project would prejudice the delivery of the site at Howford. The local road network is already being assessed by the Council and contributions could be agreed for any local improvements. The location and size of this development, alongside the benefit of delivering a large area of parkland should be further considered. The site is well situated in location to the ongoing Uryside development OP4 and would provide the additional benefits required to supplement this development. The argument for protecting due to the presence of prime agricultural land is no longer relevant. Due to the site's proximity to the large development at Uryside it would make maintaining the area for agriculture extremely problematic for the local community due to heavy requirement for spreading of organic manures such as slurry. The requirement to transport slurry tankers in and out of this site which is now sandwiched between Inverurie developments on three sides would result in heavy complaints from the public. This continuous and cyclic process of slurry spreading will also have an impact on the current Uryside Park causing a deterrent for the public due to proximity to this farmland smell (PP0524).

Modifications sought by those submitting representations:

General

Modify the PLDP to allow the Inverurie Settlement Statement the ability to consider proposals for tourism, including caravan park, self-catering, town centre improvements, transport interchange and connectivity (PP0223).

Modify the PLDP to improve connectivity at the south end of the Keithhall Estate within the Inverurie Settlement Statement (PP0223).

Modify the PLDP to create a stronger commitment to promoting walking, cycling and public transport within the Inverurie and Port Elphinstone Settlement Statement (PP0782).

Modify the PLDP to designate protected areas to prevent coalescence of Thainstone and Port Elphinstone and ensure a policy is in place to protect the land (PP0733).

Modify the PLDP to remove constraints that hinder housing delivery in Inverurie (PP0760).

Modify the PLDP to ensure developments requiring access to the A96 at Thainstone and Port Elphinstone roundabouts are only approved subject to a comprehensive traffic assessment, and improvements paid for by developers (PP0733).

Modify the PLDP to ensure that major developments that have not progressed since the LDP 2012 are removed at the 5-year review, and that masterplans are kept up to date (PP0733).

Vision

Modify the PLDP to ensure the Vision statement has a more positive approach for the town, especially to existing and future derelict sites (PP0223).

Modify the PLDP to review the role of Keithhall Estate and likely designations for potential development, enhancement, or protection (PP0223).

Modify the PLDP to replace the current text for the Vision statement with, “within the Crichton area ... will help address traffic congestion issues through the provision of a new grade separated interchange on the A96.” (PP0782).

Site P8 – To protect the landscape buffer/setting as forming part of the green-blue network

Modify the PLDP to extend the P8 boundary south to cover the adjacent flood plain (PP1313).

Site P9 – To protect the playing fields as forming part of the green-blue network

Modify the PLDP to extend the P9 north to cover the strip of land adjacent to the river (PP1313).

Site P10 – To protect the playing fields as forming part of the green-blue network

Modify the PLDP to exclude land within the P10 site that has planning permission (PP0223).

Site P15 – To protect the Uryside Riverside Park

Modify the PLDP to improve connectivity at the west end of Uryside Park by improving Howford Bridge (PP0223).

Site P18 – To protect the golf course as an amenity for the settlement and forming part of the green-blue network

Modify the PLDP to extend the P18 designation to include Inverurie Golf Course practice area (PP0223).

Site P19 – To protect the football pitches and grounds

Modify the PLDP to remove the P19 designation to retain as its current zoning (PP0032, PP0050, PP0068, PP0071, PP0080, PP0223, PP0427, PP0572, PP0731, PP0843, PP0861, PP0875, PP1016, PP1124, PP1172 and PP1173).

Modify the PLDP to remove the P19 designation (PP0089, PP0427, PP0820 and PP0831).

Modify the PLDP to remove the P19 designation and leave the area as white land or retain for a mixed-use development (PP0193 and PP0941).

Site P26 – To protect an area of open space forming part of the green-blue network

Modify the PLDP to protect the landscaped area to the north west of the Anderson's A96 roundabout (PP0223).

Site R1 – For transport interchange

Modify the PLDP to amend the boundary of site R1 to extend the site to include extra land to the west (PP1241).

Site R2 – For an extension to Ury Riverside Park

Modify the PLDP to allocate land for development on site R2 that is outwith the flood plain (PP0223 and PP0983).

Site R3 – To enable development of community and education facilities

Modify the PLDP to extend the R3 site to include the existing buildings, games hall and the new sports and recreation facilities attached to the school (PP0223).

Site R4 – For community uses

Modify the PLDP to remove the R4 designation for a community use (PP0223).

Site BUS1 – Safeguarded for business uses

Modify the PLDP to amend the BUS1 boundary to exclude the residential area (PP0008 and PP0223).

Site BUS2 – Safeguarded for business uses

Modify the PLDP to remove the BUS2 site at Inverurie (PP1339).

Flood Risk

Modify the PLDP to add a new 'Flood Risk' bullet point, "Due to watercourses running through or adjacent to the site and/or surface water flooding, Flood Risk Assessments will

be required for sites OP5, OP13 and OP16. A Flood Risk Assessment may be required for site OP3.” (PP1219).

Modify the PLDP to add a new ‘Flood Risk’ bullet point, “A detailed flood study by Aberdeenshire Council has confirmed site OP4 is at risk of flooding. A Flood Risk Assessment will be required for any future development on this site.” (PP1219).

Modify the PLDP to add a new ‘Flood Risk’ bullet point, “All BUS sites have surface water flood risk areas and/or are adjacent to watercourses. A Flood Risk Assessment may be required. Appropriate buffer strips will be required alongside the watercourses. Re-naturalisation of the watercourses and removal of any redundant features should be investigated.” (PP1219).

Services and Infrastructure

Modify the PLDP to amend wording under ‘Strategic drainage and water supply’ to include, “A Drainage Impact Assessment may be requested.” (PP0272).

Modify the PLDP to ensure the LDP and Delivery Programme outline the specific required infrastructure that developments will be required to provide in order for development to be delivered (PP0578).

Site OP2 – Former Garioch Health Centre

Modify the PLDP to remove the retail element of the site OP2 for a mix of uses including housing and retail uses (PP0223).

Site OP3 – Land at Harlaw Park

Modify the PLDP to amend the OP3 allocation, if a ‘Flood Risk’ bullet point is not added as requested by SEPA, the following text should be added to the allocation summary, “A Flood Risk Assessment will be required due to surface water flood risk” is added to the allocation text.” (PP1219).

Modify the PLDP to remove the contribution of 50 homes to the allowances for OP3 Inverurie and identify an alternative effective allocation in the SGAs of the AHMA (PP1082).

Site OP4 – Phase 2 Portstown

Modify the PLDP to add the following to the allocation summary, “Should extant permission lapse any future developments will have to take account of the latest Council Flood Study for Inverurie.” (PP1219).

Site OP5 – Crichton (Residential and Community)

Modify the PLDP so that the allocation summary for site OP5 remains as per the LDP 2017 to state, “This site was previously allocated as site H1 in the 2012 LDP and OP4 in the 2017 LDP. It is located to the west of Port Elphinstone on the western side of the A96. A Development Framework was approved in February 2013, and a Masterplan for the site was subsequently approved in June 2013. Future development proposals should take account of these documents, which identify key principles for the urban form and design of

the development. The lower lying area of the site along the river should be retained and enhanced as a natural corridor to secure the setting of the River as well as to provide opportunities for enhanced recreational linkages. The site must contribute proportionally towards major improvements in relation to the required road and junction capacity possibly including the construction of a new grade separated interchange to replace the Thainstone and Port Elphinstone roundabouts to facilitate later stages of development. Accesses to the initial phase of development (no more than 300 dwellings) are expected to be via the B993 Kemnay Road, although subsequent stages of development will require an additional access to the south of the site from the new grade separated interchange. Pedestrian and cycling linkages will be required, particularly to ensure accessibility between the site and the existing built-up areas of Port Elphinstone. Significant areas of woodland within and adjoining the site should be retained and enhanced wherever possible. The northern part of the site is at risk of flooding from the River Don, and a flood risk assessment will be required to support any development in this part of the site. Full SuDS implementation and adequate buffer zone provision will be required. Water impact assessment and drainage impact assessments will be required. The demand for water and waste water capacity for the non-domestic element of this development will depend on the business use and early engagement with Scottish Water is recommended in this respect.” (PP1290).

Modify the PLDP to amend the allocation boundary to designate the woodland and flood plain as protected land (PP1313).

Modify the PLDP to amend the allocation boundary to designate the broadleaved woodland south of Lynndale on Old Kemnay as protected land (PP1313).

Site OP6 – Crichie (Employment)

Modify the PLDP to remove site OP6 (PP0878).

Modify the PLDP to review the deliverability of OP6 for 23.7ha employment land (PP0413).

Modify the PLDP to remove reference to the requirement of a formal footway/cycleway connection made across the A96 into Port Elphinstone and Inverurie from site OP6 Crichie (Employment), Inverurie and Port Elphinstone Settlement Statement (PP1289).

Modify the PLDP to remove the following sentence from the statement of OP6 Crichie (Employment) from the Inverurie and Port Elphinstone Settlement Statement, “an updated Transport Assessment should be provided as development comes forward.” (PP1289).

Modify the PLDP to delete the existing development brief for OP6 Crichie and replace the wordings with the following, “This site was previously allocated as site E1 in the 2012 LDP and OP11 in the 2017 LDP, although the site boundaries have since been amended. It is located on the western side of the A96 to the immediate south of site OP5. A Development Framework and Masterplan, including the site, was approved in 2013, and the development must accord with these documents, which identify key principles for the urban form and design of the development. The development must make provision for 5ha of high-quality business use. The site must contribute proportionally towards major improvements in relation to the Thainstone and Port Elphinstone roundabouts/junctions, including the construction of a new grade separated interchange on the A96 to replace the Thainstone and Port Elphinstone roundabouts. Full SuDS implementation and adequate buffer zone provision will be required to take account of the small watercourse which runs through the

site.” (PP1289 and PP1291).

Site OP8 – Former Hatchery

Modify the PLDP to ensure there is screening of a sufficient size along the southern boundary of site OP8 (PP0219).

Site OP11 – Pineshaw, Port Elphinstone

Modify the PLDP to reduce the allocation size to 25 homes, as per the 2017 LDP (PP01293).

Modify the PLDP to amend the allocation summary for proposed site OP11 to read: “This site was previously allocated as site OP14 in the LDP 2017. Located off the B993 Kemnay Road the site abuts site OP5. It is well screened by topography and vegetation. Wet habitats may be present on site. Appropriate investigation and adequate buffers/protection will therefore be required. Water network reinforcement may be required and early engagement with Scottish Water is recommended in this respect. Development must be designed to integrate into the wider Crichton development at sites OP5, OP6 and OP10 Thainstone. Access and permeability to integrate with site OP5. The site must contribute proportionately towards the cost of the footway and cycleway connections to Port Elphinstone and Inverurie that are required to facilitate this development as well as that of OP5 Crichton. Access from the B993 is dependent on measures installed on this road as part of the OP5 development, otherwise access should be taken from Ardennan Road. Two access points are required. The site must also contribute proportionally towards major improvements in relation to the Thainstone and Port Elphinstone roundabouts/junctions, including the construction of a new Grade Separated Interchange on the A96 to replace the Thainstone and Port Elphinstone roundabouts. A Transport Assessment will be required as part of this development. This site will contribute towards affordable housing in line with Policy H2 Affordable Housing. This should be delivered as part of the early phases of development and be integrated into the design of the development to provide a mix of house types and sites to meet local need.” (PP1293).

Site OP13 – Kirkwood Commercial Park, Thainstone

Modify the PLDP to remove “(FRA)” from the allocation summary (PP1219).

Site OP14 – Land Northeast of Thainstone Roundabout

Modify the PLDP to review the need for a gypsy/traveller site on site OP14 (PP0313).

Modify the PLDP to allocate OP14 as land reserved for employment land (not and/or Gypsy/Traveller halting site) (PP0592 and PP0828).

Modify the PLDP to amend the OP14 allocation to remove the halting site, and designate for employment use only, with the requirement for a comprehensive traffic assessment (PP0733).

Modify the PLDP to amend the OP14 allocation to provide a timescale for the development of the halting site and information on the decision to allocate the site for the purpose of a gypsy/traveller site (PP0866).

Site OP15 – Land West of Bennachie View Care Home

Modify the PLDP to remove the OP15 allocation and include land at Souterford and Lofthillock for residential uses (450 private units, affordable and accessible homes), a primary school and a riverside park (PP0697).

Modify the PLDP to remove the OP15 allocation and include land at Souterford and Lofthillock for residential uses (270 private homes, affordable and accessible homes), a primary school and a riverside park (PP0698).

Modify the PLDP to remove the OP15 allocation and relocate the homes to Souterford (bid site GR091) (PP0699).

Modify the PLDP to remove the OP15 allocation and provide housing allocations that better connect with and sustain facilities in Inverurie (PP0760).

Modify the PLDP to add text to the allocation summary for to read, "Provision for active travel is required." (PP1300).

Site OP16 – Land West of Conglass Cottages

Modify the PLDP to remove the OP16 allocation and include land at Souterford and Lofthillock for residential uses (450 private units, affordable and accessible homes), a primary school and a riverside park (PP0697).

Modify the PLDP to remove the OP16 allocation and include land at Souterford and Lofthillock for residential uses (270 private homes, affordable and accessible homes), a primary school and a riverside park (PP0698).

Modify the PLDP to remove the OP16 allocation and provide housing allocations that better connect with and sustain facilities in Inverurie (PP0760).

Modify the PLDP to add text to the allocation summary to read, "Provision for active travel is required." (PP1300).

Non-Allocated Site – Bid Site GR027 – Site A, Land West of Blackhall Road

Modify the PLDP to provide clarity over the continued identification of R4 for community uses (PP1010).

Non-Allocated Site – Bid Site GR028 – Site B, Mains of Blackhall, West of Blackhall Road

Modify the PLDP to include GR028 as an opportunity site for around 100 homes and GR027 should be identified as a future opportunity site for around 260 homes (PP1010).

Non-Allocated Site – Bid Site GR057 – Land at East Balhalgardy Farm (Bid 1), Bid Site GR058 – Land at East Balhalgardy Farm (Bid 2) and Bid Site GR059 – Land at East Balhalgardy Farm (Bid 3)

Modify the PLDP to allocate sites GR057, GR058 and GR059 for up to 200 homes, unless

more housing land is allocated around Inverurie to facilitate the delivery of roads infrastructure improvements on a cumulative basis in which case the site could accommodate up to 500 homes (PP1279).

Non-Allocated Site – Bid Site GR061 – Land North and East of St, James Walk, Inverurie and Bid Site GR062 – Land at St James Place

Modify the PLDP to allocate sites GR061 and GR062 for up to 100 homes to the east of the combined site and up to 900 homes on the whole site (subject to transport upgrades) (PP1280).

Non-Allocated Site – Bid Site GR091 – Land at Souterford and Lofthillock

Modify the PLDP to include land at Souterford and Lofthillock for residential uses (450 private homes, affordable and accessible homes), a primary school and a riverside park (PP0697).

Modify the PLDP to include land at Souterford and Lofthillock for residential uses (270 private homes, affordable and accessible homes), a primary school and a riverside park (PP0698).

Non-Allocated Site – Bid Site GR117 – Land North of Lochter Drive, Uryside (Phase 3)

Modify the PLDP to allocate site GR117 for 500 new homes as an extension of OP7 and amend the description of OP7 in Appendix 7D to the following: OP7: Uryside Phase 2 and Phase 3 Allocation: 866 homes (Phase 2 – 366 (remaining) and Phase 3 –500 (new)) (PP1296).

Non-Allocated Site – Bid Site GR131 – Land at Braeside Farm and Thainstone

Modify the PLDP to allocate sites ‘a’ and ‘b’ within bid site GR131 for 13 hectares of employment or strategic reserve employment land (PP0413).

Modify the PLDP to allocate site ‘c’ within bid site GR131 as strategic reserve employment land (PP0413).

Non-Allocated Site – Bid Site GR137 – Land East of Rothienorman Road, Howford

Modify the PLDP to reallocate site R2 as an opportunity site for 109 homes and a riverside park (PP0524 and PP0991).

Summary of responses (including reasons) by planning authority:

General

The aspiration for the town to become better equipped in terms of tourist facilities is something that is noted within the Vision of the Settlement Statement. Policy B3 Tourist Facilities also notes what is required for any new tourist attractions or tourist accommodation within settlements. Tourist attractions/accommodation can be developed within Inverurie as long as the principles within Policy B3 are taken account of. Additionally, this is something that could come through the development of Local Place Plans to be noted as a desire of the community which would then be looked at through the

preparation of future LDPs. The regulations for these are coming into force through the new Planning (Scotland) Act 2019. No change is required.

The core paths that are identified on the Settlement Statement maps are the existing core paths that form part of the adopted core paths network. These are not something that have been allocated through the LDP. The process of adoption of additional core paths is a separate process and not something that is completed through the LDP. No change is required.

The concerns regarding additional walking and cycling routes are noted. Within the Vision of the Settlement Statement, it notes the aspirations of connections between Inverurie and Port Elphinstone and other neighbouring settlements. Additionally, within the Services and Infrastructure sections of the Settlement Statement it also notes “development may be required to contribute to footway extensions, upgrades and crossing facilities, cycle infrastructure and public transport provision. Contributions and connections will be required towards the Inverurie to Oldmeldrum and Inverurie to Kemnay strategic cycle routes. All development will be required to show links to the Inverurie Active Travel networks” (AD0041.G, page 558). This shows the commitment to ensuring that active transport is at the forefront of decisions within the Plan. Additionally, within Policy P1 Layout, Siting and Design there are six qualities of successful places, one of which notes that new development needs to be well connected (AD0041.A, page 48). No change is required.

The comments relating to Thainstone and Port Elphinstone are noted. However, planning permission was granted for the development at Crichie which is in the location of the desired protected site, meaning that this is not an option. It should, however, be noted that the development of Crichie has been carefully considered and open space areas have been designed into the development to incorporate woodland that is onsite and to provide buffers to existing development. No change is required.

The LDP does not allocate land based on the house builder promoting the site but allocates sites which range in size and scale to allow for different developers to provide a mix of housing. There are several different house builders operating in the Inverurie area. There are a number of existing network issues, but this has not provided a constraint to development within the corridor and there are some transport mitigation improvements planned to be undertaken this year. Also, a Development Planning and Management Transport Appraisal Guidance (DPMTAG) assessment was carried out to support the preparation of the PLDP. This notes the impacts that developments will have on the road network. No change is required.

Concerns regarding the lack of progress for some of the major sites is noted. It is noted that the sites have been included in the Plan since 2012 however, the sites have been progressing towards development by overcoming constraints before development can commence on the ground. In terms of masterplans, there is a new requirement coming through Policy P1 Layout, Siting and Design. The proposed policy requires masterplans to be reviewed every 5-years. As noted within the Issues and Actions papers the introduction of the review process is to allow the masterplans to reflect updates in national guidance and policy (AD0040.E, page 106). This will ensure that masterplans remain up to date. No change is required.

The comments from Nestrans are noted. No change is required.

Vision

Concerns regarding the Vision of the Plan are noted. In terms of the existing and future derelict sites within the settlement this is something that can be addressed through policies within the LDP. Policy P3 Infill Developments within Settlements and Householder Developments which supports development on vacant sites within settlement boundaries (AD0041.A, page 50). This would then allow for development to be taken forward on these particular sites and not require to be specifically allocated for re-development. No change is required.

The proposed Vision was prepared in collaboration with Inverurie Community Council. It was requested by the Community Council that the statement relating to Keithhall Estate was included within the Vision as whilst it is noted that the area is outwith the settlement boundary, as defined by the Settlement Statement, it is an important recreation area for residents. No change is required.

A grade separated junction is noted as a concern. This is something that is noted within the Settlement Statement as a requirement for development. It is noted through the Vision and also the Services and Infrastructure section that a grade separated junction is a requirement. No change is required.

Site P8 – To protect the landscape buffer/setting as forming part of the green-blue network

The request for the protected site to be extended is noted. However, it is not felt that it is required to extend this area to include the land between the P8 site and the P17 site. The P8 site is to protect the buffer that is in place behind the existing housing on St James's Walk, by extending this site it would be introducing more land than just a buffer to the area. Additionally, the P17 site includes the River Don and the embankments of the River Don which again is serving a different purpose. No change is required.

Site P9 – To protect the playing fields as forming part of the green-blue network

The boundary of site P9 is in place is to protect the playing fields at Davidson Fields. The boundary, therefore, follows the boundary of the playing fields to ensure that this area is protected for the amenity value it adds to the area. It is not felt that it is necessary to extend the boundary of the site to include the area of land between this protected site and P17. The land between the two sites does not form part of the playing fields nor part of the River Don area. It therefore does not require to be protected for either purpose. No change is required.

Site P10 – To protect the playing fields as forming part of the green-blue network

The concerns by the representee are noted. The former care home is included within part of the P10 allocation. An enquiry has been submitted for the site to develop some affordable housing on the site, however, to date no planning application has been submitted for development. The Planning and Environment Service are aware that the Council's Property Service are in discussions regarding this site and the potential redevelopment of the site but as there are no firm proposals/applications available for the site it is deemed to be appropriate for the site to remain as part of the P10 protected site. No change is required.

Site P15 – To protect the Uryside Riverside Park

The purpose of site P15 site is to protect the Uryside Riverside Park. The concerns raised by the representee are noted. Improvement works are part of the development associated with the park. The developments to the north west and north east of the park are still under construction. The required work to improve Howford Bridge can still happen. No change is required.

Site P18 – To protect the golf course as an amenity for the settlement and forming part of the green-blue network

Comments from the representee are noted. The practice area is currently outwith the settlement boundary. It is not considered, at this stage, that it is necessary to amend the settlement boundary and the P18 designation boundary to include the practice area within the settlement and site. No change is required.

Site P19 – To protect the football pitches and grounds

The PLDP proposed a number of additional protected land designations within the Settlement Statements following an update to the Open Space Audit accounts. This update exercise undertaken during 2019 was recognised within the Issues and Actions papers arising from the Main Issues Report (MIR) 2019 consultation (AD0040.E, page 138). Within the LDP 2017 the Inverurie Loco Works Football Club grounds forms part of a wider opportunity site (OP2) allocated for a “mix of uses including 180 homes, 0.5 ha of employment land, community facilities and a variety of retail uses” (AD0034.G). Importantly the Development Framework, prepared in 2004, referred to in the allocation summary does not include the Football Club’s grounds. Through rationalisation of opportunity sites, as alluded to in the MIR, the OP2 site has been removed in favour of identifying only the remaining development opportunities (AD0038.E, page 38). Namely, the redevelopment of the former medical practice (Proposed LDP site OP2) and land at Harlaw Drive subject to bid GR084 (Proposed LDP site OP3). It is noted that no development bid was received in 2018 in response to the Council’s Call for Sites to retain or seek any alternative uses on the Football Club’s grounds. For clarity, whilst the OP2 allocation in the LDP 207 is named, “Inverurie Town Centre”, the allocation summary recognises that the site, “adjoins, and partially contains, the defined town centre of Inverurie”. The Football Club’s grounds do not currently, nor are proposed, to fall within the designated town centre as shown by a red dashed line in the Settlement Statement map.

Whilst the 2010 Open Space Audit remains baseline information, the Audit update exercise was carried out with the purpose of updating the Settlement Statements and associated mapping to ensure new open space areas were included. The Audit exercise also provided an opportunity to address any inconsistencies across the Settlement Statements in relation to protections applied to open spaces or address any gaps found in the original Audit as well as accounting for changes made to allocated sites during preparation of the PLDP. Identification of the Football Club’s grounds as open space falls into this latter grouping and was included as protected land on the basis of the existing OP2 allocation being rationalised, and for consistency, the Council have sought to protect the football grounds in the same way as we have in other settlements, for example in Turriff.

For the reasons set out above the Loco Works Football Club’s grounds have been identified in the Proposed LDP as site P19 “to protect the football pitches and grounds”. In

policy terms, any development proposed on the protected area would require, to comply with Policy PR1 Protecting Important Resources and specifically, paragraph PR1.6 which outlines that important areas of open space are identified as protected land within the Settlement Statements. There is a caveat within the policy to allow for the development of essential community infrastructure. The Planning and Environment Service believe that, in principle, the improvement works proposed by the Football Club in relation to provision for disabled access and replacement of the existing Clubhouse, assuming its proposed replacement is contained within the footprint of the existing Clubhouse and does not lead to a deficit of open space in the settlement, could come forward in accordance with Policy PR1. The protected land designation would however mean that any proposal coming forward that is for other uses, such as housing, would be contrary to the LDP and as such would be treated as a departure. No change is required.

Site P26 – To protect an area of open space forming part of the green-blue network

Site P26 was identified as a protected site to ensure that the open space that is located between the new housing development and the A96 roundabout forms part of the green-blue network. The area questioned by the respondent has not been included to form part of the green-blue network as it was partially removed from the area due to the road network. However, if the Reporter is minded, to make an amendment, then the Council recommend that the boundary of the P26 protected site could be modified to include, the land to the north of the site bound by the A96 roundabout.

Site R1 – For transport interchange

Comment from SEPA is noted. No change is required.

Nestrans note that the boundary of the transport interchange is not as robust as previously noted. It is requested that the boundary is extended, the requested change is shown within the representation by Nestrans. It is acknowledged that this is an important function within the town. Therefore, The Council confirms that it intends to address Nestrans comment through a non-notifiable modification, as set out in the list of Non-Notifiable Modifications.

Site R2 – For an extension to Ury Riverside Park

Comment from SEPA is noted. No change is required.

Comments from the representee are noted in relation to the development of the site. In relation to the query about the R2 site, this site was noted through the recommendations within the Issues and Actions Papers to be reserved for the extension of the Uryside Park (AD0040.E, page 49). Issues relating to development on the site are discussed below under bid site GR137 Land East of Rothienorman Road, Howford. No change is required.

Site R3 – To enable development of community and education facilities

Comment from SEPA is noted. No change is required.

The reserved land designation was included within the LDP to reserve the area for community and education facilities. Development on the site has taken place and is mostly completed. It is however, felt that it would be premature to remove the allocation to allow the development and associated works to be completed. It is not felt that it is necessary to

expand the designation to include land that has already been completed as the designation is to hold land for development. It would seem that it would be more appropriate to review the reserved land designation in the process of the preparation of a future LDP. No change is required.

Site R4 – For community uses

Comment from SEPA is noted. No change is required.

It is noted within the Issues and Actions paper that recommendation 3 of the paper identifies that P15 should be removed from the Plan (AD0040.E, page 49). The P15 designation is the designation of this land under the LDP 2017. It is therefore an omission on the Council's behalf that the site has remained in the Plan for community uses. The land has changed from a protected site to a reserved site to allow this area of land to be future proofed. There is a lack of community facilities within this part of Inverurie and it is thought to be appropriate to retain this protected site for this use. No change is required.

Site BUS1 – Safeguarded for business uses

Two representees note that an area of residential land has been included in the BUS1 designation. It is deemed that it would be appropriate to remove this area of land from the allocation to ensure that the allocation only contains land which is able to be developed. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the list of Non-Notifiable Modifications.

Site BUS2 – Safeguarded for business uses

The concerns by the representee are noted. The BUS2 site is not a new designation nor is it an opportunity site which proposes a new development opportunity. The BUS designations are in the LDP to protect the areas of already developed business land for this purpose. The BUS2 allocation is fairly well developed with the potential opportunity for small infill development. No change is required.

Site SR1 – Reserved for strategic employment land

Comment from SEPA is noted. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comments through non-notifiable modifications, as set out in the list of Non-Notifiable Modifications.

Services and Infrastructure

Comment from SEPA is noted. No change is required.

The Council confirms that it intends to address Scottish Water's comments through a non-notifiable modification, as set out in the list of Non-Notifiable Modifications.

The comments from the Scottish Government are noted. The request for the LDP and Delivery Programme to be more specific in terms of trunk road requirements is noted. It is

felt that the text included within the LDP is sufficient in terms of highlighting the requirement for the works to be completed. The function of the Delivery Programme is to set out how the Local Authority is going to deliver the LDP. It is noted that greater detail should be included within the Delivery Programme as this is the document that is proactive and constantly updated as the situation progresses. It is therefore, felt that there is no need to update the text within the LDP as the Delivery Programme delivers this function. No change is required.

Although, a preferred route of the A96 dualling at this location has been identified, more detailed work still requires to be progressed and delivery of this infrastructure is still unknown at this time. With this being said, work has progressed since these comments were submitted as part of the consultation as discussions are underway with all relevant parties including the Council, developers and Transport Scotland to progress with the identified improvements. The outcomes of these discussions will be highlighted within the Delivery Programme and continued to be monitored. No change is required.

The comments regarding the DPMTAG are noted. Given the uncertainty of proposals for the A96(T) from the Scottish Government it is very difficult to come to any meaningful conclusions in the DPMTAG on what works may be required from developments to address cumulative traffic impacts. Comments in relation to OP10 are noted., consent for the development has already been granted so no new conditions can be attached to this site. Conclusions reached by Aberdeenshire Council in the DPMTAG do not accord with the actions taken by the Scottish Government in consideration of the granting of that consent, In relation to OP9 the LDP reflects the need for further assessment to be undertaken once the alignment of the A96 dualling in the vicinity of Inverurie becomes clear and the recognition in the DPMTAG that grade separation at Crichton may not be required in the long-term.

A full Transport Assessment for sites OP15 & OP16 for the purposes of identifying new trunk road mitigations was not carried out for inclusion of the DPMTAG. This is the correct approach given that the level of trip generation is very small in comparison to the traffic flows that have resulted in the concerns regarding capacity of the trunk road network around Inverurie, and the commitments made from significantly larger developments to address the impacts generated from the last decade of housing growth in the town. Predicted impacts on the trunk road (estimated at approximately 40 vehicle movements in peak periods) can be assessed in a Transport Assessment, made alongside a planning application, when the trunk road position is clearer and also allowing the developer to seek alternative mitigations through more sustainable means, rather than through prescribed road capacity enhancements.

Site OP1 – Conglass

Comment from SEPA is noted. No change is required.

Site OP2 – Former Garioch Health Centre

Comment from SEPA is noted. No change is required.

The concerns by the representee are noted. The OP2 allocation is located within the boundary of Inverurie Town Centre and therefore the text highlighting that retail uses are expected at ground floor level is appropriate. Through the Town Centre First Principle that is adopted by the Council and the sequential assessment required by Policy B1 Town

Centre Development this site is an appropriate site for retail development (AD0041.A, page 25. No change is required.

Site OP3 – Land at Harlaw Park

As requested by SEPA, additional text was added to the 'Flood Risk' bullet point. It is therefore not required to add any more text into the allocation summary. No change is required.

The comments from the representee are noted. It is acknowledged that the site is noted as constrained within HLA 2020, on ownership grounds (AD0023, page 65). However, the Council do not consider that ownership would be a constraint that could not be overcome. The site is located within the AHMA, and it is not considered that this constraint would impede development coming forward on the site. In light of this, the Council would consider that the constraints on OP1 identified by the representee would be easily overcome within the Plan period and as such the site should remain in the PLDP. No change is required.

Site OP4 – Phase 2 Portstown

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the list of Non-Notifiable Modifications.

Site OP5 – Crichtie (Residential and Community)

Comment from SEPA is noted. No change is required.

The concerns raised by the representee are noted in relation to the loss of ancient woodland. However, the site is progressing towards delivery as the site has an approved Development Framework, Masterplan and also planning permission. It should be noted, however, that there are policies within the Plan that protect woodland and these would have been used when assessing the planning application for the site. No change is required.

In response to the concerns regarding a number of issues that are covered through the conditions attached to the planning application and duplicated within the allocation summary including the Transport Assessment and formal footway/cycle paths, it is noted that it seems appropriate to maintain these requirements within the allocation summary in case the planning application lapses. No change is required.

The request for two additional protected sites within the Settlement Statement are noted. However, through the development of the masterplan and the planning application (APP/2013/0267) careful consideration was given to the design of the development to ensure that the woodland that was located within the site remained (masterplan, AD0090, page 37). Therefore, currently it is not seen as necessary to have these sites noted as protected sites. However, once development on the site is completed this could be reassessed. No change is required.

Site OP6 – Crichtie (Employment)

Comment from SEPA is noted. No change is required.

It is noted that the site is infrastructure constrained within the Employment Land Audit 2019 however, it is noted through the agreed masterplan the employment element of the site was not to progress until phase 6 (AD0090, page 75). As the housing phases that are to be completed initially have been delayed this has had a knock-on impact on the delivery of the employment element. As the phasing of the site was agreed through the masterplan it does not seem appropriate to remove the allocation. No change is required.

In response to the concerns regarding a number of issues that are covered through the conditions attached to the planning application and duplicated within the allocation summary including the Transport Assessment and formal footway/cycle paths, it is noted that it seems appropriate to maintain these requirements within the allocation summary in case the planning application lapses. No change is required.

The request for the change to the allocation summary is noted. The changes requested by the representee are minimal and only really make changes to remove the assessment noted above. As noted above, it is not deemed that it is necessary to review these assessments in case the planning application lapses. It is therefore, not considered appropriate to make changes to the allocation text. No change is required.

Site OP7 – Uryside Phase 2

Comment from SEPA is noted. No change is required.

Site OP8 – Former Hatchery

Comment from SEPA is noted. No change is required.

Comments from the representee are noted. However, the issues raised by the representee were dealt with through the development management process. No change is required.

Site OP9 – Adjacent to Axis Business Centre

Comment from SEPA is noted. No change is required.

Comments in support of the allocation are noted. No change is required.

Comments made by the Scottish Government that the DPMTAG identified that a contribution should be made to the provision of a grade separated junction at Crichton, cannot be sustained as the DPMTAG identifies that grade separation at Crichton may not be required in the long-term. No change is required.

Site OP10 – Thainstone

Comment from SEPA is noted. No change is required.

Comments made by the Scottish Government that the DPMTAG identified that a contribution should be made to the provision of a grade separated junction at Crichton, cannot be sustained as no such condition was applied to the consent issued by Ministers on appeal (following refusal of the planning application by Aberdeenshire Council) resolved by the Scottish Government and the subsequent Matters Specified in Conditions granted

by Aberdeenshire Council without objection from Transport Scotland and without any condition relating to the grade separated junction at Crichtie. No change is required.

Site OP11 – Pineshaw, Port Elphinstone

Comment from SEPA is noted. No change is required.

Comments from the representee are noted. Concerns have been raised in relation to the increase in density. The site was increased from the allocation in the LDP 2017 to 54 units based on a 25 house per hectare being applied to undeveloped housing sites in the Aberdeen Housing Market Area. The site capacity was changed in order to ensure that the site was not underdeveloped. No change is required.

It is noted that there is a request for the site allocation summary to specifically mention contributions to the grade separated junction on the A96. It is not felt that this is required. At such times as a detailed proposal comes forward the site will be assessed to determine the site's impact on all infrastructure and the site will require to contribute proportionally to any infrastructure where necessary. No change is required.

Site OP12 – North Street, Inverurie

Comment from SEPA is noted. No change is required.

Site OP13 – Kirkwood Commercial Park, Thainstone

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the list of Non-Notifiable Modifications.

Site OP14 – Land Northeast of Thainstone Roundabout

Comment from SEPA is noted. No change is required.

The requirement for a halting site for gypsy/travellers required within the Thainstone/Crichtie employment area is not new. This was highlighted as a requirement within the LDP 2017, see page 393. However, one of the major differences between the LDP 2017 and the PLDP is that a site has now been allocated in order to deliver this requirement. Through discussion at the Garioch Area Committee on 3 September 2019 the Committee added a recommendation to those proposed by Officers to identify a suitable site for a gypsy/traveller site in the Port Elphinstone/Crichtie/Papermill area in the Proposed LDP (AD0145 and AD0040.E, page 50). This site was selected as it is considered an appropriate site for developing a gypsy/traveller halting site. Concerns are noted regarding not meeting the requirements set out in policy in terms of amenities etc, however through development of this site, alongside other developments in the area, will help to overcome these concerns. No change is required.

Site OP15 – Land West of Bennachie View Care

Comment from SEPA is noted. No change is required.

The site was allocated after consideration of the sites within the Issues and Actions Papers. It was noted within the Issues and Actions Paper that although there were a couple of constraints associated with the sites that the site should be allocated for development

including the requirement for a landscape buffer (AD0038.E, page 44). The site also links in with the wider development at Conglass. Additionally, within the allocation summary the requirement for bus stop infrastructure is noted to ensure that there are linkages to within the settlement but also outwith the settlement. No change is required.

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in the list of Non-Notifiable Modifications.

In respect of the Scottish Governments suggestion that a cumulative appraisal should be undertaken with both OP15 and OP16 to address impacts on current capacity issues on the A96(T) in Inverurie, a holistic revised cumulative appraisal would not reflect the actions agreed and now forming part of the consents for major established developments. Capacity issues on the A96(T) have been recognised by Aberdeenshire Council since the Aberdeenshire Local Development Plan 2012 and a programme of cumulative mitigation is in place. A transport assessment to build on this reference case is an appropriate approach. No change is required.

Site OP16 – Land West of Conglass Cottages

Comment from SEPA is noted. No change is required.

The site was allocated after consideration of the sites within the Issues and Actions Papers. It was noted within the Issues and Actions Papers that, although there were a couple of constraints associated with the sites, the site should be allocated for development including the requirement for a landscape buffer. Additionally, within the allocation summary the requirement for bus stop infrastructure is noted to ensure that there are linkages to within the settlement but also outwith the settlement. No change is required.

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in the list of Non-Notifiable Modifications.

In respect of the Scottish Governments suggestion that a cumulative appraisal should be undertaken with both OP15 and OP16 to address impacts on current capacity issues on the A96(T) in Inverurie, a holistic revised cumulative appraisal would not reflect the actions agreed and now forming part of the consents for major established developments. Capacity issues on the A96(T) have been recognised by Aberdeenshire Council since the Aberdeenshire Local Development Plan 2012 and a programme of cumulative mitigation is in place. A transport assessment to build on this reference case is an appropriate approach. No change is required.

Non-Allocated Site – Bid Site GR027 – Site A, Land West of Blackhall Road

The Council does not support allocating bid site GR027. As noted within the Main Issues Report the site is partially located within the settlement boundary and also located on a protected site within the 2017 LDP, which is to be removed from the PLDP (AD0038.E, page 40). It is also noted within the Main Issues Report that the site cannot be considered as a preferred site until the preferred route for the dualling of the A96 is selected. Although, the route of the A96 at this location has been decided, more detailed work still requires to be progressed and delivery of this infrastructure is still unknown at this time. Additionally, through the Issues and Actions paper NatureScot noted that development would go beyond the broad summit of Backhill of Davah which forms the natural landscape

setting to Inverurie (AD0040.E, page 47). It is therefore not seen that it is appropriate to allocate this land within the Plan. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site GR028 – Site B, Mains of Blackhall, West of Blackhall Road

The Council does not support allocating bid site GR028 as an opportunity site for around 100 homes. As noted within the Main Issues Report the site is adjacent to the settlement boundary, with a number of constraints requiring to be taken account of (AD0038.E, page 40). It is also noted within the Main Issues Report that the site cannot be considered as a preferred site until the preferred route for the dualling of the A96 is selected. Although, the route of the A96 at this location has been decided, more detailed work still requires to be progressed and delivery of this infrastructure is still unknown at this time. Additionally, through the Issues and Actions paper it is noted that based on the calculation of 25 houses per hectare the site could accommodate 158 homes. It is considered that there is not a strategic need to allocate a site of this scale in the Plan (AD0040.E, page 47). As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Sites – Bid Site GR057 – Land at East Balhalgardy Farm (Bid 1), Bid Site GR058 – Land at East Balhalgardy Farm (Bid 2) and Bid Site GR059 – Land at East Balhalgardy Farm (Bid 3)

The Council does not support allocating bid sites GR057, GR058 and GR059 for up to 200 homes, unless more housing land is allocated around Inverurie to facilitate the delivery of roads infrastructure improvements on a cumulative basis in which case the site could accommodate up to 500 homes. Within the Main Issues Report, a number of constraints were noted for these sites including, prime agricultural land, flood risk, being within the Battle of Harlaw inventory battlefield and the impact on a B listed building nearby (AD0038.E, page 41). Also, through the Issues and Actions papers HES noted that the cumulative impact on the sites should be considered and that there was a potential for impact on the understanding and appreciation of the battlefield landscape and character (AD0040.E, page 42). It is also noted within the Main Issues Report that the site cannot be considered as a preferred site until the preferred route for the dualling of the A96 is selected. Although, the route of the A96 at this location has been decided, more detailed work still requires to be progressed and delivery of this infrastructure is still unknown at this time. Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Sites – Bid Site GR061 – Land North and East of St. James Walk and Bid Site GR062 – Land at St James Place

The Council does not support allocating bid sites GR061 and GR062 for up to 100 homes to the east of the combined site and up to 900 homes on the whole site (subject to transport upgrades). Within the Main Issues Report it is noted that both of the sites are

located in areas of flood risk and that site GR062 would have an impact on the Bennachie Special Landscape Area (AD0038.E, page 42). It is also noted within the Main Issues Report that the site cannot be considered as a preferred site until the preferred route for the dualling of the A96 is selected. Although, the route of the A96 at this location has been decided, more detailed work still requires to be progressed and delivery of this infrastructure is still unknown at this time. Also, as noted within the Issues and Actions papers NatureScot have concerns regarding the sites noting that significant earthworks would be required for the GR062 site and also to ensure that ancient woodland was kept on the site. Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site GR091 – Land at Souterford and Lofthillock

The Council does not support allocating bid site GR091 for residential uses (450 private homes, affordable and accessible homes), a primary school and a riverside park or for residential uses (270 private homes, affordable and accessible homes), a primary school and a riverside park. A number of constraints were highlighted for this site through the Main Issues Report including, flood risk, prime agricultural land and also the impact on the Keithhall Inventory Garden and Designed Landscape (AD0038.E, page 42). It is also noted within the Main Issues Report that the site cannot be considered as a preferred site until the preferred route for the dualling of the A96 is selected. Although, the route of the A96 at this location has been decided, more detailed work still requires to be progressed and delivery of this infrastructure is still unknown at this time. Through the consultation for the Main Issues Report, HES highlighted that the site could have potential to have a significant impact on the Keithhall Inventory Garden and Designed Landscape and there is a need to preserve the integrity of the designed landscape (AD0040.E, page 43). It is still maintained that the reasons outlined within the Main Issues Report and Issues and Actions papers remain relevant and it is not appropriate to allocate this site.

Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site GR117 – Land North of Lochter Drive, Uryside (Phase 3)

The Council does not support allocating bid site GR117 for 500 new homes as an extension of OP7 and amend the description of OP7 in Appendix 7D to the following: OP7: Uryside Phase 2 and Phase 3 Allocation: 866 homes (Phase 2 – 366 (remaining) and Phase 3 –500 (new)). As noted within the Main Issues Report the site is adjacent to the settlement boundary, with a number of constraints requiring to be taken account of (AD0038.E, page 43). It is also noted within the Main Issues Report that the site cannot be considered as a preferred site until the preferred route for the dualling of the A96 is selected. Although, the route of the A96 at this location has been decided, more detailed work still requires to be progressed and delivery of this infrastructure is still unknown at this time. Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site GR131 – Land at Braeside Farm and Thainstone

The Council does not support allocating bid site GR131 sites ‘a’ and ‘b’ for 13 hectares of employment or strategic reserve employment land and site ‘c’ as strategic reserve employment land. A number of constraints were highlighted for this site through the Main Issues Report including landscape impact and the sites position with an HSE pipeline consultation zone (AD0038.E, page 43). It is also noted within the Main Issues Report that the site cannot be considered as a preferred site until the preferred route for the dualling of the A96 is selected. Although, the route of the A96 at this location has been decided, more detailed work still requires to be progressed and delivery of this infrastructure is still unknown at this time. Through the consultation for the Main Issues Report HES highlighted that the site could have potential to have an impact on the setting of Bruce’s Camp including the views to and from it if trees are felled (AD0040.E, page 44). It is still maintained that the reasons outlined within the Main Issues Report and Issues and Actions papers remain relevant and it is not appropriate to allocate this site. No change is required.

Non-Allocated Site – Bid Site GR137 – Land East of Rothienorman Road, Howford

The Council does not support allocating bid site GR137 for 109 homes and a riverside park. As noted within the Main Issues Report the site is on site reserved for Uryside Park, with a number of constraints requiring to be taken account of including the presence of prime agricultural land, flood risk and the potential for impact on the water environment (AD0038.E, page 43). It is also noted within the Main Issues Report that the site cannot be considered as a preferred site until the preferred route for the dualling of the A96 is selected. Although, the route of the A96 at this location has been decided, more detailed work still requires to be progressed and delivery of this infrastructure is still unknown at this time. Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Reporter’s conclusions:

Preliminary Matters

1. The examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.
2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” in relation to the settlement statement matters covered in Issue 34. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

General

3. A representation states that as the oil sector changes, more consideration should be

given to tourism development in the Aberdeenshire Area. I note that tourism is specifically addressed in the third paragraph of the vision for the settlement. I am satisfied that policy B3 Tourist Facilities sets out the principles for tourist facilities within settlements, which are matters that can be addressed as development proposals are assessed. No modification to the plan is required.

4. Concern is raised in a representation that, while core paths have been allocated through Keithhall Estate, there is no connectivity at the south end, and that the council is encouraging a dangerous walk from the South Lodge to the cemetery. I find that the designation of core paths is undertaken through the preparation of the core paths plan and therefore this is not a matter to be addressed in the local development plan. No modification to the plan is required.

5. A representation is concerned that the settlement statement does not show a sufficiently strong commitment to promoting walking, cycling and public transport in Inverurie and Port Elphinstone. Connectivity with new developments and protection for existing routes is sought. I note that the third and fourth paragraphs of the vision section address these matters, and where applicable, site specific requirements are set out in the allocation summaries. In the local transport infrastructure bullet point, the requirement for development to contribute to access routes and the active travel network is noted. I consider that the wording of the development plan is sufficient to provide protection for existing and new access routes. No modification to the plan is required.

6. A representation is seeking to ensure that land between Inverurie and Port Elphinstone remains undeveloped. A plan indicating the location of this land did not appear to accompany the submission. On my site inspection, I noted that although the land to the south of the River Don is currently undeveloped, it is the subject of an existing planning permission and allocation OP5 in the proposed plan. The consent and the allocation both seek to retain the existing woodland and I note that land to the east of the A96 is protected. No modification to the plan is required.

7. A representee notes that the limited choice in the housing market in Inverurie is due to a small number of developers having a 'monopoly', with sites being slow in coming forward, and the town's progress hindered by delays in the A96 dualling. I acknowledge that sites in Inverurie have been relatively slow in coming forward, for a number of reasons. However, I do not have any evidence to demonstrate that there is a monopoly, and find that the representations submitted to this plan demonstrate that there are a number of housebuilding companies active or wishing to become active in the area. The dualling of the A96 is a constraint, but nevertheless development is and has been carried out in the settlement. I do not consider that a change to the plan is required.

8. A representation states that development that accesses the A96 at Thainstone or Port Elphinstone roundabouts should not be approved, as the junctions cannot accommodate them. This is a valid concern and one that is also raised in the representation from Transport Scotland, which I address below. I consider that matters relating to transport infrastructure required to mitigate the impacts of development in Inverurie should be addressed in the Supplementary Guidance on Developer Obligations and Affordable Housing (see recommended modification in Issue 12). No specific change in relation to the Thainstone and Port Elphinstone roundabouts is required.

9. A representation is seeking the removal of major sites such as Crichtie, Kintore East

and Woodland Croft, as they have not progressed since the 2012 plan. Out of date masterplans should be reviewed. I note that some of the named major sites have planning consents and are progressing to delivery. All have been reviewed in the preparation of this plan and found capable of delivering homes in the plan period. I note that Policy P1; Layout, Siting and Design requires masterplans to be reviewed every five years. No change to the plan is required.

Vision

10. A representation is concerned that the plan lacks vision, ambition and is a repeat of the 2017 local development plan. The derelict sites in the town require a positive approach from the planners and the plan. I am satisfied that, although the vision for the settlement is broadly unaltered from the previous plan, this is not necessarily a negative outcome. The vision reflects the desired outcomes, many of which remain to be delivered and some of which are by their nature long term. The council advises that derelict sites can be addressed through the provisions of policy P3 Infill Developments within Settlements and Householder Developments, and do not require a specific allocation in the plan. I agree with this position, and find that policy P3 should provide sufficient flexibility to allow derelict sites to be re-developed for appropriate uses. No modification to the plan is required.

11. A representation queries why the vision statement refers to Keithhall Estate as contributing to the town's open and green spaces when it is outwith the settlement boundary. The council advises that it was included at the request of the community council, who identified it as an important resource for the town. I am content that the reference to the estate should remain in the vision, as it accurately references an important resource for the community. No change is required.

12. Concern is expressed in a representation that a new grade separated interchange on the A96 will be insufficient to accommodate the extra traffic caused by the number of new houses in the Crichton development. The allocation summary for site OP5 Crichton refers to the need for a new grade separated interchange to the south. Subject to a recommended modification, it also indicates that transport assessment updates may be required. These updates would provide the opportunity to identify further mitigation measures if necessary. No modification is recommended.

Site P8 – To protect the landscape buffer/setting as forming part of the green-blue network

13. A representation is seeking to extend site P8 to the south to cover the adjacent flood plain and protect the landscape setting of the green-blue network (P17). The representee argues this would ensure consistency with any protection afforded to the flood plain on the south side of the River Don. The council advises that P8 is designated to protect the amenity of housing on St James Walk. I noted at my site visit that the area is generally wooded, while the area to south is open and slopes to the river. P17 encompasses both river banks and serves to protect those areas. The area of land between P8 and P17 does not require specific protection and so I do not support its designation as such in the plan. No modification is required.

Site P9 – To protect the playing fields as forming part of the green-blue network

14. A representation suggests that site P9 be extended north to cover the strip of undesignated land between P9 and P17 as protected land. It is considered illogical to have

a strip of unprotected land between the River Don and the protected land at Davidson Field. Site P9 is in place to protect the playing fields at Davidson Fields, and the boundary follows the edge of the playing fields. The reason for designating site P9 would not apply to the area that lies between sites P9 and P17. An extension of site P9 to include this area would therefore not be appropriate. No change to the plan is required.

Site P10 – To protect the playing fields as forming part of the green-blue network

15. A representee indicates that site P10 (Blythwood) is subject to planning consent and the logic of the protected land designation is queried. The council has confirmed that no planning application has been submitted or approved on site P10. The open space forms part of the grounds of the former care home and it is currently on the market as a development opportunity. I conclude that retaining the protected status of the open space and wooded part of the site at this time is reasonable given its current character and appearance. No modification to the plan is required.

Site P15 – To protect the Uryside Riverside Park

16. A representee has commented that there is a need to improve connectivity at the west end of Uryside Park and that intended works to improve Howford Bridge have not happened. The council has confirmed that development is still under construction and that the required works to Howford Bridge can still be delivered. This matter is not one that can be addressed through the local development plan examination. No change to protected land designation P15 is required.

Site P18 – To protect the golf course as an amenity for the settlement and forming part of the green-blue network

17. A representation is seeking to extend the P18 designation to cover the golf practice area, which is currently outside the settlement boundary. The remainder of the golf course is within the settlement. I find that it would be logical to include the practice area within P18 and within the settlement boundary, given that the purpose of P18 is to protect the Inverurie Golf Course. A recommended modification to that end is set out below.

Site P19 – To protect the football pitches and grounds

18. Site P19 is currently occupied by football pitches and associated development. It lies to the north-east of Harlaw Road and adjacent to the town centre. In the existing local development plan, the site is included in allocation OP2 for mixed use development. It is now designated as protected land and would be subject to Policy PR1 Protecting Important Resources.

19. A number of representations have been received, objecting to the designation of Harlaw Park as protected land for various reasons, including that it would prevent the redevelopment and/or potential relocation of the football club and its facilities.

20. For clarity, it should be noted that the football grounds are not included in the town centre in the 2017 local development plan, and the town centre boundary has not changed in the proposed plan. However, the OP2 allocation in the 2017 plan has been replaced by smaller separate designations/allocations in the proposed plan.

21. The council has advised that the Open Space Audit 2019 identified all open space areas in Aberdeenshire, and following the change in allocation, Harlaw Park football grounds now fall within the remit of the audit.

22. I note the concerns raised in representations regarding the impact on the operation and future development of the club. I also note the council's response that any proposal for a use other than open space would be contrary to the plan and be treated as a departure from it. However, I am satisfied that paragraph PR1.6 Open Space makes provision for the redevelopment of facilities and their possible development, if that development would not result in an overall deficit of open space and subject to replacement facilities in the settlement if appropriate. Any such proposal would be assessed against the terms of Policy PR1 and any other relevant plan policies.

23. I conclude that, although the site is designated as protected land, Policy PR1 makes specific provision for the replacement/redevelopment scenarios, which are of concern to those who made representations. No modification to the plan is required.

Site P26 – To protect an area of open space forming part of the green-blue network

24. A representation has questioned the contribution of site P26 and the exclusion of the landscaped area to the northwest.

25. The council advises that site P26 was identified as a protected site to ensure that the open space located between the new housing development and the A96 roundabout forms part of the green-blue network. The council recommend that the boundary of the P26 protected site could be modified to include the land to the north of the site bound by the A96 roundabout.

26. Having visited the site, I note that all points of the roundabout contain areas of wooded open space which function as part of the green-blue network. I find that adding the area to the north-west of the roundabout would more fully reflect local circumstances and so I recommend that it be included in the P26 allocation. A modification to that end is set out below.

Site R1 – For transport interchange

27. Nestrans has noted that the boundary of site R1 is less extensive than previously defined boundaries for a proposed transport interchange at this location and has requested that the boundary revert to the previously defined one. The council agrees with the representation, and is satisfied that an alteration to the boundary is appropriate. I also agree that the proposed amendment would add clarity to the plan and reflect the correct boundary of the transport interchange. A modification to the boundary of site R1 is recommended.

Site R2 – For an extension to Ury Riverside Park

28. Site R2 is allocated in the plan as reserved land for an extension to Ury Riverside Park. Representations from landowners and others indicate that the site cannot be delivered without development of the part of the site that is outwith the flood plain.

29. Two representations have been made seeking the allocation of the site identified as

bid site GR137 (and site R2) for mixed use development, incorporating up to 109 homes. Consideration of these representations is set out in my conclusions on bid site GR137 below.

Site R3 – To enable development of community and education facilities

30. A representee seeks an extension to site R3 to include the existing buildings, games hall and the new sports and recreation facilities attached to the school. The council notes that the reserved land designation is retained in the plan as works on site are still taking place. Completed works at Inverurie Academy are not included. I agree that including completed works in a reserved land designation would not be appropriate. No modification to the plan is required.

Site R4 – For community uses

31. This site is identified as protected land P15 in the 2017 local development plan for the provision of a special school. However, the school has now been delivered on the Inverurie Academy Campus.

32. The representation is querying why the allocation remains in the plan. The council advises that, although the school has been delivered elsewhere in the town, there remains a lack of community facilities in this part of Inverurie. The site is therefore reserved for community uses instead. I find that reserving the site for community uses is reasonable, as the council has identified a need for facilities in this area. No change to the plan is required.

Site BUS1 – Safeguarded for business uses

33. It is noted in representations that an area of residential land has been included in the BUS1 designation. The council agrees that the suggested alteration to the boundary is appropriate. The purpose of BUS1 is to safeguard land for business use and, as such, I agree that the inclusion of an area of residential land within the BUS1 designation would not be appropriate. A modification to amend the boundary of BUS1 is set out below.

Site BUS2 – Safeguarded for business uses

34. A representation has raised concerns regarding the impact of existing development at BUS2 on television reception and in terms of the number of seagulls nesting. The purpose of the designation is to identify and protect existing business areas. I do not consider the difficulties identified in the representation would justify the removal of the business designation. No change to the plan is required.

Flood Risk

35. The Scottish Environment Protection Agency (SEPA) has requested the addition of a new 'Flood Risk' bullet point for sites OP5, OP3, OP13 and OP16 as they will require a Flood Risk Assessment due to a watercourse or surface water flooding. A new 'Flood Risk' bullet point is also requested for site OP4 as a Flood Risk Assessment would now be required, following a recent detailed flood study by Aberdeenshire Council.

36. In addition, SEPA has requested a new 'Flood Risk' bullet point for all the BUS sites,

as they may also require a Flood Risk Assessment due to surface water flood risk and/or risk from adjacent watercourses. This should also include a requirement for buffer strips and re-naturalisation of watercourses.

37. The council supports the suggested modifications. I agree that the additional text would be appropriate to take account of the recent flood study and add clarity in terms of flood risk assessments. Recommended modifications to the flood risk section are set out below.

Services and Infrastructure

38. Scottish Water has requested that the bullet point for 'Strategic drainage and water supply' be amended to refer to the available capacity at Inverurie Waste Water Treatment Works and the potential need for a Drainage Impact Assessment.

39. The council has indicated that it agrees with the requested change. However its suggested modification only addresses part of Scottish Water's representation. If Scottish Water is satisfied that there are no capacity issues at Inverurie Waste Water Treatment Works, then I consider the wording of this bullet point should be amended accordingly. I agree that the reference to a Drainage Impact Assessment would add clarity. A modification on these matters is set out below.

40. Transport Scotland has made a representation outlining its concerns regarding the identification of specific required infrastructure in the plan. It considers that the plan and the delivery programme should set out a clear position on what trunk road infrastructure is required to support development, and how, when and by whom it will be delivered.

41. The council advises that the text included in the proposed plan is sufficient in terms of highlighting the requirement for the works. Greater detail is included within the delivery programme as this is the document that is updated as the situation progresses.

42. I agree with Transport Scotland that the proposed plan, as it stands, fails to meet the expectations of Scottish Planning Policy (2014), paragraph 275, insofar as it does not identify the essential transport infrastructure required to support new development in Inverurie. Furthermore, paragraph 139 of Circular 6/2013 indicates that items for which financial or other contributions will be sought, and the circumstances where they will be sought, should be included in the plan. In particular, Transport Scotland highlights omissions in relation to information on which sites are required to deliver the A96 grade separated junction, how, when and by whom infrastructure is to be delivered for sites OP5 and OP6, and the implications of sites OP15 and OP16 on the capacity of the A96(T) road and any required mitigation. In order to address these matters, and the wider issues raised by Transport Scotland in respect of the council's overall approach to the provision of infrastructure and developer obligations, a further information request was issued (FIR007). My conclusions below focus on matters relating to Inverurie, while wider issues, including the preparation of supplementary guidance on developer obligations and affordable housing, are addressed in Issue 12 (responsibilities of developers).

43. Transport Scotland's representation notes a number of inconsistencies between the proposed plan, the Delivery Programme and the DPMTAG transport assessment report. It also refers to the complexity of the transport infrastructure position in Inverurie due to the various mitigation measures identified in existing planning permissions and the uncertainty

regarding the alignment of the A96 upgrade.

44. In its response to the further information request, the council provided further details of how mitigation necessary to make development proposals acceptable in terms of impact on the A96 has been secured via planning conditions. It highlights that delivery will be the responsibility of individual developers, in liaison with Transport Scotland, as the thresholds in the consents issued are passed. The timing of these investments is not in the hands of Aberdeenshire Council and will depend on the aspirations of developers to complete their sites.

45. Transport Scotland does not disagree with the Council's response. However, it recommends, as detailed within its representation to the proposed plan, that the local development plan and Delivery Programme set out clear and consistent information on which sites are required to contribute and deliver specific mitigation.

46. Given the complexity of the transport infrastructure position in Inverurie, it is not possible to remedy the deficiency of the Inverurie settlement statement in terms of meeting the expectations of paragraph 275 of Scottish Planning Policy and Circular 6/2013 through the examination. However, the recommended modification in issue 12 to prepare statutory supplementary guidance provides the opportunity to set out the transport infrastructure required in association with allocations in Inverurie including how, and by whom, this is to be delivered and phased. This would allow the council to address the detailed matters raised by Transport Scotland, including which allocations are expected to deliver the new grade separated junction on the A96(T) to replace the current at grade Thainstone and Port Elphinstone roundabouts. Information relating to how, when and by whom infrastructure is to be delivered should be provided in the Delivery Programme, the details of which are not a matter for this examination.

47. I recommend that a bullet point entitled strategic transport infrastructure be added to the Inverurie settlement statement to indicate that development may be required to contribute to strategic transport infrastructure and that further information is provided in Supplementary Guidance on developer obligations and affordable housing and in the Delivery Programme. I give further consideration to the representation from Transport Scotland in relation to the relevant site allocations below.

Site OP2- Former Garioch Health Centre

48. Site OP2 is a brownfield site on Constitution Street, in the town centre. At the time of my site inspection, the site was vacant and cleared of any former structures. A representation has questioned the need for retail provision on the ground floor, given the current level of vacant units in the town centre.

49. As the site is within the town centre as set out in the plan on pages 566 and 571, Policy B1 Town Centre Development and paragraphs B1.1 and B1.2 would apply to any development proposal. The planning authority is pursuing a 'Town Centre First' strategy, where retail and other appropriate uses are encouraged. Although there may be a high number of vacant retail units in the town centre at present, I find that would not negate the allocation of sites for suitable town centre uses. I consider that the site would be appropriate for retail use and this requirement would be in accordance with the wider town centre policies of the plan. No modification to the plan is required.

Site OP3 – Land at Harlaw Park

50. A representation objects to the site being identified as contributing towards the strategic development plan allowance for the Aberdeen Housing Market Area. The site has been in the audit since 2011 and its ownership is constrained. Previous permissions on site have lapsed and there are potential contamination issues.

51. I note that the housing land audit 2020 identifies the ownership constraint, and does not programme delivery of any homes before 2027. In this instance, the owner of the site is the council, who has indicated that the site can be brought forward for development in the plan period. No evidence has been provided on the nature of potential contamination referred to in the representation. Based on the information before me, I consider it reasonable to assume that the site would be deliverable by 2032. No modification is required.

Site OP4 – Phase 2 Portstown

52. SEPA has requested an amendment to state that should an extant permission lapse on site OP4, any future development would have to take account of the latest Council Flood Study for Inverurie. The council agrees with the representation. I also agree that the proposed modification would add clarity to the plan and the position on flood risk at site OP4. A modification to this effect is recommended.

Site OP5 – Crichtie (Residential and Community))

53. The Woodland Trust Scotland has objected to the inclusion of site OP5, as it is likely to cause damage and/or the loss of ancient woodland, contrary to Scottish Planning Policy. A separate representation has requested that the woodland and flood plain, located north of the Old Kemnay Road (currently in OP5) be designated as protected land and that the linked area of broadleaved woodland south of Lynndale on Old Kemnay Road be added to this protected land designation.

54. Given that there is a current planning permission on site OP5, I do not consider there is any justification to remove the allocation. The council has indicated that the protection of woodland has been carefully considered through the development framework, masterplan and planning permission. I therefore agree with the council that an additional protected land designation would not be necessary. However, as development on this site has not commenced, future planning applications may be submitted for revised proposals. I consider that text should be added to the allocation summary to indicate the presence of ancient woodland, that this woodland should be retained and enhanced where possible and that compensatory planting must be provided for any loss of woodland/trees. A modification to this effect is set out below.

55. A representation has objected to the requirement for the masterplan and the development framework to be reviewed if development has not commenced by the time the development plan is adopted. I note that the council has not specifically addressed this part of the representation.

56. Policy P1 - Layout, Siting and Design states that once agreed, masterplans shall remain valid for a period of five years, unless planning permission is granted and implemented. The current masterplan on this site is more than five years old. However, planning permission in principle has been granted which is valid until December 2023.

57. In this instance, I consider the requirement to review the masterplan should be linked to the timescales set out in the planning permission in principle, that is, it would only be required if the extant permission is not implemented. A modification to this effect is recommended.

58. A representation is seeking to have the requirement for a formal footway/cycle path from site OP5 and Riverside Park via the A96 to revert to the wording in the previous local development plan, which did not require a formal route. The current planning permission in principal has a condition requiring a route but not a formal route. The council has advised that it would seek to retain the wording, as the existing permission may lapse.

59. I consider that the requirement for a formal footway/cycle path would be consistent with the intended outcome of the plan to “promote walking and cycling”. Reference to walking and cycling facilities is also included in the vision for Inverurie. I therefore agree with the council that the requirement for a formal route should remain in the allocation summary. No modification to the plan is required.

60. The removal of the requirement to provide transport assessment updates with phases of development is also sought. The representation states that a condition of consent sets out upper development limits on the proposed use classes, which were supported by a transport assessment in the determination of the planning permission in principal. Therefore, unless those upper limits are breached, there is no requirement for a transport assessment for different phases of development.

61. The requirement for updated transport assessments is consistent with the approach taken to other strategic sites that are to be developed over a long time period. However, the council has not explained why in the case of site OP5, this requirement is linked to development phases. I agree with the representee that this may not be justified and I consider that it may be unnecessarily onerous. I recommend a modification to amend the wording in the allocation summary to state that “Transport Assessment updates may be required.”

62. Transport Scotland considers that the plan should indicate that site OP5 (and site OP6) are required to deliver a grade separated junction on the A96, to replace the at-grade A96 Crichtie and Port Elphinstone roundabouts. Transport Scotland also states that sites OP9 and OP10 have been linked to the delivery of this junction within the 2021 DPMTAG transport assessment report, which supports the proposed plan.

63. The allocation summary for OP5 identifies the need for a new grade separated junction and states that infrastructure requirements should be provided as agreed through the planning permission in principle. The allocation summary for OP9 states that development proposals must assess network capacity at Port Elphinstone and Thainstone roundabouts on the A96. No reference is made to the new junction in the allocation summaries for OP6 or OP10.

64. The representation from Dandara has suggested revised wording for allocations OP5 and OP6 in relation to transport matters, including contributions towards the new grade separated interchange. However, I am unclear whether this information reflects the council’s understanding of transport infrastructure matters in relation to these allocations. The council and Transport Scotland are in agreement that the position regarding transport

infrastructure in Inverurie is complex. Whilst some clarification was provided in response to a further information request, uncertainty remains regarding the details of the proposed new grade separated interchange, which sites are required to help deliver it and what transport infrastructure improvements have already been secured through existing permissions.

65. I conclude that this is not a matter that can be resolved through the examination and should instead be addressed in the statutory Supplementary Guidance on Developer Obligations and Affordable Housing, referred to in a recommended modification under issue 12. This would provide the opportunity for the council to discuss matters further with Transport Scotland and other relevant parties. Given the recommended modification to add a strategic transport bullet point to the Inverurie settlement statement, no changes are required to the allocation summaries for sites OP5, OP6, OP9 and OP10 on this matter.

Site OP6 – Crichton (Employment)

66. A representation has questioned the deliverability of site OP6 for 23.7 hectares of employment land as this site has been allocated since 2012 and it is identified as constrained in the 2019 Employment Land Audit.

67. The council acknowledges the constraint but advises that the allocation is linked to site OP5 Crichton (Residential and Community) which has an agreed development framework and masterplan. The agreed phasing for delivery through the masterplan indicates that site OP6 would be delivered as phase 6 of the overall scheme. Site OP6 contributes towards meeting the strategic development plan employment land target for the Aberdeen to Huntly strategic growth area. I am not persuaded that it should be deleted on the basis that it is currently constrained. No modification to the plan is required.

68. A representation is seeking to have the requirement for a formal footway/cycle path from site OP6 across the A96 to Port Elphinstone to revert to the wording in the previous local development plan, which did not require a formal route. The council has advised that it would seek to retain the wording as the existing permission may lapse.

69. I consider that the requirement for a formal footway/cycle path would be consistent with the intended outcome of the plan to “promote walking and cycling”. Reference to walking and cycling facilities is also included in the vision for Inverurie. I therefore agree with the council that the requirement for a formal route should remain in the allocation summary. No modification to the plan is required.

70. The removal of the requirement to provide transport assessment updates as development comes forward is also sought. The representation states that a condition of consent sets out upper development limits on the proposed use classes, which were supported by a transport assessment in the determination of the planning permission in principle. Therefore, unless those upper limits are breached, there is no requirement for a transport appraisal for different phases of development.

71. The requirement for updated transport assessments is consistent with the approach taken to other strategic sites that are to be developed over a long time period. However, the council has not explained why in the case of site OP6, further assessments are needed “as development comes forward”. I agree with the representee that this may not be justified and I consider that it may be unnecessarily onerous. I recommend a modification

to amend the wording in the allocation summary to state that “Transport Assessment updates may be required.”

72. Matters relating to the transport infrastructure requirements associated with allocation OP6 are addressed in the paragraphs above, under allocation OP5. No modifications are required to the allocation summary.

Site OP8 – Former Hatchery

73. This site has planning permission for 64 homes and is currently being built out. A representation has raised concerns regarding the landscaping on the southern boundary and the potential impact on screening to existing residential properties.

74. I find that this is a matter to be addressed through the development management process or should it be necessary, through the enforcement procedures of the planning authority. The discharge of conditions attached to a planning consent is not a matter that can be addressed in a local development plan examination. No modification to the plan is required.

Site OP9 – Adjacent to Axis Business Centre and Site OP10 – Thainstone

75. Transport Scotland notes an inconsistency between the DPMTAG transport assessment report and the proposed plan as to whether sites OP9 and OP10 are required to contribute to the delivery of the grade separated junction. As I have indicated above in relation to allocation OP5, this is a matter which should be addressed in the Supplementary Guidance on Developer Obligations and Affordable Housing. The recommended modification below in relation to a new strategic transportation bullet point indicates that development may be required to contribute to strategic transport infrastructure. No changes are required to the allocation summaries for sites OP9 and OP10 on this matter.

Site OP11 – Pineshaw, Port Elphinstone

76. Dandara has objected to the increase of 29 homes at site OP11 in this plan, and requested that the capacity be reduced to 25 homes set out in the existing local development plan. The council has explained that all undeveloped sites in the Aberdeen Housing Market Area have had a standard density of 25 homes per hectare applied to their site area, in order to ensure the efficient use of land. I find this approach to be consistent with paragraph 4.18 in the strategic development plan, which states that “land brought forward for housing must be used efficiently”. The exact number of houses to be developed on the site will be determined through a planning application. No modification is required.

77. Dandara also seeks a number of amendments to the allocation summary for site OP11, in particular in relation to integration with site OP6 and proportional contributions towards transport infrastructure.

78. Whilst not addressed in the council’s response, I find that the requirement for integration with site OP10 (rather than OP6) appears to be a typographical error. Reference is made to the wider Crichton site which comprises OP5 and OP6, not OP10 which is located some distance from OP11. I therefore recommend a modification to replace OP10 with OP6 in the allocation summary.

79. The council's response does not address the request that site OP11 should contribute proportionately towards the cost of the footway and cycleway connections to Port Elphinstone and Inverurie that are required to facilitate this development as well as OP5 Crichtie. However, in relation to the request that site OP11 must contribute proportionally towards major improvements in relation to the Thainstone and Port Elphinstone roundabouts/junctions, it indicates that this cannot be determined until a detailed proposal comes forward.

80. We have concluded under issue 12 that statutory Supplementary Guidance on Developer Obligations and Affordable Housing should be prepared to meet the requirements of paragraph 275 in Scottish Planning Policy and Circular 6/2013. I have insufficient information before me to identify what transport infrastructure is required to support the development of site OP11, including any contributions towards active travel connections through the adjacent site. The potential requirement for contributions towards strategic transport infrastructure is addressed through the recommended modification to add a new bullet point to the services and infrastructure section. Potential contributions towards footways and cycle infrastructure are included in the local transport infrastructure bullet point on page 558 of the Inverurie settlement statement. I consider that the matters raised in the representation from Dandara in relation to site OP11 should be addressed in the statutory Supplementary Guidance on Developer Obligations and Affordable Housing. No further modification is required on this matter.

81. The wording of the sentence on affordable housing provision for site OP11 is consistent with other new sites in the plan. No modification is required.

Site OP13 – Kirkwood Commercial Park, Thainstone

82. SEPA has requested that the abbreviation (FRA) be removed from the text at page 564, at the penultimate and final sentences of the allocation summary. I agree in the interest of consistency. A modification is recommended.

Site OP14 – Land Northeast of Thainstone Roundabout

83. This site is allocated for a halting site for gypsy/travellers and/or employment land in the proposed plan. In response to a further information request (FIR002), the council has confirmed that the site now has planning permission for commercial development and associated infrastructure, with no provision made for a gypsy/traveller site.

84. There are a number of objections to the allocation, which seek to remove the reference to a halting site and which question the ability to deliver the facility. The potential impact of the use as a halting site is also questioned, in terms of the marketability of the wider business area, and impact on road junctions and drainage. I do not agree that use of part of OP14 as a halting site for gypsy/travellers site would be incompatible with the wider business allocation. Other matters raised in representations would also arise in relation to business uses on the site and could be addressed through the planning application process. None, I consider, would prevent delivery of a halting site for gypsy/ travellers.

85. The Housing Need and Demand Assessment 2017 sets out the identified need for halting site provision, as referenced in Policy H5 of the proposed plan. Through various iterations of the local development plan and in the 'other designations' on page 557 of this

plan, the need for a halting site in the Thainstone/Crichie employment area is acknowledged. Although planning consent has been granted for employment uses, I am satisfied that the requirement for a halting site should remain in the allocation summary, as the existing consent may lapse and the requirement for the halting site could then be incorporated into revised proposals. No modification to the plan is required.

Site OP15 – Land West of Bennachie View Care

86. This site is allocated for 130 homes and is located to the north of the town. Site OP1, which is now built out, lies to the north-east and the A96 lies to the south-west of the site. It is currently an open field.

87. A representation has objected to the allocation of site OP15 as it is considered to be in an unsustainable location to the north of the town, is on a north facing slope and may be part of an historic battlefield. Another site to the east of Inverurie is suggested as an alternative.

88. Site OP15 would effectively infill the area of land between the existing residential development and the A96. I note that there are bus stops in close proximity to the site, and active travel will be encouraged and facilitated. Given the extent of existing residential development in this part of Inverurie, I consider that site OP15 would be a logical and compatible land use in this location.

89. I find that the site and location are no less sustainable overall than other allocations for housing development in the town and that to deliver homes in the strategic growth area on the scale envisaged by this plan, greenfield land allocations need to be made. Any greenfield development on the edge of the town would have the effect of extending the settlement. I note that the strategic environmental assessment does not identify any post mitigation negative environmental effects for this site and it concludes that the proposal is unlikely to have any effects on the historic environment.

90. NatureScot has requested that the allocation summary be amended to reference the requirement for active travel provision. The council agrees to the suggested change. I consider that a requirement for active travel provision would be consistent with the intended outcome of the plan to increase walking and cycling. A modification is recommended.

91. Transport Scotland has noted that the site has not been included in the DPMTAG transport assessment report which informed the proposed plan. This compounds the uncertainty over trunk road capacity arising from consented and allocated development in Inverurie. Following a further information request (FIR007), Transport Scotland has agreed that a cumulative transport appraisal should be undertaken with site OP16 (to the west) to assess capacity issues on the A96. The council has suggested a modification to the plan to reflect this approach. I conclude that, at this stage of plan preparation, the requirement for a cumulative transport assessment is an appropriate way forward. I recommend that the plan be modified accordingly.

Site OP16 – Land West of Conglass Cottages

92. Site OP16 is allocated for 50 homes and 2 hectares of employment land. The site lies to the north-west of Inverurie and north-east of Crawford Road. It is comprised of

agricultural buildings and fields, and a farmhouse with associated buildings.

93. A representation has objected to the allocation of site OP16 as it is considered to be in an unsustainable location to the north of the town and may be part of an historic battlefield. An alternative site to the east of Inverurie is suggested as an alternative.

94. Site OP16 would effectively infill the area of land between the existing residential development and the settlement boundary to the north-west. I note that there are bus stops in close proximity to the site, and active travel will be encouraged and facilitated. Given the extent of existing residential development in this part of Inverurie, I consider that site OP16 would be a logical and compatible land use in this location.

95. I find that the site and location are no less sustainable overall than other allocations for housing development in the town. Part of site OP16 is brownfield and any greenfield development on the edge of the town would have the effect of extending the settlement. Apart from a potential risk of surface water flooding, no negative environmental effects (including on the historic environment) are identified in the strategic environmental assessment.

96. NatureScot has requested that the allocation summary be amended to reference the requirement for active travel provision. The council agrees to the suggested change. I consider that a requirement for active travel provision would be consistent with the intended outcome of the plan to increase walking and cycling. A modification is recommended.

97. Transport Scotland has noted that the site has not been included in the DPMTAG transport assessment report which informed the proposed plan. This compounds the uncertainty over trunk road capacity arising from consented and allocated development in Inverurie. Following a further information request (FIR007), Transport Scotland has agreed that a cumulative transport appraisal should be undertaken with site OP15 (to the east) to assess capacity issues on the A96. The council has suggested a modification to the plan to reflect this approach. I conclude that, at this stage of plan preparation, the requirement for a cumulative transport assessment is an appropriate way forward. I recommend that the plan be modified accordingly.

Non-Allocated Bid Site GR027 – Site A, Land West of Blackhall Road

98. Bid site GR027 is located to the west of Inverurie, to the west of Corsmanhill Drive and commercial area and south of the Blackhall Road. The site is in two parts, one north of Blackhall Road and the larger part to the south. Both appeared to be in agricultural use at the time of my site visit. A representation is seeking to have Site A, the whole site, which is 34.1 hectares of land, allocated for approximately 360 homes, with Phase 1 (Site B) providing 100 homes within the plan period. The remaining 260 homes would be delivered after 2032. Part of the site is within the settlement boundary and is allocated as site R4, which is reserved for community uses. The wider allocation is considered necessary to deliver these community uses. An indicative masterplan was submitted in support of the representation

99. The strategic environmental assessment identified site GR027 as having some negative effects, including an increase in traffic flow, waste water treatment capacity, flood risk and surface water flooding, and increased travel requirements. For site B specifically, the remediation of brownfield land was assessed as a positive effect. In its response to

the main issues report, NatureScot noted that development should be limited to the eastern part of the site due to impact on the Backhill of Davah which forms the natural landscape setting to Inverurie.

100. Issue 2 of this examination addresses general representations regarding the identification of future opportunity sites. This concludes that, whilst the strategic development plan allows local development plans to identify additional strategic reserves beyond 2032, there is no requirement to do so. I am satisfied that the council's decision not to identify future opportunity sites is in accordance with the strategic development plan. There is therefore no justification to allocate bid site GR027 at this time. I consider bid site GR028 separately below.

Non-Allocated Bid Site GR028 – Site B, Mains of Blackhall, West of Blackhall Road

101. Site B (bid site GR028) comprises the northern-most section of bid site GR027. It covers the area to the north of the Blackhall Road and includes Mains of Blackhall farm and steadings. The representation is seeking to have the site allocated as an opportunity site for up to 100 homes to be delivered during the plan period.

102. The representation considers that there is a strategic need for additional housing in Inverurie. Furthermore bid site GR028 is a natural infill site and better located than others, it is a brownfield site and is adjacent to existing employment opportunities.

103. I note that Mains of Blackhall is outside the settlement boundary and may benefit from any relevant countryside policies that relate to brownfield land. I do not agree that the site could be considered an infill site, as it lies completely outside the settlement boundary and is surrounded to the north, west and south by open countryside. Only part of the site is brownfield and I also noted the presence of the overhead line which may limit the capacity of the site.

104. Matters relating to overall housing provision in the proposed plan are covered in issues 2 and 5. The strategic development plan requires additional land for 3065 houses to be identified in the Aberdeen Housing Market Area. For the reasons set out in the schedule 4 for issue 5, we have concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. I have therefore considered whether this site could contribute towards meeting this shortfall.

105. I find that housing development on site GR028 could potentially be accommodated with limited environmental impact and could bring a number of benefits. However, as I have concluded previously, the position regarding transport infrastructure in Inverurie is complex. Although the route to the A96 has been decided, the delivery of the infrastructure remains unknown. Given the availability of other suitable sites to meet the shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area, I conclude that this site should not be identified for housing development. No modification is required.

Non-Allocated Bid Site GR057 – Land at East Balhalgardy Farm (Bid 1), Bid Site GR058 – Land at East Balhalgardy Farm (Bid 2) and Bid Site GR059 – Land at East Balhalgardy Farm (Bid 3)

106. Bid sites GR057, GR058 and GR059 comprise an area of land to the north of the

town. The site could accommodate up to 200 homes, or if required to deliver road infrastructure, could deliver up to 500 homes and assist in delivering the Ury Riverside Park. The site is adjacent to the Portstown development and lies to the west of the B9001. There is existing and emerging residential development to the east and south, with associated infrastructure and facilities. The representation objects to the lack of strategic housing allocations in the Inverurie area. It queries why new allocations have been made in Inverurie, when the council had suggested that none could be accommodated due to transport infrastructure uncertainty.

107. Given the size of the settlement and the range of local facilities, I consider it reasonable that the proposed plan includes some additional housing sites in Inverurie. However, I note the ongoing concerns raised by Transport Scotland regarding transport impact and the delivery of mitigation measures

108. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. I have therefore considered whether these sites could contribute towards meeting this shortfall.

109. The bid sites had been allocated for future housing development in the 2012 local development plan, subject to compatibility with the Harlaw Battlefield designation. The supporting information submitted for bid site GR057/58/59 addresses matters relating to proximity to local facilities, site opportunities and constraints, landscape and visual impact assessment, transport appraisal and provides an indication of development parameters. It states that the site is free from constraints, is being promoted by an established house builder, and could deliver up to 200 homes in the plan period.

110. The strategic environmental assessment identifies mainly neutral effects arising from the proposed development, with the exception of loss of prime agricultural land and impact on the Battle of Harlow site. At the main issues report stage, the council also indicated other constraints relating to impact on a B-listed building and potential flood risk. The need to identify a route for the dualling of the A96 was also noted.

111. Historic Environment Scotland highlighted the need to consider the cumulative impacts of development on the inventory battlefield. However, it did object to the principle of housing development on the site. Within this context, I consider it possible that impacts on the battlefield could be mitigated. The potential impact on the nearby listed building could also be addressed through appropriate design and landscaping.

112. Whilst parts of the site are identified on SEPA's flood maps as being at risk of flooding, a substantial part of the site would be available for development.

113. I conclude overall that some of the negative environmental effects could be mitigated. However, although the route to the A96 has been decided, the delivery of the infrastructure is unknown. Evidence to this examination has highlighted that the position regarding transport infrastructure in Inverurie remains complex and uncertain. Furthermore, the sites would involve the loss of prime agricultural land, which would not be justified, given the availability of other sites to meet the strategic development plan allowance for the Aberdeen Housing Market Area. No modification is recommended in relation to bid sites GR57/GR058 and GR059.

Non-Allocated Bid Site GR061 – Land North and East of St, James Walk and Bid Site GR062 – Land at St James Place

114. Bid sites GR061 and GR062 are located to the south-west of Inverurie, to the west of the A96 and north and south of the River Don. St James Place runs east to west through the overall site. At the time of my site inspection, the land appeared to be in agricultural use. Bid site GR061 is a smaller site to the east of the bid area, proposed for up to 100 homes. It lies directly to the north and east of the existing housing on St James Walk. Bid site GR062 encompasses all of site GR061 and extends to the east with land north and south of the River Don. Site GR062 could accommodate up to 900 homes and associated development.

115. The representation objects to the lack of strategic housing allocations in the Inverurie area. It queries why new allocations have been made in Inverurie, when the council had suggested that none could be accommodated due to transport infrastructure uncertainty.

116. As I have indicated above, I consider it reasonable that the proposed plan includes some additional housing sites in Inverurie. However I note the ongoing uncertainty regarding transport infrastructure. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. I have therefore considered whether these sites could contribute towards meeting this shortfall.

117. The strategic environmental assessment identifies mainly neutral or negative effects arising from the proposed development. Negative impacts include the loss of part of protected site P18 and flood risk. NatureScot advised that ancient woodland would need to be retained, and that the significant earthworks required may have landscape impacts.

118. The documents accompanying the representation suggest that, although part of the site is potentially at risk of flooding, this could be addressed through a masterplan. A master plan could also address the need to protect the ancient woodland. Whilst landscaping and visual impact could be mitigated through site layout and strategic planting, I remain concerned about the landscape impact arising from the required earthworks. Furthermore, these sites are physically separated from the main part of the settlement by the A96 and the golf course. I do not consider that development on bid site GR062 in particular would provide good accessibility to local services, or be well integrated with existing development.

119. The representee has commented that the route of the A96 dualling project would not impact on the site. However, the cumulative impacts of the whole bid site on the transport network in the area are not demonstrated in the submitted transport appraisal information, as only 100 homes at Ardtannes are included. In addition, the report is dated 2010, since which time both the transport network and land allocations in Inverurie will have changed. I am therefore unable to reach any conclusions on transport matters specific to the development of these sites. Transport impact remains a potential concern, given the complexity of the transport infrastructure position in Inverurie and the comments made in Transport Scotland's representation.

120. For the reasons outlined above, I conclude that bid sites GR061 and GR062 should not be allocated in the plan. Other suitable sites are available to meet the shortfall in the

strategic development plan allowance for the Aberdeen Housing Market Area. No modification is required.

Non-Allocated Bid Site GR091 – Land at Souterford and Lofthillock

121. Representations are seeking the allocation of bid site GR091 for up to 270 or 450 homes, a new primary school and a riverside park. The site is in two sections, to the west and north of the core path and woodland running towards Keithhall Estate and gardens. To the west is the Oldmeldrum Road, to the south is the Keithhall Inventory Garden and Designed Landscape, to the east is open countryside and to the north is the newly established residential area of Uryside and Portstown. The site had been identified in the 2012 local plan as future housing site, but was not allocated for development in the existing local development plan. The bids are supported by a transport and access appraisal report and by a planning strategy for the site.

122. The strategic environmental assessment for bid site GR091 identifies mainly neutral effects arising from the proposed development, with the exception of the loss of prime agricultural land, flood risk and the impact on the Keithhall Inventory Garden and Designed Landscape. At the main issues report stage, the council did not support the allocation of the site because of these negative environmental effects. The Issues and Actions Paper concludes that there are still a number of constraints and there is no strategic need for further allocations on the scale proposed.

123. The representations consider that additional land should be provided in Inverurie to help meet strategic requirements. These also state that there will be a shortfall in the delivery of affordable housing in Inverurie in the plan period and this site could assist in the delivery of up to 25% affordable homes and 10% accessible homes.

124. The tables in Appendix 6 show that a range of housing sites have been allocated to meet the strategic allowance for the Aberdeen Housing Market Area, including some sites in Inverurie. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. I have therefore considered whether these sites could contribute towards meeting this shortfall. All housing allocations, including any sites identified to meet this shortfall would be expected to provide affordable housing in line with policy H2. There is no requirement to allocate additional land over and above the strategic development plan allowances in order to meet affordable housing needs.

125. The documents accompanying the representation suggest that a biodiversity park could be located on the part of the site that is at risk of flooding. In addition, careful site design and layout could address issues relating to landscaping and visual impact on the inventory gardens and designed landscape to the south. I am satisfied that such issues could be potentially be addressed through a masterplan framework process, and through appropriate site layout and design.

126. I note the representee's comments that the route of the A96 dualling project would not impact on the site. I agree that the previously identified constraint of the Northern Relief Road is no longer relevant. However, I note that the timescales for the delivery of the A96 dualling remain unknown and that the overall position regarding transport

infrastructure in Inverurie is complex and uncertain.

127. The loss of prime agricultural land may be justified if required to meet strategic housing needs and there are no reasonable alternative sites. However, in this instance, other suitable housing sites are available in the Aberdeen Housing Market Area to meet the identified shortfall. The loss of prime agricultural land would therefore be contrary to policy PR1 Protecting Important Resources.

128. Given the uncertainty regarding transport infrastructure in Inverurie and the loss of prime agricultural land, I conclude that this site should not be identified for housing development. No modification is required.

Non-Allocated Bid Site GR117 – Land North of Lochter Drive, Uryside (Phase 3)

129. Bid site GR117 is the subject of a representation seeking an allocation for up to 500 homes, as an extension to site OP7 at Uryside. The representation also seeks a modification to paragraph 5.12 in section 5 (the spatial strategy) of the proposed plan as a suggested way forward to address the current transport infrastructure constraint in Inverurie.

130. The strategic environmental assessment for bid site GR117 identifies a range of effects arising from the proposed development, including the loss of prime agricultural land, tree loss, flood risk and the impact on the A-listed Bourtie House and scheduled ancient monuments. For these reasons, the council does not support the allocation of the site. The need to identify a route for the dualling of the A96 was also noted at main issues report stage. The Issues and Actions Paper concludes that there are still a number of constraints and the site is not preferred for development as there is no strategic need for further allocations on the scale proposed in the bid.

131. The representation considers that there is a strategic need for additional housing allocations in Inverurie. It states that there is a 'double-counting' in appendix 6 for sites OP4 and OP7 of up to 315 homes, which should be allocated elsewhere in Inverurie.

132. The tables in Appendix 6 show that a range of housing sites have been allocated to meet the strategic allowance for the Aberdeen Housing Market Area, including some sites in Inverurie. Sites OP4 and OP7 form part of the 2019 effective housing land supply and are not identified as contributing towards the strategic development plan allowance. The number of homes listed in the final column of the tables on Appendix 6 relate to the total capacity of the site, including those already built in 2019. I am satisfied that there is no double counting.

133. Matters relating to overall housing provision in the proposed plan are covered in issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. I have therefore considered whether this site could contribute towards meeting this shortfall.

134. The representation explains that flood risk is minimal and could be controlled through careful siting and design, as could any potential tree loss. The impact on Bourtie House which lies to the northeast of the bid site could also be managed through masterplanning and careful design. A woodland boundary would help mitigate any impact. I am satisfied

that such issues could potentially be addressed through a masterplan framework process, and through appropriate site layout and design.

135. I note the comments that the route of the A96 dualling project would not impact on the site. I agree that the previously identified constraint of the Northern Relief Road is no longer relevant. However, I note that the timescales for the delivery of the A96 dualling remain unknown and that the overall position regarding transport infrastructure in Inverurie is complex and uncertain. In considering the representations from Transport Scotland and others in relation to transport infrastructure in Inverurie, I have concluded that I have insufficient information to resolve these matters through the examination. The preparation of statutory Supplementary Guidance on Developer Obligations and Affordable Housing (as recommended in Issue 12) provides the opportunity for the council to work with Transport Scotland and other relevant parties to try to resolve the current uncertainty regarding transport infrastructure in Inverurie. Within this context, it would not be appropriate to amend the wording of paragraph 5.12 as suggested in this representation.

136. The loss of prime agricultural land may be justified if required to meet strategic housing needs and there are no reasonable alternative sites. However, in this instance, other suitable housing sites are available in the Aberdeen Housing Market Area to meet the identified shortfall. The loss of prime agricultural land would therefore be contrary to policy PR1 Protecting Important Resources.

137. Given the uncertainty regarding transport infrastructure in Inverurie and the loss of prime agricultural land, I conclude that this site should not be identified for housing development. No modification is required.

Non-Allocated Site – Bid Site GR131 – Land at Braeside Farm and Thainstone

138. A representation is seeking to extend Thainstone Business Park, with three sites being promoted for inclusion in the development plan. Sites A and B lie to the south of the existing business park and are being promoted as an employment allocation of 13 hectares. Site C lies to the west of the business park and is being promoted as a longer term expansion project with capacity for up to 30 hectares of strategic reserve employment land.

139. All three sites lie to the south west of the settlement and to the west of the A96. The adjacent business park and intervening site OP10, which is allocated for 25.8 hectares of employment land, are within the settlement boundary. The proposed sites are in the countryside and at the time of my site visit were in agricultural use.

140. The strategic environmental assessment for bid site GR131 identifies a range of effects arising from the proposed development, including flood risk, potential impact on the Bennachie Special Landscape Area, the Health and Safety pipeline consultation zone and the potential impact on the scheduled ancient monument Bruce's Camp hillfort. The council's response highlights a number of constraints including landscape impact, the sites position with an HSE pipeline consultation zone and the uncertainty regarding transport infrastructure in Inverurie.

141. Table 1 in Appendix 1 of the proposed plan indicates that the plan identifies land for 92.84 hectares of business land compared to the strategic development plan target of 42 hectares. The strategic reserve target for the same area is 28 hectares, with strategic

reserve land allocations of 26.4 hectares. Given the substantial supply of employment land available in the strategic growth area to 2032, I am content that the small shortfall in strategic reserve land would not justify additional employment land allocations at this time.

142. The representation suggests that site SR2, a strategic reserve site of 17 hectares as set out in Table 2 of Appendix 1 in the proposed plan, is now properly part of site OP10, where site enabling works are complete. I have no representation before me to remove site SR2 from Table 2, but I note that it is not mentioned in the Inverurie settlement statement or map and is instead included within site OP10. This discrepancy does not change my conclusions regarding the need for additional business land.

143. I acknowledge that matters relating to the pipeline consultation zone, flood risk and landscape impact could potentially be addressed through site layout and landscaping. However, I conclude that there is no justification to extend business allocation OP10 at this time. No modification is required.

Non-Allocated Bid Site GR137 – Land East of Rothienorman Road, Howford

144. Two representations are seeking to have site R2, which is allocated in the plan for an extension to Uryside Park, re-allocated as a mixed use site, providing 109 homes and an extension to the park. The representations are from the landowners of site R2, who indicate that they object to the whole of the site being allocated as reserved land and that a mixed use allocation could deliver the expansion to the park.

145. Bid site GR137 lies to the north east of the town and is currently in agricultural use. To the north east of the site is established and emerging residential development and the new Uryside primary school. To the north west is open countryside, to the south and south west is the River Ury and the riverside park.

146. The strategic environmental assessment of site GR137 found that effects were generally neutral, with the exception of the risk of fluvial and surface water flooding and the loss of prime agricultural land. Matters relating to transport infrastructure in Inverurie including the dualling of the A96 would require to be taken into account.

147. I note that the whole of the site is not subject to flood risk, and therefore part of the site could potentially be suitable for development. The representations are not supported by a flood risk appraisal and so I am not able to reach a firm conclusion on flood risk matters. I note the comments in the representation regarding the difficulties maintaining this land in agricultural use. However, given that land to the west is to remain undeveloped, I am satisfied that access to the site would not be impeded and that the difficulties referred could be overcome.

148. The use of the land for a park would also result in the loss of prime agricultural land, albeit would not involve built development. However, if the land was not required for the purpose of a park, then loss of prime agricultural land would be a relevant policy consideration. As I have already indicated, developing prime agricultural land may be justified if required to meet strategic housing needs and there are no reasonable alternative sites. However, in this instance, there are other suitable sites available to meet the identified shortfall in housing provision in the Aberdeen Housing Market Area (see Issue 5).

149. I have not been made aware of any requirement to deliver the proposed extension to

the park though developer contributions from any source or specific development. In response to representations relating to the park and site P17, the council has indicated that funds for improvements to the park have been received from developer contributions and work is progressing, with works to the bridge programmed for the future. On that basis, I am satisfied that the identification of site R2 as an extension to the park is appropriate and that at this point in time, further programmed improvement works are not dependant on developing part of the site. No modification to the plan is required.

Reporter's recommendations:

Modify the local development plan by:

1. Amending the boundary of protected land designation P18 and the settlement boundary on the Inverurie and Port Elphinstone Keymap on page 566 and other maps on pages 567 – 574 (as relevant) to include the golf practice area.
2. Adding the wooded open area to the north – west of the B9170 / A96 roundabout to the P26 designation on the Inverurie and Port Elphinstone Key map on page 566 and other maps on pages 567 – 574 (as relevant).
3. Amending the boundary of the R1 designation on the Inverurie and Port Elphinstone Keymap on page 566 and other maps on pages 567 – 574 (as relevant) to reflect the plan at paragraph 4.10 of representation PP1241.
4. Amending the BUS1 boundary on the Inverurie and Port Elphinstone Keymap on page 566 and other maps on pages 567 – 574 (as relevant) to exclude the residential area at Versatile Square and Taylor Place.
5. Adding the following new second bullet point to the Flood Risk section on page 558:
“• Due to watercourses running through or adjacent to the site and/or surface water flooding, Flood Risk Assessments will be required for sites OP5, OP13 and OP16. A Flood Risk Assessment may be required for site OP3.”
6. Adding the following new third bullet point to the Flood Risk section on page 558:
“• A detailed flood study by Aberdeenshire Council has confirmed site OP4 is at risk of flooding. A Flood Risk Assessment will be required for any future development on this site.”
7. Adding the following new fourth bullet point to the Flood Risk section on page 558:
“• All BUS sites have surface water flood risk areas and/or are adjacent to watercourses. A Flood Risk Assessment may be required. Appropriate buffer strips will be required alongside the watercourses. Re-naturalisation of the watercourses and removal of any redundant features should be investigated.”
8. Adding the following new first bullet point in the Services and Infrastructure section on page 558:
“• Strategic transport infrastructure - Development may be required to contribute to strategic transport infrastructure. Further information is provided in Supplementary Guidance on Developer Obligations and Affordable Housing and in the Delivery Programme.”

9. Replacing the strategic drainage and water supply bullet point on page 558 with:
“• Strategic drainage and water supply: There is currently available capacity at Inverurie Waste Water Treatment Works. A Drainage Impact Assessment may be required.”
10. Inserting a new fourth sentence into the allocation summary for OP4: Phase 2 Portstown on page 560 to read:
“...of the Plan. Should extant permission lapse any future developments will have to take account of the latest Council Flood Study for Inverurie. A Flood ...”
11. Replacing the second sentence in the first paragraph of the allocation summary for OP5: Crichtie (Residential and Community) on page 561 with:
“A Development Framework was approved in February 2013 and a masterplan for the site was subsequently approved in June 2013 but will need to be reviewed if the extant planning permission is not implemented.”
12. Replacing the fourth sentence in the second paragraph of the allocation summary for OP5: Crichtie (Residential and Community) on page 561 with:
“Transport Assessment updates may be required.”
13. Replacing the final sentence of the second paragraph of the allocation summary for OP5 Crichtie (Residential and Community) on page 561 with:
“The maintenance and enhancement of wildlife corridors should be integral to the site’s development. Where possible, existing woodland should be retained and enhanced. Equivalent compensatory planting must be provided for any loss of woodland/trees.”
14. Replacing the second sentence in the second paragraph of the allocation summary for OP6: Crichtie (Employment) on page 561 with:
“Transport Assessment updates may be required.”
15. Replacing “OP10” with “OP6” in the first sentence of the second paragraph in the allocation summary for OP11: Pineshaw, Port Elphinstone on page 563.
16. Deleting “(FRA)” from the penultimate sentence of the allocation summary for OP13: Kirkwood Commercial Park, Thainstone on page 564 and replacing “FRA” with “Flood Risk Assessment” in the last sentence of the allocation summary.
17. Adding the following new sentences to the end of the allocation summary for site OP15: Land West of Bennachie View Care Home on page 565:
“A cumulative appraisal is to be undertaken to determine any potential impact to the A96(T) and identify if any mitigation is required to deliver the site. Provision for active travel is required.”
18. Adding the following two sentences before the last sentence in the third paragraph of the allocation summary for OP16: Land West of Conglass Cottages on page 565:
“A cumulative appraisal is to be undertaken to determine any potential impact to the A96(T) and identify if any mitigation is required to deliver the site. Provision for active travel is required.”

Issue 35	Kintore	
Development plan reference:	Proposed LDP, Appendix 7D Garioch, Page 588-598	Reporter: Sinéad Lynch
Body or person(s) submitting a representation raising the issue (including reference number):		
PP0102 Mr Peter Winn PP0121 Mrs Lorraine Strachan PP0225 The Kintore Consortium PP0226 The Kintore Consortium PP0239 Barratt Homes PP0246 RMB Developments PP0251 Mr Dennis Cran PP0269 Maxwell McDonald PP0272 Scottish Water PP0477 Monarch Developments PP0558 Asda Stores Limited PP0578 Scottish Government Planning and Architecture Division PP0733 Dr Paul Davison PP1219 Scottish Environment Protection Agency PP1241 Nestrans PP1343 Historic Environment Scotland		
Provision of the development plan to which the issue relates:	Kintore Settlement Statement	
Planning authority's summary of the representation(s):		
<p><u>General</u></p> <p>Nestrans are currently gaining clarity from Transport Scotland on their proposals for the upgrade of the A96 at this location. The railway station is due to open in Autumn 2020 (RD0227.A). No modifications sought (PP1241).</p> <p><u>Settlement Features</u></p> <p>For all protected sites in the settlement, wording should make it clear that no development should take place in these areas (PP0733).</p> <p><u>Site P7 – To protect recreational open space as an amenity for the settlement</u></p> <p>A representee has requested that the protected status afforded to site P7 is removed and incorporated into the OP1 allocation, as identified within the approved Kintore East Development Framework. Concerns are noted that while site P7 was allocated for education uses in the 2012 and 2017 Local Development Plans (LDPs), at no point has there been any suggestion that the site would be protected as recreational open space in</p>		

the Main Issues Report (MIR) or Issues and Actions paper for Kintore. The site P7 was allocated for education uses in previous LDPs, the Council recognises the development potential this site has, and therefore it is logical that this development potential continues to be recognised within the Proposed Local Development Plan (PLDP), albeit for alternative residential and community use associated with the neighbouring development at Kintore East. It is suggested that the site offers the potential to make a significant contribution to the existing settlement as well as the emerging development at Kintore East, through a sensitive mix of community and residential uses, and creating an attractive new gateway for the OP1 allocation. The representee has included an Appendix (RD0031.A) in their representation which provides further detail to support their position (PP0225).

Site P9 – To protect the football pitch and open space as an amenity for the settlement and forming part of the green-blue network and Site BUS4 – Safeguarded for business uses

The representee has no objection to protecting land to cover the football pitch, but objects to including within P9 the brownfield area and the yard area associated with the garage in business use. It is requested that the part of P9 is removed and an extension of site BUS4 area is introduced. The representee has included an Appendix (RD0038.A) in their representation which provides further detail to support their position (PP0269).

Site R1 – For a town park at Gauch Hill

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R1 (RD0214.B). No modification sought (PP1219).

Site BUS1 – Safeguarded for business uses

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for BUS1 (RD0214.B). No modification sought (PP1219).

Site BUS2 – Safeguarded for business uses

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for BUS2 (RD0214.B). No modification sought (PP1219).

Part of the site is identified in the 2017 LDP as BUS2 site has been carried forward but the representee is looking to extend the allocation slightly to include land at Bridgend House. The site is located within a short walk from the new railway station and the town centre so is in close proximity to a number of services. Within the 2017 Settlement Statement it notes that it is safeguarded for employment uses etc. subject to a masterplan for housing. This shows that a mix of housing and business uses is considered appropriate in principle (PP0477).

In line with the 2017 LDP a draft masterplan was prepared, and public consultation carried out. The feedback was generally supportive of the overall development with most queries regarding the trees to the southern boundary and there are no proposals to remove these. The draft masterplan was then presented to Garioch Area Committee where there were no objections by statutory consultees as necessary tweaks had been made to plans for flood risk. Garioch Area Committee did not approve the site as it was felt that the site was primarily housing and would change the allocation of the site which contradicts the statement in the Settlement Statement. It was also noted that the site would act as a

gateway function to the north of Kintore, the OP7 site would actually be more prominent and serve as the gateway. Nothing raised at the Committee meeting would stop the site being allocated and reallocating the site from a BUS2 site to mixed-use would address the concerns raised by the Committee (PP0477).

The Settlement Statement for Kintore makes it clear that there is capacity for both housing and employment land in Kintore. Within the Strategic Development Plan (SDP) it states that LDP allocations should be small-scale in nature as no changes were made to the SDP through the Examination. Most of the allocations in Kintore are large-scale, although it is noted that OP7 is small scale. This was however noted not to be developed in isolation. So, allocating this site would accommodate the small-scale element and address the lack of effective small-scale sites in Kintore. The Employment Land Audit (ELA) also notes that there is a significant oversupply of employment land in Aberdeenshire. There is therefore no need for additional employment land so the reallocation of the site to mixed-use would have no adverse impact on the availability of employment land. Working from home is also now becoming more popular given the current situation and there is support for this through the policies in the Plan. This site would be able to help address the uptake of this also. Scottish Planning Policy (SPP) states that allocations should meet the diverse needs of sectors and be flexible to accommodate changing circumstances. Given the oversupply of employment land and the demands for flexible live-work options this site should be considered in accordance with SPP as there are still other sites allocated in Kintore for employment opportunities. The presumption in favour of development set out in SPP also notes that decisions should respond to current economic issues/challenges/ opportunities, make efficient use of land allocations and support delivery of accessible housing. The site being reallocated as mixed-use would be in line with what is advocated by SPP (PP0477).

If the site was allocated for mixed-use there are no constraints that would prejudice development, it would facilitate the redevelopment of a steading building, there is no conflict between the proposed use and adjacent land uses and can be accessed by sustainable means and is within close proximity to the rail station and facilities. Through the masterplan there is also a SuDS strategy, availability of services and the awareness that any capacity issues at the school can be addressed. Finally, the site can be delivered within the Plan period. The representee has included a number of Appendices (RD0076.A, RD0076.B and RD0076.C) in their representation which provides further detail to support their position (PP0477).

Flood Risk

SEPA has requested, that for consistency, a new 'Flood Risk' bullet point should be added to state that parts of sites OP1, OP2 and OP7 are at risk from flooding and that Flood Risk Assessments may be required (RD0214.B) (PP1219).

SEPA has requested, that for consistency, a new 'Flood Risk' bullet point should be added to state that significant areas of sites BUS3 and BUS4 are at risk from flooding by the Tuach Burn and Flood Risk Assessments may be required, buffer strips will be required, and re-naturalisation of the watercourse and removal of any redundant features be investigated (RD0214.B) (PP1219).

Services and Infrastructure

A representee has concerns, about the impact of the proposed new 1000 homes, on

vehicular traffic in the area. The B987 leading to Broomhill Roundabout (A96) is already a traffic choke point and without a slip road link here there would be significant queuing resulting in increased pollution, commuting times and potentially road traffic collisions (PP0102).

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Scottish Water have requested that text under the 'Strategic drainage and water supply' bullet point is amended to read, "There is currently available capacity at Inverurie WWTW. A Drainage Impact Assessment will be required. A Water Impact Assessment will be required. Early engagement with Scottish Water is recommended." (PP0272).

A representee has requested the deletion of the secondary education requirement under 'Service and Infrastructure', as the previous requirement for a new academy has changed. Progress has been made on a new £55 million Inverurie Community Campus, which will replace Inverurie Academy, and an extension to Kemnay Academy is complete. As such, there is sufficient capacity available within the wider catchment area to absorb pupils from Kintore (PP0225).

A representee notes that the reference to 'recreation provision for Tuach Hill Park' should be deleted as there is no Tuach Hill Park (PP0733).

A representee notes that there is no need for a new health centre, however the requirement for contributions towards additional capacity is required. Reference to new health centre should be removed (PP0733).

Site OP1 – Kintore East (Residential)

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

A representee agrees with the third paragraph in the summary text for OP1 and that progress on the additional 400 homes should not proceed until progress has been made on the initial 600 homes and not before delivery of the community facilities and neighbourhood centre associated with site OP5. No modification sought (PP0226).

The continued identification of Kintore East as OP1 is welcomed and that the PLDP recognises the site's true capacity of 1,000 homes. This will help grow this popular settlement, delivering housing to meet strategic needs and support the broad range of services, amenities and employment land within the settlement (PP0226).

A representee has objected to the proposed wording that suggests the approved masterplan for the 600-home scheme will need to be reviewed if development has not commenced on this site at the date of adoption of the Plan. It is argued the approved Kintore East Masterplan is still very much relevant to the development of the site and has informed the extant Planning Permission in Principle (PPP) (APP/2013/3830) consent to which Matters Specified in Conditions (MSC) applications have been pursued and remain pending. It would therefore be unreasonable to request a formal review of the masterplan during the lifetime of the PPP consent. The allocation summary also needs clarification in relation to supporting information for the site. It is requested that any new technical

reports, in relation to flood risk, transportation etc., are only to be required to support the additional 400 homes, and not the existing 600 homes that have extant planning permission. A significant amount of information has already been provided for the 600 homes (PP0226).

A representee supports the identification of the indicative access route within the Settlement Statement maps, but requests that the access route is updated to align with the route identified within the development framework, masterplan and approved PPP (APP/2013/3830). The representee has included a number of Appendixes (RD0032.A, RD0032.B and RD0032.C) in their representation which provides further detail to support their position (PP0226).

A representee requests the boundary of the OP1 site is changed to remove an area of land as it had not been included in the Kintore East Masterplan or any planning applications (PP0239).

In addition to the 400 homes at OP1, and those that already have consent, a further three allocated sites identify potential upgrade relating of the A96/B987 Broomhill roundabout. The LDP should identify what, if any, improvement is required at this location on the trunk road network. This should include the nature and scale of improvements required and associated cost. If developer contributions are to be sought, the mechanism whereby such contributions will be gathered, and when and by whom improvements will be delivered should also be included in the LDP in accordance with SPP. In the Settlement Statement for Kintore, the LDP proposes under Allocated Sites on page 591 an allocation of 1,000 homes at site OP1: Kintore East (Residential). This site was previously allocated as site OP1 in the LDP 2017 with a proposed allocation of 600 houses. Planning Permission in Principle was approved in 2015 for the 600 houses including required mitigation measures at the A96/B957, Broomhill roundabout. No further assessment has been undertaken of the impact of this further allocation of 400 houses and the potential impact on the trunk road network at the A96/B987 Broomhill roundabout (PP0578).

A representee also notes that site OP1 is not justified and there is no community support for the development (PP0733).

Kintore OP1 is located in the immediate vicinity of the scheduled monuments known as Aberdeenshire Canal, remains of, NW of Brae of Kintore (SM 7674) and Aberdeenshire Canal, remains of, south of Dalwearie (SM 7675). Historic Environment Scotland (HES) has noted that while the allocation appears to exclude the monuments, it will be important that any development avoids any direct (i.e., physical) impacts on their legally protected scheduled areas of the monuments. They add, while the monuments (canal) are industrial in nature, they are in a largely rural and open landscape and still retain a sense of place. Therefore, consideration should be given to mitigating the impact through sensitive housing design and potentially also landscaping, such as leaving undeveloped land as a buffer and/or using trees to screen the development from view, in line with HES Setting guidance (RD0266.A) (PP1343).

Site OP2 – Woodside Croft, Town Park

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219).

A representee wishes to gain clarification of boundaries of the site in relation to their land, otherwise will object to an application (PP0251).

Site OP3 – Kintore South

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP3 (RD0214.B). No modification sought (PP1219).

A representee has a number of concerns regarding the site including, a negative impact on neighbouring properties particularly in relation to road access and visual impact. Concerns are also noted about impact on features of archaeological interest within the site and the environmental health impact of this development in combination with the existing industrial estate. In particular, there is already a lighting and noise issue (PP0121).

Site OP4 – Midmill Business Park

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP4 (RD0214.B). No modification sought (PP1219).

A, respondent notes that they have concerns about the negative impact that the development will have on neighbouring properties and particularly has concerns about the negative impact of this development due to increased traffic. This is given there are existing safety concerns at Broomhill Roundabout being a traffic bottleneck, with many lorries (PP0121).

A representee notes that the wording stating 'a new distributor link is required to the B987' is not required as there is an existing distributor link to the B987 (PP0733).

Site OP5 – Kintore East (Commercial and Community)

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP5 (RD0214.B). No modification sought (PP1219).

Any new retail facilities within the allocation should be clearly restricted by maximum floorspace levels to prevent ambiguity with the reference 'neighbourhood' and allow adequate assessment of retail impact on existing centres (PP0558).

A representee supports the inclusion of OP5 for the delivery of commercial and community uses, as the Proposed Plan designation now provides sufficient clarity on this and should resolve any misled preconceptions within certain parts of the community that the land would not be subject to development. No modification sought (PP0226).

This site is part of the existing Tuach Hill protected area and should not be developed. The site should be removed along with all references to a distributor road connecting to the B987 (PP0733).

Site OP6 – Land Adjacent to Woodside Croft

SEPA recommends, for site OP6, removing the requirement for a Flood Risk Assessment (FRA) as SEPA have no requirement for one and recommend consulting the Council's Flood Prevention Unit to confirm whether this requirement can be removed from the

allocation text (RD0214.B) (PP1219).

Site OP6 is not justified and there is no community support for the development. Provision of affordable housing in the area should be part of the Woodland Croft/Town Park development and not specified as a percentage of housing on site (PP0733).

Site OP7 – South of Northern Road-A96

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP7 (RD0214.B). No modification sought (PP1219). A representee has expressed support for the inclusion of site OP7. The owner has not yet been approached by the neighbouring landowner with regard to the requirement for a masterplan as part of the 2017 LDP. The neighbouring landowner has recently submitted a masterplan to Aberdeenshire Council but has not yet got this approved by Garioch Area Committee. A comment was submitted to highlight that the representee does not wish any masterplan approved under the Aberdeenshire LDP 2017 or any alteration to adjacent proposed BUS2 allocation as it could prejudice the detailed proposal proposed to be allocated as OP7. The representee has included an Appendix (RD0033.A) in their representation which provides further detail to support their position. No modification sought (PP0246).

Site OP7 site should be designated for retail and employment, with a specification that up to 18 homes could be allowed if justified by an approved masterplan. The site is an opportunity for small shops, cafes and small businesses that would benefit the community and presents the right image for the Kintore. No more houses are needed in the village (PP0733).

Modifications sought by those submitting representations:

Settlement Features

Modify the PLDP to amend wording for 'P' sites within the Kintore Settlement Statement to make it clear no development is permitted (PP0733).

Site P7 – To protect recreational open space as an amenity for the settlement

Modify the PLDP to incorporate site P7, which is designated to protect recreational open space and place within OP1, which is allocated for 150 homes to enable the development of Gauch Hill Town Park (PP0225).

Site P9 – To protect the football pitch and open space as an amenity for the settlement and forming part of the green-blue network and Site BUS4 – Safeguarded for business uses

Modify the PLDP to remove part of the P9 site and extend BUS4 area (PP0269).

Site BUS2 – Safeguarded for business uses

Modify the PLDP to reallocate part of BUS2 to a mixed-use opportunity site for housing, employment and commercial units with the extension of the boundary of the site to include land at Bridgend House and land adjacent to the existing garage (PP0477).

Flood Risk

Modify the PLDP to add a new 'Flood Risk' bullet point, "Parts of sites OP1, OP2 and OP7 lie within or adjacent to SEPA's Indicative 1 in 200-year flood risk area or have a watercourse running through or adjacent to the site. Flood Risk Assessments may be required." (PP1219).

Modify the PLDP to add a new 'Flood Risk' bullet point, "Significant areas of BUS3 and BUS4 sites are at risk from flooding by the Tuach Burn and small watercourses. Flood Risk Assessments may be required. Appropriate buffer strips will be required alongside the watercourse. Re-naturalisation of the watercourse and removal of any redundant features should be investigated." (PP1219).

Services and Infrastructure

Modify the PLDP to ensure appropriate infrastructure improvements are made to accommodate the proposed new 1000 homes (PP0102).

Modify the PLDP to amend text under 'Strategic drainage and water supply' to read, "There is currently available capacity at Inverurie Waste Water Treatment Works. A Drainage Impact Assessment will be required. A Water Impact Assessment will be required. Early engagement with Scottish Water is recommended." (PP0272).

Modify the PLDP to remove "Secondary education, All residential development will be required to contribute towards additional capacity at Kemnay Academy" under the 'Services and Infrastructure' section (PP0225).

Modify the PLDP to delete the reference to 'Tuach Hill Park' under 'Sports and recreation facilities' (PP0733).

Modify the PLDP to remove reference to a new health centre in Kintore (PP0733).

Site OP1 – Kintore East (Residential)

Modify the PLDP to remove the second part of the second sentence in paragraph one of the allocation summary for OP1 to read, "A masterplan for the residential part of the site was approved in June 2014 but will need to be reviewed if development has not commenced on this site at the date of adoption of this Local Development Plan." (PP0226).

Modify the PLDP to clarify that any new technical reports in relation to flood risk, transportation, etc, would be required to inform the additional 400 units, not 600 units, which are subject to an extant permission within the allocation summary for OP1 (PP0226).

Modify the PLDP to ensure the access route will align with the route identified within the development framework, masterplan and approved PPP on the Kintore Settlement Statement map (PP0226).

Modify the PLDP to amend the site boundary of OP1 to remove an area of land from the allocation and update the site boundary of Site OP1 (PP0239).

Modify the PLDP to ensure that the allocation summary identifies what, if any, improvement

is required at this location on the trunk road network (PP0578).

Modify the PLDP to amend the allocation of OP1 to change the allocation from 1000 to 600 homes and remove references to 'a further 400 homes' (PP0733).

Modify the PLDP to ensure consideration is given to mitigating impact through sensitive housing design and potentially also landscaping, such as leaving undeveloped land as a buffer and/or using trees to screen the development from view, in line with the HES setting guidance (PP1343).

Site OP2 – Woodside Croft, Town Park

Modify the PLDP to clarify the boundary of site OP2 (PP0251).

Site OP3 – Kintore South

Modify the PLDP to ensure that the OP3 site minimises the noise and light pollution impact, minimise adverse impact on neighbouring properties and protect archaeological features within the site (PP0121).

Site OP4 – Midmill Business Park

Modify the PLDP to address local traffic safety issues and ensure there are suitable infrastructure and/or traffic measures in place to accommodate increased traffic from new development and minimise adverse impact on neighbouring properties (PP0121).

Modify the PLDP to remove the requirement for a new distributor link to the B987 from the allocation summary (PP0733).

Site OP5 – Kintore East (Commercial and Community)

Modify the PLDP to make reference to 'neighbourhood' to restrict maximum floorspace levels within the site allocation summary for OP5 and for proposals to be subject to a Retail Impact Assessment where over 400sqm gross floorspace (PP0558).

Modify the PLDP to remove site OP5 and all references to a distributor road connecting B987 (PP0733).

Site OP6 – Land Adjacent to Woodside Croft

Modify the PLDP to confirm whether a Flood Risk Assessment is still required and if not, remove it from the allocation summary (PP1219).

Modify the PLDP to remove site OP6 (PP0733).

Site OP7 – South of Northern Road-A96

Modify the PLDP to amend the OP7 allocation to retail and employment with up to 18 homes permitted with an approved masterplan (PP0733).

Summary of responses (including reasons) by planning authority:

General

The comments from Nestrans are noted. No change is required.

Settlement Features

The comments from the representee are noted. Protected land status does not necessarily mean that development proposals could not come forward. The designation summary outlines exactly why each of the sites is designated as a protected site. Furthermore, it is stated within Policy PR1 Protecting Important Resources at paragraph PR1.6 Open Space that development will not normally be permitted on any area of open space, including outdoor sports facilities and buffer strips along watercourses, unless the new use is ancillary to the use of area as open space, see Proposed Plan (AD0041.A page 74). This then affords the protected sites within the Settlement Statements protection without having to make individual statements for each site. No change is required.

Site P7 – To protect recreational open space as an amenity for the settlement

The concerns relating to the protected status of the site are noted. Within the Issues and Actions paper it is noted, for the sites, that a number of representees are concerned in respect of the potential for adverse impacts on protected sites and open space, and those matters would have been considered within the context of the planning history associated with the site, see Issues and Actions (AD0040.E, page 76). Therefore, to provide a transparent process and also to enable clarity for the residents of Kintore it is considered appropriate to maintain the open space protection of the area. No change is required.

Site P9 – To protect the football pitch and open space as an amenity for the settlement and forming part of the green-blue network and Site BUS4 – Safeguarded for business uses

The BUS4 site has slightly extended in size since the 2017 LDP, as there is now a small area of extension on the west side of the B987. This extension to the site is for the area of land associated with the garage. This area of land is excluded from the P9 boundary as included within the BUS designation, shown by the blue overlay on the PLDP, Kintore Settlement Statement, page 597. No change is required.

Site R1 – For a town park at Gauch Hill

Comments from SEPA are noted. No change is required.

Site BUS1 – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

Site BUS2 – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

Through comments received in relation to the MIR, a new allocation, OP7 has been proposed to be included within the LDP for a mix of uses including housing and employment. This previously formed part of the wider BUS2 site in the 2017 LDP

(AD0034.G, page 426). The representee is requesting that more of the BUS2 allocation is also changed to form a mixed-use allocation. This is not considered to be appropriate at this point as there is limited employment land left within the settlement and there is still demand for space as seen with the take up at BUS1, BUS3 and BUS4. It would, therefore, seem to be appropriate to allow for the smaller OP7 development to be constructed first, then should demand exceed the allocation at OP7 a future development bid could be submitted to the Council to request further development on the site. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the list of Non-Notifiable Modifications.

Services and Infrastructure

Concerns regarding the traffic impact of the site are noted. This particular section of the Plan 'Services and Infrastructure' notes any developer obligations that are/may be required as a result of additional development. Developer obligations cannot be used to solve existing problems but can be used to mitigate the impact of any development on the existing infrastructure. It is noted within the 'local transport infrastructure' bullet point that a new distributor road will be required and the B987 will require to be upgraded, both of these projects will help relieve pressure on the transport network. No change is required.

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address Scottish Water's comment through a non-notifiable modification, as set out in the list of Non-Notifiable Modifications.

The information regarding the secondary education requirements originates from the Council's Education Service. The requirements are worked out by looking at allocations within the Plan and capacity within the schools. Any requirements for developer obligations are then discussed with the Council's Developer Obligations Team to ensure that the requirements are relevant and correct for the developments. It is therefore considered that the text contained within the PLDP is relevant and should remain. No change is required.

The bullet point for 'Sports and recreation facilities' was carried over from the 2017 LDP. However, it is acknowledged that there is a typographical error within the statement as it should reference 'Gauch Hill Town Park' rather than 'Tuach Hill Park'. The Council confirms that it intends to address the comment from the representee through a non-notifiable modification, as set out in the list of Non-Notifiable Modifications.

Information relating to the requirements for health care are sought from NHS Grampian for each settlement in the LDP and then the relevant information is included. NHS Grampian provided the information contained within the PLDP and have not objected to the inclusion of the current wording. Although the wording in the LDP will remain for the entirety of the Plan this is reviewed with NHS Grampian on a yearly basis and any updates would be detailed within the most up to date Delivery Programme. No change is required.

Site OP1 – Kintore East (Residential)

Comments from SEPA are noted. No change is required.

The comments in support of the allocation are noted. No change is required.

The concerns regarding the wording in relation to the masterplan needing to be reviewed are noted. The requirement for the review of the masterplan is a new requirement coming through Policy P1 Layout, Siting and Design. The policy requires masterplans to be reviewed every 5 years. As noted within the Issues and Actions papers the introduction of the review process is to allow the masterplans to reflect updates in national guidance and policy (AD0040.E, page 106). It also allows the community to keep up to date with what is proposed on the site and for this to be as responsive as possible to any changes. No change is required.

The access route shown on the Settlement Statement map is shown as an indicative line. However, as noted by the representee there is an access route shown in the agreed development framework, masterplan and PPP. The Council confirms that it intends to address the representees comment through a non-notifiable modification, as set out in the list of Non-Notifiable Modifications.

A representee notes that an area of land has been included in the OP1 allocation but has not been included in the masterplan or any planning applications. A copy of the land in question has been mapped by the representee. It is deemed that it would be appropriate to remove this area of land from the allocation to ensure that the allocation only contains land which is to be developed. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the list of Non-Notifiable Modifications.

A Development Planning and Management Transport Appraisal Guidance (DPMTAG) assessment was carried out to support the preparation of the PLDP. The DPMTAG notes that overall, the OP1 site performs well against the criteria and that proposals for the site detailed within the approved masterplan would support the access strategy for the site and would have limited adverse impact on the Strategic Transport Network. The development would still be required to mitigate any impact that the development will have as a result of the additional development through developer obligations. Some information is contained within the 'Services and Infrastructure' section of the Plan and note under the local transport infrastructure. More detail on specific requirements of the OP1 site would be assessed and discussed during future masterplans and planning applications for the site. No change is required.

The site is an allocated site which has an approved development framework, masterplan and also has PPP for the site with a MSC application pending. The site is therefore progressing towards development. No change is required.

The Council confirms that it intends to address the comment from HES through a non-notifiable modification, as set out in the list of Non-Notifiable Modifications.

Site OP2 – Woodside Croft, Town Park

Comments from SEPA are noted. No change is required.

The boundary of the OP2 remains unchanged from the 2017 LDP with sections fronting the B994 and B987 as well as the boundaries of the existing properties in the area. The map of the site can be found in both the 2017 LDP (AD0034.G) at page 427 and in the

Proposed LDP (AD0041.G) at page 597. Any neighbouring property within 20 metres of the site would have been notified when the allocation was originally allocated within the LDP and then subsequently at each review of the LDP. No change is required.

Site OP3 – Kintore South

Comments from SEPA are noted. No change is required.

Concerns relating to the OP3 site are noted. Any impacts on the amenity of neighbouring properties will be addressed at a planning application stage with proposals being assessed against relevant policies within the Plan. Additionally, issues relating to access would be assessed at the planning application stage through consultation with the relevant stakeholders. Also, in relation to the archaeological concerns, as part of the site assessment process when selecting acceptable sites, this is one of the criteria that is looked at which is why the text was included in the allocation summary to highlight this was something that requires to be considered when developing the site. Additionally, any planning application that was submitted for the site would be assessed against all of the relevant policies in the Plan, including Policy HE1 Protecting Listed Buildings, Scheduled Monuments and Archaeological Sites. It is therefore considered to be appropriate to maintain the allocation of the OP3 as the issues raised within the representations can be addressed at the planning application stage. No change is required.

Site OP4 – Midmill Business Park

Comments from SEPA are noted. No change is required.

Concerns relating to the OP3 site are noted. Any impacts on the amenity of neighbouring properties will be addressed at a planning application stage with proposals being assessed against relevant policies within the Plan. Additionally, issues relating to roads would be assessed at the planning application stage through consultation with the relevant stakeholders. In relation to the concerns raised about the additional traffic at the Broomhill roundabout is noted. The 'Services and Infrastructure' section of the Settlement Statement notes any developer obligations that are/may be required as a result of additional development. Developer obligations cannot be used to solve existing problems but can be used to mitigate the impact of any development on the existing infrastructure. Within the 'local transport infrastructure' bullet point a number of requirements are mentioned and would be considered upon an application being submitted for development. No change is required.

The reference relating to the distributor road relates to the new principal access route which is indicatively shown on the Settlement Statement maps which is proposed to come forward when the new development allocations are development see PLPD (AD0041.G, page 595). This is seen as one of the measures of dealing within the additional traffic pressure from these new developments and is considered appropriate to remain. No change is required.

Site OP5 – Kintore East (Commercial and Community)

Comments from SEPA are noted. No change is required.

The comments in support of the allocation are noted. No change is required.

The site has planning permission for a supermarket under planning application APP/2014/1953. No stipulations in terms of floor space are set by the allocation summary text. However, should any new planning application be submitted for the site it would be assessed against the relevant policies within the Plan including Policy B1 Town Centre Development. This policy states that retail and commercial facilities must be appropriate to the scale and function of the settlement (B1.2, AD0041.A, page 26). This would then allow for a judgement to be taken should a planning application be submitted. No change is required.

The PLDP is being updated to reflect the agreed development framework and masterplan for the site which both make reference to this area being developed for commercial/community uses, see the development framework (AD0089, page 22). It is therefore considered appropriate to ensure transparency and clarity that the site is allocated as OP5 within the Plan. No change is required.

The reference relating to the distributor road relates to the new principal access route which is indicatively shown on the Settlement Statement maps which is proposed to come forward when the new development allocations are developed, PLPD (AD0041.G, page 595). This is seen as one of the measures of dealing within the additional traffic pressure from these new developments and is considered appropriate to remain. No change is required.

Site OP6 – Land Adjacent to Woodside Croft

SEPA recommended removing the requirement for a FRA, as they had no requirement for one for this site. The Council's Flood Prevention Unit was in agreement with this. Therefore, the Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the list of Non-Notifiable Modifications.

This site is a newly allocated site within the PLDP to support the development of affordable housing within the settlement. The site was originally noted within the MIR, as being reserved and not for immediate development as it was considered the site formed part of the land currently reserved for the town park at Guach Hill (AD0038.E, page 60). Through representations to the MIR, it was highlighted within the Issues and Actions paper that the Section 75 plan for the town park did not include the area proposed for housing, (AD0040.E, page 76). It was therefore considered that it was appropriate to include the site within the PLDP, albeit that within the allocation summary for the site that development on the site should not take place prior to the completion of the town park, PLDP (AD0041.G, page 593). Additionally, in relation to the comment on there being no community support for the allocation this has not been reflected in the comments received through the consultation as there is only one objection to the site. No change is required.

Site OP7 – South of Northern Road-A96

Comments from SEPA are noted. No change is required.

The comments in support of the allocation are noted. No change is required.

This is a new allocation with the PLDP and has been allocated for a 'mix of uses including 32 homes, retail and employment land'. This means that the change requested by the

representee would be acceptable under the new allocation as it would include housing, retail and employment uses. No change is required.

Reporter's conclusions:

Preliminary Matters

1. The examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” in relation to the settlement statement matters covered in Issue 35. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Settlement features

3. I note that the word “conserve” is used in the description of the protected land designations in the adopted local development plan. In the proposed plan, the word “protect” is used instead and for some of the entries, further explanation of the purpose of the designation is provided. I do not consider the wording in the proposed plan to lessen the protection of these areas.

4. Paragraph P1.6 of policy PR1 (protecting resources) states that development will not normally be permitted on any areas of open space, including that identified as protected land in the settlement statements. However, it indicates that “exceptionally, the development of essential community infrastructure may be allowed”. It would therefore not be appropriate to state that no development should take place in these areas. No modification is required.

Site P7 – To protect recreational open space as an amenity for the settlement

5. Site P7 is an area of open space to the east of Midmill primary school. To the north, east and south is the OP1 allocation for 1000 homes. At the time of my site visit, it appeared to be in agricultural use.

6. A representation advises that the site is in the control of the consortium who are promoting site OP1, and now that site P7 is no longer required for a high school, it should form part of the overall OP1 allocation. It had never been intended that the site provide open space, it had always been proposed for use as a high school until the recent extension of Kemnay Academy. The approved framework for site OP1 incorporates the site into the overall development. The removal of the allocation is sought, with the site either being white land or part of OP1.

7. The council advises that to maintain a transparent process for residents, the site should be maintained as open space.

8. I note that in previous plans the site was also identified as P7, but for new education provision. The approved development framework for the whole of the OP1 allocation also identifies the site for education purposes. The Main Issues Report and the Issues and Actions Paper did not make reference to any change in the purpose of site P7. The council refers to page 76 of the Issues and Actions Paper, but on that page there appears to be no reference to any change in the purpose of site P7. On my reading of the situation, it appears that the change in purpose of site P7 did not materialise until the proposed plan stage.

9. On that basis, I am satisfied that the interests of residents in Kintore would not be unduly affected. The site had not been allocated for recreational open space in the past, and the plan consultation process did not include recreational open space as a proposed use for the site until the proposed plan stage. I note that the site is not currently recreational open space, nor is there a proposal to deliver open space.

10. I do not consider that allocating site P7 as protected recreational open space in this plan is justified. The site is no longer required for its original purpose. However, it does not automatically follow that the site should remain protected for another purpose, particularly when it has not been used for that purpose in the past, and when there is no proposal to deliver recreational open space in the future.

11. I note that the representation is seeking to have the site incorporated into the wider OP1 allocation. Given that a new masterplan would be required for the OP1 allocation, to reflect the additional 400 homes, I am satisfied that the future use of site P7 would best be determined through the consideration of a new or updated masterplan.

12. A modification to remove site P7 from the protected land table and to incorporate it into site OP1 is set out below.

Site P9 – To protect the football pitch and open space as an amenity for the settlement and forming part of the green-blue network and Site BUS4 – Safeguarded for business uses

13. A representation seeks an extension to BUS4 to cover the functioning areas of a garage on the west side of the B987. The proposed plan extends the BUS4 designation to cover part of the garage premises and yards. However part of the garage display yard has been omitted from BUS4 and included in protected land designation P9 instead.

14. On my site inspection, I noted that, although BUS4 has been extended to the west, the extension does not appear to cover an area of open yard which is in use as a display for vehicles. This area is hard surfaced, has access from both the north and south from the B987 and includes an electricity pylon.

15. The remainder of the P9 designation relates to the football pitch and open space. I am satisfied that if the BUS4 allocation was extended to include the yard area, neither the football pitches nor the open space to the west of the pitches would experience any negative impact. A modification to this end is set out below.

16. The representation is also seeking to exclude an area of land to the west of the football pitches, as it is considered brownfield land. Whilst I note that this area of land is in private ownership and is relatively unkempt in appearance, it sits within a green corridor which runs immediately to the east of the A96. The corridor as a whole contributes the

setting of Kintore and I do not consider it would be appropriate to remove this section. No modification is required in relation to this part of site P9.

Site BUS2 – Safeguarded for business uses

17. Site BUS2 is located to the north of the town, and south and east of the A96 junction. The part of the site to the east of the B987 is reserved as a transport interchange to serve the new railway station. Site OP7 has been removed from BUS2, and is allocated for mixed use development, including 32 homes. The representation is seeking the reallocation of part of BUS2 to accommodate mixed use development including housing, employment and retail/commercial units. The extension of the site to the south and the inclusion of Bridgend House is also sought.

18. At my site inspection, I observed the railway station and associated infrastructure, the OP7 site which is in agricultural use, the remainder of BUS2, Bridgend House and steadings, the Station garage, and the white land between the garage and the southern end of BUS2.

19. Paragraph B2.2 of policy B2 (Employment/Business Land) clearly sets out the circumstances where alternative development proposals would be permitted. I note that it should be demonstrated that there is no reasonable prospect of the employment land becoming marketable for business development. The alternative use, in this case residential, must benefit the local community and not prejudice the strategic employment land requirement.

20. I find that the proposed re-allocation of part of site BUS2 has not been fully evidenced. Although the representation states that there is sufficient employment land in Kintore, the council advises that employment sites are in demand, as evidenced by the successful take up of land in the other employment areas in the town. Furthermore, the suitability of the site for the alternative uses has not been demonstrated. In advance of the development of site OP7, I do not consider the proposed re-allocation of site BUS2 would be justified. In relation to the proposed extension of BUS2 to include Bridgend House and steadings, and an area to the south-east of the site, I note both these areas are within the settlement boundary and that Bridgend House and steadings could be considered a brownfield opportunity. I agree with the council that a proposal for alternative uses, the development of Bridgend House and steadings and the additional land to the south-east of BUS2 could come forward through the development management process, and be assessed against the criteria in policy B2 and other relevant policies. No modification to the plan is required.

Flood Risk

21. The Scottish Environment Protection Agency (SEPA) has requested some additional bullet points in the flood risk section. These would refer to flood risk at sites OP1, OP2 and OP7 and indicate that significant areas of sites BUS3 and BUS4 are at risk from flooding by the Tuach Burn. The council agrees with both representations. I also agree that the amendment proposed by SEPA would add clarity to the plan and the position on flood risk. A modification is set out below.

Services and Infrastructure

22. A representation has expressed concerns about the impact of the proposed new

homes on vehicular traffic in the area. A slip road to link the B987 to the Broomhill Roundabout (A96) is required. Without it, queuing traffic will lead to an increase in pollution and in commuting times.

23. I note that the local transport infrastructure section indicates that development may be required to contribute to new infrastructure, if necessary as a result of that new development. However, developer obligations cannot be used to solve existing problems. I am satisfied that the new distributor road and the upgrading of the B987 to the A96 will help relieve pressure on the transport network. No change to the plan is required

24. Scottish Water has requested an amendment to the 'Strategic drainage and water supply' bullet point. I agree that the wording proposed by Scottish Water would add clarity to the plan and the position on capacity in Kintore. A modification to the Services and Infrastructure section is set out below.

25. A representation is seeking the deletion of the secondary education requirement under 'Service and Infrastructure', as the previous requirement for a new academy has changed. There is now sufficient capacity available within the wider catchment area to absorb pupils from Kintore.

26. My reading of the representation is that what is sought is the removal of the requirement for a new secondary school in Kintore, not that the requirement for contributions to the extension of Kemnay Academy should be removed. However, I agree with the council that requirements for development obligations for education may be relevant, and should remain in the plan. No modification to the plan is required.

27. A representation notes that the reference to 'recreation provision for Tuach Hill Park' should be deleted as there is no Tuach Hill Park. The council advises that this is a simple typographical error and that the final sentence of the sports and recreation facilities bullet point on page 590 should read 'Gauch Hill Park'. A modification to that end is set out below.

28. A representee notes that there is no need for a new health centre, however the requirement for contributions towards additional capacity at existing centres should be retained. The reference to a new health centre should be removed.

29. The council advises that information relating to the requirements for health care are sought from NHS Grampian for each settlement in the LDP. NHS Grampian provided the information contained within the proposed plan, and has not objected to the inclusion of the current wording. Requirements for healthcare are reviewed with NHS Grampian on a yearly basis and any updates would be detailed within the most up to date Delivery Programme. I am satisfied that the current wording in the plan reflects the position of NHS Grampian and no modification to the plan is required.

Site OP1 – Kintore East (Residential)

30. Site OP1 is a large site to the south-east of Kintore. It is allocated in the existing local development plan for up to 600 homes, a neighbourhood centre, open space and associated infrastructure. A 2014 masterplan is in place for the residential element of the site. The proposed plan includes an allocation for up to 1,000 homes and associated infrastructure in this plan period.

31. A representation has objected to the requirement for the masterplan to be reviewed if

development has not commenced on site by the time the development plan is adopted. A significant amount of information was submitted with both the original masterplan and the planning application, and the representee considers that it is unreasonable to seek new technical reports for any part of the site, other than for the additional 400 homes.

32. Policy P1 (Layout, Siting and Design) indicates that, once agreed, masterplans shall remain valid for a period of five years, unless planning permission is granted and implemented. Paragraph P1.3 also states that design statements and masterplans must reflect the whole of the allocated site, and only when there is a development framework for the whole allocation will a masterplan for smaller parts be accepted.

33. I am satisfied that in order for the requirements of Policy P1 to be met, the 2014 masterplan would need to be reviewed and amended to incorporate the additional allocation of 400 homes. No modification is required.

34. The access route associated with site OP1 is shown on the plan at page 595 as an indicative route. A representation has noted that the indicative route does not directly align with the route set out in the approved masterplan and planning consent. The council agrees that the route shown in the plan should be consistent with these other documents. I find that, as there is an approved access route, the plan should reflect its position in the interests of clarity. A modification to this effect is recommended.

35. A representation has noted that the settlement map at page 595 includes an area of land within site OP1, which does not form part of the design framework, masterplan or planning consent. The land in question lies on the northern boundary, immediately to the east of the existing core path. I agree with the council that it would be appropriate to remove this area of land from the allocation to ensure that the boundary of site OP1 reflects the masterplan and planning permission. I also agree that it would be appropriate to amend the settlement boundary accordingly. Modifications to this effect are recommended.

36. Transport Scotland has made a representation which seeks clarity on the potential impact of the additional 400 homes at site OP1 (and other allocations in Kintore) on the A96 Broomhill junction, and how those potential impacts might be accommodated in a single scheme of improvements. In order to better understand how the council intends to address Transport Scotland's concerns, a further information request was issued (FIR007).

37. The council has indicated that the mitigation required for the additional 400 homes on site OP1 is not known at this time. It has advised that there is potentially a long lead-in time to the full allocation of 1000 homes being delivered, and so it is not appropriate at this stage to identify additional mitigation to the strategic transport network.

38. Transport Scotland makes clear that all the information on the allocated and proposed sites in Kintore should have been included in the updated Development Planning and Management Transport Appraisal Guidance (DPMTAG). Its preferred approach would be the identification of a single scheme of improvements at the A96 Broomhill junction that accommodated the increase in housing numbers on OP1, and would be delivered in its entirety at an agreed trigger point. Transport Scotland warns that a piecemeal approach to delivery of interventions on the trunk road as the development progresses can cause additional delays and disruption to the operation of the trunk road network. It also places a risk on the deliverability of the allocation if, at the planning application stage, the

supporting Transport Assessment is unable to identify appropriate trunk road mitigation.

39. However, in this instance Transport Scotland agrees that the council's suggested approach is an adequate way forward from a practical position.

40. Paragraph 275 in Scottish Planning Policy indicates that development plans are expected to identify any required transport and related infrastructure and, alongside other associated documents, should set out how, and by whom, this is to be delivered and phased. We have concluded under Issue 12, that the approach taken in the proposed plan to the identification of necessary transport infrastructure does not meet the expectations of paragraph 275 of Scottish Planning Policy. In order to address this deficiency, we have recommended a modification to require the council to prepare statutory Supplementary Guidance on Developer Obligations and Affordable Housing. This should include information on the transport and related infrastructure required in association with allocations in the plan. We understand that information on how, and by whom, infrastructure is to be delivered and phased will be provided in the Delivery Programme. The recommended modification to paragraph 2.2 (see Issue 12) also states that "Where the exact requirements for site specific infrastructure are not known, the guidance will include as much detail as possible and set out clearly how, when and by whom, this information will be provided."

41. The allocation summary for site OP1 in the plan does make specific reference to the A96 roundabouts, but does not specify the nature or cost of the required upgrades. It also indicates an updated transport assessment would be required. I recommend a sentence be added to the allocation for OP1 to indicate that, where available, further information on transport infrastructure requirements will be provided in the Supplementary Guidance on developer obligations and affordable housing. A modification to this effect is recommended.

42. A representation is seeking the removal of the 400 homes from the OP1 allocation, and for it to revert to 600 homes. It states that the addition of 400 homes does not have community support.

43. The bid submission for site OP1 provided substantial information on the expected delivery process for the additional homes in conjunction with the already masterplanned and consented 600 homes. I note that a proposal referring to the full capacity of site OP1 for 1000 homes was included in the Main Issues Report and matters raised in responses are recorded in the Issues and Actions Paper. As explained in Issue 5, evidence provided by the consortium of housebuilders and the council indicates that the additional 400 homes would be deliverable within the plan period.

44. I therefore consider it reasonable that the capacity of site OP1 is increased to 1000 homes, with 400 of these identified as contributing towards the strategic development plan allowance for the Aberdeen Housing Market Area. No modification to the plan is required.

45. Historic Environment Scotland has noted that it will be important to avoid any impact on the nearby scheduled monuments, being the Aberdeenshire Canal in two locations. Buffer zones and tree planting and screening could be appropriate mitigation measures to address any such impacts.

46. The council has suggested a new paragraph to address these concerns. I find that the concerns expressed by Historic Environment Scotland are valid, and that any development on site OP1 should not have any negative impact on the scheduled monuments. I recommend a modification to the plan to address this matter.

Site OP2 – Woodside Croft, Town Park

47. A representation has advised that an issue regarding the boundary of site OP2 is currently being debated between parties, and that an objection would be made to any application. Site OP2 is a site for 150 homes as enabling development for the town park and associated facilities. Planning permission in principle was granted in 2015 and the site has been in the local development plan since 2017.

48. Should the developable area of the site change, then an altered site boundary could be included in the next local development plan. No modification to the plan is required at this stage.

Site OP3 – Kintore South

49. A representee has raised a number of concerns regarding the potential impact on their residential amenity, as they consider that there is an existing impact from the commercial and industrial activity. Traffic at the A96 Broomhill roundabout is also a concern, as is the potential impact on the archaeological remains on the site.

50. The plan on page 592 addresses the need for any development to take into account traffic impact and any impact on archaeological features. The Kintore settlement statement makes clear that improvements would be required at the A96 junctions serving the town, to address any impact that might arise from the allocations in the plan.

51. The concerns raised in the representation, about the potential impact on existing residential development in the area, are site-specific matters that cannot be fully addressed in a local development plan. Proposals would be assessed against relevant policies in the plan including policy P1 (Layout, Siting and Design) and policy P2 (Open Space and Access in New Development) and matters such as impact on the amenity, character and appearance of the area, privacy, open space and safety would be considered. There would be opportunities for participation in the development management process once a planning application is submitted and I am satisfied that this would be the most appropriate point in the planning process to consider such potential impacts. Any planning application would also be assessed against Policy HE1 (Protecting Listed Buildings, Scheduled Monuments and Archaeological Sites). No modification to the plan is required.

Site OP4 – Midmill Business Park

52. The concerns expressed in relation to OP4 by the representee are the same as those made in relation to site OP3, and my conclusions are set out above.

53. A representee is seeking the removal of the requirement for a new distributor link to the B987. It is considered that a new link is not required as there is an existing distributor link.

54. The indicative principal access route as shown on the plan on page 595 illustrates the

new route which would serve the plan allocations to the east of Kintore. I am satisfied that the new route is required to access those allocations and should not be removed from the plan. No modification is required.

Site OP5 – Kintore East (Commercial and Community)

55. Site OP5 lies within the settlement boundary of Kintore and at the time of my site visit appeared to be in agricultural use. It lies to the south of the town centre, on the eastern side of the B987.

56. A representation is seeking to have a maximum floorspace level imposed on retail development at the site, and a requirement for a retail impact assessment to be provided for retail developments over 400 square metres.

57. I note that site OP5 has planning consent for a supermarket and also forms part of the development framework and masterplan for Kintore East (sites OP1 and OP4). I am satisfied that its inclusion in the plan as a site for commercial and community uses is appropriate. Policy B1 Town Centre Development sets out that any retail proposal should be appropriate to the scale and function of the settlement. I consider this to be a more appropriate basis for assessment than a fixed floorspace, as account can be taken of local circumstance and function.

58. A representee is seeking the removal of the site and the removal of the requirement for a new distributor link to the B987. It is considered that a new link is not required as there is an existing distributor link.

59. As the site has planning permission and is included in the development framework and masterplan, I conclude that it is appropriate to allocate the site in this plan for commercial and community uses.

60. The indicative principal access route shown on the plan on page 595 illustrates the new route which would serve the plan allocations to the east of Kintore. I am satisfied that the new route is required to access those allocations and should not be removed from the plan. No modification to the plan is recommended.

Site OP6 – Land Adjacent to Woodside Croft

61. SEPA has requested an amendment to site OP6, to remove the requirement for a flood risk assessment, unless the council considers this to be necessary. The council's flood prevention team has confirmed that a flood risk assessment would not be required. I therefore recommend a modification to amend the text accordingly.

62. A representation is seeking the removal of the site from the plan, as it was added without consultation and affordable housing is required to be delivered as part of OP2.

63. I note that site OP6 had previously formed part of site R1, being land reserved for a town park. The site, identified as bid site GR126, was included in the public consultation process for the proposed plan, including the main issues report and strategic environmental assessment.

64. The council advises that the site does not form part of the Section 75 agreement and

plan for the town park. As the site does not require to be reserved for the park, I find that it is reasonable to promote an alternative use. The environmental effects identified in the strategic environmental assessment can be addressed through a flood risk assessment and design and layout details. I consider the site to be a suitable location for affordable housing and that its allocation can assist in meeting housing need. No modification to the plan is recommended.

Site OP7 – South of Northern Road-A96

65. A representation has suggested that the number of homes be reduced to 18, retail and commercial uses be included and a masterplan required.

66. I note that the allocation summary on page 594 does specifically provide for retail and commercial uses. No justification for the suggested reduction in the number of homes on site OP7 has been provided, except that Kintore has enough houses. I consider that the homes on site OP7 would be in a sustainable location and would maximise the efficient use of the site. The site would contribute 32 homes towards meeting the strategic development plan allowance for the Aberdeen Housing Market area and I am satisfied that the indicative capacity is appropriate. The exact number of homes to be built on the site will be determined at planning application stage. Given the scale and nature of the site, and in compliance with Policy P1 (Layout, Siting and Design), a masterplan is not required. No modification to the plan is recommended.

Reporter’s recommendations:

Modify the local development plan by:

1. Removing site P7 from the protected land section in the settlement features table on page 589 and from the Kintore settlement maps on pages 595 to 598 (as relevant) and including the site as part of allocation OP1 instead.

2. Adding a new second ‘Flood Risk’ bullet point on page 590:

“• Parts of sites OP1, OP2 and OP7 lie within or adjacent to SEPA’s Indicative 1 in 200-year flood risk area or have a watercourse running through or adjacent to the site. Flood Risk Assessments may be required.”

3. Adding a new third ‘Flood Risk’ bullet point on page 590:

“• Significant areas of BUS3 and BUS4 sites are at risk from flooding by the Tuach Burn and small watercourses. Flood Risk Assessments may be required. Appropriate buffer strips will be required alongside the watercourse. Re-naturalisation of the watercourse and removal of any redundant features should be investigated.”

4. Amending the second bullet point of the services and infrastructure section on page 590 to read:

“• Strategic drainage and water supply: Waste water is pumped to Inverurie Waste Water Treatment Works (WWTW). There is currently available capacity at Inverurie WWTW. A Drainage Impact Assessment will be required. A Water Impact Assessment will be required. Early engagement with Scottish Water is recommended.”

5. Replacing the words “Tuach Hill Park” with “Gauch Hill Park” in the sports and recreation facilities bullet point on page 590.

6. Adding the following sentence to the end of the fifth paragraph in the allocation summary for OP1 (Kintore East Residential) on page 591:

“Where available, further information on transport infrastructure requirements associated with allocation OP1 will be provided in the Supplementary Guidance on Developer Obligations and Affordable Housing.”

7. Adding the following new final paragraph to the allocation summary for OP1 (Kintore East Residential) on page 591:

“Any negative effects to scheduled monuments location in proximity to the site should be mitigated through sensitive housing design. Landscaping, such as leaving undeveloped land as a buffer and/or using trees to screen the development from view, should be incorporated, in accordance with the Historic Environment Scotland’s ‘Setting’ guidance.”

8. Deleting the fourth sentence (A Flood Risk Assessment may be required.) from the allocation summary for site OP6 (Land adjacent to Woodside Croft) on page 593 of the plan.

9. Amending the Kintore settlement map on pages 595 to 598 (as relevant) to extend the BUS4 designation to include the full extent of the garage premises on the western side of the B897 and remove this area from protected land designation P9.

10. Amending the Kintore settlement map on pages 595 to 598 (as relevant) to realign the indicative principal access route to reflect the route identified within the development framework, masterplan and approved planning permission in principle for site OP1.

11. Amending the Kintore settlement map on pages 595 to 598 (as relevant) to remove an area of land (next to the northern boundary of the site and immediately to the east of the existing core path) from allocation OP1 and exclude it from the settlement boundary, as set out in the plan attached to representation PP0239.

Issue 36	Newmachar	
Development plan reference:	Proposed LDP, Appendix 7D Garioch, Page 609-613	Reporter: Sinéad Lynch
Body or person(s) submitting a representation raising the issue (including reference number):		
PP0043 Brian Johnston PP0045 Chris Cooper PP0048 Michael Bruce PP0064 Neil Hay PP0076 John Barclay PP0272 Scottish Water PP0309 Parish of Newmachar Community Council PP0387 Strategic Land (Scotland) Limited PP0388 Strategic Land (Scotland) Limited PP0577 Anne Milne PP0984 Alan Buchan PP1219 Scottish Environment Protection Agency PP1288 Kirkwood Homes Limited PP1300 NatureScot (Scottish Natural Heritage)		
Provision of the development plan to which the issue relates:	Newmachar Settlement Statement	
Planning authority's summary of the representation(s):		
<p><u>Vision</u></p> <p>It is noted in the Vision and Sports and Recreation sections that Newmachar is in need of additional facilities to cater for the local football club. The settlement map shows an area marked as R1 has been earmarked for such a development. This site forms the perimeter of the existing sports facility at Charlie Gordon Park and Reisque Park already used by the football club. Therefore, the Settlement Statement is factually inaccurate as this is not providing additional land for sports and recreation (PP0043, PP0045 and PP0048).</p> <p><u>Site R1 – For the development of a recreational area</u></p> <p>Scottish Environment Protection Agency (SEPA) has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R1. No modification sought (RD0214.B) (PP1219).</p> <p>Concern has been raised surrounding delivery of land for football pitches. A representee has suggested that a sum per housing plot be passed to Newmachar United Football Club to allow the Club to secure additional land and develop pitches for the free use of the Club and the local community (PP0048).</p> <p>A representee has requested that the boundary of site R1 is amended to exclude a</p>		

privately owned agricultural field. While the land is leased to the Newmachar Football Club, the land is not formal recreational ground and may be converted back to use for agricultural purposes (PP0577).

Site R2 – For the development of a primary school

SEPA has requested that site R2 is added to the 'Flood Risk' section (RD0214.B) (PP1219).

Flood Risk

SEPA has requested that the 'Flood Risk' section be revised to include reference to site R1 (RD0214.B) (PP1219).

Services and Infrastructure

Scottish Water has requested that text is added to the statement on 'Strategic drainage and water supply' to read, "A growth project is due to be completed in 2021. Capacity has not been allowed for new development and therefore compliance is required with Scottish Water's five growth criteria for new proposals beyond existing allocations. Early engagement with Scottish Water is recommended." (PP0272).

SEPA has requested that the statement on 'Strategic drainage and water supply' be amended to read, "The Newmachar Waste Water Treatment Works is at capacity. Scottish Water are investigating options for a growth project but until a technical solution is found this cannot be confirmed. All new development in Newmachar must connect to the public waste water network and therefore, until a growth project is implemented, development during the Plan period may be limited." This would highlight that a technical solution is still being sought by Scottish Water for the growth project, which has not started. This may limit development in the Plan period (RD0214.B) (PP1219).

Site OP1 – Hillbrae Way

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

The Parish of Newmachar Community Council has objected to site OP1 on the basis that Newmachar is an inherently unsustainable location for additional housing, given there is no adequate source of employment within the village, the limited nature of the public transport options available and the proposal would only increase commuting (PP0309).

Site OP2 – Corseduck Road

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219).

It is thought that there has been an error in coming to the total of 95 once removing the developed area. The number in the Draft Proposed Local Development Plan (PLDP) published with the Main Issues Report (MIR) included the homes from the existing development. This included 50 of the 70 homes built with the remaining 20 units being outwith the OP2 site. The OP2 site had an accepted capacity of 165 therefore removing

the 50 homes built on the site should then leave capacity for 115 homes to be built on the site (PP0387).

Site OP2 is 5.22ha in size and based on the capacity as proposed (95 homes) it would only equate to 18 houses per hectare. Even upping the numbers to 115 as per another representation that would still fall short of the Council's standard of 25 homes per hectare. To meet this standard the site should be increased to 130 homes. It would represent a more effective and sustainable use of land which is already allocated for residential development and contribute to the increase of numbers required in the Aberdeen Housing Market Area (PP0388).

A number of representees, including the Parish of Newmachar Community Council, have objected to site OP2 (PP0064, PP0309 and PP0984).

The Parish of Newmachar Community Council has objected to site OP2 on the basis that Newmachar is an inherently unsustainable location for additional housing, given there is no adequate source of employment within the village, the limited nature of the public transport options available and the proposal would only increase commuting (PP0309).

Another representee has objected on the basis of non-delivery indicating that the site is not suitable for immediate development as further investigations into the site is required, such as a Water Impact Assessment and Transport Assessment. The representee added, this will also delay seeking contributions for the distributor road (PP0984).

A third representee has noted that there is no provision made for school buses to Oldmeldrum Academy from Newmachar. The roads in the area are already very busy with many children out playing on the road and at times traffic being over the speed limit. The site has had some major flooding in the past and currently floods occasionally. At the time of purchasing their own home the representee was informed that there were no plans to build homes at the back of the existing housing development. There is an overlooking concern from the new development. The development on OP2 site shall block the sunlight into their home during the afternoon. The view shall be lost if the development on site OP2 takes place. Dyce Medical Practice is already working at overcapacity. Public transport is infrequent and there is already no childcare nursery or child minder spaces in the area (PP0064).

Site OP3 – Redwood Cottage

The Parish of Newmachar Community Council supports the extension of site OP3 for a total of 11.1ha employment land to meet the community aspiration for greater opportunities for employment within the settlement. No modification sought (PP0309).

SEPA has requested that the allocation summary is made more succinct and the Scottish Water requirement be made separately to those relating to flood risk, the small watercourse and the buffer strip associated with it. SEPA suggest amending the text to read, "A Flood Risk Assessment may be required due to a small watercourse running through the site. A buffer strip will be required adjacent to the watercourse which should be integrated positively into the development. The buffer strip will need to allow sufficient space for restoration of the straightened watercourse. Enhancement through re-naturalisation and removal of any redundant features in the watercourse should be investigated. A Water Impact Assessment...in this respect." (RD0214.B) (PP1219).

NatureScot has requested additional wording in the allocation summary for site OP3 in Newmachar to give due consideration to the design of the new southern settlement edge (as opposed to the alignment of the New Road) that incorporates well designed structure planting, given the scale of this site (11.1 ha of employment land). NatureScot expressed concern that if fully developed the allocation would reduce the compactness of the settlement form and contribute to unsustainable ribbon development divorced from the main settlement centre and key facilities but taking due cognisance of the preferred route of the future distributor road, development of a greater part of this site appears sensible (RD0255.B) (PP1300).

NatureScot has requested that the allocation summary for site OP3 in Newmachar includes a requirement for active travel facilities, as it would improve links between this employment land and the town centre (RD0255.B) (PP1300).

Another representee has objected to site OP3 on the basis of non-delivery of the existing allocated area. It is believed that the site is not suitable for immediate development as further investigations into the site are required, such as Flood Risk Assessment, Water Impact Assessment and Transport Assessment. This allocation will add delay to delivery of the proposed distributor road (PP0984).

A representee has noted that the Draft PLDP published alongside the MIR 2019 showed the allocation of GR075 (part of the proposed OP3 site) for 1.6ha of employment land independently of any surrounding land. The representee has stated that the community aspiration for greater opportunities for employment to be provided in the settlement would be better achieved by identifying GR075 independently from the surrounding land. If the site were allocated independently it would be deliverable in the new LDP's lifespan. Safe and convenient access can be provided to the site. The site is capable of being developed independently of the other sites included in the wider Development Framework, with no environmental or infrastructure constraints and identified as part of the marketable employment land supply in the Employment Land Audit. The site is constrained by the extant LDP and the requirement for a Development Framework and reliance on other parties is constraining the release of needed employment land contrary to the settlement's aspirations. The Development Framework is outdated and would be more appropriate as a material consideration. Improvement to the A947 will allow for small scale development without the need for the distributor road. The representee has included a number of Appendices (RD0006.A, RD0006.B, RD0006.C and RD0006.D) in their representation which provides further detail to support their position (PP0076).

A representee has requested that site OP3 be amended from 11.1ha employment land to 40 homes and 5ha employment land. The current LDP 2017 allocates OP3 for 5ha employment land and the respondent argues there is no justification provided as to how this level of allocation (11.1ha) is neither appropriate nor deliverable. The alternative proposals are deliverable and can be developed in advance of the distributor road. It is within walking distance of community facilities, vehicular access is readily available from Hillbrae Way, and it can reserve land for a distributor road and not prejudice its delivery (PP1288).

Non-Allocated Site – Bid Site GR079 – Land South East of Hillbrae Way

A representee has requested that land north of OP3 (part of bid GR079) is identified as a

Future Opportunity Site (FOP) with land for housing, retail, and commercial uses. The representee has highlighted that this site was identified as a reserve site in the MIR 2019 and was supported in the Proposed LDP 2010. The MIR 2019 acknowledged that bid GR079 could help deliver the distributor road, that the site on its own merits could appear as a logical extension to Newmachar, and that it supports the MIR, which recognised the desire of the community to transform Newmachar from a dormitory settlement to a sustainable mixed community. The representee has included an Appendix (RD0243.A) in their representation which provides further detail to support their position (PP1288).

Non-Allocated Site – Bid Site GR086 – Land at Mameulah, North of Kingseat Road

A representee has requested that bid GR086 be allocated for 300 homes and 1.75ha of employment land. This land was reserved as a FOP site at the MIR 2019 stage. The site has been identified for future growth since 2012, forming part of the approved Newmachar East Development Framework. The site is free from constraints and could be readily delivered during the Plan period. The development would meet all the key planning objectives identified for Newmachar by way of creating employment opportunities, supporting existing and proposed services, meeting clear housing needs, and supporting the delivery of an eastern distributor road. The representee has included two Appendices (RD0181.A and RD0181.B) in their representation which provides further detail to support their position (PP0984).

Modifications sought by those submitting representations:

Vision

Modify the PLDP to clarify the position with regard to creating additional capacity for football pitches within the settlement in relation to the Vision (PP0043, PP0045 and PP0048).

Site R1 – For the development of a recreational area

Modify the PLDP to see a sum per housing plot be passed to Newmachar United Football Club to allow the club to secure additional land and develop pitches for the free use of the club and the local community (PP0048).

Modify the PLDP to remove a privately owned agricultural field from the R1 boundary (PP0577).

Site R2 – For the development of a primary school

Modify the PLDP to include reference to site R2 in the ‘Flood Risk’ section (PP1219).

Flood Risk

Modify the PLDP to include reference to sites R1 and OP3 in the ‘Flood Risk’ section (PP1219).

Services and Infrastructure

Modify the PLDP to amend the ‘Strategic drainage and water supply’ section to read, “A

growth project is due to be completed in 2021. Capacity has not been allowed for new development and therefore compliance is required with Scottish Water's five growth criteria for new proposals beyond existing allocations. Early engagement with Scottish Water is recommended." (PP0272).

Modify the PLDP to amend the 'Strategic drainage and water supply' section to read, "The Newmachar Waste Water Treatment Works is at capacity. Scottish Water are investigating options for a growth project but until a technical solution is found this cannot be confirmed. All new development in Newmachar must connect to the public waste water network and therefore, until a growth project is implemented, development during the Plan period may be limited." (PP1219).

Site OP1 – Hillbrae Way

Modify the PLDP to remove site OP1 (PP0309).

Site OP2 – Corseduck Road

Modify the PLDP to amend the allocation of site OP2 to 165 homes (PP0387).

Modify the PLDP to amend the allocation of site OP2 to 130 homes (PP0388).

Modify the PLDP to remove site OP2 (PP0064, PP0309 and PP0984).

Site OP3 – Redwood Cottage

Modify the PLDP to amend the allocation summary for site OP3 to read, "A Flood Risk Assessment may be required due to a small watercourse running through the site. A buffer strip will be required adjacent to the watercourse which should be integrated positively into the development. The buffer strip will need to allow sufficient space for restoration of the straightened watercourse. Enhancement through re-naturalisation and removal of any redundant features in the watercourse should be investigated. A Water Impact Assessment ... in this respect." (PP1219).

Modify the PLDP to amend the allocation summary for site OP3 to read, "There could be improvement to the settlement edge to the south if combined with well-designed structure planting. Provision for active travel is required, with links into the town centre through the site layout." (PP1300).

Modify the PLDP to remove site OP3 (PP0984).

Modify the PLDP to split site OP3 into two standalone allocations (PP0076).

Modify the PLDP to amend the allocation for site OP3 from 11.1ha employment land to 40 homes and 5ha employment land (PP1288).

Non-Allocated Site – Bid Site GR079 – Land South East of Hillbrae Way

Modify the PLDP to include bid site GR079 as a Future Opportunity Site for housing, retail, and commercial uses (PP1388).

Non-Allocated Site – Bid Site GR086 – Land at Mameulah, North of Kingseat Road

Modify the PLDP to allocate bid GR086, Land at Mameulah for 300 homes and 1.75ha of employment land (PP0984).

Summary of responses (including reasons) by planning authority:

Vision

The Vision makes no reference to site R1 being identified as a new site providing 'additional' capacity for the creation of football pitches within the settlement. None of the bids received in response to the Council's Call for Sites during 2018 included provision for football pitch(es) and as such a statement was included within the Vision for the settlement to reflect this as a community aspiration and indicate support, in principle, for proposals coming forward to meet this aspiration. No change is required.

Site R1 – For the development of a recreational area

Comments from SEPA are noted. No change is required.

There is no mechanism for the Council, through developer obligations, to require that a sum per housing plot be passed to Newmachar United Football Club to allow the Club to secure additional land and develop pitches for the free use of the Club and the local community. Developer obligations are intended to ensure that developers address any impact on infrastructure created by the development but cannot resolve existing deficiencies. No change is required.

The boundary of site R1 has remained unchanged in both the LDP 2012 and 2017. The representee has submitted a plan indicating the extent of their ownership. The Council has obtained this information from the representee to seek clarity concerning the change that the representee wishes to see made to the LDP (AD0137). Removing the reserved status of the site without either amending the settlement boundary or protecting the land as open space would result in an infill opportunity being created. The Council do not believe it appropriate to amend the settlement boundary in this instance. Therefore, if the Reporter is minded, to make an amendment, the Council would recommend that the agricultural field be removed from the R1 designation and replaced as protected land, "To protect an area of open space forming part of the green-blue network." The settlement map would need to be amended accordingly.

Site R2 – For the development of a primary school

SEPA's comment is addressed under the 'Flood Risk' section below.

Flood Risk

SEPA has requested that the 'Flood Risk' section be revised to include reference to site R1. However, in their comments against specific sites they note that site R2 should be added to the Flood Risk section. Unfortunately, it has not been possible to obtain clarity from SEPA due to issues with SEPA's communications systems brought about by Covid-19 (telephone) and cyber security (emails). However, following consultation with the Council's Flood Risk and Coast Protection Team, the Council believe that SEPA meant to

state that R2 should be added to the 'Flood Risk' section. The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the list of Non-Notifiable Modifications.

Services and Infrastructure

The Council acknowledges the changes sought by Scottish Water and SEPA. The Council believe that the revised text provided by Scottish Water would also satisfy the changes sought by SEPA. The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the list of Non-Notifiable Modifications.

Site OP1 – Hillbrae Way

Comments from SEPA are noted. No change is required. The Council notes the objection received from the Parish of Newmachar Community Council. Site OP1 is however an effective site in the Housing Land Audit 2019 and subject to an agreed masterplan and planning permission (APP/2016/2794 and APP/2017/1399) (AD0022). No change is required.

Site OP2 – Corseduick Road

Comments from SEPA are noted. No change is required.

The Council notes the objections received to the site, including from the Parish of Newmachar Community Council. Site OP1 is however an effective site in the Housing Land Audit 2019 and subject to an agreed masterplan. The Council do, however, note in the proposed allocation summary that it would be prudent to review the masterplan. The Council expect delivery of the site during the Plan-period. The Council disagree that the location of the site is unsustainable. The need for technical assessments (WIA and Transport Assessment) is recognised in the proposed allocation summary. The site lies within the catchment for Dyce Academy rather than Oldmeldrum Academy. Impact from development on local road capacity would be addressed through a Transport Assessment and appropriate mitigation identified as part of the development management process. SEPA has indicated that they have no comment on the site with regard to flood risk. The potential impact to surrounding properties including any overshadowing or overlooking would be addressed through the development management process. The Council does not comment on any advice that the representee may have been given by a third party at the time they purchased their property. The proposed Settlement Statement notes that residential development will be required to contribute towards a new health centre in the Dyce locality. No change is required.

The Council notes differing views as to the site allocation. The Council are inclined to agree with representees with regard to there being an error in the arithmetic used to calculate the site capacity. The proposed OP2 site previously formed part of a larger allocation. The PLDP sought to amend the site boundary to exclude part of the site already developed. A simple calculation was made to take the number of homes built (70) from the original site capacity (165). This resulted in the allocation for the proposed OP2 site being 95 homes. This was also reflected in the HLA 2019 (AD0022, page 78). However, in reaching this number, the fact that 20 of the 70 homes previously approved actually fell outwith the allocated site boundary and as such should not have been deducted from the site capacity. If the Reporter is minded, to make an amendment, then

the Council would recommend that the allocation of site OP2 is increased to 115 homes. As a consequence of such a change Appendix 6 of the PLDP would also require to be amended. The Council understand the rationale behind applying a standard density of 25 homes per hectare which would take the site capacity to 130 homes based on a site area of 5.22 hectares. However, given that site capacities are indicative in any case the Council do not see a need to increase the site allocation further.

Site OP3 – Redwood Cottage

The Council welcome support from the Parish of Newmachar Community Council for the proposed OP3 allocation.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the list of Non-Notifiable Modifications.

The Council confirms that it intends to address NatureScot's comments through non-notifiable modifications, as set out in the list of Non-Notifiable Modifications.

The Council notes the objection received to site OP3. The Newmachar Issues and Actions paper justifies retaining and extending the allocation to meet a community aspiration for further employment land to be provided. It is anticipated that the larger site area may also make the site more attractive commercially. Technical assessments will be required in bringing the site forward as outlined in the allocation summary. The Council disagree that delivery of the site will delay delivery of a distributor road. No change is required.

The Council does not see any merit in splitting the site into two separate opportunity sites. The Council would expect parties responsible for the site to work together in bringing the site forward in order to see the optimum site design and infrastructure delivery. The Council's Delivery Team would be able to facilitate any discussion required between parties and work with them to bring the site forward.

The Council do not agree that the site allocation should be amended to 40 homes and 5ha employment land. This would go against community aspirations to see no further housing land allocations identified until such time as existing sites are completed and to identify additional employment land in the settlement. No change is required.

Non-Allocated Site – Bid Site GR079 – Land South East of Hillbrae Way

The Council does not support allocating bid site GR079 for housing, retail and commercial uses. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. As outlined in the Issues and Actions papers, the Council no longer intend on identifying FOP sites (AD0040.A). The Council acknowledge merits of the site in terms of the long-term Vision for Newmachar, but allocation of further sites is considered to be premature at this time and contrary to community aspirations in the short-term. No change is required.

Non-Allocated Site – Bid Site GR086 – Land at Mameulah, North of Kingseat Road

The Council does not support allocating bid site GR086 for 300 homes and 1.75ha of

employment land. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. As outlined in the Issues and Actions papers, the Council no longer intend on identifying FOP sites (AD0040.A). The Council acknowledge merits of the site in terms of the long-term Vision for Newmachar, but allocation of further sites is considered to be premature at this time and contrary to community aspirations in the short term. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which remains unresolved, they are not addressed in my conclusions.
2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” in relation to the settlement statement matters covered in Issue 36. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Vision

3. A representation notes that site R1 is already in use by the football club, and so the reference in the settlement vision to additional football pitches is inaccurate.
4. The council advises that this reference to additional pitches does not relate specifically to site R1, but to a wider community aspiration to create more pitches in the town.
5. I find that the reference in the vision element of the settlement statement is non-site specific, and there is no reference to site R1. I am satisfied that the vision reflects the aspirations of the community, based on the council's response. No modification to the plan is required.

Flood Risk

6. I note the confusion between the references to site R1 and R2 in the submission from the Scottish Environment Protection Agency (SEPA). On reviewing the representations, I am satisfied that the representation relates to site R2.
7. Furthermore, the response of the council is clear that it is site R2 that is to be included in the Flood Risk section of the settlement statement. A modification to the Flood Risk section is recommended below.

Services and Infrastructure

8. Scottish Water has requested an amendment to the effect that early engagement with

the agency is recommended for new proposals. SEPA has also requested an amendment which would reference the growth project and the potential interim limitations on development in the settlement. The council agrees with both representations, and is satisfied that the wording suggested by Scottish Water would suffice to address both representations. I also agree that the proposed Scottish Water modification would add clarity in relation to drainage and water supply, and would address the matters raised in SEPA's representation. A modification to the Services and Infrastructure section is set out below.

Site R1 – For the development of a recreational area

9. A representation has suggested that each new housing plot in Newmachar should contribute a sum to Newmachar United Football Club, which would allow the club to acquire additional land and to develop pitches for the use of the club and the community.

10. Planning Circular 3/2012: planning obligations and good neighbour agreements (revised 2020) sets out, at part 14, that contributions must relate to the proposed development either as a direct consequence of the development or arising from the cumulative impact of development in the area.

11. The council advises that developer obligations cannot resolve existing deficiencies in the provision of services or facilities.

12. I consider that developer contributions in the form of a levy per house plot in the settlement would not be in conformity with either national or local policy. No modification to the plan is recommended.

13. The owner of part of site R1 has advised that it is leased to the football club but may revert to agricultural use at some point in the future. She is seeking the removal of that part of the site from the reserved status as currently proposed.

14. The council advises that removing that part of the site, but leaving it within the settlement boundary, could result in an infill opportunity being inadvertently created in this location. Instead, that part of the site could be designated as protected land in the plan.

15. I note the owner's concerns regarding the future use of the site, and also those of the council regarding inadvertent infill sites. I agree that designating that part of the site as protected land should give the flexibility sought by the representee, as it could revert to agricultural use at any point, whilst maintaining the open space for use by the club. A modification to the plan is recommended.

Site OP1 – Hillbrae Way

16. Site OP1 is a large allocation for 340 homes to the north east of the town. It is allocated for housing in the 2017 local development plan. There is an agreed masterplan for the site and planning permission is also in place.

17. The Parish of Newmachar Community Council has objected to site OP1 on the basis that Newmachar is an inherently unsustainable location for additional housing, given there is no adequate source of employment within the village, the limited nature of the public transport options available and the proposal would only increase commuting.

18. I note the comments of the parish council, but consider that the allocations made in the plan, OP1, OP2 and OP3, aim to address the matters raised. In particular, OP3 Redwood Cottage is a major allocation of 11 hectares of employment land, which is a substantial increase on the previous allocation, and is supported by the community council. The combination of land for new homes and for employment opportunities is intended to minimise the need to commute outwards from Newmachar.

19. I am satisfied that the concerns expressed by the parish council are addressed in the plan as is. No modification is required.

Site OP2 – Corseduick Road

20. Site OP2 is located to the north-west of Newmachar, at the edge of the settlement. To the north, west and south is open agricultural land and to the east is newly established residential development.

21. The community council has also objected to the allocation of site OP2, on the grounds that the settlement does not provide employment opportunities and that an increase in the number of homes would encourage commuting. As with my conclusions on site OP1, I am satisfied that the allocation of site OP3 Redwood Cottage to the south-east of the town should provide opportunities for employment in the plan period and can help minimise commuting.

22. The site is allocated in the plan for 95 homes to be delivered during the plan period. A representation has queried the number of homes allocated, as the adjacent development which delivered 70 homes took place on part of OP2, but only 50 of the 70 homes were on the actual site. The remaining 20 homes were on another site, which does not form part of OP2.

23. The council agrees with the representation. The original capacity of OP2 was 165 homes. By removing the completed homes, the remaining balance to deliver in this plan period would be 115. The council suggests a modification to the plan to that end.

24. However, the council has set out at Issue 5 that for allocated sites in the Aberdeenshire Housing Market Area without planning permission or an agreed masterplan, a standardised site capacity of 25 homes per hectare has been applied. In applying that site capacity to OP2, at a site area of 5.22 hectares, the site could be estimated to deliver up to 130 homes in the plan period. A representation has requested that the allocation for site OP2 be amended to reflect this increase in the number of homes which could be delivered in the plan period. I note that a masterplan had been prepared for a site which OP2 formed part of, but that a review of the masterplan is required, as there have been significant changes to the site area.

25. I agree with the council that the remaining capacity of the site, based on previous proposals and the extent of development to date, would equate to 115 homes. In terms of the standard site capacity of 25 homes per hectare, the council agrees that it could be applied to the site, but says that site capacity is indicative and may change over time. I concur that site capacity assumptions may not be reflected in the number of homes a site ultimately delivers in a plan period. However, adopting a density of 25 homes per hectare would promote greater efficiency in the use of land and would be consistent with the

approach taken for other sites in the Aberdeen Housing Market Area. This approach would also reflect paragraph 4.8 in the strategic development plan, which states that “land brought forward for housing must be used efficiently”.

26. As the site area has changed and there is a need for a review of the masterplan, I am recommending that the capacity of site OP2 be increased to 130 homes. This would provide 35 homes over and above the 95 noted (in Appendix 6 in the proposed plan) as forming part of the 2019 effective supply. A modification to the relevant table in Appendix 6 would be required to identify site OP2 in Newmachar as contributing 35 homes to the strategic development plan allowance for the Aberdeen Housing Market Area.

27. Concern has also been expressed about the delivery of the site, as further investigations are required in the form of a water impact assessment and a transport assessment. I am satisfied that such assessments are a standard requirement when a planning application for a development proposal is made and that it is appropriate to allocate a site in a local development plan without these being in place. The details of a proposal are needed to properly assess the potential impact in terms of water and transport and to identify any mitigation measures that may be required. Contributions to the distributor road could be sought at the appropriate time, in accordance with policies RD1 and RD2 of the plan and would, I find, assist in delivery of the road contrary to the concerns expressed in the representation. No modification to the plan is recommended.

28. The concerns raised in the representation, about potential impacts on existing residential development in the area, are site-specific matters, which I consider would be more appropriately addressed at planning application stage. The impact of proposals on the amenity, character and appearance of the area would require to be assessed against relevant policies in the plan, such as P1 (Layout, Siting and Design) and P2 (Open Space and Access in New Development). Furthermore, there would be opportunities for participation in the development management process, once a planning application is submitted.

29. Road safety is a matter that could be addressed through the assessment of a planning application and the transport information, which should accompany any such application. Concerns are also raised regarding access to the school bus network and child care provision. However, these are not matters which I can take into account in the local development plan examination.

30. SEPA has confirmed that it has no comments regarding flood risk at the site, which would lead me to conclude that any potential flood risk could not be managed at the site.

31. The capacity of the Dyce Medical Practice is acknowledged by the council to be challenging. I am satisfied that the specific requirement set out at page 610 of the proposed plan, for all residential development in Newmachar to contribute to a new health centre, addresses the concerns raised in representations.

32. Apart from the increase in site capacity, no modifications in relation to allocation OP2 are required.

Site OP3 – Redwood Cottage

33. Site OP3 Redwood Cottage is located to the south-east of Newmachar and at the time of my site inspection was in agricultural use. To the west, the site is bound by the Old Meldrum Road (A947), to the north by Hillbrae Way and established residential development, to the south and east is agricultural land, with some established commercial/ industrial operations to the south east. The proposed line of the distributor road would form the southern boundary of the site, when complete.

34. The site is allocated for 11.1 hectares of employment land in the plan, which is an increase from the employment land allocation set out in the 2017 local development plan.

35. SEPA has requested that the allocation summary on page 612 be made more succinct and has suggested alternative wording. I consider that the modification requested by SEPA would provide clarification on flood risk assessment requirements and water requirements for site OP3, and would clearly set out the purpose and nature of the buffer strip. A modification on this matter is recommended.

36. NatureScot has raised concerns regarding the new settlement edge that would be created when site OP3 is built out and the new distributor road is complete. Well-designed structure planting is recommended to be incorporated into any site layout. Having visited the site and Newmachar, I acknowledge that the new settlement edge created by this site would need to be treated sensitively, and agree with the modification suggested by NatureScot. A modification is recommended accordingly.

37. In addition, NatureScot has requested that the allocation summary include a requirement for active travel facilities, as it would improve links between this employment land and the town centre. I note the distance between site OP3 and existing services, and agree that any development proposal for the site should include and promote active travel facilities. A modification to that effect is recommended.

38. Concern has also been expressed about the delivery of the site, as further investigations are required in the form of a water impact assessment, a flood risk assessment and a transport assessment. I am satisfied that such assessments are a standard requirement when a planning application for development is made and that it is appropriate to allocate a site in a local development plan without these being in place. Details of a proposal are needed to properly assess the potential impact in terms of water, flooding and transport and to identify any mitigation measures that may be required. Contributions to the distributor road could be sought at the appropriate time, in accordance with policy RD2 of the plan and would, I find, assist in delivery of the road contrary to the concerns expressed in the representation. No modification to the plan is recommended.

39. A representation has been submitted on behalf of the owners of a site which forms part of OP3. It covers an area of some 1.6 hectares in the south-western most part of OP3 (excluding the triangular part to the south) and is identified as bid site GR075. The land in question is adjacent to the A947, with access proposed from that road. The representation is seeking a separate allocation for the land, so that its delivery is not contingent on implementation of the overall Delivery Framework for Newmachar, the distributor road, or the wider OP3 site. The representation advises that the smaller site could be developed independently with no constraints; it would not generate traffic that would impact on the village centre; and it is deliverable in the plan period but would be constrained by having to be delivered as part of the Development Framework. The Development Framework was approved in 2012 and should be considered outdated.

40. At Main Issues Report stage, the site was shown as an independent site of 1.6 hectares of employment land, with the remaining OP3 land shown as an opportunity site. The overall site is now shown as a single allocation.

41. I note that a masterplan is required for the whole of the site. I appreciate that working with other parties to agree a masterplan may not be straightforward, but it should be possible to agree a plan that can be delivered in phases. I note that development in Newmachar may be subject to developer contributions, in accordance with policy RD2 of the plan.

42. I consider that splitting OP3 into two separate allocations would negate the purpose of the overall allocation, in that a coherent strategy for the delivery of employment land in Newmachar would be more difficult to achieve. The development of the site in separate parts would not lend itself to addressing the issues of structure planting to provide a new settlement edge, the impact on the service reservoir, or the provision of a buffer strip for the re-aligned watercourse. The council has confirmed that its delivery team would facilitate discussions with parties and assist in moving the site forward. Overall, I am satisfied that site GR075 should remain as part of OP3.

43. Kirkwood Homes is seeking to have the allocation for site OP3 amended to provide for 5 hectares of employment land and land for 40 homes in this plan period, with land to the north and south east identified as a future opportunity site for retail, community and housing uses (see non-allocated bid site GR079 below). The representation states that the employment allocation is too large and is inappropriate for Newmachar, and that delivering it is not possible in the plan period. The proposed alternative mix of uses on site OP3 could be delivered in the plan period, is not reliant on the distributor road, is within walking distance of facilities and could reserve land for the new road.

44. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. The re-allocation of part of site OP3 for 40 homes could potentially contribute to meeting this shortfall.

45. Whilst Newmachar is located within the Aberdeen Housing Market Area, it is not within a strategic growth area. I consider that allocations OP1 and OP2 for 435 homes in total would be consistent with paragraph 4.18 in the strategic development plan, which refers to “appropriate levels of local growth” for locations outwith the strategic growth areas. Furthermore, I note that the community council supports the employment allocation in the proposed plan and no substantive evidence has been submitted to demonstrate that the allocation would not be deliverable.

46. Alternative sites have been identified to meet the shortfall in housing land provision in the Aberdeen Housing Market Area and I conclude that allocation OP3 should not be amended to include housing. No modification to the plan is required.

Non-Allocated Bid Site GR079 – Land South East of Hillbrae Way

47. As I have indicated above, this representation seeks the identification of land to the north and south east of site OP3 identified as a future opportunity site for retail, community

and housing uses. The indicative masterplan, as submitted, illustrates a phased development to be delivered in later plan periods.

48. I note that general representations regarding the identification of future opportunity sites are addressed under issue 2 of this examination. This concludes that, whilst the strategic development plan allows local development plans to identify additional strategic reserves beyond 2032, there is no requirement to do so. The council's decision not to identify future opportunity sites is in accordance with the strategic development plan. There is therefore no justification to identify additional opportunity sites in Newmachar in this plan. No modification is required.

Non-Allocated Bid Site GR086 – Land at Mameulah, North of Kingseat Road

49. Bid site GR086 is located to the north of the settlement. At the time of my site visit, it was in agricultural use. The representation is seeking an allocation for 300 homes and 1.75 hectares of employment land to be delivered in the plan period. The representation states that site GR086 was considered as part of the Development Framework 2012, but was not actually allocated for development in any subsequent plan.

50. The strategic environmental assessment report assessed site GR086 as having some negative effects, including the loss of prime agricultural land, flood risks, increased travel requirements and proximity to the Straloch Gardens and designed landscape. Positive impacts such as an increase in the range of housing choice and increased access to housing were noted.

51. At the Main Issues Report stage, the site was identified as being 'reserved' to allow identified constraints to be resolved and to allow further discussion on the delivery of an eastern relief road. However, as stated above, the council has decided not to identify future opportunity sites in this plan and there is no requirement for it to do so.

52. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. I acknowledge that this site could potentially contribute to meet this shortfall.

53. I note that the Council acknowledges merits of the site in terms of the long-term vision. The allocation of bid site GR086 would represent a major northern expansion of Newmachar for housing and business uses onto prime agricultural land. Given the existing housing and business allocations in Newmachar and the availability of other sites in the Aberdeen Housing Market Area to meet the shortfall in the housing land provision, I agree with the council that an expansion of this scale would not be justified at this time. I conclude that the site should not be allocated in the plan. No modification is required.

Reporter's recommendations:

Modify the local development plan by:

1. Replacing the first sentence of the flood risk bullet point on page 610 with:
"A small watercourse runs through or adjacent to sites R1, OP1 and OP3."

2. Adding the following new final sentence to the strategic drainage and water supply bullet point on page 610 Services and Infrastructure:

“Early engagement with Scottish Water is recommended.”

3. Amending the settlement plan on page 613 to remove the R1 designation from the agricultural field which lies to the east of the football ground and replace it with a P6 protected land designation.

4. Adding the following new row to the protected land section of the settlement features table on page 609:

“P6 To protect an area of open space forming part of the green-blue network.”

5. Replacing the title for allocated site OP2 on page 611 with:

“OP2: Corseduick Road, Allocation: 130 homes”

6. Amending the entry for Newmachar OP2 in the relevant table in Appendix 6 to replace 95 with 130 in the final column (LDP 2022 allocation) and add 35 to the second last column (Local Growth AHMA). (Note – a revised version of Appendix 6, incorporating all the recommended modifications, is provided at the end of this report.)

7. Replacing the second paragraph in the allocation summary for OP3 : Redwood Cottage on page 612 with:

“A Flood Risk Assessment may be required due to a small watercourse running through the site. A buffer strip will be required adjacent to the watercourse, which should be integrated positively into the development. The buffer strip will need to allow sufficient space for restoration of the straightened watercourse. Enhancement through re-naturalisation and removal of any redundant features in the watercourse should be investigated. A Water Impact Assessment will be required to determine the impact of development on the service reservoir and pumping station. Early engagement with Scottish Water is recommended in this respect. A Transport Assessment will be required to determine an access strategy and connectivity with Newmachar. A pedestrian crossing facility is to be provided on Hillbrae Way. There could be improvement to the settlement edge to the south if combined with well-designed structure planting. Provision for active travel is required, with links into the town centre through the site layout.”

Issue 37	Westhill	
Development plan reference:	Proposed LDP, Appendix 7D Garioch, Page 620-627	Reporter: Sinéad Lynch

Provision of the development plan to which the issue relates:	Westhill Settlement Statement	
Planning authority's summary of the representation(s):		
<p><u>General</u></p> <p>Concerns have been raised over road capacity in and around Westhill and it is considered that there is no road network capacity to accommodate additional housing. Additionally, it is noted that there is a lack of walking and cycling paths around Westhill (PP0168). Similarly, Westhill and Elrick Community Council has noted that the need for development to upgrade footpaths and cycle pathways was identified in a recent road transport questionnaire that the Community Council completed. There is an ambition to have a circular path network around Westhill and into the countryside, as well as good routes through it (PP0523).</p>		

Westhill and Elrick Community Council has noted that a Community Action Plan should be established to allow the future development in Westhill to be community led rather than developer led (PP0523).

Additionally, Westhill and Elrick Community Council has raised concerns over further large-scale development taking place along the A944 as this could lead to coalescence between Westhill and Kingswells. No modification sought (PP0523).

Nestrans has noted that Westhill is highly dependent on the performance and capacity of the transport links that run along the A944 corridor via Kingwells to Aberdeen and is supporting a corridor study looking at this specific route. Upon completion of the regional strategic model, ASAM19, it is anticipated that work considering the transport implications of any future growth options will be undertaken (RD0227.A) (PP1241). Westhill and Elrick Community Council has also raised concerns with the traffic network with the amount of traffic leaving the Aberdeen Western Peripheral Route (AWPR) going towards Westhill and the amount of traffic that will increase from the stadium which is less than a mile from Westhill's boundary with Aberdeen (PP0523).

Westhill and Elrick Community Council has indicated support for the Council's position to not allocate any additional bid sites but understands that developers may object to this decision. No modification sought. (PP0523).

A representee notes that the town is located immediately adjacent to the Aberdeen Strategic Growth Area as defined by the Aberdeen and Aberdeenshire Strategic Development Plan (ACSDP). Section 3.10 of the Proposed Local Development Plan at 3.10 advises as part of the Local Vision, the Plan "balances economic growth with the urgent challenges of sustainable development and climate change" and at paragraph 3.11 "the area around Aberdeen City continues to be the powerhouse of economic activity in the region and so the land allocations made in settlements around Aberdeen City reflect this." Unfortunately, these statements do not appear to apply in the case of Westhill as Aberdeenshire Council have failed to allocate sufficient land for housing in this sustainable settlement. The SDP states that local growth in individual settlements should relate to local needs, although the scale of this growth will vary place to place, paragraph 3.43 and at paragraph 4.18 it states appropriate levels of growth can be provided across the rest of the city region. Therefore, opportunities for growth can exist in Westhill. New homes are a requirement to fulfil the needs of the town to support the vast amount of employment uses in order to meet the sustainability requirement laid out in SPP and in the SDP. Westhill falls within the Local Growth Areas of the Aberdeen Housing Market Area and therefore, should have capacity for more housing to achieve "right development in the right places" (Scottish Planning Policy). More land should be released, in particular larger sites for development. Although Westhill has been considered a suitable town to expand, it was however ultimately concluded that none of the proposed releases could be taken forward without further studies, but the Council have not committed to these studies. Westhill currently has 4813 homes and an allocation of at least 10% of that would be reasonable. Any assessment required should be highlighted in the Settlement Statement and Action Programme (PP0675).

Vision

The statement in the Vision relating to traffic concerns is unsubstantiated and it is unreasonable to impose a moratorium to development on this basis. Additionally, it means

that other local needs addressed in the Vision are not being met by the Proposed Local Development Plan (PLDP) as two of the three sites allocated for housing are historical allocations and the OP3 site solely will not provide enough affordable housing for the settlement (PP0675).

Site R1 – For the future expansion of the health centre

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the designation summary for site R1 (RD0214.B). No modification sought (PP1219).

Site BUS – Safeguarded for business uses

The boundary of the BUS site as per the PLDP includes 3 private dwellings (Bridgefoot, Hazeldean and Malahal) and the land should be changed to exclude these houses from the boundary as no contact was made regarding the proposed use/designation of the land in 2012 (PP0049).

Green belt

Westhill and Elrick Community Council note that the green belt has been omitted from the list of protected sites even though it is shown on the settlement map (PP0523).

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Strawberry Field Road

Westhill and Elrick Community Council are satisfied with the inclusion of the OP1 site. No modification sought (PP0523).

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

There is no information available on the feasibility and demand assessment for the OP1 site. Two options are presented for the site. The first to retain the green belt and remove sections that currently lie within the OP1 site. The second option for the site is to retain the site as existing, in accordance with the 2017 LDP but remove the requirement for a convenience store (PP1130).

Site OP2 – Burnland

Westhill and Elrick Community Council are satisfied with the inclusion of the OP2 site. No

modification sought (PP0523).

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

The site should be removed from the Plan as the area the site borders is a fairly rural community and there is no justification on how the numbers for the allocation have been decided. The allocation numbers seem to ignore the downturn in the oil industry and has a negative effect on demand for property in the area. Infill sites should be considered for housing instead of the OP2 site. There are large areas of employment land sitting vacant elsewhere in Westhill (PP0542).

Additionally, SPP at paragraph 119 advises that Local Development Plans should allocate a range of sites which are effective or expected to be effective in the Plan period. In allocating sites, Planning Authorities should be confident that the land can be brought forward in the Plan period. It is noted that the site should be removed and revert to white land as the site is constrained as the landowner is unwilling to sell the land. No delivery has happened on the site and no bid was submitted for the site during the Plan making process and the planning permission was granted in February 2008 with no property being built after 2013, therefore it is unlikely the land will come forward in the Plan period (PP0673).

Since there has been no demand for development in this location it would be better designated as open space to allow development for community leisure areas as there is limited green space in the area (PP0542).

Site OP3 – Land at Former Blockworks Site

Westhill and Elrick Community Council are satisfied with the inclusion of the site and particularly express support for the site as it is providing affordable housing which will help to meet local need (PP0523).

SEPA has requested that a statement to say that a Flood Risk Assessment may be required due to surface water flood risk on the site is added to the allocation summary for site OP3 (RD0214.B) (PP1219).

NatureScot request that the allocation summary for site OP3 includes a requirement for active travel facilities and good quality open space, as it is a large allocation, and it would improve placemaking and promote safe and convenient opportunities for active travel. There is the opportunity to link with existing areas of open space and core paths in the business park to improve amenity for this development (RD0255.B) (PP1300).

It is requested that the requirements for a noise impact assessment and appropriate mitigation to residential properties for the site to protect established neighbouring businesses and their operation (PP0674 and PP0676). It is essential that the economic benefit from the neighbouring industrial uses is not compromised by future development. PAN 1/2011 Planning and Noise requires development plans to guide development to the right locations and where necessary specifying requirements for design and layouts can help prevent and minimise the consequences of noise pollution (PP0674).

Another representee notes that the site will need a secondary access but given that the frontage of the site is only 90m it is not possible to have two points of access to Straik Road, especially given the proximity of the Gordon Park and Straik Place junctions. Additional information needs to be included regarding where suitable junctions can be located (PP0676).

Non-Allocated Site – Bid Site GR025 – Land at Kinmundy

A representee has requested the allocation of bid site GR025 for up to 20 homes. Westhill has a need for a diverse range of house types and tenures to meet market demand and local housing needs, as demonstrated in the Housing Land Audit (HLA). The Proposed Strategic Development Plan 2018 Report of Examination notes the housing need, as does the Westhill Capacity Study Update 2014, and the PLDP cites a requirement for affordable housing in the settlement Vision for Westhill. Whilst the SDP has not recommended to include Westhill as a Strategic Growth Area, the town remains a key location and as the fourth largest town in Aberdeenshire, allocations should be made to sustain the local economy and services. Site GR025 represents a measured, phased expansion of housing in Westhill to the east with no absolute constraints to development. The site would be laid out in a manner that ensures it will relate to existing development and the wider settlement. The site is close to the town centre, schools, pedestrian networks, and existing bus services. The site is not required to meet the functions of the green belt. The representee has included an Appendix (RD0063.A) in their representation which provides further detail to support their position (PP0411).

Non-Allocated Site – Bid Site GR032 – Land at Strawberry Fields

A representee objects to there not being sufficient housing land allocated in Westhill and the PLDP does not reflect the strategic importance of the settlement. To address this, bid site GR032 should be allocated on the basis it has scored well in the SEA, it provides a logical extension to Westhill in a sustainable, accessible location in an area of strong market demand, in close proximity to employment opportunities and facilities, delivering much needed affordable homes. There are no infrastructure constraints, and the site will ensure short term delivery of housing to meet the housing target and support the aims of the PLDP and objectives of the Settlement Strategy, as well as meeting SPP. The traffic concerns raised by Officers are unsubstantiated and not considered to be a constraint to development additionally, the site will not compromise areas important for their qualities in respect of landscape, natural or built environment. The representee has included an Appendix (RD0261.A) in their representation which provides further detail to support their position (PP1308).

Concerns are noted regarding the number of sites identified in the PLDP which are constrained in the HLA and carried forward from the previous LDP. No new sites have been identified for open market housing in Westhill over the next Plan period which is concerning in the context of the failure to deliver homes within the existing Plan period. The representee questions why OP2 has been allocated when it has not delivered any new homes since 2014 and no bid has been submitted. Bid site GR032 remains the most suitable area to accommodate future expansion of the settlement (PP1308).

Non-Allocated Sites – Bid Site GR039 – Land West of Westhill, South of the A944 (Site 1), Bid Site GR040 – Land West of Westhill, South of the A944 (Site 2) and Bid Site GR041 – Land West of Westhill, South of the A944 (Site 3)

Two representee have requested the allocation of bid sites GR039, GR040 and GR041 for a phased delivery of housing from immediate delivery through to Future Opportunity Sites (FOP). FOP sites provide the flexibility to review the delivery of allocations with the option for a drawdown on strategic reserve sites following an interim review and it is disagreed with Officers' fears that the sites could be drawn down early (PP1274 and PP1275). The two representees have included a number of Appendices (RD0232.A- RD0232.C and RD0233.A- RD0233.E) in their representations which provides further detail to support their position.

It is additionally noted that the land is not subject to any special ecological, historical or landscape designations, is free from flood risk and contamination and can be designed around the oil and gas pipelines. Areas of ancient woodland and surrounding historic interests could be successfully integrated into the overall development of the area without any negative impacts. The concerns and requests raised by Historic Environment Scotland (HES) and NatureScot should not be perceived as barriers to development as proposals would be taken forward in a highly sensitive manner (PP1275).

Concerns are noted about the Westhill Capacity Study being used as a basis for not including new housing allocations. A number of concerns have been noted with regards to the study including, lack of clarity on the study methodology for categorising constraints, factual inaccuracies and inconsistencies within the scoring criteria, and lack of public consultation. It is considered that capacity can be addressed, and that there are no strategic road network barriers to the proposed phasing options put forward and bid GR039 should be included as an initial allocation of 100 homes, with GR040 and GR041 reserved as future allocations (PP1275).

Non-Allocated Site – Bid Site GR063 – Land South of Mill of Brodiach

A representee has requested the allocation of bid site GR063 for housing. The nearby pipeline was considered to be a constraint by the Council but as noted by a recent planning application the Health and Safety Executive did not consider the nearby pipeline to be a constraint to development. It is noted that the site does not positively contribute to the green belt as it is set in the urban fringe and land to the south has been approved for a football stadium and training ground which undermines the green belt in the area. The site would form a close extension to the existing settlement and is in a sustainable location with the AWPR being accessible. A small section to the south of the site is noted at risk of flooding but the remaining capacity of the site could deliver 100 homes (PP0948).

Non-Allocated Site – Bid Site GR064 – Land North of Broadshade

There are considered to be a lack of allocations for Westhill and it is considered that additional sites are required in Westhill. Site GR064 is well placed to meet that requirement and Officers accepted that the site relates well to the existing residential development and although elevated the landscape assessment submitted with the development bid shows that there is relatively limited views towards the site from points of public access and the masterplan designed to account for the nearby Scheduled Monument. The site is well located in terms of access to existing facilities and is sustainable. A full site analysis and site capacity study was undertaken to address concerns raised in the MIR. The pipeline has no bearing on the future development potential as the majority of existing development is located in the HSE consultation zone.

Comments in the MIR stating that road infrastructure requirements may be difficult but no further information was given. However, GR064 has been designed to accommodate future phases and provides an opportunity to deliver a logical extension to Westhill at a sustainable and marketable location. The representee has included a number of Appendices (RD0114.A, RD0114.B and RD0114.C) in their representation which provides further detail to support their position (PP0685).

Non-Allocated Site – Bid Site GR066 – Land at Damhead Cadgerford and Backhill, South of Westhill

Cults, Bielside and Milltimber Community Council support the non-allocation of the site in the PLDP as the open landscape to the south of the B9119 should not be lost and there should be no coalescence between Westhill and Lower Deeside. No modification sought (PP0187).

The representee objects to the failure of the PLDP in allocating a proportionate amount of land for residential development in Westhill to meet the objectives of the SDP and the PLDP. A high-level strategy is proposed for a southern expansion of Westhill, showing how GR066 will help in the delivery of improvements to infrastructure and the provision of land to meet the identified demand for residential and employment uses. This would be in line with the SPP core principle of supporting economically, environmentally and socially sustainable places. The town's location in an SGA is a key consideration in meeting SDP, together with its further enhanced strategic location due to AWPR and public transport links, together with good foot/cycle path connectivity. There is a need for further allocations to balance out the residential and employment uses. The three housing allocations in the PLDP will not meet local housing needs. The Council should commit to allowing for larger releases of land in Westhill, through conducting the required studies.

The approach taken by the Council of using matters such as infrastructure as constraints as reasons not to allocate additional land is objected to. Site GR066 could be used to address and facilitate strategic infrastructure improvements through an appropriate scale of deliverable development allocation. Constraints to the southern edge of Westhill relate to the pipeline consultation zone which can be incorporated into responsible design. It is not accepted that local needs are being met in relation to the traffic congestion constraint identified by the Council. In addition, the SEA misrepresents the true position in assessing negative and significantly negative effects for the 6 topic areas, with landscape standing out as a clear anomaly with no detailed landscape analysis to back up the 'significantly negative' effect conclusion. It is argued that landscape and visual effects would be limited to a localised area. The representee has included an Appendix (RD0209.A) in their representation which provides further detail to support their position (PP1184).

Non-Allocated Site – Bid Site GR106 – Land South of Arnhall Business Park (Phase 4)

The representee objects to the PLDP for failure to identify land for commercial development. The settlement boundary should be extended to include bid site GR106 as an opportunity site for employment land and hotel or as strategic reserve land to ensure that there is sufficient supply for the period 2021-2032 and beyond. There needs to be sufficient land in the area, as identified in the HLA, to ensure Westhill functions as a global subsea centre. There is no flexibility for delivery of further employment land in this logical, sustainable location next to existing employment land. The representee has included a number of Appendices (RD0059.A, RD0059.B and RD0059.C) in their representation which

provides further detail to support their position (PP0402).

Non-Allocated Site – Bid Site GR132 – Land at Mains of Keir, South East of B979

Development in this location provides an appropriate extension to the north of Westhill. The site would allow for planned future growth, supporting and retaining the development pattern to the east and west, without coalescence with Kirkton of Skene. Westhill is a self-sustaining town that requires a long-term development strategy which is presently not being delivered by the PLDP. The settlement has a need for a diverse range of house types and tenures to meet market demand. All substantive allocations in Westhill have been built out and additional allocations are needed to sustain supply, and to meet the settlement's Vision statement which identifies a lack of smaller homes. If no additional housing land is made available there will be no provision of new affordable housing in Westhill. GR132 is vacant, brownfield land and the site, was not ruled out for future development in the MIR. The proposal presents a measured, phased expansion, with no absolute constraints, and no adverse impacts on the setting, and a site which can be well connected to Westhill. The representee has included an Appendix (RD0240.A) in their representation which provides further detail to support their position (PP1285).

Non-Allocated Site – Bid Site GR133 – Land at Souterhill Farm, North West of Westhill

There is a need to allocate additional housing in Westhill to meet ongoing need and demand for housing close to employment opportunities as there is an insufficient supply of effective housing sites identified in the Proposed LDP. The site is not constrained by the issues which are identified in the settlement Vision. Allocating no new sites within Westhill is contrary to the SDP noting Westhill as a "main focus for new investment". The 2014 Westhill Capacity Study identified the site within the 9 most suitable and sustainable and is the only residential option not within the green belt. The time passed since the study would be appropriate to consider the application of some of its recommendations, transport network improvements are required if several sites were to be developed but this small site in isolation would have a negligible impact and there is no need for additional studies to understand this site's suitability.

Concerns are raised that the Council did not fully consider the site or comprehensive analysis included with the bid due to errors in the site-specific assessment in the MIR. These include that the density can be more than 49 homes, it is not green belt, not constrained by a pipeline as confirmed by the pipeline operator, the core path is not a constraint, not disjointed addition as confirmed by the Capacity Study and is well connected to existing development, a Landscape and Visual Impact Assessment would not be required as this is included with the bid demonstrating a good fit, and the site does not rely on an unclassified road with access proposed from Blacklaws Brae. It is thought that the site rounds off the settlement and is contained, well connected with access to open space with provision of a large public park on site and a golf practice area adjacent which is needed by the golf club. Additionally, it would provide mixed use and housing which is needed for workers in the subsea engineering sector, accessible, education capacity, early delivery of needed affordable housing and has no particular biodiversity value so can be enhanced. The representee has included a number of Appendices (RD0135.A- RD0135.F) with their representation which provides further detail to support their position (PP0766).

Non-Allocated Site – New Site N010 – Land South of the A944

A mixed zoning should be introduced to the area south of Straik Road, Westhill. This area currently has many different uses on site. The area of land is adjacent to the OP3 site which is currently zoned for business in the 2017 LDP but changing to a housing allocation, specifically affordable housing. It is important that the potential opportunities and conflicts within this area are recognised and as such the site should be zoned as a mixed-use area. In the Main Issues Report, it was advised that the OP3 site would have the potential to deliver a mixed-use development (commercial, retail and housing). It would meet the Scottish Planning Policy, paragraph 30 “development plans should positively set opportunities to meet the development needs of the area in a way which is flexible enough to adapt to changing circumstances over time and supporting business sectors”. The representee has included an Appendix (RD0105.A) in their representation which provides further detail to support their position (PP0676).

Modifications sought by those submitting representations:

General

Modify the PLDP to ensure that no additional allocations are made in Westhill unless specific interventions are made (PP0168).

Modify the PLDP to include a reference to the ambition of having a circular path around Westhill and require development to contribute towards this (PP0523).

Modify the PLDP to include provision to allow a Community Action Plan to come forward (PP0523).

Modify the PLDP to ensure the Settlement Statement reflects that upon completion of the regional strategic model, ASAM19, it is anticipated that work considering the transport implications of any future growth options will be undertaken (PP1241).

Modify the PLDP to confirm within the Settlement Statement that there is traffic capacity as a result of Kingsford Stadium (PP0523).

Modify the PLDP to allocate large opportunity sites for housing in the Westhill Settlement Statement (PP0675).

Vision

Modify the PLDP to amend the Vision to review the following text, “Significant traffic congestion also remains an issue, particularly along Hay’s Way and around the town centre. These constraints mean that development within the Plan period will be focussed primarily on meeting local needs and maintaining Westhill’s function as a successful employment centre.” (PP0675).

Site BUS – Safeguarded for business uses

Modify the PLDP to amend the boundary of the BUS designation to exclude the privately owned dwellings (PP0049).

Green belt

Modify the PLDP to include the green belt in the list of protected land designation within the Settlement Statement (PP0523).

Site OP1 – Strawberry Field Road

Modify the PLDP to amend the OP1 site, to either remove the sections that are in the green belt from the allocation or to keep the site as per the 2017 LDP but remove the requirement for a convenience store (PP1130).

Site OP2 – Burnland

Modify the PLDP to remove the OP2 site (PP0542 and PP0673).

Modify the PLDP to amend the OP2 site to change from a housing allocation to a protected designation for open space (PP0542).

Site OP3 – Land at Former Blockworks Site

Modify the PLDP to amend the allocation summary for OP3 to add the following text to the fourth sentence, “A Flood Risk Assessment may be required due to surface water flood risk on site.” (PP1219).

Modify the PLDP to amend the allocation summary for OP3 to add the following text at the end of the allocation summary, “Active travel facilities and good quality open space are required. Efforts should be made, including through the site layout, to connect through the adjacent business park to core paths beyond, including the core path to the west across Peregrine Road.” (PP1300).

Modify the PLDP to amend the allocation summary for OP3 to add the following text to the allocation summary, “The design of any development on site OP3 in Westhill should include noise attenuation measures to protect the neighbouring employment uses.” and, “A Noise Impact Assessment is required.” (PP0674 and PP0676).

Modify the PLDP to amend the allocation summary for OP3 to add in information about where suitable junctions can be located (PP0676).

Non-Allocated Site – Bid Site GR025 – Land at Kinmundy

Modify the PLDP to include site GR025 as an opportunity for 120 homes (PP0411).

Non-Allocated Site – Bid Site GR032 – Land at Strawberry Fields

Modify the PLDP to include site GR032 for 180 homes with the settlement boundary altered accordingly (PP1308).

Non-Allocated Sites – Bid Site GR039 Land West of Westhill, South of the A944 (Site 1), Bid Site GR040 Land West of Westhill, South of the A944 (Site 2) and Bid Site GR041 Land West of Westhill, South of the A944 (Site 3)

Modify the PLDP to include site GR039 as an opportunity for 100 homes and GR040 and GR041 as future opportunity sites (PP1274 and PP1275).

Non-Allocated Site – Bid Site GR063 – Land South of Mill of Brodiach

Modify the PLDP to include site GR063 as an opportunity site for 100 homes (PP0948).

Non-Allocated Site – Bid Site GR064 – Land North of Broadshade

Modify the PLDP to include site GR064 as an opportunity site for 250 homes (PP0685).

Non-Allocated Site – Bid Site GR066 – Land at Damhead Cadgerford and Backhill, South of Westhill

Modify the PLDP to include site GR066 as an opportunity site for 200-250 homes and 3.18Ha of employment land (PP1184).

Non-Allocated Site – Bid Site GR106 – Land South of Arnhall Business Park (Phase 4)

Modify the PLDP to extend the settlement boundary and allocate GR106 as an opportunity site for employment land and hotel or identify as strategic reserve land (PP0402).

Non-Allocated Site – Bid Site GR132 – Land at Mains of Keir, South East of B979

Modify the PLDP to include site GR132 as an opportunity site, in whole or in part, as a future opportunity site for up to 90 homes (PP1285).

Non-Allocated Site – Bid Site GR133 – Land at Souterhill Farm, North West of Westhill

Modify the PLDP to include site GR133 as an opportunity site for 70 homes and adjacent golf practice area (PP0766).

Non-Allocated Site – New Site N010 – Land South of the A944

Modify the PLDP to include site N011 as an opportunity site for mixed use development (PP0676).

Summary of responses (including reasons) by planning authority:

General

Active travel is a main component of the PLDP and is something that is considered when any planning application is submitted to the Council. Westhill and Elrick Community Council note that there is a need for the upgrading of footpaths and cycle paths through new development, but developer obligations money sought from new development cannot be used to resolve existing problems. It is however, noted within the 'Services and Infrastructure' section of the PLDP under the 'local transport infrastructure' that development may require to contribute to footway extensions and cycle infrastructure thus meaning, any new development in Westhill could be contributing to the path network (AD0041.G, page 620-627). No change is required.

The Council notes the ambitions of Westhill and Elrick Community Council for a circular path network round Westhill. This is something that would be better to come into the Plan

preparation process at an earlier stage to allow for full consideration to be given to this concept. It should be highlighted that this is a proposal that could be highlighted through a Local Place Plan which is a new requirement of the Planning (Scotland) Act 2019, of which regulations associated with this particular aspect are expected in 2021. This would give the Community Council time to consider this before the preparation of the next Local Development Plan. No change is required.

Again, the Westhill and Elrick Community Council's request for a Community Action Plan is noted however, it is felt that this is something that would be better to come through under the new legislation of the Local Place Plans. The regulations are still to be adopted and consultation is expected on the proposed regulations during 2021. With this being said, the Local Place Plans still remain to be the most appropriate route for this to be taken forward as within the Planning (Scotland) Act 2019 Local Development Plans have to consider any registered Local Place Plans when preparing the Local Development Plan. No change is required.

Westhill and Elrick Community Council's concerns regarding coalescence are noted and it is currently noted within the PLDP (AD0041.G, 620-627). It is also one of the reasons that a number of the bid sites submitted to the Council were not supported for development through the Main Issues Report, Issues and Actions Papers and the PLDP. No change is required.

The Council confirms that it intends to address Nestrans comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Under the Strategic Development Plan's Spatial Strategy Westhill is noted as a town within the Local Growth and Diversification area. Therefore, development at a significant and strategic scale is not in keeping with the Strategic Development Plan. Development in Westhill should be at a scale aimed at meeting local needs. Although, it is noted in paragraph 3.45 that Westhill would be one of the main focuses for new investment within the Local Growth and Diversification Area there are a significant number of constraints noted for the whole settlement which are detailed within the Issues and Actions, page 103-112, noting that with these constraints in place significant new development should not be promoted (AD0016, page 23 and AD0040.E, pages 103-112). This is the main reason as to why there is currently limited growth allocated within Westhill. No change is required.

Vision

There are a significant number of constraints noted for the whole settlement which are detailed within the Issues and Actions Papers, noting that with these constraints in place significant new development should not be promoted (AD0040.E, pages 103-112). Through the Westhill Capacity Study Update 2014 there were a number of studies that were recommended to be carried out as a result of the study. The further studies to be undertaken are to consider the most appropriate and sustainable way forward for future development in Westhill. Nestrans note within their response to the consultation that the ASAM19 model is currently being undertaken to look at performance and capacity on the transport lines that run along the A944 corridor. It is anticipated that the work considering the transport implications of any future growth options will be undertaken and this could help towards issues raised in terms of capacity. However, smaller allocations have been made within Westhill that can be accommodated within the road capacities in the short to medium term until a point that the studies noted above are completed. No change is

required.

Site R1 – For the future expansion of the health centre

Comments from SEPA are noted. No change is required.

Site BUS – Safeguarded for business uses

A representee notes that three dwellinghouses have been included in the BUS designation but are in private ownership and should be removed from the boundary. It is deemed that it would be appropriate to remove these dwellinghouses from the designation to ensure that the allocation only contains land which is able to be developed. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Green belt

The green belt designation does not appear under the protected land list within the settlement features table as green belt is its own designation within the LDP under Policy R1 Special Rural Areas and associated Appendix 4. The green belt designation falls within the other designation section of the table as the policies associated within the green belt are different than those for protected land. No change is required.

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Strawberry Field Road

Support for the inclusion of the site is noted. No change is required.

Comments from SEPA are noted. No change is required.

Their concerns regarding the site are noted however, a planning application for 6 houses and a convenience store (APP/2020/0684) was approved in December 2020. This indicates that there is interest in the site. It is therefore, proposed that the OP1 site remains unchanged. No change is required.

Site OP2 – Burnland

Support for the inclusion of the site is noted. No change is required.

Comments from SEPA are noted. No change is required.

The OP2 site forms part of a larger development which has an extant planning permission on the site which leads for it to be appropriate to be an allocation within the LDP. Due to its allocation in the LDP it would therefore be included as part of the Delivery Programme.

This would then allow Officers within the Council's Delivery Team to liaise with the relevant parties to bring the site forward to completion. No change is required.

Site OP3 – Land at Former Blockworks Site

Support for the inclusion of the site is noted. No change is required.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

A noise impact of a particular development is something that would be considered as part of any planning application process. However, if the Reporter is minded, to make an amendment, then the Council recommend that the allocation summary for site OP3 could be modified to read, "A Noise Impact Assessment may be required".

Issues relating to specific access requirements will be further assessed when a planning application is submitted for the site. This would involve discussions with the Council's Roads and Transportation colleagues to ensure that the best solution for the area can be sought. No change is required.

Non-Allocated Site – Bid Site GR025 – Land at Kinmundy

The Council does not support allocating bid site GR025 for 120 homes. There are a significant number of constraints noted for the whole settlement which are detailed within the Issues and Actions Papers, noting that with these constraints in place significant new development should not be promoted (AD040.E, pages 103-112). The Westhill Capacity Study, updated in 2014, does not provide a timeline as to when development in Westhill would be suitable. In any event, the Westhill Capacity Study Update 2014 does not identify this site as being one of the 'most suitable' locations for longer-term further expansion of the town, largely because of concerns that development in this location could weaken Westhill's spatial identity and structure, see Westhill Capacity Study Update 2014, AD0178, Appendix B: Area 4 Site Appraisal.

The Westhill Capacity Study does however recommend a number of further studies to be undertaken to consider the most appropriate and sustainable way forward for future development in Westhill. Nestrans note within their response to the consultation that the ASAM19 model is currently being undertaken to look at performance and capacity on the transport lines that run along the A944 corridor. It is anticipated that the work considering the transport implications of any future growth options will be undertaken. It is therefore seen as the most appropriate action to allow these studies to be undertaken and future development within Westhill to follow once the relevant information has been reviewed.

In terms of site-specific information, the site is noted as being constrained in terms of the green belt, pipeline consultation zone and access constraints which are noted within the Main Issues Report, AD0038.E, pages 84-92. Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site GR032 – Land at Strawberry Fields

The Council does not support allocating bid site GR032 for 180 homes and amendment of the settlement boundary. There are a significant number of constraints noted for the whole settlement which are detailed within the Issues and Actions, AD0040.E, pages 103-112, noting that with these constraints in place significant new development should not be promoted. The Westhill Capacity Study, updated in 2014, does not provide a timeline as to when development in Westhill would be suitable. It does however recommend a number of further studies to be undertaken to consider the most appropriate and sustainable way forward for future development in Westhill. Nestrans note within their response to the consultation that the ASAM19 model is currently being undertaken to look at performance and capacity on the transport lines that run along the A944 corridor. It is anticipated that the work considering the transport implications of any future growth options will be undertaken. It is therefore seen as the most appropriate action to allow these studies to be undertaken and future development within Westhill to follow once the relevant information has been reviewed.

Coalescence between Westhill and Kirkton of Skene was noted as a constraint which the Main Issues Report, AD0038.E, page 84-92 which still remains a concern regarding development on the site. Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site GR039 Land West of Westhill, South of the A944 (Site 1), Bid Site GR040 Land West of Westhill, South of the A944 (Site 2) and Bid Site GR041 Land West of Westhill, South of the A944 (Site 3)

The Council does not support allocating bid site GR039 for 100 homes nor bid sites GR040 and GR041 as FOPs. There are a significant number of constraints noted for the whole settlement which are detailed within the Issues and Actions Papers noting that with these constraints in place significant new development should not be promoted (AD0040.E, pages 103-112). The Westhill Capacity Study, updated in 2014, does not provide a timeline as to when development in Westhill would be suitable. It does however recommend a number of further studies to be undertaken to consider the most appropriate and sustainable way forward for future development in Westhill. Nestrans note within their response to the consultation that the ASAM19 model is currently being undertaken to look at performance and capacity on the transport lines that run along the A944 corridor. It is anticipated that the work considering the transport implications of any future growth options will be undertaken. It is therefore seen as the most appropriate action to allow these studies to be undertaken and future development within Westhill to follow once the relevant information has been reviewed. Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site GR063 – Land South of Mill of Brodiach

The Council does not support allocating bid site GR063 for 100 homes. There are a

significant number of constraints noted for the whole settlement which are detailed within the Issues and Actions, AD0040.E, page 103-112, noting that with these constraints in place significant new development should not be promoted. Through the Main Issues Report the site was considered to be unsuitable for development for a number of reasons including the access to the site and the fact that the site would be physically disconnected from the settlement, see Main Issues Report, AD0038.E, page 84-92. The latter point is something that has been reviewed by the Reporter at the Examination of the 2012 Local Development Plan, who concluded that development at this location “would be physically detached from the built-up area as a result of the open space corridor that has been retained along the length of the gas pipeline that passes to the east of Westhill”, see Examination Report – Aberdeenshire Local Development Plan 2012, AD0032, page 597, paragraph 14. This message is echoed by the Reporter at the Examination of the 2016 Local Development Plan, who concluded “...the site lacks direct connection and integration with the settlement to the west given the open space corridor reserved for the pipeline.”, see Examination Report – Aberdeenshire Local Development Plan 2016, AD0036, page 656-657, paragraph 28. Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site GR064 – Land North of Broadshade

The Council does not support allocating bid site GR064 for 250 homes. There are a significant number of constraints noted for the whole settlement which are detailed within the Issues and Actions, AD0040.E, pages 103-112, noting that with these constraints in place significant new development should not be promoted. Through the Main Issues Report the site was considered to be unsuitable for development for a number of reasons including the access to the site and negative landscape impacts including an adverse impact on the setting of Keir Hill and Beryhill Scheduled Monuments, see Main Issues Report, AD0038.E, pages 84-92. These concerns noted are still considered relevant. More information relating to the road network issues within Westhill is noted within the Issues and Actions paper, see page 103-112 including more information on the Westhill Capacity Study.

The Westhill Capacity Study, updated in 2014, does not provide a timeline as to when development in Westhill would be suitable. It does however recommend a number of further studies to be undertaken to consider the most appropriate and sustainable way forward for future development in Westhill. Nestrans note within their response to the consultation that the ASAM19 model is currently being undertaken to look at performance and capacity on the transport lines that run along the A944 corridor. It is anticipated that the work considering the transport implications of any future growth options will be undertaken. It is therefore seen as the most appropriate action to allow these studies to be undertaken and future development within Westhill to follow once the relevant information has been reviewed.

Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site GR066 – Land at Damhead Cadgerford and Backhill, South

of Westhill

The Council does not support allocating bid site GR066 for 200-250 homes and 3.18ha of employment land. Support for the Council's approach is noted. No change is required.

The scale of development proposed cannot be supported under the Strategic Development Plan's Spatial Strategy for the Local Growth and Diversification area as it is not of a scale aimed at meeting local needs. Although, it is noted in paragraph 3.45 that Westhill would be one of the main focuses for new investment within the Local Growth and Diversification Area there are a significant number of constraints noted for the whole settlement which are detailed within the Issues and Actions, AD0040.E, pages 103-112, noting that with these constraints in place significant new development should not be promoted. It would not be appropriate to support further development until these issues have been subject to more detailed consideration. The Westhill Capacity Study, updated in 2014, does not provide a timeline as to when development in Westhill would be suitable. It does however recommend a number of further studies to be undertaken to consider the most appropriate and sustainable way forward for future development in Westhill. Nestrans note within their response to the consultation that the ASAM19 model is currently being undertaken to look at performance and capacity on the transport lines that run along the A944 corridor. It is anticipated that the work considering the transport implications of any future growth options will be undertaken. It is therefore seen as the most appropriate action to allow these studies to be undertaken and future development within Westhill to follow once the relevant information has been reviewed.

There are a number of constraints noted within the Main Issues Report, AD0038.E, pages 84-92 that although could be designed and assessed further at any planning application stage it is considered at this time that the scale of development proposed is not required in Westhill and would preempt any outcomes of the studies that require to take place looking at the road network.

Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site GR106 – Land South of Arnhall Business Park (Phase 4)

The Council does not support allocating bid site GR106. As noted within the Issues and Actions paper, AD0040.E, pages 103-112, the site was not proposed to be included within the PLDP to allow for detailed consideration to be made regarding the future expansion of Westhill in the most sustainable way and once all of the relevant evidence has been compiled. It would also allow for the studies Nestrans note within their response to be completed for the settlement. No change is required.

Non-Allocated Site – Bid Site GR132 – Land at Mains of Keir, South East of B979

The Council does not support allocating bid site GR132 for 90 homes. There are a significant number of constraints noted for the whole settlement which are detailed within the Issues and Actions, AD0040.E, pages 103-112, noting that with these constraints in place significant new development should not be promoted. Through the Westhill Capacity Study update 2014 a number of studies were suggested to be completed in order to look at

the most appropriate and sustainable way forward for future development in Westhill. Nestrans note within their response to the consultation that the ASAM19 model is currently being undertaken to look at performance and capacity on the transport lines that run along the A944 corridor. It is anticipated that the work considering the transport implications of any future growth options will be undertaken. It is therefore seen as the most appropriate action to allow these studies to be undertaken and future development within Westhill to follow once the relevant information has been reviewed.

Another of the concerns noted within the Main Issues Report, AD0038.E, pages 84-92 is that the western part of the site could result in coalescence with Kirkton of Skene which remains a valid concern. It is however noted that the eastern side of the site would not have the same impact on the coalescence but there are site concerns over the impact that the site would have on the setting on Keir Hill Scheduled Monument. Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site GR133 – Land at Souterhill Farm, North West of Westhill

The Council does not support allocating bid site GR133 for 70 homes and adjacent golf practice area. It is important to note that there are a significant number of constraints noted for the whole settlement which are detailed within the Issues and Actions, AD0040.E, pages 103-112, noting that with these constraints in place significant new development should not be promoted. The Westhill Capacity Study, updated in 2014, does not provide a timeline as to when development in Westhill would be suitable. It does however recommend a number of further studies to be undertaken to consider the most appropriate and sustainable way forward for future development in Westhill. Nestrans note within their response to the consultation that the ASAM19 model is currently being undertaken to look at performance and capacity on the transport lines that run along the A944 corridor. It is anticipated that the work considering the transport implications of any future growth options will be undertaken. It is therefore seen as the most appropriate action to allow these studies to be undertaken and future development within Westhill to follow once the relevant information has been reviewed.

As noted in the Main Issues Report, AD0038.E, pages 84-92, the site is noted to be disjointed from the settlement and is noted to be on a higher elevation than the rest of the built-up area in Westhill, therefore presenting a visual impact for the development. These concerns remain valid and therefore the site should not be proposed through the PLDP. No change is required.

Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – New Site N010 – Land South of the A944

The Council does not support allocating new site N010 for mixed-use development. The site was not put forward as a development bid so was not considered as such at the MIR stage, nor subject to site assessment and public consultation. The representation does not

include any site details or site location plan, nor supporting information such as an environmental assessment to allow a detailed evaluation of the suitability of the proposal. In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Reporter's conclusions:

Preliminary matters

1. The examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” in relation to the settlement statement matters covered in Issue 37. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

General

3. Westhill and Elrick Community Council and a resident wish to see the footpath and cycle pathways improved around and into the town. I note that on page 622, development may be required to contribute to the footway network to cycle infrastructure and to public transport. The council has suggested that the emerging Local Place Plan may be an appropriate process through which to pursue a foot and cycle strategy for the town. I agree, and note that such a strategy could be refined and finalised in a Local Place Plan, prior to the next local development plan process. No change to the plan is required.

4. I agree that the emerging Local Place Plan process would be best placed to address the request for a Community Action Plan. No modification to the plan is required.

5. Concerns regarding coalescence between Westhill and nearby settlements have been expressed. I note that the vision for Westhill at page 620 of the proposed plan states that coalescence with Kirkton of Skene to the west needs to be avoided. I am satisfied that the plan addresses this matter and so no modification to the plan is required.

6. The community council has commented on potential traffic implications of the new football stadium at Kingsford, but does not seek any modification on this matter. Nestrans has requested that the allocation summary in the settlement vision statement on page 620 reflects the work being undertaken on the corridor study along the A944 and the B9119, which is likely to lead to an evidence base for any future strategic decisions for development in and around Westhill. Suggested wording has been provided. I consider that the modification requested by Nestrans would provide clarification on transport requirements and opportunities for the settlement, and would clearly set out that future strategies for development in Westhill would be dependent on the outcomes of the potential strategic transport interventions that may be required. A modification on this

matter is recommended.

7. A number of representations, including those promoting additional housing sites, object to the lack of proportionate allocations for development in Westhill, in the plan period. They consider opportunities for growth in local growth and diversification areas, as set out in the strategic development plan, have not been addressed in Westhill and the plan should commit to larger land releases.

8. I agree that Westhill appears to be a sustainable and suitable location for appropriate development that contributes to the wider City Region. Whilst not located within a strategic growth area, new allocations in Westhill could help meet the strategic development plan allowance for the Aberdeen Housing Market Area. The 2014 Capacity Study identified areas for growth but noted that additional studies were required to progress development, particularly in relation to transport provision and infrastructure. Nestrans in its representation advises that an A944 and B9119 corridor study is underway and will provide the basis for further work. I have set out a modification to reference the need for further work to enable future growth options. This matter is considered further in the vision section, below.

Vision

9. A representation objects to the traffic concerns and the other constraints as set out in the second paragraph of the vision for Westhill. The representation states that local housing need is not being met by the plan allocations for this period and that placing a moratorium on additional allocations in the proposed plan on transport concerns is unreasonable.

10. I find that the constraints outlined in the vision for Westhill are properly based on the physical constraints that impact on the settlement and its potential future development. Subject to the modification suggested by Nestrans, the plan acknowledges that the A944 and B9119 corridor study is underway and provides the basis for further work, which in turn will inform future development scenarios. The total all tenure housing allocation for Westhill in this plan period is 111 homes. I agree that a settlement the size and nature of Westhill would normally be expected to make a bigger contribution to meeting housing land requirements in the Aberdeen Housing Market Area. However, the scope to allocate appropriate housing sites at this time is limited by the availability of the study outcomes. On this basis, I am satisfied that, until the further studies are complete, it would be premature to allocate significant development sites in the settlement. No further modification to the plan is required. My considerations on this matter provide the context for the assessment of representations seeking the allocation of housing bid sites in Westhill.

Site BUS – Safeguarded for business uses

11. A representation advises that three privately owned dwellings appear to have been included in the BUS allocation to the south of the settlement in error, and is seeking to have them removed. The council has confirmed that the inclusion of these is an error. I consider that the modification requested would provide clarity on the correct boundary for the BUS allocation. A modification on this matter is recommended.

Green belt

12. Westhill and Elrick Community Council has noted that the green belt has been omitted

from the list of protected sites set out in the proposed plan, although it is illustrated on the settlement map at page 624.

13. I note that the green belt in Aberdeenshire, including to the east of Westhill, is addressed under Policy R1 Special Rural Areas. Maps showing the detailed boundaries of the green belt are provided in appendix 4. The policies associated with the green belt are different to those associated with protected land, and each has been identified separately in the settlement features table in the plan. I am satisfied that the green belt designation is properly represented in the settlement statement and no modification to the plan is required.

Site OP1 – Strawberry Field Road

14. Site OP1 lies to the west of the settlement and to the north of the Straik Road. The site is bisected by large electricity pylons. At the time of my site visit, the site was an open field.

15. The representation objects to the inclusion of a convenience store in a planning application for the site, and seeks to have an economic justification for both the proposed new homes and the retail store. The representation also questions the need for any new homes in this part of Westhill, based on the contraction of the North Sea oil sector.

16. Site OP1 is allocated for 10 homes in line with an extant planning permission in principle for 10 homes. Whilst I note that a further planning consent has been granted for six homes and a retail convenience store, the allocation does not refer to a convenience store. Therefore, no change to the proposed plan is required to address the representation on this matter.

17. The planning history on the site supports the principle of housing development. An economic justification would not be needed when the use is acceptable in land use planning terms.

18. Despite the contraction in the North Sea oil sector, the strategic development plan identifies a need for new homes in both tenure sectors of the housing market in Aberdeenshire. Appropriate provision for new homes is an integral part of the development process and I am satisfied that allocating land for new homes in Westhill is both appropriate and necessary. No modification to the plan is required.

Site OP2 – Burnland

19. Site OP2 lies to the west of the settlement and to the south of the A944 Straik Road. At the time of my site visit, it was open fields.

20. A representation objects to the inclusion of the site in the plan, as it is considered to be in a rural location and there is no demand or justification for its development for housing. Another representation seeks the retention of the site within the settlement but the deletion of the housing allocation as it is constrained and would be better designated as open space.

21. I note that site OP2 is part of a larger development with planning permission, the majority of which has been built out. The council advises that if allocated in the local

development plan, the site could be included in the council's delivery programme, which would help support the completion of the development. I note that the community council supports the allocation.

22. I find that site OP2 is not in a rural area. It is within the settlement boundary and adjacent to established residential development to the east and south, with less dense development to the north and west. An economic justification would not be needed when the use is acceptable in land use planning terms.

23. I find that the allocation for 38 homes and commercial/retail uses reflects the previous planning permission on the site. I note that there is a constraint in terms of ownership, but the council is committed to working with stakeholders to deliver the site. The site is not currently used for open space or community leisure purposes and no evidence is provided to show how this alternative use would be delivered. No modification to the plan is required.

Site OP3 – Land at Former Blockworks Site

24. Site OP3 lies to the south of the A944 Straik Road, close to the centre of Westhill. It is in a mixed use area, with established residential development to the north, and hotel, light industry and commercial uses to the east, west and south. The site was cleared and vacant at the time of my site visit.

25. The Scottish Environmental Protection Agency (SEPA) has requested that the allocation summary for site OP3 reflects the need for a flood risk assessment. Suggested wording has been provided. I consider that the modification requested by SEPA would provide clarification on the requirements for any future planning application. A modification on this matter is recommended.

26. Nestrans has requested that the allocation summary for site OP3 reflects the need for development to provide for active travel and quality open space. Suggested wording has been provided. I consider that the modification requested by Nestrans would provide clarification on such matters, consistent with relevant policies in the proposed plan. A modification on this matter is recommended.

27. A representation has noted the specific requirements of the site relating to noise and access, as it is in a mixed use area where commercial and light industrial uses are already established to the south and east. I find that issues relating to noise would generally be addressed as part of the development management process. However, in this instance as the site is adjacent to existing uses, I agree with the council's suggestion that the allocation summary for site OP3 could be modified to read, "A Noise Impact Assessment may be required". A recommended modification to that end is set out below.

28. A representation has noted that the site would require a secondary access, but options are limited given the proximity of existing junctions on the A944. I agree with the council that in this case, options should be addressed through the development management process. I understand that planning permission has now been granted for development on this site. No modification to the plan is required in relation to this issue.

Non-Allocated Bid Site GR025 – Land at Kinmundy

29. Bid site GR025 is a greenfield site to the east of the settlement. To the west is established residential development, to the north, south and east is open countryside. At the time of my site visit, the site appeared to be in agricultural use.

30. A representation is seeking to have the site allocated for up to 120 homes. It is considered that the scale of housing allocations in the plan for Westhill is not appropriate, as it is too low to ensure a range and choice of sites. An indicative masterplan for the site has been submitted which illustrates the potential phasing and delivery, pipeline location, possible access points and open space of the development.

31. The strategic environmental assessment report assessed site GR025 as having some negative effects, including increased traffic flow, potential impact on Loch Skene, erosion of the green belt, landscape impacts and a pipeline. Positive impacts such as an increase in the range of housing choice and increased access to housing were noted. At the main issues report stage, the site was identified as being constrained by its location within the green belt and the pipeline zone. It was considered unsuitable for development. In the Issues and Actions paper, it was again noted that site GR025 was not supported.

32. The representation states that the site is not required to meet the functions of the green belt in this location, and that allocating sites should not be delayed until the proposed green belt review is carried out, as there is no fixed timeframe to deliver the review.

33. Policy R1 Special Rural Areas sets out the permissible uses in the green belt in Aberdeenshire and Appendix 4 illustrates the boundaries of the green belt. Paragraphs 49, 50, 51 and 52 of Scottish Planning Policy refer to the purpose of the green belt in supporting the local development plan spatial strategy. In this instance, I am satisfied that the proposed plan directs allocated development to the most appropriate locations in Westhill, and that the green belt in this location protects and enhances the character and landscape setting of the settlement. The loss of the green belt in this location would, I find, result in the erosion of the defined green belt boundary on the east side of Westhill. The uses proposed would not achieve the aims of the green belt in this location and would harm the character and setting of the town. I am satisfied that the site contributes to the green belt function in this area.

34. I have already addressed concerns regarding the limited scale of new housing allocations in Westhill and the implications of the current transport constraint in the vision section, above. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. However, alternative sites have been identified to meet this shortfall.

35. Overall, I conclude that housing development on this site would have an adverse impact on the integrity of the green belt and the landscape setting of Westhill. Given the availability of other suitable sites to meet the shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area, I do not consider that meeting housing need would outweigh the negative effects outlined above. No modification is required.

Non-Allocated Bid Site GR032 – Land at Strawberry Fields

36. Bid site GR032 is being promoted for the development of up to 180 homes, with

associated infrastructure and open space. The site lies to the west of the settlement, to the south of the Old Skene Road and north of the A944 Straik Road. At the time of my site visit, the site appeared to be in agricultural use. The representation is supported by an indicative masterplan and accompanying site assessments.

37. The strategic environmental assessment report assessed site GR032 as having some negative effects, including increased traffic flow, flood risk, impact on infrastructure and a pipeline. Positive impacts such as an increase in the range of housing choice and increased access to housing were noted. At the main issues report stage, the site was identified as being constrained by the pipeline zone, the relationship with existing residential development and the potential for coalescence with Kirkton of Skene to the west. It was considered unsuitable for development. In the Issues and Actions paper, it was again noted that site GR032 was not supported.

38. I note that paragraph 255 of Scottish Planning Policy states that the planning system should promote a precautionary approach to flood risk and locate development away from medium to high risk areas. Paragraph 263 indicates that sites with a medium to high risk of flooding may be suitable for residential development in particular circumstances. I find that flood risk matters may not prevent housing development on the site, but the outcome of the flood risk assessment may have implications for overall development capacity.

39. The site is located to the south of the Old Skene Road, which has relatively new traffic and transport infrastructure, including access to public transport. The general transport constraint on development in Westhill would need to be taken into account in relation to this site. However, given the nature and location of the site, I consider that development may be justified in advance of the wider capacity studies, if required to meet strategic housing needs. However, a transport assessment would be necessary to explore this matter and identify any necessary mitigation on the transport network.

40. In terms of coalescence with Kirkton of Skene and the relationship with existing residential development, I consider that this is a matter which could be resolved through appropriate design and landscape mitigation. The Westhill Capacity Study identified the west of the settlement as suitable for future expansion. The indicative masterplan illustrates a layout which does not significantly extend the built envelope of the settlement to the west and which incorporates structural planting to create a defining boundary in visual terms. When approaching or leaving Westhill on the A944 or the Old Skene Road, I am satisfied that the visual impact of the development of the site would not give rise to an impression of coalescence.

41. The strategic environmental assessment noted that there may be impacts arising from the proposed development on social infrastructure. Whilst carrying out my site inspection, I noted the close proximity of the site to existing facilities such as a medical centre, primary school and local retail facilities. I have not been provided with any information to suggest that the existing facilities are unable to accommodate demand from an additional 180 homes. Where necessary, developer contributions could be sought, in line with policy RD2.

42. An overhead powerline runs through the site from north to south, and a pipeline runs north to south in the western part of the site. A request for further information (FIR 019) was issued to Stewart Milne Homes and the council, to gain a better understanding of the implications of the pipeline for housing development on this site.

43. The council advises that the pipeline is the Scottish Gas Network Leuchers Moss to Craibstone high pressure gas pipeline. It states that, based on mapped information provided by the Health and Safety executive, consultation zones associated with the pipeline would be a constraint to housing development.

44. However, the council acknowledges that during the development of the Broadshade estate to the north, the pipeline was partially re-routed and that re-routing extends into the northern part of bid site GR032. It understands that the new pipeline would have been encased, at least along the land north of the Old Skene Road, to reduce the separation distance from the nearest houses to six metres.

45. Stewart Milne Homes has confirmed that the encasing of the pipeline and a consequential reduction in the standoff distance to six metres in the Broadshade development was agreed with the Health and Safety Executive. It states that a similar solution would be available for bid site GR032. A revised indicative master plan, submitted by Stewart Milne Homes in response to the further information request, illustrates how a six metre standoff from the pipeline could be accommodated in the site layout. However, no evidence has been provided to indicate that this has been discussed and agreed with the Health and Safety Executive. The council states that, without evidence of discussions between the Health and Safety Executive and Stewart Milne Homes, the standard consultation zones should apply.

46. The council considers sites within a pipeline consultation zone to be physically constrained and that they should only be considered for allocation if there are no suitable alternatives. The examples referred to in Westhill by the representee are sites, which predate the previous two local development plans.

47. Whilst I acknowledge that it may be possible to overcome this constraint, given the council's response and the uncertainty regarding the Health and Safety Executive's position, I am unable to reach a conclusion on the implications of the pipeline for housing development on this site. Based on the information before me, I conclude that a housing allocation on this site would not be in accordance with Policy P4: Hazardous and Potentially Polluting Developments and Contaminated Land.

48. I have already addressed concerns regarding the limited scale of new housing allocations in Westhill in the vision section, above. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. However, alternative sites are available to meet this shortfall.

49. Overall, I consider that housing development on this site could be accommodated with limited impact on settlement coalescence and local services. However, given the uncertainty regarding the implications of the pipeline, I am unable to conclude that development of the site could contribute to meeting the strategic development plan allowance for the Aberdeen Housing Market Area in the period up to 2032. I therefore do not consider that this site should be allocated in the plan.

50. No modification is required.

Non-Allocated Sites – Bid Site GR039 – Land West of Westhill, South of the A944 (Site 1), Bid Site GR040 – Land West of Westhill, South of the A944 (Site 2) and Bid Site GR041 –

Land West of Westhill, South of the A944 (Site 3)

51. Representations are seeking the allocation of bid site GR039 for up to 100 homes. The identification of bid sites GR040 and GR041, as future opportunity sites for up to 3,000 homes, is also sought. All of the bid sites are supported by substantial background information and a transport position statement.

52. I note that general representations regarding the identification of future opportunity sites are addressed under Issue 2 of this examination. This concludes that, whilst the strategic development plan allows local development plans to identify additional strategic reserves beyond 2032, there is no requirement to do so. The council's decision not to identify future opportunity sites is in accordance with the strategic development plan. On the basis that there is no requirement to allocate future opportunity sites, I have not given further consideration to bid proposals GR040 and GR041.

53. Bid site GR039 lies to the west of the settlement and to the south of the A944 Straik Road. There is some low density residential and retail development to the north-east of the site, but it is surrounded by agricultural land to the north, south and west. At the time of my site inspection, the site was laid out as open fields.

54. The strategic environmental assessment report assessed site GR039 as having some negative effects, including increased traffic flow, impact on infrastructure and a pipeline. Positive impacts such as an increase in the range of housing choice and increased access to housing were noted. At the main issues report stage, the site was identified as being constrained by the pipeline zone, the distance from a primary school and a poor relationship with the existing settlement. It was considered unsuitable for development. In the Issues and Actions paper, it was again noted that site GR039 was not supported.

55. Potential impacts on Loch of Skene, Dunecht House Inventory Gardens and Designed Landscape, on ancient woodland, on scheduled ancient monuments and on protected species were also the basis for the non-inclusion of the site in the plan. I do note that bid site GR039 would be the furthest from these protected sites and I am satisfied that if developed as a discrete site and not as part of a 3,000+ homes development, then structural landscaping and careful design would have the potential to mitigate these potential impacts.

56. However, I find that the open character and setting of Westhill would be impacted if this development were to go ahead. It would read as an isolated pocket of development, visually unconnected to the established residential area of Burnland to the east. The site would not create a defensible boundary for the settlement and would erode the landscape setting of Westhill. It may be that careful design and structural landscaping could mitigate these issues, but, as an isolated site, I find that the landscape and visual impact would most likely remain unacceptable.

57. I have already addressed concerns regarding the limited scale of new housing allocations in Westhill and the implications of the current transport constraint in the vision section, above. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4s for Issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. However, alternative sites have been identified to meet this shortfall.

58. Overall, I conclude that housing development on this site would result in an adverse impact on the landscape and visual setting of the western edge of the settlement. Given the availability of other suitable sites to meet the shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area, I do not consider that meeting housing need would outweigh the adverse landscape and visual impacts. No modification is required.

Non-Allocated Bid Site GR063 – Land South of Mill of Brodiach

59. A representation is seeking to have bid site GR063 allocated for residential development of up to 100 homes. The site lies to the east of Westhill, bound to the north by the Westhill Road, to the east by the Brodiach Burn and to the south and west by agricultural and playing fields. The site itself appears to be in agricultural use, and is broadly triangular in shape.

60. The representation considers that the site would form an extension to the existing settlement, that it does not contribute to the green belt, that the pipeline is not a constraint, and that flood risk can be managed. The consent for the football stadium and training facility to the south and east is also considered to undermine the principle of protecting the green belt in this location.

61. The strategic environmental assessment report assessed site GR063 as having generally negative effects, including increased traffic flow, flood risk, erosion of the green belt, impact on infrastructure and a pipeline. At the main issues report stage, the site was identified as being constrained by the pipeline zone, flood risk and a poor relationship with the existing settlement. It was considered unsuitable for development. In the Issues and Actions paper, it was again noted that site GR039 was not supported. NatureScot suggests that a development brief would be required to support any development, to reduce the loss of woodland, carbon rich soil and habitats, and to promote active travel.

62. I have already addressed concerns regarding the limited scale of new housing allocations in Westhill and the implications of the current transport constraint in the vision section, above. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. However, alternative sites have been identified to meet this shortfall.

63. Policy R1 Special Rural Areas sets out the permissible uses in the green belt in Aberdeenshire and Appendix 4 illustrates the boundaries of the green belt. Paragraphs 49, 50, 51 and 52 of Scottish Planning Policy refer to the purpose of the green belt in supporting the local development plan spatial strategy. In this instance, I am satisfied that the proposed plan directs allocated development to the most appropriate locations in Westhill, and that the green belt in this location protects and enhances the character and landscape setting of the settlement. The loss of the green belt in this location would, I find, result in the erosion of the defined green belt boundary on the east side of Westhill. The uses proposed would not achieve the aims of the green belt in this location and would harm the character and setting of the town. I do not consider that the recent consents for a football stadium and associated training facility provide justification for the release of green belt land for housing development in this location. It would also

result in a development which is detached from the settlement, due in part to the existing open space corridor. I am satisfied that the site contributes positively to the green belt functions in this area and its loss would have a negative impact.

64. The issue of flood risk is considered capable of being managed with buffer strips and by careful design in the site layout. The representation indicates that only a small part of the site is at risk, with the remaining part being able to provide up to 100 homes. I am satisfied that flood risk would not be an impediment to the development of the site.

65. The pipeline has been identified by the council as a constraint. The representation advises that, in the consideration of a refused planning application on the site, the Health and Safety Executive did not consider the pipeline to be a constraint. I note that the pipeline runs nearby and an open space corridor is to be maintained along its route in this location. However, this corridor would mean that bid site GR063 would be physically and visually separated from the eastern edge of Westhill and development would not be well integrated with the rest of the settlement.

66. The council indicates that the proposed layout would not meet its road standards. The bid proposal is unclear whether adequate access arrangements can be provided to serve a development of over 100 houses and so I am unable to reach a conclusion on this matter.

67. Overall, I conclude that that housing development on this site would have an adverse impact on the landscape and visual setting of the eastern edge of the settlement and the function of the green belt. Given the availability of other suitable sites to meet the shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area, I do not consider that meeting housing need would outweigh the impact on the green belt and other negative effects outlined above. No modification is required.

Non-Allocated Bid Site GR064 – Land North of Broadshade

68. Bid site GR064 is being promoted for residential development, which could accommodate up to 250 homes. The site is located to the north west of Westhill, and immediately to the north of the recently established Broadshade residential development. At the time of my site visit, the site appeared to be in agricultural use. It is an open site bisected by an unmade road to Sunnybrae House and the farm beyond. It rises from south to north and has an elevated position.

69. The representation considers that sufficient land has not been allocated in Westhill to meet local needs, and that the bid site is fully deliverable without constraints.

70. The strategic environmental assessment report assessed site GR064 as having generally negative effects, including increased traffic flow, proximity to Loch Skene, negative impact on landscape character, the setting of a scheduled ancient monument Berryhill and on the pipeline. At the main issues report stage, the site was identified as being constrained by the pipeline zone, by difficult road infrastructure improvements and the potential impact on the scheduled ancient monuments Keir Hill and Berryhill. It was considered unsuitable for development. In the Issues and Actions paper, it was again noted that site GR064 was not supported.

71. I consider that the rising elevations to the north of the town from part of its character

and setting. I note the negative effects set out in the strategic environmental assessment report and main issues report, but I am satisfied that the visual impact of extending the built environment northwards could be mitigated with careful design and layout and with structural planting. I viewed the bid site from viewpoints to the west and south of Westhill, and found that, given the extent of existing residential development at Broadshade, additional development to the north would not be incongruous.

72. The strategic environmental assessment of site GR064 identifies a number of other negative effects, some of which it may be possible to mitigate. The supporting document provided by the representation highlights the scale of infrastructure that would be required to support the proposal. I find that I have insufficient details before me to take a view on potential mitigation measures to address matters such as the impact on the scheduled ancient monuments and transport.

73. I have already addressed concerns regarding the limited scale of new housing allocations in Westhill and the implications of the current transport constraint in the vision section, above. Matters relating to overall housing provision in the proposed plan are covered in issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. However, alternative sites have been identified to meet this shortfall.

74. Overall, I conclude that housing development on this site could potentially be accommodated with limited impact on settlement character and setting, and subject to appropriate mitigation, on scheduled ancient monuments and the transport network. However, given the uncertainty regarding the potential impact on the transport network, and the availability of other suitable sites to meet the shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area, I do not consider that this site should be allocated in the plan. No modification is required.

Non-Allocated Bid Site GR066 – Land at Damhead Cadgerford and Backhill, South of Westhill

75. Bid site GR066 comprises three lots of land to the south of the settlement, south of the B9119. The sites are currently in agricultural use, and in open countryside.

76. Bid site GR066 is being promoted for 3.18 hectares of employment land on the part of the site immediately south of the B9119 and 200 - 250 homes on the Cadgerford / Bankhead Farm areas, as part of a southern expansion of Westhill. A wider development strategy (including land in Aberdeen City council area) was submitted in support of the representation, as was information on business and community evaluations in Westhill.

77. The strategic environmental assessment report assessed bid site GR066 as having generally negative effects, including increased traffic flow, proximity to Loch Skene, negative impact on landscape character, surface water flooding. At the main issues report stage, the site was identified as being constrained by the pipeline zone, by transport constraints, by educational requirements and a buffer to the Brodiach Burn. It was considered overall to be unsuitable for residential development at this time, and that this land should only come forward for development as part of an overall agreed strategic vision for significant growth in Westhill. I note the numbers and site area referred to in the main issues report (750 - 900 homes and 9 -10 hectares of employment land) also include land

in the Aberdeen City Council area. In the Issues and Actions paper, it was again noted that site GR066 was not supported.

78. The Westhill Capacity Study Update 2014 identifies land to the south of the settlement, including bid site GR066, as 'most suitable for development'. However, in advance of the supporting studies referred to by the council, no decisions have been taken regarding the scale, direction and timescales for the strategic growth of Westhill.

79. The strategic development plan identifies Westhill as an area suitable for local growth and diversification. Whilst only proposals within Aberdeenshire can be assessed through this examination, I consider that the overall development strategy, submitted in support of bid site GR066, would form a strategic expansion of the settlement and would represent more than just 'local growth'. I note that paragraph 3.45 of the strategic development plan indicates that Westhill would be a main focus for new investment. However, I agree with the council that this should happen in a planned manner, and should only be considered once the necessary supporting studies are complete.

80. The constraints identified in the site assessments appear to be matters that are capable of being resolved through the development management process and through site master planning and a development framework. However, at this time, development at this location would be remote from, and poorly connected to, the town centre, local facilities and other residential areas.

81. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. However, alternative sites have been identified to meet this shortfall.

82. Table 5 in the strategic development plan sets out targets for employment land allocations to be addressed in local development plans. However, these relate to strategic growth areas and therefore would not require the allocation of site GR066 for employment purposes. Furthermore, this bid is for a mixed use proposal and does not promote a separate business allocation.

83. Overall, I conclude that there is no justification for a strategic southerly expansion of Westhill at this time. The allocation of bid site GR066 is not required to meet strategic housing or employment needs, and development on the southernmost part of this site would be poorly integrated with the rest of the settlement. No modification is required.

Non-Allocated Bid Site GR106 – Land South of Arnhall Business Park (Phase 4)

84. Bid site GR106 is located to the south of the B9119, and immediately south of the Arnhall Business Park. At the time of my site visit, the site was in agricultural use.

85. The representation is seeking the allocation of the site (11.6 hectares) for employment and hotel use, as an extension to the existing business park to the north. Its identification as an opportunity site in this plan is sought, and if that is not accepted, the site should be identified as Strategic Reserve land and included in Appendix 1; Employment Land Allocations.

86. As I have indicated above, the strategic development plan (Table 5) sets out targets for employment land allocations to 2032, and strategic reserve land for the period 2033 – 2044. These relate to strategic growth areas and therefore would not require or justify the allocation of site GR106 for employment purposes in this plan.

87. However, the strategic development plan also states that local development plans should identify and maintain an appropriate amount of business land for Local Growth and Diversification Areas in Aberdeenshire. The vision for Westhill at page 620 of the proposed plan sets out that the town functions as an established employment hub and is a centre for global excellence in the subsea sector. It also notes that Westhill supports emerging industries. The representation indicates that no sites for employment have been allocated and that opportunities to meet demand for employment land cannot be met in the settlement.

88. Site GR106 was identified as a reserved site in the main issues report. However, the council is concerned that giving reserved status to land south of the B9119 could be interpreted as indicating its preferred direction of future growth. I have noted above that the Westhill Capacity Study Update 2014 identifies land to the south of the settlement as 'most suitable for development'. However, in advance of the supporting studies referred to by the council, no decisions have been taken regarding the scale, direction and timescales for the strategic growth of Westhill. Whilst bid site GR106 could form part of a strategic southerly expansion of the settlement, I consider that it could also come forward on its own as an extension to Arnhall Business Park.

89. Given Westhill's status as a global subsea centre of excellence and established employment hub, as highlighted in the vision section of the settlement statement, I agree with the representee that an extension to the existing business park would be appropriate, if required. I am satisfied that this would be a suitable future use for this site and would not prejudice the outcome of the ongoing supporting studies or decisions regarding the future growth of Westhill.

90. I therefore consider that bid site GR106 should be identified as Strategic Reserve Employment Land for development post-2032, but capable of being brought forward prior to that date, should circumstances allow and subject to relevant policies in the plan. Paragraph 5.11 in the strategic development plan states that "in exceptional circumstances, for example if it is essential to put this Plan's Vision or Spatial Strategy into practice, applications for planning permission may be considered before 2033 on land identified as Strategic Reserve for Employment". Whilst Westhill is not located within a strategic growth area, I consider it appropriate to refer to the future potential extension of Arnhall Business Park as strategic employment land.

91. I recommend that the plan is modified to identify site GR106 as SR1 - reserved for strategic employment land (11.6 hectares) in the other designations section of the settlement features table and on the Westhill settlement map. The site should also be added to the "Strategic Reserve – beyond 2032" column of table 2 in appendix 1: Employment Land Allocation. Modifications to this effect are set out below.

Non-Allocated Bid Site GR132 – Land at Mains of Keir, South East of B979

92. A representation is seeking to have the whole or part of bid site GR132 allocated as a reserved site for future delivery of up to 90 homes, should current allocated sites fail to

deliver. The representation is supported by a planning statement which contains a site analysis and a development concept.

93. Bid site GR132 is located to the north west of Westhill, to the north of the Broadshade residential development and south of the B979. At the time of my site visit, it appeared to be in agricultural use.

94. Although reserve or future opportunity sites had been included in the early stage of the plan preparation, the council decided not to identify such sites in the proposed plan. The strategic development plan at paragraph 4.20 states that 'Local Development Plans may choose to make provision for additional Strategic Reserves for Housing for the period 2033 to 2040 in line with Table 3, but this is not a requirement.' I find that the council's decision not to include future opportunity sites in this plan is in accordance with the strategic development plan. There is no therefore no justification to allocate a housing site of 90 homes as a future opportunity at this time. No modification to the plan is required.

Non-Allocated Bid Site GR133 – Land at Souterhill Farm, North West of Westhill

95. A representation is seeking the allocation of bid site GR133 for up to 70 homes and a golf practice area. The site lies to the north of the settlement, to the west of Westhill Drive and with the golf course to the south. To the west and north is open countryside. At the time of my site visit, the site appeared to be in agricultural use.

96. The representation indicates that the site is considered to be 'most suitable and sustainable' in the Westhill Capacity Study 2014; it is located adjacent to the settlement boundary to the west, is free from constraints and could be delivered in the plan period.

97. The strategic environmental assessment report assessed bid site GR133 as having generally negative or neutral effects, including increased traffic flow, surface water flooding, water capacity issues, proximity to Loch Skene, negative impact on landscape character, impact on the character of the area, and the pipeline consultation zone. At the main issues report stage, the site was identified as being constrained by the pipeline zone, by being within the green belt, by being accessed by an unmade road, and by the core path running through the site. It was not shown as a preferred option for development. In the Issues and Actions paper, it was again noted that site GR133 was not supported. NatureScot advised that landscape and visual impacts were likely to arise from the disconnect from the settlement boundary. Historic Environment Scotland noted that the site had the potential to impact on the scheduled ancient monument at Berryhill.

98. I note that the council's assessment of the site appears to contain a number of factual errors. The representee has brought these to my attention and for clarity I will set them out. The representation is seeking an allocation for 70 not 49 homes. The site is not in the green belt. It is adjacent to the settlement boundary. The site is not constrained by the pipeline consultation zone or the core path. A landscape and visual impact assessment has been submitted with the representation. The site would not be accessed from an unclassified road, but from Blacklaws Brae which is an adopted road.

99. I am satisfied that the site would not be disjointed from the settlement, but could fit well with the established residential neighbourhoods to the east and south. The ridgeline of Hill of Keir would be north of the site, with the proposed development occupying a similar position to existing residential development on Meadowlands Drive to the east. I viewed

the site from various viewpoints to the north, south, south-west and south east. I am satisfied that the site would not present an over-prominent built element in the landscape, and that structural planting would be capable of providing any required screening.

100. A traffic assessment was submitted with the representation which concludes that the development would have an acceptable impact on the local transport network. Flood risk and water capacity issues are matters that could be addressed at planning application stage. I find that the proximity to Loch Skene and Berryhill could also be addressed through site layout and design. I note that in the site appraisal prepared by the representee, the core path is identified as an opportunity. I would support this approach, and agree that it could be designed into an overall street pattern.

101. I have already addressed concerns regarding the limited scale of new housing allocations in Westhill and the implications of the current transport constraint in the vision section, above. Matters relating to overall housing provision in the proposed plan are covered in issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. However, alternative sites have been identified to meet this shortfall.

102. As explained above, I find that the scope to allocate appropriate housing sites at this time is limited by the availability of the transport study outcomes. On this basis, I am satisfied that until the further studies are complete, it would be premature to allocate significant development sites in the settlement.

103. Overall, I conclude that housing development on this site could be accommodated with limited impact on the settlement and its landscape character and setting. However, given the uncertainty regarding the potential impact of housing development in Westhill on the transport network, and the availability of other suitable sites to meet the shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area, I do not consider that this site should be allocated in the plan. No modification is required.

Non-Allocated New Site N010 – Land South of the A944

104. A mixed use zoning is sought for an area south of the A944 Straik Road. The site location plan submitted with the representation illustrates an area encompassing land to the east of Enterprise Drive and to the north of Peregrine Road.

105. It would appear, from the representation, that the purpose of the proposed zoning is to recognise the existing mixed use nature of this area, as well as promoting mixed use development opportunities. The representation does not provide any details of particular proposals to be assessed.

106. Site N010 is shown in the proposed plan as “white land” within the settlement boundary. Proposals for changes of use or redevelopment of sites within this area would be assessed against relevant policies in the plan and would not require a mixed use allocation. The local development plan policies would also allow consideration of potential conflicts between existing uses and future development proposals. No modification to the plan is required.

Reporter's recommendations:

Modify the local development plan by:

1. Adding the following new fifth paragraph to the vision section on page 620:
"Upon completion of the regional strategic model (ASAM19), it is anticipated that work considering the transport implications of any future growth options will be undertaken."
2. Adding the following new entry to the other designations section of the settlement features table in the settlement statement on page 621:
"SR1 - reserved for strategic employment land (11.6 hectares)"
3. Adding the following new four sentences to the end of the allocation summary for OP3: Land at Former Blockworks Site on page 623:
"A Flood Risk Assessment may be required due to surface water flood risk on site. Active travel facilities and good quality open space are required. Efforts should be made, including through the site layout, to connect through the adjacent business park to core paths beyond, including the core path the west across Peregrine Road. A Noise Impact Assessment may be required."
4. Amending the Westhill settlement map on page 624 and 625 to exclude the privately owned dwellings (Bridgefoot, Hazeldean and Malahal) from the BUS designation.
5. Amending the Westhill settlement map on pages 624 and 627 to show bid site GR106 as strategic reserved land designation SR1.
6. Adding Westhill SR1 to the Garioch section of Table 2: Employment Land Allocations in appendix 1 on page 100, with 11.6 hectares added in the Strategic Reserve – beyond 2032 column.

Planning authority's summary of the representation(s):**Goval**Non-Allocated Site – Bid Site GR143 – Land South of Goval Junction

A representee has requested that bid site GR143 be allocated for a mix of uses including a hotel, fuel station, charging station, Park & Choose, restaurant, farm shop, garden centre and an activity centre. The representee has argued that the site should be included on the basis of this being an obvious location for convenient roadside services that are needed close to the Aberdeen Western Peripheral Route (ABERDEEN WESTERN PERIPHERAL ROUTE). They note that the Strategic Development Plan does not rule out development adjacent to the AWPR route or junctions and the site would support SPP outcomes. The proposed development is strategically located to attract existing trips from the adjacent strategic and local road network. The impact of this development on the road network will be limited and not have a major impact on the ABERDEEN WESTERN PERIPHERAL ROUTE or its junctions. The site would support the Local Transport Strategy by assisting in the delivery of 'Park and Choose', providing new strategically located recharging facilities, and other facilities serving passing traffic and wider accessibility to sustainable transport modes. There are, no overriding land use, environmental, road safety or traffic management justifications for not allocating this site for the proposed range of uses, and previous reasons given in the MIR are disputed. The proposal has been planned to avoid impacts on surrounding woodland, there is only limited surface water flooding, and there would be limited landscape impact. Furthermore, green belt zoning is not a reason for ruling out new opportunities and each bid should be considered individually and in relation to an up-to-date green belt review. The representee has included an Appendix (RD0229.A) in their submission which provides further detail to support their position (PP1245).

Non-Allocated Site – Bid Site GR144 (part) – Land North of Goval Junction, Little Goval

A representee has requested that bid site GR144 (part) be allocated for 15 homes. The representee has argued that the site should be allocated on the basis that it offers the opportunity to increase housing mix and diversity, provides for self-build and custom-built housing plots to meet local needs, and the opportunity for a new sustainable rural lifestyle. The representee does not consider the site's location in the countryside as a valid justification to discount the site, as other bids have been supported in the countryside and the local landscape has been irreversibly changed due to the AWPR and considers the site would have a positive fit into the wider landscape as a small household group. Presence of the green belt should not be a reason for ruling out new opportunities as each bid should be considered individually and in relation to an up-to-date green belt review. The proposal has been planned to avoid impacts on surrounding woodland, there is no flood risk on the site. The proposed development has good transport links including cycle links, supporting the possibility to work from home and access services sustainably, so providing for a need demonstrated by the Covid pandemic. The siting of this development within the accessible rural area ensures good access to employment and services. The limited scale housing will complement the current hamlet at Little Goval, providing a continuation of the existing housing. The proposed site boundary has been reduced to address the MIR suggestion of the site representing underdevelopment. The representee has included an Appendix (RD0217.A) in their submission which provides further detail to support their position (PP1227).

Hatton of Fintray

Vision

Fintray Community Council has expressed support for the proposed settlement Vision for Hatton of Fintray (PP0326).

Fintray Community Council has expressed support for the Proposed Local Development Plan (PLDP) maintaining the current designated area of green belt as this benefits the environment and historic landscape (PP0326).

Flood Risk

Scottish Environment Protection Agency (SEPA) has recommended for consistency that a new 'Flood Risk' section and bullet point be included to note that due to the presence of a small watercourse adjacent to the OP1 site that a Flood Risk Assessment may be required (RD0214.B) (PP1219).

Services and Infrastructure

Scottish Water request that in the Hatton of Fintray 'Services and Infrastructure', under 'Strategic drainage and water supply' that text is added to read, "There is limited supply at Hatton of Fintray septic tank. Early engagement with Scottish Water is recommended" (PP0272).

SEPA has confirmed that it has no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – North of B977

Historic Environment Scotland (HES) notes that Hatton of Fintray is located approximately 210m west of the Scheduled Monument known as Jasmine Cottage, cursus monument and barrows 160m south east of (SM 6572) but given the location of site OP1 adjacent to the existing settlement and the distance to the monument, HES is content that the proposed development will not significantly impact on its setting (RD0266.A). No modification sought (PP1343).

SEPA has recommended a minor amendment to the last sentence in the allocation summary of site OP1 to state "this" rather than "these" as it refers to the enhancement of only one watercourse (RD0214.B) (PP1219).

Fintray Community Council has noted support for the OP1 site on the provision that 16 homes are a binding limit. They also note that a proportion of the site should be designated as open space/amenity land, that the development reflects the character of the settlement and should include appropriate landscaping and safe cycle/pedestrian access to the school and wider settlement. Furthermore, development should make a contribution towards the community, recreation and learning facilities in the area (PP0326).

A representee objects to the reduced size of the existing allocation as the original bid GR044 was accepted at the Main Issues Report (MIR) with an increase from 12 to 32

homes to avoid underdevelopment. This location is not suitable for a higher density development on a reduced site area approach. Higher density would not be in keeping with the lower density, larger plots which characterise the settlement. Keeping the existing allocation boundary of the site would still provide a dense development at 16 homes from the current 8 homes allocation. The representee notes that while Hatton of Fintray is not in a Strategic Growth Area, the site is a desirable small-scale addition to the settlement and has good connectivity to the A96 and Aberdeen Western Peripheral Route. It has not come forward only due to the general economic downturn in the area. The reduced site size does not make sense from a delivery or good planning perspective. The representee has included an Appendix (RD0066.A) in their submission which provides further detail to support their position (PP0435).

A representee has suggested that site OP1 should be removed on the basis of non-delivery or the allocation reduced to 8 homes (PP1102).

Keithhall

Site R1 – To provide a car park for the village hall

SEPA has confirmed that it has no flooding, strategic drainage or water supply issues with the designation summary for site R1 (RD0214.B). No modification sought (PP1219).

A representee supports the safeguarding of site R1 for provision of car parking at the Village Hall. No modification sought (PP1317).

Flood Risk

SEPA requests that the second 'Flood Risk' bullet point adds site OP1 or include it as a separate new bullet point, as this site requires a Flood Risk Assessment (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that it has no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – South of Inverurie Road

SEPA has confirmed that it has no flooding, strategic drainage or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

A representee has expressed support for the allocation of site OP1 and welcomes the increased capacity at the site (PP1317).

This allocation entered the housing land audit in 2006 and is included in the long-term constrained schedule in the 2019 Housing Land Audit as an ownership constrained site. The position agreed by the Planning Authority at the time of the 2019 audit was that the timescale for resolving the constraint was unknown. No planning applications have been submitted to advance development on the site in the past 15 years. Initially, the site had a capacity of 5 houses, and this has increased to 15 houses in successive LDPs. The recruitment of long-term constrained sites to meet the strategic allowances is not a

competent approach to the delivery of housing through the development plan. Generally, constrained sites within the established supply at the base date of a local development plan should be discounted unless the constraint is known to be temporary in nature. This is not the case in this instance. There is nothing to justify the inclusion of this site as an allocation which will contribute to meeting the strategic allowances and nothing to support the increase in its capacity from 15 houses to 36 (PP1083).

Non-Allocated Site – Bid Site GR060 – Land at Tweedale

A representee continues to object to the effective embargo on greenfield housing allocations in the Blackburn to Inverurie Strategic Growth Area pending confirmation of the preferred route of the A96. Dualling of the A96 is a strategic project that is not intended to provide capacity for housing in particular areas and that it is for the LDP to ensure that housing can be delivered along with the necessary infrastructure. This site could offer a solution to traffic congestion by delivering the majority of a route from the east of Inverurie to the north allowing traffic to bypass the town centre. It is contended that there is an effective housing land shortfall within the Aberdeen Housing Market Area and this site would contribute to meeting that. An assessment of this bid on the Designed Landscape is provided. The representee has included two Appendices (RD0237.A and RD0237.B) in their submission which provides further detail to support their position (PP1281).

Non-Allocated Site – Bid Site GR128 – South of Inverurie Road

A representee has noted that bid site GR128 was supported as a preferred option in the MIR and extended to the east to take in the full extent of the site. No justification has been provided for the change in the site within the PLDP and the representee considers this a missed opportunity to establish the long-term future of Keithhall. It is noted that the site is available, deliverable and does not present any particular challenges in terms of topography or gradient. Allocation of the larger site would allow for a more comprehensive and integrated development and it is suggested that the expansion of the allocation would result in the creation of a more sustainable and higher quality development (PP1317).

Kingseat

Site BUS1 – Safeguarded for business uses

SEPA has confirmed that it has no flooding, strategic drainage or water supply issues with the designation summary for site BUS1 (RD0214.B). No modification sought (PP1219).

Two representees have requested that site BUS1 is reallocated as an opportunity site for housing. The representees have outlined that the site is undeliverable as business land due to marketability constraints (PP0063 and PP0973).

Site BUS2 – Safeguarded for business uses

SEPA has confirmed that it has no flooding, strategic drainage or water supply issues with the allocation summary for site BUS2 (RD0214.B). No modification sought (PP1219).

A representee notes that the site BUS2 is well outwith the main development area at the former Kingseat Hospital Site. In the MIR the site was shown to be within the settlement boundary but with no designation. The Garioch Area Committee discussed placing the site

outwith the settlement. Should it remain within the Kingseat settlement boundary, then the representee requests that the BUS2 allocation be removed from the PLDP as the site falls outwith the settlement boundary. The representee has included an Appendix (RD0034.A) in their submission which provides further detail to support their position (PP0247).

Flood Risk

SEPA has confirmed that it has no comment to make on the 'Flood Risk' bullet point in the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

Scottish Water request that in the Kingseat 'Services and Infrastructure' under 'Strategic drainage and water supply' that text is added to read, "Kingseat connects to the Newmachar Waste Water Treatment Works which is at capacity. A Growth Project has been initiated and early engagement with Scottish Water is required to discuss build out plans of any sites" (PP0272).

SEPA has requested amending the 'Strategic drainage and water supply' bullet point to provide transparency and highlight the significant waste water treatment issues at Kingseat as it is connected to the Newmachar network which is at capacity, and the growth project cannot be confirmed until a technical solution is found, as the existing receiving waters have little dilution potential for an increase in discharge, which may limit development in the Plan period (RD0214.B) (PP1219).

Site OP1 – Former Kingseat Hospital

SEPA has confirmed that it has no flooding, strategic drainage or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

NatureScot has requested that the allocation summary for site OP1 in Kingseat includes a requirement for active travel provision and good quality open space, as this site offers remediation of a brownfield site, and the additional wording would help promote good quality open space and safe and convenient active travel opportunities (in accordance with the PLDP policies) (RD0255.B) (PP1300).

HES has noted that site OP1 lies within the Kingseat Conservation Area, and while there are no listed buildings within the Conservation Area, there are five buildings, associated with the former hospital, that are on the national Buildings at Risk Register. Therefore, HES encourage priority is given to restoring/regenerating and safeguarding the setting of these 'at risk' buildings, together with the other former hospital buildings, settlement plan layout and spaces, that contribute positively to the special architectural and historic character of the Conservation Area (RD0266.A) (PP1343).

Kinmuck

Flood Risk

SEPA has confirmed that it has no comment to make on the 'Flood Risk' bullet point in the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that it has no issues with the statement on ‘Strategic drainage and water supply’ (RD0214.B). No modification sought (PP1219).

Non-Allocated Site – Bid Site GR118 – Land South West of Meadow Croft

A representee has requested that bid site GR118 be allocated for 15 homes. It is noted that this site would be intended to support self and custom-build options which is promoted by the Scottish Government policies and the Planning (Scotland) Act 2019. The site is flat and located close to a core path and has a consented access point. The site is in a sustainable location in close proximity to Inverurie which has strategic rail and road network connections. Kinmuck offers local services including a primary school which the development will help to support. The overall impact of the site will be limited. Concerns regarding drainage infrastructure can be addressed as private treatment is both possible and viable. Scottish Water previously noted there was capacity at the water works and it would also be the intention to include SuDS infrastructure and full engagement with Scottish Water and SEPA would take place. In terms of the impact on the adjacent category B-listed building, this will be addressed at the design stage of a planning application and should not preclude allocation in the LDP as careful design and identified green space will provide separation between the new development and the listed building. The representee has included an Appendix (RD0085.A) in their submission which provides further detail to support their position (PP0580).

Modifications sought by those submitting representations:

Goval

Non-Allocated Site – Bid Site GR143 – Land South of Goval Junction

Modify the PLDP to include bid site GR143 for a mix of uses including a hotel, fuel station, charging station, Park & Choose, restaurant, farm shop, garden centre and an activity centre (PP1245).

Non-Allocated Site – Bid Site GR144 (part) – Land North of Goval Junction, Little Goval

Modify the PLDP to include part of bid site GR144 for 15 homes (PP1227).

Hatton of Fintray

Flood Risk

Modify the PLDP to add a new ‘Flood Risk’ section and bullet point that reads, “Due to the presence of a small watercourse adjacent to OP1 a Flood Risk Assessment may be required.” (PP1219).

Services and Infrastructure

Modify the PLDP to add text under ‘Strategic drainage and water supply’ that reads, “There is limited supply at Hatton of Fintray septic tank. Early engagement with Scottish Water is recommended.” (PP0272).

Site OP1- North of B977

Modify the PLDP to amend the last sentence of the allocation summary for site OP1 to state “this” rather than “these” as it refers to the enhancement of only one watercourse (PP1219).

Modify the PLDP to increase the area of site OP1 to that allocated in the LDP 2017 and subject to bid GR044 (PP0435).

Modify the PLDP to remove site OP1 or allocate for 8 homes (PP1102).

Keithhall

Flood Risk

Modify the PLDP to add a new bullet point to the ‘Flood Risk’ section noting that site OP1 requires a Flood Risk Assessment (PP1219).

Site OP1 – South of Inverurie Road

Modify the PLDP to delete the contribution of 36 houses towards meeting the strategic allowances in the Local Growth Area from the OP1 allocation in Keithhall, (Table 2, Appendix 6). Identify a new alternative effective allocation in the Local Growth Area of the Aberdeen Housing Market Area (PP1083).

Non-Allocated Site – Bid Site GR060 – Land at Tweedale

Modify the PLDP to include bid site GR060 for housing (PP1281).

Non-Allocated Site – Bid Site GR128 – South of Inverurie Road

Modify the PLDP to include bid site GR128 for 32 homes (PP1317).

Kingseat

Site BUS1 – Safeguarded for business uses

Modify the PLDP to change the BUS1 allocation to an opportunity site for housing (PP0063).

Site BUS2 – Safeguarded for business uses

Modify the PLDP to remove site BUS2 from the settlement boundary (PP0247).

Services and Infrastructure

Modify the PLDP to read, “... A Growth Project has been initiated and early engagement with Scottish Water is required to discuss build out plans of any sites.” (PP0272).

Modify the PLDP to highlight the significant waste water treatment issues at Kingseat as it

is connected to the Newmachar network which is at capacity, and the growth project cannot be confirmed until a technical solution is found, as the existing receiving waters have little dilution potential for an increase in discharge, which may limit development in the Plan period (PP1219).

Site OP1 – Former Kingseat Hospital

Modify the PLDP to include a requirement for active travel provision and good quality open space (PP1300).

Kinmuck

Non-Allocated Site – Bid Site GR118 – Land South West of Meadow Croft

Modify the PLDP to include bid site GR118 for 15 homes (PP0580).

Summary of responses (including reasons) by planning authority:

Goval

Non-Allocated Site – Bid Site GR143 – Land South of Goval Junction

The Council does not support allocating bid site GR143 for a mix of uses including a hotel, fuel station, charging station, Park & Choose, restaurant, farm shop, garden centre and an activity centre. The site was not identified as a preferred option in the MIR. The Council maintain the reasons set out at that time (see MIR Garioch Appendix, AD0038.E). Whilst the site is accessible from the ABERDEEN WESTERN PERIPHERAL ROUTE, the AWPR is not a development corridor and the additional impact to the adjacent junction would need to be determined. The SDP 2020 clearly indicates that “Local Development Plans must ensure that the transport benefits created by the road are “locked in” and that the capacity of the route, and its junctions, is not negatively affected by development. Local Development Plans, in line with the sequential test and Town Centre First Principle, should expressly avoid any new development that would result in a negative impact on the route or any junction. Any new development adjacent to the Aberdeen Western Peripheral Route...will be resisted unless it has been properly considered through the Development Plan process, and any proposals which are not identified by a Local Development Plan will generally not be supported.” (AD0016, paragraph 3.14 SDP). In addition, it is recognised that there is an expectation that land used to facilitate delivery of the ABERDEEN WESTERN PERIPHERAL ROUTE should be restored (AD0087, AD0163 and AD0183). The site is likely to have a significant effect on the landscape character of the site area and its setting. No change is required.

Non-Allocated Site – Bid Site GR144 (part) – Land North of Goval Junction, Little Goval

The Council does not support allocating bid site GR144 for 15 homes, in part or in its entirety. The site was not identified as a preferred option in the MIR. Whilst is noted that the representee has indicated a willingness to reduce the proposed development area, it is maintained landscape impact would require to be carefully considered. The site is also situated within the green belt. It is considered that the AWPR is not a development corridor and as such promotion of such a development would not be appropriate (see MIR Garioch Appendix, AD0038.E). In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 –

Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Hatton of Fintray

Vision

Support from the Fintray Community Council for the Vision and area of green belt for Hatton of Fintray are noted. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

The Council confirms that it intends to address Scottish Water's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Comments from SEPA are noted. No change is required.

Site OP1 – North of B977

Support expressed for site OP1 is noted along with the comments from HES.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

As outlined in proposed Policy H1 (paragraph H1.3) site capacities are intended to be indicative. Unfortunately, the Council can give no guarantees to Fintray Community Council that a subsequent planning application for the site could not propose a greater scale of development. This is a matter that would be considered through the development management process in determining whether the proposal is suitable in respect of its layout, siting and design, in accordance with relevant policies and other material considerations. No change is required.

The Council acknowledges that bid site GR044 was a preferred option in the MIR for 32 homes. Due to the site being located within the Aberdeen Housing Market Area, the Council applied a standard density of 25 homes a hectare to the bid site. However, on the basis of concern received in response to the MIR, including from Fintray Community Council, surrounding the scale of development proposed, recommended that the site area be reduced to that required to accommodate 16 homes. This recommendation was agreed by the Garioch Area Committee at its special meeting on 3 September 2019 (see MIR Issues and Actions paper, AD0040.E). No change is required.

The Council appreciates that the site has been "marketability" constrained in the HLA for some time. However, the receipt of a bid in response to the Council's call for sites in 2018 and consideration of the site through the MIR, indicates to us that there is appetite from the landowner/developer in bringing the site forward. Site OP1 is considered the most

appropriate location for future growth of the settlement. No change is required.

Keithhall

Site R1 – To provide a car park for the village hall

Support expressed for site R1 is noted along with the comments from SEPA. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – South of Inverurie Road

Support expressed for site OP1 is noted along with the comments from SEPA. No change is required.

This site should remain within the Plan as the Council do not consider that marketability would be a constraint that could not be overcome. The site is located within the AHMA, in which marketability is not considered to be a constraint that would impede development coming forward on the site. Additionally, it is also considered that due to the site's location within the AHMA that other constraints are more likely to come forward given the pressure for development. It is acknowledged that this site has not progressed quickly but due to the landownership there are a number of protocols that require to be followed before the site can progress towards development. Given the above information it is considered that the site can progress towards development. No change is required.

Non-Allocated Site – Bid Site GR060 – Land at Tweeddale

The Council does not support allocating bid site GR060 as an opportunity site. The site was not identified as a preferred option in the MIR. The Council maintain that the site is detached from the settlement, and the scale of development proposed is considered to be significantly disproportionate to the size of the settlement and capability of local services to accommodate development (see MIR Garioch Appendix, AD0038.E). The concerns highlighted remain valid through the Issues and Actions Paper, AD0040.E, page 54 and continue to remain valid. In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site GR128 – South of Inverurie Road

The Council does not support allocating bid site GR128 for 32 homes. The Council appreciate that bid site GR128 was identified as a preferred option in the MIR. In order to address the concern raised in response to the MIR, surrounding the scale of development

proposed, including from Inverurie Community Council, Officers recommended that the bid should not be allocated in the Proposed LDP. This recommendation was agreed by the Garioch Area Committee at its special meeting on 3 September 2019 (see MIR Issues and Actions paper, AD0040.E). Whilst the Council see some merit in the site, which has been recognised in the Proposed LDP, development of site OP1 should not prejudice future expansion. However, the Council do believe it would be premature at this stage to allocate the bid as an opportunity site. No change is required.

Kingseat

Site BUS1 – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

The Council disagree with the suggestion that BUS1 should be identified as an opportunity site for residential development. The purpose of a BUS designation is to safeguard existing employment/business sites. The existing units are designed to accommodate employment uses. Paragraph B2.2 of proposed Policy B2 Employment/Business Land clearly sets out the circumstances where alternative development proposals would be permitted. At such time as a detailed proposal for the redevelopment of site BUS1 comes forward and planning permission approved, the Council believe it appropriate to retain the BUS designation as proposed. No change is required.

Site BUS2 – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

Given the relationship that the warehouses subject to the proposed BUS2 designation and adjacent cottages had with the existing settlement boundary, it was felt prudent to bring these into the built-up extent of the settlement boundary. This change was indicated in the MIR (see Garioch Appendix, AD0038.E, page 54). As outlined in the Issues and Actions papers, no comment was received in response to the change to extend the settlement boundary to include the warehouses, (AD0040.E). The Garioch Area Committee at its special meeting of 3 September 2019 recommended that the BUS designation be identified. No change is required.

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

The Council note comments received from SEPA and Scottish Water. The Council believe that the revised text provided by Scottish Water would satisfy SEPA's modification. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Former Kingseat Hospital

Comments from SEPA and HES are noted. No change is required.

The Council confirms that it intends to address Nature Scot's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Kinmuck

Flood Risk and Services and Infrastructure

Comments from SEPA in respect to sections on 'Flood Risk' and 'Services and Infrastructure' are noted. No change is required.

Non-Allocated Site – Bid Site GR118 – Land South West of Meadow Croft

The Council does not support allocating bid site GR118 for 15 homes. The site was not identified as a preferred option in the MIR (see MIR Garioch Appendix, AD0038.E). The Council maintain that given the lack of services available it is not considered that it is appropriate to promote further housing development in Kinmuck at this time. This view was supported by respondents to the MIR, including Inverurie Community Council (see Issues and Actions papers, AD0040.E). In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.
2. The council has indicated that it intends to make what it refers to as "non-notifiable modifications" in relation to the settlement statement matters covered in Issue 38. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Goval

Non-Allocated Bid Site GR143 – Land South of Goval Junction

3. A representation has sought a mixed use allocation for bid site GR143, which is located south of the Goval Junction on the Aberdeen Western Peripheral Route (AWPR) A90 and the A947. The uses proposed would include a hotel, a fuel station, charging station, Park & Choose, restaurant, farm shop, garden centre and an activity centre. The site had been used as a construction compound during the construction of the AWPR.
4. It is claimed that it would support the Local Transport Strategy by assisting in the delivery of 'Park and Choose', providing new strategically located recharging facilities, and

other facilities serving passing traffic and wider accessibility to sustainable transport modes. The representation notes that there are no roadside-specific services proposed on the AWPR, leading to longer journeys as traffic leaves the route at various points to access local services. It considers that the proposed development would enable travellers to leave and re-join the route whilst maintaining the flow of traffic at the junction and on the AWPR itself. A transport assessment dated 2019 accompanies the representation.

5. It is considered that the proposal would be in accordance with the strategic development plan, which requires that the route and its junctions are not negatively affected by development.

6. The council has indicated that it does not support the proposal. Paragraph 3.14 in the strategic development plan states that “Local development plans, in line with the sequential test and Town Centre First Principle, should expressly avoid any new development that would result in a negative impact on the route or any junction. Any new development adjacent to the Aberdeen Western Peripheral Route...will be resisted unless it has been properly considered through the Development Plan process, and any proposals which are not identified by a Local Development Plan will generally not be supported”.

7. I do not consider that the allocation of bid site GR143 for a hotel, a fuel station, charging station, Park & Choose, restaurant, farm shop, garden centre and an activity centre would be justified. In the strategic environmental assessment, negative effects in the form of surface water flooding, loss of trees and ancient woodland, loss of greenbelt land and landscape impact were identified. The remainder of effects were neutral. At Main Issues Report stage, the proposal was not supported for the same reasons. The Aberdeen Western Peripheral Route is not a development corridor and promotion of such a development is not supported.

8. Although a transport statement has been submitted in support of the representation, I find that it does not appear to assess the actual impact on the A90 junction or offer a definitive response to the requirements of paragraph 3.14 of the strategic development plan. I am unable to assess the impact of the proposed development on the AWPR and the Goval junction.

9. The transport assessment suggests that many of the trips to the development would be diverted trips from the key transport corridors routing past the site. The representation is not supported by an assessment of the proposal’s potential social and economic impact on nearby settlements and town centres that offer similar facilities and from where such trips might be diverted. I appreciate that some of those diverted trips may offer environmental benefits in the form of reduced travel. However, this would be an out of centre location in terms of policy B1 town centres and policy B3 tourist facilities.

10. The site is in the green belt, where the purpose is to protect the character and landscape setting of the city (strategic development plan paragraph 6.9). Although this site had been used as a construction compound, it has been restored and could revert to providing a landscape setting for the city. The representation suggest that the woodland would be retained in any proposal.

11. Overall, I am not satisfied that the proposal has demonstrated that the potential benefits outweigh the impacts on the A90 and its junctions, or on nearby settlements and centres that already provide such services. No modification to the plan is required.

Non-Allocated Bid Site GR144 (part) – Land North of Goval Junction, Little Goval

12. An allocation for 15 homes is sought for bid site GR144. The site would provide self-build and custom-built housing plots to meet local needs, and the opportunity for a new sustainable rural lifestyle. The site is located within the triangle created by the A90 Aberdeen Western Peripheral Route, the A947 and the B977. It lies to the north of the existing access road to Little Goval Cottages.
13. The representation argues that it is an appropriate use in the green belt, it is in an accessible rural area, would provide choice in the local housing market and has good transport links.
14. In the strategic environmental assessment, negative effects in the form of surface water flooding, loss of trees and ancient woodland, loss of greenbelt land and landscape impact were identified. The remainder of effects were neutral. At Main Issues Report stage, the proposal was not supported for the same reasons. The council noted that the AWPR is not a development corridor and promotion of such a development is not supported.
15. The site would be visually prominent if developed and there could be impacts on the residential amenity of new homes from the close proximity to the road network. I have not been provided with any information on this matter, and so am unable to reach a conclusion. Its location in the countryside and in the green belt gives rise to landscape impact and setting issues, as the wooded setting of the city in this location would change, should this site be developed for housing. I appreciate that the woodland itself would be unaffected but the visual impact would change to be a developed setting.
16. Given the availability of other sites in rural areas outwith the green belt in Aberdeenshire, I am satisfied that this site would not represent the best development option or location for self-build plots. I find that there are other sites available to meet the strategic development plan allowance for the Aberdeen Housing Market Area, and I do not consider that the allocation of bid site GR144 would be justified. No modification is recommended.

Hatton of Fintray

Flood Risk

17. The Scottish Environment Protection Agency (SEPA) has requested the addition of a flood risk section to the Hatton of Fintray settlement statement. I agree that in the interests of consistency, a new bullet point be added to note the presence of a watercourse next to site OP1 and that a Flood Risk Assessment may be required. Modifications on these matters are recommended below.

Services and Infrastructure

18. Scottish Water has requested that the strategic drainage and water supply bullet point be amended to reflect the status of services in the settlement and to encourage early dialogue with Scottish Water. I agree that in the interests of clarity, the bullet point should be amended. A modification on this matter is recommended below.

Site OP1 – North of B977

19. SEPA has requested the alteration of the reference to watercourses in the allocation summary to the singular. I agree that in the interests of clarity, the reference should be amended. A modification on this matter is recommended below.

20. Fintray Community Council is seeking to have the 16 home allocation on site OP1 set as a capacity limit. I appreciate the concern expressed regarding the potential number of homes based on the council's standard density per hectare calculation and note that at Main Issues Report stage, the area of the site was reduced to limit the number of homes to 16. I note that there is no restriction on the number of homes that could be applied for through a planning application, but it is for the development management process to determine the optimum outcome for the site, though the application of the council's policies and standards.

21. A representation is seeking to increase the site area to reflect the original allocation in previous plans, which would result in a larger site area, but to set the number of homes to be delivered at 16. The representee advises that larger plots tend to be typical in Hatton of Fintray and that 16 homes would still reflect the council's strategy. I find that in applying the council's standard density per hectare calculation, a smaller site size with the same number of units is appropriate. It would result in a more efficient use of land and of resources.

22. A representation is seeking to have the site removed due to it being marketability constrained in the housing land audit 2019. The site identified in the 2019 housing land audit is for eight homes on a larger site. I consider that the reduction in the site area and increased density may improve the marketability of the site. No substantive evidence has been submitted to indicate otherwise.

23. No modification to the plan is required.

Keithhall

Flood Risk

24. SEPA has requested the addition of site OP1 to the flood risk section in the proposed plan. I agree that in the interests of consistency, the bullet point should be amended to note that for site OP1, a Flood Risk Assessment may be required. A modification to that end is recommended below.

Site OP1 – South of Inverurie Road

25. A representation objects to the inclusion of site OP1 in the plan and the increase in the number of homes it could deliver, as it is noted as ownership constrained in the housing land audit 2019. In order to gain a better understanding of the implications of the existing constraint, this site was included in a further information request (FIR008). Responses were received from the council and the Church of Scotland General Trustees, the site owner. The council explained that the site was recorded as ownership constrained due to a tenancy on the land, which has now expired. The site owner has indicated its intention to release the site to the market. On this basis, I am satisfied that the constraint has been

resolved and the site would be deliverable within the plan period. No modification to the plan is required.

Non-Allocated Bid Site GR128 – South of Inverurie Road

26. Bid site GR128 is immediately adjacent to site OP1, and lies to the south of the B993 and west of the road that leads to the B977. At the time of my site visit, it was in agricultural use.

27. The representation is seeking the allocation of the site for up to 32 homes in this plan period. It notes that the site had been supported for inclusion in the plan in the Main Issues Report and that it is available, deliverable and would create a more sustainable and higher quality development.

28. I note that, following concern expressed regarding the scale of development, the site was not included in the proposed plan. I agree that given the small size of Keithhall, an allocation for 32 homes in addition to site OP1, would be excessive. I am not convinced that an additional 32 homes would be deliverable within the plan period and therefore the allocation could not be justified on the grounds of contributing towards the strategic development plan allowance for the Aberdeen Housing Market Area. I note that the allocation summary for site OP1 makes specific reference to the potential for possible future expansion of the settlement onto bid site GR128, but not in this plan period. I consider this to be a reasonable approach. No modification to the plan is required.

Non-Allocated Bid Site GR060 – Land at Tweedale

29. A representation promotes the development of bid site GR060 for 400 homes and associated infrastructure. The site is located outwith any settlement, lying to the east of Port Elphinstone and west of Keithhall. The southern boundary of the site is formed by the B993, with the woodlands of the Keithhall estate forming the boundaries to the north, east and west. The site is in single ownership and immediately available for development, and was supported in representations by a designed landscape appraisal and a landscape and visual appraisal. In addition to 400 homes, the representation suggests that a portion of a new eastern relief road for Inverurie could be delivered by the proposal. Objection is raised to the lack of allocations of greenfield housing in the area and to the shortfall in effective housing land in the Aberdeenshire Housing Market Area.

30. In the strategic environmental assessment, negative effects in the form of waste water and water mains capacity, surface water flooding, the loss of prime agricultural land, landscape impact and a permanent negative effect on an inventory garden and designed landscape were identified. At Main Issues Report stage, the proposal was not supported, as the scale of development was considered disproportionate to the size of Keithhall and the constraints already identified. In the Issues and Actions Paper, objections were noted from NatureScot, Historic Environment Scotland and SEPA, based on impact on ancient woodland, mature policy woodland in a designed landscape and the Keith Hall Inventory garden and designed landscape.

31. The suggestion that the site could deliver an eastern relief road for Inverurie is considered to be of little value at present, as the allocations for development in the town of Inverurie could and would contribute proportionately to any such road. I find that the site has little or no physical or visual connections to any settlement, and is remote from

services and facilities.

32. I agree that the proposal could have a negative impact on the key features of the Keith Hall inventory garden and designed landscape, the policy woodland and ancient woodland. I appreciate that detailed consideration would need to be given to the impact of the proposed layout on these cultural and landscape interests, and mitigation could potentially minimise any such impacts. However, I conclude that, even with mitigation, the proposal is likely to detract from the setting of the Keith Hall inventory garden and designed landscape.

33. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. Whilst this site could potentially contribute to meeting this shortfall, I conclude that the negative effects outlined above would outweigh the benefits in terms of providing additional land for housing. Furthermore, the scale of development on bid site GR060 could potentially inhibit the delivery of the existing strategic allocations at Inverurie and Port Elphinstone. There are other sites available to meet the identified shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area. No modification is required.

Kingseat

Site BUS1 – Safeguarded for business uses

34. Two representations are seeking to have site BUS1 reallocated as an opportunity site for housing. One is seeking to have 50% of the business park allocated for housing, specifically the area comprising units 4, 5 and 6 at Kingseat Business Park. The other is suggesting demolishing the existing pavilions and redeveloping the whole of the site.

35. Kingseat Business Park is located to the east of the settlement, south of the B979. I noted at my site inspection that the signage appeared to be for Newmacher Business Centre, which may relate only to the central pavilion. The northern pavilion did not appear to be occupied but the remainder of the site appeared to be let and in use.

36. The council advises that the purpose of a BUS designation is to safeguard existing employment/business sites.

37. Paragraph B2.2 of policy B2 (Employment/Business Land) in the proposed plan clearly sets out the circumstances where alternative development proposals would be permitted. I note that it should be demonstrated that there is no reasonable prospect of the employment land becoming marketable for business development. The alternative use, in this case residential, must benefit the local community and not prejudice the strategic employment land requirement.

38. I find that the proposed re-allocation of site BUS1 has not been fully evidenced. Although there is anecdotal evidence of difficulty in letting the business space, there is no formal marketing report or history of a marketing campaign to illustrate this. The potential benefits of the alternative use have not been demonstrated.

39. I agree that retaining the business use, until such time as a detailed proposal for the redevelopment of the site comes forward, is appropriate. Any such proposal could be dealt

with through the development management process. No modification to the plan is required.

Site BUS2 – Safeguarded for business uses

40. A representation from the owner and operator of site BUS2 is objecting to the allocation of the site as land safeguarded for business use, and to the site being included within the settlement boundary.

41. The site comprises warehouse and business units, and lies to the north of the B979, to the north-east of Kingseat Avenue. At the time of my site inspection, the site appeared to be in use.

42. The inclusion within the settlement boundary of the site and Wood Cottages, which are also located to the north of the B979, was shown in the Main Issues Report. The Issues and Actions Paper indicates that it was a committee decision to identify the site as business allocation. Given the nature of the existing uses on the site, I consider a business allocation to be justified. I also consider it reasonable to extend the settlement boundary to include the built development to the north of the B979 road.

43. Allocating the warehouses as a business use does not prevent its redevelopment for an alternative use. I find that paragraph B2.2 of policy B2 (Employment/ Business Land) clearly sets out the circumstances where alternative development proposals would be permitted. I am satisfied that the interests of the owner/operator are not prejudiced by the allocation or inclusion within the settlement boundary, as it would not affect the day to day operation of the business and would not prevent alternative uses being considered. No modification to the plan is required.

Services and Infrastructure

44. SEPA and Scottish Water have both requested changes to the strategic drainage and water supply section, in reference to the Newmacher waste water treatment works and the growth project. The representation by Scottish Water updates the current position and addresses the matters raised by SEPA. I agree that the revised text provided by Scottish Water clarify the position on waste water capacity for the settlement and a modification to that end is set out below.

Site OP1 – Former Kingseat Hospital

45. NatureScot has requested that the allocation summary for site OP1 in Kingseat be amended to include a requirement for active travel provision and good quality open space. The council agrees. I find that the additional wording would help promote good quality open space and active travel opportunities, consistent with relevant policies in the plan. A modification is recommended to this effect.

Kinmuck

Non-Allocated Bid Site GR118 – Land South West of Meadow Croft

46. A representation is seeking the allocation of bid site GR118 for up to 15 homes. The site is located to the south-west of the settlement, to the south of the B979. The site would

support self build and custom build homes for which there has been significant local interest. At the time of my site visit, the site was in agricultural use.

47. The strategic environmental assessment identifies negative effects in the form of waste water capacity and impact on a B-listed building (Friends Cottage), which could be mitigated by landscaping. All other effects would be neutral. At Main Issues Report stage, the proposal was not supported as it was considered to constitute an underdevelopment of land, as the site has capacity for up to 30 homes. The site is within a pipeline consultation zone and may affect the B-listed building. The site was not included in the proposed plan given the lack of services available in Kinmuck.

48. The vision for Kinmuck indicates that there is no capacity for significant new development due to constraints such as public waste water infrastructure. The key objective is to preserve the amenity and character of the village.

49. I note that there are no development opportunities allocated in Kinmuck in this plan period and that services in the village itself are limited. Access to services, facilities and further transport options are only available in Keithhall and in Inverurie, all of which would require travel to and from the site.

50. If the site were developed for self build and custom homes, then I agree that the density could be lower than the council's standard 25 homes per hectare. However, it would not be appropriate to allocate the site for such specific housing types, nor prevent development proposals which are of a higher density and a different housing type from coming forward.

51. I am satisfied that appropriate landscaping and open space setbacks could mitigate any potential impact on the near-by B-listed building and preserve the character and amenity of the settlement. Appropriate landscape buffers on the approach to Kinmuck from the north would also serve to preserve the setting of the village.

52. I have insufficient information before me regarding the implications of the pipeline consultation zone. However, it is potentially a matter that could be addressed at design stage in accordance with policy P4 and the Health & Safety Executive land use planning methodology.

53. Whilst the provision of 15 homes could contribute towards the strategic development plan allowance for the Aberdeen Housing Market Area, I do not consider this to be a sustainable location for new housing development. The proposal would result in increased travel by private car, which would be contrary to one of the intended outcomes of the plan. I conclude that site GR118 should not be allocated for development. No modification to the plan is required

Reporter's recommendations:

Modify the local development plan by:

Hatton of Fintary

1. Adding a new flood risk section to the Hatton of Fintary settlement statement on page 547, with the following new bullet point:

“• Due to the presence of a small watercourse adjacent to OP1 a Flood Risk Assessment maybe required.”

2. Adding the following new sentences to the end of the ‘Strategic drainage and water supply’ bullet point in the Hatton of Fintary settlement statement on page 548:
“There is limited supply at Hatton of Fintray septic tank. Early engagement with Scottish Water is recommended.”

3. Replacing the word ‘these’ with ‘this’ in the final sentence of the fourth paragraph in the allocation summary for OP1: North of B977 in the Hatton of Fintary settlement statement on page 549.

Keithhall

4. Adding the following new third bullet point to the Flood Risk section of the Keithhall settlement statement on page 575:

“• A Flood Risk Assessment will be required for site OP1.”

Kingseat

5. Replacing the last sentence of the ‘Strategic drainage and water supply’ bullet point in the Kingseat settlement statement on page 583 with:

“A Growth Project has been initiated and early engagement with Scottish Water is required to discuss build out plans of any sites.”

6. Adding the following new final sentence to the allocation summary for OP1: Former Kingseat Hospital in the Kingseat settlement statement on page 584:

“Development should include provision for active travel and good quality open space.”

Planning authority's summary of the representation(s):

Cullerlie

Settlement Status

One representee has stated that Cullerlie should be recognised as a settlement and have a Settlement Statement. The settlement should consist of land subject to bid site GR098 (discussed below), land occupied by Flora's restaurant and land to the east, south and southwest of bid site GR098 (PP0600).

Non-Allocated Site – Bid Site GR098 – Land at Cullerlie Smithy

A representee has requested that bid site GR098 be allocated as a mixed-use site for housing and retail/ employment uses. Development of bid site GR098 site would allow the creation of a rural hub in an area where there is already an established employment and residential use. The representee has disagreed that the analysis of the site in the Issues and Action Paper provides sufficient rationale to exclude GR098 as the site benefits from a semi-rural location, space and amenity can be provided and existing services in the area. The representee has included two Appendices (RD0095.A and RD0095.B) in their submission which provides further detail to support their position (PP0600).

Non-Allocated Site – Bid Site GR099 – Land East of Birchmoss Depot

A representee has requested that bid site GR099 be allocated for 4.6 ha employment land (Class 4, 5 and 6). The representee has indicated an aspiration to expand in an easterly extension to the existing employment development land at Birchmoss and considers this would be an attractive option for research or storage uses and could provide opportunities for small or medium sized businesses which are seeking smaller plots of land to establish or grow their operations on small footplates. An allocation would provide an attractive and well-located space within Aberdeenshire. The representee has disagreed that the analysis of the site in the Issues and Action Paper provides sufficient rationale to exclude GR099. The representee has included a number of Appendices (RD0097.A, RD0097.B and RD0097.C) in their submission which provides further detail to support their position (PP0602).

Dunecht

Flood Risk

Scottish Environment Protection Agency (SEPA) has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Land to the West of Tillybrig

SEPA has confirmed that they have no flooding, strategic drainage or water supply issues with site OP1 (RD0214.B). No modification sought (PP1219).

Non-Allocated Site – Bid Site GR094 – North of Dunecht, West of B977

A representee has requested that bid site GR094 be allocated for 50 homes. The development potential of this site was previously recognised in preparation of the Local Development Plan (LDP) 2012 and in the Main Issues Report (MIR) 2019. As site OP1 is nearing completion, site GR094 would increase availability of housing in Dunecht, and benefit from, and help sustain, a range of local services, including the primary school. Dunecht is a popular settlement being in close proximity to Westhill and Aberdeen with associated employment opportunities, and good transport links. The site location would avoid ribbon development. The representee disagrees that there would be significant impact on the Scheduled Monument as this would be addressed, and flood risk appropriately mitigated through development management procedures. The site could be delivered following adoption of the Plan or split into two phases with 25 homes in the first 5 years and the remaining 25 delivered following an interim review of the Plan. The representee has included a number of Appendices (RD0070.A, RD0070.B and RD0070.C) in their submission which provides further detail to support their position (PP0451).

Echt

Site P2 – To protect area of open space at risk from flooding and forming part of the green-blue network

A representee supports inclusion of site P2 as open space and landscaping to be provided in bringing forward development proposals on site OP1 (PP0500).

A representee notes that it is proposed to plant trees, but this area is prone to flooding and is often boggy. Trees previously planted have died and there is concern that the same will happen again. Any dead trees should be replaced in a timely manner (PP0426).

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the

Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

There is no public transport and other areas are poor in terms of inter-area transportation. The lack of cycle paths and pedestrian safety are issues. The need to travel and reliance on cars is exacerbated by a lack of facilities to support additional population and poor transportation. Access to public transport, active travel provision and local facilities in the settlement should be clarified (PP0057).

Site OP1 – North of Forbes Park

One representee welcomes the allocation of OP1 for 25 homes, as it will ensure the continued growth of the village to meet demand, and it will sustain local services and facilities. The representee has included a number of Appendices (RD0079.A, RD0079.B and RD0079.C) in their submission which provides further detail to support their position (PP0500).

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP1 (RD0214.B) (PP1219).

A number of representees object to inclusion of site OP1 (PP0057, PP0191, PP0329, PP0342, PP0357, PP0545, PP0555, PP0735, PP0742, PP0844, PP0846, PP0931, PP0949, PP1024 (Echt and Skene Community Council), PP1127 and PP1418). A range of reasons were cited including that:

- The proposal would constitute overdevelopment and the settlement should be afforded time to absorb recent development (PP0191, PP0555, PP0742, PP0846, PP1024 and PP1418).
- There is a lack of infrastructure to support development (PP0329, PP0545, PP0555, PP0846 and PP0949).
- There is no mains gas available (PP0949).
- The Echt Waste Water Treatment Works is already or near capacity (PP0357, PP0555, PP0742, PP0931, PP0949, PP1127 and PP1418).
- The primary school will be over capacity (PP0329, PP0357, PP0545, PP0555, PP0931, PP0949 and PP1024).
- Echt is served poorly by public transport (PP0329, PP0357, PP0545, PP0555, PP0742, PP0844, PP0931, PP0949, PP1024 and PP1418).
- Development would result in increased car dependency and impact on roads, traffic, parking and safety (PP0357, PP0545, PP0555, PP0735, PP0742, PP0844, PP0931, PP0949, PP1127 and PP1418).
- Development would cause habitat loss for a range of species, flora and fauna (PP0545, PP0555, PP0735, PP0844, PP0846, PP0931, PP0949, PP1127 and PP1418).
- A footpath would be lost because of development (PP0735, PP0742, PP0844, PP0846, PP1127 and PP1418).
- The site is at risk from flooding (PP0057, PP0329, PP0342, PP0357, PP0742, PP0844, PP0846, PP0931 and PP1418).
- Development will cause noise and disruption, particularly during construction

(PP0545, PP0555, PP0735, PP0846, PP0949 and PP1127).

- The impact development would have on housing prices, particularly given the decline in oil and gas meaning that houses are taking longer to sell (PP0329, PP0545, PP0555 and PP0949).
- The design of recent development has not been sympathetic to cultural heritage or the surrounding architecture. There is concern that this may be repeated (PP0931).
- Development would not follow the traditional linear pattern of the settlement (PP0357, PP0742 and PP1418).
- Overshadowing, overlooking and loss of privacy (PP0846).
- Clarity is sought with regards to local provision for recycling (PP0545).

Representees have included Appendices (RD0045.A- RD0045.B, RD0197.A and RD0274.A – RD0274.B) in their submission which provides further detail to support their position (PP0342, PP1127 and PP1418).

Non-Allocated Site – Bid Site GR093 – South East of Echt, South of B9119

A representee has requested that bid site GR093 be allocated as a Future Opportunity Site for 42 homes. This site was identified as a preferred site in the MIR 2019, but site GR092 (OP1) was subsequently allocated. It is argued that site GR093 is deliverable, free from constraints and would ensure the longer-term growth aspirations of the settlement, as well as the future sustainability of the broad range of existing services and amenities within the settlement, including a local shop and post office, primary school, church and restaurant. The site would form a natural south easterly expansion and consolidate the existing boundaries of the settlement. The representee has included a number of Appendices (RD0080.A, RD0080.B and RD0080.C) in their submission which provides further detail to support their position (PP0501).

Non-Allocated Site – New N002 – Echt Glebe

A representee requests that a new site (N002) be allocated for 25 homes. The site was not submitted as a bid at call for sites or MIR consultation stages. The site has been recommended for development by a local church group to meet local housing needs. Any uplift value from the sale of the site would be reinvested back into the local community. A phased development of 25 homes is promoted and would utilise an existing field access and development would reflect the scale and density of existing housing in the area. There may also be scope, to take non-vehicular access via the playing fields to the north of the site. The site is well located in relation to the existing development and could be viewed as a natural and logical expansion of the settlement. Development would meet local housing needs and help sustain and support the range of services, shop and facilities that are currently available in Echt. The site lies adjacent to a listed manse and old churchyard, and the layout of the development would respect the setting of these. There are no flood risk issues, no known heritage or archaeological constraints within the site. The site would allow for an appropriate level of development to meet local housing needs in an attractive and accessible settlement. The Settlement Statement advises a car park is an aspiration of the community and development of this site could also provide a location for the new car park. There could be an opportunity to provide an off-road footpath/cycleway through the site to link with the school and playing fields for a safe route to school. The site can be advanced as a suitable housing site to meet local needs in an accessible and sustainable location that would, complement existing housing development in the area and meet objectives of the settlement by meeting local housing needs; sustaining local services; and

enhancing the role and attractiveness of the settlement, in addition it could provide a new car park. The representee has included two Appendices (RD0260.A and RD0260.B) in their submission which provides further detail to support their position (PP1307).

Garlogie

Flood Risk

SEPA requests that for consistency, a new 'Flood Risk' section and bullet point is added to state that, "Garlogie lies within an area potentially vulnerable to flood risk and Flood Risk Assessments may be required." (RD0214.B) (PP1219).

Services and Infrastructure

SEPA requests that for consistency, a new 'strategic drainage' bullet point is added to state that there is no public waste water infrastructure in Garlogie (RD0214.B) (PP1219).

Non-Allocated Site – Bid Site GR095 - Land North of Roadside of Garlogie

A representee has requested the allocation of bid site GR095 for 15 homes as it would ensure the sustainable and balanced growth of Garlogie, allow for consolidation of the village layout by improving the existing ribbon pattern of development, whilst making a modest contribution to strategic housing targets set by the Aberdeen City and Shire Strategic Development Plan. The representee welcomes the identification of Garlogie as a settlement but it is argued that this would be meaningless without allowing modest expansion to meet local demand. The development would support and sustain local services and facilities in the village including the school, increase housing choice and provide affordable housing where there is demand and developer interest. It is added that the proposal of 15 homes would be sympathetic, unobtrusive, and the open space would create a focal point for the village. It is refuted that there is no strategic need to allocate this site as it would bolster the existing effective allocations, allow for managed growth of Garlogie that has not benefitted from any development in the last 30 years, it is accessible and it would be deliverable. The proposed housing would be screened by existing housing and landscaping. The representee disagrees that there would be impact on an archaeological site. The representee has included a number of Appendices (RD0273.A, RD0273.B and RD0273.C) to support their position (PP1417).

Kirkton of Skene

Vision

A representee has requested that the statement, "There has been significant development pressure around Kirkton of Skene in recent years, but the need to preserve the setting and character of the settlement mean that the settlement is not an appropriate location for significant new development and as such no development allocations have been made during the Plan period." is removed and replaced with, "There has been a limited amount of new development around Kirkton of Skene in recent years, but a modest amount of development is required to help sustain the range of important existing services within Kirkton of Skene. An allocation for 45 new homes has been made at Land southwest of Old Skene Road. The delivery of additional homes on this well screened site will avoid coalescence with Westhill." (PP1282).

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Service and Infrastructure

SEPA requests, for consistency, the addition of a 'Strategic drainage and water supply' bullet point that includes text, which is confirmed by Scottish Water, on the capacity of its infrastructure in Kirkton of Skene (RD0214.B) (PP1219).

Non-Allocated Site – Bid Site GR116 – Land South West of Old Skene Road

A representee requests that bid site GR116 be allocated for 45 homes. This development would assist in the economic contribution to the settlement in the longer term. The representee has included a number of Appendices (RD0238.A- RD0238.E) in their submission which provides further detail to support their position (PP1282).

Lyne of Skene

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Service and Infrastructure

There is a lack of drainage infrastructure but there is scope for connecting the development to the mains' drainage or to a standalone system (PP0663). SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Non-Allocated Site – Bid Site GR031 (Site A) – Sites A, B and C

A representee requests that bid site GR031 (Site A) be allocated for 40 homes and a retail/community facility. Development can be delivered in a phased manner, covering 2 to 3 Plan periods. The site occupies the frontage of the B977 which offers an ideal location for the retail/community facility. Landscaping on the southern boundary would be provided to enhance the setting of the settlement. Lyne of Skene is able to absorb sensitive development and the site forms a logical and sustainable expansion of the settlement. The settlement is served by public transport. The representee has included an Appendix (RD0102.A) in their submission which provides further detail to support their position (PP0663).

Modifications sought by those submitting representations:

Cullerlie

Settlement Status

Modify the PLDP to recognise Cullerlie as a settlement (PP0600).

Non-Allocated Site – Bid Site GR098 – Land at Cullerlie Smithy

Modify the PLDP to include bid site GR098 for a mix of uses including housing and retail/employment uses (PP0600).

Non-Allocated Site – Bid Site GR099 – Land East of Birchmoss Depot

Modify the PLDP to include bid site GR099 for 4.6 ha employment land with the allocation summary to read, “This is a newly allocated site that forms a logical extension to the already existing Birchmoss Depot. New and extended planted boundaries will ensure that the development of the site will be sympathetic to the character and setting of the surrounding area. Employment land uses in Classes 4,5 and 6 with supporting ancillary uses are considered to be acceptable here.” (PP0602).

Dunecht

Non-Allocated Site – Bid Site GR094 – North of Dunecht, West of B977

Modify the PLDP to include bid site GR094 for 50 homes (PP0451).

Echt

Site P2 – To protect an area of open space at risk from flooding and forming part of the green-blue network

Modify the PLDP to state that any dead trees should be replaced in a timely manner (PP0426).

Services and Infrastructure

Modify the PLDP to clarify access to public transport, active travel provision and local facilities in the settlement (PP0057).

Site OP1 – North of Forbes Park

Modify the PLDP to remove site OP1 (PP0191, PP0329, PP0342, PP0357, PP0545, PP0555, PP0735, PP0742, PP0844, PP0846, PP0931, PP0949, PP1024, PP1127 and PP1418).

Non-Allocated Site – Bid Site GR093 – South East of Echt, South of B9119

Modify the PLDP to include bid site GR093 as a future opportunity site for 42 homes (PP0501).

Non-Allocated Site – New N002 – Echt Glebe

Modify the PLDP to include site N002 for 25 homes (PP1307).

Garlogie

Flood Risk

Modify the PLDP to add a new 'Flood Risk' section and bullet point, "Garlogie lies within an area potentially vulnerable to flood risk as identified by the National Flood Risk Assessment. Flood Risk Assessments may be required." (PP1219).

Services and Infrastructure

Modify the PLDP to add a new bullet point, 'Strategic drainage and water supply': There is no public waste water infrastructure in Garlogie." (PP1219).

Non-Allocated Site – Bid Site GR095 - Land North of Roadside of Garlogie

Modify the PLDP to include bid site GR095 for 15 homes (PP1417).

Kirkton of Skene

Vision

Modify the PLDP to amend the Vision to read, "There has been a limited amount of new development around Kirkton of Skene in recent years, but a modest amount of development is required to help sustain the range of important existing services within Kirkton of Skene. An allocation for 45 new homes has been made at Land South West of Old Skene Road. The delivery of additional homes on this well screened site will avoid coalescence with Westhill." (PP1282).

Service and Infrastructure

Modify the PLDP to add a new 'Strategic drainage and water supply' bullet point that sets out the capacity of Scottish Water infrastructure, which has been confirmed by Scottish Water (PP1219).

Non-Allocated Site – Bid Site GR116 – Land South West of Old Skene Road

Modify the PLDP to include bid site GR116 for 45 homes (PP1282).

Lyne of Skene

Non-Allocated Site – Bid Site GR031 (Site A) – Sites A, B and C

Modify the PLDP to include bid site GR031 (Site A) for 40 homes and a retail/community facility (PP0663).

Summary of responses (including reasons) by planning authority:

Cullerlie

Settlement Status

The Council does not agree to preparing a Settlement Statement for Cullerlie in Appendix 7

as there are no land use allocations or other designations proposed. As outlined in the Issues and Actions Papers, AD0040.E, page 118), it is maintained that Cullerlie is an unsustainable location and that development should be focused towards, existing settlements, in accordance with paragraphs 40 and 81 of SPP (AD0012). Development in this area would be considered under the relevant policies in the PLDP. No change is required.

Non-Allocated Site – Bid Site GR098 – Land at Cullerlie Smithy

The Council does not support allocating bid site GR098 for a mix of uses including housing and retail/employment uses. Bid site GR098 was not identified as preferred option in the MIR 2019 (see MIR 2019, Appendix Garioch, AD0038.E, page 94). The site is distant from amenities or community facilities which would promote high car dependency. As outlined in the Issues and Actions Papers (see MIR Issues and Actions Papers, AD0040.E, Issue 120 Garioch Landward), it is maintained that Cullerlie is an unsustainable location and that development should be focused towards, existing settlements, in accordance with paragraphs 40 and 81 of SPP (AD0012). Furthermore, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site GR099 – Land East of Birchmoss Depot

The Council does not support allocating bid site GR096 for 4.6 ha employment land. Bid site GR099 was not identified as preferred option in the MIR 2019 (see MIR 2019, Appendix Garioch, AD0038.E, page 94). The site is distant from any settlement which would promote high car dependency. The existing depot at Birchmoss is relatively self-contained. There is no established need that would justify allocating further employment land at this time. Should such demand have been established, our preference would be to direct development opportunities towards existing settlements, in accordance with SPP. No change is required.

Dunecht

Flood Risk and Services and Infrastructure

Comments from SEPA in respect to sections on ‘Flood Risk’, ‘Services and Infrastructure’ and site OP1 are noted.

Non-Allocated Site – Bid Site GR094 – North of Dunecht, West of B977

The Council does not support allocating bid site GR094 for 50 homes. It is acknowledged that site GR094 was identified as a ‘reserved’ option in the MIR 2019 (see MIR 2019, Appendix Garioch, AD0038.E, page 20). However, in considering responses to the MIR consultation it was recommended that the site should not be allocated as an opportunity site in the PLDP on the basis of comments received from Historic Environment Scotland and NatureScot (Scottish Natural Heritage) (see MIR Issues and Actions Papers, Issue 99 Dunecht, AD0040.E, pages 19-21). As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Echt

Site P2 – To protect an area of open space at risk from flooding and forming part of the green-blue network

Support expressed for site P2 is noted. Site P2 is associated with the development of site OP1 and the Planning Authority expects this site to be enhanced to include a buffer strip as outlined in the allocation summary for site OP1. Any planting which, within a period of 5 years from the completion of the development, in the opinion of the Planning Authority is dying, being severely damaged or becoming seriously diseased, would require to be replaced by plants of similar size and species to those originally required to be planted. This matter can be addressed through the development management procedures and inclusion of an appropriate condition to any planning permission granted. No change is required.

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

The Council has no control over the timetabling or routes offered by bus providers as these are operated by private organisations. Echt is currently on a route served by buses however the frequency and routes of local bus services are not, matters that can be addressed directly through the Plan-making process. PLDP policy P1.5 requires development to be “well connected to create well connected places that require intermodal shifts and active travel”. No change is required.

Site OP1 – North of Forbes Park

Support expressed for site OP1 is noted along with comments from SEPA.

The Council note that there are concerns surrounding the proposed allocation. Echt is located within a "local growth and diversification area", which the Strategic Development Plan (SDP) 2020 identifies as being appropriate for a level of growth related to local needs and encouraging sustainable mixed communities (see SDP 2020, AD0016, Spatial Strategy, paragraphs 3.44 and 3.45). Site OP1 is a new allocation in the PLDP and was subject to a bid (GR092) received in response to the Council's call for sites in 2018. Bid site GR092 was not identified as a preferred option in the MIR 2019. The MIR acknowledged that there was little to separate the merits of the bid proposals in Echt but at that time bid site GR093 was considered to be the Officers' preference. It was not possible to support both sites due to constraints associated with creating additional capacity at Echt School (see MIR 2019, AD0038.E, Appendix Garioch, page 24). Responses received to the MIR 2019 consultation indicated a preference to see bid site GR092 developed rather than site GR093 (see MIR Issues and Actions Papers, AD0040.E, Issue 101 Echt, pages 24-26). As such it was recommended that bid site GR092 be allocated in the PLDP and to reduce the developable area to account for part of the site at risk from flooding. This area has been identified as P2 in the PLDP.

In terms of the comments raised by representees, many of these matters can be addressed at such time as a planning application comes forward such as mitigating impact on local roads infrastructure, school capacity, waste water treatment and flood risk. Likewise, sympathetic and high-quality layout, siting and design can ensure that overshadowing, overlooking and loss of privacy does not arise. Policies of the PLDP will ensure that impact on species is considered and mitigated where appropriate. Similarly, the PLDP includes a policy requiring new development to include appropriate opportunities for walking or cycling. Conditions can be applied to any planning permission to ensure that noise and disruption during construction are appropriately managed. Requirements from new development in respect of waste and recycling is already addressed in the proposed Settlement Statement for Echt. Impact on house prices is not a matter that can be addressed through the Plan-making process. Whilst Echt is on a bus route, it is acknowledged that development would be largely car dependent. However, Echt is well served by local services and amenities and is considered an appropriate location for new development. This accords with paragraph 40 of SPP which outlines that new development should be within or adjacent to settlements. No change is required.

The Council would generally be supportive of the belief that Echt should be permitted a period of time to allow the settlement to consolidate and react to the level of growth experienced during the recent Plan periods. The Council believe that the most appropriate time for this to take place would be after the forthcoming Plan period, following completion of the OP1 site and this should be fully considered and debated in preparing the next LDP but at this time, no change is required.

Non-Allocated Site – Bid Site GR093 – South East of Echt, South of B9119

The Council does not support allocating bid site GR093 for 42 homes. As noted above, there was little to separate the merits of the bid received in Echt. The Council maintain that following feedback to the MIR 2019, that bid site GR092 was in fact the more appropriate site to include within PLDP. It is not possible to allocate both sites due to constraints associated with providing additional capacity at Echt School (see MIR Issues and Actions Papers, Issue 101 Echt, AD0040.E, pages 24-26). Further consideration and debate is also required as to whether Echt needs time to absorb recent growth before further land is allocated for development. The Council propose this should be considered in preparing the next LDP for the Aberdeenshire area. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – New N002 – Echt Glebe

The Council does not support allocating new site N002 for 25 homes. The site was not put forward as a development bid so was not considered as such at the MIR stage, nor subject to site assessment and public consultation. In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Garlogie

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Non-Allocated Site – Bid Site GR095 - Land North of Roadside of Garlogie

The Council does not support allocating bid site GR095 for 15 homes. Bid site GR095 was not identified as a preferred option in the MIR 2019 (see AD0038.E, page 97). As outlined in the Issues and Actions Papers (see AD0040.E, page 119), it was considered appropriate to identify Garlogie within the "Settlement Statement" appendix of the PLDP only on the basis that it contains a conservation area, maintaining consistency with the approach taken for other settlements. The Vision contained within the Settlement Statement, identifies the primary planning objective is to preserve the amenity and character of the settlement and highlights that Garlogie is not considered an appropriate location for new development. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Kirkton of Skene

Vision

There has been significant development pressure around Kirkton of Skene in recent years. This is demonstrated in the development bids received to the Council's call for sites in 2018 and previously in 2013, relative to the size of the settlement. Development pressure nearby at Westhill also has a bearing on the desire to not direct new development to Kirkton of Skene. The most recent development in Kirkton of Skene is a development comprising of 20 homes at Kirkville completed in 2013. Given the objective to prevent coalescence with Westhill it is maintained that Kirkton of Skene is not an appropriate location for significant new development and that no development allocations should be made for the forthcoming Plan period. No change is required.

Flood Risk

Comments from SEPA are noted. No change is required.

Service and Infrastructure

Aberdeenshire Council confirms that clarification has been sought from Scottish Water (see email from Scottish Water, AD0139). The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Non-Allocated Site – Bid Site GR116 – Land South West of Old Skene Road

The Council does not support allocating bid site GR116 for 45 homes. Bid site GR116 was not identified as preferred option in the MIR 2019 (see MIR 2019, Appendix Garioch, AD0038.E, page 63). As outlined in the Issues and Actions Papers and the Vision contained within the Settlement Statement, it is maintained that it would not be appropriate to identify opportunity sites in Kirkton of Skene at this time (see MIR Issues and Actions Papers, Issue 110 Kirkton of Skene, AD0040.E, pages 80-82). As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Lyne of Skene

Flood Risk

Comments from SEPA are noted. No change is required.

Service and Infrastructure

Comments from representees, including SEPA are noted. No change is required.

Non-Allocated Site – Bid Site GR031 (Site A) – Sites A, B and C

The Council does not support allocating bid site GR031 (Site A) for 40 homes and a retail/community facility. No part of bid site GR031, including Site A, was identified as a preferred option in the MIR 2019 (see MIR 2019, Appendix Garioch, AD0038.E, page 65). It is maintained that the proposal represents a scale of development over and above that which could be considered as appropriate to meet local needs in a settlement of the scale and nature of Lyne of Skene. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Reporter's conclusions:

Preliminary matters

1. The examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.
2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” in relation to the settlement statement matters covered in Issue 39. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Cullerlie

3. A representation seeks to have Cullerlie identified as a settlement in the plan. It is suggested that the existing café and the land to the south, south-east and south-west of the café site should encompass the extent of the proposed settlement.
4. The council does not support the designation of Cullerlie as a settlement, as there are no land use designations, no facilities and in terms of location, it is considered unsustainable.
5. I note that the glossary in the plan provides a definition of a settlement. In this instance, and as observed at my site inspection, there is no identifiable boundary for a settlement, there is no built up area, there is no street lighting and no reduced speed limit. There are less than 15 residential address points (the information submitted with the accompanying representation for the site indicates approximately eight new homes). Overall, I find that the requirements for settlement status are not met in this location, even taking account of the proposal below.
6. No modification is required.

Non-Allocated Bid Site GR098 – Land at Cullerlie Smithy

7. In addition to seeking settlement status, the representation also promotes bid site GR098 as a mixed-use allocation for homes, retail and employment uses. This could create a rural hub which would be sustainable and provide accommodation which is difficult to access in semi-rural locations.
8. The site is located at the junction of the B9125 and Couper's Road. It is currently comprised of a commercial building fronting the road to the north, with extensive parking areas and access from the north and the east. The southern part of the site is open farmland, with some farm buildings on the western boundary. There are a number of farm cottages and buildings on the western side of Couper's Road that are included within the proposed site.
9. The council considers that the site is remote from services and would be reliant on private transport, and that development in the plan area should focus on existing settlements. The strategic environmental assessment identifies mainly neutral effects, with the exception of a Health and Safety pipeline consultation zone. The scale of the proposed development was considered unlikely to give rise to significant effects. In the Issues and Actions Paper, bid site GR098 is discussed at Issue 120 Garioch Landward. The council concluded that Cullerlie is an unsustainable location and that development should be focused towards existing settlements, in accordance with Scottish Planning Policy. In addition to the representation seeking the allocation, there were two representations objecting to it.
10. Overall, I conclude that that development on this site would not be appropriate, given that it does not have settlement status, is remote from services and likely to be car reliant. I have insufficient information before me to comment on the implications of the pipeline consultation zone on the development potential of the proposed site. The identified shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area (see issue 5) would not justify an additional allocation of residential land in a location which is not in or adjacent to an existing settlement.

11. No modification to the plan is required.

Non-Allocated Bid Site GR099 – Land East of Birchmoss Depot

12. Birchmoss Depot is an existing industrial estate on the north side of the B9125. The site is in a relatively isolated location, with no adjacent or nearby settlements. Banchory is five miles away, Westhill is five miles away and Aberdeen is 12 miles away. The site is surrounded on all sides by agricultural land, which was in use at the time of my site inspection.

13. The representation is seeking to have 4.6 hectares of land allocated for employment uses, to accommodate an easterly expansion of the existing employment site. It is envisaged that future employees would be from the locality, so travel would be minimised. The site would provide opportunities for small and medium size businesses to access smaller plots in an attractive and accessible location. Any screening issues could be addressed through a landscape condition.

14. The council does not support the request for an allocation of employment land at Birchmoss Depot. It considers the site to be remote and that it would be car dependant. It also does not consider that there is a need for employment land in this location, as such a need would be met in existing settlements. The potential detrimental impact on the setting of a nearby scheduled monument was also noted.

15. I am satisfied that that appropriate screening could mitigate against the potential impact on the nearby scheduled monument. In terms of the unsustainable location and increase in travel requirements to access the site, I find the concerns of the council to be valid. Birchmoss Depot is in a relatively isolated location, with no housing or local services nearby. There are no existing settlements within five miles and commercial and passenger vehicles would need to travel relatively far distances to access the site. I have not been made aware of a mechanism which would ensure that workers travel from a defined local area. I also find that a need for additional employment land in this remote location has not been demonstrated.

16. No modification to the plan is required.

Dunecht

Non-Allocated Bid Site GR094 – North of Dunecht, West of B977

17. An allocation for 50 homes has been requested in a representation relating to bid site GR094. The site is located to the north-west of the settlement, and at the time of my site visit, appeared to be in productive agricultural use.

18. The site is bound to the north by a local road, to the east by the B977 which runs from Dunecht to Kintore, to the west by agricultural land and to the south by the Corskie Burn which is heavily wooded on its banks and the settlement beyond. Dunecht is a linear settlement with a range of services. In Dunecht, one site for housing is currently partially complete with the remainder of the site under construction on the western edge of the settlement.

19. The Main Issues Report noted the site as reserved, meaning that it was not preferred for immediate development. A number of potential constraints were identified, including impact on the linear character of the village; potential risk of flooding; and the pipeline consultation zone.

20. The strategic environmental assessment identifies mainly neutral effects, with the exception of the potential negative impact of increased travel requirements and the potential significant adverse impact on the setting of the Upper Corskie scheduled monument. The scale of the proposed development was considered unlikely to give rise to other significant effects

21. The representation advises that the pipeline would not impact on the layout or design of the site, nor would any development need to be located on the floodplain. The linear nature of the village would not be unduly affected, as the site would be naturally screened and the A944 would remain the primary focus of the village. The support for the site expressed in previous local development plan preparation processes is noted.

22. The council does not support the allocation of bid site GR094. Following the Main Issues Report submissions, comments from Historic Environment Scotland and NatureScot regarding the potential impact on the scheduled ancient monument at Upper Corskie and the character and distinctive historical vernacular in Dunecht raised concerns about the potential impact of the proposed development.

23. I recognise that it may be possible to mitigate some of the potential negative effects, in particular the impact on the scheduled ancient monument. I agree with the representation that the linear nature of the village could be retained, as the A944 corridor would remain the dominant feature of the village. However, given the availability of other sites to meet the strategic development plan allowance for the Aberdeen Housing Market Area, I do not consider that the allocation of bid site GR094 is justified at this time. Non-site specific representations relating to the identification of land with potential for future long term development are addressed under Issue 5. This concludes that there is no requirement for the local development plan to identify sites for the period beyond 2032.

24. No modification is required.

Echt

Site P2 – To protect area of open space at risk from flooding and forming part of the green-blue network

25. The purpose of designation P2 is to protect land to the northeast of allocation OP1 as open space, because it is a risk from flooding. The provision and management of tree planting in this area is not a matter for the local development plan. No modification is required.

Services and Infrastructure

26. The matters raised in relation to existing services and facilities in Echt are addressed in the section below on site OP1. No modification is sought to the services and infrastructure section of the settlement statement.

Site OP1 – North of Forbes Park

27. Site OP1 is located to the north east of the settlement. It is allocated in the proposed plan for 25 homes and includes an area of protected land, which is at risk of flooding (P2). At the time of my site visit, the land was in agricultural use. It is a flat site, bordered by fields to the north and east, and by the established Forbes Park residential development to the south and west. Echt is a small settlement but has a number of local services including a school, post office/shop, village hall, restaurant and church. The village is located on the four quadrants created by the junction of the B119 and the B977.

28. The site was promoted through a bid submission and is included in the proposed plan as the sole allocation for residential development in the settlement. The site has been identified as contributing to the strategic development plan allowance for the Aberdeen Housing Market Area and the council is content that the site can deliver 25 homes in the plan period. Echt is located within an area identified as being suitable for a level of growth related to local needs and encouraging sustainable mixed communities, as set out in paragraphs 3.44 and 3.45 of the strategic development plan. The potential for flooding has been recognised, and allocation P2 has been made to limit development in that part of the site.

29. A number of representations have been made relating to the principle of allocating land for new homes in Echt. The basis for such objections is that there is sufficient housing available in the village; access to public transport is limited; the site is subject to flooding; there are school capacity issues; and other settlements are better placed to accommodate development.

30. In relation to concerns regarding the impact on waste water capacity, the settlement statement explains that increased capacity would be provided through a Scottish Water growth project. Policy RD2 of the proposed plan provides the mechanism to seek developer contributions towards increased education capacity and infrastructure improvements, if needed as a result of development. Both primary and secondary education are identified in the settlement statement as potentially requiring developer contributions from residential development. I noted on my site visit that, although Echt has traditionally been arranged around the cross roads, more recent development at Forbes Park has expanded that pattern to the north-east. I find that further development in that area would not have an adverse impact on the settlement layout and pattern. The strategic environmental assessment concluded that the development of site OP1 would have a neutral or positive impact on habitats and biodiversity. Echt is served by public transport in the form of a bus service, but I note that this is not a frequent service.

31. At present, the details of the layout and design of any development at land north of Forbes Park are not known. Policy P1 (Layout, Siting and Design), Policy P2 (Open Space and Access in New Development) and the other relevant policies of this plan would be used to assess proposals with regard to impact on the amenity of neighbouring properties and the character and appearance of the area. There would be opportunities for participation in the development management process once a planning application is submitted and I am satisfied that this would be the most appropriate point in the planning process to consider such potential impacts. Impact on house prices is not in itself a relevant planning consideration.

32. I am satisfied that Echt is a suitable location for housing growth in this plan period, at

the scale provided for in site OP1. Further, at paragraph 3.46, the strategic development plan sets out that new housing should be in, or an extension to, existing settlements, particularly those which are well served by public transport. Although access to public transport is limited, there are services available in the village itself providing local facilities that do not require access to transport.

33. No modification to the plan is required.

Non-Allocated Bid Site GR093 – South East of Echt, South of B9119

34. A representation has been submitted seeking the identification of land to the south-east of Echt as a future opportunity site for 42 homes. This site lies to the south of the B9119. At the time of my site inspection, the site appeared to be in agricultural use.

35. General representations regarding the identification of future opportunity sites are addressed under issue 5. This concludes that, whilst the strategic development plan allows local development plans to identify additional strategic reserves beyond 2032, there is no requirement to do so. The council's decision not to identify future opportunity sites is in accordance with the strategic development plan.

36. Within this context, there is no justification to allocate bid site GR093 as a future opportunity site in the plan. The representee has not suggested that any part of the site would come forward in the period to 2032 and I have no evidence before me to indicate that the site could help meet the shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area.

37. I note that the site has been assessed through the strategic environmental assessment process and Main Issues Report stage. However, given my conclusions above, I have not undertaken a detailed assessment of the merits or otherwise of the bid proposal. No modification is required.

Non-Allocated New Site N002 – Echt Glebe

38. A representation to the proposed plan was made, seeking the allocation of a site at Echt Glebe for 25 homes. The site lies to the south of the village, to the east of the B977.

39. To the east and west across the B977, the site is bound by agricultural land. To the north are the school playing fields and to the south is a house and its grounds.

40. I note that submissions for this site were not made at the bid or Main Issues Report stages of the plan preparation. The site has therefore not been the subject of a strategic environmental assessment, nor has it been subject to any form of key agency or public consultation. Notwithstanding the information provided in support of the bid, I am unable to fully assess the merits or otherwise of the site at this time.

41. In any event, I conclude that there is no justification to allocate additional housing land in Echt for the period up to 2032. Whilst a shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area has been identified under issue 5, other suitable sites are available to address this matter. No modification to the plan is required.

Garlogie

Flood Risk

42. The Scottish Environment Protection Agency (SEPA) has requested a new flood risk section be included in the Garlogie settlement statement. I agree that, in the interests of consistency, a section on flood risk should be included. A modification on this matter is recommended.

Services and infrastructure

43. I agree that a new strategic drainage and water supply bullet point should be added to the services and infrastructure section. This should include the information provided by Scottish Water which notes that there is no public waste water infrastructure in Garlogie. A modification to this effect is recommended.

Non-Allocated Bid Site GR095 - Land North of Roadside of Garlogie

44. Site GR095 lies to the north on Garlogie and to the west of the B9126. The site is generally flat, and wooded to the eastern boundary. To the north and west is open agricultural land and to the south is the settlement boundary.

45. The representation is seeking an allocation for 15 homes in this plan period. The site could contribute to the sustainable and balanced growth of Garlogie, it would support local facilities and provide affordable housing. The identification of Garlogie as a settlement is welcomed. There has been no development in the village for a long period and 15 homes would not be an excessive addition.

46. The council disagrees, and considers that the historic and traditional characteristics of Garlogie should be protected. It does not consider the village to be an appropriate location for development and confirms that the aim of designating it as a settlement is to preserve its amenity and character. The strategic environmental assessment identifies two negative effects, the distortion of the linear pattern of the settlement, which was considered unlikely to be capable of being mitigated against, and the effect on the setting of the hut circles and field system to the east (a scheduled ancient monument).

47. I am satisfied that appropriate screening could mitigate the potential impact on the nearby scheduled monument and archaeological sites. However, the existing pattern of development in Garlogie would be altered in a manner which would not be in keeping with the nature of the village, as the linear form of development would be changed. Furthermore, the conservation area would not be enhanced or preserved by the proposed development.

48. Overall, I conclude that that development on this site would not be appropriate, given the potential impacts on the character of the village. The identified shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area (see Issue 5) would not justify an additional allocation of residential land in this location. Other suitable sites have been identified to address this matter.

Kirkton of Skene

Vision Statement

49. The request to alter the text of the vision statement is made as part of a representation relating to bid site GR116 and is addressed below.

Service and Infrastructure

50. SEPA has requested the addition of a new section on strategic drainage and water supply. I agree that this would provide pertinent information relating to drainage and water services in Kirkton of Skene, and a recommendation to that effect is set out below.

Non-Allocated Bid Site GR116 – Land South West of Old Skene Road

51. A representation seeks the allocation of land to the south and east of the settlement for up to 45 homes. The site is located to the south of an existing residential development at Kesson Gardens and to the south of the village centre. To the south lies a nursing home and grounds in the former Kirkton House estate, including listed buildings and their curtilages. At the time of my site visit, the site appeared to be an open field.

52. The strategic environmental assessment concluded that the site would have generally neutral effects, with the exception of the potential for surface water flooding, the potential for increased travel impacts and the impact on the church and graveyard.

53. At the Main Issues Report stage, the importance of maintaining the open countryside between the settlement and Westhill to prevent coalescence was noted. The settlement was not considered to be a suitable location for development, due to the likelihood of coalescence with Westhill and the issue of available capacity of Skene primary school.

54. The representation provides background information to address the matters raised by the council.

55. I am satisfied that measures to accommodate additional pupils at the primary school could be secured through developer obligations if required, in accordance with policy RD2. I do not consider that educational impact would justify the non-allocation of the site.

56. Having visited the site and the settlement, I agree that some limited views of the church from the east across the proposed site may be affected by housing development on bid site GR116. However, depending on site layout and landscaping, the impact could potentially be mitigated and may not be detrimental to the setting of the listed building.

57. The issue of coalescence with the nearby town of Westhill to the east is pertinent. The intervening farmland is open in this location, providing a countryside setting for both settlements and clearly distinguishing the boundaries of each. The bid site would extend development in an easterly direction, which would reduce the gap between Kirkton of Skene and Westhill.

58. Whilst the vision statement indicates that Kirkton of Skene has a good range of facilities for its size, residents would require to travel outwith the settlement for the majority of education, health and other local services. I consider that the bid proposal would result in increased travel by private car, which would be contrary to one of the intended outcomes of the plan.

59. Matters relating to overall housing provision in the proposed plan are covered in

Issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. I acknowledge that this site could potentially contribute towards meeting this shortfall. However, I conclude that the negative effects outlined above would outweigh the benefits in terms of providing additional land for housing. There are other sites available to meet the identified shortfall in the strategic development plan allowance. No modification is required.

60. The requested amendment to the vision section of the settlement statement would not be appropriate, following my conclusions above. No modification is required.

Lyne of Skene

Non-Allocated Bid Site GR031 (Site A)

61. Bid site GR031 is located to the south west of the village of Lyne of Skene, a small settlement which lies to the north-west of Westhill and north of Dunecht, on the crossroads of the B9126 and the B977.

62. The bid submission includes three parcels of land which are being promoted by a housebuilder as a phased development over a number of plan periods. In total, the sites could deliver up to 157 homes. However, only Site A is the subject of a representation to the proposed plan. It is intended to provide a mix of house sizes and tenures, including self-build plots.

63. At the time of my site visit, Site A was in agricultural use. It appears generally flat with no obvious topographical or landscape features.

64. The strategic environmental assessment concluded that the site would have generally neutral effects, with the exception of the potential for surface water flooding and potential for increased travel impacts. The positive effect of an increase in the range of housing choice was noted.

65. At the Main Issues Report stage, limited public transport infrastructure and the lack of a sewerage network in the area were identified as constraints. The ability of the site to potentially address the identified constraints is acknowledged, but the scale of development proposed is not considered appropriate for the settlement and could negatively affect the sense of place.

66. The representation sets out that Lyne of Skene is able to absorb sensitive development and the site forms a logical and sustainable expansion of the settlement. The settlement is served by public transport, and the development would provide the local services that have recently been lost in the village. The representation was supported by a strategic masterplan which sets out the features of all three sites, site opportunities and constraints and potential phasing and layouts.

67. I find that the scale of development proposed could address the lack of provision of sewerage facilities in the village, and the issue of flood risk has been addressed in the strategic masterplan. I am satisfied that these matters would not prevent the allocation of the site for development.

68. However, the scale of development proposed, being up to 40 homes with retail and community uses on Site A, would be transformative and would have a potential negative impact on the settlement. The delivery of those homes over a number of plan periods would have a cumulative effect on the village, but ultimately with the same negative impact. If delivered organically, at a rate of five homes per plan period, the risk would be that the constraints identified relating to sewerage would not be capable of being addressed.

69. Overall, I conclude that that development of Site A would not be appropriate, given the potential impacts on the character of the village. Other suitable housing sites have been identified to meet the shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area identified in issue 5. No modification to the plan is required.

Reporter's recommendations:

Modify the local development plan by:

Garlogie

1. Inserting a new Flood Risk section into the Garlogie settlement statement on page 545 with the following new bullet point

“• Garlogie lies within an area potentially vulnerable to flood risk and Flood Risk Assessments may be required.”

2. Inserting the following new first bullet point into the Services and Infrastructure section of the Garlogie settlement statement on page 545:

“• Strategic drainage and water supply: There is no public wastewater infrastructure in Garlogie.”

Kirkton of Skene

3. Inserting the following new first bullet point into the Services and Infrastructure section of the Kirkton of Skene settlement statement on page 600:

“• Strategic drainage and water supply: There is currently sufficient capacity at Nigg Waste Water Treatment Works. A Water Impact Assessment and a Drainage Impact Assessment may be required to identify any mitigation measures that may be required for both water and wastewater networks.”

Millbank PP1219 Scottish Environment Protection Agency	
Provision of the development plan to which the issue relates:	Cluny and Sauchen Settlement Statement Kemnay Settlement Statement Midmar Settlement Statement Millbank Settlement Statement
Planning authority's summary of the representation(s):	
<p>Cluny and Sauchen</p> <p><u>Site R1 – For development of a community hub</u></p> <p>A number of representees object to the inclusion of site R1 (PP0003, PP0016, PP0074, PP0082, PP0125, PP0896 and PP1229). A range of reasons were cited including that:</p> <ul style="list-style-type: none"> • The proposed site is the only green open space left within the settlement other than the children's playpark (PP0003, PP0016 and PP0125). • The proposed site is currently protected land due to the wildlife and this has not changed (PP0003, PP0074, PP0082 and PP0125). • The proposed community hub was earmarked to be on the eastern side of the settlement (PP0003 and PP0125). • There is no parking available at the site and the extra traffic will affect residents living in the Linton (PP0003, PP0016, PP0082, PP0125 and PP0896). • This area is not suitable for a community hub (PP0074, PP0082 and PP0896). • There is more need to extend Cluny Primary School which does not have a proper gym hall and food hall (PP0074). • There is a community building in Millbank which is rarely used, and Alford has a new campus (PP0074). • The Vision states this is a "community aspiration", but the community has not agreed to a site and that everything is at the discussion stage (PP0082). • It will increase footfall, affect their quality of life with noise impacts and loss of privacy (PP0082, PP0125 and PP0896). • Despite the Community Council supporting site R1 for the location of a future community hub, the local community support site P2 for the location of a community hub (PP0896). • The allocated land for site R1 should be reallocated as open space as per the LDP 2017 (PP0896). • There is a lack of services and the proposed community hub would result in a loss of trees (PP0074 and PP0896). • No indication is given on when the community hub will be delivered (PP1229). <p><u>Site R2 – To provide a safe route to school</u></p> <p>A representee has raised concern regarding traffic speed through Cluny which is dangerous in such close proximity to a housing development and school. The proposed path at this site would be a welcome addition, however, there remains danger to walkers between Sauchen and Cluny as traffic conditions continue. The representee would like further action to address these concerns through the installation of traffic calming measures (PP0842).</p>	

Flood Risk

Scottish Environment Protection Agency (SEPA) has recommended amending a 'Flood Risk' bullet point to state that a Flood Risk Assessment (FRA) will only be required for "this" site, as only site OP1 is mentioned (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that it has no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Main Street

SEPA has no issues with the allocation text for site OP1 (RD0214.B). No modification sought (PP1219).

A representee requests that the reference to the requirement for an emergency access be removed from the allocation summary. It is noted that this has already been provided between Cluny Meadows and Main Street (PP0672).

Non-Allocated Sites – Bid Sites GR030 – Land South West of Sauchen, North of A944

A representee objects to the non-inclusion of bid GR030 in the Main Issues Report as an opportunity site in the Cluny and Sauchen Settlement Statement for retail/café and also that the settlement boundary was not extended to include this site. There is no physical or technical constraint, and the site can be delivered in the short-term. The community desired to have this development which was evident from the developer's community engagement as part of a pre-application consultation for a housing development in the village. In the MIR stage, it was recognised that the need to provide local amenities outweighed the site being zoned as prime agricultural land. The shape and size of the site limits its value for agricultural use. No clear explanation was provided as to why this site was withdrawn. In the Issues and Actions Paper, it was mentioned, "a possible solution to the community's aspiration for a community hub to be established in this settlement" and that alternative site has been established by the community for this purpose. The argument made was that a community hub is a meeting place/community venue. This is not a logical explanation. The representee has included two Appendices (RD0111.A and RD0111.B) in their submission which provides further detail to support their position (PP0682).

Non-Allocated Sites – Bid Sites GR096 – Land South of Main Street (Smaller Site) and GR097 Land South of Main Street (Larger Site)

A representee has requested that bid sites GR096 and GR097 be allocated for housing development. The smaller site (bid site GR096) would comprise of 40 homes and a 'community hub' facility set to the western portion of the larger site (bid site GR097). The larger site (GR097) could accommodate 100 to 120 homes and a community hub. This site is considered as a logical extension to the settlement, which is set close to a bus stop, is 1 mile from the primary school and is in close proximity to the play park. In the MIR, the Council's assessment of the site indicates that "there are concerns surrounding potential for visual impact upon the setting of the village". The representee disagrees with this

statement noting that the site shares many of the characteristics of the adjacent allocated site OP1, including its proximity to the existing settlement and landscape features. The sites are noted in the MIR as being adjacent to the Cluny Burn which is at risk of flooding. In response to this a flooding and drainage study has been undertaken and the result shows no constraints that would preclude development. The representee has included a number of Appendices (RD0218.A, RD0218.B and RD0218.C) in their submission which provides further detail to support their position (PP1229).

Non-Allocated Site – Bid Site GR115 – Land at Mains of Sauchen, North West of Sauchen

A representee requests that bid site GR115 be allocated for 150 homes. The representee considers that this site would result in a carefully planned extension of the settlement. This site is deliverable during the Plan period in the short-term and would bring community benefit through the inclusion of a community facility and parkland. The representee considers that the assessment in the MIR in relation to the impact on the setting of the village is overstated as it was not recognised the potential enhancements which would be provided from the significant area of parkland. The MIR also failed to note the landscape buffer that would be provided to the waste water treatment works which would benefit the site and the wider area. The representee has included two Appendices (RD0110.A and RD0110.B) in their submission which provides further detail to support their position (PP0681).

Kemnay

Site R1 – For medical/community facilities

NHS Grampian has indicated support for the inclusion of site R1 in the Kemnay Settlement Statement (PP1223).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R1 (RD0214.B). No modification sought (PP1219).

Site R2 – For future expansion of the Kemnay Community Garden

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R2 (RD0214.B). No modification sought (PP1219).

Site BUS1 – Safeguarded for business uses

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site BUS1 (RD0214.B). No modification sought (PP1219).

A representee has highlighted that this site includes a piece of garden ground which should not be included in the BUS1 site. The site should be moved to exclude the area as shown in supporting evidence. The representee has included two Appendices (RD0004.A and RD0004.B) in their submission which provides further detail to support their position (PP0042).

Site BUS2 – Safeguarded for business uses

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site BUS2 (RD0214.B). No modification sought (PP1219).

A representee has requested that site BUS2 be reallocated to housing land for up to 65 homes. The representee notes that development in Kemnay should be in line with local needs as a 'Local Growth and Diversification Area' as defined in the Strategic Development Plan (SDP). There is a demonstrable continued local demand for a range of housing, with Housing Land Audit (HLA) delivery rates demonstrating a consistent demand. Since the site was allocated for business development in 2006 there has been no interest for that use. The existing housing allocation will be delivered by 2021, essentially leaving no effective housing land supply in Kemnay during the Plan period. This is contrary to SDP and the PLDP which will constrain the housing supply in Kemnay, put greater pressure on existing housing stock and have an adverse impact on the affordability of housing (PP1239).

A representee requests that site BUS2 be removed as land for business use in favour of reallocation as housing land (subject to bid site GR134 discussed below). It is noted that the take up of business land in Kemnay has been subdued, with greater demand for business and employment land in the Aberdeen to Huntly Strategic Growth Area. It is more appropriate to allocate business land in Inverurie, Kintore, Thainstone and Blackburn. Any demand in Kemnay can easily be met through existing allocations at BUS1 and BUS3 which are more appropriately located to the north of the settlement (PP1240).

Site BUS3 – Safeguarded for business uses

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site BUS3 (RD0214.B). No modification sought (PP1219).

Flood Risk

SEPA has indicated that they object to the PLDP unless text is added to the 'Flood Risk' section to note that, "Flooding records show in a significant portion of the site OP1 to be at fluvial flood risk from the River Don and a small watercourse on its southern boundary. A Flood Risk Assessment will be required." (RD0214.B) (PP1219).

SEPA has also recommended rewording of the second 'Flood Risk' bullet point due to the site being a distance away from the River Don flood extent and on relatively high ground but having a small watercourse on its northern boundary (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that it has no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – West of Milton Meadows

SEPA has indicated that they object to site OP1 unless a new 'Flood Risk' bullet point is added as noted above. SEPA has also requested that the first sentence of the last paragraph of the allocation summary is deleted and replaced with, "A significant portion of

this site has flooded historically. A Flood Risk Assessment will be required to determine the developable area and layout of the site.” (RD0214.B) (PP1219).

Site OP2 – Birley Bush Depot

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219). Scottish Water suggested adding text to the allocation summary to read, “Capacity may be limited depending on use, early engagement with Scottish Water is recommended.” (PP0272).

Non-Allocated Site – Bid Site GR134 – Land at Kirkstyle Farm (North) (Option 1)

A representee has requested that bid site GR134 be allocated for 65 homes. It is noted that this site would contribute to the effective housing land supply in Kemnay and the Aberdeen Housing Market Area, and on the basis that there is no demand for business use. Residential use would be compatible with surrounding land uses and there are opportunities to ensure good connectivity with Kemnay. Constraints identified in the MIR are either unmerited or have viable solutions, and housing use is better suited to deal with topography and landscape impact than business use. The site has already made a ‘technical start’ through formation of access and SuDS pond. The representee has included two Appendices (RD0225.A and RD0225.B) in their submission which provides further detail to support their position (PP1239).

Non-Allocated Site – Bid Site GR135 – Land at Kirkstyle Farm (South) (Option 2)

A representee has requested that bid site GR135 be allocated for 111 homes. The identified constraints including topography, landscape impact, lack of coalescence, flooding and drainage are unmerited or have viable solutions. There would be sensitive design, with habitat value enhanced. The site is a logical location for new housing land and could create an attractive planned residential gateway into Kemnay. It is further noted that the site GR135 should be included as a strategic reserve site to come forward after development of site GR134. This would balance development to the north of the settlement. The site would align with the SDP which directs development to areas such as Kemnay where levels of growth should relate to local needs. The development would meet the local needs identified in the settlement Vision. With only a single housing allocation of 20 homes in Kemnay, based on the HLA projected delivery by 2021, there will be no effective housing land supply in Kemnay during the Plan period. This would be contrary to SDP and PLDP objectives, put greater pressure on existing housing stock, and have an adverse impact on the affordability of local housing. The representee has included two Appendices (RD0226.A and RD0226.B) in their submission which provides further detail to support their position (PP1240).

Midmar

Flood Risk

SEPA has confirmed that it has no comment to make on the ‘Flood Risk’ bullet point in the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that it has no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Roadside of Corsindae

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219). Historic Environment Scotland (HES) note that site OP1 is located 305m and 210m respectively southwest of the scheduled monuments known as Craiglea, cairn 265m W of (SM 12122) and Craiglea, ring-marked boulder 440m WNW of (SM12174), but HES is content that any impact on their setting is not significant for HES' interests (RD0266.A). No modification sought (PP1343).

A number of representees object to the inclusion of site OP1, including Cluny, Midmar and Monymusk Community Council (PP0065, PP0275, PP0297, PP0470, PP0539, PP0611, PP0613, PP0882 and PP1292). A range of reasons were cited including that:

- This site was earmarked for community space as per a planning application (APP/2014/0148), and development could impact on the use of Midmar Hall, as the site will erode the green buffer zone (PP0065, PP0470, PP0539 and PP0882).
- The site is subject to condition to provide landscaping, footpaths and a public garden that is yet to be delivered (PP0613).
- Housing development could lead to restrictions relating to noise levels from the use of the hall and the Men's Shed (PP0065, PP0275, PP0297, PP0470, PP0539, PP0613 and PP1292).
- Concern at the increase made to the site capacity through the loss of an area of protected land (PP0297).
- The community garden should be built on this land in line with the extant planning permission at the site (PP0275, PP0470, PP0882 and PP1292). The representees have included a number of Appendices (RD0039.A-RD0039.B and RD0247.A) in their submissions which provides further detail to support their position (PP0275 and PP1292).
- The previous development at the site was started but has never been completed, this should be complete rather than allocating a further ten homes on green space (PP0539 and PP0882).
- If the currently consented 9 houses are not viable, then perhaps the focus should be on amending the currently consented housing site for a more representative mix of housing tailored to the local market, before abandoning the public gardens and landscaping scheme (PP0613).
- The development will result in the loss of protected land (PP0613 and PP0882).
- This site fails the test of effectiveness as outlined in PAN 2/2010 in terms of "land use" as there is a preferred, consented and deliverable, scheme for public gardens and landscaping which is protected in the existing LDP and will help achieve the priorities for the settlement (PP0613).
- Midmar is a suitable location for new housing in order to support LDP priorities but an alternative site to OP1 should be allocated. The representee has included an Appendix (RD0099.A) in their submission which provides further detail to support their position (PP0611).

Non-Allocated Site – Bid Site GR054 – Land South of Midmar School

Representees, including Cluny, Midmar and Monymusk Community Council, have requested that bid site GR054 be allocated for 20 homes (PP0065, PP0611 and PP0882). Cluny, Midmar and Monymusk Community Council has noted that this site is supported by the school and members of the community. It would provide housing more suited to the area, with a high percentage of affordable houses to encourage more local workers with young families and would support Midmar Primary School, which has a falling school roll and hosts community functions (PP0065).

The area has recently benefitted significantly from the removal of the commercial forestry plantation. This would likely be reversed if the development subject to the bid was not possible and should the area be replanted with commercial forestry. The ancient woodland status is disputed, and agreement has been reached with Forestry Scotland to place compensatory woodland elsewhere. There are allocated sites nearby that have not come forward and it might be worth considering other options. It is not clear why roads capacity is a constraint for this proposed site and not the proposed OP1 site. The site would meet the tests of effectiveness as set out in PAN 2/2010. The representee has included an Appendix (RD0099.A) in their submission which provides further detail to support their position (PP0611).

Development of the site would help meet the housing needs of the settlement and in sustaining the local primary school. The site was not preferred due to the presence of ancient woodland. The landowner disputes this as there is evidence of cultivation and a network of small stone dykes (PP0882).

Non-Allocated Site – Bid Site GR055 – Land at Tillybirloch

A representee has requested that bid site GR055 be allocated for 4 homes. Tillybirloch is located in the Aberdeen Housing Market Area and is a small hamlet with one local employer. The LDP does not identify it as a settlement and as such no priorities are identified. Bid site GR055 is within walking distance to the local school at Midmar where there is also a community hall. There is a bus stop in close proximity to the site. The site would have no negative impact on the settlement, would have a positive impact on both facilities in Midmar, including supporting the primary school roll. Development would deliver market housing, at reasonable prices, and an additional affordable home. Four houses at this location would not represent overdevelopment. The representee has highlighted that proposed site is not prime quality agricultural land for the purposes of planning (Grade 3.2). Layout, siting and design of the site would be in compliance with the Councils design guidance can be demonstrated in the event that the principle is accepted (PP0612).

Millbank

Flood Risk

SEPA has confirmed that it has no comment to make on the 'Flood Risk' bullet point in the Settlement Statement (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that it has no issues with the statement on 'Strategic drainage and

water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Land at Millbank Crossroads

SEPA has confirmed it has no issues with the allocation text for site OP1. No modification sought (RD0214.B) (PP1219).

Modifications sought by those submitting representations:

Cluny and Sauchen

Site R1 – For development of a community hub

Modify the PLDP to remove site R1 (PP0003, PP0016, PP0074, PP0082, PP0125, PP0896 and PP1229).

Modify the PLDP to reinstate the protected land designation (PP0896).

Site R2 – To provide a safe route to school

Modify the PLDP to add text to the designation summary for site R2 to address traffic concerns (PP0842).

Flood Risk

Modify the PLDP to amend the 'Flood Risk' bullet point to state that the Flood Risk Assessment will only be required for "this" site (PP1219).

Site OP1 – Main Street

Modify the PLDP to remove the requirement for emergency access from the allocation summary for site OP1 (PP0672).

Non-Allocated Sites – Bid Sites GR030 – Land South West of Sauchen, North of A944

Modify the PLDP to include bid site GR030 for retail/café (PP0682).

Non-Allocated Sites – Bid Sites GR096 – Land South of Main Street (Smaller Site) and GR097 Land South of Main Street (Larger Site)

Modify the PLDP to include bid site GR096 or GR097 for 40 or 100-120 homes respectively (PP1229).

Non-Allocated Site – Bid Site GR115 – Land at Mains of Sauchen, North West of Sauchen

Modify the PLDP to include bid site GR115 for 150 homes (PP0681).

Kemnay

Site BUS1 – Safeguarded for business uses

Modify the PLDP to amend the boundary of the BUS1 designation to exclude the privately owned garden ground (PP0042).

Site BUS2 – Safeguarded for business uses

Modify the PLDP to reallocate site BUS2 as an opportunity site for 65 homes (PP1239).

Modify the PLDP to remove site BUS2 (PP1240).

Flood Risk

Modify the PLDP to add a 'Flood Risk' bullet to read, "Flooding records show that a significant portion of the site OP1 to be at fluvial flood risk from the River Don and a small watercourse on its southern boundary. A Flood Risk Assessment will be required." (PP1219).

Modify the PLDP to amend the second 'Flood Risk' bullet point to read, "Due to the presence of a small watercourse on its northern boundary a Flood Risk Assessment will be required for site BUS1. A buffer strip will be required along the watercourse. Re-naturalisation of the watercourse and removal of any redundant features should be investigated." (PP1219).

Site OP1 – West of Milton Meadows

Modify the PLDP to remove the first sentence of the last paragraph of the allocation summary and replace with, "A significant portion of this site has flooded historically. A Flood Risk Assessment will be required to determine the developable area and layout of the site." (PP1219).

Site OP2 – Birley Bush Depot

Modify the PLDP to add text to the allocation summary to read, "Capacity may be limited depending on use, early engagement with Scottish Water is recommended." (PP0272).

Non-Allocated Site – Bid Site GR134 Land at Kirkstyle Farm (North) (Option 1)

Modify the PLDP to include bid site GR134 for 65 homes (PP1239).

Non-Allocated Site – Bid Site GR135 Land at Kirkstyle Farm (South) (Option 2)

Modify the PLDP to include bid site GR135 for 111 homes (PP1240).

Midmar

Site OP1 – Roadside of Corsindae

Modify the PLDP to remove site OP1 (PP0065, PP0275, PP0297, PP0470, PP0539, PP0611, PP0613, PP0882 and PP1292).

Non-Allocated Site – Bid Site GR054 – Land South of Midmar School

Modify the PLDP to include bid site GR054 for 20 homes (PP0065, PP0611 and PP0882).

Non-Allocated Site – Bid Site GR055 – Land at Tillybirloch

Modify the PLDP to include bid site GR055 for 4 homes (PP0612).

Millbank

No modifications sought.

Summary of responses (including reasons) by planning authority:

Cluny and Sauchen

Site R1 – For development of a community hub

The Council acknowledges objection received to site R1. The location of a suitable site for the development of a community hub has been subject to discussion through the Plan-making process. During the Council's pre-MIR engagement with the Midmar, Cluny and Monymusk Community Council, it was evident that development of a community hub or a central place where the community could meet and come together was a key community aspiration. This aspiration was reflected in the MIR and a number of the bids received to the Council's call for sites included provision for a community hub as part of their submission. However, the majority of these bids were focused towards further growing the settlement in terms of new housing. Again, in discussion with the Community Council the demand for further housing was questioned.

At the MIR stage, an alternative site was preferred by Officers – site GR030. Support was received for this site in responses to the MIR. However, as outlined in the Issues and Actions papers since the publication of the MIR, negotiations on this matter had progressed and an alternative site had been identified by the community within the existing P2 site (AD0040.E, page 17). This site was considered to be a more appropriate location for a community hub. The PLDP makes it clear that until development of a community hub comes forward that the land should be maintained as open space. No change is required.

Site R2 – To provide a safe route to school

The Council acknowledges the issue raised by the representee. However, the Council is unable to address traffic speeds and traffic calming through the R2 designation. The Council do however believe that delivery of this route will contribute towards improving pedestrian safety between Cluny Primary School and Sauchen. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Main Street

Comments from SEPA are noted. No change is required.

It is noted that part of site OP1 is now subject to Full Planning Permission for 27 homes (APP/2019/2302 approved 3 March 2020). A planning application for Full Planning Permission was also pending as at, 1 February 2021 (APP/2020/1259) for a further 49 homes. It is noted that the approved Masterplan outlines that, “an emergency access to serve the site can be provided onto Main Street between the recycling centre and the landscaping strip to the south of the centre” (AD0081, page 13). This access, between Main Street and Cluny Meadows was included as part of an earlier phase of development. However, the Council note that the Council’s Roads Development Team in responding to the most recent planning application (AD0064, consultation response 17 September 2020) for the third phase of development, have commented that a suitable emergency access is required to be provided to serve all parts of the development, indicating that the existing access between Main Street and Cluny Meadows serves only part of the wider development. Until such time as this matter has been resolved, the Council does not agree with the removal of the requirement outlined in the allocation summary that requires an emergency access to be provided. No change is required.

Non-Allocated Sites – Bid Sites GR030 – Land South West of Sauchen, North of A944

The Council does not support allocating bid site GR030 for retail/café. It is acknowledged that through the Main Issues Report the site was identified as an officer’s preference for development as it was easily accessible and provided a needed amenity for the settlement (AD0038.E, page 16). It was however, noted within the Issues and Actions papers that the site was no longer to be proposed to be allocated within the plan as the community has identified a more suitable location for this particular use within the village, which was to be the preferred option (AD0040.E, page 17). As such, the bid is not proposed to be allocated within the plan. No change is required.

Non-Allocated Sites GR096 Land South of Main Street (Smaller Site), Sauchen and GR097 Land South of Main Street (Larger Site)

The Council does not support allocating bid site GR096 nor bid site GR097 for 40 or 100-120 homes, respectively. These sites were not identified as Officers’ preferences in the MIR 2019. The Council maintain the reasons outlined for dismissing these bid sites at that time. The site is identified as being prime agricultural land and the southern part of the site adjacent to the Cluny Burn is at risk from flooding. Concerns also exist surrounding the potential for visual impact upon the setting of the settlement (AD0038.E). It is noted that a number of those responding to the MIR supported the Officers’ view not to promote the site, including the Community Council (AD0040.E). In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site GR115 Land at Mains of Sauchen, North West of Sauchen

The Council does not support allocating bid site GR115 for 150 homes. These sites were not identified as Officers’ preferences in the MIR 2019. The Council maintain the reasons

outlined for dismissing these bid sites at that time. Development is significantly constrained by a flood risk and the presence of prime agricultural land. Concern was also expressed concerning the potential for adverse visual impact upon the setting of Sauchen, with the overall scale of the site resulting in a disproportionate extension to the settlement. It was highlighted that the site is located in proximity to Cluny Castle Gardens and Designed Landscape, a nationally important heritage asset and new housing would have to be designed around an existing waste water treatment facility which should be discouraged (AD0038.E). It is noted that a number of those responding to the MIR supported the Officers' view not to promote the site, including the Community Council (AD0040.E). In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Kemnay

Site R1 – For medical/community facilities

Support expressed for site OP1 is noted along with the comments from SEPA. No change is required.

Site R2 – For future expansion of the Kemnay Community Garden

Comments from SEPA are noted. No change is required.

Site BUS1 – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address the representees comment regarding the allocation boundary as shown on the settlement map through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site BUS2 – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

The Council does not agree that site BUS2 should be reallocated for housing development. The site was subject to a bid received in response to the Council's call for sites in 2018 (bid site GR134). The site was not identified as Officers' preference in the MIR 2019. The Council maintain the reasons outlined for dismissing the bid site at that time outlining that constraints associated with the site including flood risk, topography and landscape impact, mean that it would be inappropriate to develop housing on this site (AD0038.E). It is noted that a number of those responding to the MIR supported the Officers' view not to promote the site (AD0040.E Issues and Actions papers). In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

The Council acknowledges that the BUS2 site has remained undelivered for some time.

The site is not listed as constrained in the Employment Land Audit 2019 (AD0018, page 31). On the basis that an access has been created and the site appears to be partially serviced the Council do not believe that the site should be removed from the LDP. In addition, during pre-MIR discussions with Kemnay Community Council, they indicated a desire to retain the areas of employment land identified in the settlement (AD0164 Place Standard Notes - Pre-MIR consultation - Kemnay Community Council). Through its allocation and subsequent inclusion in the associated Delivery Programme, the Council's Delivery Team would be able to facilitate any discussion required between parties and work with them to bring the site forward. If the Reporter is minded, to make an amendment, then the Council recommend that site BUS2 could be reallocated as an opportunity site for 2.8ha employment land given the site remains undeveloped.

Site BUS3 – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comments through non-notifiable modifications, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 - West of Milton Meadows

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP2 – Birley Bush Depot

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address Scottish Water's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Non-Allocated Site – Bid Site GR134 Land at Kirkstyle Farm (North) (Option 1)

The Council does not support allocating bid site GR134 for 65 homes. The Council have addressed the representee's request in responding to unresolved matters associated with site BUS2 above. No change is required.

Non-Allocated Site – Bid Site GR135 Land at Kirkstyle Farm (South) (Option 2)

The Council does not support allocating bid site GR135 for 111 homes. This site was not identified as Officers' preference in the MIR 2019. The Council maintain the reasons outlined for dismissing the bid site at that time. The site is considered to be isolated in relation to the existing pattern of development, with little or no coalescence to existing development to the north or west. The site would be visually prominent given the topography of the site and possible impacts on the Bennachie Special Landscape Area

(AD0038.E). It is noted that a number of those responding to the MIR supported the Officers' view not to promote the site (AD0040.E Issues and Actions papers). In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Midmar

Flood Risk and Services and Infrastructure

Comments from SEPA in respect to sections on 'Flood Risk' and 'Services and Infrastructure' are noted.

Site OP1 – Roadside of Corsindae

Comments from SEPA and HES are noted. No change is required.

The Council acknowledges objection received to site OP1. The site was subject to a development bid received in response to the Council's call for sites in 2018. It was subsequently identified in the MIR 2019 as a preferred option for 20 homes. The site capacity was increased from the 10 homes originally sought through the bid to reflect a standard density of 25 homes per hectare applied to sites in the Aberdeen Housing Market Area. The MIR recognised that the site was identified as protected land in the LDP 2017 but that a project to deliver a public garden and landscaping associated with the adjacent development site had not yet come forward. The bid was seen as an infill site which was deemed to be appropriate for housing development. Objection was received in response to the MIR, including from Cluny, Midmar and Monymusk Community Council, (AD0040.E). However, the Council agreed with Scottish Natural Heritage's (now NatureScot's) view that this site was more suitable for housing than bid site GR054. The allocation summary outlines that a landscape buffer would be required to minimise any landscape impact along the northern boundary of the site. No change is required.

Non-Allocated Site – Bid Site GR054 – Land South of Midmar School

The Council does not support allocating bid site GR054 for 20 homes. Whilst the Council acknowledge support received for this site, including from Cluny, Midmar and Monymusk Community Council, we do not agree that bid site GR054 should be allocated in the LDP. This site was not identified as Officers' preference in the MIR 2019. The Council maintain the reasons outlined for dismissing the bid site at that time. The Council agree that the site is well situated in proximity to the primary school however is constrained due to the presence of ancient woodland. Notwithstanding the presence of trees, the ancient woodland designation seeks to preserve the integrity of soil ecological processes and associated biodiversity associated with areas of ancient woodland as an important and irreplaceable natural resource. The Council do appreciate confirmation that compensatory planting for the block of commercial woodland previously felled has been agreed. However, until such time as this matter can be resolved, through discussion with NatureScot, unfortunately, the Council are unable to support allocation of this site as an opportunity site.

In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations,

there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site GR055 – Land at Tillybirloch

The Council does not support allocating bid site GR055 for 4 homes. This site was not identified as Officers' preferences in the MIR 2019 (AD0038.E, page 70). The Council maintain the reasons outlined for dismissing the bid site at that time. In any case, the Council would not seek to allocate opportunity sites for less than 5 homes. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Millbank

Flood Risk and Services and Infrastructure

Comments from SEPA in respect to sections on 'Flood Risk' and 'Services and Infrastructure' are noted.

Site OP1 – Land at Millbank Crossroads

Comments from SEPA are noted. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as "non-notifiable modifications" in relation to the settlement statement matters covered in Issue 40. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Cluny and Sauchen

Site R1 – For development of a community hub

3. During the plan process, it emerged that delivery of a community hub was a key aspiration. A number of sites were assessed, including bid site GR030, and site R1, which is reserved for a community hub and is to be kept as open space until a proposal comes forward. Site R1 is to the south-west of the settlement and is currently lightly wooded open space, accessed by foot from The Linton and Green Meadows.

4. There have been a number of representations objecting to the allocation of site R1 for a community hub, for various reasons. Of particular concern to representees is the loss of open space in the village, which is the only open space other than the play park on Main Street. There is no parking on the site, and local residents will be adversely affected by increased footfall and parking. There is an under-used village hall in Millbank. The location is not supported by the community, only the community council. The primary school needs an extension for a gym and dining hall. Trees and wildlife would be lost.

5. I note that site R1 sits within a larger area of protected open space. Having visited the site, I am of the view that a reasonable amount of open space would remain. The loss of some trees would seem inevitable, given the distribution of existing trees on the site, but compensatory planting could be a condition of any planning consent. I have not been made aware of any specific species that are protected on the site, or any designations which may prevent development proceeding. I note the concerns regarding parking on adjoining streets. I consider that site R1 is in an accessible location in the village, and walking to the facility should be encouraged. There is a village hall in Millbank, but the purpose of the allocation would appear to meet the aspiration for a facility in the village itself. Having a combined facility in a new space in the primary school could be a practical solution, but would limit availability to non-school hours. In any event, the allocation before me is for site R1, not alternative sites.

6. Overall, I am satisfied that site R1 would be a suitable location for a new community hub. No change to the plan is required.

Site R2 – To provide a safe route to school

7. Site R2 is a proposed safe walking link from the village to the primary school at Cluny. A new path would be added to the road that links the two villages. Concern has been expressed in a representation that the route may be unsafe due to traffic speed and volume. Traffic calming measures are sought.

8. The council believes that installing the path would improve pedestrian safety on the route. I agree that the new path should enhance safety for pedestrians. Traffic calming measures are not matters that can be specifically addressed in a local development plan. No modification to the plan is required.

Flood Risk

9. The Scottish Environment Protection Agency (SEPA) has recommended amending the 'Flood Risk' bullet point to state that a Flood Risk Assessment (FRA) will only be required for "this" site, as only site OP1 is mentioned. The council agrees with the representation, and is satisfied that the wording suggested by SEPA would be appropriate. I also agree that the proposed modification would clarify the position in relation to flood risk. A modification is set out below.

Site OP1 – Main Street

10. Site OP1 is a site for 76 homes, which lies to the east of Sauchen. The overall site has a masterplan which was approved in 2012, and the first phase of the development in the northern part of the site, Cluny Meadows, has been delivered. Planning consent for 49 homes was granted in 2021 and work has begun on site.

11. A representation is seeking the removal of the requirement for an emergency access for the site, as set out in the allocation summary on page 537 of the proposed plan, as it has already been provided between Cluny Meadows and Main Street.

12. As advised by the council's roads development team, a suitable emergency access is required to serve the whole development, as the existing access serves only part of it. I find that retaining the requirement for the access in this plan would be prudent, should the current consent lapse. No modification to the plan is required.

Non-Allocated Bid Site GR030 – Land South West of Sauchen, North of A944

13. Site GR030 is a triangular site located at the junction of the A994 and the access road leading east to the village and Main Street. It is an open, flat site and was in agricultural use at the time of my site inspection.

14. A representation is objecting to the non-allocation of this site for use as café and retail space. The proposal received community support when public consultation was carried out and there is capacity in the settlement for both a community hub and a café with retail space.

15. The council has advised that a more suitable location has been identified for this particular use within the village, and therefore site GR030 is no longer supported.

16. I appreciate the desires and need for local facilities in settlements such as Sauchen. I do however note the relative physical separation of this site from the village and its visual prominence when approached from all directions except the north. I find that its development in isolation from any surrounding land uses would have a negative impact on the setting of the village. No modification is required.

Non-Allocated Bid Sites GR096 Land South of Main Street (Smaller Site), Sauchen and GR097 Land South of Main Street (Larger Site)

17. Sites GR096 and GR097 are two sites which overlap, located to the south of the settlement. A representee is seeking the allocation of bid sites GR096 and GR097 for a phased housing-led mixed-use development of up to 120 homes with community uses, open space/landscaping and associated infrastructure. Supporting information including an indicative masterplan, phasing plan and a transport statement was submitted with the representation.

18. The strategic environmental assessment identified some negative effects, including the loss of prime agricultural land, an increase in travel requirements and flooding. At the Main Issues Report stage, neither site GR096 nor site GR097 was identified as being preferred for immediate development. Some constraints such as landscape and visual impact were noted.

19. The potential loss of prime agricultural land is noted, but I am satisfied that in line with Policy PR1 (Protecting Important Resources), the loss of prime agricultural land may be justified if required to meet strategic housing needs and there are no reasonable alternative sites. The representation has addressed the potential flooding risk at the site and I am content that there are mitigation measures, which could address this issue satisfactorily.

20. Although the representation suggests that the landscape and visual impact would be similar to that of site OP1, I disagree. I noted on my site visit that site OP1 would not extend the built environment of the settlement to the south and that it would create a compact and logical extension to the existing development in the village. Sites GR096 and GR097 would, I find, be visually prominent on all approaches from the south, east and west. I acknowledge that careful landscaping may serve to mitigate any such impacts arising from development of the sites, but overall I find that the scale of the proposed allocation would have a detrimental impact on the setting of the village.

21. An alternative site for the community hub has been identified within the settlement boundary, site R1, but the representation suggest that funding would not be delivered without the allocation and development of sites GR096 and GR097. I find that the potential funding for a community hub would not in itself justify the allocation of these sites.

22. Matters relating to overall housing provision in the proposed plan are covered in issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is a need to allocate additional land in the Aberdeen Housing Market Area. I acknowledge that these sites could potentially contribute to meeting this shortfall. However, given the availability of other suitable housing sites and the concerns regarding the scale of proposed development, loss of prime agricultural land and landscape and visual impact, I do not consider that either of these bid sites should be identified as a housing allocation.

23. No modification is required.

Non-Allocated Bid Site GR115 Land at Mains of Sauchen, North West of Sauchen

24. Site GR115 is located to the north-west of Sauchen, on land which is currently in agricultural use. The representation is seeking an allocation for 50 homes to be delivered in this plan period, with a further 100 homes in later phases. An ecological park would form the northern part of the site with land also provided for a community hall. The site is owned by a house builder and immediately available for development. Supporting information, including a strategic masterplan, was submitted with the representation.

25. The strategic environmental assessment identified some negative effects, including the loss of prime agricultural land, an increase in travel requirements, flood risk and impact on the setting of gardens and a designed landscape. Constraints such as landscape and visual impact, flooding and proximity to an existing waste water treatment facility were noted at the Main Issues Report stage.

26. I am satisfied that in line with Policy PR1 (Protecting Important Resources), the loss of prime agricultural land may be justified if required to meet strategic housing needs and there are no reasonable alternative sites. The representation has addressed the potential flood risk at the site and I consider that there are mitigation measures available which could address this issue.

27. Although in close proximity to Cluny Castle and the designed gardens and landscape, I find that the proposed park, which would lie to the north of the site, would mitigate against any potential impacts on the heritage assets. The separation between the built element of the proposal and the designed landscape, together with the intervening park, would limit the visual impact on the designed landscape.

28. The council has decided not to reserve land for future housing development beyond 2032, an approach that we consider is consistent with the strategic development plan (see Issue 2). In this case, the indicative site layout and phasing plan submitted by Stewart Milne Homes do not show how the site could be subdivided to bring forward a separate allocation for 50 homes in the plan period. I therefore consider it appropriate to assess bid site GR115 as a development of 150 homes and a community parkland, regardless of the intended phasing.

29. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, it is concluded that there is a need to allocate additional land in the Aberdeen Housing Market Area. Whilst I recognise that the 50 homes proposed in the plan period could contribute to meeting this shortfall, there are other suitable sites available. As such, the loss of prime agricultural land would not be justified at this time. No modification is required.

Kemnay

Site BUS1 – Safeguarded for business uses

30. A representee has requested that the private garden ground shown as part of allocation BUS1 on the Kemnay map be excluded and the map revised. The council agrees that the map should be amended.

31. I find that the plan should accurately reflect the correct site boundaries and am recommending that the Kemnay map be modified to exclude the triangular area of garden ground in line with representation PP0042.

Site BUS2 – Safeguarded for business uses and Non-Allocated Bid Site GR134 – Land at Kirkstyle Farm (North)

32. This site is located to the east of Kemnay, to the north of the B993. At the time of my site inspection, there appeared to be completed site works and partial services on the site, but no formal access point from the B993. The remainder of the site appeared to be set to grass. Site BUS2 is on the eastern edge of the settlement, with open agricultural fields to the east, north and south. To the west is established residential development at Stuart Crescent.

33. The site as a whole (including the completed residential development to the west) had planning consent and was identified as a future development opportunity in the local development plan in 2006. The residential element was delivered through a separate consent, with a further consent partially purifying the conditions relating to the access and surface water drainage on site BUS2. The site is safeguarded for business use in the adopted local development plan.

34. CHAP Group (Aberdeen) Limited is seeking the deletion of the business designation on site BUS2 and for its re-allocation as a housing site for up to 65 homes. The representation highlights the compatibility of housing with the adjacent residential area, strong connections to the town and that there is sufficient business land elsewhere in Kemnay. Furthermore, once site OP1 is complete, there are no other housing sites allocated in the settlement.

35. The council notes that the site has been partially developed, but a business use has not been delivered. The council has suggested that the site should be reallocated as a business opportunity site to allow its Delivery Team to help bring forward development.

36. Kemnay is not located within a strategic growth area. The strategic development plan requires local development plans to identify and maintain an appropriate amount of business land for Local Growth and Diversification Areas in Aberdeenshire.

37. The employment land audit 2018 – 2019 indicates that there is a marketable employment land supply of 281 hectares in Aberdeenshire. This includes 76 hectares in the Local Growth and Diversification Areas in Aberdeenshire, including 2.8 hectares at site BUS2 in Kemnay. There is a further 34 hectares of marketable employment land in the Inverurie to Blackburn section of the Aberdeen to Huntly Strategic Growth Area, which lies to the north east of Kemnay. The audit states that “the targets for the supply of marketable employment land in both Aberdeen City and Aberdeenshire continue to be significantly exceeded and the overall employment land supply provision is generous”.

38. The representee has supplied background information on the development of, and demand for, employment land in Kemnay, which shows that take up is low, mainly due to high demand and relatively better locations in the growth corridor of the A96. This information is consistent with the notes from the community council meeting on 26 October 2017, which indicates support for local employment opportunities but recognises the challenges in attracting business development.

39. Existing employment and business land is concentrated to the north of the town, around site BUS1 and BUS3. I note that, whilst BUS1 is identified as a business safeguard, it includes undeveloped land. A further allocation is identified at site OP2, located in the south west of the settlement, where development of one hectare of employment land is expected to be delivered when the council depot has moved from the site. Whilst BUS2 is identified as a business safeguard, there are no existing business uses on the site. I agree with the council that if the site is retained for employment purposes, a business opportunity allocation would be more appropriate.

40. I note the community support for retaining site BUS2 as employment land in the Issues and Actions Paper and that the council considers that it should be retained for business purposes. However, the evidence before me suggests there is sufficient business land elsewhere in Kemnay and along the nearby A96 corridor to meet local and strategic employment requirements. I conclude that the retention of site BUS2 would therefore not be justified solely on the grounds of need.

41. I now turn to the potential use of the site for housing. The council, in its strategic environmental assessment, identified no negative effects for site GR134. However constraints such as landscape and visual impact, flooding and topography were noted.

42. It is not clear, from the Issues and Actions Paper, which comments relate specifically to bid site GR134. Given the location of site GR134 next to existing housing, I find that housing would be compatible with neighbouring uses. I do not consider that transport impact and distance from schools would justify the non-allocation of the site for housing. I find that matters relating to potential flood risk and impact on infrastructure are already addressed in the ‘flood risk’ and ‘services and infrastructure’ section of the settlement statement.

43. I note that Kemnay Academy is already operating at capacity and that developer contributions would be required to help mitigate the impacts of additional housing development. The vision statement also refers to a review of secondary education provision in the Garioch area in the medium term.

44. In terms of landscaping and topography, I find that the principle of development has already been established on this site, as it has an extant consent for commercial development and has been safeguarded for business use. Furthermore, it is located within the settlement boundary in the adopted local development plan and the proposed plan. Whilst the site lies within the Bennachie Special Landscape Area, I do not consider that residential development would have a greater impact in terms of landscaping and topography than the proposed business use and mitigation could be provided through appropriate landscaping proposals.

45. The vision for Kemnay as set out on page 578 of the proposed plan indicates a high level of services available in the town, including retail, commercial and education facilities. A site for a new health centre has been identified, as has a site for expanding the community garden. The vision also identifies that further housing development at an appropriate scale would help meet local housing needs.

46. Whilst the discussions with Kemnay Community Council in October 2017 indicate a desire to retain the areas of employment land identified in the settlement, support is also expressed for additional housing suited to meeting local needs.

47. Within the settlement, only site OP1 has been allocated for housing development. This site has planning consent and at the time of my site inspection was under construction. The 2020 housing land audit indicates that the 20 homes on the site are nearing completion. Furthermore, I note that a site for 65 homes on land to the east of Greystone Road, allocated in the existing local development plan, is not included in the proposed plan.

48. Matters relating to overall housing provision in the proposed plan are covered in issues 2 and 5. Kemnay lies within the Aberdeen Housing Market Area, where it is concluded, under Issue 5, that additional land for housing is needed to meet the strategic development plan allowance for the period up to 2032. The bid proposal for site BUS2 is being promoted by a house builder, who has indicated that development can come forward within the plan period.

49. Overall, I conclude that that housing development on this site could be accommodated with limited impact on the character of the settlement, on the landscape and on local services. The principle of development is already established and I have concluded that the retention of the site as employment land would not be justified on the grounds of need. Given the size of the settlement and range of local services, I consider Kemnay to be an appropriate location for additional housing to meet local needs and contribute towards meeting the shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area.

50. Taking account of the above considerations, I conclude that designation BUS2 should be removed from the plan and the site should instead be allocated for housing and identified as contributing towards the strategic development plan allowance for the

Aberdeen Housing Market Area.

51. It is recommended that the plan be modified to identify bid site GR134 as allocation OP3: Land to the east of Stuart Crescent for 65 homes and include an allocation summary, as set out in the recommendations below. The allocation summary should indicate that a master plan would be required in line with policy P1 (Layout, Siting and Design), which would provide the opportunity for input from local residents and other interested parties.

52. Allocation Kemnay OP3 should be included in the revised version of Appendix 6 and shown as contributing 65 homes to the strategic development plan allowance for the Aberdeen Housing Market Area.

53. Modifications to this effect are set out below.

Non-Allocated Bid Site GR135 – Land at Kirkstyle Farm (South)

54. Bid site GR135 is a site to the east of Kemnay, south of the B993. At the time of my site inspection, the site appeared to be in agricultural use. It is outwith the settlement, and is surrounded by open fields to the east, south, west and partially to the north. There is established residential development on the opposite side of the B993 to the north and a row of low density development fronting onto the B993 adjacent to the site.

55. A representee has requested that bid site GR135 be allocated for 111 homes, for delivery after site GR134 has potentially been delivered. The site could either be identified as an allocation for development in the plan period or as a future strategic reserve.

56. The strategic environmental assessment identified site GR135 as having a negative effect in terms of landscape and visual impact. At the Main Issues Report stage, site GR135 was not identified as being preferred for development due to landscape and visual impact and topography.

57. I note that the site is relatively isolated from the main settlement in terms of physical connectivity, and may visually present as an isolated pocket of development on the south side of the B993. The potential impact on the Bennachie Special Landscape Area is of concern to the council. I appreciate that the site is outside the special landscape area but it is immediately adjacent to it. However, I acknowledge that adverse landscape and visual impacts could potentially be mitigated through site layout and strategic landscaping.

58. We have concluded under Issue 2, that there is no requirement for the plan to identify future opportunity sites for development beyond 2032. Given my recommendation to allocate bid site GR134, I do not consider there is any justification for a further allocation in Kemnay at this time. Alternative sites have been identified, alongside bid site GR134, to meet the shortfall in the housing land provision in the Aberdeen Housing Market Area (See Issue 5). No modification is required.

Midmar

Site OP1 – Roadside of Corsindae

59. Midmar is small linear village, with all existing development lying to the north of the road that links the B9119 and the A994. The village is served by a primary school and a

village hall. Site OP1 lies between the village hall and the established residential development and is roughly triangular in shape. The allocation is expected to deliver 12 homes in the plan period. Planning permission for nine homes was granted and development commenced on the adjacent site. At the time of my site visit, incomplete site works were in evidence on the adjacent site and site OP1 was fenced off and inaccessible.

60. The site has attracted objections from the community council, who are concerned that the development of the site for 12 homes could lead to the loss of protected land, that the community garden may not be delivered, that homes in close proximity to the hall may inhibit activity there, and that better sites are available in the village.

61. The strategic environmental assessment identified site OP1 as having a negative effect in terms of a potential increase in the need to travel. At the Main Issues Report stage, site OP1 was identified as a preferred allocation for 20 homes, with no constraints identified. It was stated that as there was no project to deliver a public garden adjacent to the village hall, alternative uses for the site should be considered. The Issues and Actions Paper notes objections to the proposal, but that NatureScot considers this site to be a more suitable location for housing than bid site GR054. The council concluded that an allocation for 12 would be more appropriate to allow for the provision of a landscape buffer.

62. As there is no identified project to deliver the public garden, I can appreciate that a productive alternative use has been sought for the site. The site lies within the settlement boundary in the current local development plan and I am satisfied that housing is a use which would be appropriate in this location. It would add to the range of housing sites identified as contributing towards the strategic development plan allowance in the Aberdeen Housing Market Area and help consolidate the primary school roll. Any application for planning consent would need to include a landscape buffer along the northern boundary, which should help minimise any conflict between new and existing uses. No modification to the plan is required.

Non-Allocated Bid Site GR054 – Land South of Midmar School

63. This is a site to the south of the village, immediately adjacent to the primary school and car park. At the time of my site visit, commercial tree planting appeared to have been recently cleared.

64. The representation is seeking an allocation for 20 homes, of which 60% would be affordable and 40% for sale at market rates. All would be delivered in the current plan period.

65. The strategic environmental assessment, identified site GR054 as having negative effects in terms of the loss of ancient woodland and the requirement for increased travel. At the Main Issues Report stage, site GR054 was not identified as being preferred for development, but it was noted that the site was well related to the remainder of the settlement. In the Issues and Actions Paper, NatureScot noted that the site included ancient woodland and that it was an important and irreplaceable natural resource.

66. The issue of the site containing ancient woodland appears to be one of the primary reasons for not allocating the site for development in the proposed plan. I note that the representation contains considerable evidence which sets out the history of land uses on the site and which appears to demonstrate that there is no ancient woodland on site

GR054. It does lie adjacent to Marywell Wood, which may comprise ancient woodland and is identified as being ancient woodland. The commercial woodland on the site has been felled.

67. I note that Forestry Commission (now Scottish Woodlands) has agreed a compensatory planting scheme for the site. Given the evidence submitted by the representee and my observations that planting on the site has been felled, I am satisfied that irreplaceable ancient woodland would not be compromised by the development of this site for housing.

68. The community council has expressed its support for the allocation of the site, as has the primary school and other members of the public. However, this support would appear to be as an alternative to site OP1. Given my conclusions above that site OP1 should be retained in the plan and the limited range of local facilities in Midmar, I do not consider that an additional housing allocation would be justified at this time. The limited size of Midmar and its relatively remote location suggest that the allocation of land for 32 houses in total would not represent sustainable development. Furthermore, whilst the site is conveniently located next to the primary school, it would result in a significant south-westerly extension of the settlement into the surrounding countryside.

69. The council has also expressed concern regarding the potential impact on the local road network, arising from the development of the site. I am satisfied that a requirement for a transport assessment to be submitted with any development proposal would address this issue.

70. As set out in the conclusions to issue 5 of this examination, there is a shortfall of housing land in the Aberdeen Housing Market Area. I acknowledge that this site could contribute to addressing the identified shortfall. However, for the reasons set out above, I conclude that it should not be allocated in the plan. Alternative sites have been identified to meet the shortfall. No modification is required.

Non-Allocated Bid Site GR055 – Land at Tillybirloch

71. A representee has requested that bid site GR055 be allocated for four homes in Tillybirloch. Tillybirloch is not a settlement and the representation is not seeking to have it allocated as such.

72. The strategic environmental assessment identified GR055 as having no negative effects. At the Main Issues Report stage, it was noted that the site was not in a settlement, was distant from Midmar, was in an unsustainable location and would be car reliant.

73. As the site is not within a settlement, nor in an area where a new settlement is proposed, I find that the development of such a site for housing would properly fall to be considered under the appropriate policies for development in the countryside and through the development management process. In addition, sites under five homes have not been allocated for development in this plan. No modification is required.

Reporter's recommendations:

Modify the local development plan by:

Cluny and Sauchen

1. Deleting the words 'these sites' and replacing them with 'this site' in the final sentence of the flood risk section in the Cluny and Sauchen settlement statement on page 535.

Kemnay

2. Amending the boundary of the BUS1 designation on the Kemnay settlement map on page 582 to exclude the privately owned garden ground shown in representation PP0042.

3. Deleting BUS2 from the other designations section of the settlement features tables in the Kemnay settlement statement on page 579.

4. Inserting the following new allocation after OP2 in the Kemnay settlement statement on page 581:

"OP3: Land to the east of Stuart Crescent

Allocation: 65 homes

This is a new housing allocation on land that was previously identified for business development in the 2017 local development plan. The site is located on the eastern edge of the settlement and slopes gently upwards in a northerly direction from the B993 road.

A master plan is required for this site. Early discussions should take place with the council to identify the assessments required to inform and support development proposals. These are expected to include matters such as transport, drainage and flood risk.

It is anticipated that the site would be accessed from the B993 road, with provision made for a continuation of the pedestrian footpath on the north side of the B993, as far as the new road junction. Provision for active travel is required.

Strategic landscaping is likely to be required to soften the settlement edge and reduce the prominence of the development, particularly when approaching from the east. The site lies within the Bennachie Special Landscape Area. Development should not adversely affect the special qualities for which this area is identified. A Landscape and Visual Impact Assessment may be required.

It is expected that the site will contribute towards affordable housing in line with Policy H2 Affordable Housing. This should be delivered as part of the early phases of development and integrated into the design of the development to provide a mix of houses types and sizes to meet local needs."

5. Amending the Kemnay settlement map on page 582 to replace site BUS2 with housing allocation OP3.

6. Adding Kemnay OP3 for 65 homes to the table of sites which contribute towards the strategic development plan allowance for the Aberdeen Housing Market Area in Appendix 6. (Note – a revised version of Appendix 6, incorporating all the recommended modifications, is provided at the end of this report).

required from SEPA for any private treatment which will need to be built to an adoptable standard (RD0214.B) (PP1219).

Site OP1 – Land at Pitbee

SEPA has requested that the last two sentences referring to waste water are removed from the allocation summary as they are satisfied this issue will be addressed in the strategic drainage bullet point once reworded (RD0214.B) (PP1219).

Durno

Vision

A representee has supported the decision not to allocate any housing to the settlement but disagrees with the use of the word 'significant' in the Vision as it would allow development, and this was not approved by any of the Council Committees (PP0137).

Flood Risk

SEPA has confirmed that it has no comment to make on the 'Flood Risk' bullet point in the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that it has no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Lethenty

Settlement Status

One representee has stated that Lethenty should be recognised as a settlement and have a Settlement Statement. The settlement should consist of land subject to bid site GR081 (discussed below) (PP1287).

Non-Allocated Site – Bid Site GR081 (part) – Land North and West of Lethenty

A representee has requested that part of bid site GR081 be allocated 7 homes. The representee has argued that the site offers an opportunity for a new sustainable semi-rural lifestyle, providing an extension to an existing 'settlement', with a new cycle route and commercial business in Lethenty able to support its role as a rural settlement. It is believed that not enough land has been allocated on a range of locations or scales in the area. The proposed site fits with the pattern of existing settlement, that landscape and visual impact have been considered, and that the loss of prime agricultural land on part of the site is justified. Also, there is no flood risk, a waste water treatment and drainage solution would be identified, and proximity to pipeline consultation zones should not restrict development. The representee has included an Appendix (RD0242.A) in their submission which provides further detail to support their position (PP1287).

Meikle Wartle

Vision

A representee has expressed concern regarding existing footpaths. The representee notes this matter is referred to in the Vision but believes this should be looked at in more detail (PP0099).

Site R1 – To provide a car park for the village hall

SEPA has confirmed it has no issues with the designation text for site R1. No modification sought (RD0214.B) (PP1219).

Flood Risk

SEPA has confirmed that it has no comment to make on the 'Flood Risk' bullet point in the Settlement Statement (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that it has no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Land North of Meikle Wartle

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

A representee has raised concern that the number of housing eventually built will increase significantly from the 12 homes proposed. Concerns are based on previous experience of the 'Earls Ree' development where an initial 12 houses became 21 houses. The representee has sought clarity on what is in place to prevent more homes being built than allocated, and that houses are not built on areas designated for public open space. The representee seeks clarity on development detail, in particular house types, ground level details, arrangements for roads, pathways, and fencing. The representee considers that new houses should be no greater than 1.5 storey high, and as a neighbour, has a particular concern regarding blocking aspect and light, and would like to input on the border layout (PP0099).

Old Rayne

Flood Risk

SEPA has requested that a new 'Flood Risk' section and bullet point is added for consistency to highlight sites OP1 and OP2 being at risk from flooding and a Flood Risk Assessment (FRA) may be required (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has requested that for consistency, a new 'Strategic drainage and water supply' bullet point is added to provide a reference to waste water drainage after consulting with Scottish Water to confirm that the proposed population growth is within the design criteria for the existing waste water infrastructure and, if not, the need for an upgrade is highlighted

(RD0214.B) (PP1219).

Scottish Water has requested that a new 'Strategic drainage and water supply' bullet point is added to state, "There is currently capacity at Old Rayne Waste Water Treatment Works." (PP0272).

Concern has been raised with regard to access to any further development and the need for a new link road to the A96 in Old Rayne. Lawrence Road is a narrow winding road with blind corners and many parts with no pavement and in other parts reduced width. It is single carriageway over the Ury bridge and at the St Lawrence Hall. There is the prospect of over 40 new homes or businesses and close to 100 more vehicles passing through the settlement. With the inevitable increase in children walking/ attending the primary school and also the increase in cycling then their safety will be in severe danger. A new link road with standard pavement and cycle lane must be incorporated into any future planning permission (PP0430).

Site OP1 – Land North of Pitmachie Farm

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

Two representees have objected to the inclusion of site OP1 (PP0332 and PP1038). The scale of development is inappropriate, no feasibility assessment of the site has been made and there would be a detrimental impact at the A96 junction. There is no safe route to school and lack of play areas. Their view would also be impacted (PP0332). It is additionally noted that there is no basis for confidence that it can become effective during the Plan period to satisfy SPP. It is inappropriate and unjustifiable to score capacity as contributing to the allowances. It is a long-term constrained site with a physical constraint that is unlikely to improve without requiring additional land in different ownership. There has not been planning permission on the site and no housebuilder noted interest (PP1038).

Site OP2 – Barreldykes

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219).

A representee has objected to the inclusion of site OP2. The representee states the local Community Council does support it, the local community do not believe the site is suitable, the proposed scale is detrimental to the settlement, the site is home to a badger sett close to Mill Croft Woods, it will disturb wildlife in the adjacent woods, including squirrels, deer insects and birds of prey, it will affect the spawning grounds of Brown Trout along the adjacent Bonnyton Burn, and the site sits on a raised elevation and will be very overbearing. Other negative effects include increased traffic, poor visual impact, primary school is overcapacity, additional noise, light and air pollution, and pedestrian safety due to lack of pavements in the village. In addition, the A96 junction may not be fit for purpose for the increase in the number of homes, and the settlement lacks sufficient amenities and community infrastructure for 30 homes. Concern is expressed regarding soil saturation and trees blowing over as the wooded area of their garden is water-logged from a Barrel Dykes sewer pipe running through the site OP2 (PP0079).

Oyne

Site BUS – Safeguarded for business uses

SEPA has confirmed it has no issues with the designation text for site BUS. No modification sought (RD0214.B) (PP1219).

Flood Risk

SEPA has confirmed that it has no comment to make on the 'Flood Risk' bullet point in the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has requested that the 'Strategic drainage and water supply' bullet point also states that Oyne lies within a SEPA Waste Water Drainage Consultation Area and site investigations will be required for any private system, built to an adoptable standard (RD0214.B) (PP1219).

Site OP1 – Former Archaeolink Site

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

A representee has objected to the inclusion of site OP1 on the basis of non-delivery and lack of there being a need for such a development. The representee has stipulated a number of requirements that should be identified in the allocation summary should the allocation remain in the LDP. These include the retention of mature trees, restricting development to 1½ storeys, ensuring access to Berryhill for walkers including during any construction, development should be completed at the same time and not piecemeal over a number of years and implementation of additional speed reduction/enforcement measures (PP0084).

Whiteford

Vision

A representee has requested that the objectives for the settlement be modified to include provision for a small affordable housing development to meet established demand and sustain local facilities including the primary school and village hall (PP0952).

Non-Allocated Site – New Site N017 – Land at Whiteford Road

A representee has sought an extension to the settlement boundary to include land subject to an extant planning permission for 3 homes or identify the site as an opportunity site for 9 homes. The representee outlines that the site benefits from an extant planning permission for three detached homes which has been partially implemented and so remains in perpetuity. Change was sought through the Main Issues Report (MIR) that the settlement boundary was changed to include the area in the plan with planning permission which has been done elsewhere in the LDP, but this did not happen. Extending the settlement boundary would allow for flexibility to reconfigure the layout utilising the access arrangement for the extant permission and accommodate a viable affordable housing

scheme of up to nine affordable homes either through the infill policy or as an opportunity site which would have no detrimental intrusion into the countryside. There was previous expansion planned for Whiteford in the Local Plan 2006, but this was subsequently removed in the 2012 LDP and rolled forward into the 2017 LDP. The site would benefit and support the local services including the village hall and local school which has been done elsewhere in the Garioch area. The local primary school is forecast to remain in capacity until 2026 and even then, would be 7 pupils under capacity and contributions would be made to Meldrum Academy as part of any future application. Concerns were raised over the junction with the A96 but the allocation of land for development would provide the opportunity to address that issue. Concerns were also raised about flood risk but the extant planning permission on the site did not have flooding issues and increasing the numbers would have no increased risk of flooding. It is also noted that lack of community engagement was a reason for not including the site but due to the small-scale nature of the proposal formal public engagement was not seen to be necessary and there were no public objections to the extant planning permission. Positive discussions with the Council's Housing Service and a number of housing associations have taken place and have been positive in respect of the site being taken forward as a 100% affordable housing development, to meet existing demand across Aberdeenshire. The representee has included two Appendices (RD0179.A and RD0179.B) in their representation which provides further detail to support their position (PP0952).

Modifications sought by those submitting representations:

Auchleven

Modify the PLDP to add new 'Health and care facilities' bullet point, "Health and care facilities: All residential development must contribute towards the creation of additional capacity at health facilities in Inch to allow for additional capacity." (PP1223).

Chapel of Garioch

Services and Infrastructure

Modify the PLDP to replace the second sentence in the 'Strategic drainage and water supply' bullet point with, "Full authorisation will be required from SEPA for any private treatment which will need to be built to an adoptable standard." (PP1219).

Site OP1 – Land at Pitbee

Modify the PLDP to remove the last two sentences, "Early engagement should be undertaken with SEPA and full authorisation sought for relevant licensing of private treatment. Options to provide a new waste water treatment works should also be explored." from the allocation summary (PP1219).

Durno

Vision

Modify the PLDP to amend the Vision to read: "Durno is not considered suitable for any further development." (PP0137).

Lethenty

Settlement Status

Modify the PLDP to recognise Lethenty as a settlement (PP1287).

Non-Allocated Site – Bid Site GR081 (part) – Land North and West of Lethenty

Modify the PLDP to include part of bid site GR081 for 7 homes (PP1287).

Meikle Wartle

Vision

Modify the PLDP to provide further detail with regard to footpath improvements (PP0099).

Site OP1 – Land North of Meikle Wartle

Modify the PLDP to ensure that the site capacity is not increased beyond 12 homes (PP0099).

Modify the PLDP to provide clarity with regard to house types and layout, ground level details, arrangements for roads, pathways, and fencing (PP0099).

Old Rayne

Flood Risk

Modify the PLDP to add a new 'Flood Risk' section and bullet point, "Sites OP1 and OP2 lie adjacent to SEPA's Indicative 1:200 flood risk area and/or have small watercourses running through them. Flood Risk Assessments may be required." (PP1219).

Services and Infrastructure

Modify the PLDP to add a new 'Strategic drainage and water supply' bullet point on waste water drainage in Old Rayne after consulting with Scottish Water (PP1219).

Modify the PLDP to add a new 'Strategic drainage and water supply' bullet point to read, "There is currently capacity at Old Rayne Waste Water Treatment Works" (PP0272).

Modify the PLDP to add a requirement for a new link road with standard pavement and cycle lane to be incorporated into any future planning application (PP0430).

Site OP1 – Land North of Pitmachie Farm

Modify the PLDP to remove site OP1 (PP0332).

Modify the PLDP to remove the contribution to the SGA Allowances for OP1 Old Rayne and identify an alternative effective allocation in the Huntly – Pitcaple SGA or, if constrained by marketability, in another SGA (PP1038).

Site OP2 – Barreldykes

Modify the PLDP to remove site OP2 (PP0079).

Oyne

Services and Infrastructure

Modify the PLDP to add text to the 'Strategic drainage and water supply' bullet point to read, "... Oyne lies with a SEPA Waste Water Drainage Consultation Area. Therefore, site investigations will be required for any private system, which will be required to be built to an adoptable standard to allow connection once the growth project is complete." (PP1219).

Site OP1 – Former Archaeolink Site

Modify the PLDP to remove site OP1 or amend the allocation summary to ensure the retention of mature trees, restrict development to 1½ storey, ensure access to Berryhill for walkers including during any construction, ensure development is completed at the same time and not piecemeal over a number of years and implement additional speed reduction/enforcement measures (PP0084).

Whiteford

Vision

Modify the PLDP Vision to reflect a settlement objective to support a small affordable housing development (PP0952).

Non-Allocated Site – New Site N017 – Land at Whiteford Road

Modify the PLDP to extend the settlement boundary to allow for infill for three houses with extant permission or identify the site as an opportunity site for 9 affordable homes (PP0952).

Summary of responses (including reasons) by planning authority:

Auchleven

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address NHS Grampian's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Auchleven Croft and Site OP2 – Adjacent to Premnay School

Comments from SEPA are noted. No change is required.

Chapel of Garioch

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Land at Pitbee

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Durno

Vision

The Council does not agree with the removal of the word "significant" from the Vision statement. The representee wishes to see the Vision changed to prevent any development. The implications of such a change would mean that householder developments, for example, would be contrary to the LDP. The Council believe such a change would be inappropriate and overly restrictive. The Council strongly contest the argument that the word "significant" has been included within the PLDP without Council approval. The existing LDP 2017 also uses the word "significant" within the Vision statement (AD0034.G, page 383). Changes to the Vision were identified via the Draft PLDP published alongside the MIR 2019 but not in terms of the word "significant" (AD0039, page 18). The PLDP has also been subject to approval by Full Council prior to its publication. No change is required.

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Lethenty

Settlement Status

The Council does not agree to preparing a Settlement Statement for Lethenty in Appendix 7 as there are no land use allocations or other designations proposed. As outlined in the Issues and Actions Papers (AD0040.E, page 118), it is maintained that Lethenty is an unsustainable location and that development should be focused towards, existing settlements, in accordance with paragraphs 40 and 81 of SPP (AD0012). Lethenty does

not meet the criteria of being classed as a “settlement” as it does not have sufficient urban characteristics or facilities to support it as a settlement. Transport access is very poor. In addition, as there are no protected, reserved, or opportunity sites identified it would not be appropriate to include Lethenty within the Appendix 7. Development in this area would be considered under the relevant policies in the PLDP. No change is required.

Non-Allocated Site – Bid Site GR081 (part) – Land North and West of Lethenty

The Council does not support allocating bid site GR081 for 7 homes, in part or in its entirety. Bid site GR081 was not identified as preferred option in the MIR 2019 (see MIR 2019, Appendix Garioch, AD0038.E, page 104). Even at a reduced scale, the site is distant from amenities or community facilities which would promote high car dependency. Lethenty is considered to be an unsustainable location and as such that development should be focused towards, existing settlements, in accordance with paragraphs 40 and 81 of SPP (AD0012). Furthermore, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. No change is required.

Meikle Wartle

Vision

The Council believes that it has been pragmatic in their approach to footpaths in the Vision statement. The Vision recognises there is an issue to be resolved with regard to creating a safe route to school, but the Council are unable, through the LDP, to identify a suitable solution to this problem. The intention is to outline that such a route would be an aspiration. No change is required.

Site R1 – To provide a car park for the village hall

Comments from SEPA are noted. No change is required.

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Land North of Meikle Wartle

Comments from SEPA are noted. No change is required.

As outlined in proposed Policy H1 (paragraph H1.3) site capacities are intended to be indicative. Unfortunately, the Council can give no guarantees that a subsequent planning application for the site could not propose a greater scale of development. This is a matter that would be considered through the development management process in determining whether the proposal is suitable in respect of its layout, siting and design, in accordance with relevant policies and other material considerations. A representee has raised concern

that the number of houses eventually built will increase significantly from the 12 homes proposed. The matters the representee seeks clarity on (house types, amenity impact, ground level details, arrangements for roads, pathways, and fencing) would all be addressed at such time as a detailed proposal comes forward and would be addressed via the development management process. No change is required.

Old Rayne

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

The Council notes comments received from SEPA and Scottish Water. The Council believe that the revised text provided by Scottish Water would satisfy SEPA's modification. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council does not agree that a provision of a link road to the A96 should be a requirement of development. The proposed Settlement Statement contains detail on what requirements there might be in terms of local transport infrastructure and any proposal coming forward would also be considered by the Council's Roads Development Team through the development management process. In addition, the allocation summaries contain specific measures that would be required in bringing forward allocated sites. This information has been provided in consultation with the Council's Transportation Service in preparing the PLDP. No change is required.

Site OP1 – Land North of Pitmachie Farm

Comments from SEPA are noted. No change is required.

The concerns from the representee are noted. However, it is not agreed that the site should be removed. As noted, in the Main Issues Report the site is within the settlement boundary therefore the development would be brownfield land and an infill opportunity. The proposal for 10 homes would continue the style of the "model" home adjoining the site providing affordable low energy sustainable housing options for the village. Despite the lack of open space on the indicative plan the site is of a size to accommodate this (AD0038.E, page 24). The site is also replacing the existing allocation in the settlement therefore the concerns regarding the scale of development and impact in the A96 junction are refuted. The concerns regarding the safe route to school is noted. However, within the allocation summary there is a requirement for the development to deliver a safe route to school which should help to alleviate concerns from the representee, see Proposed Plan (AD0041.G, page 615). No change is required

Additionally, more information can also be found in Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, regarding the Housing Land Supply calculations. No change is required.

Site OP2 – Barreldykes

Comments from SEPA are noted. No change is required.

Site OP2 was allocated by the Reporter in examining the PLDP 2015 (AD0036). The site is identified as being effective in Housing Land Audit 2019 with delivery projected between 2022 and 2027 (AD0022, page 123). The Council see no reason to remove the site from the PLDP. Matters raised by the representee can be addressed at such time as a detailed proposal comes forward through the development management process. The Council dispute the assertion that the Community Council object to inclusion of the site. In responding to the MIR, the Bennachie Community Council indicated support for the site (MIR response, AD0185). The Community Council has not included any comments in their representation to the PLDP to suggest their view has changed. No change is required.

Oyne

Site BUS – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Former Archaeolink Site

Comments from SEPA are noted. No change is required.

The Council note that the site is marketability constrained in terms of the HLA 2019. However, as a disused brownfield opportunity the Council believe it is appropriate to continue to identify it in the PLDP. Through its allocation and subsequent inclusion in the associated Delivery Programme, the Council's Delivery Team would be able to facilitate any discussion required between parties and work with them to bring the site forward. No change is required.

Whiteford

Vision

The Council does not agree that the Vision statement should be amended as suggested by the representee. Reasons are outlined in response to the matter below. No change is required.

Non-Allocated Site – New Site N017 – Land at Whiteford Road

The Council does not agree that the settlement boundary should be extended to encompass land subject to APP/2013/2710 nor do we agree that the site should be

identified as an opportunity site. As outlined in the response to this request at the MIR stage, it may be appropriate once the 3 homes, the subject of APP/2013/2710, have been built out to include the application site within the settlement boundary as contributing towards the built-up area of Whiteford (AD0040.E, pages 113-114).

In terms of the proposal to allocate an opportunity site for 9 homes, as alluded to in the MIR Issues and Actions Paper (AD0040.E, pages 113-114), the Council are not aware that any community engagement exercise has been undertaken to gauge community feeling towards the proposal. As a result, the community view of such a proposal is unknown at this time. The Council believes it would be more appropriate for this site to be considered in a future review of the LDP with a bid put forward to any call for sites issued by the Council. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of this plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as "non-notifiable modifications" in relation to the settlements statement matters covered in Issue 41. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below

Auchleven

3. NHS Grampian has requested additional text in the services and infrastructure section on page 576 of the proposed plan to set out the requirement for all residential development to contribute to the creation of additional capacity at health facilities in Inch.

4. Policy RD2.14 in the proposed plan indicates that it may be appropriate to seek contributions towards health and care facilities. Whilst NHS Grampian has indicated that there is a need for additional capacity at health facilities in Inch, it has not been demonstrated that financial contributions from development at Auchleven would meet the tests of Circular 3/2012. Furthermore, I note that planning permission has already been granted in relation to allocations OP1 and OP2. I consider that the wording suggested by NHS Grampian should be amended to indicate that there may be a requirement for contributions towards health facilities. A modification to this effect is recommended.

Chapel of Garioch

Services and Infrastructure

5. The Scottish Environment Protection Agency (SEPA) has suggested that full authorisation rather than early engagement, would be required for any private treatment. A modification to the text is requested. As development in the village would be reliant on a

private waste water system, I find that the reference to 'full authorisation' would be appropriate. A modification to the strategic water and drainage supply bullet to reflect the wording suggested by SEPA is recommended.

Site OP1 – Land at Pitbee

6. As a consequence of the above recommended modification, SEPA has requested that the last two sentences on waste water are removed from the allocation summary for OP1. I agree that this would be logical. A modification is recommended accordingly.

Durno

Vision

7. A representation has objected to the inclusion of the word 'significant' in the third sentence of the vision as set out the plan. The concern raised is that the inclusion of the word implies that less significant development may be approved, contrary to the planning objectives for the village.

8. I note the council's response and agree that, without the word 'significant', householder or infill development which may preserve the amenity and character of the village, would be contrary to the development plan. Although the version of the proposed plan considered by the area committee did not include the word 'significant', I am satisfied that the version which was approved by the Aberdeenshire full committee did. There is no justification for a total moratorium on development in Durno. I find that the inclusion of the word 'significant' is helpful in indicating the scale of development which would not be appropriate in Durno. No modification is required.

Lethenty

Settlement Status

9. A representation seeks to have Lethenty identified as a settlement in the plan. It is suggested that the existing commercial and housing development, and the northern part of bid site GR081 should encompass the extent of the proposed settlement. The proximity to and the prospect of a new cycle / footpath link to Inverurie is noted. The non-identification of Lethenty as a settlement in contrast to other comparable rural settlements in Aberdeenshire is questioned. The representations state that the identification of Lethenty as a settlement would enable the provision of semi-rural housing opportunities that are not available under the current policies in the proposed plan.

10. The council does not support the designation of Lethenty as a settlement, as there are no land use designations, no facilities and in terms of location, it is considered unsustainable.

11. I note that the glossary in the proposed plan provides a definition of a settlement. In this instance, and as observed at my site inspection, there is no identifiable boundary for a settlement; there is no definable built up area; there is no street lighting; and no reduced speed limit. There appear to be less than 15 residential address points. Both phases of bid site GR081 would be required to facilitate the numbers needed to meet the definition of a settlement. There are no public transport services to Lethenty and no education,

community, health or retail facilities. Overall, I find that the requirements for settlement status are not met in this location and that the proposal does not appear capable of meeting the definition of a settlement set out in the glossary. No modification is required.

Non-Allocated Bid Site GR081 (part) – Land North and West of Lethenty

12. A representation seeks the allocation of the northern part of bid site GR081 (Phase 2) for seven homes to be delivered in the plan period. The development would be set out in a traditional linear pattern, and be semi-rural in nature. A future phase, to the west of Lethenty, would provide a further eight homes.

13. The strategic environmental assessment identified site GR081 as having some negative effects, including the loss of prime agricultural land, flood risks and increased travel requirements. A negative impact on the character of the existing group and ribbon development was noted. The site is also partially within a pipeline consultation zone. At the Main Issues Report stage, the site was not supported as it would not provide a sustainable pattern of development, would negatively impact the character of the area and could lead to suburbanisation of the countryside.

14. Matters relating to overall housing provision in the proposed plan are covered in issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is no shortfall in the number of homes to be delivered by the housing land identified to meet the strategic development plan allowance for the Rural Housing Market Area.

15. The loss of prime agricultural land is noted, but I am satisfied that in line with Policy PR1 (Protecting Important Resources), this may be justified if required to meet strategic housing needs and there are no reasonable alternative sites. However, as sufficient land has been identified in the Rural Housing Market Area to meet the strategic development plan allowance, the loss of prime agricultural land would not be justified in this instance.

16. I also note the information regarding the position and status of the pipeline consultation zone and am satisfied that development could potentially still proceed. However, I consider that the proposed seven homes would alter the character of the existing group, which is not linear in form but clustered around Lethenty Mill. It would create ribbon development which may appear suburban in form and which would have a negative impact on the rural landscape. The lack of public services and access to public transport also persuade me that this location is not appropriate for a housing allocation in this plan.

17. The representation has raised the issue of housing allocations in settlements similar to Lethenty. I have visited each of these settlements and sites, and find that there are distinct differences between them and Lethenty. Each of the settlements referenced in the representation (Keithhall, Midmar and Millbank) meets the definition of a settlement and contains local services in the form of schools, community halls and public transport. Whereas, Lethenty does not meet the definition of a settlement and does not have the benefit of the services that those settlements enjoy.

18. For the reasons set out above, I conclude that this site should not be identified as a housing allocation. No modification is required.

Meikle Wartle

Vision

19. Concern has been raised in a representation regarding existing footpaths in the village. I note the reference to creating a safe route to school in the vision section, and in the local transport infrastructure section of the plan at page 603. Footway connections from site OP1 will also be required. I am satisfied that the council has addressed this issue in as much detail as is appropriate for a local development plan. Any further detail on footpath and safe routes provision would be dependent on the particulars of a development proposal. No modification to the plan is recommended.

Site OP1 – Land North of Meikle Wartle

20. Site OP1 lies to the north of the village and is allocated for 12 homes. Concern has been expressed that the number of houses built would exceed 12; land identified for open space would be built on; detailed plans are not available; and the current open aspect would be blocked. Other matters raised include boundary treatments and the height of the houses.

21. I note the concern regarding eventual site capacity, but as set out in Policy H1 of the plan, site capacity is indicative. If a proposal is capable of meeting relevant policies in the plan and is suitable in terms of siting, design and layout, then the actual number of homes would be a matter to be determined through the development management process.

22. The concerns raised in the representation about the potential impact on existing residential development in the area are site-specific matters that are not possible to address in a local development plan. Proposals would be assessed in relation to relevant policies, including policy P1 (Layout, Siting and Design) and policy P2 (Open Space and Access in New Development), with regard to impact on residential amenity and the character and appearance of the area. There would be opportunities for participation in the development management process once a planning application is submitted and I am satisfied that this would be the most appropriate point in the planning process to consider such potential impacts. No modification to the plan is required.

Old Rayne

Flood Risk

23. SEPA has requested that a new 'Flood Risk' section and bullet point is added for consistency, as sites OP1 and OP2 are at risk of flooding. I agree that a section on flood risk would add clarity to the plan and recommend that the plan be modified accordingly.

Services and Infrastructure

24. Both SEPA and Scottish Water have made representations in relation to the strategic drainage and water supply in Old Rayne. Scottish Water has confirmed that capacity is available and has provided wording to add as a new bullet point under the services and infrastructure section. This suggested amendment would also address the matters raised by SEPA. I agree that an additional bullet point would add clarity and I recommend that the plan be modified accordingly.

25. A representation has raised concerns relating to the scale of development proposed for Old Rayne in the plan period. In particular, concern is raised in relation to the capacity of Lawrence Road, which leads east from the A96 and runs through the village. In places the road is single lane, is without footpaths and has blind corners. The representation is seeking a link road from Old Rayne to the A96 to improve road safety and to serve the new development.

26. I note that the development allocations in Old Rayne have been assessed by the council's Roads Development Team and the need for a link road to the A96 as a consequence of the two allocations is not supported. I also note that each allocation is required to address the issue of safe routes to school, including new footbridges and links to the existing footpath network. I am satisfied that the issue of road safety has been appropriately addressed and that the need for a link road has not been demonstrated. No modification is required.

Site OP1 – Land North of Pitmachie Farm

27. This site is referred to as bid proposal GR067 in the Main Issues Report. It is now site OP1 and allocated for 10 homes, which are expected to be delivered in the plan period. I noted on my site visit the existing new house and commercial operations on the site and the existing access on to the A96.

28. There are two representations objecting to the allocation of the site on the grounds of access and road safety, community interests, and deliverability.

29. The comments made on deliverability appear to be based on an assumption that allocation OP1 in the proposed plan is on the same site as allocation OP1 in the existing local development plan. It is not. Allocation OP1 in the existing plan, which lies on the eastern side of the village and is identified as constrained in the 2019 housing land audit, has not been included in the proposed plan. Site OP1 in the proposed plan is a new allocation, which is not yet included in the housing land audit. Comments regarding existing constraints are therefore not relevant. In response to this representation and in the interest of clarity, I recommend that the relevant table in Appendix 6 Housing Land Allocations be amended to show allocation OP1 Old Rayne as a new site and to delete the figure '10' from the 'Constrained 2019' column.

30. The strategic environmental assessment identifies positive and neutral environmental effects in relation to this allocation. In particular, it recognises the benefits of redeveloping a brownfield site. The Main Issues Report notes that the existing buildings on the site are approaching the end of their useful life and that the site lies within the settlement boundary. The Issues and Actions Paper notes that the council considered it appropriate to allocate bid GR067 as a brownfield opportunity to replace the existing OP1 site, which is to be removed from the plan on the basis of non-delivery.

31. I note that other bid proposals were not supported in the Issues and Actions Paper. However, none of these are the subject of site specific representations and their non-inclusion in the proposed plan is not matter for this examination. Furthermore, I am unable to address questions regarding a potential conflict of interest in relation to the allocation of this site.

32. Given its location within the settlement boundary and the nature of neighbouring uses,

I consider the principle of redeveloping this brownfield site for housing to be appropriate. There is an existing access onto the A96 and the need to provide a safe route to school is included in the allocation summary. I anticipate that these matters and other comments regarding the detailed impact of development on neighbouring properties would be addressed further at planning application stage. The scale of development proposed seems to me to be appropriate for a site of this size and location. However, the exact number of homes to be developed and the site layout including open space provision would be determined at planning application stage, when neighbours and other interested parties would have the opportunity to submit representations.

33. The site is identified as contributing towards the strategic development plan allowance for the Rural Housing Market Area. Based on the information before me, I do not consider that the matters raised in representations would justify the removal of this allocation from the plan. Apart from the minor amendment to Appendix 6, no modifications are required.

Site OP2 – Barreldykes

34. Site OP2 is a large site to the north-west of Old Rayne, allocated in this plan for 30 homes. It had previously been allocated in the 2017 Plan as site OP2. There is one objection to the allocation from a local resident.

35. A development of 30 homes in a village the size of Old Rayne is not considered modest. The site supports a variety of wildlife, upon which the development would have a negative impact. The Bonnyton Burn, which runs to the east of the site, is a spawning ground for brown trout and would be adversely affected. Pedestrian safety would be negatively impacted upon, due to the lack of pavements and the junction with the A96. The elevation of the site would lead to an overbearing impact on neighbouring properties. It is difficult to see what, if any, benefit the development could bring to the village. The relocation of a sewer pipe through OP2 has led to issues with water retention and tree loss due to saturated soil.

36. I note that at the Main Issues Report stage, Bennachie Community Council indicated support for the retention of the allocation. Although 30 homes in a single allocation may seem excessive, the plan covers a 10+ year period up to 2032. I noted on my site visit, that this part of Old Rayne is characterised by modern residential development. While the site is elevated, it is only marginally so over the existing residential development at Leslie Park and Barreldykes Way and I am satisfied that development would not be overbearing or have a negative impact on residential amenity for that reason.

37. This is a continuation of an existing allocation and the council's Roads Development Team has not raised any concerns regarding the junction with the A96. The issue of pedestrian safety has been addressed in the allocation summary, where footpath links to the school and the existing footpath network are specifically addressed. The allocation summary also indicates that a flood risk assessment is required. I anticipate that these matters would be addressed further at planning application stage. Matters relating to damage of private garden ground or details shown on the developer's plans cannot be addressed in the local development plan

38. The representation questions the benefits the development might bring to the village. I note that the site would be expected to contribute towards affordable housing in accordance with Policy H2 Affordable Housing and would provide additional residents to

help support local facilities. The provision of retail and employment uses would also provide local services and promote local employment opportunities.

39. I note the comments regarding the habitat for wildlife in the woods that bound the site and the trout hatchery in the Bonnyton Burn. In order to protect any wildlife and/or habitats, I recommend that the plan be modified to include a requirement for a habitat and wildlife survey. A modification is set out in my recommendations below.

Oyne

Services and Infrastructure

40. SEPA seeks an amendment to the 'Strategic drainage and water supply' bullet point to indicate that Oyne lies within a SEPA Waste Water Drainage Consultation Area and site investigations will be required for any private system, built to an adoptable standard. I agree that additional text on waste water would add clarity to the plan and recommend that the plan be modified accordingly.

Site OP1 – Former Archaeolink Site

41. A representation seeks the removal of site OP1 as there is no need for additional housing in Oyne, and the oil industry in the region will suppress the economy and the demand for new housing. The representation also raised some detailed matters to be addressed if the allocation is retained.

42. The site is allocated for 10 homes in the existing local development plan. I note that the 2019 housing land audit identifies the site as being constrained for marketability reasons. Allocation OP1 is a brownfield site which lies within the settlement boundary next to existing housing. I am satisfied that its inclusion in the plan as a site for housing is in accordance with local and national planning policy on the efficient re-use of previously used land.

43. The allocation summary on page 618 of the proposed plan sets out a number of development requirements which specifically address some of the concerns raised in the representation. Boundary trees are to be retained, a link to the footpath to Berry Hill is required, recycling facilities are to be retained, a Water Impact Assessment including drainage is required. It would not be appropriate for the local development plan to refer to a legally binding clause to limit development to a maximum of 10 houses or require all 10 houses to be built at the same time. In terms of road safety, reducing the speed limit to 20 miles per hour in the vicinity of the site is not a matter for the local development plan.

44. When visiting Oyne, I observed the homogenous design features that are typical in the village, even in more recent residential development, such as one and a half storey building heights and dormer windows. I agree that the design of any development should be appropriate for the village and I therefore recommend a modification to require a design statement to accompany any development proposal.

Whiteford

Non-Allocated New Site N017 – Land at Whiteford Road

45. An amendment to the text of the vision section is requested to provide for affordable housing on site N017, which lies to the west of the settlement. The representation is seeking an allocation of up to 9 affordable homes either in this plan period or as a future opportunity site, and an amendment to the settlement boundary to include site N017. The site has planning consent for 3 detached homes and at the time of my site visit, it was on the market for the sale of individual house plots. The representation advises that up to 9 affordable homes could be accommodated within the site boundary of the extant planning consent.

46. The site previously formed part of a larger allocation in the 2006 local plan for 15 homes to be delivered as future housing land in the period 2006-2015. This allocation was removed in the 2012 local development plan and not included in the 2017 plan.

47. As the site boundary would not change, the representation considers that there would be no adverse impact on the village in terms of visual and built form, access to services, the safety of the A96 junction and intrusion into the countryside. There would be positive outcomes in terms of housing choice and support for the existing facilities in the village such as Logie Durnie primary school, the village hall and recreation grounds. Flood risk has been identified as a general issue for the village but is not relevant to this site.

48. The site was not promoted at development bid stage, but a submission was made in response to the Main Issues Report. However, site N017 was not included in the strategic environmental assessment carried out by the council, and has not been the subject of public consultation.

49. Whilst the planning permission for three houses has been implemented, the site lies outwith the settlement boundary. This does not prevent the development of the site in line with the current permission. However, a development for nine homes would require a new application.

50. I find that I have insufficient information before me to assess the suitability of the site for nine homes, in particular as key agencies and local residents have not had the opportunity to consider the proposal. Furthermore, we have indicated in issue 5 that there is no requirement to allocate additional housing land to meet the strategic development plan allowance for the Rural Housing Market Area. I therefore conclude that site N017 should not be identified as a housing allocation.

51. If not allocated in this plan, the representation sought the identification of site N017 as a future opportunity site in the plan. Whilst the strategic development plan allows local development plans to identify additional strategic reserves beyond 2032, there is no requirement to do so. The council's decision not to identify future opportunity sites in this plan is therefore in accordance with the strategic development plan. This matter is addressed in issue 2 of this examination. Within this context, there is no justification to allocate bid site N017 as a future opportunity site in the plan.

52. No modification is required.

Reporter's recommendations:

Modify the local development plan by:

Auchleven

1. Adding the following new final bullet point to the Services and Infrastructure section of the Auchleven settlement statement on page 526:
“• Health and care facilities: Residential development may be required to contribute towards the creation of additional capacity at health facilities in Insch.”

Chapel of Garioch

2. Replacing the second sentence in the ‘Strategic drainage and water supply’ bullet point of the Chapel of Garioch settlement statement on page 532 with:
“Full authorisation will be required from SEPA for any private treatment which will need to be built to an adoptable standard.”
3. Deleting the final two sentences of the allocation summary for OP1: Land at Pitbee in the Chapel of Garioch settlement statement on page 533.

Old Rayne

4. Adding the following new Flood Risk section to the Old Rayne settlement statement on page 614:
“Flood Risk
• Sites OP1 and OP2 lie adjacent to SEPA’s indicative 1:200 flood risk area and/or have small watercourses running through them. A Flood Risk Assessment may be required.”
5. Adding the following new first bullet point to the ‘Services and Infrastructure’ section of the Old Rayne settlement statement on page 614:
“• Strategic drainage and water supply: There is currently capacity at Old Rayne Waste Water Treatment Works.”
6. Amending the entry for Old Rayne OP1 in the relevant table in Appendix 6 to show it as a new site and delete the figure ‘10’ from the ‘Constrained 2019’ column.
(Note – a revised version of Appendix 6, incorporating all the recommended modifications, is provided at the end of this report.)
7. Adding the following new fourth sentence to the first paragraph of the allocation summary for OP2: Barreldykes in the Old Rayne settlement statement on page 615:
“A wildlife and habitat survey is required.”

Oyne

8. Adding the following two sentences to the end of the strategic drainage and water supply bullet point in the Oyne settlement statement on page 617:
“Oyne lies within a SEPA Waste Water Drainage Consultation Area. Therefore, site investigations will be required for any private system, which will be required to be built to an adoptable standard to allow connection once the growth project is complete.”
9. Adding the following new final sentence to the first paragraph of the allocation summary for OP1: Former Archaeolink Site in the Oyne settlement statement on page 618:
“A design statement will be required to ensure that any development is appropriate in form and scale for the site and the village.”

Issue 42	Drumoak	
Development plan reference:	Proposed LDP, Appendix 7E Kincardine and Mearns, Page 654-656	Reporter: Alison Kirkwood
Body or person(s) submitting a representation raising the issue (including reference number):

Provision of the development plan to which the issue relates:	Drumoak Settlement Statement	
Planning Authority's summary of the representation(s):		
<p><u>General</u></p> <p>Representees, including Crathes, Drumoak and Durriss Community Council, support the proposed allocations and oppose any further sites being allocated for housing (PP0077 and PP0337).</p> <p>Crathes, Drumoak and Durriss Community Council has confirmed that they are opposed to development of any kind south of the River Dee as it does not comply with local and national policies due to the lack of public transport, that any development would not provide sufficient demand for a viable service, and the local infrastructure does not support such developments in particular the limited access to Drumoak via Park Bridge. They add there is community interest to protect the sensitive nature of the River Dee and its habitats (PP0337).</p> <p>Crathes, Drumoak and Durriss Community Council has indicated the area needs a sensitive approach to better develop it to become a tourist destination (PP0337).</p> <p><u>Site R1 – Reserved for a future cemetery expansion</u></p> <p>Scottish Environment Protection Agency (SEPA) has requested adding additional text to the allocation summary stating that the potential impact of the proposal on the private water supply to the church will need to be fully assessed or connection to the mains water</p>		

supply implemented (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Land to the North of Sunnyside Farm

The allocation is supported as it meets local housing need (PP0077 and PP0337).

Crathes, Drumoak and Durriss Community Council is concerned that the surface water drains in the older (lower) part of the village are insufficient due to new developments expanding up the hill that have resulted in overflowing drains and flooding in the area of Keithmuir Gardens. It is requested that this issue is addressed if further development takes place (PP0303).

SEPA has confirmed that that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B) (PP1219).

Non-Allocated Site – Bid Site KN034 – Site A East of Drumoak

A representee has requested that bid site KN034 be allocated for 50 homes and that 60 homes are reserved for future development. They have noted that this is a reduction from the original bid, which proposed 178 homes, and propose developing the southern half first in light of the Council's connection concerns. They disagree a second access is required. They refute this proposal would result in overdevelopment and undermine the landscape character and village setting. They disagree with the concerns of NatureScot (Scottish Natural Heritage) regarding landscape and visual impact as the site is contained by trees and would be no less conspicuous than existing home. There will be strategic planting to reduce its visual impact on the setting of Drumoak, and it can be phased to allow incremental growth. They also state there is demand for new homes in Drumoak, but only one site is allocated for 11 homes. They report there will be capacity in both Drumoak Primary School and Banchory Academy, and the site relates well to the primary school. They also disagree that the pipelines (and overhead lines) should be a constraint as they can be rerouted like at Westhill and allocations are on a pipeline corridor in Stonehaven. The representee has included a number of Appendices (RD0169.A, RD0169.B and RD0169.C) in their representation which provides further detail to support their position (PP0905).

Non-Allocated Site – Bid Site KN035 – Site B South of Drumoak

A representee has requested that bid site KN035 be allocated for 123 homes with 50 homes for immediate development and 73 homes reserved for future development. They have stated the proposal provides an ideal location for the planned expansion of Drumoak and is enclosed by mature landscape features in all directions but to the north, where the development would integrate into the existing settlement. They add, it would sustain local services, provide much needed new housing where only one site is allocated for 11 homes, and avoids Protected Land to the south of Drumoak. They also argue, it would not significantly detract from the character of the landscape, the idyllic setting of the village or the viability of local infrastructure such as foul water drainage and schooling, and neither

would it result in overdevelopment as it would be phased to allow incremental growth. The proposal also includes two points of access and upgrades the minor C35K road with paths and street lighting, parking for the post office, and a light-controlled pedestrian crossing to provide a safe crossing of the A93. The representee has included a number of Appendices (RD0170.A, RD0170.B, RD0170.C and RD0170.D) in their representation which provides further detail to support their position (PP0906).

Non-Allocated Site – Bid Site KN036 – Site C West of Drumoak

A representee has requested that bid site KN036 be allocated for future development for 345 homes and retail/commercial uses. The representee states the proposal is well-contained within a strong landscape framework, it will integrate with established features of the settlement such as adjacent housing, Drumoak Public Park and Drumoak Primary School, which can be extended if required. They highlight that the proposed landscaping would be used to contain the site and connect to the adjacent park and school. They advise no impact would be incurred upon the setting of Drum Castle, or the wider landscape setting, and it can be phased to allow incremental growth to minimise visual impacts. They state that the presence of a pipeline corridor does not inherently preclude development as they can be rerouted like at Westhill and allocations are on a pipeline corridor in Stonehaven. They also note that land could be provided for new retail/commercial space next to the A93 if there is the critical mass from new development. The representee has included a number of Appendices (RD0171.A, RD0171.B and RD0171.C) in their representation which provides further detail to support their position (PP0907).

Non-Allocated Site – Bid Site KN037 – Land West of Mains of Drum Garden Centre

A representee has requested that bid site KN037 be allocated for an age exclusive development for up to 50 single storey homes, management office (including a communal meeting area and a small shop), along with open space and new/enhanced woodland for landscape enhancement, ecological benefit and recreational use to meet the demand for a lack of suitable homes for an expanding ageing population. The representee argues that this is a national issue. There is a high proportion of elderly residents within the site's catchment with limited provision in the immediate area. The proposal will provide a range of services and support. It will be well designed and fit for current and future needs. The site is readily accessed by car and public transport. The area is punctuated by a range of development and is therefore not remote. It sits well in the landscape. There are no absolute constraints to development. The representee has included a number of Appendices (RD0228.A, RD0228.B, RD0228.C, and RD0228.D) in their representation which provides further detail to support their position (PP1244).

It is also argued by the representee that the proposal meets the Council's Local Housing Strategy objectives and would help address the needs identified in the Aberdeenshire Housing Needs and Demand Assessment (HNDA), which highlights an increasing demand for more housing for the elderly and small households across all tenures, but that this is not being delivered by the private market. They also state the proposal will address issues identified by the Scottish Government's strategy for housing for older people and Scotland's national dementia strategy, which recognise the benefits of independent living as long as possible, enabled by housing specifically designed for those who are elderly and/or have complex care or additional support needs, and so avoiding the need for care home/hospital stays. They consider this gap in the market will only increase over time

(PP1244).

Non-Allocated Site – Bid Site KN064 – Land at Park Quarry

A representee has requested that bid site KN064 be allocated for a new settlement comprising of up to 600 homes, a small-scale business park, a village centre and land for a primary school. The representee has stated that the site is deliverable with no technical constraints. It will provide a unique sustainable development opportunity. It will contribute to Aberdeenshire's housing land supply and is in an area of high demand with a significant under-allocation of housing. They also state housing land is needed to meet the Aberdeen City and Shire Strategic Development Plan's housing allowances, particularly in an area considered to be more deliverable and sustainable, such as the Deeside area. They dispute the need for road access to the north of the River Dee onto the A93. In addition, it is suggested that it makes sense to redevelop the land from its previous quarry use on a site with good connectivity. The site is accessible from the Deeside Way and National Cycle Network. There will be no significant impact on the River Dee Special Area of Conservation and would retain riparian habitats, and it will have limited visual impact on the Dee Valley Special Landscape Area (SLA). The proposal will reflect the historical development patterns, include generous open space with affordable and self-build housing in an area where people want to live, and it will enable infrastructure improvements to be made to the local road network including reopening the category B-listed Park Bridge to traffic, and deliver a new primary school. The representee has included a supporting statement (RD0123.A) in their representation which provides further detail to support their position (PP0732).

Crathes, Drumoak and Durris Community Council does not support bid site KN064 and welcome its exclusion from the Proposed Local Development Plan (PLDP), as the local community overwhelmingly want the quarry re-instated to agricultural land as per the planning conditions. They argue the bid site lies at the bottom of the valley making it visible from a wide area and development would have a highly detrimental visual impact (PP0304). The proposed bid does not accord with Policies R1 and R2 as it does not meet local needs as there is no need for additional housing on this scale, and there are no exceptional circumstances (PP0346). In addition, the proposal would impact on local infrastructure that is currently inadequate, social interaction and the environment (PP0346), and that the area is unsuited to this type of development as there are no amenities or infrastructure, the site is not on a bus route, there is no school capacity and pupils would need to be transported in buses (PP0305).

A representee has supported the Council's decision not to allocate bid site KN064 due to constraints affecting the viability and appropriateness of developing the site as discussed in the Main Issues Report (MIR) 2019, specifically the constraint that the site is within 500m of the River Dee Special Area of Conservation (SAC), which includes European Protected Species. Development of this site would not be sustainable as it would promote reliance on car use as it is distant from employment opportunities, local services and facilities and is not easily accessible by public transport. Should, additional housing land be required, it should be small-scale, compatible with the scale and nature of existing communities and support local services and facilities – KN064 would not provide any of these elements. The site is currently operating as a quarry with the planning consent for this use due to expire in October 2022. If the site were to be developed as per KN064, the restoration scheme, as set out in the planning consent's conditions would not be satisfied. Proposal for Storage Bottom Ash (IBA) and Occasional IBA Processing is within the

boundary of site KN064 - the homes proposed as part of KN064 would be incompatible with the IBA and would have significant landscape impacts. The local community have started work to develop a vision for alternative uses for the site and in the context of the new Planning (Scotland) Act 2019, and the focus on Local Place Plans (LLPs), opportunity should not be prejudiced by the allocation of KN064 (PP0077).

Modifications sought by those submitting representations:

Site R1 – Reserved for a future cemetery expansion

Modify the PLDP to amend site R1 to include, “The potential impact on the private water supply to the church will need to be fully assessed or connection to mains water supply implemented.” (PP1219).

Site OP1 – Land to the North of Sunnyside Farm

Modify the PLDP to amend the allocation summary of site OP1 to include a modification to the surface water drains lower down in the settlement (PP0303).

Non-Allocated Site – Bid Site KN034 – Site A East of Drumoak

Modify the PLDP to include bid site KN034 for 50 homes in the southern half of the site and reserve the remaining area for 60 homes as future development (PP0905).

Non-Allocated Site – Bid Site KN035 – Site B South of Drumoak

Modify the PLDP to include bid site KN035 for 123 homes - 50 homes for immediate development and 73 homes reserved for future development (PP0906).

Non-Allocated Site – Bid Site KN036 – Site C West of Drumoak

Modify the PLDP to include bid site KN036 as a reserve site for future development for 345 homes and retail/commercial uses (PP0907).

Non-Allocated Site – Bid Site KN037 – Land West of Mains of Drum Garden Centre

Modify the PLDP to include bid site KN037 for the development of a retirement (age exclusive) community containing up to 50 single storey homes for the over 60s, with management office, community facilities and open space (PP1244).

Non-Allocated Site – Bid Site KN064 – Land at Park Quarry

Modify the PLDP to include bid site KN064 for a new village of up to 600 homes and a small-scale business park, a village centre and land for a primary school (PP0732).

Summary of responses (including reasons) by planning authority:

General

Support for the allocations is welcomed and the desire for no further allocations around Drumoak and to the south of the River Dee are noted. No change is required.

The Council notes Crathes, Drumoak and Durriss Community Council's desire for a sensitive approach to developing the area as a tourist destination. However, no requests (bids) for tourist facilities were submitted during the Call for Sites stage and proposals can come forward under policies in the LDP. No change is required.

Site R1 – Reserved for a future cemetery expansion

The Council agrees with SEPA's request to include additional text to protect the church's private water supply. If the Reporter is minded, to make an amendment, then the Council recommend that the designation summary for site R1 could be modified to include, "The potential impact on the private water supply to the church will need to be fully assessed or connection to mains water supply implemented."

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Land to the North of Sunnyside Farm

Support for this site is noted. No change is required.

The Council notes that SEPA has no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1. No change is required.

The Council notes Crathes, Drumoak and Durriss Community Council's concerns regarding surface water drains overflowing and flooding Keithmuir Gardens. Only a small allocation of 11 homes is proposed, which is part of an existing allocation. SEPA has not raised any issues with this allocation. This issue would be more appropriately addressed at the planning application stage, but consent on this site has already been granted. No change is required.

Non-Allocated Site – Bid Site KN034 – Site A East of Drumoak

The Council does not support allocating bid site KN034 for 50 homes and reserving the remainder of the site for 60 homes as 'future development'. Bid site KN034 was not identified as a preferred option in the MIR, see AD0038.F, pages 20-21). The PLDP does not reserve land for housing beyond the proposed Plan period. While this is a reduction from the original bid, the Council still have concerns on the wider landscape impact, which are supported by NatureScot in their response to the MIR 2019, see AD0171, page 30. They state, "that it is an extensive site, which extends west and north up the slopes of the immediate landform which forms the landscape and visual setting to Drumoak to the north. Development on this site, in particular on the steeper slopes would incur likely significant adverse landscape and visual effects." The site would have a significant visual and landscape impact when approaching the settlement along the A93 as it is visible along the A93 with the Dee Valley SLA immediately opposite (south). Furthermore, the current tree belts that run down the eastern boundary of the settlement boundary provide an effective boundary treatment.

With regards to the other comments raised by the representee, a second access is required under paragraph 12.1 of the Council's Standards for Road Construction Consent

and Adoption (2015), see AD0111, which states, “Where a core road is not a loop and serves more than 50 but less than 100 dwellings, an emergency access route must be provided. Where a core road serves in excess of 100 houses it must have at least two points of access.” While the School Roll Forecasts 2019 state Drumoak Primary School has capacity in 2024, Banchory Academy is forecast to be at 100% by 2024, see AD0110, Appendix 1, page 1. Although the National Grid Transmission Pipeline, which crosses the centre of the site, could be realigned, the PLDP has sought to demonstrate the avoidance of risk by carefully considering sites that are within pipeline consultation zones and favouring alternative sites where possible. It has also not been demonstrated if all landowners support moving the pipeline.

In relation to housing need, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site KN035 – Site B South of Drumoak

The Council does not support allocating bid site KN035 for 50 homes and reserving 73 homes for future development. Bid site KN035 was not identified as a preferred option in the MIR, see AD0038.F, page 21. The PLDP does not reserve land for housing beyond the proposed Plan period. While the site is well located in relation to the settlement and partially enclosed by woodland, it sits in the Dee Valley SLA and its scale and location would impact negatively on the landscape and setting of the settlement and would result in development encroaching towards the River Dee.

With regards to our other concerns and comments raised by the representee, having two access points would meet Council roads standards, although their supporting material does not show this. Widening the minor C35K Park Road is welcomed if they have the control in order to do so, but this is not clear, as a bid across from the site (KN128) was submitted by a different proposer. While the School Roll Forecasts 2019 state Drumoak Primary School has capacity in 2024, it would result in pupils needing to cross the A93, which is undesirable even with a controlled crossing if this was consented, see AD0110, Appendix 1, page 1. Banchory Academy is forecast to be at 100% capacity by 2024. The Council are unconvinced the proposal would help sustain the limited facilities in Drumoak and are concerned about the proximity the site is to the sewage works should it ever need to expand and with the prevailing south westerly wind direction.

In relation to housing need, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site KN036 – Site C West of Drumoak

The Council does not support allocating bid site KN036 for future development for 345 homes and retail/commercial uses. Bid site KN036 was not identified as a preferred option in the MIR, see AD0038.F, page 21. The PLDP does not reserve land for housing beyond the proposed Plan period. While the proposed site is well located to the settlement, the indicative layout is unlikely to affect Drum Castle, and it is in close proximity to the primary school, it is constrained by a pipeline, it only has one access point (unless the distributor

road is built early on to connect the A93 with James Gregory Road near the primary school), and it would have a significant impact on landscape and result in coalescence with Park and Drumoak. Although the National Grid Transmission Pipeline, which crosses the centre of the site, could be realigned, the PLDP has sought to demonstrate the avoidance of risk by carefully considering sites that are within pipeline consultation zones and favouring alternative sites where possible. It has also not been demonstrated if all landowners support moving the pipeline. In relation to housing need, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocation, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site KN037 – Land West of Mains of Drum Garden Centre

The Council does not support allocating bid site KN037 for an age exclusive development for up to 50 homes, management office (including a communal meeting area and a small shop), open space and new/enhanced woodland. Bid site KN037 (recreational/leisure uses) and Bid site KN038 (50 homes for the elderly) were not identified as preferred options in the MIR, see AD0038.F, page 22. While the Council commend the proposed use and additional facilities, the site relates poorly to existing settlements, with Drumoak over 1km away and it would exacerbate the disparate pattern of development around Drum. Its scale and location would likely have a significant landscape impact and result in urbanisation of the countryside. The site is located on green belt land and is visually prominent from the A93, although screening is proposed in the indicative plan. It would result in reliance on the private car. It could impact on the setting of the Category A listed Drum Castle and designed landscape less than 1km away.

Therefore, given its distance from health services, shops and other facilities and potential impact on the landscape, it is considered that such a proposal would be best placed within or adjacent to a larger settlement. In relation to housing need, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site KN064 – Land at Park Quarry

The Council does not support allocating bid site KN064 for a new village of up to 600 homes, a small-scale business park, a village centre and land for a primary school. Bid site KN064 was not identified as a preferred option in the MIR, see AD0038.F, page 22. The bid site proposes to accommodate a large-scale of development that relates poorly with Drumoak and subsequently would pose considerable impacts on local services and infrastructure, the local landscape and potentially the wider transport network. There is insufficient secondary and primary education provision, and insufficient waste water treatment works capacity. While the site lies in the Aberdeen Housing Market Area, it is outwith the Strategic Growth Area where development of this scale should be directed. Furthermore, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area.

Crathes, Drumoak and Durriss Community Council have stated that they prefer to have the quarry reinstated as per the planning conditions than developed for housing. All contaminants should be removed as part of the remediation.

The Council notes that on page 229 of the representees supporting material (page 11 the Response to the Main Issues Report 2019) the Environmental Impact Assessment reported no impact to the River Dee Special Area of Conservation. However, as SEPA's online water classification tool (<https://www.sepa.org.uk/data-visualisation/water-classification-hub/>) classifies the River Dee as being of moderate quality and when it reaches Aberdeen is classified as bad, it is preferred that development avoids this location. Furthermore, the nature, scale and location of the proposal will also affect the Dee Valley SLA, as it will introduce a significant amount of development where there is currently very little.

The category B-listed single lane Park Bridge is currently closed to vehicular traffic and the Council's Transportation Service advises that a new bridge across the River Dee and a link road to the A93 will be required from the site, along with an upgrade of the A93/A90 junction at Milltimber. The Council notes this is disputed by the representee as Park Bridge can be repaired and vehicles can utilise the B9077 South Deeside Road, negating the need for a Park Bridge upgrade, and further impacts on junctions on the A93. However, unless the primary school is built in the first phase of the development and Park Bridge is opened to traffic, access to Drumoak Primary School can only be on foot, which is undesirable as the C35K Park Road has no footpath and pupils would need to cross the A93, or take a round trip to Crathes, 5km away, to cross the River Dee. Furthermore, given the scale and proposed uses, it is also more appropriate for road users to utilise the A-class road. Access to the Aberdeen Western Peripheral Route (A90(T)) will be from the A93/A90 junction at Milltimber.

In conclusion, this is not the right type of development in the right location. No change is required.

The Council notes that Crathes, Drumoak and Durriss Community Council does not support this proposal. Restoring the quarry to its former use is not a matter for the LDP and this should be undertaken in accordance with the agreed planning permissions. The proposal for Storage Bottom Ash is noted. Any future Local Place Plans will be considered during the preparation of the next Local Development Plan. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

Site R1 – Reserved for a future cemetery expansion

2. As the church relies on a private water supply, I consider that it would be prudent to highlight that any potential impact on this would need to be fully assessed. I recommend

a modification to reflect the wording requested by the Scottish Environment Protection Agency (SEPA).

Site OP1 – Land to the north of Sunnyside Farm

3. This site, which lies to the north of new housing development at James Gregory Road, is allocated for 11 homes. The proposed plan indicates that the site has full planning permission and development is expected to be completed in 2020. However, I observed on my site inspection that no houses had been built yet. I note the concerns raised by the community council in relation to the potential impact of new development on the surface water drains in the lower part of the village. However, this concern is not shared by SEPA. In the absence of evidence relating to this particular allocation, it would not be appropriate to require the developer to upgrade drains elsewhere in the village. No modification is required.

Non-allocated Bid Site KN034 – Site A east of Drumoak

4. Bid site KN034 is one of three sites being promoted by Stewart Milne Homes in Drumoak, which is located within the Aberdeen Housing Market Area. It is currently agricultural land, which lies on the eastern side of the settlement and immediately to the north of the A93 road.

5. I note that the bid proposal for this site was initially for 178 homes. However, the representation to the proposed plan relates only to the land to the south of the area of ancient woodland. It seeks an allocation of 50 homes in the period to 2032 and a future reservation for a further 60 homes.

6. The council has decided not to reserve land for future housing development beyond 2032, an approach which is consistent with the strategic development plan. However, the indicative site layout and phasing plan submitted by Stewart Milne Homes do not show how the site could be subdivided to bring forward a separate allocation for 50 homes. I therefore consider it appropriate to assess bid site KN034 as a development of 110 homes on all of the land to the south of the woodland belt, regardless of the intended phasing.

7. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5 it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. Bid site KN034 could potentially meet this shortfall and I note from the main issues report that there is officer support for some additional housing in Drumoak.

8. The assessment of the site in the environmental report and main issues report indicate that development would be well located in relation to local facilities, particularly those to the north of the A93. Concerns were raised in relation to landscape impact and potential effects on the setting of Drum Castle. However, I consider that these effects would be reduced, as a result of restricting development to the southern part of the site and could be addressed through a master plan. The school roll information provided by the council shows that there is available capacity at Drumoak primary, but not necessarily at Banchory Academy. However, policy RD2 in the proposed plan provides a mechanism for securing developer contributions to address infrastructure deficiencies. Furthermore, the

strategic drainage and water supply bullet point in the settlement statement sets out a way forward to provide additional capacity at the waste water treatment works. I consider overall that the identified impacts on infrastructure could be overcome and would not prevent development coming forward.

9. Whilst there are some merits in bid proposal KN034, I have insufficient information before me regarding the implications of the pipeline which passes through the site. Stewart Milne suggests that it can be rerouted. However, no information has been provided to indicate that such a solution would be supported by the pipeline operator or the Health and Safety Executive. I note that the community council does not support the allocation of any further sites in Drumoak and, given the limited range of local services, I am not convinced that a development of over 100 houses would be appropriate in this location.

10. In light of the above considerations and given the availability of other sites to meet the strategic development plan allowance for the Aberdeen Housing Market Area, I conclude that site KN034 should not be identified as housing allocation. No modification is required.

Non-allocated Bid Site KN035 Site B South of Drumoak

11. The site lies to the south of the existing settlement boundary, on undulating agricultural land which slopes gently downwards towards the River Dee. The representation from Stewart Milne seeks an allocation for 123 homes, 50 of which would be delivered in the period up to 2032. For the same reasons as KN034, I consider it appropriate to assess the whole site.

12. This site could also potentially address the shortfall in allocations identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. I find that its development would raise similar concerns in relation to the scale of development relative to the provision of local services. However, there are no pipelines passing through this site.

13. The strategic environmental assessment indicates that development would have significant adverse landscape effects. Existing and additional tree planting would help mitigate any impact on the Dee Valley Special Landscape and on views across the site from the road to the west. However, development would bring the built up area much closer to the River Dee and would alter the existing rural character of the valley slopes. As indicated above, I consider the council's concerns regarding impact on local infrastructure could be addressed. However, I note that the requirement for primary school pupils to cross the A93 would be a concern to the local community.

14. Whilst there are merits in this proposal, there would be adverse landscape impacts. I am also concerned about the scale and location of development relative to the provision of local services. Given the availability of other sites to meet the strategic development plan allowance for the Aberdeen Housing Market Area, I conclude that site KN035 should not be identified as housing allocation. No modification is required.

Non-allocated Bid Site KN036 Site C West of Drumoak

15. Stewart Milne Homes has requested that this site to the west and north west of the

settlement be identified as a future reservation for housing with some retail/commercial space. General representations regarding the identification of future opportunity sites are addressed under issue 2. This concludes that, whilst the strategic development plan allows local development plans to identify additional strategic reserves beyond 2032, there is no requirement to do so. The council's decision not to identify future opportunity sites is in accordance with the strategic development plan.

16. Within this context, there is no justification to allocate bid site KN036 as a future opportunity site in the plan. Stewart Milne has not suggested that any part of the site could come forward in the period to 2032 and I have no evidence before me to indicate that the site could help meet the shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area.

17. I note that the site has been assessed through the strategic environmental assessment process and main issues report stage. However, given my conclusions above, I have not undertaken a detailed assessment of the merits or otherwise of the bid proposal. No modification is required.

Non-allocated Bid Site KN037 – Land west of Drum Garden Centre

18. Bid site KN037 lies in the countryside over one kilometre to the east of Drumoak, to the north of the A93 road and immediately to the west of Mains of Drum garden centre. The site is located within the green belt in the existing and proposed plan.

19. The bid proposal is for a standalone age exclusive development for up to 50 single storey homes and ancillary facilities. I agree that the provision of housing designed for older people would help meet increasing demand as identified in the Aberdeenshire Housing Needs and Demand Assessment 2017. However, I do not consider the location of this site would be suitable for housing, "age exclusive" or otherwise. An urban development of this scale would have an adverse landscape and visual impact on the countryside. I agree with the council that the site relates poorly to existing settlements and would be remote from local services. I consider that the proposal would be contrary to the objectives set out in section 4 of the proposed plan, "to promote sustainable mixed communities and "to reduce the need to travel". I acknowledge that it may be possible to mitigate the impact of development on local infrastructure and the setting of Drum Castle. However, for the reasons set out above, I do not consider the allocation of this site would be appropriate. No modification is required.

Non-allocated Bid Site KN064 – Land at Park Quarry

20. Park Quarry is located to the south of the River Dee, immediately to the west of the minor road which runs between Drumoak and the B9077 road. The bid proposal would create a new settlement comprising up to 600 homes, a business park, village centre and primary school.

21. The site is located within the Aberdeen Housing Market Area but not within a strategic growth area. I consider that the scale of proposed development would exceed that anticipated in paragraph 4.18 of the strategic development plan which refers to "appropriate levels of local growth" for locations outwith the strategic growth areas.

22. Matters relating to overall housing provision in the proposed plan are covered in

Issues 2 and 5. For the reasons set out in the schedule 4s for Issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. However, there is no requirement to allocate land for an additional 600 houses at this time.

23. I note that the development would potentially have an adverse impact on the River Dee Special Area of Conservation, the Dee Valley Special Landscape Area and local infrastructure. I am also concerned that the closure of Park Bridge would mean that there would be no direct road access to the primary school and other local facilities in Drumoak. This would be necessary until such time that a new school and other services are delivered. I have insufficient information before me to take a view on potential mitigation to address these adverse impacts. However, as I have concluded that there is no justification for this allocation, it is not necessary for me to address these matters in detail. No modification is required.

Reporter's recommendations:

Modify the local development plan by:

1. Adding the following sentence to the description for designation R1 in the table on page 654:

“The potential impact on the private water supply to the church will need to be fully assessed or connection to the mains water supply implemented.”

Issue 43	Laurencekirk	
Development plan reference:	Proposed LDP, Appendix 7E Kincardine and Mearns, Page 691-703	Reporter: Alison Kirkwood
Body or person(s) submitting a representation raising the issue (including reference number):		
<p>PP0046 Robin and Paula Donald PP0139 Anita and Peter Connell PP0185 Alan Warden PP0208 Mrs I J Nicoll PP0240 Dr Patrick Mulcahy PP0459 Jim Stuart PP0558 Asda Stores Limited PP0562 Transport Action Kincardineshire (TRAK) PP0578 Scottish Government Planning and Architecture Division PP0624 Mearns Community Council PP0625 Mearns Community Council PP0626 Mearns Community Council PP0627 Mearns Community Council PP0628 Mearns Community Council PP0629 Mearns Community Council PP0630 Mearns Community Council PP0631 Mearns Community Council PP0632 Mearns Community Council PP1065 c a s e CONSULTING Limited PP1066 c a s e CONSULTING Limited PP1067 c a s e CONSULTING Limited PP1199 Medlock and Medlock Ltd PP1219 Scottish Environment Protection Agency PP1230 Mr and Mrs Clelland PP1241 Nestrans PP1300 NatureScot (Scottish Natural Heritage)</p>		
Provision of the development plan to which the issue relates:	Laurencekirk Settlement Statement	
Planning authority's summary of the representation(s):		
<p><u>General</u></p> <p>Priority should be placed on supporting jobs in Laurencekirk than building more housing sites (PP0185).</p> <p>A representee has suggested reserving land for a "Park and Choose" similar to that at Newtonhill to enable fast long-distance buses to serve Laurencekirk with minimum stopping time. The proposed facility would integrate Laurencekirk into the larger bus</p>		

network and increase the demand for feeder services which would in turn improve the local rural public transport viability (PP0562).

The Scottish Government Planning and Architecture Division has noted that a Development Framework is required for sites OP1, OP3, OP8, R3, and SR1, which were previously allocated in the Local Development Plan (LDP) 2017 as site OP1, but they are concerned it is not clear what such a Framework would comprise. In addition, they also note that the Proposed Local Development Plan 2020 (PLDP) states on page 693 under Services and Infrastructure – Local transport infrastructure: “Development beyond existing consents will be restricted until the A90 grade separated junction to the south is delivered and an assessment is undertaken of the existing north A90 junction.” Therefore, the Scottish Government has suggested a cumulative assessment of the potential transport impacts at the A90(T) north junction for these, and any others which do not yet have consent, should be undertaken to understand what mitigation measures may be required, including how, when and by whom (PP0578).

Mearns Community Council has noted that a dedicated route for a relief road has been dropped from the LDP and that an alternative should be identified (PP0624) through Beatie Lodge field adjacent to and west of the A90, which would run through site OP6 and connect with the new southern grade separated junction on the A90 (PP0630). They also suggested this relief road could extend north through site OP8 to provide an alternative route to Laurencekirk Academy and north of the settlement (PP0630).

Nestrans has stated that draft orders have been published for the layout of the new southern grade separated junction and Transport Scotland are currently considering the representations that have been made on these draft orders. They report that Nestrans continues to work with Transport Scotland and Aberdeenshire Council to progress this scheme (RD0227.A). No modification sought (PP1241).

Vision

Mearns Community Council has stated that the Vision statement is generally acceptable but has requested amending it to highlight the issue of traffic and parking in the settlement, particularly the High Street, which could be resolved with supporting development to the south of the High Street (PP0624)

Site P5 – To protect the area around Gaugers Burn as an amenity for the settlement and forming part of the green-blue network and Site P7 – To protect the area as a significant contribution to the character of place

Mearns Community Council has sought clarity that sites P5 and P7 within OP6 can also serve as a wildlife corridor (PP0630).

Site R1 – Reserved for cemetery expansion and to protect the existing cemetery

Scottish Environment Protection Agency (SEPA) has confirmed that they are unlikely to have any issues with this site continuing to be allocated as a cemetery. No modification sought (RD0214.B) (PP1219).

Site R2 – Reserved for community facilities on the former academy site

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation/designation summary for site R2 (RD0214.B). No modification sought (PP1219).

Site R3 – Reserved for primary school education and as a neighbourhood centre

New retail facilities should be clearly restricted by maximum floorspace levels to prevent ambiguity with the reference ‘neighbourhood’ and allow adequate assessment of retail impact on existing centres (PP0558).

Site SR1 – Reserved for 11.8 hectares of strategic employment land

SEPA has requested that the allocation summary box includes an additional sentence that states a Flood Risk Assessment will be required to assess the risk from Gaugers Burn and to consider any culverts/bridges that may exacerbate flood risk (RD0214.B) (PP1219).

Flood Risk

SEPA has requested removing the third ‘Flood Risk’ bullet point on site R1 as they do not have any issues with this site (RD0214.B) (PP1219).

SEPA has requested simplifying the ‘Flood Risk’ bullet points by amalgamating the second and fourth bullet points as they refer to all the OP sites (RD0214.B) (PP1219).

SEPA has requested a separate ‘Flood Risk’ bullet point for SR1 due to the possibility of culverted watercourses on site SR1 and a need for a Flood Risk Assessment is required (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on ‘Strategic drainage and water supply’ (RD0214.B). No modification sought (PP1219).

Site OP1 – North Laurencekirk

Mearns Community Council has requested that some of the housing that can be built prior to the installation of a north grade separated junction is transferred from site OP1 to site OP3, as this allowance is currently all under site OP1. They have noted that both sites are within phase 1 of the same Development Framework that they share, and this change would allow site OP3 to become active as per the original phasing of the Development Framework (PP0625).

A representee has requested reducing this site’s allocation to 200 homes, as the LDP 2021 base date is 1 January 2019, and the site capacities should be consistent with the Housing Land Audit 2019. They state the site is constrained due to a requirement for a grade separated junction before more than 200 homes can be delivered, but that this may be delayed due to unresolved objections from landowners and that a public inquiry may be required (PP1065).

SEPA has requested amending the second paragraph of the allocation summary to include “Flood Risk Assessment” with the other assessments in the first sentence rather than on

its own in the second sentence (RD0214.B) (PP1219).

SEPA has also requested amending the fourth paragraph of the allocation summary to include the need for a Flood Risk Assessment and that it will be required to assess the risk from small watercourses and to consider if any culverts/bridges may exacerbate flood risk (RD0214.B) (PP1219).

Site OP2 – Off Blackiemuir Ave/East of Westmuir

Mearns Community Council has commented that they do not recognise the allocation site's name "Westmuir" (PP0626). They also note that this site is around 80% complete with approximately 40 sites left but are disappointed that mature trees have been felled with no sign of their replacement. They have also requested a footpath linking Blackiemuir Avenue to Pitcowes Road (PP0626).

A representee has requested that the number of homes allocated on this site is consistent with the Housing Land Audit 2019, as the LDP 2021 base date is 1 January 2019. As such, its allocation should be reduced from 210 to 136 homes as 74 homes have been completed before 2019 (PP1066).

SEPA has requested amending the end of the third paragraph of the allocation summary to explain that the Flood Risk Assessment will be required to assess the risk from the Gaugers Burn and to consider if any culverts/bridges may exacerbate flood risk (RD0214.B) (PP1219).

Site OP3 – Land North of Fordoun Road

Mearns Community Council are concerned that development cannot begin on site OP3, as the number of homes that can be built in advance of a northern grade separated junction was only awarded to the adjacent site OP1. As such, Mearns Community Council has requested that some of this allowance is transferred from site OP1 to OP3, as it would be good for the community to have continuity in house building and it could contribute to a western relief road (PP0627).

SEPA has requested amending the first paragraph of the allocation summary to include "Flood Risk Assessment" with the other assessments in the penultimate sentence rather than on its own in the last sentence (RD0214.B) (PP1219).

Site OP4 – Land North of Gardenston Street

A representee has objected to site OP4 on the basis that the site forms part of the Laurencekirk green belt and is crucial to the history of the settlement, adding the proposal would contribute towards the demise of the settlement (PP0185). While Mearns Community Council does not object to the site, they request it is removed as they do not believe it can be delivered as it is landlocked in terms of the Council's Road Department's requirements, it is next to a substation, and the density is too high to meet the local needs of a rural settlement (PP0628).

SEPA has requested amending the first sentence of the second paragraph to explain that the Flood Risk Assessment will be required to assess the risk from the Gaugers Burn and to consider if any culverts/bridges may exacerbate flood risk (RD0214.B) (PP1219).

Site OP5 – Land South of Gardenston Street

Several representees have objected to the proposed allocation of OP5 and request it is removed (PP0046, PP0139, PP208, PP0240, PP0459, PP0629 and PP1230). They are concerned about impact on existing limited vehicular access and congestion and will exacerbate pedestrian safety issues (PP0046). It will increase traffic (PP0240), which will likely worsen when the A90 reconfiguration is implemented (PP0046). Clarity is also sought as to whether traffic will increase by linking Gardenston Street to the new development (PP0459). Mearns Community Council has suggested the site's access will result in a loss of on street parking on the High Street, increase traffic on Gardenston Street (PP0459 and PP0629), which this site links onto, exacerbate traffic and parking problems on the High Street (PP0629). It is also argued that this site is deemed premature until a relief road is found to ease the High Street, and other sites should be promoted that could accommodate a relief road (PP0459 and PP0629), and it that it will not provide a layout/design that the southern gateway of Laurencekirk requires (PP0459). A representee has included a number of Appendices (RD0219.A and RD0219.B) in their representation which provides further detail to support their position (PP1230).

They are concerned that the development would have a detrimental impact to the overall landscape and outlook (PP0046 and PP0240), especially when the proposed A90 is implemented (PP0046) and when entering the settlement from the south (PP0240). The site would not be in keeping with the existing pattern of development (PP0139). They are also concerned that the proposal will have an adverse impact on wildlife, most notably Gaugers Burn (PP0046, PP0139, PP0208, PP0459, PP0629 and PP1230). Bats are reported in the area, and as they are a protected species this development is likely to adversely affect their habitat (PP0240 and PP1230). They also cite additional light and noise pollution will have an adverse impact on the settled and thriving wildlife environment around Gaugers Burn and will discourage any new species coming to the area (PP0046). It will lead to further water run-off causing pollution and contamination of the watercourse, which will have an adverse impact on the ecology and surrounding environment at Gaugers Burn (PP0046 and PP1230). It is suggested that land is set aside to protect the Gaugers Burn wildlife corridor as per sites P5 and P7 (PP0459). A representee has included a number of Appendices (RD0219.A and RD0219.B) in their representation which provides further detail to support their position (PP1230).

Several representees are concerned that the land available for development will be much less due to several constraints (PP0240, PP0459 and PP0629). The site does not account for land needed for open space and infrastructure including waste water drainage, road access, footpaths, landscape/planting buffers, and pond/SuDS, which would result in a small footprint for the new houses and would require two storeys, whereas surrounding properties are mainly one and a half/single storey (PP0459 and PP0629). While an emergency entrance to the site and pedestrian access to Westburnside would be in keeping with the Council's policy of encouraging walking and cycling this would further reduce the area able to be developed (PP0240).

Other concerns that were raised are increased noise and light pollution (PP0240), reduced privacy and air quality, and noise and light disturbance from the access road (PP1230), lack of school capacity to serve the site (PP0139, PP0208 and PP1230), overlooking, loss of privacy and overshadowing to neighbouring properties (PP0139, PP0208 and PP1230), the density of the site is too high (11 houses on 1.13 hectares) (PP0240 and PP1230) and

would not be appropriate for a rural community (PP0240), it would result in overdevelopment (PP0459 and PP0629) and there is a lack of demand for new homes due to the slowing of the economy (PP0240), there are many sites in the village that are allocated (PP0208) while several have planning permission and not yet developed (PP0240). A representee has included a number of Appendices (RD0219.A and RD0219.B) in their representation which provides further detail to support their position (PP1230).

SEPA has requested removing the first sentence of the third paragraph on the need for a Flood Risk Assessment and amend the second paragraph to include the need for a Flood Risk Assessment and explain that it will be required to assess the risk from the Gaugers Burn, and to consider if any culverts/bridges may exacerbate flood risk (RD0214.B) (PP1219).

SEPA has requested removing the first sentence of the third paragraph on the need for a Flood Risk Assessment and amend the second paragraph to include the need for a Flood Risk Assessment and explain that it will be required to assess the risk from the Gaugers Burn and to consider if any culverts/bridges may exacerbate flood risk (RD0214.B) (PP1219).

Site OP6 – Land South of High Street

A representee has requested the removal of site OP6 for 100 homes. They stated that this is a windfall site with planning permission for 77 homes and a mix of other uses, where the status of its implementation is questionable due to unmet suspensive conditions. They also stated that the site is constrained by the requirement to upgrade the junction to the A90 and a public inquiry will be required due to unresolved objections from landowners on this issue. Therefore, it is argued that there can be no basis for confidence in the delivery of this site within the plan period, and it is contrary to SPP, given the procedural delay and unknown outcome in relation to the junction (PP1067).

SEPA has requested amending the last sentence of the third paragraph to explain that the Flood Risk Assessment will be required to assess the risk from the Gaugers Burn and to consider if any culverts/bridges may exacerbate flood risk (RD0214.B) (PP1219).

Site OP7 – Land West of Fordoun Road

Mearns Community Council is confused with the allocation summary for site OP7 and seek clarity on whether 28 homes are being proposed, rather than 15 as stated. They note that this site was part of a larger bid for 42 homes excluding the 7 homes that are under construction, and planning permission is pending for plots 8 to 13 (PP00631).

It is requested that the allocation summary is reworded, as part of this site has planning permission for seven homes and six homes are pending planning permission. Therefore, they argue it is inappropriate to place requirements on the site, such as a Flood Risk Assessment (FRA). They state there is no need for a buffer strip as it is not near a watercourse. Regarding affordable housing, it cannot be applied retrospectively and as self-build plots, the representee has stated that they understand that the policy contributions are not required for the remaining six homes (PP1199).

SEPA has requested amending the last sentence of the second paragraph to state that a

Flood Risk Assessment will be required to assess the risk from the small watercourses to the east (RD0214.B) (PP1219).

Site OP8 – Land East of Laurencekirk

SEPA has requested amending the second paragraph to include “Flood Risk Assessment” with the other assessments in the first sentence rather than on its own in the second sentence (RD0214.B) (PP1219).

NatureScot has requested that the allocation summary highlights the key concerns that would act to help reduce the landscape and visual impacts of the proposal at this edge of the settlement, as it lies on the eastern approach to Laurencekirk (RD0255.B) (PP1300).

Non-Allocated Sites – Bid Site KN019 – Land at Beattie Lodge, Bid Site KN020 – Land SouthWest of Cemetery at Beattie Lodge and Bid Site KN026 – Land West of A90

Mearns Community Council has expressed support towards allocating bid sites at Beattie Lodge, to the east of the primary school for development to enable the long-term aim of providing a relief road running parallel to the High Street and help resolve the issue of traffic and parking along the High Street. They suggest the new road infrastructure provides a link between Garvock Street, Frain Drive/Johnston Avenue and the OP6 site, which would also allow the potential to being extended to link up with OP8 and from there to the Community Campus (PP0624).

Non-Allocated Site – Bid Site KN114 – Land West of Fordoun Road, North of Finella View

Mearns Community Council has requested that bid KN114 be allocated for 42 homes. They highlight that this site was a preferred option in the Main Issue Report (MIR) 2016 for 100 homes (known as KM066). The MIR 2016 stated this site has good access to the train station and bus services, would fit in with the existing settlement and have minimal visual impact, and would be a suitable option if required but that there were existing allocations for 1105 homes and there was no need for this site at that time. The Community Council argue that development on sites OP1 (310 homes) and OP3 (247 homes) have not begun, site OP2 (210 homes) is almost complete and therefore site KN114 should be allocated (PP0631).

A representee has proposed allocating bid site KN114 for self-build homes, as site OP7, which is adjacent to this bid site, is inadequate to meet local demand, has approved and pending planning permissions and it will not provide the diversity of homes required. They add, the vision statement states there is a desire for self-build plots and to meet this an allocation should be made of an appropriate size, otherwise the next opportunity to deliver self-build plots will not be until the next Plan. They state that bid site KN114 would not extend any further than the adjacent OP3 site and allocating an appropriate size of site would address the local demand for self-build plots and allow for appropriate masterplanning with an integrated design (PP1199).

The representee continues to state that bid site KN114 relates well to Laurencekirk with the only concern raised relates to density and future potential western link road. They argue that density should not be an issue as the initial bid for 42 homes was indicative and bid site KN114 would not affect plans for the western link road, as the adjacent OP1 site confirms a route and provision for a future western link road, and appropriate space for an

extension of the western link road was requested as part of the seven approved homes on site OP7. Therefore, the western link road would not run through this area (PP1199).

Non-Allocated Site – Part of Site OP1 LDP 2017 – Land north of site OP8

Mearns Community Council has requested land north of site OP8 be allocated for development, as it has been allocated in previous LDPs, currently part of site OP1 in the LDP 2017, it is easily serviced, is free of constraints and more likely to attract a developer, and it will enable the development of site OP8 (11ha employment land) as it is currently landlocked (PP0632).

Modifications sought by those submitting representations:

General

Modify the PLDP to include provision to support employment rather than developing more housing sites (PP0185).

Modify the PLDP to include a new reserved site, R4 for a “Park and Choose” close to the planned grade separated junction in the vicinity of the A90 and A937 Junction (PP0562).

Modify the PLDP to require a cumulative assessment of the potential transport impacts at the A90(T) north junction for the sites requiring a Development Framework (OP1, OP3, OP8, R3, & SR1), and any others that do not yet have consent, to understand what mitigation measures may be required, including how, when and by whom (PP0578).

Modify the PLDP to identify a route for a relief road west of the A90 through Beattie Lodge field, and to the south through site OP6 and connecting to the proposed grade separated junction, and north through OP8 (PP0630).

Vision

Modify the PLDP to highlight the issue of traffic and parking in the town, particularly the High Street, which could be resolved by supporting development to the south of the High Street and could identify a route for a relief road within the Vision (PP0624).

Site P5 – To protect the area around Gaugers Burn as an amenity for the settlement and forming part of the green-blue network and Site P7 – To protect the area as a significant contribution to the character of place

Modify the PLDP to ensure sites P5 and P7 within site OP6 also serve as a wildlife corridor (PP0630).

Site R3 – Reserved for primary school education and as a neighbourhood centre

Modify the PLDP to make reference to ‘neighbourhood’ to restrict maximum floorspace levels within the site description summary and for proposals to be subject to a Retail Impact Assessment where over 400sqm gross floorspace (PP0558).

Site SR1 – Reserved for 11.8 hectares of strategic employment land

Modify the PLDP to amend the allocation summary of site SR1 to include, "... the development. A Flood Risk Assessment will be required to assess the risk from Gaugers Burn and consideration should be given to any culverts/bridges which may exacerbate flood risk." (PP1219).

Flood Risk

Modify the PLDP to remove the third bullet point within the 'Flood Risk' section referring to site R1 and amalgamate the second and fourth bullet points to, "All OP site[s] and R1 [R3] site have a watercourse flowing through or adjacent to them. Flood Risk Assessments will be required." (PP1219).

Modify the PLDP to add a new bullet point, "Due to the possibility of a number of culverted watercourses on site SR1, a Flood Risk Assessment will be required. The opening up and environmental enhancement of these watercourses should be investigated in the Flood Risk Assessment. Buffer strips will be required along the length of the watercourses. No development will be permissible on a culverted watercourse." (PP1219).

Site OP1 – North Laurencekirk

Modify the PLDP to amend the allocation summary of site OP1 to include a statement that transfers some of the housing allowed to be built in advance of a grade separated north junction to site OP3. No change to the allocation is sought. (PP0625).

Modify the PLDP to amend site OP1 to reduce the allocation from 310 to 200 homes (PP1065).

Modify the PLDP to amend the allocation summary of site OP1 to change paragraph two, from, "... Water Impact Assessment, Landscape Plan and an Environmental Statement. A Flood Risk Assessment may also be required." to "... Water Impact Assessment, Flood Risk Assessment, Landscape Plan and an Environmental Statement." and remove "A Flood Risk Assessment may also be required." in the next sentence (PP1219).

Modify the PLDP to amend the allocation summary of site OP1 to include at the end paragraph four, "... be investigated and should be supported in the Flood Risk Assessment. The Flood Risk Assessment will be required to assess the risk from the small watercourse in the western area and along the eastern boundary and consideration should be given to any culverts/bridges which may exacerbate flood risk." (PP1219).

Site OP2 – Off Blackiemuir Ave/East of Westmuir

Modify the PLDP to review the title of site OP2 "East of Westmuir" (PP0626).

Modify the PLDP to review the need to replace the felled trees adjacent to Blackiemuir (PP0626).

Modify the PLDP to amend site OP1 to require a footpath linking Blackiemuir Avenue to Pitcowes Road (PP0626).

Modify the PLDP to amend site OP2 to reduce the allocation from 210 to 136 homes (PP1066).

Modify the PLDP to amend the allocation summary of site OP2 to change paragraph three from, "... be investigated. A Flood Risk Assessment may be required." to "... be investigated and should be supported in a Flood Risk Assessment. The Flood Risk Assessment will be required to assess the risk from the Gaugers Burn and consideration should be given to any culverts/bridges which may exacerbate flood risk." (PP1219).

Site OP3 – Land North of Fordoun Road

Modify the PLDP to amend the allocation summary of site OP3 to include a statement that transfers some of the housing allowed to be built in advance of building the new grade separated junction from site OP1 to site OP3. No change to the allocation is sought. (PP0627).

Modify the PLDP to amend the allocation summary of site OP3 to change paragraph one from, "... Water Impact Assessment, Landscape Visual Impact Assessment and an Environmental Statement." to "... Water Impact Assessment, Flood Risk Assessment, Landscape Plan and an Environmental Statement." and remove "A Flood Risk Assessment may also be required." from the next sentence (PP1219).

Site OP4 – Land North of Gardenston Street

Modify the PLDP to remove site OP4 (PP0185 and PP0628).

Modify the PLDP to amend the allocation summary of site OP4 to change the first sentence in paragraph two from, "A Flood Risk Assessment may be required." to "A Flood Risk Assessment will be required to assess the risk from the Gaugers Burn and consideration should be given to any culverts/bridges which may exacerbate flood risk." (PP1219).

Site OP5 – Land South of Gardenston Street

Modify the PLDP to remove site OP5 (PP0046, PP0139, PP0208, PP0240, PP0459, PP0629 and PP1230).

Modify the PLDP to amend the allocation summary of site OP5 to remove the first sentence of paragraph three, "A Flood Risk Assessment will be required." and change paragraph two to: "... be investigated and should be supported in a Flood Risk Assessment. The Flood Risk Assessment will be required to assess the risk from Gaugers Burn and consideration should be given to any culverts/bridges which may exacerbate flood risk." (PP1219).

Site OP6 – Land South of High Street

Modify the PLDP to remove site OP6 for 100 homes (PP1067).

Modify the PLDP to amend the allocation summary of site OP6 to change the last sentence of paragraph three from, "A Flood Risk Assessment will be required." to "A Flood Risk Assessment will be required to assess the risk from Gaugers Burn and consideration should be given to any culverts/bridges which may exacerbate flood risk." (PP1219).

Site OP7 – Land West of Fordoun Road

Modify the PLDP to clarify the number of homes that are allocated on site OP7 (PP0631 and PP1199).

Modify the PLDP to amend the allocation summary of site OP7 to change the last sentence of paragraph two from, “A Flood Risk Assessment may also be required.” to “A Flood Risk Assessment will be required to assess the risk from the small watercourses to the east.” (PP1219).

Site OP8 – Land East of Laurencekirk

Modify the PLDP to amend the allocation summary of site OP8 to change paragraph two from, “... Water Impact Assessment, Landscape and Visual Impact Assessment, and an Environmental Statement.” to “... Water Impact Assessment, Flood Risk Assessment, Landscape Plan and an Environmental Statement.” and remove “A Flood Risk Assessment may also be required.” in the next sentence (PP1219).

Modify the PLDP to amend the allocation summary of site OP8 to add at the end of paragraph one, “Careful consideration in terms of layout, massing and design of built and landscape work should be given to the eastern edge of the proposed site, in particular in how it contributes to the eastern entrance to Laurencekirk.” (PP1300).

Non-Allocated Sites – Bid Site KN019 – Land at Beattie Lodge, Bid Site KN020 – Land SouthWest of Cemetery at Beattie Lodge and Bid Site KN026 – Land West of A90

Modify the PLDP to include land at Beattie Lodge [bid sites KN019, KN020 and KN026] for housing and require any new road infrastructure to provide a link between Garvock Street, Frain Drive/Johnston Avenue and the OP6 site to enable a relief road running parallel to the High Street (PP0624).

Non-Allocated Site – Bid Site KN114 – Land West of Fordoun Road, North of Finella View

Modify the PLDP to include bid site KN114 for 42 homes (PP0631 and PP1199).

Non-Allocated Site – Part of Site OP1 LDP 2017 – Land north of site OP8

Modify the PLDP to include part of site OP1 in the LDP 2017 for development (PP0632).

Summary of responses (including reasons) by planning authority:

General

The Council does not agree that priority should be on supporting jobs in Laurencekirk rather than building more housing sites. Laurencekirk is within a Strategic Growth Area (SGA) so it is appropriate that land for both homes and housing are allocated. The Vision Statement does however highlight the Community’s desire for more employment land, and two large areas of employment land are allocated. No change is required.

The Council does not support reserving land for a “Park and Choose”, as this has not been proposed in the Aberdeenshire City and Shire Strategic Development Plan (SDP) 2020,

see AD0016 or the draft Regional Transport Strategy (RTS) 2020, see AD0024, and no request has been made from the Council's Transportation Service. However, the SDP does state in Schedule 1 the need to increase the capacity of Laurencekirk's train station car park, see AD0016 and this is mentioned in the draft RTS, AD0024, pages 41 and 55. As the train station is not far from the High Street, bus stops are within walking distance of the train station. No change is required.

A Development Framework has already been prepared and agreed by Aberdeenshire Council for sites OP1, OP3, OP8, R3, and SR1, which were previously allocated in the LDP 2017 as site OP1. The allocation summary for sites OP1, OP3 and OP8 already requires the need for a Transport Assessment, but text could be added to require a cumulative assessment be undertaken on the potential transport impacts at the A90(T) north junction for these, and any other sites that do not have consent, to understand what mitigation measures may be required, including how, when and by whom. If the Reporter is minded, to make an amendment, then the Council recommend that the allocation summaries for site OP1, OP3 and OP8 could be modified to read, "A Transport Assessment will be required to include a cumulative assessment on the potential transport impacts at the A90(T) north junction for this and any other site that does not have consent, to understand what mitigation measures may be required, including how, when and by whom."

The community's aspirations for a new road to relieve traffic along the High Street has not been "dropped" from the PLDP, as it is referenced in the second paragraph of the Vision as the "western distributor road". It has not been identified on the proposals map as no transport appraisal has been undertaken on the entire route. It is also referred to in the allocation summaries for sites OP1 and OP3. The Community Council's proposed new route, to the east of Laurencekirk is not supported by any plan, transport appraisal or land allocations to help secure its delivery. It is also constrained to the north due to existing development (e.g., Garvock Street and the cemetery), and to the south from Gaugers Burns and site OP6, which has planning consent and been lawfully implemented. No change is required.

Comments from Nestrans are noted. No change is required.

Vision

The Council does not agree with the Community Council's request to amend the Vision to highlight the issue of traffic and parking in the settlement, particularly the High Street, or to support development to the south to provide a relief road. The Vision already notes the issue of congestion in the town centre (i.e., the High Street), but the Council is not aware of parking and traffic issues in the settlement. Congestion in the High Street is worsened by vehicles parked on the High Street, but the delivery of a new road or development will not resolve the parking issue. It is assumed that when referring to land to the south of the High Street, Mearns Community Council are referring to land between the High Street and the A90. While a new distributor road could be delivered by new housing to the south, no plan of this relief road has been provided, and as discussed below, land allocations in this area are not supported by the Council. No change is required.

Site P5 – To protect the area around Gaugers Burn as an amenity for the settlement and forming part of the green-blue network and Site P7 – To protect the area as a significant contribution to the character of place

While neither the PLDP nor Scottish Planning Policy (SPP) refers to the term “wildlife corridor”. Protected Land (identified as site P5), which forms part of the approved planning application of site OP6, and P7 will contribute to the green-blue network, which will benefit local wildlife. No change is required.

Site R1 – Reserved for cemetery expansion and to protect the existing cemetery

Comments from SEPA are noted. No change is required.

Site R2 – Reserved for community facilities on the former academy site

Comments from SEPA are noted. No change is required.

Site R3 – Reserved for primary school education and as a neighbourhood centre

With regards to the comment on retail, the Council does not support amending this designation. Site R3 is identified as a neighbourhood centre with a new primary school in the agreed Laurencekirk Development Framework and masterplan for OP1. It aims to encourage social and communal activity. In terms of retail, Appendix 2 states retail proposals in a neighbourhood centre are restricted to principal town centres, of which Laurencekirk is not. No restrictions or the need for a Retail Impact Assessment require to be added as, SPP states, “Where a retail and leisure development with a gross floorspace over 2,500m² is proposed outwith a town centre, contrary to the development plan, a retail impact analysis should be undertaken. For smaller retail and leisure proposals which may have a significant impact on vitality and viability, planning authorities should advise when retail impact analysis is necessary.”, see AD0012, paragraph 71. No change is required.

Site SR1 – Reserved for 11.8 hectares of strategic employment land

The Council confirms that it intends to address SEPA’s comment through non-notifiable modifications, as set out in the List of Non-Notifiable Modifications.

Flood Risk

It is assumed by the Council that SEPA is referring to site R3 than site R1, as their representation raises no issues with site R1 but for site R3 they state, “See comment above on the flood risk bullet point”. The Council confirms that it intends to address SEPA’s comments through non-notifiable modifications, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – North Laurencekirk

The Council notes that site OP1 has not moved forward since gaining planning permission, but it is beyond the scope of the LDP to amend planning conditions of an approved planning application and in this case, to transfer some of the housing allowed to be built in advance of an assessment on the north grade separated junction to site OP3. No change

is required.

The Council does not support reducing the site's allocation to 200 homes. The 23rd planning condition set out in the decision notice for application APP/2014/4094 states, "Prior to the construction of the 200th dwellinghouse within the development, a further assessment of the operational performance of the A90/A937 Laurencekirk North Junction must be undertaken. The assessment shall consider the capacity and safety of the junction and, if appropriate, propose additional measures to mitigate any adverse issues identified.", see AD0056. This assessment does not prevent more housing on this site, as it could show there is not an issue. Furthermore, there are benefits to keeping allocation totals to the original number than amending them as a result of the Housing Land Audit (HLA), particularly to allow the allocation boundary to remain unaltered as it could be difficult to amend, especially undeveloped sites with a masterplan and planning permission. In addition, HLAs are a snapshot in time and circumstances change on an annual basis. No change is required.

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP2 – Off Blackiemuir Ave/East of Westmuir

The title of site OP2 has been carried forward from the LDP 2017. Westmuir Cottage lies to the north west of the site. However, as the title could be misleading, the Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The latest figures from the HLA 2020 show that 116 out of 210 homes remain to be built, see AD0023, Rural Housing Market Area, page 37. Issues on tree removal are noted but are not a concern for the allocation summary of this site as planning consent for the site has been granted. The Council could not find any road named Pitcoves Road. No change is required.

The Council notes the number of homes that are remaining to be built on this site, but there are benefits to keeping allocation totals to the original number rather than amending them as a result of the HLA, particularly to allow the allocation boundary to remain unaltered as it could be difficult to amend for larger sites. In addition, HLAs are a snapshot in time and circumstances change on an annual basis. No change is required.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP3 – Land North of Fordoun Road

The Council notes that the decision notice for site OP3 for application APP/2016/1203 is dependent on the construction of a grade separated junction at the A90(T)/A937 south junction, which is only at the post consultation stage of the draft Orders (<https://www.transport.gov.scot/projects/a90a937-laurencekirk-junction-improvement-scheme/project-details/> and <https://www.transport.gov.scot/media/46716/a90-a937-laurencekirk-junction-panels-january-2020.pdf>), and that the central reservation gap at the A90(T)/A937) north junction will be closed, see AD0072, condition 1, page 14. As such, transferring all or part of the 200-home housing allowance discussed above on site OP1

will make no difference to this site progressing in the short term. Development on site OP3 cannot be occupied until the grade separated junction has been completed, which could take 18 months to construct. A Transport Assessment will also be required of the existing north A90 junction. Furthermore, it is beyond the scope of the LDP to amend planning conditions of approved planning applications. However, it is noted that the second paragraph in the allocation summary for site OP3 does not clarify which of the three junctions the “A90 grade separated junction” will be required at, which is now preferred at the south junction. If the Reporter is minded, to make an amendment, then the Council recommend that the first sentence in paragraph two of the allocation summary for site OP3 could be modified to read, “...delivery of a grade separated junction at the A90(T)/A937 south junction.”

The Council confirms that it intends to address SEPA’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP4 – Land North of Gardenston Street

The Council does not agree with removing this site. There are no green belt or other designations on this site. The site presents a logical extension to current site OP2 and at 1.56 hectares, an allocation of 20 homes is considered appropriate. While Laurencekirk is in the Rural Housing Market Area, it is within a SGA, and the SDP 2020, see AD0016 page 27 expects sites larger than 1ha should generally be no less than 30 homes per hectare. The allocation takes into consideration the adjacent substation and varying house densities in this area. To meet the Council’s Road Standards, access must come via site OP2. No change is required.

The Council confirms that it intends to address SEPA’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP5 – Land South of Gardenston Street

The Council does not agree with the removal of this site. The Council’s Transportation Service have raised no concerns regarding access and impacts on the existing road network, other than the provision of a footway connection on the north side of the A937 that connects to the existing network. The site forms a logical extension to the settlement and the required buffer strip and open space provision provides an opportunity to enhance Gaugers Burn. The site has been used for grazing and there is very little natural or riparian habitat along this part of Gaugers Burn. Only 11 homes are proposed on this 1.1ha site to take account of Gaugers Burn, topography, local density, and visually impact. As this site is on the southern gateway into Laurencekirk the design of the development will be very important, and impact on adjacent properties would be a key consideration at the planning application stage. The allocation summary for site OP5 requires strategic landscaping along Gaugers Burn to provide an appropriate boundary treatment and retention of the hedge along the High Street. The scale and location of the site would have no impact on the provision of a relief road, which is proposed to the west of the settlement, starting at sites OP1 and OP3. There is demand for homes given the progress of site OP2, and the lack of development on sites OP1 and OP3 does not demonstrate there is a lack of demand for new homes. There is also a local aspiration for self-build homes, which smaller sites can offer. At 11 homes, this site will not have an adverse impact on the education capacity of the academy and primary school. No change is required.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP6 – Land South of High Street

The Council does not agree with the removal of this site for 100 homes and 0.8ha employment land. While the Planning Permission in Principle for a mixed-use development on this site has expired (APP2010/2823), around two-thirds of the site as Full Planning Permission for 77 homes and 8 commercial units (see AD0184) that has been lawfully implemented (APP/2010/2822). A bid (KN073) was also submitted on this site during the Call for Sites in 2018, see AD0038.F, pages 52 and 54. The number of homes was increased to 100 in light of comments received on the MIR 2019, see MIR Issues and Actions Paper, AD0040.F, pages 62, 65 and 67. The site is identified as constrained in the HLAs due to infrastructure issues, see AD0022, Rural Housing Market Area, page 38, as the homes cannot be occupied until the A90/A937 grade separated junction has been implemented. Therefore, it makes sense not to begin building until further progress has been made on the grade separated junction. While a public inquiry on the new grade separated junction will delay the delivery of site OP6, Transport Scotland is committed to delivering it, see AD0024, draft Regional Transport Strategy 2040, paragraph 2.3. In light of the above, it is deemed appropriate to allocate this as a new site in the PLDP. No change is required.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP7 – Land West of Fordoun Road

Site OP7 is allocated for 15 homes, which includes seven homes that have planning permission plus eight homes that were included within bid site KN114, which covers a much larger area. It is noted that six of the additional eight homes have pending planning applications (described as plots 8 to 13). This brings the total to 15 homes. No change is required.

It is noted that seven homes have planning permission on this site, and six homes are pending planning permission and will be determined against the relevant policies in the LDP 2017. However, the Council supports SEPA's request to amend the allocation summary, which confirms the need for a Flood Risk Assessment. A drain runs along the western boundary of the site and the need for a buffer strip remains. The affordable housing requirement will remain as LDP housing allocations do not differentiate between self-build plots and developer-led housing sites, as either can occur on this or any other housing allocation. Developments should also be aiming to deliver a mix of house types to comply with the PLDP's objectives and Policy P1 Layout, Siting and Design. The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP8 – Land East of Laurencekirk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Non-Allocated Sites – Bid Site KN019 – Land at Beattie Lodge, Laurencekirk, Bid Site KN020 – Land SouthWest of Cemetery at Beattie Lodge, Laurencekirk and Site – Bid Site KN026 – Land West of A90 Laurencekirk

The Council does not support allocating bid sites KN019, KN020 and KN026 for housing to enable a link road. Bid site KN019 (150 homes), KN020 (20 homes) and KN026 (250 homes and 10,000m² employment land) were not identified as preferred options in the MIR, see AD0038.F, pages 55-56. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. A relief road has been proposed to the west of the settlement, starting at sites OP1 and OP3. No supporting material, such as a plan or Transport Assessment have been produced that supports an eastern relief road. Development on these bid sites are not supported as they are within a pipeline consultation zone, on prime agricultural land, insufficient water and education capacity, affect the setting of the B listed Beattie Lodge, close proximity to the cemetery and war memorial, loss of land to extend the cemetery, accessibility into the sites, and significant road infrastructure is required to improve the junctions off the A90(T)/A937 before housing developments of this size can be allocated, see AD0038.F. These sites could also significantly impact on the setting of Laurencekirk and it is desirable to leave a buffer between the settlement and the A90. Regarding sites KN020 and KN026, the Reporter at the Local Development Plan 2017 Examination stated that there is "some merit in maintaining a degree of separation between new development and the A90", see AD0036, paragraph 11, page 715. No change is required.

Non-Allocated Site – Bid Site KN114 – Land West of Fordoun Road, North of Finella View

The Council does not support allocating bid site KN114 for housing. Bid site KN114 (42 homes) was not identified as a preferred option in the MIR, see AD0038.F, page 57. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. A range of large and small housing allocations totalling 913 homes have been proposed in Laurencekirk to meet local demand and any allocation can provide self-build plots, as this is the decision of the landowner or developer and not the LDP.

Development on this bid site for 42 homes is not supported as the site constitutes an underdevelopment of land, which measures 6.7ha, see AD0038.F. As such, there is insufficient justification to allow building on prime agricultural land at such a low density (6 homes per hectare) on such a large site, which would also conflict with the housing densities expected in the SDP 2020 for large sites in the SGA, see AD0016 page 27.

In addition, this site could prejudice the western distributor road. The approved site plan for a road on site OP7 that was granted planning permission (APP/2016/2229) says "Land left for future link" at the end of the turning area, which is assumed would form part of the distributor road. However, this is not evidenced in the decision notice for APP/2016/2229, see AD0057 or its Section 75 Agreement, see AD0073. The supporting evidence provided by the applicant makes a reference to a link road on page 7 under 'Refusal 4' where it,

states "...has left land to allow a potential link through to East Blackmuir for a possible distributor road". The Council is concerned that the Transportation Service only commented on the planning application for a road that would serve a residential development, and not as a potential distributor road. It is noted that the Transportation Service objected to this planning application as it would clash with the junction for site OP1 (then known as site M1) and they noted that "There is also aspiration for a link road around the west of Laurencekirk which may affect the alignment of Fordoun Road in the vicinity of this site.", see AD0062. The indicative layout for bid site KN114, see AD0150, that was submitted during the Call for Sites does not show a distributor road, but the road layout in the masterplan for sites OP1 and OP3 shows one junction is opposite site OP7, see AD0082. Nonetheless, without further confirmation of the route and that it would meet the Council's Roads Standards, allocating bid site KN114 could affect the delivery of the distribution road.

This site is also constrained as significant road infrastructure is required to improve the Laurencekirk junctions off the A90(T)/A937 before housing developments of this size can be allocated. It is also noted that the HLA 2020 shows that site OP2 is not near completion as 116 out of 210 homes remain to be built, see AD0023, Rural Housing Market Area, page 37.

In conclusion, no change is required.

Non-Allocated Site – Part of Site OP1 LDP 2017 – Land north of site OP8

The Council does not support allocating part of site OP1 in the LDP 2017 for development. The area of land the Council assumes Mearns Community Council is referring to is currently allocated in the LDP 2017 as part of site OP1. The agreed Development Framework for this area identifies this land as future housing measuring 8 hectares (page 7, para 4.1). Figure 13 on page 12 in the Development Framework also identifies it as phase 2, and text for Figure 14 states that phase 1 (PLDP sites OP1 and OP3) will take around 7-10 years to deliver and the timescale of delivering the phases is broadly discussed in para 8.2 of AD0075. The PLDP does not reserve land for housing beyond the proposed Plan period. As delivery of this site will be beyond the PLDP period and SPP expects allocated sites to be deliverable, see AD0012, paragraph 110, the decision was taken to break up the LDP 2017 allocation and only allocate those sites that will deliver the SDP housing targets. This site can be considered again during a future LDP review.

This site is also not necessary to deliver site OP8, as it is not land locked. Fields lie to the north and the demolished former academy site lies to the west. Road access can be taken through either of these to the A937. However, this site is constrained as significant road infrastructure is required to improve the Laurencekirk junctions off the A90(T)/A937 before housing developments of this size can be allocated. Finally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.
2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” in relation to the Laurencekirk settlement statement. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

General

3. The settlement statement for Laurencekirk makes provision for employment opportunities and house building. I consider that the principle of allocating land for housing in Laurencekirk is consistent with the strategic development plan, which states (on page 10) that strategic growth areas will be the main focus for development in the area up to 2040. No modification is required.
4. There are no proposals for a “Park and Choose” facility in the strategic development plan or the draft regional transport strategy. I therefore do not consider there is any justification to reserve land for this purpose in the plan. No modification is required.
5. Transport Scotland is seeking clarification on the assessment of development allocations in Laurencekirk, in terms of any potential impact on the A90(T) north junction. I sought further information from the council and Transport Scotland in order to better understand the planning context and potential solutions (FIR007).
6. I understand that a cumulative transport assessment was not undertaken as part of the development framework which covers sites OP1, OP3, OP8, R3 and SR1 in the proposed plan. However, this matter was considered in individual applications for sites OP1 and OP3. The need for further assessment on potential impacts on the A90(T) north junction was included in a condition attached to the planning permission for site OP1. A condition attached to the permission for site OP3 requires the closure of the central reservation gap at the A90(T) north junction, before any house is occupied.
7. The council has explained that the permission for site OP1 has now lapsed and there are currently no proposals to close the central reservation gap at the A90(T) north junction. As the council expects new applications to be submitted for both sites, I consider that the local development plan provides the opportunity to reconsider the necessary mitigation to deliver these allocations in a cumulative context.
8. I agree with the council and Transport Scotland that the local development plan should require proposals for sites OP1, OP3 and OP8 to undertake a cumulative transport assessment of the potential impacts on the A90(T) north junction. It should be made clear that the cumulative assessment should include all allocated sites which do not have planning permission, and set out what mitigation measures may be required, including

how, when and by whom. In the interests of clarity, reference to the status of the now lapsed planning permission for site OP1 should be amended.

9. I note that the council and Transport Scotland are in agreement that planning applications for the smaller allocations in Laurencekirk (OP4, OP5 and OP7) would not need to be supported by a cumulative transport assessment. I have no reason to disagree with this approach.

10. I recommend modifications to the allocation summaries for sites OP1, OP3 and OP8 to highlight the need for a cumulative transport assessment of potential impacts on the A90(T) north junction and update the references to the now lapsed planning permission for site OP1.

11. The council has suggested that the third sentence in the local transport infrastructure bullet point should be amended to read as two sentences. I agree that this change would also assist in providing clarification in relation to the impact of development on the A90(T) junctions. A modification to this effect is recommended

12. The community council is concerned that a dedicated route for a relief road has been dropped from the local development plan. However, I note that the route of the distributor road is not shown on the Laurencekirk Key Map in the adopted plan. On the basis that references to a distributor road which would run to the north and west of the settlement are similar in both the adopted and proposed plan, I do not consider there is any evidence to suggest this route has been dropped. In terms of the proposed plan, I note that it is mentioned in the vision section, the local transport infrastructure bullet point and the allocations summaries for sites OP1 and OP3. I have insufficient information before me to comment on the suitability or deliverability of an alternative route to the south and east of the settlement. No modification is required.

Vision

13. I consider the issue of traffic is covered in the vision section, through the reference to town centre congestion and the aspiration for a distributor road. No details have been provided on parking matters and I am not aware of any of the bid proposals seeking to address parking issues in the settlement. No modification is required.

Protected Land designations P5 and P7

14. I agree with the council that sites P5 and P7 may also have biodiversity value. No modification to the plan is required.

Site R3 – land reserved for primary school and a neighbourhood centre

15. Asda Stores Limited requests that a maximum floorspace limit be identified for any new retail facilities provided in the proposed neighbourhood centre. Site R3 reserves land for a school and neighbourhood centre, in line with the development framework and master plan approved in 2013. There is no definition of “neighbourhood centre” in the glossary of the proposed plan. However, the council has pointed out that Appendix 2 indicates that retail uses would not generally be permitted in a neighbourhood centre in Laurencekirk, as it is not a principal town centre. In this context, there would be no requirement to modify the plan to specify a maximum retail floorspace limit. No

modification is proposed.

Flood Risk

16. I agree that the changes requested by the Scottish Environment Protection Agency (SEPA) to the description of designation SR1, the bullet points in the flood risk section and the allocation summaries for sites OP1, OP2, OP3, OP4, OP5, OP6, OP7 and OP8 would provide clarification on flood risk matters. Modifications based on the wording provided by SEPA are recommended.

Site OP1 – North Laurencekirk

17. Planning permission APP/2014/4094 was granted in December 2016 for 310 homes on site OP1. This permission included a condition which states that “prior to the construction of the 200th home within the development, a further assessment of the operational performance of the A90/A937 Laurencekirk north junction” would be required. The terms of this condition are referenced in the second paragraph of the allocation summary.

18. The community council would like some of the 199 houses, which can be built before a transport assessment is undertaken, to be reallocated to site OP3. I agree with the council that it is not possible for the local development plan to amend the wording of conditions. However, as I have already noted, the planning permission for site OP1 has now lapsed.

19. Transport Scotland has highlighted the need to undertake a cumulative assessment of potential impacts on the A90(T) north junction to identify what mitigation measures would be necessary. The modifications recommended to address the representation from Transport Scotland provide an updated position on the transport assessment work required to allow development to come forward on sites OP1 and OP3. No further modifications are required on this matter.

20. The indicative capacity of the site shown in the proposed plan is consistent with the most recent planning application. The 2019 housing land audit identifies 200 homes as forming part of the effective land supply. This reflects the condition in the planning permission in place at that time, which limited the number of houses which could be built prior to further transport assessment work.

21. Table 3 in Appendix 6 of the proposed plan shows that the remaining capacity on the site is not identified as contributing to the strategic development plan allowance for the Rural Housing Market Area. This is understandable, given the uncertainty regarding the need to upgrade the A90(T) north junction. Whilst a new planning application and a cumulative transport assessment will now be required, there is no justification to change the indicative capacity of site OP1 at this time. No modification is required.

Site OP2 – Off Blackiemuir Avenue/East of Westmuir

22. I agree with the council that the title of allocation OP2 should be amended in the interests of clarity. A modification is recommended.

23. The total capacity of the site is 210 homes. The figures in Appendix 6 of the

proposed plan indicate that in 2019, 74 homes had been built with a remaining capacity of 136 homes. These figures are consistent with the 2019 housing land audit. I note the comments from the community council regarding the removal of trees and the provision of a footpath link. As the site is under construction, these are not matters which can be addressed through this examination. No further modifications are required.

Site OP3 – Land north of Fordoun Road

24. I note that planning permission for 247 homes on this site was granted on appeal in May 2019, subject to 22 conditions. The first of these conditions states that no part of the proposed development shall be occupied until works to upgrade the Laurencekirk south junction and close the central reservation at the Laurencekirk north junction have been completed. As I have already indicated in relation to site OP1, I agree with the council that it is not possible to amend the wording of conditions through the development plan examination process. However, I consider that the recommended modification to require a cumulative transport assessment would assist the delivery of development on site OP3. No further modifications are required on this matter.

25. The council has suggested a modification to clarify that it is the south junction which is referred to in the second paragraph of the allocation summary. I consider this change to be appropriate to provide clarity, relevant to the matters raised in representations. A modification is recommended.

Site OP4 – Land north of Gardenston Street

26. Site OP4 covers 1.56 hectares of open land located between site OP2 and Gardenston Street. It lies outwith the settlement boundary in the current local development plan, but is not designated as green belt. The strategic environmental assessment indicates that the allocation would result in the loss of prime agricultural land. However, I observed on my site inspection that the land was not in active agricultural use and does not appear to be physically related to a wider farm unit.

27. The Main Issues Report and Issues and Actions Paper note that the site forms a logical extension to the settlement, but that potential issues in relation to the adjacent electricity substation and access would need to be addressed. These matters, plus the density of development, have been raised as concerns by the community council

28. The allocation summary in the proposed plan sets out a number of potential solutions regarding access to the site, including that access should be taken through site OP2. I consider that the proximity of the substation could be addressed through the site layout and landscaping strategy at planning application stage. I note that the density proposed by the council has taken account of the proximity of the substation and the character of neighbouring properties and is already less than the standard density proposed in the strategic development plan. Reducing the density further would be contrary to paragraph 4.6 in the strategic development plan, which states that “land brought forward for housing must be used efficiently”.

29. Whilst I note the concern regarding the need for employment opportunities and loss of local services in Laurencekirk, I consider that these matters are addressed in the settlement statement. The proposed plan includes allocations and a future reservation for employment uses and one of the benefits of the housing allocations would be to provide

additional support for local services. Allocation OP4 would contribute 20 homes towards meeting the strategic development allowance for the Rural Housing Market Area and could help address the community council's concerns regarding continuity in housebuilding. I do not consider that the removal of the site from the plan would be justified. No modification is proposed.

Site OP5 – Land south of Gardenston Street

30. Site OP5 is located at the south western end of the settlement on the north side of the high street. The land, which is currently grassland, slopes upwards in a north easterly direction from Gaugers Burn and is clearly visible on the approach to the settlement from the south.

31. Representations objecting to the allocation for 11 homes raise various concerns including regarding transport matters, visual and environmental effects, impact on residential amenity and impact on local services and infrastructure.

32. I note, from the strategic environmental assessment, that the allocation would result in the loss of prime agricultural land. However, I observed that the site is not in active agricultural use and is separated by the burn from the agricultural land to the south east. No other negative environmental effects were identified. The roads authority has no objection to the allocation and strategic landscaping along the burn would bring positive effects in relation to biodiversity and enhancing the southern gateway to the settlement. I agree with the council that it would not be directly affected by works to upgrade the Laurencekirk South junction.

33. I have no evidence before me to suggest that a development of 11 homes would have an unacceptable impact on local services and infrastructure. I note the comments that the existing large housing allocations to the north of the settlement should be delivered, prior to developing this site. However, I consider that the identification of this smaller site would contribute to the provision of a range of sites, consistent with paragraph 119 in Scottish Planning Policy. Furthermore, as with site OP4, this allocation would contribute to meeting the strategic development plan allowance for the Rural Housing Market Area and could help address the community council's concerns regarding continuity in housebuilding.

34. I have considered the matters raised in representations, but conclude overall that the allocation would bring a number of benefits and potential negative effects can be addressed at planning application stage. No modification is required.

Site OP6 – Land south of High Street

35. Site OP6, which is located at the south western end of the settlement has planning permission for 77 homes and eight business units. I note that Scotia Homes, who have an option on the site, provided a response to the main issues report requesting that the number of housing units be increased to 100. The resultant increase in density would still be below the 25 – 30 homes per hectare standard referred to in the strategic development plan and used by the council in preparing the proposed plan.

36. The site is identified as contributing 100 homes towards the strategic development plan allowance for the Rural Housing Market Area up to 2032. Given the existing

infrastructure constraint, I sought further information from the council regarding the deliverability of this allocation.

37. I note that the road access into the site will be influenced by the side road layout associated with the upgrading of the Laurencekirk South junction, which has yet to be finalised. The council has indicated that, whilst no dates have been provided by Transport Scotland, it is confident that the new junction will be completed within the first five years of the adoption of the plan. The lead in to development on site OP6 could overlap with work on the junction, which would allow at least five years to build 100 homes in the period to 2032. There is an active housebuilder involved and I consider it reasonable to conclude that the site would be deliverable within the plan period. No modification is required.

Site OP7 – Land west of Fordoun Road

38. The council indicates that site OP7 comprises seven homes which have planning permission and land for a further eight homes. This is already explained in the allocation summary for site OP7. The council has explained that the need for a buffer strip relates to the presence of a drain which runs along the western boundary. No modifications are recommended.

39. Policy H2 in the proposed plan requires all housing developments of four or more houses to provide 25% affordable housing. It is therefore appropriate for this requirement to be included in the allocation summary for site OP7. It would be open to an applicant to seek an exception to policy H2 at planning application stage, if necessary. I observed from my site inspection that the access to the site from Fordoun Road is already in place. I therefore consider that the sentence which states “access to the site must work in conjunction with site OP1” should be removed. A modification on this matter is required.

Site OP8 – Land east of Laurencekirk

40. Site OP8 is currently flat agricultural land, located to the west of, and clearly visible from, the A90(T) road. Protected land designation P1, which seeks “to protect the landscape buffer as an amenity for the settlement and to protect the area as a significant contribution to the character of the place”, lies between site OP8 and the road.

41. I note that allocation OP8 is included in the 2013 development framework which covers various sites in the north and east of the settlement. The proposed plan requires a masterplan to be prepared. I agree that the additional sentence suggested by NatureScot would be appropriate to highlight some of the key matters to be addressed in the master plan. A modification to this effect is recommended.

Non-allocated Bid Sites KN019, KN020 and KN026 - Land at Beattie Lodge and to the west of the A90.

42. The community council supports the allocation of these three bid sites to help deliver a partial relief road to the south east of the High Street. No representations have been submitted to the proposed plan on behalf of the landowner and/or prospective developer.

43. I note from the strategic environmental assessment, main issues report and issues and actions paper that there are a number of potential constraints affecting these sites. These are summarised in the council’s response above and include the presence of a

pipeline consultation zone and proximity to the A90(T) road. No details have been provided to address these matters or demonstrate that adverse effects can be mitigated. The council indicates that a relief road has been proposed to the west of the settlement and no supporting information has been provided to justify an eastern relief road.

44. There is no requirement to allocate additional sites to meet the strategic development plan allowance in the Rural Housing Market Area up to 2032. Even if there was a shortfall, I have insufficient information before me to assess whether these sites would be deliverable within the plan period. I conclude that bid sites KN019, KN020 and KN026 should not be allocated in the plan. No modification is required.

Non-allocated Bid Site KN0144 - Land west of Fordoun Road, north of Finella View

45. Bid site KN114 lies immediately to the north of allocation OP7, and is being promoted by the same landowner/developer for self-build homes. I note that the community council is supportive of allocating this site. The south eastern part of the bid proposal has been allocated as part of site OP7.

46. Development of this site would extend the settlement in a north westerly direction into open countryside. It would result in the loss of prime agricultural land and alter the rural character of the approach to the settlement from the north. I note that the northern boundary of bid site KN114 would align with the northern boundary of site OP3. However, until the allocations on the eastern side of Fordoun Road have been developed, I consider that site KN114 would appear remote from the settlement as a whole.

47. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is no shortfall in the housing land identified to meet the strategic development plan allowance for the Rural Housing Market Area. Whilst the loss of prime agricultural land may be justified if required to meet strategic housing needs, there is no requirement to identify additional sites at this time.

48. There are already a number of housing sites identified in Laurencekirk which are capable of providing a range of house sizes and types, including OP7. I conclude that there is no justification to allocate this site in the plan. No modification is required.

Non-allocated site – part of site OP1 in 2017 plan.

49. Land to the north east of site OP8 is identified as part of site OP1 in the current local development plan. The council has explained that it is identified for future housing in the development framework. There is no requirement for this plan to identify housing land to be developed beyond 2032 and no information has been submitted to suggest that this site is capable of being delivered within the plan period. I therefore agree with the council that it should not be identified as a housing allocation in the plan. The council has clarified that the allocation of former site OP1 is not needed to provide access to allocation OP8. No modification is required.

Reporter's recommendations:

Modify the local development plan by:

1. Adding the following sentence to the end the description of designation SR1 in the settlement features table on page 692:
“A Flood Risk Assessment will be required to assess the risk from Gaugers Burn and consideration should be given to any culverts/bridges which may exacerbate flood risk.”
2. Deleting the third bullet point (that relating to site R1) in the flood risk section on page 693.
3. Deleting the second and fourth bullet points in the flood risk section on page 693 and replacing them with:
“• All OP sites and site R3 have a watercourse flowing through or adjacent to them. Flood Risk Assessments will be required.”
4. Adding the following new bullet point to the flood risk section on page 693:
“• Due to the possibility of a number of culverted watercourses on site SR1, a Flood Risk Assessment will be required. The opening up and environmental enhancement of these watercourses should be investigated in the Flood Risk Assessment. Buffer strips will be required along the length of the watercourses. No development will be permissible on a culverted watercourse.”
5. Replacing the third sentence in the local transport infrastructure bullet point on page 693 with the following two sentences:
“Development beyond existing consents will be restricted until the A90 grade separated junction to the south is delivered. An assessment is required of the existing north A90 junction.”
6. Replacing the last sentence in the first paragraph of the allocation summary for OP1 – North Laurencekirk on page 694 with:
“The full planning permission granted for site OP1 in 2016 has now lapsed.”
7. Replacing the second paragraph of the allocation summary for OP1 – North Laurencekirk on page 694 with:
“Before development can commence on the site, there are several assessments that need to be carried out including a Transport Assessment, Water Impact Assessment, Flood Risk Assessment, Landscape Plan and an Environmental Statement. The Transport Assessment will be required to include a cumulative assessment of the potential transport impacts at the A90(T) north junction for the sites within the agreed Laurencekirk Development Framework, and any other allocation in Laurencekirk that does not have planning permission, to understand what mitigation measures may be required, including how, when and by whom.”
8. Replacing the last sentence in the fourth paragraph of the allocation summary for OP1 – North Laurencekirk on page 694 with the following two sentences:
“Enhancement of the straightened watercourses through re-naturalisation and removal of any redundant features will require to be investigated and should be supported in a Flood Risk Assessment. The Flood Risk Assessment will be required to assess the risk from the small watercourse in the western area and along the eastern boundary and consideration should be given to any culverts/bridges which may exacerbate flood risk.”
9. Replacing the title of the allocation summary for OP2 on page 695 with:
“OP2: Off Blackmuir Avenue”

10. Replacing the last two sentences in the third paragraph of the allocation summary for OP2 – Off Blackmuir Avenue on page 695 with:

“Enhancement of the straightened watercourse through re-naturalisation and removal of any redundant features will require to be investigated and should be supported in a Flood Risk Assessment. The Flood Risk Assessment will be required to assess the risk from the Gaugers Burn and consideration should be given to any culverts/bridges which may exacerbate flood risk.”

11. Replacing the last two sentences in the first paragraph of the allocation summary for OP3 – Land north of Fordoun Road on page 696 with:

“Before development can commence on the site, there are several assessments that need to be carried out including a Transport Assessment, Water Impact Assessment, Flood Risk Assessment, Landscape Visual Impact Assessment and an Environmental Statement. The Transport Assessment will be required to include a cumulative assessment of the potential transport impacts at the A90(T) north junction for the sites within the agreed Laurencekirk Development Framework, and any other allocation in Laurencekirk that does not have planning permission, to understand what mitigation measures may be required, including how, when and by whom.”

12. Replacing the first sentence in the second paragraph of the allocation summary for OP3 – Land north of Fordoun Road on page 696 with:

“Development of this site is dependent on delivery of the A90(T) south grade separated junction.”

13. Replacing the first sentence in the second paragraph of the allocation summary for OP4 - Land north of Gardenston Street on page 697 with:

“A Flood Risk Assessment will be required to assess the risk from the Gaugers Burn and consideration should be given to any culverts/bridges which may exacerbate flood risk.”

14. Deleting the first sentence in the third paragraph of the allocation summary for OP5 – Land south of Gardenston Street on page 697 and replacing the last sentence in the second paragraph with:

“Enhancement of the straightened watercourse through re-naturalisation and removal of any redundant features will require to be investigated and should be supported in a Flood Risk Assessment. The Flood Risk Assessment will be required to assess the risk from the Gaugers Burn and consideration should be given to any culverts/bridges which may exacerbate flood risk.”

15. Replacing the last sentence in the third paragraph of the allocation summary for OP6 – Land south of High Street on page 698 with:

“A Flood Risk Assessment will be required to assess the risk from Gaugers Burn and consideration should be given to any culverts/bridges which may exacerbate flood risk.”

16. Replacing the last sentence in the second paragraph of the allocation summary for OP7 – Land west of Fordoun Road on page 699 with:

“A Flood Risk Assessment will be required to assess the risk from the small watercourses to the east.”

17. Deleting the last sentence in the third paragraph (that relating to access to the site) of the allocation summary for OP7 – Land west of Fordoun Road on page 699.

18. Inserting the following additional sentence at the end of the first paragraph of the allocation summary for OP8 – Land east of Laurencekirk on page 699:

“Careful consideration in terms of layout, massing and design of built and landscape work should be given to the eastern edge of the proposed site, in particular in how it contributes to the eastern entrance to Laurencekirk.”

19. Replacing the second paragraph of the allocation summary for OP8 – Land east of Laurencekirk on page 669 with:

“Before development can commence on the site, there are several assessments that need to be carried out including a Water Impact Assessment, Flood Risk Assessment, Landscape and Visual Impact Assessment and an Environmental Statement. A Transport Assessment will also be required in order to determine access and connectivity; however, no access is to be taken via Borrowmuirhill Road. The Transport Assessment will be required to include a cumulative assessment of the potential transport impacts at the A90(T) north junction for the sites within the agreed Laurencekirk Development Framework, and any other allocation in Laurencekirk that does not have planning permission, to understand what mitigation measures may be required, including how, when and by whom.”

Issue 44	Newtonhill	
Development plan reference:	Proposed LDP, Appendix 7E Kincardine and Mearns, Page 717-721	Reporter: Alison Kirkwood
Body or person(s) submitting a representation raising the issue (including reference number):		
PP0272 Scottish Water PP0556 Newtonhill, Muchalls and Cammachmore Community Council PP0751 Elsick Development Company (EDC) PP0880 Dr Linsey Hunter PP1219 Scottish Environment Protection Agency PP1241 Nestrans PP1276 Polmuir Properties (Newtonhill) Limited PP1300 NatureScot		
Provision of the development plan to which the issue relates:	Newtonhill Settlement Statement	
Planning Authority's summary of the representation(s):		
<p><u>General</u></p> <p>A representee has requested that no more houses are built in Newtonhill, the Proposed Local Development Plan (PLDP) prevents coalescence of smaller settlements and measures are taken to ensure that land already classified as protected or potentially protected, is protected from all future housing development in relation to Newtonhill. They favour developments in planned settlements with suitable infrastructure, access to amenities and employment. The representee states that Newtonhill lacks infrastructure, public transport, employment opportunities, access to amenities and green space, nursery space and that there is a high dependence on cars (PP0880).</p> <p>Nestrans has reported that they are currently progressing a study considering options for new local rail stations between Aberdeen and Laurencekirk, including in/around Newtonhill (RD0227.A). No modification sought (PP1241).</p> <p><u>Vision</u></p> <p>A representee has suggested amending the term "future opportunity site", as it is misleading and should be changed. Adds, the only housing site, OP1 has planning permission and is under construction (PP1276).</p> <p><u>Site P2 – To protect the area of open space and allotments as amenities for the settlement and forming part of the green-blue network</u></p> <p>A representee has requested amending site P2 to reference the now built access road into site OP1 (PP1276).</p>		

Site P3 – To protect the recreation ground as an amenity for the settlement and forming part of the green-blue network

A representee has suggested extending site P3 to the south to include the proposed open space as part of the masterplan for bid site KN101 (PP1276).

Site P5 – To protect the area as a significant contribution to the character of the place and provide a landscape buffer

A representee has stated that they cannot find a reference in the PLDP background documents as to why site P5 includes a Sustainable Drainage System (SuDS) area, as it is already protected by its very use (PP1276).

Site P8 – To protect the area as forming part of the green-blue network

A representee has stated that they cannot find a reference in the PLDP background documents as to why site P8, which is gorse, has been included or the justification for it. They argue there is nothing meritorious of the Plan's reference to P8 in particular "forming part of the green-blue network", as the characteristics of the land appear very similar to many areas of gorse that are commonly found in this coastal environment, and that the Council confirmed it is not of a standard that can be protected by additional Local Nature Conservation Site status. They also note NatureScot's only comments on bid site KN101 were it having adequate biodiversity, open space and to utilise the core path (PP1276).

Flood Risk

Scottish Environment Protection Agency (SEPA) has requested that the two 'Flood Risk' bullet points are reversed for consistency, so the general bullet point is first (RD0214.B) (PP1219).

SEPA has requested that the general 'Flood Risk' bullet point also states that parts of Newtonhill are affected by flooding from the Burn of Elsick and the Pheppie Burn, and not just from coastal flooding (RD0214.B) (PP1219).

Services and Infrastructure

Scottish Water has requested inserting after 'Strategic drainage and water supply', "There is currently sufficient capacity at Nigg Waste Water Treatment Works. A Drainage Impact Assessment may be required. Early engagement with Scottish Water is recommended." (PP0272).

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Park Place

Newtonhill, Muchalls and Cammachmore Community Council has objected to site OP1 for 121 homes, as there is no public support for this site (PP0556).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

Site OP2 – Land to the West of the A92

A representee supports the inclusion of site OP2 site for employment land. The representee has included an Appendix (RD0128.A) in their representation which provides further detail to support their position (PP0751).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219).

NatureScot has requested that the allocation summary for site OP2 includes text that concentrates development to the eastern extent of this site, to maintain some 'rural' landscape setting between Newtonhill and Chapelton, as the scale and form of this site projects westwards from the A92, and significantly narrows and erodes the existing area of agricultural land that separates Newtonhill/A92 from the emerging settlement at Chapelton (RD0255.B) (PP1300).

NatureScot has also noted that the allocation summary for site OP2 refers to a core path on the boundary of this site, but they state no core path is shown at this location on the settlement map and understand that rather than being a core path, this is an 'on road link'. They suggest the allocation summary should therefore be corrected (RD0255.B) (PP1300).

Site OP3 – West Monduff

Newtonhill, Muchalls and Cammachmore Community Council has suggested that an alternative access road is identified for this employment land site, as in terms of Policy B2 Employment/Business Land (paragraph B2.1), the site is poorly located due to the limited and potentially dangerous access from the A92 slip-road. They also argue an alternative access route is required so that traffic does not obstruct or cross the A92 slip road (PP0556).

A representee has requested that this site be carefully constructed to minimise negative visual impact on the local landscape, adequate road access should be facilitated, and the slip road is extended for safety as the volume of traffic will only increase in this part of the A92 (PP0880).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP3 (RD0214.B). No modification sought (PP1219).

Non-Allocated Site – Bid Site KN101 – Land South of OP1, North of Mains on Monduff

Newtonhill, Muchalls and Cammachmore Community Council support Aberdeenshire Council's decision not to allocate bid site KN101 as it would make Newtonhill unsustainable, result in coalescence and protects the coastal environment of Newtonhill as a tourist destination, which will enhance the local economy in the long-term. No modification sought (PP0556).

A representee has requested the allocation of bid site KN101 for 120 homes. They have stated that this site supports the Aberdeen City and Shire Strategic Development Plan (SDP) and Scottish Planning Policy (SPP) in terms of delivery. It is a small-scale

extension of Newtonhill in the Strategic Growth Area (SGA) that is compatible with the SDP and PLDP para 5.8, it compensates for ineffective sites in the SGA. It relates well to site OP1. It scores positively in the Strategic Environmental Assessment (SEA). It will not affect the delivery of Chapelton. It is a natural extension of the settlement with minimal landscape impact. They have also highlighted that site OP1 will be complete by 2022 and a settlement such as Newtonhill requires another housing allocation in order to fulfil its function within the Aberdeen Housing Market Area (AHMA) and the SGA. This development also proposes playing fields to the east of the railway line that will help deliver the community aspiration for further recreation facilities for teenagers, as set out in the vision. The representee has included a number of Appendices (RD0234.A and RD0234.B) in their representation which provides further detail to support their position (PP1276).

A representee has objected to this site as it is contrary to planning priorities, it is unsuitable in terms of flooding and other key planning reforms, it is in the green belt, it would place undue pressure on local amenities without adding needed local employment, and it would lead directly to overdevelopment (PP0880).

Non-Allocated Site – Bid Site KN132 – Land at Cammachmore

Newtonhill, Muchalls and Cammachmore Community Council support Aberdeenshire Council’s decision not to allocate bid site KN132 for 10 homes and to introduce a settlement boundary around Cammachmore, as it would make Cammachmore unsustainable and result in coalescence. No modification sought (PP0556).

Non-Allocated Site – Bid Site KN133 – Land at Michael Tunstall Place and Cairnhill Drive

Newtonhill, Muchalls and Cammachmore Community Council support Aberdeenshire Council’s decision not to allocate bid site KN133 for 130 homes as it would make Newtonhill unsustainable, result in coalescence and protects the coastal environment of Newtonhill as a tourist destination, which will enhance the local economy in the long-term. No modification sought (PP0556).

Modifications sought by those submitting representations:

General

Modify the PLDP to provide measures to ensure that land already classified as protected or potentially protected, is protected from all future housing development in relation to Newtonhill (PP0880).

Vision

Modify the PLDP to amend the Vision statement to change the term “future opportunity site” (PP1276).

Site P2 – To protect the area of open space and allotments as amenities for the settlement and forming part of the green-blue network

Modify the PLDP to amend the designation summary of site P2 to reference the new access road into site OP1 (PP1276).

Site P3 – To protect the recreation ground as an amenity for the settlement and forming part of the green-blue network

Modify the PLDP to extend site P3 to the south for open space as proposed in the masterplan for bid site KN101 (PP1276).

Site P5 – To protect the area as a significant contribution to the character of the place and provide a landscape buffer

Modify the PLDP to remove the SuDS area within the site P5 (PP1276).

Site P8 – To protect the area as forming part of the green-blue network

Modify the PLDP to remove site P8 (PP1276).

Flood Risk

Modify the PLDP to reverse the 'Flood Risk' bullet points so the general bullet point is first (PP1219).

Modify the PLDP to amend the second 'Flood Risk' bullet point to, "Parts of the settlement may be at risk from coastal flooding and flooding from the Burn of Elsick and the Pheppie Burn. Flood Risk Assessments may be required." (PP1219).

Services and Infrastructure

Modify the PLDP to add after 'Strategic drainage and water supply', "There is currently sufficient capacity at Nigg Waste Water Treatment Works. A Drainage Impact Assessment may be required. Early engagement with Scottish Water is recommended." (PP0272).

Site OP1 – Park Place

Modify the PLDP to remove site OP1 (PP0556).

Site OP2 – Land to the West of the A92

Modify the PLDP to amend the allocation summary of site OP2 to add after the second sentence of paragraph one, "To maintain some 'rural' landscape setting between these two large settlements, development should be concentrated towards the eastern extent of this site." (PP1300).

Modify the PLDP to amend the allocation summary of site OP2 to change the third sentence of paragraph one from, "A core path also runs ..." to "An 'on the road link' to the core path network also runs ..." (PP1300).

Site OP3 – West Monduff

Modify the PLDP to identify an alternative access road into site OP3 that avoids access from the A92 slip-road (PP0556).

Modify the PLDP to amend the allocation summary of site OP2 to the site minimises negative visual impact, provides adequate road access, and the slip road is extended (PP0880).

Non-Allocated Site – Bid Site KN101 – Land South of OP1, North of Mains on Monduff

Modify the PLDP to include bid site KN101 for 120 homes or identify as a future opportunity site (PP1276).

Summary of responses (including reasons) by planning authority:

General

The Council acknowledges in the Vision section of Newtonhill's Settlement Statement the importance of avoiding coalescence with Muchalls, but as Newtonhill is within the AHMA and Aberdeen to Laurencekirk SGA, it is also important to provide a modest amount of housing. Only one housing allocation is proposed, which is carried forward from the Aberdeen Local Development Plan (LDP) 2017, see AD0034.H, pages 520 to 521. The Council notes the concerns raised by the representee. No change is required.

Comments from Nestrans are noted. No change is required.

Vision

Reference to "future opportunity site" has been included in error and no such sites are proposed to be allocated in the PLDP. The Council confirms that it intends to address this error through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site P2 – To protect the area of open space and allotments as amenities for the settlement and forming part of the green-blue network

If the access road into site OP1 has been constructed, the boundary of site OP2 could be amended to exclude the road. Its purpose is not to protect the access road, but the open space referred to in the PLDP. If the Reporter is minded, to make an amendment, then the Council recommend that the proposals map of Newtonhill could be modified to amend the boundary of site P2 to exclude the access road into site OP1.

Site P3 – To protect the recreation ground as an amenity for the settlement and forming part of the green-blue network

The Council notes the request to extend site P3 to the south to include the proposed open space as part of the masterplan for bid site KN101. However, it is not supported as the open space does not exist (it is currently a field) and it is proposed as part of a bid site that is not supported in the PLDP and unlikely to be delivered during the Plan period. No change is required.

Site P5 – To protect the area as a significant contribution to the character of the place and provide a landscape buffer

All protected land destinations are updated during the review of the LDP. As SuDS fall

within the definition of green-blue infrastructure in the PLDP glossary, are referred to in PAN 65 Planning and Open Space, see AD0007, page 2, and contribute to green-blue networks, it is appropriate to designate them as Protected Land. The Council does not agree that a SuDS area is protected by its very use, as they can be moved and infilled and built on. No change is required.

Site P8 – To protect the area as forming part of the green-blue network

The majority of site P8 is already identified as contributing to the green network in the LDP 2017, see AD0034.H, pages 51 and 521. This area also includes a core path that runs through this site, and together with the area of gorse, they make an important contribution to the green-blue network for both people and wildlife. Only areas in and around settlements in Appendix 7 are protected as green-blue networks, and the majority do not have a natural heritage designation. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comments through non-notifiable modifications, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

The Council confirms that it intends to address Scottish Water's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Comments from SEPA are noted. No change is required.

Site OP1 – Park Place

The Council notes Newtonhill, Muchalls and Cammachmore Community Council's objection to this site. Planning permission has been granted on this site and construction of an access road has reportedly begun. No change is required.

Comments from SEPA are noted. No change is required.

Site OP2 – Land to the West of the A92

Support for this site is noted. No change is required.

Comments from SEPA are noted. No change is required.

The Council does not object to NatureScot's request to maintain some 'rural' landscape setting between Newtonhill and Chapelton. If the Reporter is minded to make an amendment, then the Council recommend that the first paragraph of the allocation summary could be modified to include a new third sentence that reads, "To maintain some 'rural' landscape setting between these two large settlements, development should be concentrated towards the eastern extent of this site."

The Council confirms that it intends to address NatureScot's comment on the link road through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP3 – West Monduff

The Council notes the concerns regarding road access into the site, but do not agree with the suggested amendments, as the second paragraph in the allocation summary, which reflects the Council’s Transportation Service comments on access and capacity of the Newtonhill junction, is sufficient. No change is required.

Comments on minimising visual impact are noted, but the Council is content that the first paragraph in the allocation summary on screening and the relevant policies in the PLDP, including Policy P1 Layout, Siting and Design, will address any visual impact issues. No change is required.

Comments from SEPA are noted. No change is required.

Non-Allocated Site – Bid Site KN101 – Land South of OP1, North of Mains on Monduff

Comments from Newtonhill, Muchalls and Cammachmore Community Council and the representee objecting to this site are noted. No change is required.

The Council does not support allocating bid site KN101 for 120 homes or as a future opportunity site. Bid site KN101 was not identified as a preferred option in the MIR, see AD0038.F, page 76). The PLDP does not reserve land for housing beyond the Proposed Plan period. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. There is already a mix of allocations within the Aberdeen to Laurencekirk SGA and the representee has not provided evidence on how it will not affect the delivery of Chapelton when it is less than 1km away from this settlement, and cumulatively would result in 241 homes being built in Newtonhill. This is supported in the SDP, which states in paragraph 4.19, “Allocations should be of a scale which would not inhibit the delivery of current strategic allocations” and it is up to LDP to “determine whether a proposal is “small-scale or not, giving due regard to its context and deliverability”. This bid site would not be the small level of growth the representee refers to in paragraph 5.13 in the PLDP, as both Marywell and Newtonhill currently only have one housing allocation each. Furthermore, while the Housing Land Audit (HLA) 2019 states that site OP1 for 121 homes will be completed in 2022, see AD0022, Aberdeen Housing Market Area, page 23, the HLA 2020 pushes the completion year back to 2024, see AD0023, Aberdeen Housing Market Area, page 21.

While this bid site relates well to site OP1 and proposes playing fields, it includes land that forms part of the green network, contains semi-natural habitats, and is entirely within the green belt, the Southeast Aberdeenshire Coast Special Landscape Area, and Muchalls Conservation Area. It would rely on access from site OP1 and its potential impact on the A92 junction is a concern. The site would be visually prominent, and its scale and location will negatively affect how it relates within the landscape, as it would break the skyline and continue towards Muchalls. The proposal is contrary to community aspirations that new development avoids coalescence with Muchalls. The MIR 2019 Issues and Actions paper also notes NatureScot’s concerns that the bid site would significantly erode the southern landscape setting which separates Newtonhill and Muchalls, see AD0040.F, page 94. Similarly, the representee refers to the SEA’s from the LDP 2017 and PLDP 2020, but the latest SEA notes that mitigation measures will give mostly neutral scores, but it will have

significant negative impacts on landscape and impacts on material assets (e.g., school capacity) are uncertain, see AD0045.A, Appendix 8.7, Table 8.7.5, page 590.

The site is also constrained in terms of education provision. The 2019 School Roll states Newtonhill Primary School will be at 96% capacity by 2024 and Portlethen will be at 103% capacity, see AD0110, Appendix 1, page 5. The agreed masterplan for part of the Chapelton new town shows the school site in Phase 1B, but the development of this new settlement is currently in phase 1A (APP/2011/3103 for Phase 1A comprising of 802 homes, retail and commercial), see AD0078. As such, the development of site KN101 cannot depend on a new school being built soon to resolve primary school capacity. Likewise, a new academy is not proposed in Chapelton until phase 2A (no date is provided in the Development Framework, see AD0074, page 29).

In conclusion, no change is required.

Non-Allocated Site – Bid Site KN132 – Land at Cammachmore

The Council does not support allocating bid site KN132. Comments from Newtonhill, Muchalls and Cammachmore Community Council are noted. No change is required.

Non-Allocated Site – Bid Site KN133 – Land at Michael Tunstall Place and Cairnhill Drive

The Council does not support allocating bid site KN133. Comments from Newtonhill, Muchalls and Cammachmore Community Council are noted. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan (including the non-allocation of bid sites) or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” in relation to the settlement statement matters covered in Issue 44. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

General

3. The vision for Newtonhill on page 717 of the proposed plan refers to the importance of avoiding coalescence with Muchalls and land adjacent to the northern and southern boundaries of Newtonhill is identified as protected land. Furthermore, land to the west of the railway line, to the north and south of Newtonhill lies within the green belt. The proposed plan does not include any new development allocations in Newtonhill. Any future applications for development outwith the settlement boundary would be assessed against relevant policies. No modification is required.

Vision

4. I agree that the use of the term “future opportunity” in relation to housing allocation OP1 is misleading as the site is already under construction. The council has suggested removing the words “future opportunity” in the second last sentence of the first paragraph. I agree that this would be appropriate and recommend a modification to this effect.

Protected Land

5. I observed on my site inspection that the protected land designation P2 covers the recently formed access road to housing site OP1. As the purpose of P2 is to protect open space and allotments, I consider that the western boundary of the site, as shown in the proposed plan, should be amended to exclude the access road. A modification is recommended.

6. The proposed plan includes the sustainable urban drainage system (SuDS) to the south of Michael Tunstall Place and Cairnhill Drive within the protected land designation P5. The table on page 717 explains that the purpose of designation P5 is “to protect the area as a significant contribution to the character of the place and provide a landscape buffer”.

7. Whilst there is some vegetation on the SuDS site, I do not consider that it makes a significant contribution to the character of the place or provides a landscape buffer. However, the council has pointed out that sustainable drainage systems are included within the definition of green-blue infrastructure in the glossary of the proposed plan. Given that the site is connected to other features of green infrastructure, I consider that it would be reasonable to describe it as forming part of the green-blue network.

8. In order to more accurately reflect the nature of the SuDS site, I recommend that the site be removed from the P5 designation and instead given its own protected designation (P11). As a result, the last row of the table on page 717 of the proposed plan should be amended to read “P8 – P11 To protect the area as forming part of the green-blue network”. A modification to this effect is proposed.

9. The area of gorseland covered by protected designation P8 in the proposed plan lies immediately to the south of the landscape buffer which runs next to site OP1. Whilst not of local nature conservation site status, I note that the council and NatureScot consider the site to have some biodiversity value. I also observed on my site inspection that there is a core path which passes through and along the western edge of the protected area. Given these characteristics of the site and that it is connected to other features of green infrastructure, I consider that it forms part of the green–blue network as defined in the glossary of the proposed plan. No modification is recommended.

Flood Risk

10. The council supports the changes requested by the Scottish Environment Protection Agency (SEPA) in relation to flood risk. In the interests of consistency and to identify the risk of flooding from the Burn of Elsick and the Pheppie Burn, I recommend that the bullet points in the flood risk section are modified in line with the changes requested by SEPA.

Services and Infrastructure

11. The council also supports the changes requested by Scottish Water in relation to strategic drainage and water supply. The additional information provided by Scottish Water in relation to capacity at the waste water treatment works and the potential need for a drainage impact assessment would be useful for prospective developers. A modification on this matter is recommended.

Site OP1 – Park Place

12. I note that planning permission has been granted for 121 homes on allocated site OP1 at Park Place. I observed on my site inspection that construction is underway. There is no justification to remove this site from the plan.

Site OP2 – Land to the west of the A92

13. Site OP2 for employment land was previously allocated in the 2017 Local Development Plan. It is located within the Newtonhill settlement boundary in the proposed plan and the allocation summary requires appropriate screening of the development. I recognise the value of maintaining an area of separation between the settlements of Newtonhill and Chapelton. However, I do not consider it appropriate to require an allocated site within the settlement boundary “to maintain some rural landscape setting”, as requested by NatureScot. Whilst NatureScot is not seeking an amendment to the extent of allocation OP2, concentrating development on the eastern part of the site would in effect reduce its developable area and development capacity.

14. The land between the settlement boundaries of Newtonhill and Chapelton is designated green belt. Paragraph 49 of Scottish Planning Policy indicates that one of the purposes of a green belt designation is to protect and enhance the character, landscape setting and identity of a settlement. I consider that the existing green belt designation is the appropriate mechanism “to maintain some rural landscape setting” between Newtonhill and Chapelton”. In addition, land to the south west of the OP2 site is safeguarded for future public open space as part of the development of Chapelton (shown as reserved land R1). No modification is recommended in relation to this matter.

15. NatureScot has indicated that the “core path” referred to in the allocation summary for site OP2 should more accurately be described as an “on road link”. I agree that the text in the allocation summary should be modified to provide clarification on this matter.

Site OP3 - West Monduff

16. This is not an entirely new allocation, in that the site is safeguarded for employment purposes in the current local development plan. I note that planning permission was granted in November 2018 for a workshop and yard on part of the site. As the allocation summary for site OP3 does not include any details on transport matters, I sought further information from the council in order to address the concerns raised in representations.

17. The Council has confirmed that the road where access for site OP3 would be taken from does not form part of the A92 slip road, but is part of the local road network, and is listed as C24K. It highlighted that there is two-way traffic along most of the north-eastern boundary of site OP3. The A92 access/egress from C24K is non-conventional and includes a very low speed exit off the A92, due to the very tight alignment. In this context, I

have no reason to disagree with the council's view that satisfactory access arrangements can be provided for site OP3.

18. The council has confirmed that development on this site would require an assessment of traffic generation, the provision of a footway (and potentially a shared cycle link) to the C24K roundabout near Chapelton and the provision of appropriate visibility splays. I agree that a modification would be necessary to include these requirements within the allocation summary for site OP3.

19. The allocation summary for site OP3 states that there should be "appropriate screening of the development" which I consider would address potential landscape and visual impacts. No further modifications are required.

Non-allocated Bid Site KN101 Land South of OP1

20. Polmuir Properties (Newtonhill) Limited consider that the allocation of bid site KN101 would deliver 120 homes in support of the strategic development plan and Scottish Planning Policy. Newtonhill lies within the Aberdeen Housing Market Area. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area.

21. Whilst site KN101 could potentially help meet this shortfall, I agree with the council that the development of a further 120 homes in Newtonhill would potentially detract from the delivery of the strategic allocation at Chapelton and as a result would be contrary to paragraph 4.19 in the strategic development plan.

22. In terms of distance, the proposal would not bring development at Newtonhill any closer to Muchalls than the existing housing at Michael Tunstall Place. However, there would be a perception of closing the gap between the two settlements because part of site KN010 sits on the skyline and the core path which runs between Newtonhill and Muchalls passes through the site. The council has indicated that the site lies within the Muchalls Conservation Area. However, I do not find this to be the case.

23. The proposal would involve land within the green belt and identified for protection as part of the green-blue network. Given the rising topography within the central part of the site, I consider that development would also detract from the landscape setting of the settlement and the qualities of the South East Aberdeenshire Coast special landscape area.

24. I note that the indicative framework prepared by the developer proposes to retain some of the existing gorse and create a new landscape buffer on the southern edge of the site. I also note the potential to extend the boundary of the protected land allocation P3 to provide open space in association with development on bid site KN101.

25. However, I do not consider that the proposed mitigation of landscape effects or community benefits in terms of open space provision would outweigh the negative effects of the proposal on housing delivery at Chapelton and the separation between Newtonhill and Muchalls. There are other sites available to meet the shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area and there is no

requirement to allocated sites for the period beyond 2032. No modifications are recommended in relation to bid site KN101 or the extent of the P3 site.

Reporter's recommendations:

Modify the local development plan by:

1. Deleting "future opportunity" before "housing site" in the second last sentence of the first paragraph in the vision section on page 717.

2. Replacing the two bullet points in the flood risk section on page 718 with:

• Parts of the settlement may be at risk from coastal flooding and flooding from the Burn of Elsick and the Pheppie Burn. Flood Risk Assessments may be required.

• There is a record of flooding close to the OP3 site. A Flood Risk Assessment may be required."

3. Replacing the second bullet point in the service and infrastructure section on page 718 with

• Strategic drainage and water supply: There is currently sufficient capacity at Nigg Waste Water Treatment Works. A Drainage Impact Assessment may be required. Early engagement with Scottish Water is recommended."

4. Replacing the last sentence of the first paragraph of allocation OP2 on page 719 to read:

"An 'on the road' link to the core path network also runs along the boundary of the site and connections should be made to link up with the network."

5. Amending the western boundary of site P2 at Park Place on the settlement map on page 721 to exclude the access road to site OP1.

6. Removing the SuDS site to the south of Michael Tunstall Place and Cairnhill Drive from the P5 designation on the settlement map and replacing it with a new protected land designation P11.

7. Amending the last row of the table on page 717 to read "P8 – P11 To protect the area as forming part of the green-blue network".

8. Inserting the following new second paragraph into the allocation summary for OP3 West Monduff on page 720:

"An assessment of traffic generation will be required, either in a Transport Assessment or Statement, depending on the scope of the proposed development. A new footway (and potentially a shared cycle link) will be required along the road to the roundabout near Chapelton. Appropriate visibility splays related to the anticipated scale of HGV use would be required.

Issue 45	Portlethen and Portlethen Village	
Development plan reference:	Proposed LDP, Appendix 7E Kincardine and Mearns, Page 724-734 and Proposed LDP, Appendix 7E Kincardine and Mearns, Page 735-736	Reporter: Alison Kirkwood

Provision of the development plan to which the issue relates:	Portlethen Settlement Statement and Portlethen Village Settlement Statement	
Planning authority's summary of the representation(s):		
<p>Portlethen</p> <p><u>General</u></p> <p>A representee has requested that development proposed at Portlethen is curtailed within the boundaries of common sense. There is a lack of infrastructure, public transport, employment opportunities, access to amenities and green space and a high dependence on cars. The local nursery is vastly under pressure for space (PP0880).</p> <p>Portlethen and District Community Council has welcomed that more green spaces have</p>		

been added to Portlethen and its nearby settlements. No modification sought (PP1226).
Flood Risk

Scottish Environment Protection Agency (SEPA) has requested that for consistency the second 'Flood Risk' bullet point includes sites OP2 and OP5 (RD0214.B) (PP1219).

SEPA has requested that the third 'Flood Risk' bullet point includes site BUS1 as well as site R1 and is reworded for consistency (RD0214.B) (PP1219).

SEPA has requested that the fourth 'Flood Risk' bullet point only includes site BUS2 (sites OP5 and BUS1 are moved to second and third bullet points) and is amended to include buffers strips, FRA and watercourse enhancement opportunities (RD0214.B) (PP1219).

Services and Infrastructure

Scottish Water has requested adding additional text under 'Strategic drainage and water supply', to state there is sufficient capacity at Nigg Waste Water Treatment Works and that a Drainage Impact Assessment may be required (PP0272).

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Nestrans has requested adding additional text under 'Local transport infrastructure' to state that contributions for a link road between Hillhead to Badentoy Industrial Estate may be required (RD0227.A) (PP1241).

Site P8 – To protect recreational open space as an amenity for the settlement

Portlethen and District Community Council has supported the designation of site P8 as recreational land is needed in the Hillside area. No modification sought (PP1226).

Site R1 – Safeguarded for a Park and Ride facility

Nestrans has confirmed that they continue to seek development of a strategic park and ride site to the south of Aberdeen and welcome the safeguarding of site R1 (RD0227.A). No modification sought (PP1241).

A representee has proposed reserving site R1 for a park and ride and out of city bus station, as the Guild Street Bus Station in Aberdeen is privately owned and not fit for purpose. They argue a publicly owned out of City bus station will allow bus companies to use it on equal terms and will encourage competition. They state bus passengers would be able to change between different bus companies' vehicles within the bus station and be able to wait between connections in pleasant conditions (PP0563).

Objection is made to site R1, and it is requested that it is allocated as part of BUS2 and safeguarded for business use. The representee has stated that the site has Class 4 "Business Use" consent, and this should be recognised in the zoning of the site in the Proposed Local Development Plan (PLDP) 2020. They highlight planning consent ref APP/2014/1747, extended planning consent reference APP/2000/0006 and consent is valid until December 2020 – a new planning application will be submitted. Planning permission was granted in 2014 for a park and ride facility, but it has not come forward. Not all the

land is in under control of the relevant body/Aberdeenshire Council and its allocation is sterilising a marketable business site, which is within the settlement boundary and has connections to the Trunk Road network and public transport (PP0670).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R1 (RD0214.B). No modification sought (PP1219).

Site R2 – Reserved for a lorry park

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R2 (RD0214.B). No modification sought (PP1219).

Site R3 – Reserved for Hillside Primary School extension, if required

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R3 (RD0214.B). No modification sought (PP1219).

Site BUS1 – Safeguarded for business uses

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site BUS1 (RD0214.B). No modification sought (PP1219).

Site BUS2 – Safeguarded for business uses

A representee has requested the allocation of site BUS2 for 148 homes on 6.5ha of land safeguarded for business uses. The site is adjacent to housing at Hillside, it will deliver a range of house types, there is an insufficient housing land supply to meet the Housing Allowances of the Aberdeen City and Shire Strategic Development Plan 2020 (SDP). States, there are no planning, infrastructure, or environmental issues, and that the site is in a sustainable location with employment uses next to it and that it benefits from existing bus stops. Adds, the site can have two points of access from Mossie Avenue, education capacity issues can be overcome, includes a landscape buffer along the western, northern, and southern boundaries of the site, includes 40% open space to the east of the site (2.6ha) (PP0752).

In terms of loss of employment land, the representee argues there is a low demand for employment land and that Aberdeenshire has a significant over allocation of land for employment use with a reduced market demand for business use at Portlethen. Reports, there is reduced demand for employment land at Office Park at City South (BUS2), with virtually no interest in offices over the last 3 to 5 years. Notes that PLDP Appendix 1 Employment Land Allocations shows there is a surplus of 117.3 hectares of employment land in Aberdeenshire from 2020 to 2040. Adds, Policy B2 Employment/Business Land allows alternative uses on employment sites if there is a constraint on the site whereby there is no reasonable prospect of it ever becoming marketable for business development or it is poorly located for employment use. The representee has included a number of Appendices (RD0129.A, RD0129.B, RD0129.C, RD0129.D, RD0129.E and RD0129.F) in their representation which provides further detail to support their position, including a Site Assessment with a Strategic Environmental Assessment (SEA) (PP0752).

Site OP1 – Schoolhill

A representee has expressed their support for this allocation but request the PLDP is updated to reflect planning application APP/2016/0934 that was approved in October 2019. They add, this would also allow references to a Drainage Impact Assessment and Transport Assessment to be removed as issues of transport impact and drainage impact were resolved through the planning application process (PP0668).

A representee is concerned over the lack of useable open space in Portlethen and has requested significantly reducing the scale and number of homes on site OP1 to accommodate a park. They note reference was made to a public park on part of site OP1 in the Main Issues Report 2019, but this has not been carried forward. A public park would benefit the community, school, nursery, and other organisations working with young people (PP0474).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

Portlethen and District Community Council is concerned that this proposal is constrained as Hillside Primary School is at overcapacity (currently under consultation for re-zoning), and there are several issues with local amenities, road network, the medical centre and waste. They query if these issues have been resolved (PP1226).

NatureScot has requested that the allocation summary for site OP1 includes a requirement that promotes active travel provision (in accordance with the Proposed Plan's aims), as it already states a Transport Assessment and contributions to improve the A92(T) Findon trunk road junction may be required (RD0255.B) (PP1300).

Site OP2 – Land to Northwest of Badentoy

SEPA has queried the need for a Flood Risk Assessment (FRA) for site OP2, which does not appear in the 'Flood Risk' bullet points and they are not aware of any flood risk issues. They suggest, if the Council's Flood Prevention Unit (FPU) confirm there is a surface water issue it should be confirmed if this can be addressed through appropriate SuDS and if not, and they confirm an FRA is required, the allocation summary should state the purpose of the FRA. In this case to address surface water flooding (RD0214.B) (PP1219).

Portlethen and District Community Council is disappointed that no decision has been made to move this site forward since its allocation in the LDP 2017 (PP1226).

NatureScot has requested that the allocation summary for site OP2 removes a reference to a core path, as no core path is shown on the settlement map and rather than being a core path, this is an 'on road link' (and Route 1 of the National Cycle Network) (RD0255.B) (PP1300).

NatureScot has requested that the allocation summary for site OP2 includes a requirement that active travel provision to and from this site, as this would promote active travel provision in accordance with the PLDP's aims (RD0255.B) (PP1300).

Site OP3 – Fairview Central

SEPA has requested that the last sentence in the last paragraph referring to peat should be

removed as the allocation site boundary has changed since the Main Issues Report stage (RD0214.B) (PP1219).

Portlethen and District Community Council has indicated that they are keen for this site to move forward since its allocation in the LDP 2017 and query where the masterplan is for the road network (PP1226).

Site OP4 – Fairview

SEPA has requested that the last sentence in the second paragraph states that peat is likely to be present in a significant part of the site and that a Peat Survey and Phase 1 Habitat Survey will be required (RD0214.B) (PP1219).

Portlethen and District Community Council has indicated that they are keen for this site to move forward since its allocation in the LDP 2017 and query what type of waste management facility will be provided on the site (PP1226).

Site OP5 – Land South of Portlethen Club House

Portlethen and District Community Council has requested that assessments will be required for any proposal on this site (PP1226).

Site OP6 – Land East of Badentoy

A representee has objected to this allocation as it is not founded on any basis of qualitative or quantitative deficiency, and no retail study has been undertaken that identifies a deficiency. They argue an extension over the A92 would further exacerbate the issue of an elongated Town Centre. They state there is no requirement for a further allocation for a food store given the sequentially preferable site with unrestricted open A1 retail use at the vacant former Homebase Unit in the town centre, which has an intended supermarket occupant along with a comparison retailer (with live applications to facilitate this reoccupation). They are also unclear how the site location would address the perception that there is no meeting place within the town centre, and it will further dissipate town centre users. They highlight that its peripheral location is isolated, without a high level of accessibility as required by Scottish Planning Policy (SPP), it does not have a convenient walk-in catchment, the A92 acts as significant barrier to free movement critical for a town centre, and it would not encourage linked trips with other services (PP0558).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP6 (RD0214.B). No modification sought (PP1219).

Site CC1 – The Green

A representee has requested that new retail facilities should be restricted by maximum floorspace levels to prevent ambiguity with the reference 'neighbourhood' and allow adequate assessment of retail impact on existing centres (PP0558).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site CC1 (RD0214.B). No modification sought (PP1219).

Portlethen and District Community Council has requested that a Transport Assessment is

required for this site (PP1226).

Non-Allocated Site – Bid Site KN027 – Land North of Thistle Drive, Hillside

A representee has requested allocating bid site KN027 for 300 homes. They argue that the bid site:

- represents a logical and deliverable allocation with no constraints;
- was originally included in the MIR by Officers for 300 homes, as it was considered suitable in terms of sustainable location, no undermining of the green belt and there being no technical capacity issues;
- is in line with the Spatial Strategy of the SDP of allocating significant new development on the northern part of this Strategic Growth Area (SGA);
- could deliver the increase in the housing allocation introduced through the SDP Examination to buffer any shortfall;
- will also help deliver much needed land in the SGA as Elsick (Chapelton) remains lower than previously programmed and propose 60 homes per annum compared to just over half of that at Elsick;
- is in a highly sustainably location north of the centre of Portlethen, has easy access to services, and is more accessible after the completion of the Aberdeen Western Peripheral Route (AWPR);
- the principles of the green belt will not be undermined as noted in the Strategic Environmental Assessment (SEA); and
- would also provide a large area of green space including allotments.

The representee has included a number of Appendices (RD0117.A, RD0117.B and RD0117.C) in their representation which provides further detail to support their position (PP0696).

A representee does not support bid site KN027 as there are other appropriate sites at KN057 and KN082. In addition, they state, the site is close to A92(T) and railway line and will be affected by noise and air pollution. The MIR had a number of concerns on its visual prominence, visual impact and issues of coalescence to the north of Portlethen. The site is at risk of flooding as confirmed by SEPA flood maps. Thistle Drive only has a footpath on one side of the road, and it does not provide scope for a bus service. The closest bus stop is 530m from the edge of the site. Cookston Road would need to be upgraded to bring the roads infrastructure to a suitable standard (PP0669).

Non-Allocated Site – Bid Site KN057 – Land to the West of Cookston Road

A representee has requested the allocation of bid site KN057 for up to 400 homes, land for education use and local retail use. There are no technical constraints, it will enhance the north western edge of Portlethen, it is a natural extension of Schoolhill, green belt land can be undesignated, and the site can be contained by the Aberdeen Western Peripheral Route (AWPR), and it is not open space. Portlethen falls within an SGA where there is a shortfall of 300 homes, and paragraph 3.11 in the PLDP encourages land allocations in settlements around Aberdeen City and Portlethen is situated close to Aberdeen City. Only minor enhancements to the roundabout at the Findon A92 junction are required, and a 2015 assessment shows the raised lowland bog will not constrain the site. The representee has included a number of Appendices (RD0113.A and RD0113.B) in their representation which provides further detail to support their position (PP0684).

A representee does not support bid site KN057 as this forms part of a valuable green belt area, it would have a detrimental impact on the local environment leading to a loss of identity and sense of place, it would have a negative impact on the air quality, peat soil would be severely affected as would the habitats for a wide range of local flora and fauna, as the land slopes it would result in drainage issues, major road improvements would be required to cater for the increased traffic, and primary education and the medical facility are operating at overcapacity (PP0029).

Non-Allocated Site – Bid Site KN058 – Land North of Schoolhill, Portlethen

A representee does not support bid site KN058 for 1550 homes, education and retail facilities, as this forms part of a valuable green belt area, it would have a detrimental impact on the local environment leading to a loss of identity and sense of place, it would have a negative impact on the air quality, peat soil would be severely affected as would the habitats for a wide range of local flora and fauna, as the land slopes it would result in drainage issues, major road improvements would be required to cater for the increased traffic, and primary education and the medical facility are operating at overcapacity (PP0029).

Non-Allocated Site – Bid Site KN082 – Land South of Bramble Way, Clashfarquhar

A representee has requested allocating bid site KN082 for up to 150 homes. They state the site does not have any constraints and can be delivered in the short-term. The site has good public transport facilities nearby. It is within easy walking distance of Fishermoss Primary School (where capacity exists for development) and Portlethen Academy. Issues such as noise from trains can be addressed. The site has previously been considered as a suitable site in the Portlethen Capacity Study 2008. The site is not at risk of flooding from the Burn of Daff according to SEPA flood maps. The area of land with high surface water to the south west will be incorporated into the SuDS proposal and create a feature in this area. It will not compromise the integrity of the green belt, will be contained, provide a defensible edge to prevent visual and physical coalescence with Newtonhill, and can enhance existing areas of open space. They also argue that the bid site supports the PLDP's vision in paragraph 3.11, which encourages land allocations in settlements around Aberdeen City, and state there is a shortage of at least 300 homes in this Strategic Growth Area. The representee has included a number of Appendices (RD0108.A, RD0108.B and RD0108.C) in their representation which provides further detail to support their position (PP0679).

Non-Allocated Site – Bid Site KN109 – Land at Causeyport Farm

A representee has requested allocating bid site KN109 for 1,800 homes, 19ha of reserved business land and 10ha for local retail and education. The site would be phased over the SDP plan period, and the land controlled by the representee can provide 380 units over the period to 2032 and the remaining 1420 homes identified as future housing land. They argue the development will create a sense of character through new connected neighbourhoods with an identity that people can enjoy living in and provide recreational opportunities that will benefit existing and new residents. They also argue the bid site has potential to deliver homes in a high demand location that has excellent connections to the wider region, it will maximise the sustainability of travel to existing services and the railway station while supporting existing and new facilities and amenities, and it provides an opportunity to meet the shortfall in housing allocations identified at the SDP Examination.

The representee has included a number of Appendices (RD0199.A) in their representation which provides further detail to support their position (PP1133).

A representee does not support bid site KN109 as this area forms part of a valuable green belt area, it would have a detrimental impact on the local environment leading to a loss of identity and sense of place, it would have a negative impact on the air quality, peat soil would be severely affected as would the habitats for a wide range of local flora and fauna, as the land slopes it would result in drainage issues, major road improvements would be required to cater for the increased traffic, and primary education and the medical facility are operating at overcapacity (PP0029).

Portlethen Village

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has requested that a new 'Strategic drainage and water supply' bullet point is added for consistency, as any development in Muchalls will be required to connect to the existing waste water network. SEPA has suggested confirmation be sought from Scottish Water with regard to the capacity of its infrastructure in Portlethen Village and wording of the bullet point be agreed accordingly (RD0214.B) (PP1219).

A representee has stated that as no residential allocations have been identified there will be no development impacts required to be mitigated by developer obligations and therefore this section is unnecessary (PP1413).

Modifications sought by those submitting representations:

Portlethen

Flood Risk

Modify the PLDP to amend the second 'Flood Risk' bullet point from, "Sites OP3 and OP4 are at risk from flooding due to one or more watercourses running through the site. A Flood Risk Assessment will be required." to "Sites OP2, OP3, OP4 and OP5 are at risk from flooding due to one or more watercourses flowing through or adjacent to the site. A Flood Risk Assessment will be required." (PP1219).

Modify the PLDP to amend the third 'Flood Risk' bullet point from, "Due to the presence of a watercourse in close proximity to site R1, a Flood Risk Assessment may be required." to "Sites R1 and BUS 1 have watercourses flowing through or close to the site. A Flood Risk Assessment may be required." (PP1219).

Modify the PLDP to amend the fourth 'Flood Risk' bullet point from, "Sites OP5, BUS1 and BUS2 have a watercourse within or next to the site that may be a source of flood risk. A Flood Risk Assessment may be required." to "A significant proportion of site BUS 2 is at flood risk from the small watercourses flowing through the site and this may be a major

constraint to any further development on site. A Flood Risk Assessment will be required to determine the developable area. Buffer strips will be required along the watercourses and opportunities to enhance the watercourses through re-naturalisation and removal of any redundant manmade features should be investigated.” (PP1219).

Services and Infrastructure

Modify the PLDP to amend ‘Strategic drainage and water supply’ to include at the end of the last sentence, “There is currently sufficient capacity at Nigg Waste Water Treatment Works. A Drainage Impact Assessment may be required.” (PP0272).

Modify the PLDP to amend ‘Local transport infrastructure’ to change the second last sentence from, “Contributions to a link road from Hillhead to Badentoy Industrial Estate.” To “Contributions may be required to a link road from Hillhead to Badentoy Industrial Estate.” (PP1241).

Site R1 – Safeguarded for a Park and Ride facility

Modify the PLDP to amend site R1 from, “Safeguarded for a Park and Ride facility” to “Reserved for Park and Ride and Out of City Bus Station.” (PP0563).

Modify the PLDP to amend site R1 to become an extension of site BUS2 (PP0670).

Site BUS2 – Safeguarded for business uses

Modify the PLDP to amend the western part of BUS2 (6.5ha) for 148 homes. (PP0752).

Site OP1 – Schoolhill

Modify the PLDP to amend the allocation summary of site OP1 to remove references to a Drainage Impact Assessment and Transport Assessment (PP0668).

Modify the PLDP to amend OP1 to reduce the scale of housing from 176 to 60 houses and accommodate a public park on the site that would become a protected area and form part of the green-blue network (PP0474).

Modify the PLDP to amend the allocation summary of site OP1 to include, “Provision for active travel is required.” (PP1300).

Site OP2 – Land to Northwest of Badentoy

Modify the PLDP to clarify if site OP2 requires an FRA and if the Council’s FPU says it does, amend the allocation summary to, “..., Flood Risk Assessment (to address surface water flooding), ...” (PP1219).

Modify the PLDP to amend the allocation summary of site OP2 to change paragraph one from, “There is a core path on the boundary of the site and connections could be made to this.” to “Efforts should be made to link into the National Cycle Network Route 1 which lies on the north boundary of the site.” (PP1300).

Modify the PLDP to amend the allocation summary of site OP2 to include after the third sentence of paragraph one, “Provision for active travel is required.” (PP1300).

Site OP3 – Fairview Central

Modify the PLDP to amend the allocation summary of site OP3 to remove the last sentence in the last paragraph, “Development should avoid areas of peat and a buffer strip will be required.” (PP1219).

Site OP4 – Fairview

Modify the PLDP to amend the allocation summary of site OP4 to change the last sentence of paragraph two from, “There could be peatland to the north of the site and a Habitats Assessment will be required.” to “There is likely to be peat underlying a significant part of the site. A Peat Survey and Phase 1 Habitat survey will be required.” (PP1219).

Modify the PLDP to amend the allocation summary of site OP5 to include information on the type(s) of waste disposal operations that will be carried out on the site (PP1226).

Site OP5 – Land South of Portlethen Club House

Modify the PLDP to amend the allocation summary of site OP5 to state what assessments will be required for any proposals on this site (PP1226).

Site OP6 – Land East of Badentoy

Modify the PLDP to remove site OP6 (PP0558).

Site CC1 – The Green

Modify the PLDP to amend the allocation summary of site CC1 to ensure the reference to ‘neighbourhood’ is restricted by maximum floorspace levels and for proposals over 400sqm gross floorspace to be subject to a Retail Impact Assessment (PP0558).

Modify the PLDP to amend the allocation summary to state that a Transport Impact Assessment is required (PP1226).

Non-Allocated Site – Bid Site KN027 – Land North of Thistle Drive, Hillside

Modify the PLDP to include bid site KN027 for 300 homes (PP0696).

Non-Allocated Site – Bid Site KN057 – Land to the West of Cookston Road

Modify the PLDP to include bid site KN057 for up to 400 homes (PP0684).

Non-Allocated Site – Bid Site KN082 – Land South of Bramble Way, Clashfarquhar

Modify the PLDP to include bid site KN082 for up to 150 homes (PP0679).

Non-Allocated Site – Bid Site KN109 – Land at Causeyport Farm

Modify the PLDP to include bid site KN109 for 1,800 homes, 19ha of reserved business land and 10ha for local retail and education (PP1133).

Portlethen Village

Services and Infrastructure

Modify the PLDP to include a new bullet point titled 'Strategic drainage and water supply' and in consultation with Scottish Water, confirm the capacity of its waste water infrastructure at Portlethen Village (PP1219).

Modify the PLDP to remove the Services and Infrastructure section in relation to developer obligations (PP1413).

Summary of responses (including reasons) by planning authority:

Portlethen

General

The Council does not agree with the issues raised by the representee. While there are primary school capacity issues at Hillside, this is being investigated by the Council's Education Service, and Portlethen is served by good public transport service, retail, amenities, open space and has two employment areas. No change is required.

Comments from Portlethen and District Community Council on green spaces are noted. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comments through three non-notifiable modifications, as set out in the List of Non-Notifiable Modifications. As discussed below, site OP2 should not be included in this section.

Services and Infrastructure

The Council confirms that it intends to address Scottish Water's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address Nestrans's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications. The Council also notes the following non-notifiable modification has been made to the PLDP to correct a typographical error referring to Hillhead rather than Hillside since the PLDP was agreed.

Site P8 – To protect recreational open space as an amenity for the settlement

Comments from Portlethen and District Community Council are noted. No change is required.

Site R1 – Safeguarded for a Park and Ride facility

The Council welcomes the support from Nestrans to safeguard site R1 for a park and ride

facility and note their desire for a strategic park and ride site to the south of Aberdeen.

The Council notes the representee's aspiration for the park and ride facility to have an out of city bus station, but this is not in the control of the Council. Bus companies can use the facility as a bus stop, just like Guild Street Bus Station. No change is required.

The Council does not agree with amending the R1 designation to employment land. Nestrans has indicated their support for this site as a park and ride facility. The building of the AWPR and subsidiary roads between 2015 and 2019 will have had an impact on the delivery of this site, and no alternative site has come forward. No planning application has come forward for business use on this site. The Council also notes that there is a representation to reduce the scale of site BUS2 by 6.5ha as the representee argues there is a lack of demand for employment land and there is an oversupply. No change is required.

Comments from SEPA are noted. No change is required.

Site R2 – Reserved for a lorry park

Comments from SEPA are noted. No change is required.

Site R3 – Reserved for Hillside Primary School extension, if required

Comments from SEPA are noted. No change is required.

Site BUS1 – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

Site BUS2 – Safeguarded for business uses

The Council disagrees with changing the designation of this site to an opportunity site for 148 homes. The site was not put forward for housing as a development bid in response to the Council's call for sites in 2018 and so was not considered as such at the MIR stage, nor subject to site assessment and public consultation. In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. The School Roll Forecasts 2019 show the capacity at Hillside Primary and Portlethen Academy will be exceeded in 2022 and this proposal will worsen this issue, see AD0110, Appendix 1, page 5. The capacity at Portlethen Academy is unlikely to improve until a new secondary school at the new settlement of Chapelton is built. However, its development framework shows there is no timescale on when that will be built in phase 2 and construction is only in phase 1A, see AD0074, page 29.

It is noted that the representee submitted an Environmental Assessment, but the Council is not convinced that the flood risk can be suitably mitigated and score neutral, as the whole site is at risk from fluvial and surface water flooding. The representation does not provide any flooding mitigation proposals that demonstrate that the two SuDS ponds are adequate. Furthermore, allocating housing on land at risk from flooding does not comply with paragraph 255 in SPP, see AD0012, which advocates a precautionary approach to flood

risk and paragraph 256 states the “planning system should prevent development which would have a significant probability of being affected by flooding or would increase the probability of flooding elsewhere”. While the provision of open space is welcomed, as there is insufficient provision in the Hillside area, the proposed location of the open space is focussed towards the rear of the site, next to the A92 where half of the area consists of SuDS ponds may not make it the most accessible, safe, welcoming or well connected site for existing and new residents.

In relation to employment demand, this site is in an appropriate location to take advantage of easy access to the A92, its location within an SGA, and its close proximity to Aberdeen and the local population. Demand for employment land is likely to have reduced due to the downturn in the oil and gas sector that began in 2015.

In conclusion, no change is required.

Site OP1 – Schoolhill

It is noted that a planning application APP/2016/0934 on this site was considered by Kincardine and Mearns Area Committee (KMAC) on 10 December 2019. They agreed that authority to grant planning permission be delegated to the Head of Planning and Environment Service subject to a number of conditions, see AD0179, pages 10 and 11. One of these conditions being a rezoning exercise and successful implementation of rezoning the houses in this application to Portlethen Primary School or Fishermoss School. Site OP1 is currently zoned in Hillside Primary School, which is at overcapacity and is forecast to rise to 147% capacity by 2024 (AD0110, Appendix 1, page 5). However, parent/carers and stakeholders were overwhelmingly against the rezoning of this site, and on 8 December 2020 KMAC agreed to recommend to the Education and Children’s Services Committee (in January 2021) that the Leathan Fields site (OP1) should not be rezoned (AD0166 and AD0180, page 5). As such, the Education and Children’s Services objection remains, and the planning condition remains unmet. In addition to this, a Legal Agreement to address the required developer obligations and further information to address concerns held by Roads Development are also required. To date, none of these matters have been addressed. As such, the planning application is still pending and the need for a Drainage Impact Assessment and Transport Assessment will remain. No change is required.

The Council notes the request for a public park on site OP1 and the general lack of open space in Portlethen. While the Council agrees there is a need for open space at Hillside, the housing on site OP1 conforms with the original masterplan for this area, see AD0084, and it can come forward as infill development at any time, subject to meeting the LDP policies. Open space will still be required on this site, but is unlikely to be at the scale the representee seeks. No change is required.

In relation to comments from Portlethen and District Community Council, as discussed above, some of these issues are still pending. No change is required.

The Council confirms that it intends to address NatureScot’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP2 – Land to Northwest of Badentoy

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Comments from Portlethen and District Community Council are noted. No change is required.

The Council confirms that it intends to address NatureScot's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP3 – Fairview Central

The Council confirms that it intends to address SEPA's comment through non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Comments from Portlethen and District Community Council are noted. A masterplan showing the road network between sites OP3 and OP4 is not yet required, as it was only introduced in this Proposed Plan. No change is required.

Site OP4 – Fairview

The Council confirms that it intends to address SEPA's comment through non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Comments from Portlethen and District Community Council are noted. The type of waste management facility will be proposed at the planning application stage. There has been no request to specify or restrict the types of uses on this site. No change is required.

Site OP5 – Land South of Portlethen Club House

Portlethen and District Community Council has not requested what type of assessments should be required for this site. The proposed allocation summary already states a number of technical assessments will be required, including a Transport Assessment, Flood Risk Assessment, a Landscape and Visual Impact Assessment, a Habitats Assessment, and a Drainage Impact Assessment. No change is required.

Site OP6 – Land East of Badentoy

The Council notes the concerns raised by the representee including, the lack of a retail study to justify the proposal, accessibility across the A92 slip road and how it would resolve meeting place issues. The town centre already crosses the A92 slip road and includes a hotel and restaurant. It is noted that a drive thru has been granted planning permission and built in 2018/2019. Given these concerns and because the allocation proposes either a food retail unit and drive thru or a garden centre and restaurant, it may be more appropriate to allocate site OP6 for uses that either do not exist or will have less of a conflict in Portlethen's existing town centre. If the Reporter is minded, to make an amendment, then the Council recommend that site OP6 is only allocated for a garden centre and restaurant (2,500m²).

Comments from SEPA are noted. No change is required.

Site CC1 – The Green

The Council notes the concerns raised by the representee but adding a maximum floor space to the allocation is not supported, as Policy B1 Town Centre Development requires a Retail Impact Assessment for any major proposal. No change is required.

Comments from SEPA are noted. No change is required.

The Council does not agree with Portlethen and District Community Council's requirement for a Transport Assessment as the allocation summary already refers to the need for a travel plan, which is deemed sufficient. No change is required.

Non-Allocated Site – Bid Site KN027 – Land North of Thistle Drive, Hillside

The Council does not support allocating bid site KN027 for 300 homes. Bid site KN027 was identified as a preferred option in the MIR, see AD0038.F, page 83, but the Kincardine and Mearns Area Committee did not support it, see AD0040.F, page 108). Notwithstanding this, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. Furthermore, the scale of this proposal could affect the delivery of Chapelton, which is less than 2km from Portlethen, and the SDP states, "Allocations should be of a scale which would not inhibit the delivery of current strategic allocations", see AD0016, paragraph 4.19. Reporters at previous LDP Examinations have also recognised that while the development of Chapelton has been slow and an obvious response would be to identify other sites to remedy the shortfall, this would divert the market demand to other sites and thereby threaten the viability and further delay the implementation of the Chapelton proposal (see Examination of the Aberdeenshire Local Development Plan 2017 (AD0036), page 102, paragraph 4, page 107, paragraph 19 and page 728, paragraph 10).

The proposal would also result in the loss of green belt land, and to some extent compromise the three objectives of the green belt as set out in paragraph 49 of SPP, see AD0012, namely directing development to the most appropriate locations and supporting regeneration; protecting and enhancing the character, landscape setting and identity of settlements along the A92, including Portlethen, Marywell and Aberdeen; and protecting and providing access to open space. The SDP states, "The green belt around Aberdeen will continue to protect the character and landscape setting of the City and make sure that development is directed to appropriate locations.", see AD0016, paragraph 6.9. As discussed above and in Issue 5, there is a sufficient supply of housing land and the loss of further green belt is not justified at this time.

While the new Aberdeen Western Peripheral Route will enhance the desirability of living in a settlement near to it, the SDP states, "Any new development adjacent to the Aberdeen Western Peripheral Route, including the Fastlink to Stonehaven, will be resisted unless it has been properly considered through the Development Plan process", see AD0016, paragraph 3.14. While a large number of homes are proposed in the northern part of the Aberdeen to Laurencekirk Strategic Growth Area, this is focused in Chapelton to relieve pressure in neighbouring settlements, which is supported by local communities (for example see AD0036, page 721, paragraph 1 under Vision, and Newtonhill, Muchalls and Cammachmore Community Council's response (PP0556) page 4 paragraph 2).

Comments objecting to this bid site are noted.

In conclusion, no change is required.

Non-Allocated Site – Bid Site KN057 – Land to the West of Cookston Road

The Council does not support allocating bid site KN057 for 400 homes, and land for education use and local retail uses, which is part of a much larger development extending to the west. Bid site KN057 (mixed uses including 400 homes) was not identified as a preferred option in the MIR, see AD0038.F, page 86. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. Furthermore, the scale of this proposal could affect the delivery of Chapelton, which is less than 2km from Portlethen, and the SDP states, “Allocations should be of a scale which would not inhibit the delivery of current strategic allocations”, see AD0016, paragraph 4.19. Reporters at previous LDP Examinations have also recognised that while the development of Chapelton has been slow and an obvious response would be to identify other sites to remedy the shortfall, this would divert the market demand to other sites and thereby threaten the viability and further delay the implementation of the Chapelton proposal (AD0036, page 102, paragraph 4, page 107, paragraph 19 and page 728, paragraph 10).

Parts of this site, especially the central area, is identified as at risk from surface water, as identified in SEPA’s flood risk map, see AD0169. Allocating housing on land at risk from flooding does not comply with paragraph 255 in SPP, which advocates a precautionary approach to flood risk and paragraph 256 states the “planning system should prevent development which would have a significant probability of being affected by flooding or would increase the probability of flooding elsewhere”, see AD0012.

The proposal would also result in the loss of green belt land, diminishing its integrity and separation it safeguards between Portlethen, Marywell and Aberdeen. The SDP states, “The green belt around Aberdeen will continue to protect the character and landscape setting of the City and make sure that development is directed to appropriate locations.”, see AD0016, paragraph 6.9. Part of this site was also discussed at the Examination of the LDP 2017 as bid site KM065 and the Reporter concluded that “an urban extension of this scale would be detrimental to the greenbelt’s integrity and the separation it safeguards between Portlethen and the Aberdeen city boundary.” (AD0036, page 727, paragraph 9). NatureScot also expressed their concerns that this bid site would result in coalescence and a lack of identity and sense of place in Portlethen (AD0040.F page 104, paragraph 4).

While the new Aberdeen Western Peripheral Route will enhance the desirability of living in a settlement near to it, the SDP states, “Any new development adjacent to the Aberdeen Western Peripheral Route, including the Fastlink to Stonehaven, will be resisted unless it has been properly considered through the Development Plan process”, see AD0016, paragraph 3.14. While a large amount of homes are proposed in the northern part of the Aberdeen to Laurencekirk Strategic Growth Area, this is focused in Chapelton to relieve pressure in neighbouring settlements, which is supported by local communities (for example see AD0036, page 721, paragraph 1 under Vision, and Newtonhill, Muchalls and Cammachmore Community Council’s response (PP0556) page 4 paragraph 2).

The Council is still concerned about the capacity of the Findon junction, as initially raised by Transport Scotland in their comments on the bids who are concerned with development

to the north west of Portlethen, see Transport Scotland pre-MIR comments, AD0177. The Settlement Statement for Portlethen states under the Services and Infrastructure section that strategic transport contributions will be required to upgrade the Findon A92 junction. It is noted that the representee has not submitted evidence that there are no capacity issues at Findon junction or what impact this proposal would have.

Comments objecting to this bid site are noted.

In conclusion, no change is required.

Non-Allocated Site – Bid Site KN058 – Land North of Schoolhill,

Comments from the representee are noted. No change is required.

Non-Allocated Site – Bid Site KN082 – Land South of Bramble Way, Clashfarquhar

The Council does not support allocating bid site KN082 for up to 150 homes. Bid site KN082 (160 homes) was not identified as a preferred option in the MIR, see AD0038.F, page 87. The site is affected by surface water flooding, which covers more than the southwest corner of the site. Paragraph 255 in SPP advocates a precautionary approach to flood risk and para 256 states the “planning system should prevent development which would have a significant probability of being affected by flooding or would increase the probability of flooding elsewhere”, see AD0012. There are also secondary school capacity issues, as Portlethen Academy will be at 103% capacity by 2024, see AD0110, Appendix 1, page 5). While the Portlethen Capacity Study 2008 considered this site as suitable for development, its purpose was to identify options for future growth, and was written prior to the adoption of the Aberdeenshire Local Development Plan 2012, which identified a new settlement at Chapelton (then known as Elsick) to accommodate most of the housing allowance in the Aberdeen to Laurencekirk Strategic Growth Area.

The proposal would also result in the loss of green belt land, diminish the degree of separation from Newtonhill and Cammachmore, and to some extent compromise the three objectives of the green belt set out in paragraph 49 of SPP, see AD0012, namely directing development to the most appropriate locations and supporting regeneration; protecting and enhancing the character, landscape setting and identity of settlements; and protecting and providing access to open space. The SDP states, “The green belt around Aberdeen will continue to protect the character and landscape setting of the City and make sure that development is directed to appropriate locations.”, see AD0016, paragraph 6.9. The Reporter at the Examination of the LDP 2017 was also critical of this site (AD0036, page 728, paragraph 11).

A single access road into this bid site is inadequate for the number of homes proposed, as a second access is required under paragraph 12.1 of the Council’s Standards for Road Construction Consent and Adoption (2015), which states, “Where a core road is not a loop and serves more than 50 but less than 100 dwellings, an emergency access route must be provided, see AD0111. Where a core road serves in excess of 100 houses it must have at least two points of access.” Furthermore, south Portlethen already has a defensible boundary, which was previously considered at the Local Development Plan 2017 Examination, where the Reporter concluded that, “the boundary established by the existing development [on Bramble Way and Bramble Place] and planting already provides these qualities.” (AD0036, page 728, paragraph 11).

In conclusion, no change is required.

Non-Allocated Site – Bid Site KN109 – Land at Causeyport Farm

The Council does not support allocating bid site KN109 for 1,800 homes, 19ha of reserved business land and 10ha for local retail and education. Bid site KN109 was not identified as a preferred option in the MIR, see AD0038.F, pages 87-88. The PLDP does not reserve land for housing beyond the proposed Plan period. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. Furthermore, the scale of this proposal could affect the delivery of Chapelton, which is less than 2km from Portlethen, and the SDP states, “Allocations should be of a scale which would not inhibit the delivery of current strategic allocations”, see AD0016, paragraph 4.19. Reporters at previous LDP Examinations have also recognised that while the development of Chapelton has been slow and an obvious response would be to identify other sites to remedy the shortfall, this would divert the market demand to other sites and thereby threaten the viability and further delay the implementation of the Chapelton proposal (AD0036, page 102, paragraph 4, page 107, paragraph 19 and page 728, paragraph 10).

The western area of this site is identified as at risk from surface water, as identified in SEPA’s flood risk map. Allocating housing on land at risk from flooding does not comply with paragraph 255 in SPP, see AD0012, which advocates a precautionary approach to flood risk and para 256 states the “planning system should prevent development which would have a significant probability of being affected by flooding or would increase the probability of flooding elsewhere”.

The proposal would also result in the loss of green belt land, diminishing its integrity and separation it safeguards between Portlethen, Marywell and Aberdeen. The SDP states, “The green belt around Aberdeen will continue to protect the character and landscape setting of the City and make sure that development is directed to appropriate locations.”, see AD0016, paragraph 6.9. This site was also discussed at the Examination of the LDP 2017 as bid site KM065 and the Reporter concluded that “an urban extension of this scale would be detrimental to the green belt’s integrity and the separation it safeguards between Portlethen and the Aberdeen city boundary.”, see AD0036, page 727, paragraph 9. NatureScot also expressed their concerns that this bid site would result in coalescence and a lack of identity and sense of place in Portlethen, see AD0040.F, page 104, paragraph 4).

While the new Aberdeen Western Peripheral Route will enhance the desirability of living in a settlement near to it, the SDP states, “Any new development adjacent to the Aberdeen Western Peripheral Route, including the Fastlink to Stonehaven, will be resisted unless it has been properly considered through the Development Plan process”, see AD0016, paragraph 3.14. While a large number of homes are proposed in the northern part of the Aberdeen to Laurencekirk Strategic Growth Area, this is focused in Chapelton to relieve pressure in neighbouring settlements, which is supported by local communities (for example see AD0036, page 721, paragraph 1 under Vision, and Newtonhill, Muchalls and Cammachmore Community Council’s response (PP0556) page 4 paragraph 2).

Comments objecting to this bid site are noted.

In conclusion, no change is required.

Portlethen Village

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

A pumping station takes foul water from Portlethen Village on to the water treatment plant at Nigg Bay in Aberdeen, which has capacity. The Council confirms that it intends to address SEPA's comment through non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Whilst there are no allocated sites identified within the settlement boundary, proposals for new development may still be submitted for sites within and adjacent to the settlement, which will require to be appropriately assessed by the Council in accordance with the relevant policies of the LDP. In such instances, developer obligations will require to be sought to ensure that development impacts are mitigated against. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as "non-notifiable modifications" in relation to the settlement statement matters covered in Issue 45. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Flood Risk

3. I agree with the Scottish Environment Protection Agency (SEPA) that sites OP2 and OP5 should be added to the second bullet point in the interests of consistency. I also agree that the third bullet point should be amended to refer to site BUS1, alongside site R1. This is a presentational matter and has no implications for the information provided. Modifications to this effect are recommended.

4. SEPA has indicated that a significant proportion of allocation BUS2 is at risk of flooding, which may have implications for the development capacity of the site. I agree that it would be appropriate to highlight this potential constraint in the plan and indicate that a flood risk assessment will be required to determine the developable area. However, in advance of this assessment being undertaken, it would be premature to indicate that this may be "a major constraint to any further development", as suggested by SEPA. I recommend a modification, based on SEPA's representation, but excluding the reference

to a major constraint.

Services and Infrastructure

5. The change requested by Nestrans would clarify that contributions may be required to a link road from Hillhead and Badentoy Industrial Estate. I agree that this change would be necessary as the requirement for contributions would need to be assessed in line with policy RD2. A modification is recommended.

6. The strategic drainage and water supply section in the proposed plan does not provide any information on available capacity at the waste water treatments works. I agree that the additional text provided by Scottish Water should be included to address this omission and inform developers that a drainage impact assessment may be required. A modification is recommended.

Site R1 – Safeguarded for a Park and Ride Facility

7. The purpose of the allocation is to reserve the site for use as a park and ride facility. It is not an allocation and the details of who would run this facility and how it would operate are not matters for this plan.

8. The representation which wishes to see site R1 included within allocation BUS2 indicates that the site has planning permission for business use. It notes that the permission is valid until December 2020, before which a new planning application would be submitted. However, the council's response indicates that no new planning application has come forward. I therefore assume that the previous permission has now lapsed. The figures shown in Table 1 in Appendix 1 of the proposed plan indicates that there is no requirement to allocate additional business land in the period 2021-2032.

9. Nestrans has identified a need for a strategic park and ride site to the south of Aberdeen and supports the safeguard. Within this context and given the site's proximity to the A92 and A956, I do not consider there is any justification to remove this safeguard. No modification is required.

Site BUS2 – Safeguarded for business uses

10. Allocation BUS2 in the proposed plan covers around 16 hectares, the northern section of which is already partly built and occupied. The representation from Dandara seeks to divide the overall site in two, with the southern part (6.5 hectares) to be developed for 148 homes.

11. The deletion of the business allocation on part of the site would result in the loss of a 6.5 hectare site which currently forms part of the existing employment land supply. The strategic development plan sets a target of 62 hectares of business land in the Aberdeen to Laurencekirk Strategic Growth Area for the period 2021 to 2032. Table 1 in Appendix 1 of the proposed plan shows that business allocations in this area provide 71.4 hectares, which is only a surplus of 9.4 hectares. The strategic reserve figures for the period beyond 2032 show a shortfall of 19.2 hectares. I conclude that, whilst there is no requirement for the plan to allocate more employment land in the Aberdeen to Laurencekirk Strategic Growth Area, there is not a significant surplus as suggested by Dandara.

12. Matters relating to overall housing provision in the proposed plan are covered in issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. The allocation of this site for housing development could potentially meet this shortfall.

13. The strategic environmental assessment for the proposed plan includes allocation BUS2, but does not assess the site as a potential housing allocation. The proposal has not been the subject of consultation with key agencies, the public and other stakeholders. A revised site assessment submitted by Dandara suggests that potential negative effects in relation to flooding can be mitigated. However, I consider this scoring to be potentially inconsistent with the changes SEPA has requested in relation to the flood risk bullet points.

14. The site is at high risk of fluvial flooding. Paragraph 263 in Scottish Planning Policy indicates that sites of medium to high risk may be suitable for residential development, but only in particular circumstances. I have insufficient evidence before me to assess whether these circumstances would apply to this site.

15. Housing development on the site would be located within the existing settlement boundary and would be well connected with existing housing in the Hillside area. I note the potential to enhance open space provision and footpath links. Whilst all new sites in Portlethen would raise concerns in relation to the capacity of Portlethen Academy, the site is also located within the catchment of Hillside primary, which is the only primary school in Portlethen currently exceeding its capacity. However, policy RD2 in the proposed plan provides a mechanism to seek developer contributions towards education infrastructure. I therefore do not consider this constraint to be insurmountable.

16. Overall, I consider that housing development at this location could bring benefits. However, there is uncertainty regarding the suitability of the site for housing, given the high risk of flooding. There are other sites available to meet the shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area. I conclude that no modification is required.

Site OP1 - Schoolhill

17. Site OP1 is an infill site located within the settlement boundary at Hillside. I note that the council agreed to grant planning permission in December 2019, subject to the new homes being rezoned to an alternative primary school. Concerns have been expressed that this allocation is not deliverable because the education constraint has not been resolved. I issued a further information request (FIR017) to ask the council to provide an update on the situation regarding planning application APP/2016/0934, the rezoning proposal and the implications for the delivery of allocation OP1.

18. The council has explained that the proposal to rezone the site of the application to an alternative primary school has been rejected. It is now working with the developer on an alternative solution, which would result in the phased delivery of the development based on the availability of school places.

19. I note that at Main Issues Report stage, it was proposed to allocate the site for 60 homes with the remainder protected as amenity open space or excluded from the settlement boundary. However, the Issues and Actions Paper notes that it was agreed to

allocate the entire site for 176 homes, with land to the west of the primary school to be protected open space, in line with the original Hillside master plan.

20. An area of protected open space (designation P8) is identified to the west of the primary school on the Portlethen Key Map. I observed on my site inspection that a multi-purpose sports pitch has been provided on part of the protected land. On this basis, I do not consider it necessary to require the provision of a public park on site OP1 or reduce the overall capacity to 60 homes.

21. The evidence presented by the council suggests that there is a way forward to address the education constraint during the plan period. This would involve restricting build rates to 10 homes per year for at least the first three years commencing in 2023. I note that from 2026, faster build rates may be possible and I am aware that other solutions may emerge to address this constraint. However, as I have no other evidence before me to indicate that the whole site can be delivered within the plan period, I conclude that the contribution that allocation OP1 makes towards the strategic development plan allowance for the Aberdeen Housing Market Area should be reduced to 100 homes. Whilst no change is required to the Portlethen settlement statement, a modification will be required to the relevant table in Appendix 6. The implications of this change for the overall housing land provision are addressed in Issue 5.

22. I consider that reference to the promotion of active travel provision within the allocation summary would be in accordance with the plan's aim to promote walking and cycling. I recommend a modification to address the representation from NatureScot on this matter.

Site OP2 – Land to the northwest of Badentoy

23. For the same reasons as above, I agree that reference to the provision of active travel provision and connection with the National Cycle Network should be added to the allocation summary for site OP2. As SEPA has indicated that there are no flood risk issues affecting this site, I agree that the requirement for a flood risk assessment should be deleted. Modifications on these matters are recommended.

Sites OP3 Fairview Central and OP4 Fairview

24. The business allocation in the existing local development plan has been subdivided in the proposed plan. The modifications requested by SEPA would clarify that an area of peat lies within site OP4, and not OP3. A Peat Survey and Phase 1 Habitat survey would ensure any effects on peat are fully addressed. Modifications to both allocation summaries are required.

Site OP6 – Land east of Badentoy

25. Allocation OP6 is for a food retail store and drive thru restaurant or a garden centre and restaurant. The representation from Asda seeks the deletion of the food retail store.

26. The proposal would extend the part of the town centre which lies to the north of the A92 junction, in a south westerly direction. The council has not provided any evidence in the form of a retail study to assess the impact of the additional food retail floorspace on the viability and vitality of the existing town centre.

27. I note that since the proposed plan was published, Aldi has opened in the former Homebase unit in the main part of the town centre to the south of the A92. In the absence of any evidence to the contrary, I consider it unlikely that a further food retail store would be justified. The council has suggested that allocation OP6 be modified to relate only to a garden centre and restaurant. I agree that the food retail store should be removed from allocation OP6. As the drive thru restaurant proposal forms part of the food retail store option for site OP6, I consider that it should also be deleted. A modification to this effect is recommended.

Site CC1 – The Green

28. The representation from Asda, which seeks a maximum floorspace level, relates to neighbourhood facilities in unspecified housing allocations. I do not consider it applies to The Green, which is an existing neighbourhood centre providing a range of retail and other local facilities. The allocation summary in the proposed plan refers to “small-scale infill development opportunities” in the centre. I note that Appendix 2 in the proposed plan supports local retail provision (less than 500m² gross floor area) in neighbourhood centres and that proposals would require to be assessed in relation to policy B1 Town Centre Development. No modification is required.

29. The allocation summary for site CC1 indicates that a transport assessment is likely to be required. No modification is needed.

Non-allocated Bid Site KN027 – Land North of Thistle Drive, Hillside

30. Bid site KN027 lies between the A92 and the railway line, to the north east of the existing settlement boundary at Thistle Drive. The site comprises 17.3 hectares of predominantly semi-improved grassland and is bordered to the north east by the minor road to Findon. Taylor Wimpey objects to the non-allocation of bid site KN027 for 300 homes. I note that the site was included as a preferred option in the Main Issues Report and recommended by officers for inclusion in the proposed plan. The Kincardine and Mearns Area Committee agreed not to allocate the site and the council’s response above indicates that the main reasons relate to lack of housing need and impacts on Chapelton, the green belt and the transport network.

31. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. I consider that bid site KN027 could help to meet this shortfall, if allocated.

32. The information provided in the Main Issues Report, Issues and Actions Paper, environmental report for the proposed plan and supporting documents submitted by Taylor Wimpey indicate that development on this site would have a number of positive effects. The Issues and Actions Paper summarises the responses to this bid proposal and housing in general in Portlethen, following consultation on the Main Issues Report. These include concerns regarding impact on infrastructure and local services and environmental effects such as landscape, noise, air quality and flooding, but also opportunities in terms of available capacity at Portlethen train station and enhanced access from Findon junction.

33. I agree that the site would form a logical extension to the settlement, and is conveniently located for residents to access the town centre, other local facilities and the railway station. Supporting information provided by Taylor Wimpey shows a wide range of services within a 20 minute walk of the site. Development would be visually prominent from the A92 road. However, given the relatively flat and contained nature of the site and existing development on the north west side of the A92, I do not consider that allocating this site would comprise the objectives of the green belt. The site does not currently provide access to open space and matters relating to landscape impact and maintaining the identity of Portlethen and Marywell to the north could be addressed through a masterplan.

34. The proposal would not result in the loss of prime agricultural land and the indicative layout submitted by Taylor Wimpey suggests that allocating the site would provide opportunities to enhance open space, footpath links and biodiversity. NatureScot did not object to the proposal in its response to the Main Issues Report. It indicates that the site should prioritise green infrastructure to mitigate impacts and contribute to pedestrian/cycle links to Aberdeen and the rest of Portlethen. Furthermore, the creation of green networks would contribute to a sense of identity. I conclude that, subject to the preparation of a masterplan, housing development on this site has the potential to demonstrate the six qualities of successful places, set out in Scottish Planning Policy and section 9 of the proposed plan.

35. I note that parts of the site are identified on the SEPA flood maps as being at medium to high risk of flooding, including along the two watercourse corridors running through the site and immediately to the north east of Thistle Drive. Taylor Wimpey considers that flood risk matters can be addressed by identifying an accurate flood envelope and considering the impact of this on developable areas and access options. I understand that a detailed flood risk assessment has been commissioned, but I do not know if this work has been undertaken.

36. The Issues and Actions Paper indicates that SEPA did not object to the site when it was identified as a preferred option in the Main Issues Report. It indicated that a flood risk assessment would be required and additional wording was requested for the enhancement of the straightened watercourses through re-naturalisation and removal of any redundant features to be investigated.

37. Paragraph 255 of Scottish Planning Policy states that the planning system should promote a precautionary approach to flood risk and locate development away from medium to high risk area. Paragraph 263 indicates that sites with a medium to high risk of flooding may be suitable for residential development in particular circumstances. Based on SEPA's response, I conclude that flood risk matters would not prevent housing development on the site, but the outcome of the flood risk assessment may have implications for the overall development capacity.

38. The strategic environmental assessment indicates that the Nigg Waste Water Treatment Works has sufficient capacity to accommodate the development. However, local network reinforcement and drainage impact assessment may be required. Concerns regarding noise and air quality impact could be addressed through the site layout.

39. Various supporting documents refer to capacity constraints at the Findon junction of the A92(T), which is located to the north of the site. Whilst the bid proposal is not included

in the transport assessment for the proposed plan, the site would be served by this junction. The strategic bullet point in the settlement statement states that “contributions will be required to upgrade the Findon A92(T) grade separated junction” and Transport Scotland has advised that the required improvements to the trunk road junction could affect site KN027. Further information on the details of the junction upgrade and necessary developer contributions would be required. However, this could be addressed through the Supplementary Guidance on developer obligations and affordable housing (see recommended modification in Issue 12).

40. Whilst the indicative site layout shows two access points, one from Thistle Drive and one from the north, this would require further discussion with the council. The transport appraisal report submitted by Taylor Wimpey suggests potential ways that the site could be developed to make travel to and from the Findon junction less desirable, including encouraging use of the southern access to the site. It also indicates that junction improvements between Thistle Drive and Cookston road would be feasible, if considered necessary. I consider that these matters could be explored further through a transport assessment at planning application stage.

41. The site is within the catchment area of Portlethen Primary School which I note, from the 2019 school roll information submitted by the council, is only predicted to be at 64% capacity in 2024. The requirement for developer contributions towards additional capacity at Portlethen Academy, if necessary, is already included in the Portlethen settlement statement.

43. Portlethen is located within the Aberdeen to Laurencekirk Strategic Growth Area. I consider that the allocation of this site would be consistent with the strategic development plan as it states (in paragraph 4.18) that sites to meet the strategic allowances should be focussed within the strategic growth areas. However, paragraph 4.19 states that “allocations should be of a scale which would not inhibit the delivery of current strategic allocations”.

44. I agree that, given the proximity of Portlethen to Chapelton, there is a risk that allocating this site could have a negative effect on the delivery of strategic allocation OP1 at Chapelton. However, I have indicated above that only 100 homes on site OP1 in the proposed plan are expected to be deliverable within the plan period. Given the size and characteristics of Portlethen, I consider it reasonable to conclude that the settlement could accommodate more than 100 houses in the period up to 2032, with no adverse effect on the delivery of Chapelton.

45. I consider overall that housing development on bid site KN027 would have many positive effects and that environmental and infrastructure impacts arising from the development could be satisfactorily mitigated through the preparation of a masterplan and at planning application stage. As with existing allocations in the proposed plan, matters which require to be given further consideration would be included in the allocation summary.

46. Given the need to identify additional sites to meet the strategic development plan allowance for the Aberdeen Housing Market Area (see Issue 5) and taking account of the above considerations, I conclude that site KN027 should be allocated for housing and identified as contributing 300 homes towards the strategic development plan allowance for the Aberdeen Housing Market Area. I note that the outcome of the detailed flood risk

assessment may reduce the overall capacity of the site. However, as with other allocations in the plan, this figure is an indicative capacity, with the exact number of homes determined at planning application stage.

47. It is recommended that the plan be modified to identify bid site KN027 as allocation OP7: Land north of Thistle Drive for 300 homes and include an allocation summary, as set out in the recommendations below. The allocation summary should include reference to the need to prepare a masterplan and consider matters raised by SEPA, NatureScot and others, where appropriate. Further assessments will be required to support a planning application, which provides further opportunity to address matters raised by respondents at the Main Issues Report stage.

48. As a result of this recommended modification, the settlement maps should be amended to include site KN027 within the settlement boundary and exclude it from the green belt (I note that consequential modifications would also be required to the green belt maps on page 37 and in Appendix 4 of the proposed plan). This new allocation should be included in the relevant table in Appendix 6 and shown as contributing 300 homes to the strategic development plan allowance for the Aberdeen Housing Market Area. Given the presence of watercourse in the site, I also recommend that site OP7 is added to the first bullet point in the flood risk section. Modifications to this effect are set out below.

Non-allocated Bid Site KN057 Land to the west of Cookston Road

49. Stewart Milne Homes is promoting site KN057 for up to 400 homes and educational and local retail facilities. The site covers 27 hectares of agricultural land and is located to the northwest of existing business residential uses. Whilst this bid is being presented as a standalone proposal, I understand that it originated as a first phase of a larger development (bid site KN058). There is no representation seeking the allocation of bid site KN058. However, a site with similar boundaries is being promoted by CALA Homes (Bid site KN0109).

50. Stewart Milne Homes considers that additional housing land is needed within the Aberdeen to Laurencekirk Strategic Growth Area. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area.

51. This bid proposal raises similar issues to those for site KN027 in terms of implications for the deliverability of the strategic allocation at Chapelton and uncertainty regarding impact on the A92 (T) junction at Findon. I note that parts of the site are identified on the SEPA flood maps as being at medium to high risk of flooding and development may result in the loss of peat rich soil. Neither of these matters are addressed in the supporting information provided by Stewart Milne Homes.

52. As indicated above, paragraph 255 of Scottish Planning Policy states that the planning system should promote a precautionary approach to flood risk and locate development away from medium to high risk area. Paragraph 263 indicates that sites with a medium to high risk of flooding may be suitable for residential development in particular circumstances. However, based on the information before me, I am unable to reach a conclusion as to whether these circumstances would apply in this case. I also have

insufficient information to assess whether the presence of peat has implications for the development capacity of the site.

53. The strategic environmental assessment of the site indicates that the scale and location of the proposal would have a negative impact on the landscape character and the openness of and integrity of the green belt. I consider the open aspect and rolling fields to the north west of the local distributor road contribute to the character, landscape setting and identity of Portlethen, consistent with one of the purposes of the green belt identified in Scottish Planning Policy. Site KN057 is somewhat irregular in shape and would not in itself provide a clearly identifiable visual boundary to the green belt.

54. I do not consider that the site is particularly well located in terms of accessibility to the town centre, local facilities and the railway station. Whilst the proposal includes land for educational use and local facilities, it is not clear whether these would be viable and deliverable as part of a stand-alone proposal on site KN057.

55. Given the availability of other sites to meet the strategic development plan allowance for the Aberdeen Housing Market Area, I do not consider that meeting housing need would outweigh the negative effects arising from the development of site KN057. No modification is recommended.

Non-allocated Bid Site KN109 Land at Causeyport

56. CALA Homes seeks the allocation of this 164 hectare site for 1,800 homes, 19 hectares of reserved business land and 10 hectares for local retail and education provision. Whilst the site includes bid site KN057, it proposes an alternative indicative layout.

57. CALA Homes considers that insufficient land has been allocated to meet the strategic development plan housing allowances and suggests that this site could contribute 380 units in the period to 2032 with the remaining capacity contributing towards future allowances. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. The matters raised in the report on housing land submitted in support of bid site KN109 have been taken into account.

58. For the reasons set out in the schedule 4 for Issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. Whilst 380 units from this site could contribute towards meeting this shortfall, there is no standalone proposal for a development of this scale.

59. Paragraph 4.20 in the strategic development plan states that “Local Development Plans may choose to make provision for additional Strategic Reserves for Housing for the period 2033 to 2040 in line with Table 3, but this is not a requirement.” The council’s decision not to include future opportunity sites in this plan is in accordance with the strategic development plan. There is therefore no justification to allocate a housing site of this scale at this time. Furthermore, I agree with the council that the proposal could inhibit the delivery of the strategic allocation at Chapelton, which would be contrary to the strategic development plan.

60. The strategic development plan sets a target of at least 60 hectares of marketable

land available to businesses at all times in a range of places within strategic growth areas in Aberdeenshire. Table 1 in Appendix 1 of the proposed plan indicates that within the Aberdeen to Laurencekirk Strategic Growth Area, there is a 19.2 hectare shortfall in the strategic reserve. Whilst the business component of this site could potentially address this, the bid does not include a standalone business site proposal for my consideration.

61. As I have already indicated in relation to bid site KN057, I consider the open aspect and rolling fields to the north west of the local distributor road contribute to the character, landscape setting and identity of Portlethen, consistent with one of the purposes of the green belt identified in Scottish Planning Policy. However, I note that bid proposal KN109 would provide a better opportunity than site KN057 to create new clearly identifiable visual boundaries to the green belt.

62. The strategic environmental assessment of site KN109 identifies a number of other negative effects, some of which it may be possible to mitigate. The supporting document provided by CALA Homes highlights the strategic scale of infrastructure that would be required to support the proposal. I have insufficient details before me to take a view on potential mitigation measures to address matters such as flooding, education and transport.

63. However, as I have concluded that there is no justification for an allocation of this scale and it could inhibit the delivery of Chapelton, it is not necessary for me to address these matters in this examination. I conclude that bid site KN109 should not be identified as an allocation. No modification is required.

Non-allocated Bid Site KN082 Land south of Bramble Way

64. Stewart Milne Homes is promoting this 6.3 hectare site, located immediately to the south of the existing settlement boundary, for 150 homes. The supporting information shows an indicative layout and states that the site is free from constraints.

65. Stewart Milne Homes considers that additional housing land is needed within the Aberdeen to Laurencekirk Strategic Growth Area. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. I consider that bid site KN082 could contribute towards meeting this shortfall, if allocated.

66. The site is currently within the green belt. The council is concerned that development on this site would reduce the degree of separation between Portlethen and Newtonhill and Cammochmore and compromise the objectives of the green belt. I observed from my site inspection that the site is not prominent in views from the A92(T) and I do not consider that development would have a significant effect on the landscape setting of Portlethen. Whilst the site is located within the South East Aberdeenshire Coast special landscape area, I do not consider that development would detract from the qualities of this designation.

67. The site is not used for countryside recreation purposes and development would not result in the loss of open space. Whilst the extension of Portlethen in a southerly direction would diminish the gap between it and Newtonhill and Cammochmore, I do not consider this would affect the identity of either of these settlements. I conclude that, subject to

detailed design and layout considerations, development would not compromise the objectives of the green belt or the character of the special landscape area. Whilst I agree that the existing southern boundary of Portlethen provides a strong defensible green belt edge, the indicative layout shows that a new clearly identifiable visual boundary could be created.

68. I note that the strategic environmental assessment of the site identifies negative effects in relation to surface water, flooding, biodiversity and infrastructure. I consider each of these in turn.

69. Parts of the site are shown as being at high risk of surface water flooding on the SEPA flood map. Stewart Milne Homes considers that this risk can be managed by incorporating buffer strips next to the burn and sustainable urban drainage systems in the site layout. The council has pointed out that the extent of the area at high risk of flooding covers more than the southwest corner and that Scottish Planning Policy promotes a precautionary approach to flood risk.

70. Paragraph 263 in Scottish Planning Policy indicates that sites with a medium to high risk of flooding may be suitable for residential development in particular circumstances. However, based on the information before me, I am unable to reach a conclusion as to whether the risk of flooding would rule out housing development or reduce the development capacity of the site.

71. The strategic environmental assessment indicates that the proposal would result in the loss of lowland raised peatbog. NatureScot has indicated that any lowland raised bog on the site should be protected from development. Stewart Milne Homes has indicated that an assessment of the peatbog would inform the final layout of the site. However, at this time, I am unable to reach a conclusion on how this would affect the development of the site.

72. The council indicates that the proposed layout shows 150 homes served by one vehicular access from Bramble Road, which would not meet its road standards. This matter has not been addressed by Stewart Milne Homes and the bid proposal indicates that no transport assessment has been undertaken. I am therefore unclear whether adequate access arrangements can be provided to serve a development of over 100 houses.

73. Overall, I conclude that that housing development on this site could be accommodated with limited impact on landscape character and the green belt. However, given the uncertainty regarding flooding, biodiversity and transport matters and the availability of other suitable sites to meet the shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area, I do not consider that this site should be allocated in the plan. No modification is required.

Portlethen Village

74. The Portlethen Village settlement statement in the proposed plan does not include any information on strategic drainage and water supply. I agree with SEPA that this information should be provided and note its request that the council should confirm the capacity of the waste water infrastructure. I consider that the wording suggested by the council should be added in the interests of consistency. A modification to this effect is

recommended.

75. A representee considers that the services and infrastructure section in the settlement statement should be deleted because there are no development allocations identified in Portlethen Village. The absence of any allocated sites in the plan would not preclude the submission of planning applications for development on sites in or adjacent to the settlement. The potential need for relevant developer contributions towards services and infrastructure is as applicable to proposals on non-allocated sites as it is for those identified in the plan. I therefore consider the inclusion of this information in the settlement statement to be appropriate. No modification is required.

Reporter's recommendations:

Modify the local development plan by:

Portlethen

1. Replacing the second bullet point in the flood risk section of the Portlethen settlement statement on page 725 with:

“• Sites OP2, OP3, OP4, OP5 and OP7 are at risk from flooding due to one or more watercourses flowing through or adjacent to the site. A Flood Risk Assessment will be required.”

2. Replacing the third bullet point in the flood risk section of the Portlethen settlement statement on page 725 with:

“• Sites R1 and BUS1 have watercourses flowing through or close to the site. A Flood Risk Assessment may be required.”

3. Replacing the fourth bullet point in the flood risk section of the Portlethen settlement statement on page 725 with:

“• A significant proportion of site BUS2 is at flood risk from the small watercourses flowing through the site. A Flood Risk Assessment will be required to determine the developable area. Buffer strips will be required along the watercourses and opportunities to enhance the watercourses through renaturalisation and removal of any redundant manmade features should be investigated.”

4. Replacing the third sentence of the local transport infrastructure bullet point in the Portlethen settlement statement on page 726 with:

“Contributions to a link road from Hillside to Badentoy Industrial Estate may be required.”

5. Inserting the following sentences at the start of the strategic drainage and water supply bullet point in the Portlethen settlement statement on page 726:

“There is currently sufficient capacity at Nigg Waste Water Treatment Works. A Drainage Impact Assessment may be required.”

6. Inserting the following new fifth sentence in the first paragraph of the allocation summary for OP1 – Schoolhill in the Portlethen settlement statement on page 727:

“Provision for active travel is also required.”

7. Replacing the ‘176’ in the allowances 2020 - 2032 column for Portlethen OP1 in the relevant table in Appendix 6 (Housing Land Allocations) with ‘100’ and amending the total

figures accordingly. (Note – a revised version of Appendix 6, incorporating all the recommended modifications, is provided at the end of this report).

8. Replacing the last sentence of the first paragraph of the allocation summary for OP2 – Land to the northwest of Badentoy in the Portlethen settlement statement on page 727 with the following two sentences:

“Provision for active travel is required. Efforts should be made to link into the National Cycle Network Route 1, which lies on the north boundary of the site.”

9. Deleting “Flood Risk Assessment,” from the first sentence of the second paragraph of the allocation summary for OP2 – Land to the northwest of Badentoy in the Portlethen settlement statement on page 727.

10. Deleting the last sentence of the third paragraph in the allocation summary of OP3 – Fairview Central in the Portlethen settlement statement on page 728 (Development should avoid areas of peat and a buffer strip will be required.)

11. Replacing the last sentence in the second paragraph in the allocation summary of OP4 – Fairview in the Portlethen settlement statement on page 728 with:

“There is likely to be peat underlying a significant part of the site. A Peat Survey and Phase 1 Habitat survey will be required.”

12. 12. Deleting the words “Food retail (1100m²) and drive thru restaurant (450m²) or a” from the allocation title for site OP6 – Land East of Badentoy in the Portlethen settlement statement on page 729. (The allocation title would now read ‘Garden centre and restaurant (2500m²)’)

13. Inserting the following new allocation after OP6 on page 729:

“OP7: Land north of Thistle Drive
Allocation: 300 homes

This is a newly allocated site located to the north east of Thistle Drive and to the south east of the A92. The site forms a logical extension of Portlethen and is conveniently located for access to the town centre, other local facilities and railway station.

A Masterplan will be required for the delivery of this site. Early discussions should take place with the council to identify the assessments required to inform and support development proposals. These are expected to include a transport assessment; a flood risk assessment; a drainage impact assessment; a landscape appraisal and tree survey; a habitat and ecological survey; and a noise impact assessment and mitigation plan. These assessments will influence the overall capacity, access to and layout of the site.

The transport assessment will be required to set out any wider infrastructure requirements and, subject to further investigation, contributions are expected to be required towards improvements to the Findon A92(T) junction.

The site is at risk from flooding due to watercourses running through the site and a Flood Risk Assessment will be required. Buffer strips will be required adjacent to the watercourses, which should be integrated positively into the development. Proposals should make provision for enhancement of the straightened watercourses through re-naturalisation and investigate the removal of any redundant features.

The proposals should prioritise green infrastructure to mitigate impacts, provide a sense of identity and contribute to pedestrian/cycle links to Aberdeen and the rest of Portlethen.

It is expected that the site will contribute towards affordable housing in line with Policy H2 Affordable Housing. This should be delivered as part of the early phases of development and integrated into the design of the development to provide a mix of houses types and sizes to meet local needs.”

14. Amending the Portlethen settlement map on pages 730 – 734 (as relevant) to show bid site KN027 as housing allocation OP7, include the site within the settlement boundary, and remove it from the green belt.

15. Adding Portlethen OP7 for 300 homes to the table showing new sites which contribute towards the strategic development plan allowance for the Aberdeen Housing Market Area in Appendix 6. (Note – a revised version of Appendix 6, incorporating all the recommended modifications, is provided at the end of this report.)

Portlethen Village

16. Adding the following new first bullet point to the services and infrastructure section of the Portlethen Village settlement statement on page 735:

“• Strategic drainage and water supply: A pumping station takes foul water from Portlethen Village to Nigg Waste Water Treatment Works in Aberdeen.”

Issue 46	Stonehaven	
Development plan reference:	Proposed LDP, Appendix 7E Kincardine and Mearns, Page 744-756	Reporter: Alison Kirkwood
Body or person(s) submitting a representation raising the issue (including reference number):		
PP0136 Alastair Johnstone PP0272 Scottish Water PP0564 Transport Action Kincardineshire (TRAK) PP0666 Stewart Milne Homes PP0683 Stewart Milne Homes PP0783 Sluie Estate Trust PP0784 Sluie Estate Trust PP0785 Sluie Estate Trust PP0786 Sluie Estate Trust PP0878 The Woodland Trust Scotland PP0880 Dr Linsey Hunter PP0902 Kirkwood Homes Ltd PP0920 Donald Bouma PP0921 Sharon Bouma PP0926 Bancon Homes Ltd PP0981 INEOS FPS PP1132 CALA Homes (North) Ltd PP1142 Mr George Pearson PP1198 Barratt North Scotland PP1219 Scottish Environment Protection Agency (SEPA) PP1221 FM Ury Ltd PP1241 Nestrans PP1297 Barratt North Scotland PP1298 Barratt North Scotland PP1300 NatureScot (Scottish Natural Heritage) PP1315 Stewart Milne Homes PP1316 Stewart Milne Homes PP1343 Historic Environment Scotland PP1393 Stonehaven and District Community Council		
Provision of the development plan to which the issue relates:	Stonehaven Settlement Statement	
Planning authority's summary of the representation(s):		
<u>General</u> It is requested that development proposed at Stonehaven should be curtailed within the boundaries of common sense, as Stonehaven has a lack of infrastructure, public transport, employment opportunities, access to amenities and green space, it has a high dependence on cars, and the nursery is vastly under pressure for space (PP0880).		

Given the removal of the P9 site from the current 2017 LDP, which was protected to reserve an area for the replacement of Dunnottar Primary School, it is requested that clarity is provided on the locational requirements for a replacement facility (PP0926).

Nestrans has highlighted the strategic importance of the junction between the Aberdeen Western Peripheral Route (AWPR) and A92(T) to the north of the town, and the requirement to ensure that future development in the vicinity of this junction does not compromise its safety and performance (RD0227.A) (PP1241).

Nestrans has reported that work recently undertaken demonstrates that Stonehaven Rail Station provides strategic access to the rail network to a wider catchment beyond Stonehaven and has recommended further investigation of improvements to car parking capacity at the station (RD0227.A) (PP1241).

Flood Risk

Scottish Environment Protection Agency (SEPA) has recommended amalgamating the first two 'Flood Risk' bullet points, for consistency, as they are both 'general' statements (RD0214.B) (PP1219).

SEPA has recommended amalgamating the last four 'Flood Risk' bullet points on sites OP1, OP2, OP3 and OP6 into one, as they all lie within or adjacent to SEPA's 1:200 flood risk area or have watercourses flowing through or adjacent to them (RD0214.B) (PP1219).

SEPA has requested moving BUS3 into its own 'Flood Risk' bullet point and state that a buffer strip will be required in addition to maybe requiring a Flood Risk Assessment (FRA) (RD0214.B) (PP1219).

Services and Infrastructure

Scottish Water has requested that under 'Strategic drainage and water supply' it states that there is sufficient capacity at Nigg Waste Water Treatment Works and that a Drainage Impact Assessment may be required (PP0272).

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site P9 – To protect the area as a significant contribution to the character of the place and to provide a landscape buffer

Site P9 is supported in principle as a landscape buffer (PP0902 and PP1221), as it accords with a representee's masterplan and will help provide a high-quality backdrop to the proposed new development (PP1221). However, it is requested that the inner line is noted as indicative and includes text that allows the full extent and character of site P9 to be agreed as part of the detailed planning application process on site OP5 (PP0902 and PP1221). The representees have included a number of Appendices (RD0168.A and RD0215.A) in their representation which provides further detail to support their position (PP0902 and PP1221).

Site R1 – Reserved for an extension to Fetteresso Cemetery

SEPA has stated there are unlikely to be any SEPA issues with site R1 continuing to be allocated as a cemetery (RD0214.B) (PP1219).

Site BUS1 – Safeguarded for business uses

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site BUS1 (RD0214.B). No modification sought (PP1219).

Site BUS2 – Safeguarded for business uses

It is requested that site BUS2 is removed on the basis of non-delivery. The site has significant water drainage issues which is one of the reasons why the adjacent site, OP7 was allocated, to spread the cost of the upgrades but this has not happened. The site is not marketable, is not deemed effective employment land due its constraints, and is not accessible by sustainable modes of transport (PP0786).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site BUS2 (RD0214.B). No modification sought (PP1219).

Site OP1 – Carron Den

SEPA has noted that the allocation summary for site OP1 does not include a requirement for an FRA even though it is listed in the 'Flood Risk' bullet point. They suggested this should be reviewed (RD0214.B) (PP1219).

Site OP2 – Ury House, East Lodge

Two representees have expressed their support for site OP2 for 212 houses (PP0902 and PP1221). It is in an attractive location with excellent links to Stonehaven and the wider area (PP1221). The representee remains committed to the development of the Ury Estate and this site has planning permission (PP1221). It will relieve pressure from other, potentially more sensitive sites around Stonehaven, whilst simultaneously providing enabling funding for essential infrastructure and the wider maintenance and enhancement of the Ury Estate (PP0902). The representees have included a number of Appendices (RD0168.A and RD0215.A) in their representation which provides further detail to support their position (PP0902 and PP1221).

The allocation summary is supported, i.e., recognising the requirement for the link road; the provision of access to site OP5, connections to the core path network, the listed technical requirements, and agrees that a revised masterplan would be timeous and beneficial (PP0902).

Objection has been received to the inclusion of site OP2 as it is likely to cause damage and/or loss to areas of ancient woodland. Removal of woodland is contrary to Scottish Planning Policy (SPP) paragraphs 216 and 218 and to the Control of Woodland Removal Policy (RD0161.A) (PP0878).

It is requested that the allocation summary of site OP2 includes a reference to Policy P4 and the Health and Safety Executive's (HSE) specific advice due to the presence of the

Forties Pipeline (PP0981).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP2 (see RD0214.B). No modification sought (PP1219).

NatureScot has requested that despite the requirement for a new link road between the B979 and A957, the allocation summary for site OP2 includes text that retains the amenity of the core path to the south of the site, which forms part of a key cycle link between the B979 and A957, as this will help support active travel in accordance with the LDP (RD0255.B) (PP1300).

Site OP3 – Ury House, Blue Lodge

A representee has expressed their support for site OP3 for 99 homes. They are committed to the development of the Ury Estate and this site has, planning permission. However, the current planning permission is for a small number of very large homes that does not reflect current market demand and it is argued that the success of this site (and Ury) depends on increasing its density. The representee has included a revised masterplan showing sites with planning permission and sites for future development (RD0215.A) (PP1221).

It is requested that the number of homes on site OP3 is reduced from 99 to 51 homes (PP0920, PP0921 and PP0981). The developments at Ury Estate, which were approved as enabling development to restore Ury House, was 280 homes, but has increased to over 400 homes with little progress being made to achieving the non-housing element. They are concerned that increasing the scale of the development exacerbates existing challenges including the proximity to historic assets, buffer strips to Cowie Water, appropriate road access, footpath linkages to the town, preserving the character of the area and pressure on services. They argue there is also plenty of potential to provide additional homes in the Portlethen to Stonehaven SGA without adding homes at Ury Estate, including Chapelton (PP0920 and PP0921).

A representee has highlighted that most of site OP3 is located within the HSE's middle zone of the Forties Pipeline, which is a Major Accident Hazard Pipeline (MAHP). They report that the HSE response to the most recent approval within this allocation (Application APP/2018/0113) stated that they considered this development of 51 units "as being the limit of residential development in the inner and middle zone at this location". It is also suggested that this allocation is reduced to a maximum of 46 homes if the 5 homes with planning permission are outwith the allocation, to ensure compliance with HSE guidance (PP0981).

SEPA has recommended moving the sentence referring to the FRA from the eighth paragraph of the allocation summary, which discusses mains water, to the seventh paragraph, as it refers to buffer strips and culverts and would sit more appropriately in this paragraph (RD0214.B) (PP1219).

NatureScot has requested that despite the requirement for a new link road between the B979 and A957, the allocation summary for site OP3 includes text that retains the amenity of the core path to the north and west of the site, which forms part of a key cycle link between B979 and A957, as this will help support active travel in accordance with the LDP. They also welcome the need for a revised masterplan for the Ury Estate (RD0255.B)

(PP1300).

Historic Environment Scotland (HES) is concerned about the potential impact site OP3 could have on the scheduled monument known as Cowie Line (pill box and anti-tank blocks). The site is just north of the monument and any development must avoid direct (i.e., physical) impacts on the monument or affect its setting. They highlight the need for a sensitive housing design with the possible need for landscaping, such as leaving land undeveloped, in line with HES Setting guidance (RD0266.A) (PP1343).

Site OP4 – Land Adjacent to Kirktown of Fetteresso

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP4 (see RD0214.B). No modification sought (PP1219).

Site OP5 – Land at East Lodge

Two representees have expressed their support for the allocation of site OP5 for 60 houses (PP0902 and PP1221). The site forms a logical expansion of site OP2 and is a credible and deliverable housing site (PP1221). A representee has agreed that a revised masterplan would be timeous and beneficial (PP0902), and another representee has included a revised masterplan showing sites with planning permission and sites for future development (PP1221). This site relieves pressure from other, potentially more sensitive sites around Stonehaven, whilst simultaneously providing enabling funding for essential infrastructure and the wider maintenance and enhancement of the Ury Estate (PP0902). The representees have included a number of Appendices (RD0168.A, RD0215.A) in their representation which provides further detail to support their position (PP0902 and PP1221).

The allocation summary is supported in relation to recognising the requirement to connect into the link road, access and connectivity with site OP2, and the various listed technical requirements (PP0902).

It is requested that site OP5 is removed from the Proposed Aberdeenshire Local Development Plan 2020 (PLDP) (PP0666, PP1315 and PP1316). Stonehaven is an important sub-regional service centre and the historic allocations at Ury Estate should not be relied upon (PP1315 and PP1316). Another representee has stated that to maintain the housing land supply and provide a choice of housing sites, no further land at Ury East Lodge should be allocated, as the Aberdeen City and Shire Housing Land Audit (HLA) 2019 shows 342 homes on the Ury Estate that have planning permission, but at 35 homes per annum, it will take 13.2 years to build (PP0666). They also add, as site OP5 and the Ury Estate are owned by the same owner, this site is likely to become available sequentially, rather than in parallel to OP5 and highlight that alternative short-term sites are available (bid sites KN050/KN051 and KN081) (PP0666). The representees have included a number of Appendices (RD0104.A, RD0263.A and RD0264.A), in their representation, which provides further detail to support their position (PP0666, PP1315 and PP1316).

Other concerns include site OP5's proximity from facilities and the services of Stonehaven (PP0666, PP1315 and PP1316), and lead to an over-reliance on private car travel (PP1315 and PP1316). Although consent has been granted for a supermarket at Ury, no operator has been committed (PP0666). The link road within the site remains incomplete and could result in another car dominated development, and potential impacts on a scheduled

monument, ancient woodland, and a pipeline (PP0666). The site is contrary to PLDP paragraph 3.13 in terms of sustainability (PP0666, PP1315 and PP1316). The representees have included a number of Appendices (RD0104.A, RD0263.A and RD0264.A), in their representation, which provides further detail to support their position (PP0666, PP1315 and PP1316).

A representee has requested amending the allocation summary of site OP5 to state that site P9 be indicative, but that the total area of site P9 must not fall below that identified. They support site P9 in principle but request that rather than this site having a definitive inner line, it should be flexible to accommodate landform and detailed levels survey at the time of a planning application on site OP5. A representee has included a number of Appendices (RD0168.A) in their representation which provides further detail to support their position (PP0902).

It is requested that the affordable housing provision reflects the approach taken throughout the masterplan area of the Ury Estate and that the affordable housing quota for site OP5 is provided elsewhere within the masterplan area. A representee has included a number of Appendices (RD0168.A) in their representation which provides further detail to support their position (PP0902).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP5 (RD0214.B). No modification sought (PP1219).

NatureScot has requested an additional paragraph is added to the allocation summary for site OP5 on the proposal's potential for significant effects on the designed (non-inventory) landscape of Ury House, on minimising effects on the designed landscape, on planting, and on opportunities to further reinforce the historic character in this location (RD0255.B) (PP1300).

NatureScot notes that the allocation summary for site OP5 refers to "Access and connectivity must be integrated with site OP2." and has requested that the allocation summary also promotes active travel provision in accordance with LDP policy (RD0255.B) (PP1300).

Site OP6 – Mackie Village Ury Estate

A representee has expressed their support for site OP6, which reflects the current planning permission, but has requested further flexibility in the allocation summary to allow the affordable housing allowance of other sites in the Ury Estate to be delivered on this site (e.g., sites OP2, OP3 and OP5). It is argued that site OP6 is an appropriate site for further affordable housing in light of infrastructure, design continuity and the presence of other amenities and transport links. They are committed to the development of the Ury Estate and have included a revised masterplan showing sites with planning permission and sites for future development (RD0215.A) (PP1221).

It is requested that the boundary of site OP6 is amended to reflect the site boundary of two approved planning applications (APP/2018/2227 and APP/2018/2228). They are concerned that as a larger area than that approved is to be allocated, it provides the potential for further residential development in this location when this area is located within the middle zone of the Forties Pipeline and would result in an increased density (PP0981).

It is requested that the allocation summary for site OP6 includes a statement requiring development at Ury Estate to consult with HSE and the HSE's Planning Web App will not be used to inform decision-making (PP0981).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP6 (RD0214.B). No modification sought (PP1219).

Site OP7 – East Newtonleys

It is requested that site OP7 for 7ha employment land is removed. The site has been allocated since 2012 but has not been developed, it has significant water drainage issues which is one of the reasons why the adjacent site, OP7 was allocated, to spread the cost of the upgrades but this has not happened. The site is not marketable, is not deemed effective employment land due its constraints, and is not accessible by sustainable modes of transport (PP0786).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP7 (RD0214.B). No modification sought (PP1219).

Non-Allocated Site – Bid Site KN032 – Land at Braehead

A representee has requested the allocation of bid site KN032 for 340 homes, strategic landscaping, sports pitches and open space. They argue it will meet the shortfall in the housing allowances, set out in the Aberdeen City and Shire Strategic Development Plan 2020 (SDP). The development can provide several benefits for existing and future residents including supporting the local community centre, providing alternative access to the coastal road, improved site drainage to mitigate flooding and Braehead Farm can provide community sports facilities. The representee also states that the site can make a substantial contribution to the delivery of housing in Aberdeenshire in the coming years as well as provision of affordable housing and contribute towards meeting housing land requirements. The representee has included a number of Appendices (RD0198.A and RD0198.B) in their representation which provides further detail to support their position (PP1132).

A representee objects to this bid site due to its potential to exacerbate flooding issues in Stonehaven and the lack of demand for more homes due to the downturn in the oil industry. They support the allocation of sites OP2, OP3, OP5 and OP6 that do not pose a risk to flooding to surrounding properties or roads (PP0136).

Non-Allocated Site – Bid Site KN050 – Land at Mains of Cowie (Mixed Use)

A representee has requested the allocation of bid site KN050 for 250 homes, food retail and a primary school. They argue this a suitable and deliverable site for mixed-use development, as it is sustainable, accessible, and is located in an area of strong market demand. It complies with the principles of Scottish Planning Policy (SPP) with regards to promoting sustainable new growth and increasing generosity and flexibility in the housing land supply. It is effective and free of constraints, delivers a new primary school to alleviate existing concerns, provides a much-needed site for retail as the site at Ury Estate has failed to come forward, and lies within a defensible boundary created by the A90/92. It is deliverable within 5 years unlike the Ury Estate development that will deliver only 35 homes per year according to the HLA 2019 and affect delivery of affordable homes. They report

that this site has been informed by a detailed landscape and visual appraisal and that the Reporters commented during the LDP 2017 Examination that this site could be successfully accommodated. The representee disagreed that most of the housing allocations in Stonehaven should be in one area at Ury Estate and a range of sites should be promoted. Adds, the Strategic Environmental assessment (SEA) of the site scores well against most topics and is deemed to have a neutral or positive effect against numerous criteria. The topics in which the site has scored negatively (e.g., air, soil, climatic factors, landscape and cultural heritage) are not considered to be a barrier to development and can be appropriately addressed. The representee has included a number of Appendices (RD0263.A) in their representation which provides further detail to support their position (PP1315).

Non-Allocated Site – Bid Site KN051 – Land at Mains of Cowie (Residential)

A representee has requested the allocation of bid site KN051 for 350 homes and a primary school. They argue this a suitable and deliverable site for mixed-use development, as it is sustainable, accessible, and is located in an area of strong market demand. It complies with the principles of Scottish Planning Policy (SPP) with regards to promoting sustainable new growth and increasing generosity and flexibility in the housing land supply. It is effective and free of constraints, delivers a new primary school to alleviate existing concerns, and lies within a defensible boundary created by the A90/92. It is deliverable within 5 years unlike the Ury Estate development that will deliver only 35 homes per year according to the HLA 2019 and affect delivery of affordable homes. They report this site has been informed by a detailed landscape and visual appraisal and that the Reporters commented during the LDP 2017 Examination that this site could be successfully accommodated. They disagree that most of the housing allocations in Stonehaven should be in one area at Ury Estate and a range of sites should be promoted. Adds, the SEA of the site scores well against most topics and is deemed to have a neutral or positive effect against numerous criteria. The topics in which the site has scored negatively (e.g., air, soil, climatic factors, landscape and cultural heritage) are not considered to be a barrier to development and can be appropriately addressed. The representee has included a number of Appendices (RD0264.A) in their representation which provides further detail to support their position (PP1316).

Non-Allocated Site – Bid Site KN076 – Land at East Newtonleys, East of A957

A representee has requested the allocation of bid site KN076 for around 100 homes if bid site KN078 is not allocated. Bid site KN076 is accessible from the town centre via different modes of transport. It is adjacent to existing residential development to the north and emerging employment land to the south. They disagree with the Main Issues Report (MIR) that the site is “detached from the town and due to topography, the sites would be visually prominent” and “do not present the best scale of development in the right places”, as it is closer to Stonehaven town centre in comparison to sites OP2 and OP6. The site also benefits from easy access to the trunk road A92/A90 grade separated junction to the south. The site was deemed suitable for development through an allocation within the Consolidated Aberdeenshire Local Plans (CALP), adopted in 1998. In the Examination of the LDP 2017, the Reporter considered that the western part of the site [MIR 2013 bid site KM098, see AD0037.B, pages 71 and 77] would have sufficient proximity to Stonehaven, but the entire site was inappropriate, and the proposed bid site has addressed the Reporter’s concerns by restricting development to the west. They note that the preferred sites in Stonehaven are unlikely to contribute to the delivery of those Strategic Housing

Allowances and are being built at slower rates than anticipated. Development at Chapelton is also moving slowly. They conclude the site is “right development in the right places” as advocated by paragraph 15 of the Scottish Planning Policy. The representee has included a number of Appendices (RD0174.A, RD0174.B, RD0174.C, and RD0174.D) in their representation which provides further detail to support their position (PP0926).

Non-Allocated Site – Bid Site KN077 – Land at East Newtonleys, Between A957 and Boggartyhead

A representee has requested the allocation of bid site KN077 for 300 homes as a future opportunity site, a primary school and 200sqm retail uses. A future opportunity site would provide the Local Authority with the flexibility to review the delivery of allocations and overall housing land supply position following an interim review of the Plan. Bid site KN077 is accessible from the town centre via different modes of transport. It is adjacent to existing residential development to the north and emerging employment land to the south. They disagree with the MIR that the site is “detached from the town and due to topography, the sites would be visually prominent” and “do not present the best scale of development in the right places”, as it is closer to Stonehaven town centre in comparison to sites OP2 and OP6. The site also benefits from easy access to the trunk road A92/A90 grade separated junction to the south. The site was deemed suitable for development through an allocation within CALP, adopted in 1998. In the Examination of the LDP 2017, the Reporter considered that the western part of the site [MIR 2013 bid site KM098] would have sufficient proximity to Stonehaven, but the entire site was inappropriate, and the proposed bid site has addressed the Reporter’s concerns by restricting development to the west. It only includes a small area of the Special Landscape Area. They note that the preferred sites in Stonehaven are unlikely to contribute to the delivery of those Strategic Housing Allowances and are being built at slower rates than anticipated. Development at Chapelton is also moving slowly. They conclude the site is “right development in the right places” as advocated by paragraph 15 of the Scottish Planning Policy. The representee has included a number of Appendices (RD0174.A, RD0174.B, RD0174.C, and RD0174.D) in their representation which provides further detail to support their position (PP0926).

It is noted that the replacement of Dunnottar Primary School is not preferred by the Council’s Learning Estates Team, despite concern raised by the community over its poor condition and urgent need for replacement. As such, given the existing school’s location to the south of Stonehaven and lack of opportunities for redevelopment in the immediate vicinity of the school, it is requested that a replacement site should be identified within the same catchment to the south of the settlement (PP0926).

Non-Allocated Site – Bid Site KN078 – South of Braehead, East of A957

A representee has requested the allocation of bid site KN078 for around 100 homes if bid site KN076 is not allocated. It is adjacent to existing residential development to the north and emerging employment land to the south. They disagree with the MIR that the site is “detached from the town and due to topography, the sites would be visually prominent” and “do not present the best scale of development in the right places”, as it is closer to Stonehaven town centre in comparison to sites OP2 and OP6. The site also benefits from easy access to the trunk road A92/A90 grade separated junction to the south. The site was deemed suitable for development through an allocation within the CALP, adopted in 1998. In the Examination of the LDP 2017, the Reporter considered that the western part of the site [MIR 2013 bid site KM098] would have sufficient proximity to Stonehaven, but the

entire site was inappropriate, and the proposed bid site has addressed the Reporter's concerns by restricting development to the west. It only includes a small area of the Special Landscape Area. They note that the preferred sites in Stonehaven are unlikely to contribute to the delivery of those Strategic Housing Allowances and are being built at slower rates than anticipated. Development at Chapelton is also moving slowly. The representee has included a number of Appendices (RD0174.A, RD0174.B, RD0174.C, and RD0174.D) in their representation which provides further detail to support their position (PP0926).

Non-Allocated Site – Bid Site KN081 – Land South of Braehead, Adjacent to A975

A representee has requested the allocation of bid site KN081 for 50 homes. They report that the site was previously deemed as suitable for development in 1998 through CALP and in the Stonehaven Capacity Study for residential use and in the Aberdeenshire Local Development Plan 2017 where the northern part of the site was deemed suitable for a primary school (which is no longer required). They argue Braehead provides the opportunity to deliver a sustainable extension to the town, with access to existing services, utilities and amenities. As the site is no longer required for a school, an alternative use should be considered on this site. The site is set adjacent to the settlement boundary and is not separated by the A90(T). The site has very good public transport and walking and cycling routes. The town centre can be accessed via footpath. This is designated as a "safe route to school". Their masterplan shows that the site has capacity for development. NatureScot did not raise any concern regarding this site coming forward. It can be delivered in the short term. The representee has included a number of Appendices (RD0112.A and RD0112.B) in their representation which provides further detail to support their position (PP0683).

Non-Allocated Site – Bid Site KN108 – Land East and West of Mains of Dunnottar

A representee has requested the allocation of bid site KN108 for a visitor centre and associated car parking at Dunnottar Castle, and the allocation summary allows for enabling development if necessary. They argue this proposal will enhance the visitor experience at Dunnottar Castle and promote the local tourism industry. It will consider the potential impact on Dunnottar Castle, a Scheduled Monument. It will not negatively affect the landscape and NatureScot raised no concerns. Surveys undertaken by a Tourism Resources Company highlighted the need for improved facilities at the Castle and raised concern that the lack of a modern information centre, car parking and fit for purpose toilets could have a negative impact on visitor numbers to the Castle. The enhanced facilities would also result in additional jobs and the proposal has the potential for significant economic benefits. The MIR noted support, in principle, for the visitor centre. The representee has included a number of Appendices (RD0202.A, RD0202.B, RD0202.C, RD0202.D, and RD0202.E) in their representation which provides further detail to support their position (PP1142).

Non-Allocated Site – Bid Site KN115 – Land at New Mains of Ury (Retail)

A representee has requested the allocation of bid site KN115 for retail (supermarket). They state there is demand for a supermarket in Stonehaven, and the site at Ury Estate that was granted planning permission in 2016 remains undeveloped with no retailer interest. They add, the Ury Estate site is constrained due to the need for a link road between site OP2 and the A957 and should not be considered as a viable retail location. They argue bid site

KN115 is a logical location for a supermarket as it is located adjacent to existing houses and the A90(T) and the AWPR, it is accessible by sustainable modes of transport, there are no constraints to its development, and there is interest from a national food store. The SEA also notes that the site is a suitable location for a supermarket development. The representee has included a number of Appendices (RD0139.A and RD0139.B) in their representation which provides further detail to support their position (PP0785).

Non-Allocated Site – Bid Site KN117 – Land at New Mains of Ury

A representee has requested the allocation of bid site KN117 for employment land. It is in a logical location, is located adjacent to the A90, the AWPR, and existing and proposed housing developments, and is able to be reached by sustainable means. The site will not create adverse traffic implications on the B979 or the AWPR junction. The site is effective, as it is not impeded by any infrastructure constraints. It would not have any negative impact on the local aspect as the recent development in the area, AWPR and the Ury Estate development has significantly changed the landscape, and any landscape issues can be addressed through strategic planting. The representee has included a number of Appendices (RD0140.A) in their representation which provides further detail to support their position (PP0786).

Non-Allocated Site – Bid Site KN118 – Land East of East Lodge, New Mains of Ury

A representee has requested the allocation of bid site KN118 for a hotel and restaurant. They report the need for a hotel facility has been acknowledged by Aberdeenshire Council and the Stonehaven community for several years, but nothing has been provided. They state the site is a logical location for a tourist development as it is situated close to the Ury Estate development (e.g., OP2), lies directly adjacent to the A90(T) and AWPR making it easily accessible by both car and sustainable means. The SEA also notes the site as a logical location for a hotel development. The representee has included a number of Appendices (RD0138.A and RD0138.B) in their representation which provides further detail to support their position (PP0784).

Non-Allocated Site – Bid Site KN119 – Land East of Megray Burn, New Mains of Ury

A representee has requested the allocation of bid site KN119 for roadside services comprising of a petrol filling station, ancillary class 1 unit and drive-thru. They state there is a deficiency of modern roadside facilities on the A90(T) for road users, with the closest being in Stracathro, 23 miles south of Stonehaven. They highlight the site is adjacent to the AWPR interchange, there are no roadside facilities on the A90(T) or the AWPR, and it will not adversely impact the road network or have a negative visual impact on the surrounding area. The representee has included a number of Appendices (RD0137.A and RD0137.B) in their representation which provides further detail to support their position (PP0783).

Non-Allocated Site – Bid Site KN120 – Mill of Forest (Site for 250 Units), Land at Toucks

A representee has requested the allocation of bid site KN120 for 250 homes and local retail/commercial/service facilities to address the shortfall of 939 homes identified in the SDP that are not apportioned within the PLDP, to compensate for historic under-delivery of existing housing sites, to address the lack of affordable housing delivery, and to ensure that realistic densities can be applied on a site-by-site basis. The representee has included an

Appendix (RD0213.A) in their representation which provides further detail to support their position (PP1198).

Non-Allocated Site – Bid Site KN121 – Mill of Forest (Site for 750 Units), Land at Toucks

It has been requested that bid site KN121 is allocated for 750 homes and local retail/commercial/service facilities. A representee has stated that this site is needed to address the shortfall of 939 homes identified in the SDP that are not apportioned within the PLDP, to compensate for historic under-delivery of existing housing sites, to address the lack of affordable housing delivery, and to ensure that realistic densities can be applied on a site-by-site basis. The representee has included an Appendix (RD0213.A) in their representation which provides further detail to support their position (PP1198).

Another representee has stated that there is a need to allocate additional housing land within the Aberdeen to Laurencekirk Strategic Growth Area to support housing land and rates of delivery. That the principle of extending Stonehaven beyond the A90 has been established by development at Ury Estate. The proposed site is of an appropriate scale for the size of Stonehaven. Previous applications on the site were only refused because they were not allocated and included a supermarket – the supermarket element is no longer proposed. The bid site benefits from proximity to strategic transport links and has good connectivity to public transport. They have also noted that from the A90, the bid site is viewed within the same visual envelope as Stonehaven and would be seen as an extension to the town. Concerns regarding landscape and environmental impacts can be meaningfully addressed through a masterplan and supporting documents. The representee has included a number of Appendices (RD0253.A) in their representation which provides further detail to support their position (PP1298).

Non-Allocated Site – Bid Site KN122 – Mill of Forest (Site for 1500 Units), Land at Toucks

It has been requested that bid site KN122 is allocated for 1500 homes, primary school and local retail/commercial/service facilities (PP1198 and PP1297). A representee has stated that this site is needed to address the shortfall of 939 homes identified in the SDP that are not apportioned within the PLDP, to compensate for historic under-delivery of existing housing sites, to address the lack of affordable housing delivery, and to ensure that realistic densities can be applied on a site-by-site basis (PP1198). The representees have included a number of Appendices (RD0213.A and RD0252.A) in their representation which provides further detail to support their position (PP1198 and PP1297).

A representee has stated that there is a need to allocate additional housing land within the Aberdeen to Laurencekirk Strategic Growth Area to support housing land and rates of delivery. That the principle of extending Stonehaven beyond the A90 has been established by development at Ury Estate. The proposed site is of an appropriate scale for the size of Stonehaven. Previous applications on the site were only refused because they were not allocated and included a supermarket – the supermarket element is no longer proposed. The bid site benefits from proximity to strategic transport links and has good connectivity to public transport. They have also noted that from the A90, the bid site is viewed within the same visual envelope as Stonehaven and would be seen as an extension to the town. Concerns regarding landscape and environmental impacts can be meaningfully addressed through a masterplan and supporting documents. The representee has included a number of Appendices (RD0252.A) in their representation which provides further detail to support their position (PP1297).

Non-Allocated Site – New Site N006 – Land near A90(T)/B979 roundabout

Two representees, including the Stonehaven and District Community Council, have requested the designation of a “Park and Choose” facility at the junction of the A90(T) and the B979 and it is reserved as site R2 (PP0564 and PP1393). The Community Council has suggested that this could be on the site vacated by the AWPR’s Construction Team’s Administration Building (PP1393). They argue that a “Park and Choose” facility that is similar to the facility at Newtonhill will enable fast long-distance buses to serve Stonehaven and connected destinations with a minimum stopping time (PP0564 and PP1393), as visiting town centres is not feasible for fast services (PP0564). It could link to the Ury Estate development when it has a town bus service (PP1393). It avoids people needing to commute into Aberdeen Bus station to connect with long-distance services and could utilise the Airport Bus Service and improve the viability of Airport and Town services (PP0564 and PP1393). It would also reduce Aberdeen commuter traffic and the usage of the crowded City Bus Station (PP0564 and PP1393).

Non-Allocated Site – New Site N007 – Land at Ury Estate (retail and hotel)

A representee has requested the allocation of new site N007 for a food store and hotel and is recognised as a committed development, as it benefits from planning permission and this would provide clarity and certainty. The representee has included a revised masterplan showing sites with planning permission and sites for future development (RD0215.A) (PP1221).

Non-Allocated Site – New Site N008 – Land at North Lodge (housing)

A representee has requested the allocation of new site N008 for 90 homes and is recognised as a committed development, as it benefits from planning permission and this would provide clarity and certainty. The representee has included a revised masterplan showing sites with planning permission and sites for future development (RD0215.A) (PP1221).

Non-Allocated Site – New Site N009 – Land at Ury Estate (Ury House and Golf Course)

A representee has requested the allocation of new site N009 for a hotel at Ury House and a golf course and it is recognised as a committed development and as it benefits from planning permission and this would provide clarity and certainty. The representee has included a revised masterplan showing sites with planning permission and sites for future development (RD0215.A) (PP1221).

Modifications sought by those submitting representations:

General

Modify the PLDP to review the scale of housing proposed in Stonehaven (PP0880).

Modify the PLDP to provide clarity over the future replacement of Dunnottar Primary School (PP0926).

Modify the PLDP to ensure future development in the vicinity of this junction does not

compromise its safety and performance (PP1241).

Modify the PLDP to investigate possible improvements to Stonehaven Rail Station car parking capacity (PP1241).

Flood Risk

Modify the PLDP to amalgamate the first two 'Flood Risk' bullet points, "Stonehaven lies within an area potentially vulnerable to flood risk as identified by the National Flood Risk Assessment. Flood Risk Assessments may be required." and "Parts of the settlement may be at risk from coastal flooding." into one "Stonehaven lies ... National Flood Risk Assessment. Parts of the settlement are also at risk from coastal flooding. Flood Risk Assessments may be required." (PP1219).

Modify the PLDP to amalgamate the last four 'Flood Risk' bullet points, "Site OP1 is at risk from fluvial flooding and is adjacent to a small watercourse. A Flood Risk Assessment may be required.", "Site OP2 is at risk from fluvial flooding and has a small watercourse running through the site. A Flood Risk Assessment may be required.", "Site OP3 and BUS3 are adjacent to a small watercourse. A Flood Risk Assessment may be required., and "Site OP6 is adjacent to land at risk from flooding and Cowie Water. A Flood Risk Assessment may be required." into one "Sites OP1, OP2, OP3 and OP6 lie within or adjacent to SEPA's 1:200 flood risk area or have watercourses flowing through or adjacent to them. Flood Risk Assessments may be required." (PP1219).

Modify the PLDP to remove "BUS3" from the fifth 'Flood Risk' bullet point and create a new bullet point, "BUS3 site is adjacent to a small watercourse. A buffer strip will be required alongside the watercourse and a Flood Risk Assessment may be required." (PP1219).

Services and Infrastructure

Modify the PLDP to amend wording under 'Strategic drainage and water supply' to include at the end, "There is currently sufficient capacity at Nigg Waste Water Treatment Works. A Drainage Impact Assessment may be required." (PP0272).

Site P9 – To protect the area as a significant contribution to the character of the place and to provide a landscape buffer

Modify the PLDP to amend the description of P9 to note that it is indicative and that its full extent and character will be agreed as part of the detailed planning process of site OP5 (PP0902, PP0926 and PP1221).

Site BUS2 – Safeguarded for business uses

Modify the PLDP to remove site BUS2 (PP0786).

Site OP1 – Carron Den

Modify the PLDP to review if the allocation summary for site OP1 needs to include a requirement for an FRA (PP1219).

Site OP2 – Ury House, East Lodge

Modify the PLDP to remove site OP2 (PP0878).

Modify the PLDP to amend the allocation summary of site OP2 to include, “Development on this site must accord with Policy P4 Hazardous and Potentially Polluting Developments and Contaminated Land and the Health and Safety Executive “Land Use Planning Methodology”.” (PP0981).

Modify the PLDP to amend the allocation summary of site OP2 to change paragraph four from, “Consideration should also be given to providing footpath linkages with Stonehaven as well as providing safe routes to School. A core path runs along the boundary and through the site and connections should be made to the network. Public Transport Strategy.” to “Consideration should also be given to providing active travel linkages with Stonehaven as well as providing safe routes to School. A core path runs along the boundary and through the site and connections should be made to the network. The core path forms part of a key cycle link between the B979 and A957 and amenity of this link/core path should be retained despite the requirement for a new linking road. Public Transport services should be delivered with construction of the link road in accordance with the site-wide Public Transport Strategy.” (PP1300).

Site OP3 – Ury House, Blue Lodge

Modify the PLDP to reduce the allocation of site OP3 from 99 to 51 homes (PP0920 and PP0921).

Modify the PLDP to reduce the allocation of site OP3 from 99 to 46 homes if excluding the homes with planning permission that are outwith the site (PP0981).

Modify the PLDP to amend the allocation summary of site OP3 to include, “This allocation is capped at 51 homes (or 46 homes if the approved planning application does not mirror site OP3 in full) due to the restrictions on development in close proximity to a Major Accident Hazard Pipeline.” (PP0981).

Modify the PLDP to amend the allocation summary of site OP3 to include, “For development at Ury Estate, HSE shall be consulted directly and the HSE’s Planning Web App shall not be used to inform decision-making.” (PP0981).

Modify the PLDP to amend the allocation summary of site OP3 to move the sentence, “A Flood Risk Assessment may be required.” from paragraph eight to seven (PP1219).

Modify the PLDP to amend the allocation summary of site OP3 to change paragraph five from, “It is also important that consideration is given to possible footpath linkages with the main development of Stonehaven. A core path runs along the boundary of the site and connections should be made to the network.” to “It is also important that consideration is given to possible active travel linkages with the main development of Stonehaven. A core path runs along the boundary of the site and connections should be made to the network. The core path forms part of a key cycle link between forms part of a key cycle link between the B979 and A957 and amenity of this link/core path should be retained.” (PP1300).

Modify the PLDP to amend the allocation summary of site OP3 to state that any assessment on the potential impact on the setting of the Scheduled Cowie Lines (pill box)

notes it is a strategic military site and located at a strategic crossing point of the Cowie Burn (PP1343).

Modify the PLDP to amend the allocation summary of site OP3 to ensure sensitive housing design is promoted and landscaping is considered, such as leaving undeveloped land, in line with HES's Setting guidance (PP1343).

Site OP5 – Land at East Lodge

Modify the PLDP to remove site OP5 (PP0666, PP1315 and PP1316).

Modify the PLDP to amend the allocation summary of site OP5 to change the second sentence in paragraph four to state that site P9 (landscape buffer) is indicative and an alternative layout will be supported providing it does not fall below the area identified as P9 (PP0902).

Modify the PLDP to amend the allocation summary of site OP5 to change paragraph five to allow affordable homes to be provided elsewhere within the Masterplan area for the Ury Estate (PP0902).

Modify the PLDP to amend the allocation summary of site OP5 to change paragraph five to allow the affordable housing allowance to be delivered on site OP6 (PP1221).

Modify the PLDP to amend the allocation summary of site OP5 by adding a new fifth paragraph, "Development of the full extent of this site is likely to incur significant effects on the designed (non- inventory) landscape of Ury House and is likely to compromise the balance of open to enclosed spaces which typify this historic parkland. To minimise effects on the designed landscape, the siting and massing of housing should seek to focus on the lower slopes, with a landscape structure to reflect the character, scale and species of the existing policy woodlands. Specification of planting should follow best practice to ensure early and effective establishment of tree stock on this more exposed site. Opportunities to further reinforce the historic character in this locale should be explored." (PP1300).

Modify the PLDP to amend the allocation summary of site OP5 to change paragraph two to include, "Provision for active travel is required." before "Access and connectivity must be integrated with site OP2." (PP1300).

Site OP6 – Mackie Village Ury Estate

Modify the PLDP to reduce the boundary of site OP6 to reflect the boundary of the approved development of 91 homes (APP/2018/2227 and APP/2018/2228) (PP0981).

Modify the PLDP to amend the allocation summary of site OP6 to change the last paragraph to include, "For development at Ury Estate HSE shall be consulted directly and the HSE's Planning Web App will not be used to inform decision-making." (PP0981).

Site OP7 – East Newtonleys

Modify the PLDP to remove site OP7 (PP0786).

Non-Allocated Site – Bid Site KN032 – Land at Braehead

Modify the PLDP to include bid site KN032 for 340 homes and strategic landscaping, sports pitches and open space (PP1132).

Non-Allocated Site – Bid Site KN050 – Land at Mains of Cowie (Mixed Use)

Modify the PLDP to include bid site KN050 for 250 homes, food retail and a primary school (PP1315).

Non-Allocated Site – Bid Site KN051 – Land at Mains of Cowie (Residential)

Modify the PLDP to include bid site KN051 for 250 homes and a primary school (PP1316).

Non-Allocated Site – Bid Site KN076 – Land at East Newtonleys, East of A957

Modify the PLDP to include bid site KN076 for 100 homes (PP0926).

Non-Allocated Site – Bid Site KN077 – Land at East Newtonleys, Between A957 and Boggartyhead

Modify the PLDP to include bid site KN077 as a Future Opportunity Site for 300 homes, primary school and 200sqm retail uses (PP0926).

Non-Allocated Site – Bid Site KN078 – South of Braehead, East of A957

Modify the PLDP to include bid site KN078 for 100 homes (PP0926).

Non-Allocated Site – Bid Site KN081 – Land South of Braehead, Adjacent to A975

Modify the PLDP to include bid site KN081 for up to 50 homes (PP0683).

Non-Allocated Site – Bid Site KN108 – Land East and West of Mains of Dunnottar

Modify the PLDP to include bid site KN108 for a new visitor centre and associated car parking facilities and enabling development if required (PP1142).

Non-Allocated Site – Bid Site KN115 – Land at New Mains of Ury (Retail)

Modify the PLDP to include bid site KN115 for retail (supermarket) (PP0785).

Non-Allocated Site – Bid Site KN117 – Land at New Mains of Ury

Modify the PLDP to include bid site KN117 for employment land (PP0786).

Non-Allocated Site – Bid Site KN118 – Land East of East Lodge, New Mains of Ury

Modify the PLDP to include bid site KN118 for tourist uses (Hotel & Restaurant) (PP0784).

Non-Allocated Site – Bid Site KN119 – Land East of Megray Burn, New Mains of Ury

Modify the PLDP to include bid site KN119 for roadside services (comprising petrol filling

station, ancillary class 1 unit and drive-thru class 3 food and drink units) (PP0783).

Non-Allocated Site – Bid Site KN120 – Mill of Forest (Site for 250 homes), Land at Toucks,

Modify the PLDP to include bid site KN120 for 250 homes and local retail/commercial/service facilities (PP1198).

Non-Allocated Site – Bid Site KN121 – Mill of Forest (Site for 750 homes), Land at Toucks

Modify the PLDP to include bid site KN121 for 750 homes and local retail/commercial/service facilities (PP1198 and PP1298).

Non-Allocated Site – Bid Site KN122 – Mill of Forest (Site for 1500 homes), Land at Toucks

Modify the PLDP to include bid site KN122 for 1,500 homes, a primary school and local retail/commercial/service facilities (PP1198 and PP1297).

Non-Allocated Site – New Site N006 – Land near A90(T)/B979 roundabout

Modify the PLDP to include new site N006 for a “Park and Choose” facility (PP0564 and PP1393).

Non-Allocated Site – New Site N007 – Land at Ury Estate (retail and hotel)

Modify the PLDP to include new site N007 for a food store and hotel and it is recognised as a committed development (PP1221).

Non-Allocated Site – New Site N008 – Land at North Lodge (housing)

Modify the PLDP to include new site N008 for 90 homes and it is recognised as a committed development (PP1221).

Non-Allocated Site – New Site N009 – Land at Ury Estate (Ury House and Golf Course)

Modify the PLDP to include new site N009 for a hotel at Ury House and a golf course, and it is recognised as a committed development (PP1221).

Summary of responses (including reasons) by planning authority:

General

The Council does not agree with the issues raised by the representee. Stonehaven is served by a good public transport service, retail, amenities, open space and has two employment areas. No change is required.

The School Roll Forecast for 2019 shows that none of the primary schools will be overcapacity, see AD0110, Appendix 1, Mackie Academy section, page 5. The school roll at Mill O’Forest and Dunnottar primary schools are forecast to decline. As such, there is no requirement for a new primary school or to replace Dunnottar Primary School currently. No change is required.

The Council agrees with Nestrans regarding the strategic importance of the junction between the AWPR and A92(T) and to ensure that future development does not compromise this junction. No change is required.

Comments from Nestrans on Stonehaven's Rail Station are noted, but is not a matter for the LDP. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comments through three non-notifiable modifications, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

The Council confirms that it intends to address Scottish Water's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Comments from SEPA are noted. No change is required.

Site P9 – To protect the area as a significant contribution to the character of the place and to provide a landscape buffer

The Council agrees with the representee to allow some flexibility where the boundary of site P9 runs alongside site OP5, but this should be stated in the allocation summary for site OP5. No change is required.

Site R1 – Reserved for an extension to Fetteresso Cemetery

Comments from SEPA are noted. No change is required.

Site BUS1 – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

Site BUS2 – Safeguarded for business uses

The Council disagrees with removing this site. There are no other undeveloped employment land sites in Stonehaven and this site can take advantage of the A90(T) grade separated junction. It is also on a regular bus route (service 107 and X7), and bus stops can be added. The Council is aware of the water connection issues as the site is between two water supply zones, but it should be possible to resolve this. No change is required.

Comments from SEPA are noted. No change is required.

Site OP1 – Carron Den

A Flood Risk Assessment would be required for this site, but as it has planning consent and is under construction, it is not necessary to state that one would be required. No change is required.

Site OP2 – Ury House, East Lodge

Support for this site is noted.

The Council does not agree that site OP2 will cause damage and/or loss to areas of ancient woodland, as it is unlikely that trees will be lost from the new housing, but a link road is required across Cowie Water. See AD0157, which shows where site OP2 overlays ancient woodland. No change is required.

The Council agrees that for consistency, this site should include a reference to Policy P4 and HSE's specific advice, it intends to address this comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP3 – Ury House, Blue Lodge

Support for this site is welcomed and noted. However, the Council would like to make a correction to the allocation summary as the 51 homes that have been granted planning permission includes 5 homes outwith site OP3. It intends to address this comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Concerns about increasing the density of site OP3 within a pipeline consultation zone are noted. Development within a pipeline consultation zone would normally be discouraged, but this site was granted planning permission to enable the redevelopment of Ury House, a category B listed building on the Buildings at Risk register. The pipeline's middle and inner consultation zones do dissect the site, and is therefore likely to inform the layout, and early engagement from developers on this matter would be encouraged to ensure that delivery can be accommodated within the site. Site OP3 measures around 16ha and if development were excluded from the inner consultation zone this would leave 10ha. At 99 homes, this would result in a very low-density development (10 homes per hectare). However, the Council notes HSE comments on previous planning applications on this site, referred to by INEOS FPS. For information, the latest planning applications on this site are APP/2012/1617 and APP/2018/0667, which superseded planning applications APP/2008/0113 and APP/2012/1616. The Council agrees HSE should be consulted directly, as requested in their comments on planning application APP/2018/0667, see AD0066. The Council also would like to highlight that while increasing the density will increase the number of homes on the site, in theory reducing the number of bedrooms per home will reduce the number of occupants per home. As such, each proposal will need to be considered individually and HSE comments on previous planning applications should not be considered as final. The Council confirms that it intends to address some of the representee's concerns on consulting with HSE and no development within the inner consultation zone through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Other concerns raised about overdevelopment, proximity to historic assets, buffer strips to Cowie Water, appropriate road access, linkages to the town, preserving the character of the area and pressure on services are noted. There is sufficient capacity at the local primary school, the impact on the setting of the scheduled Cowie Line can be referenced in the allocation summary, buffer strips can be applied, as required in the LDP, and existing

road links (and a new link road) can be used. This is not a new allocation, but an intensification of an existing site to accommodate a different house type to make the site more marketable. If the Reporter is minded, to make an amendment, then the Council recommend that the allocation summary could be modified to amend paragraph six to read, " Development on this site must avoid direct (i.e. physical) impacts on the scheduled Cowie Line, pill box and anti-tank blocks or affect its setting, and not affect the setting of other historic assets, including Ury House. A sensitive housing design should be promoted, and appropriate landscaping considered, such as leaving undeveloped land, in line with HES's guidance, Managing Change in the Historic Environment - Setting. Any assessment on the potential impact on the setting of the scheduled Cowie Line, pill box and anti-tank blocks should note it is a strategic military site and located at a strategic crossing point of the Cowie Burn."

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP4 – Land Adjacent to Kirktown of Fetteresso

Comments from SEPA are noted. No change is required.

Site OP5 – Land at East Lodge

Support for this site is welcomed and noted.

The Council notes the comments on the rate of development, but this fluctuates across most the allocations, and providing there is a five-year effective housing land supply and as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

The Council does not agree this is not a sustainable site. The construction of a link road is a condition of planning consent for APP/2007/2015 on part of site OP2, see AD0059, condition 18. Matters Specified in Conditions for a supermarket next to site OP6 were approved in 2019 (APP/2018/1842 and has been implemented). Whether or not a site has a committed occupant is not a material consideration and a reason to dismiss it. No ancient woodlands will be lost, impacts to the setting of scheduled monuments will be considered, although HES did not raise any concerns with this site, only a small part of the site is within the outer and middle pipeline consultation zone, and the edge of site OP5 is around 15 metres above the edge of the inner consultation zone (uphill). No change is required.

The Council does not agree to moving the affordable housing requirement to another site, as this does not achieve the PLDP objective of promoting sustainable mixed communities, see AD041.A, see paragraph 4.2. However, given the history of development in the Ury Estate, under Policy H2 Affordable Housing, the representee's request could be considered as an exceptional circumstance at the planning application process. No change is required.

Comments from SEPA are noted. No change is required.

The Council accepts NatureScot's request to ensure the proposal minimises its potential impact on the designed (non-inventory) landscape of Ury House and agrees that the layout of site P9 in the proposal map should be considered as indicative, as site P9 was taken from the indicative layout in bid site KN103. While it could be argued that site P9 will help to mitigate potential impacts on the setting of historic assets, there is merit, to adding NatureScot's suggested text and referencing site P9 together, as site OP5 forms part of the designed (non-inventory) landscape and is within the Council's Historic Environment Record. If the Reporter is minded, to make an amendment, then the Council recommend that the allocation summary could be modified to include a new fifth paragraph, and to amend and move the existing sentence on site P9 to the new fifth paragraph to read, "Development of the full extent of this site is likely to incur significant effects on the designed (non- inventory) landscape of Ury House and is likely to compromise the balance of open to enclosed spaces which typify this historic parkland. To minimise effects on the designed landscape, the siting and massing of housing should seek to focus on the lower slopes, with a landscape structure to reflect the character, scale and species of the existing policy woodlands. Specification of planting should follow best practice to ensure early and effective establishment of tree stock on this more exposed site. Opportunities to further reinforce the historic character in this locale should be explored. Strategic landscaping will be required along the entire northern boundary, and while there is some flexibility on its layout, it must not fall below the minimum area that is identified as site P9."

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP6 – Mackie Village Ury Estate

Support for this site is welcomed and noted.

The Council agrees to reducing the size of site OP6 to reflect the boundary of the approved development of 91 homes (APP/2018/2227 and APP/2018/2228) to avoid further development within the pipeline consultation zone. There will be no change to the allocation. The Council is aware that there is a desire to build the affordable housing requirement of site OP5 on site OP6, but the precautionary approach should be adopted and avoid risk by carefully considering sites that are within pipeline consultation zones. If the Reporter is minded, to make an amendment, then the Council recommend that the proposals map could be modified to reducing the size of site OP6 to reflect the boundary of the approved development of 91 homes (APP/2018/2227 and APP/2018/2228).

Although this site is only partially within a pipeline consultation zone, it would be helpful for HSE to be informed of any further development in the Ury Estate. The Council confirms that it intends to address some of the representee's concerns on consulting with HSE and no development within the inner consultation zone through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Comments from SEPA are noted. No change is required.

Site OP7 – East Newtonleys

The Council disagrees with removing this site. There are no other undeveloped employment land sites in Stonehaven and this site can take advantage of the A90(T) grade separated junction. It is also on a regular bus route (service 107 and X7), and bus stops can be added. The Council is aware of the water connection issues as the site is between two water supply zones, but it should be possible to resolve this. No change is required.

Comments from SEPA are noted. No change is required.

Non-Allocated Site – Bid Site KN032 – Land at Braehead

The Council does not support allocating bid site KN032 for the allocation of 340 homes, strategic landscaping, sports pitches and open space. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. Furthermore, the scale of this proposal could also affect the delivery of developments at the Ury Estate and Chapelton, and the SDP states, “Allocations should be of a scale which would not inhibit the delivery of current strategic allocations”, see AD0016, paragraph 4.19. While the development of Chapelton and the Ury Estate have been slow, identifying other sites to remedy the shortfall would divert the market demand to other sites and thereby threaten the viability and further delay the implementation of developments at Chapelton and the Ury Estate.

The bid site is within the East Aberdeenshire Coast Special Landscape Area, and while the proposal could have several community benefits, this does not outweigh the Council’s concerns on the general siting and scale of the development in a prominent location to the south of the settlement. NatureScot also share these concerns on the potential landscape impact this bid site could have, which they raised in their response to the MIR 2019, see AD0171, page 34). This bid site was also considered at the LDP 2017 Examination and the Reporters shared “the concerns of the Planning Authority regarding the landscape impact that would arise from the development of this site. This would affect the setting of both the Black Hill Monument and the town itself, with the site being particularly prominent in wide ranging views from the north”, AD0036 page 752, paragraph 37.

Objection to this site is noted.

In conclusion, no change is required.

Non-Allocated Site – Bid Site KN050 – Land at Mains of Cowie (Mixed Use)

The Council does not support allocating bid site KN050 for 250 homes, food retail and a primary school. Bid site KN050 for mixed uses including 250 homes was not identified as a preferred option in the MIR, AD0038.F, page 101). As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. Not all the allocations are at the Ury Estate, with two sites to the south of Stonehaven (OP1 and OP4). The scale of this proposal could also affect the delivery of developments at the Ury Estate and Chapelton, and the SDP 2020 states, “Allocations should be of a scale which would not inhibit the delivery of current strategic allocations”, see AD0016, paragraph 4.19. While the development of Chapelton and the Ury Estate have been slow, identifying other sites to

remedy the shortfall would divert the market demand to other sites and thereby threaten the viability and further delay the implementation of developments at Chapelton and the Ury Estate.

The bid site is located within the South East Aberdeenshire Coast Special Landscape Area, and the Council agrees with NatureScot's concerns on the potential landscape impact this site could have, which they raised in their response to the MIR 2019, see AD0171, page 34). The refused application (APP/2015/3324) and dismissed appeal for mixed-use development on this site both heavily referenced landscape impact and prominence within the reasoning for refusal, and those concerns remain.

The topography of the bid site reduces its accessibility with the rest of the settlement, and the retail element conflicts with the town centre first principle, and no sequential test has been provided. A site for a supermarket has been identified at the Ury Estate, next to site OP6. To identify a further site for such use would be not be appropriate and potentially damaging to the vitality and viability of Stonehaven town centre.

There is currently no requirement for a new primary school in Stonehaven, and the School Roll Forecasts 2019 show that all the primary schools in Stonehaven are below capacity and the allocation of 350 homes would not provide the critical mass to justify a new school, see AD0110, Appendix 1, Mackie Academy section, page 5.

In conclusion, no change is required.

Non-Allocated Site – Bid Site KN051 – Land at Mains of Cowie (Residential)

The Council does not support allocating bid site KN050 for 350 homes and a primary school. Bid site KN051 for 350 homes and a school was not identified as a preferred option in the MIR, see AD0038.F, pages 101-102. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. Not all the allocations are at the Ury Estate, with two sites to the south of Stonehaven (OP1 and OP4). The scale of this proposal could also affect the delivery of developments at the Ury Estate and Chapelton, and the SDP states, "Allocations should be of a scale which would not inhibit the delivery of current strategic allocations", see AD0016, paragraph 4.19. While the development of Chapelton and the Ury Estate have been slow, identifying other sites to remedy the shortfall would divert the market demand to other sites and thereby threaten the viability and further delay the implementation of developments at Chapelton and the Ury Estate.

The bid site is located within the South East Aberdeenshire Coast Special Landscape Area, and the Council agrees with NatureScot's concerns on the potential landscape impact this site could have in their response to the MIR 2019, see AD0171, page 34. The refused application (APP/2015/3324) and dismissed appeal for mixed-use development on this site both heavily referenced landscape impact and prominence within the reasoning for refusal, and those concerns remain.

The topography of the bid site reduces its accessibility with the rest of the settlement, and there is currently no requirement for a new primary school in Stonehaven. The School Roll Forecasts 2019 show that all the primary schools in Stonehaven are below capacity and

the allocation of 350 would not provide the critical mass to justify a new school see AD0110, Appendix 1, Mackie Academy section, page 5.

In conclusion, no change is required.

Non-Allocated Site – Bid Site KN076 – Land at East Newtonleys, East of A957

The Council does not support allocating bid site KN076 for around 100 homes if bid site KN078 is not allocated. Bid site KN076 for 100 homes was not identified as a preferred option in the MIR, see AD0038.F, page 102). As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. The scale of this proposal could also affect the delivery of developments at the Ury Estate and Chapelton, and the SDP 2020 states, “Allocations should be of a scale which would not inhibit the delivery of current strategic allocations”, see AD0016, paragraph 4.19. While the development of Chapelton and the Ury Estate have been slow, identifying other sites to remedy the shortfall would divert the market demand to other sites and thereby threaten the viability and further delay the implementation of developments at Chapelton and the Ury Estate.

The representee refers to the bid site being supported in CALP, see AD0029, but this plan was abandoned and not adopted when the next structure plan was agreed in 2001. Furthermore, the homes at Braehead Crescent were granted at appeal in 1997 to meet housing need and were not supported by Officers, see CALP Report of Public Local Inquiry extract, AD0140, paragraphs 53, 55 and 63. Only a further 25 homes were allocated by the Reporter as site A at the Aberdeenshire Local Plan 2006 (ALP) public local inquiry, see AD0030.A pages 257 and 260, AD0030.B pages 239 and 242, and AD0167 pages 99, 100 and 108. No further homes have been supported in subsequent Examinations for the 2012 and 2017 LDPs due to this area’s elevated position and that development in this area is likely to be conspicuous in long range views, see AD0032 paragraph 35, page 377 and AD0036 page 752, paragraph 37.

The Council’s opinion remains that this site is detached from the settlement, and while the bid site is contained by tree belts and woodland, it is still visible when viewed from the north and could impact on the setting of the town. It is not linked to any existing development and it will set a precedent for further development given the representee’s aspiration to build adjacent to this site and include land for a new primary school. There is currently no requirement for a new primary school in Stonehaven, and the School Roll Forecasts 2019 show that all the primary schools in Stonehaven are below capacity and the allocation of 100 homes would not provide the critical mass to justify a new school, see AD0110, Appendix 1, Mackie Academy section, page 5. This site does not represent the best scale of development on the best development sites in the right places. No change is required.

Non-Allocated Site – Bid Site KN077 – Land at East Newtonleys, Between A957 and Boggartyhead

The Council does not support allocating bid site KN077 for 300 homes as a future opportunity site, a primary school and 200sqm retail uses. Bid site KN077 (mixed uses including 400 homes) was not identified as a preferred option in the MIR, see AD0038.F, page 102. The PLDP does not reserve land for housing beyond the proposed Plan period.

As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. The scale of this proposal could also affect the delivery of developments at the Ury Estate and Chapelton, and the SDP 2020 states, “Allocations should be of a scale which would not inhibit the delivery of current strategic allocations”, see AD0016, paragraph 4.19. While the development of Chapelton and the Ury Estate have been slow, identifying other sites to remedy the shortfall would divert the market demand to other sites and thereby threaten the viability and further delay the implementation of developments at Chapelton and the Ury Estate.

The representee refers to the bid site being supported in CALP, see AD0029, but this plan was abandoned and not adopted when the next structure plan was agreed in 2001. Furthermore, the homes at Braehead Crescent were granted at appeal in 1997 to meet housing need and were not supported by Officers, see CALP Report of Public Local Inquiry extract, AD0140, paragraphs 53, 55 and 63. The Council also notes that around two thirds of this bid site is outwith the allocations proposed in CALP, see AD0029, page 726). Only a further 25 homes were allocated by the Reporter as site A at the Aberdeenshire Local Plan 2006 (ALP) public local inquiry, see AD0030.A pages 257 and 260, AD0030.B pages 239 and 242, and AD0167 pages 99, 100 and 108. No further homes have been supported in subsequent Examinations for the 2012 and 2017 LDPs due to this area’s elevated position and that development in this area is likely to be conspicuous in long range views, see AD0032 paragraph 35, page 377 and AD0036 page 752, paragraph 37.

The Council’s opinion remains that this site is detached from the settlement, and due to topography, it would be visually prominent. Just under half of the bid site is with the South East Aberdeenshire Coast Special Landscape Area, and in the Examination of the LDP 2017, the Reporter considered that the eastern half of bid site KN098, see AD0037.B, pages 71, 73 and 77, which includes parts of bid site KN077, “the eastern half of the site [KM098] would be significantly more prominent from the coastal area and Black Hill Monument where development would appear as detached from the town. The eastern part of the site would also be more remote from the town centre”, AD0036, page 753, paragraph 41. The site is exposed and visible when viewed from the north (e.g., A90/A92 interchange and Cowie/Stonehaven waterfront) and will appear on the skyline. The bid site would alter the landscape character of the area, its sense of place, and affect the setting of Stonehaven.

There is currently no requirement for a new primary school in Stonehaven, and the School Roll Forecasts 2019 show that all the primary schools in Stonehaven are below capacity and the allocation of 300 homes would not provide the critical mass to justify a new school, see AD0110, Appendix 1, Mackie Academy section, page 5.

This site does not represent the best scale of development on the best development sites in the right places. No change is required.

Non-Allocated Site – Bid Site KN078 – South of Braehead, East of A957

The Council does not support allocating bid site KN078 for around 100 homes if bid site KN076 is not allocated. Bid site KN077 was not identified as a preferred option in the MIR, see AD0038.F, page 103. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing

Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. The scale of this proposal could also affect the delivery of developments at the Ury Estate and Chapelton, and the SDP 2020 states, “Allocations should be of a scale which would not inhibit the delivery of current strategic allocations”, see AD0016, paragraph 4.19. While the development of Chapelton and the Ury Estate have been slow, identifying other sites to remedy the shortfall would divert the market demand to other sites and thereby threaten the viability and further delay the implementation of developments at Chapelton and the Ury Estate.

The representee refers to the bid site being supported in CALP, see AD0029, but this plan was abandoned and not adopted when the next structure plan was agreed in 2001. Furthermore, the homes at Braehead Crescent were granted at appeal in 1997 to meet housing need and were not supported by Officers, see CALP Report of Public Local Inquiry extract, AD0140, paragraphs 53, 55 and 63. The Council also notes that around two thirds of this bid site is outwith the allocations proposed in CALP, see AD0029, page 726). Only a further 25 homes were allocated by the Reporter as site A at the Aberdeenshire Local Plan 2006 (ALP) public local inquiry, see AD0030.A pages 257 and 260, AD0030.B pages 239 and 242, and AD0167 pages 99, 100 and 108. No further homes have been supported in subsequent Examinations for the 2012 and 2017 LDPs due to this area’s elevated position and that development in this area is likely to be conspicuous in long range views, see AD0032 paragraph 35, page 377 and AD0036 page 752, paragraph 37.

The Council’s opinion remains that this site is detached from the settlement, and due to topography, it would be visually prominent. The site is exposed and visible when viewed from the north (e.g., A90/A92 interchange and Cowie/Stonehaven waterfront) and will appear on the skyline. The bid site would alter the landscape character of the area, its sense of place, and affect the setting of Stonehaven. It will set a precedent for further development given the representees aspiration to build adjacent to this site and include land for a new primary school. Half of this site is with the South East Aberdeenshire Coast Special Landscape Area, and in the Examination of the LDP 2017, the Reporter considered that the eastern half of bid site KN098, see MIR 2013, AD0037.B, pages 71, 73 and 77, which includes bid site KN078, “the eastern half of the site [KM098] would be significantly more prominent from the coastal area and Black Hill Monument where development would appear as detached from the town. The eastern part of the site would also be more remote from the town centre”, see AD0036, page 753, paragraph 41.

There is currently no requirement for a new primary school in Stonehaven, and the School Roll Forecasts 2019 show that all the primary schools in Stonehaven are below capacity and the allocation of 300 homes would not provide the critical mass to justify a new school, see AD0110, Appendix 1, Mackie Academy section, page 5.

This site does not represent the best scale of development on the best development sites in the right places. No change is required.

Non-Allocated Site – Bid Site KN081 – Land South of Braehead, Adjacent to A975

The Council does not support allocating bid site KN081 for 50 homes. Bid site KN081 was not identified as a preferred option in the MIR, see AD0038.F, page 103. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area.

The representee refers to the bid site being supported in CALP, but this plan was abandoned and not adopted when the next structure plan was agreed in 2001. The adopted Aberdeenshire Local Plan 2006 did not allocate any land in this location, see AD0030.A. The Stonehaven Capacity Study 2006 considered the hypothetical implications of allowing for expansion by about 50% of Stonehaven's housing stock, from about 4100 (in 2001) to about 6,100 homes, see AD0175 pages 2 to 5 and Diagrams 1 to 9 and AD0182, Appendix 2. The study was written prior to the adoption of the Aberdeenshire Local Development Plan 2012, which identified a new settlement at Chapelton (then known as Elsick) to accommodate most of the housing allowance in the Aberdeen to Laurencekirk Strategic Growth Area.

The Council's opinion remains that this site is detached from the settlement, and due to topography, it would be visually prominent. The Council identified a site for a primary school in this area, see site P9 in LDP 2017, AD0034.H, page 542) as at the time it was the right development on the right location. The representee is proposing a different use that the Council deems is not in the right place.

Non-Allocated Site – Bid Site KN108 – Land East and West of Mains of Dunnottar

The Council does not support allocating bid site KN108 for a visitor centre and associated car parking at Dunnottar Castle, and for the allocation summary of this bid site to allow enabling development if necessary. Bid site KN108 (visitor centre with retail and café and 10 homes (enabling development)) was not identified as a preferred option in the MIR, see AD0038.F, pages 130-131. There are policies in the LDP that support development of tourist facilities, namely Policy B3 Tourist Facilities. Therefore, such a proposal can come forward without being allocated or reserved in the Plan. The Council also opposes allocating this site as it impacts on the South East Aberdeenshire Coast Special Landscape Area, which this site lies within, and impacts on the setting of Dunnottar Castle, should be considered through the development management process.

As demonstrated in the Schedule 4 Issue 9: Section 11 – The Historic Environment and Appendix 11 Conservation Areas the use of enabling development other than to restore a listed building at risk is not supported. The PLDP only supports enabling development to restore historic buildings 'at risk', under Policy HE3 Helping to Reuse Historic Buildings at Risk, and it should only be sought as a last resort, see AD0041.A. As such the Council opposes the use of enabling development to build a Visitor Centre when the representee has not sufficiently justified what other funding avenues they have explored and exhausted or provided a cost benefit analysis on the type and number of homes likely to be required.

In conclusion, no change is required.

Non-Allocated Site – Bid Site KN115 – Land at New Mains of Ury (Retail)

The Council does not support allocating bid site KN115 for retail (supermarket). Bid site KN115 was not identified as a preferred option in the MIR, see AD0038.F, pages 103-104. This proposal conflicts with the Town Centre First Principle, and no sequential test has been provided. A site for a supermarket has been identified at the Ury Estate, next to site OP6. To identify a further site for such use would be irresponsible and potentially damaging to the vitality and viability of Stonehaven town centre. The need for a link road in the Ury Estate is not a constraint, but an infrastructure requirement. No change is required.

Non-Allocated Site – Bid Site KN117 – Land at New Mains of Ury

The Council does not support allocating bid site KN117 for employment land. Bid site KN117 was not identified as a preferred option in the MIR, see AD0038.F, page 104). Sufficient supply of employment land exists at BUS2/OP5 at East Newtonleys, with consents in place. Therefore, further allocations are not required at this time. In addition, this junction forms part of the AWPR and the SDP states that LDPs “must ensure that the transport benefits created by the road are “locked in” and that the capacity of the route, and its junctions, is not negatively affected by development. Local Development Plans, in line with the sequential test and Town Centre First Principle, should expressly avoid any new development that would result in a negative impact on the route or any junction.”, see AD0016, paragraph 3.14. No Transport Assessment or other supporting material has been provided to demonstrate if the junction’s capacity will be affected. No change is required.

Non-Allocated Site – Bid Site KN118 – Land East of East Lodge, New Mains of Ury

The Council does not support allocating bid site KN118 for a hotel and restaurant. Bid site KN118 was not identified as a preferred option in the MIR, see AD0038.F, pages 104-105. There are policies in the LDP to support development of tourist accommodation, namely Policy B3 Tourist Facilities. Therefore, such a proposal can come forward without being allocated or reserved in the Plan. Furthermore, planning permission has been granted for a 50-bedroom hotel and restaurant at Ury estate (APP/2015/3716). The latest matters specified in conditions were approved in 2020. Ury House also has planning permission to be converted into a hotel as part of the enabling development scheme (planning application APP/2015/2710).

The site is noted to be accessible for passing trade and provide opportunity for tourists to explore the region due to ease of access to the A90, but the site topography does raise concern in terms of visual and landscape impacts, and the Reporter stated at the Examination of the LDP 2017 that “notwithstanding its proximity to the A90 and AWPR, it maintains a countryside character”, see AD0036, page 750, paragraph 29. This site is also next to the junction that forms part of the AWPR and the SDP 2020 states that LDPs “must ensure that the transport benefits created by the road are “locked in” and that the capacity of the route, and its junctions, is not negatively affected by development. Local Development Plans, in line with the sequential test and Town Centre First Principle, should expressly avoid any new development that would result in a negative impact on the route or any junction.”, see AD0016, paragraph 3.14. Concern does remain in relation to access to the B979 and potential implications on the functionality of the AWPR junction and no Transport Assessment or other supporting material has been provided to demonstrate if the junction’s capacity will be affected. The representee highlights the SEA’s comment that “the site would appear to be a logical location for passing trade”, but it also highlights several issues affecting the site and it still notes there would be a negative landscape impact, see AD0045.B, pages 172 and 173. No change is required.

Non-Allocated Site – Bid Site KN119 – Land East of Megray Burn, New Mains of Ury

The Council does not support allocating bid site KN119 for roadside services comprising of a petrol filling station, ancillary retail and a drive-thru. Bid site KN119 was not identified as a preferred option in the MIR, see AD0038.F, page 105). While the general location of this proposal, off the A90/A92 junction may be logical, there are several issues. Firstly, this use conflicts with the Town Centre First Principle, although this could be resolved using a

sequential test. Secondly, the specific location is visually prominent, contains very little development on the north side of the A90, and when considered against Policy R2 Development Proposals Elsewhere in the Countryside, employment proposals in 'accessible' rural areas are restricted to brownfield sites. Such opportunities are available on bid site KN115, which is less intrusive on the landscape. Thirdly, the Council is concerned about road access and road safety, as access is proposed off a grade separated junction, using an access road that only serves Megray Farm. This junction forms part of the AWPR and the SDP 2020 states that LDPs "must ensure that the transport benefits created by the road are "locked in" and that the capacity of the route, and its junctions, is not negatively affected by development. Local Development Plans, in line with the sequential test and Town Centre First Principle, should expressly avoid any new development that would result in a negative impact on the route or any junction.", see AD0016, paragraph 3.14. The representee seeks to address this in their supporting material on page 29, which states a Transport Assessment has been undertaken (they note it is available on request), but its conclusions only refer to the capacity of the junction and not the appropriateness of using the road access to Megray Farm. Finally, in terms of need and whether the negative effects are outweighed by the need of this proposal, there are several service stations and drive-thru's along the A90/A92 corridor. Portlethen, 10km away has a drive-thru and petrol station linked to a supermarket, and a hotel and restaurant just off the A92. There is a service station at Fiddes, 9.5km south of this bid site. Stonehaven already has 2 petrol stations and Westhill, off the 90(T), has a petrol station. No change is required.

Non-Allocated Site – Bid Site KN120 – Mill of Forest (Site for 250 homes), Land at Toucks

The Council does not support allocating bid site KN120 for 250 homes and local retail/commercial/service facilities. Bid site KN120 was not identified as a preferred option in the MIR, see AD0038.F, page 105). As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. The scale of this proposal could also affect the delivery of developments at the Ury Estate and Chapelton, and the SDP 2020 states, "Allocations should be of a scale which would not inhibit the delivery of current strategic allocations", see AD0016, paragraph 4.19. While the development of Chapelton and the Ury Estate have been slow, identifying other sites to remedy the shortfall would divert the market demand to other sites and thereby threaten the viability and further delay the implementation of developments at Chapelton and the Ury Estate.

NatureScot agreed with the Council's landscape assessment in their response to the MIR 2019, which states, the bid site "is disconnected from Stonehaven and is constrained as it relates poorly to the town. The indicative plans also lack a central core to the town, making it lack a sense of place, and it also shows the loss of ancient woodland. Although compensatory planting is proposed, it breaks up the continuity of trees south of the site.", see AD0038.F, page 105. This is further evidenced by refused applications APP/2015/3583 and APP/2010/3646 both citing the inappropriate scale of development and associated landscape impacts and detrimental impact on the setting of Stonehaven.

In conclusion, no change is required.

Non-Allocated Site – Bid Site KN121 – Mill of Forest (Site for 750 homes), Land at Toucks

The Council does not support allocating bid site KN121 for 750 homes and local retail/commercial/service facilities. Bid site KN121 was not identified as a preferred option in the MIR, see AD0038.F, pages 105-106. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. The scale of this proposal could also affect the delivery of developments at the Ury Estate and Chapelton, and the SDP 2020 states, “Allocations should be of a scale which would not inhibit the delivery of current strategic allocations”, see AD0016, paragraph 4.19. While the development of Chapelton and the Ury Estate have been slow, identifying other sites to remedy the shortfall would divert the market demand to other sites and thereby threaten the viability and further delay the implementation of developments at Chapelton and the Ury Estate.

NatureScot agreed with the Council’s landscape assessment in their response to the MIR 2019, which states, the bid site “is disconnected from Stonehaven and has a number of constraints, including poor connectivity and visual impact. It relates poorly to the town, and although a new bridge is proposed across the A90, land for the bridge is in separate ownership and details of it, which includes crossing the Carron Den Road to site OP1, are uncertain. There are also concerns with... the setting of Stonehaven...”, see AD0038.F, page 105. This is further evidenced by refused applications APP/2015/3583 and APP/2010/3646 both citing the inappropriate scale of development and associated landscape impacts and detrimental impact on the setting of Stonehaven.

In conclusion, no change is required.

Non-Allocated Site – Bid Site KN122 – Mill of Forest (Site for 1500 homes), Land at Toucks

The Council does not support allocating bid site KN122 for 1500 homes, primary school and local retail/commercial/service facilities. Bid site KN122 was not identified as a preferred option in the MIR, see AD0038.F, page 106. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. The scale of this proposal could also affect the delivery of developments at the Ury Estate and Chapelton, and the SDP 2020 states, “Allocations should be of a scale which would not inhibit the delivery of current strategic allocations”, see AD0016, paragraph 4.19. While the development of Chapelton and the Ury Estate have been slow, identifying other sites to remedy the shortfall would divert the market demand to other sites and thereby threaten the viability and further delay the implementation of developments at Chapelton and the Ury Estate.

NatureScot agreed with the Council’s landscape assessment in their response to the MIR 2019, which states, the bid site “is disconnected from Stonehaven by the A90 and has a number of constraints, including poor connectivity and landscape impact. It relates poorly to the town, and although a new bridge is proposed across the A90, land for the bridge is in separate ownership and details of it, which includes crossing the Carron Den Road to site OP1, are uncertain... There are also concerns with...the landscape setting of Stonehaven...”, see AD0038.F, page 105. This is further evidenced by refused applications APP/2015/3583 and APP/2010/3646 both citing the inappropriate scale of development and associated landscape impacts and detrimental impact on the setting of Stonehaven.

In conclusion, no change is required.

Non-Allocated Site – New Site N006 – Land near A90(T)/B979 roundabout

The Council is supportive of a “Park and Choose” facility serving Stonehaven, and while a site at the junction of the A90(T) and the B979 would be appropriate further considerations are necessary, such as impacts on the capacity of the A90/A92 junction, and land ownership, as several bids for alternative uses are proposed in this area. This proposal could come forward on brownfield land on bid site KN115 under Policy R2 Development Proposals Elsewhere in the Countryside. No change is required.

Non-Allocated Site – New Site N007 – Land at Ury Estate (retail and hotel)

The Council agrees that new site N007 could be identified in the Plan as a commercial centre (e.g., CC1), as the Council granted planning permission for a commercial development comprising of 3,750m² supermarket with 50-bedroom hotel and restaurant (APP/2015/3716). If the Reporter is minded, to make an amendment, then the Council recommend that the Settlement Statement could be modified to include a new commercial centre called CC1, as defined in planning application APP/2015/3716 and include a new allocation summary to read, “CC1: Site east of Slug Road, Allocation: Commercial, retail and 50-bedroom hotel. This is a newly allocated site. It received Planning Permission in Principle for a commercial development comprising of 3,750m² supermarket with 50-bedroom hotel and restaurant in 2016 and several matters specified in conditions have since been submitted and approved.”

Non-Allocated Site – New Site N008 – Land at North Lodge (housing)

The Council agrees with allocating site N008 as an allocation, as the principle of development has been accepted by the Council through the granting of planning application APP/2015/0541 in 2018 for a golf course and enabling housing development (90 homes). A start has been made on this approved development through the creation of road access at the North Lodge. Any further planning applications will be considered through other policies in the plan, such as on landscape and ancient woodland. If the Reporter is minded, to make an amendment, then the Council recommend that the Settlement Statement could be modified to include a new housing allocation, site OP8 “North Lodge”, as defined in planning application APP/2015/0541, and it is allocated for 90 homes (or as site OP7 and change the existing employment allocation from site OP7 to OP8 to keep retain the order of housing then employment allocations). The allocation summary of this site should be consistent with sites OP2, OP3, OP5 and OP6, as they are all part of the Ury Estate. As such, the Reporter may wish to include the following in the allocation summary for this new site:

- that the site is allocated to enable the development of a golf course;
- a revised Masterplan for the Ury Estate would be beneficial before further planning consents are granted;
- that this site forms the start of the link road connecting the A957 Slug Road and the B979 Netherley Road;
- it includes footpath linkages to Stonehaven;
- it includes a statement on pipelines; and
- it minimises impact on ancient woodland.

Non-Allocated Site – New Site N009 – Land at Ury Estate (Ury House and Golf Course)

The Council agrees that new site N009 could be reserved for a hotel at Ury House and a golf course, as it will provide clarity and certainty. Full planning permission for a golf course and enabling development of 90 homes was approved in 2018 (APP/2015/0541) and conditions are currently being purified. If the Reporter is minded, to make an amendment, then the Council recommend that the Settlement Statement could be modified to include a new reserved site, R2, as defined in planning application APP/2015/0541 and is “Reserved for a hotel at Ury House and a golf course, as part of the approved planning application APP/2015/0541.”

Reporter’s conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” in relation to the settlement statement matters covered in Issue 46. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

General

3. I agree with the council that Stonehaven has a good public transport service, including a railway station, a range of retail and other local services, including schools and health facilities, and employment opportunities. Stonehaven is located within the Aberdeen to Laurencekirk strategic growth area, one of three strategic growth areas identified in the strategic development plan. The strategic development plan states that the strategic growth areas will be the main focus for development. Within this context, I do not consider it appropriate to curtail further development in Stonehaven. No modification is recommended.

4. The council has explained the current situation regarding the need for a replacement primary school. I have nothing further to add. No modification is required.

5. Paragraph 3.14 in the strategic development plan makes clear that “local development plans must ensure that the transport benefits created by the (Aberdeen Western Peripheral Route) road are “locked in” and that the capacity of the route, and its junctions, is not negatively affected by development”. As this matter is addressed in the spatial strategy section of the proposed plan (paragraph 5.8), I do not consider it necessary to include any additional reference in the Stonehaven settlement statement. No modification is required.

6. The council considers that further investigation of improvements to car parking capacity at Stonehaven railway station is not a matter for the local development plan. I would not

necessarily agree. However, the absence of an allocation or reserved site in the proposed plan would not prevent a proposal coming forward, if required. No modification is required.

Flood Risk

7. The Scottish Environment Protection Agency (SEPA) has requested a number of changes to the flood risk section of the Stonehaven settlement statement. I agree that in the interests of consistency, the first two bullet points should be amalgamated. I consider that it would be logical to bring together information in relation to sites OP1, OP2, OP3 and OP6 into one bullet point. Given that site BUS3 is located next to a watercourse, the need for a buffer strip is justified. Modifications on these matters are recommended.

8. I agree that the strategic drainage and water supply bullet point should be amended to include the information provided by Scottish Water on the capacity of the Nigg waste water treatment works. A modification to this effect is recommended.

Protected Land: P9

9. The purpose of designation P9 is to protect the character of the place and provide a landscape buffer to the north of housing allocations OP2 and OP5. For the reasons set out in my assessment of representations to allocation OP5, I consider that the exact boundaries and layout of designation P9 should be addressed through the future master plan for site OP5. A modification to the allocation summary for OP5 is recommended to address this representation, alongside related comments from NatureScot – see site OP5 below.

Site BUS2 (business safeguard) and Site OP7 - East Newtonleys

10. Sites BUS2 and OP7 are located next to each other to the south of Stonehaven and close to the junction between the A90(T) and the A92. Together they relate to over 20 hectares of agricultural land, which is safeguarded/allocated for business uses and employment land in the proposed plan. The representation on behalf of Sluie Estate Trust seeks the deletion of these allocations on the basis that they are not effective and a better alternative site for business uses is available (bid site KN117 Land at New Mains of Ury).

11. I consider the merits of bid site KN117 later in this schedule 4. In terms of sites BUS2 and OP7, the council has indicated that these allocations are on a regular bus route and I note their proximity to the A90(T) road. I do not have any detailed information before me regarding the drainage infrastructure constraint. However, I note that SEPA has not raised any concerns and the council considers that water connection issues can be overcome. No evidence has been provided to back up the claim that the two sites are not marketable.

12. The strategic development plan requires the plan to provide 62 hectares of employment land allocations in the Aberdeen to Laurencekirk strategic growth area. Appendix 1 in the proposed plan shows allocations for 71.4 hectares, including seven hectares on site OP7 in Stonehaven. Further information in relation to the implementation of site BUS2 and OP7 is provided in the delivery programme for the proposed plan. I note that planning permission was granted in October 2016 for a business park on OP7 and that there is a current application for the approval of matters specified in conditions. The delivery plan states that development on BUS2 will follow OP7, as a proposed roundabout will serve both sites.

13. From the information before me, I do not consider there is any justification to remove these sites from the plan on the grounds of deliverability. No modification is recommended.

OP1 - Carron Dam

14. Given that site OP1 is under construction, I agree with the council that there would be no reason to require a flood risk assessment to be undertaken. No modification is recommended.

Site OP2 – Ury House, East Lodge

15. The Woodland Trust is concerned that allocation OP2 would result in the loss of ancient woodland. The plan submitted by the council shows that only a small proportion of the site is included in the ancient woodland inventory. Comparing this plan to the illustrative planning summary submitted by FM Ury Limited, I find that no housing is proposed on the parts of site OP2 where ancient woodland exists. The indicative link road shown on map 1 in the Stonehaven settlement statement does appear to pass through an area of ancient woodland. However, I note that the construction of a link road is a condition of a planning permission on part of site OP2 and therefore not a matter for this examination. No modification is required.

16. NatureScot has requested additional text to highlight that the core path, which runs along the boundary and through site OP2, forms part of an important cycle route and that the new link road should not affect its amenity. I consider that the changes proposed by NatureScot would be consistent with the plan's aim to promote walking and cycling. A modification to the allocation summary of OP2 is recommended.

17. INEOS FPS indicates that the Forties pipeline passes through or close to allocation OP2. I agree that, in the interests of consistency, a reference to policy P4 (Hazardous and Potentially Polluting Developments and Contaminated Land) and Health and Safety Executive advice should be included in the allocation summary for site OP2. A modification to this effect is recommended.

Site OP3 – Ury House, Blue Lodge

18. Site OP3 has planning permission for 46 houses, with permission for a further five houses on land outwith the site boundary. The council proposes to increase the level of housing development on the site by a further 48 homes, which have been identified as contributing towards the strategic development plan allowance for the Aberdeen Housing Market Area. Whilst the principle of housing development on this site has already been established, there are a number of unresolved representations to the proposed increased in density.

19. The Health and Safety Executive's consultation response dated 22 October 2018 on planning application APP/2018/0667 advises "against any future residential development at this location which would increase the housing density or introduce dwellings within the inner zone of the BP Forties pipeline". It goes on to say that the Health and Safety Executive should be consulted if any further residential developments are proposed at the Ury Estate. In response to a request for further information (FIR11), the council indicated

that the Health and Safety Executive has not been consulted on the proposed increase in capacity for allocation OP3.

20. Whilst the indicative layout submitted as part of the bid proposal would not result in any homes within the inner zone, it would increase the housing density in the middle zone contrary to the advice of the Health and Safety Executive in 2018. As there is no consultation response from Health and Safety Executive on allocation OP3, I am unclear whether the proposed additional 48 homes on this site would be supported.

21. The council's proposed modification would include a statement that "no housing will be allowed within the inner pipeline consultation zone". However, this would not address the issue of increased density in the middle zone. Whilst the council has indicated that higher density development has been permitted in the middle zone in Westhill, I have no detailed evidence of this proposal and it does not necessarily follow that an increased density would be supported on site OP3.

22. The strategic environmental assessment report for the proposed plan indicates that allocation OP3 has an overall negative impact due to impact on air quality, riparian habitats, some loss of prime agricultural land, cultural heritage and ancient woodland, and it is within a pipeline corridor. However, it considers that the proposal would provide a better mix of house types than what is currently approved, that effects on habitats, landscape, the scheduled Cowie Line and Ury House can be mitigated, and it contributes to redeveloping the B listed Ury House. I consider that the modification suggested by the council would address the matters raised by Historic Environment Scotland in relation to the potential impact of development on the Cowie Line scheduled ancient monument and its setting. A modification to this effect is required.

23. In response to the other concerns raised in representations, the council indicates that there is sufficient capacity at the local primary school and existing and proposed road network and matters relating to the provision of buffer strips and active travel links can be addressed through development. I agree that the change requested by SEPA, to move the sentence on flood risk assessment to the paragraph which addresses buffer strips and culverts, would be logical. I also consider that the additional wording recommended by NatureScot in relation to active travel linkages would be consistent with the plan's aim to promote walking and cycling. Modifications to this effect are recommended.

24. In conclusion, the principle of increasing the density would be consistent with paragraph 4.8 in the strategic development plan which states that "land brought forward to housing must be used efficiently". Subject to the modifications referred to above, I consider that adverse environmental and infrastructure impacts can be addressed at planning application stage. However, I am unable to reach a conclusion on whether the site can accommodate additional homes due to the presence of the pipeline consultation zone.

25. I therefore consider that the number of homes in this allocation should not be specified and the allocation summary should make clear that the potential to increase the site capacity is subject to consultation with the Health and Safety Executive. This would require some wording changes to the first paragraph of the allocation summary. Also, given the potential constraint relating to the pipeline consultation zone, I recommend that a new paragraph on this matter is inserted after the first paragraph in the allocation summary.

26. Given the uncertainty regarding the potential to increase the density of development, I do not consider that additional homes on site OP3 should be counted towards meeting the strategic development plan allowance for the Aberdeen Housing Market Area. A modification is therefore required to the relevant table in appendix 6 to remove allocation OP3 from the list of sites which contribute towards the strategic development plan allowance for the Aberdeen Housing Market Area. The implications of a deduction of 48 homes from the sites that contribute to the strategic development allowances are addressed in Issue 5.

Site OP5 – Land at East Lodge

27. Allocation OP5 for 60 homes is located immediately to the north east of site OP2, which is currently under construction by the same developer. It is identified as contributing towards the strategic development plan allowance for the Aberdeen Housing Market Area.

28. The 2020 housing land audit indicates that the remaining capacity on existing site OP2 will be completed by 2025, with an average completion rate of 25 homes per year. Based on a similar build rate, it would be reasonable to expect the additional 33 homes proposed on site OP2 and the new allocation for 60 homes on site OP5 to be deliverable by 2032.

29. The strategic environmental assessment for the proposed plan indicates that site OP5 has an overall mixed impact with negative impacts due to the distance from the settlement and services, soil and possibly on air and a pipeline zone. However, it considers that the impact on population, material assets, water, setting of Ury House and landscape can be mitigated.

30. NatureScot is concerned about the impact of development on the designed landscape of Ury House. The allocation would introduce built development on an area of open and relatively exposed agricultural land, which slopes upwards in a northerly direction from site OP2. The additional text suggested by NatureScot highlights the importance of creating a landscape framework which reflects the character of existing woodland and careful siting and massing of housing on the lowers slopes to minimise effects on the designed landscape. It also identifies the need for early and effective tree planting and encourages the reinforcements of the historic character. I agree that these design principles are important, to ensure that development protects and reflects the character of the wider designed landscape and should be addressed in the required masterplan.

31. The illustrative planning summary (July 2020) submitted by Ury Estate and Kirkwood Homes includes an area of undeveloped land along the northern boundary of the site, which is reflected generally in the proposed plan through protected land designation P9. Whilst a landscape buffer in this location would help prevent development on the uppermost slopes of the site, it may not necessarily provide a landscape structure which reflects the character and scale of the existing policy woodlands. I consider that there would be benefits in allowing the detailed extent of protected land to be identified as part of the masterplanning process. In its response to further information request (FIR11), the council has indicated that restricting development on the upper slopes would still allow 60 homes to be provided on the site.

32. I conclude that the allocation summary for site OP5 should be amended to allow more

flexibility in relation to the protected land allocation P9, but also ensure that the concerns of NatureScot are addressed. A modification to this effect is recommended

33. I note the council's response to the other concerns raised in representations and would agree that proposals for a supermarket at Ury and public transport services (once the link road is complete) have the potential to reduce reliance on accessibility by private car. Within this context, I agree that a sentence on provision for active travel should be added, as requested by NatureScot.

34. Historic Environment Scotland has not raised any concerns about the potential impact of allocation OP3 on the Cowie Line scheduled ancient monument. In addition, the protecting resources map on page 78 of the proposed plan does not show any ancient woodland within the boundaries of allocation OP5 and the council has indicated that only a small part of the site is within the pipeline consultation zone. On the basis of the information before me, I consider that these matters, and any impact on the Cowie Burn, can be addressed at planning application stage, and would not justify the removal of the site from the plan. No further modifications are required.

OP6 – Mackie Village Ury Estate

35. The approved site plans for applications APP/2018/2227 and APP/2018/2228 show built development in the southern part of site OP6 only. This is consistent with the area shown in blue (sites with planning permission) on the illustrative planning summary, submitted by Ury Estate and Kirkwood Homes.

36. I agree that the extent of allocation OP6 should be modified to align with the boundaries shown on the approved site plans for applications APP/2018/2227 and APP/2018/2228. This would address the risk of further development within the middle pipeline consultation zone. A modification to this effect is recommended, which I consider would respond to the matters raised in the representation from Ineos FPS. No changes to the allocation summary are required.

37. FM Ury Estates has asked for further flexibility in the delivery of affordable homes at Mackie Village. The council has indicated that this refers to a desire to build the affordable housing requirements for site OP5 on site OP6. However, no details have been provided in the representation. No modification is required.

Non-Allocated Bid Site KN032 – Land at Braehead

38. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area.

39. The site at Braehead covers 33 hectares of agricultural land which sits to the south of Stonehaven town centre and to the west of the coastal route. The strategic environmental assessment identifies a number of post mitigation significant adverse impacts in relation to the development of 400 homes on this site. These relate to the loss of prime agricultural land, landscape and visual impact and effects on cultural heritage. The council also cited education capacity and impact on the delivery of strategic allocations at Chapelton and Ury Estate as reasons for not including the site in the proposed plan.

40. The submission from Cala Homes indicates that there has been a change of developer since the bid submission, with the number of homes reduced to 340 and the site layout amended to create and retain views to the war memorial. Additional information has been provided to address the council's concerns regarding loss of agricultural land, visual and landscape impact and education capacity.

41. I note that the proposal would result in the loss of 22 hectares of category 3.1 prime agricultural land, albeit around nine hectares of this would be used as strategic open space. In line with policy PR1 (Protecting Important Resources), I consider that the loss of prime agricultural land may be justified, if it is required to meet strategic housing needs and there are no reasonable alternative sites.

42. The Stonehaven settlement statement does not identify any issues in relation to secondary school capacity and the school roll is predicted to decline from 2023 onwards. Whilst I note that Dunnottar Primary School is not currently at capacity, measures to accommodate additional pupils could be secured through developer obligations if required, in accordance with policy RD2. I do not consider that educational impact would justify the non-allocation of the site.

43. Paragraph 4.19 in the strategic development plan states that "allocations should be of a scale which would not inhibit the delivery of current strategic allocations". It goes on to say that "it will be for Local Development Plans to determine whether a proposal is small scale or not, giving due regard to its context and deliverability. The strategic development plan glossary defines "strategic allocations" as "major land allocations, which are identified in a Local Development Plan for development over a number of phases". I agree with the council that the allocations at Chapelton and Ury Estate would meet this definition.

44. I consider that the development of 340 houses at Braehead would be of a scale which could inhibit the delivery of the strategic allocation at Ury Estate. The allocation of bid site KN032 may therefore raises issues in terms of consistency with the strategic development plan.

45. The additional information and visualisations provided by Cala Homes are helpful in considering the potential landscape and visual impact of development on this site. I note that there is scope to reduce landscape and visual impacts by avoiding development on sensitive areas and through the provision of open space and strategic landscaping. Whilst I recognise that these matters and others could be addressed in further detail through a masterplan and at planning application stage, I share the council's concern regarding the siting and scale of development in a prominent location to the south of the settlement.

46. I agree that the proposal would have minimal impact on most of the key features of the South East Aberdeenshire Coast Special Landscape Area, set out in appendix 13 of the proposed plan. However, detailed consideration would need to be given to the impact of the proposed layout on views to the war memorial, which is visible from many vantage points. Whilst the site itself may not have any particularly notable features, I consider that the existing open agricultural landscape provides an attractive backdrop to the town and harbour. I therefore conclude that, even with strategic landscape planting along the northern edge of the site, the proposal would detract from the setting of the settlement in views from the north. This is evidenced in visualisations showing views from Stonehaven Golf Club access, contained in appendix 2 of Cala Homes' submission. I also viewed the

site from various locations as part of my site inspections.

47. Overall, I conclude that the scale of development on bid site KN032 would potentially inhibit the delivery of the existing strategic allocation at Ury Estate. Furthermore, the bid proposal would have an adverse impact on the landscape setting of Stonehaven and result in the loss of prime agricultural land. Given the availability of other suitable sites to meet the shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area, I conclude that this site should not be identified as a housing allocation. No modification is recommended.

Non-allocated Bid Sites KN050 and KN051 Land at Mains of Cowie

48. Stewart Milne Homes has submitted representations in relation to two development scenarios for a site at Mains of Cowie. Housing is the predominant use in both proposals and accordingly I have focussed my assessment on this use in the first instance.

49. As I have indicated above, there is a shortfall in the amount of housing land identified to meet the Strategic Development Plan allowance for the Aberdeen Housing Market Area.

50. The 34 hectare site at Mains of Cowie is located at the north eastern end of the settlement, immediately to the south of the railway line. The majority of this triangular shaped site is a relatively flat area of raised arable land, with fields which slope down to adjacent roads on the southern and western boundaries.

51. The supporting information submitted by Stewart Milne Homes for bid sites KN050 and KN051 addresses matters relating to proximity to local facilities, site opportunities and constraints and provides an indication of development parameters. The strategic environmental assessment identifies only one post mitigation significant negative effect, in relation to the loss of prime agricultural land. From the supporting information provided, I agree that the proposal has the potential to bring a number of environmental benefits.

52. As I have indicated in relation to other bid proposals, I consider that, in line with policy PR1 (Protecting Important Resources), the loss of prime agricultural land may be justified, if required to meet strategic housing needs and there are no reasonable alternative sites.

53. The site is located on a raised beach landform which is one of the key features of the South East Aberdeenshire Coast Special Landscape Area, set out in appendix 13 of the proposed plan. Development at this location would form a prominent eastward extension of the existing built up area and I note the concerns raised by NatureScot at the main issues report stage. However, I agree with the comments in the strategic environmental assessment and supporting information provided by Stewart Milne Homes, that adverse landscape and visual impacts could potentially be mitigated through site layout and strategic landscaping. I also note that, in views across Stonehaven Bay from the south, the proposal would sit at a level lower than existing development to the west.

54. Given the proximity of the site at Cowie Mains to Ury Estate, I consider that its development would potentially inhibit the delivery of this strategic allocation. The allocation of bid site KN050/KM051 may therefore raise issues in terms of consistency with the strategic development plan.

55. Information provided by Stewart Milne Homes indicates that the site is located within

a 15 minute walk of a wide range of local facilities. Whilst the sloping nature of the southern and western boundaries of the site make integration of development with the existing urban area more challenging, the indicative site layout suggests potential solutions could be explored through the preparation of a master plan.

56. Overall, I conclude that that housing development on this site could be accommodated with limited environmental impact and could bring a number of benefits. However, the scale of development would potentially inhibit delivery of the existing strategic allocation at Ury Estate and the development would result in the loss of prime agricultural land. Given the availability of other suitable sites to meet the shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area, I conclude that this site should not be identified for housing development.

57. In light of my conclusions on housing, I have not undertaken a detailed assessment of the other uses proposed in bids KN050 and KN051. However, I note the council's comments that there is no requirement for a new primary school in Stonehaven and that a site for a new supermarket has been identified as part of the Ury Estate development. No modification is required.

Non-allocated Bid Sites KN076, KN077, KN078 and KN081 East Newtonleys and South of Braehead

58. These four bid submissions relate to land to the south west of existing housing at Braehead and to the south east of the A957 road which provide access to Stonehaven from the south.

59. Bancon Homes Limited considers that land for 100 homes should be allocated, either on bid site KN076 or bid site KN078. It considers that remaining land in the wider bid site KN077 should be identified as a future opportunity site for 300 homes, a primary school and retail uses. The area covered by Site KN077 also includes bid site KN078, a rectangular shaped site adjacent to the A957 road, which Stewart Milne Homes is promoting for 50 homes.

60. Matters relating to the overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. I find that bid sites KN076, KN078 and KN081 could each contribute to meeting this shortfall, if allocated.

61. I agree with the council that an allocation of the scale proposed on site KN077 would potentially inhibit the delivery of the existing strategic allocation at the Ury Estate, which would be contrary to the strategic development plan. Due to their smaller size, I consider that, on an individual basis, bid sites KN076, KN078 and KN081 would be less likely to have any impact on the delivery of the strategic allocations at Ury Estate or Chapelton.

62. I have concluded under Issue 2 that there is no requirement for the plan to identify future opportunity sites for development beyond 2032. For this reason and its potential impact on the delivery of the strategic housing allocation at Ury Estate, there is no justification to identify site KN077 as a future development opportunity. I therefore have not undertaken a detailed assessment of the proposal. No modification is required.

63. The strategic environmental assessment for sites KN076 and KN078 identifies significant post mitigation environmental effects due to the loss of prime agricultural land and landscape impact. As I have indicated in relation to other bid proposals, I consider that, in line with policy PR1 (Protecting Important Resources), the loss of prime agricultural land may be justified if required to meet strategic housing needs and there are no reasonable alternative sites.

64. Site KN078 covers 10 hectares of agricultural land which slopes upwards from the north west corner. The eastern section of site KN078 is located within the South East Aberdeenshire Coast Special Landscape Area. The indicative master plan submitted by Bancon Homes seeks to address previous concerns regarding impact on the special landscape area and proposes no built development on the eastern section of the site. Based on the information before me, I consider that the proposal is unlikely to have a significant impact on the character of the coastal landscape, taking account of the key features set out in appendix 13 of the proposed plan. However, detailed consideration would need to be given to the impact of the proposed layout on views to and from the war memorial.

65. The council considers that the site would be visible from the north and development could impact on the setting of the town due to the site's prominent position on the skyline. From my site inspection, I observed that the commercial forestry plantation to the south west of the site is clearly visible in views from various locations from the north. Bancon Homes has indicated that a landscape and visual assessment has been prepared to inform the extent of the area capable of accommodating development. It concludes that the visual impact beyond that already created by the Braehead development to the north and the business park to the south would be minimal. However, no visualisations have been provided for consideration at this examination.

66. Based on the information before me and my site inspection, I conclude that development on the western part of site KN078 (as shown on the indicative layout) would be visible in views from the north, but it would be unlikely to have a significant impact on the skyline and setting of Stonehaven.

67. Whilst the north west corner of the site sits immediately adjacent to the settlement boundary, I agree with the council that development at this location would be detached from the rest of the settlement. The site is set back from the A957 road and, with the exception of the north west corner, is surrounded on all sides by undeveloped land. As the site slopes upwards in a south easterly direction, development would be readily visible on the approach to the settlement from the south

68. The indicative master plan is an extract from a proposal for the wider KN077 site and does not demonstrate how development of this site would integrate into the surrounding area. I note that it has not been updated to reflect the non-inclusion of the school safeguard in the proposed plan. Apart from avoiding built development in the special landscape area, no explanation or justification for the extensive area of open space and playing fields on the eastern part of the site. Overall, I find the site boundaries and indicative layout to be somewhat arbitrary and I am not convinced that development at site KN078 would result in an appropriate extension or southern gateway to the existing settlement.

69. I conclude that that housing development on the western part of the site (as shown on

the indicative layout) could be accommodated with limited environmental impact. However, development on the site would not be well integrated with the existing settlement or surrounding countryside and would result in the loss of prime agricultural land. Given the availability of other sites to meet the strategic development plan allowance for the Aberdeen Housing Market Area, I do not consider the allocation of this site to be justified. I conclude that site KN078 should not be identified as a housing allocation.

70. Site KN076 covers 8.6 hectares of agricultural land, which also includes an area of commercial forestry plantation and the farmhouse and outbuildings at East Newtonleys Farm. The site sits immediately to the south of business allocations OP7 and BUS 2 and over 500 metres from the edge of the main settlement boundary. It is currently surrounded by open fields on all sides

71. A small area of land at the south eastern corner of the site lies within the South East Aberdeenshire Coast Special Landscape Area. However, I consider it unlikely that development on this site would affect the character of the coastal area. The council indicates that the site is visible from the north and could impact on the setting of the town, but has not referred to any particular locations. The information provided by Bancon Homes on this matter comes from a wider landscape and visual assessment for Stonehaven south and is not site specific. The indicative master plan does not demonstrate how this site, if developed on its own, would integrate into the surrounding landscape. I find overall that I have insufficient information before me to reach a firm conclusion on landscape and visual impact.

72. I consider that the allocation of this site on its own would result in a development remote from the main built up area. The site is located over a kilometre from local shops and other facilities, with access along an A class road with only one narrow pavement. The indicative site layout shows access to the site from the A92, through the business allocation sites to the south. In terms of public transport accessibility, I consider it unlikely that a development of this scale would justify an extension of the town bus service. I conclude that the development would be poorly integrated with the main urban area to the north and would encourage reliance on travel by private car.

73. Given the availability of other sites to meet the strategic development plan allowance for the Aberdeen Housing Market Area, I do not consider that meeting housing need would outweigh the loss of prime agricultural land and other likely negative effects arising from the development of site KN076. No modification is recommended.

74. Bid site KN081 is a rectangular site which covers nearly four hectares of agricultural land immediately to the south east of the A957 road. The northern boundary of the site lies adjacent to existing housing at Braehead. Whilst part of the site is reserved for a primary school in the adopted local development plan, this reservation has not been included in the proposed plan.

75. The strategic environmental assessment identifies only limited negative effects from this proposal. Development would not involve the loss of prime agricultural land and landscape and visual impacts would not be significant, because most of the site sits at a lower level than land to the east and the nearby woodland could help screen built development. The highest point of the site is at the southern corner, where the site opportunities and constraints diagram provided by Stewart Milne Homes notes "views of Stonehaven and Coast". This suggests that this part of the site would be visible from other

vantage points. There are also views from and through the site to the war memorial. However, I acknowledge that adverse landscape and visual impacts could potentially be addressed through the preparation of a masterplan.

76. The proposal for 50 homes would extend the existing built up area at Braehead for around 450 metres in a southerly direction opposite Dunottar Woods. This would alter the rural character of the approach to Stonehaven from the south along the A957 road, particularly adjacent to the southern section of the site where existing housing at Braehead is not visible. I am not convinced that an elongated extension of the built up area along one side of the A957 road would provide an appropriate gateway for Stonehaven. However, I recognise that the character of the approach from the A92 to the south may change, as a result of the development of business allocations OP7 and BUS2.

77. I consider that the northern section of the site, that which is currently reserved for the primary school, would enjoy similar levels of accessibility to the town centre and local facilities as existing housing at Braehead. Development at the southern end of the site would be more remote from the existing built up area and consideration would need to be given to the creation of safe active travel links to avoid reliance on the A975.

78. I recognise that development of this site could bring a number of benefits and that it may be possible to mitigate some of the negative effects. However, given the availability of other sites to meet the strategic development plan allowance for the Aberdeen Housing Market Area, I do not consider that the bid site KN076 should be identified as a housing allocation. No modification is recommended.

Non-allocated Bid Site KN108 – land east and west of Mains of Dunnottar

79. The representee seeks the allocation of land for a new visitor centre at Dunnottar Castle on land to the east of the Coastal Tourist Route, with support provided for enabling development, if necessary. The main issues report indicates that the enabling development would comprise 10 homes on land to the west of Mains Of Dunnottar. However, no further information on the housing proposal is provided in the representation.

80. I agree with the council that the development of new tourist facilities is supported in principle by policy B3 in the proposed plan. However, given the location of the site within the South East Aberdeenshire Coast Special Landscape Area and that Dunnottar Castle is a Scheduled Monument, careful consideration would need to be given to matters of siting, scale and design.

81. I have insufficient detailed information before me to assess the suitability of the site for a visitor centre. I agree with the council that such a proposal could come forward through the development management process, which would allow assessment against relevant development plan policies. This would also allow for the submission of information to justify enabling development, if necessary. No modification is required.

Non-allocated Bid Sites KN115, KN117, KN118 and KN119 Land at New Mains of Ury

82. Bid submissions KN115 (retail) and KN117 (employment land) relate to the same brownfield site, which is located to the east of housing allocation OP2 and close to the interchange between the A90, A92 and Aberdeen Western Peripheral Route. The northern half of the site is occupied by traditional and modern farm buildings, and there are

existing residential properties to the east and south, just outwith the site boundary.

83. Site KN118 lies immediately to the north and east of the B979 and occupies the corner of an agricultural field which slopes gently downwards in a southerly direction. Site KN119 forms part of a sloping, agricultural field which is located to the east of the road interchange.

84. Sluie Estate Trust has submitted two alternative master plans, both showing a hotel and restaurant on site KN118 and a petrol filling station and two drive thru restaurants on site KN119. One version proposes a retail development of 2,787 square metres with associated car parking on land to the east of OP2 (bid proposal KN115) and the other proposes four business units ranging from 2,600 square metres to 162 square metres with car parking on the same site (bid proposal KN117).

85. The supporting information provided by Sluie Estate Trust indicates that site KN115/KN117 is free from constraints and deliverable. I note that the strategic environmental assessment identifies negative effects in relation to soil erosion and loss of prime agricultural land. However, given the predominantly brownfield nature of the site, I consider any negative impacts on these resources are likely to be minimal. Sluie Estate Trust considers that transport information submitted with a planning application for a supermarket in 2015 demonstrates that there would be no adverse impact on the road network or junction. This transport information has not been submitted to the examination. However, on the basis that this information is likely to be more than six years old and it predates the strategic development plan, which highlights the need to prevent negative effects on the new route and its junctions, I consider that a more up to date transport assessment would be required.

86. I note that planning permission has been granted for a supermarket at Ury Estate. Paragraph 68 in Scottish Planning Policy indicates that development plans should adopt a sequential town centre first approach for retail uses. This site would fall into the category of "out of centre location", which is the lowest preference. I agree with the council that an additional supermarket to the north of the A90 is unlikely to be justified and would potentially have an adverse impact on the town centre. No modification is required in relation to bid KN115.

87. The strategic development plan sets a target of 62 hectares of employment land in the Aberdeen to Laurencekirk strategic growth area for the period to 2032. It also identifies the need for 42 hectares of land to provide a strategic reserve for the period 2033 -2044 in this strategic growth area. Paragraph 5.11 in the strategic development plan states that "in order to ensure that we can plan for growth, local development plans should ensure that strategic reserve land for employment is provided in line with the allocations set in Tables 4 and 5"

88. Table 1 in appendix 1 in the proposed plan shows that there are sufficient allocations to meet the strategic development plan requirements up to 2032. This includes site OP7 at Stonehaven, which I have already concluded should be retained within the local development plan. However, there is a 19.2 hectare shortfall in the strategic reserve land identified in the Aberdeen to Laurencekirk strategic growth area.

89. The council has indicated that it does not support the allocation of this site as employment land because further allocations are not required at this time. However, no

mention is made of the shortfall in the strategic land reserve. Based on the information before me, I consider that site KN117 could potentially contribute to the strategic land reserve. However, in the absence of an up to date transport assessment, I am unable to reach a conclusion in terms of its impacts on the Aberdeen Western Peripheral Route and its junction. No modification is recommended in relation to bid KN117.

90. I do not consider that the allocation of bid site KN118 for a hotel and restaurant or KN119 for roadside services would be justified. The proposals would result in the loss of prime agricultural land which policy PR1 seeks to protect, unless public economic and social benefits outweigh any negative effects. No supporting information has been submitted to quantify the economic and social benefits of the proposals. Furthermore, similar to bid proposals KN115 and KN117, I am unable to assess the impact of the proposed uses on the Aberdeen Western Peripheral Route and its junction.

91. I recognise that the sites would be well placed to benefit from passing trade and tourists using the main road network. However, site KN118 sits on the eastern edge of the strategic housing allocation at Ury Estate and is not well integrated with the rest of Stonehaven. Site KN119 is separated from the built up area by the new road interchange to the west and the A92 to the south. Both sites would be likely to encourage car based travel from the surrounding area, which I consider would be at odds with the sustainable development objectives in the proposed plan. From the information provided by the council, in relation to two alternative proposals for hotels at the Ury Estate and existing service stations in the surrounding area, I conclude that there is no overriding need for the proposed facilities. No modification is recommended in relation to bid site KN118 and KN119.

Non-allocated Bid Sites KN120, KN121 and KN122 Mill of Forest, Land at Toucks

92. Barratt North Scotland has submitted a representation which relates to three alternative development options of increasing scale on land to the west of the A90 and to the south west of the settlement boundary. Whilst all three proposals include local retail/commercial/service facilities, the main land use is housing – 250 homes on site KN120; 750 homes on KN121 and 1500 homes and a primary school on KN122. Barratt North Scotland considers that the proposed plan should be modified to provide additional housing allocations, including sites KN120, KN121 or KN122 at Mill of Forest.

93. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area.

94. Barratt North Scotland has also submitted a separate representation for bid site KN121, which includes supporting information. No additional information is provided in relation to bid sites KN120 and KN122.

95. There is no justification to allocate additional housing land on the scale proposed on sites KN121 and KN122. Development would result in the loss of prime agricultural land, which would not be justified, as the sites are not required to meet the strategic development plan allowance. I agree with the council that allocations of 750 or 1500 homes at this location would potentially inhibit the delivery of the existing strategic allocations at the Ury Estate and Chapelton. I note the supporting information provided in

relation to site KN121 and recognise that it may be possible to mitigate some of the adverse effects identified in the strategic environmental assessment through detailed proposals. However, I agree with the council that the land is disconnected from Stonehaven and has poor connectivity, due mainly to its location to the west of the A90. I do not consider that the ongoing development at Ury Estate sets a precedent to support the extension of Stonehaven in a south westerly direction. No modification is recommended in relation to bid sites KN121 and KN122.

96. Bid site KN120 for 250 homes is located on land immediately to the west and northwest of the Glaslaw interchange and forms the southern part of site KN121. I note that development of this site would not result in the loss of prime agricultural land. However, the strategic environmental assessment identifies a number of negative effects in relation to increased travel, potential flood risk, biodiversity and landscape impact.

97. I consider that development on site KN120 would be remote from the existing settlement, with poor accessibility to existing services. I consider it unlikely that a development of 250 homes could support a range of local facilities and it is not clear whether a direct link over the A90 could be provided from this site. I conclude that there would be a reliance on car based travel which would not be consistent with the principles of sustainable development. Whilst Barratt North Scotland considers that concerns relating to flood risk, biodiversity and landscape impacts could be overcome through detailed proposals, I have insufficient information before me to assess these matters.

98. However, I conclude that the locational disadvantages and resultant increased travel associated with site KN120 would outweigh the benefits in terms of providing additional land for housing. There are other sites available to meet the identified shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area. No modification is required.

Non-allocated New Site N006 – Land near A90(T)/B979 roundabout

99. I can see merit in the suggestion to allocate land close to the A90(T)/B979 roundabout for a “park and choose” facility to encourage travel by bus and reduce car based travel. However, I have insufficient information regarding the availability of potential sites and impact on the capacity of the junction. As I have indicated previously, the strategic development plan indicates that any development, which would result in a negative impact on the Aberdeen Western Peripheral Route, or its junctions, should be avoided. I consider that such a proposal, with the required supporting information, could come forward outwith the local development plan process. No modification is recommended

Non-allocated New Sites N007, N008 and N009 Land at Ury Estate and North Lodge

100. FM Ury Limited has requested that additional sites at Ury Estate, which have been granted planning permission, should be identified as local development plan allocations in Stonehaven. It has suggested that these could be identified as OP8 (retail and hotel), OP9 (North Lodge) and OP10 (Ury House and championship golf course).

101. I note that the council is supportive of allocating these sites and suggests that site N007 could be identified as a new commercial centre. Although these sites have planning permission for various uses, none of them were included in the Main Issues Report. As a

result, they have not been the subject of public consultation or strategic environmental assessment through the local development plan process. I recognise the benefits of the local development plan showing the full range of development proposed at Ury Estate. However, in the absence of information on environmental effects and the views of key agencies, community representatives and other stakeholders, I do not consider it appropriate to include these allocations or identify a new commercial centre at this stage in the plan process. The non-inclusion of these sites within the local development plan would not prevent the implementation of the current planning permissions. No modification is recommended.

Reporter's recommendations:

Modify the local development plan by:

1. Merging the first two flood risk bullet points on page 746 to read:

“• Stonehaven lies within an area potentially vulnerable to flood risk as identified by the National Flood Risk Assessment. Parts of the settlement are also at risk from coastal flooding. Flood Risk Assessments may be required.”

2. Merging the last four flood risk bullet points together on page 746 into the following bullet point:

“• Sites OP1, OP2, OP3 and OP6 lie within or adjacent to SEPA's 1:200 flood risk area or have watercourses flowing through or adjacent to them. Flood Risk Assessments may be required.”

3. Adding the following new bullet point to the Flood Risk section on page 746:

“• Site BUS3 is adjacent to a small watercourse. A buffer strip will be required alongside the watercourse and a Flood Risk Assessment may be required.”

4. Replacing the second bullet point under the services and infrastructure section on page 747 with:

“• Strategic drainage and water supply: Local mains water reinforcement and Water Impact Assessments may be required. There is currently sufficient capacity at Nigg Waste Water Treatment Works. A Drainage Impact Assessment may be required.”

5. Replacing the fourth paragraph of the allocation summary for site OP2 (Ury House, East Lodge) on page 748 with:

“Consideration should also be given to providing active travel linkages with Stonehaven as well as providing safe routes to school. A core path runs along the boundary and through the site and connections should be made to the network. The core path forms part of a key cycle link between the B979 and the A957 and amenity of this link/core path should be retained, despite the requirement for a new link road. Public transport services should be delivered with construction of the link road in accordance with the site-wide Public Transport Strategy.”

6. Adding the following new paragraph at the end of the allocation summary for site OP2 (Ury House, East Lodge) on page 748:

“Development on this site must accord with Policy P4 Hazardous and Potentially Polluting Developments and Contaminated Land and the Health and Safety Executive “Land Use Planning Methodology”, owing to the presence of one or more oil or gas pipelines in the vicinity.”

7. Replacing the title of the allocation summary for OP3 - Ury House, Blue Lodge on page 748 with:

“OP3: Ury House, Blue Lodge Allocation: Housing”

8. Replacing the first paragraph in the allocation summary for OP3 - Ury House, Blue Lodge on page 748 with the following two paragraphs:

“Part of this site was allocated for 25 homes as site OP3 in the LDP 2017. The site is located to the north of Stonehaven and is separated from the main development by the A90. The site was allocated in the LDP 2012 to enable the redevelopment of Ury House. The site (including some land outwith the site boundary) has full planning permission for 51 homes. Subject to consultation with the Health and Safety Executive, there is potential to increase this number to improve the density of the site.

Development on this site must accord with Policy P4 Hazardous and Potentially Polluting Developments and Contaminated Land and the Health and Safety Executive “Land Use Planning Methodology”, owing to the presence of one or more oil or gas pipelines in the vicinity. The pipeline consultation zones may restrict the developable area and overall capacity of the site. The Health and Safety Executive must be consulted.”

9. Replacing the fifth paragraph in the allocation summary for OP3 - Ury House, Blue Lodge on page 749 with:

“It is also important that consideration is given to possible active travel linkages with the main development of Stonehaven. A core path runs along the boundary of the site and connections should be made to the network. The core path forms part of a key cycle link between the B979 and A957 roads and amenity of this link/core path should be retained.”

10. Replacing the sixth paragraph in the allocation summary for OP3 - Ury House, Blue Lodge on page 749 with:

“Development on this site must avoid direct (i.e. physical) impacts on the scheduled Cowie Line, pill box and anti-tank blocks or affect its setting, and not affect the setting of other historic assets, including Ury House. A sensitive housing design should be promoted, and appropriate landscaping considered, such as leaving undeveloped land, in line with Historic Environment Scotland’s guidance, Managing Change in the Historic Environment - Setting. Any assessment on the potential impact on the setting of the scheduled Cowie Line, pill box and anti-tank blocks should note it is a strategic military site and located at a strategic crossing point of the Cowie Burn.”

11. In the allocation summary for OP3 - Ury House, Blue Lodge on page 749, moving the sentence, ‘A Flood Risk Assessment may be required’ from the eighth paragraph to the start of the seventh paragraph.

12. Deleting the final paragraph in the allocation summary for OP3 - Ury House, Blue Lodge on page 749.

13. Amending the entry for Stonehaven OP3 in the relevant table in Appendix 6 to show that the site does not contribute towards the strategic development plan allowance for the Aberdeen Housing Market Area, delete the figure ‘48’ from the allowances 2020- 2032 column and replace the figure ‘99’ in the final column with the words ‘unspecified’. (Note – a revised version of Appendix 6, incorporating all the recommended modifications, is provided at the end of this report.)

14. Inserting the following new penultimate sentence into the second paragraph in the allocation summary for site OP5 (Land at East Lodge) on page 750:

“Provision for active travel is required.”

15. Deleting the sentence “Strategic landscaping will be required along the northern boundary, the minimum area of this is identified as site P9” from the fourth paragraph of the allocation summary for site OP5 (Land at East Lodge) on page 750.

16. Inserting the following new fifth paragraph to the allocation summary for site OP5 (Land at East Lodge) on page 750.

“Development should avoid significant effects on the designed (non-inventory) landscape of Ury House and not compromise the balance of open to enclosed spaces which typify this historic parkland. To minimise effects on the designed landscape, the siting and massing of housing should seek to focus on the lower slopes, with a landscape structure to reflect the character, scale and species of the existing policy woodlands. Strategic landscaping will be required along the entire northern boundary, and while there is some flexibility on its layout, it must not fall below the minimum area that is identified as site P9. Specification of planting should follow best practice to ensure early and effective establishment of tree stock on this more exposed site. Opportunities to further reinforce the historic character in this locale should be explored.”

17. Amending the boundaries of allocation OP6 (Mackie Village Ury Estate) as shown on the Stonehaven key map (page 752) and map 1 (page 753) to reflect the approved site plans for planning permissions APP/2018/2227 and APP/2018/2228.

Planning Authority's summary of the representation(s):

Banchory-Devenick

Non-Allocated Sites – Bid Site KN069 – Land at Tollohill Wood (Phase 1), Bid Site KN070 – Land at Tollohill Wood (Phases 1-2), Bid Site KN071 – Land at Tollohill Wood (Phases 1-3), Bid Site KN072 – Land at Tollohill Wood (Phases 1-4)

Representees have welcomed and supported the exclusion of bid sites, KN069 to KN072 for 289 to 1310 homes, commercial, employment land and school. Many representees have referred to Aberdeen City Council's site "1308" (Banchory-Leggart) (PP0188, PP0196, PP0197, PP0307, PP0328, PP0338, PP0339, PP0340, PP0354, PP0355, PP0358, PP0359, PP0360, PP0378, PP0379, PP0391, PP0432, PP0433, PP0434, PP0439, PP0452, PP0453, PP0461, PP0475, PP0476, PP0486, PP0521, PP0541, PP0570, PP0575, PP0649, PP0726, PP0779, PP0780, PP0789, PP0817, PP0836, PP0839, PP0849, PP0903, PP0922, PP0933, PP0979, PP0996, PP1008, PP1009, PP1011, PP1029, PP1150, PP1162, PP1163, PP1164, PP1341, PP1342, PP1346, PP1364, PP1365, PP1366, PP1367, PP1368, PP1369, PP1370, PP1371, PP1372, PP1373, PP1374, PP1375, PP1376, PP1377, PP1378, PP1379, PP1380, PP1381,

PP1382, PP1383, PP1384, PP1385, PP1386, PP1387, PP1388, PP1389, PP1398, PP1404 and PP1405). Concerns raised include:

- Bid sites KN069 to KN072 are not required to meet the requirements of the Aberdeen City and Shire Strategic Development Plan 2020 (SDP) (PP0188);
- They are not needed given the foreseeable state of the North-East economy (PP0188);
- Its scale would adversely affect its unique landscape, local heritage, and natural habitats, and their exclusion should be retained to ensure that paragraph 4.8, “the right development in the right place” in the Proposed Aberdeenshire Local Development Plan 2020 (PLDP) is realised (PP0196, PP0197, PP0307, PP0328, PP0338, PP0339, PP0340, PP0354, PP0355, PP0359, PP0360, PP0378, PP0379, PP0391, PP0432, PP0433, PP0434, PP0439, PP0452, PP0453, PP0475, PP0476, PP0486, PP0521, PP0570, PP0575, PP0649, PP0726, PP0779, PP0780, PP0789, PP0817, PP0836, PP0839, PP0849, PP0903, PP0922, PP0933, PP0979, PP0996, PP1008, PP1009, PP1011, PP1029, PP1150, PP1162, PP1163, PP1164, PP1341, PP1342, PP1346, PP1364, PP1366, PP1367, PP1368, PP1369, PP1370, PP1371, PP1372, PP1373, PP1374, PP1375, PP1376, PP1377, PP1378, PP1379, PP1380, PP1381, PP1382, PP1383, PP1384, PP1385, PP1386, PP1387, PP1388, PP1389, PP1398, PP1404 and PP1405); and
- Loss of green belt, impact on wildlife, increase traffic on already busy roads and produce more pollution (PP0358).

Five representees have included an Appendix (RD0026.A, RD0027.A, RD0184.A, RD0185.A and RD0187.A) in their representation which provides further detail to support their position (PP0196, PP0197, PP1008, PP1009 and PP1011).

Aberdeen City Proposed Local Development Plan 2020 – Site OP46 – Royal Devenick Park

Representees have also objected to the adjacent OP46 Royal Devenick Park, contained within the Aberdeen Proposed Local Development Plan 2020 which is claimed by representees to include land within Aberdeenshire, as shown in a Proposal of Application Notice, and that it has not been identified in the Aberdeenshire PLDP (PP0196, PP0197, PP0307, PP0328, PP0334, PP0338, PP0339, PP0340, PP0354, PP0355, PP0359, PP0360, PP0378, PP0379, PP0391, PP0432, PP0433, PP0434, PP0439, PP0452, PP0453, PP0461, PP0475, PP0476, PP0486, PP0498, PP0517, PP0521, PP0522, PP0541, PP0570, PP0571, PP0575, PP0649, PP0726, PP0779, PP0780, PP0789, PP0817, PP0839, PP0849, PP0903, PP0922, PP0933, PP0953, PP0974, PP0979, PP0996, PP1008, PP1009, PP1011, PP1013, PP1026, PP1029, PP1150, PP1159, PP1162, PP1163, PP1164, PP1218, PP1341, PP1342, PP1346, PP1364, PP1365, PP1366, PP1367, PP1368, PP1369, PP1370, PP1371, PP1372, PP1373, PP1374, PP1375, PP1376, PP1377, PP1378, PP1379, PP1380, PP1381, PP1382, PP1383, PP1384, PP1385, PP1386, PP1387, PP1388, PP1389, PP1391, PP1394, PP1396, PP1398, PP1400, PP1404 and PP1405). Concerns raised include:

- Loss of green belt and woodland, and impact on historic assets, wildlife and recreation users, (PP0196, PP0197, PP0307, PP0328, PP0334, PP0338, PP0339, PP0340, PP0354, PP0355, PP0359, PP0360, PP0378, PP0379, PP0391, PP0432, PP0433, PP0434, PP0439, PP0452, PP0453, PP0461, PP0475, PP0476, PP0486, PP0498, PP0517, PP0521, PP0522, PP0541, PP0570, PP0571, PP0575, PP0649,

PP0726, PP0779, PP0780, PP0789, PP0817, PP0839, PP0849, PP0903, PP0922, PP0933, PP0953, PP0974, PP0979, PP0996, PP1008, PP1009, PP1011, PP1013, PP1026, PP1029, PP1150, PP1159, PP1162, PP1163, PP1164, PP1218, PP1341, PP1342, PP1346, PP1364, PP1365, PP1366, PP1367, PP1368, PP1369, PP1370, PP1371, PP1372, PP1373, PP1374, PP1375, PP1376, PP1377, PP1378, PP1379, PP1380, PP1381, PP1382, PP1383, PP1384, PP1385, PP1386, PP1387, PP1388, PP1389, PP1391, PP1394, PP1396, PP1398, PP1400, PP1404 and PP1405);

- Impact negatively on the existing road network (PP0334 and PP1013);
- Impact on the 12th century Causeymouth Road is inadequate and with the route and impact of the link road (PP0196, PP0197, PP0307, PP0328, PP0334, PP0338, PP0339, PP0340, PP0354, PP0355, PP0359, PP0360, PP0378, PP0379, PP0391, PP0432, PP0433, PP0434, PP0439, PP0452, PP0453, PP0461, PP0475, PP0476, PP0486, PP0498, PP0541, PP0571, PP0575, PP0649, PP0726, PP0779, PP0780, PP0789, PP0817, PP0839, PP0849, PP0903, PP0922, PP0933, PP0953, PP0974, PP0979, PP0996, PP1008, PP1009, PP1011, PP1013, PP1026, PP1150, PP1159, PP1162, PP1163, PP1164, PP1218, PP1341, PP1342, PP1346, PP1364, PP1365, PP1366, PP1367, PP1368, PP1369, PP1370, PP1371, PP1372, PP1373, PP1374, PP1375, PP1376, PP1377, PP1378, PP1379, PP1380, PP1381, PP1382, PP1383, PP1384, PP1385, PP1386, PP1387, PP1388, PP1389, PP1391, PP1394, PP1396, PP1398, PP1400, PP1404 and PP1405);
- There is an oversupply of land for new homes (PP0334, PP0391 and PP0953);
- Lack of demand for new homes (PP0334, PP0486, PP0541, PP0789, PP0974, PP1029, PP1159 and PP1396);
- Adverse visual impact (PP0334, PP0461 and PP0522);
- It will set a precedent for further development in the area (PP0196, PP0197, PP0307, PP0328, PP0334, PP0338, PP0340, PP0354, PP0355, PP0359, PP0360, PP0378, PP0379, PP0432, PP0433, PP0434, PP0439, PP0452, PP0453, PP0461, PP0475, PP0476, PP0521, PP0571, PP0575, PP0649, PP0726, PP0779, PP0780, PP0817, PP0839, PP0849, PP0903, PP0922, PP0933, PP0979, PP0996, PP1008, PP1009, PP1011, PP1013, PP1029, PP1150, PP1162, PP1163, PP1164, PP1341, PP1342, PP1346, PP1364, PP1366, PP1367, PP1368, PP1369, PP1370, PP1371, PP1372, PP1373, PP1374, PP1375, PP1376, PP1377, PP1378, PP1379, PP1380, PP1381, PP1382, PP1383, PP1384, PP1385, PP1386, PP1387, PP1388, PP1389, PP1398, PP1404 and PP1405);
- It is poorly served by public transport and active travel infrastructure (PP0391 and PP1013);
- It is inconsistent with the SDP (PP0196, PP0197, PP0307, PP0328, PP0338, PP0339, PP0340, PP0354, PP0355, PP0359, PP0360, PP0378, PP0379, PP0391, PP0432, PP0433, PP0434, PP0439, PP0452, PP0453, PP0475, PP0476, PP0521, PP0570, PP0575, PP0649, PP0726, PP0779, PP0780, PP0817, PP0839, PP0849, PP0903, PP0922, PP0933, PP0953, PP0974, PP0979, PP0996, PP1008, PP1009, PP1011, PP1029, PP1150, PP1162, PP1163, PP1164, PP1341, PP1342, PP1346, PP1364, PP1366, PP1367, PP1368, PP1369, PP1370, PP1371, PP1372, PP1373, PP1374, PP1375, PP1376, PP1377, PP1378, PP1379, PP1380, PP1381, PP1382, PP1383, PP1384, PP1385, PP1386, PP1387, PP1388, PP1389, PP1398, PP1404 and PP1405);
- It site was not supported in Aberdeen City Council's Main Issues Report 2019 (PP0196, PP0197, PP0307, PP0328, PP0338, PP0339, PP0340, PP0354, PP0355, PP0359, PP0360, PP0378, PP0379, PP0391, PP0432, PP0433, PP0434, PP0439, PP0452, PP0453, PP0475, PP0476, PP0486, PP0517, PP0521, PP0522, PP0570, PP0571, PP0575, PP0649, PP0726, PP0779, PP0780, PP0817, PP0839, PP0849,

PP0903, PP0922, PP0933, PP0979, PP0996, PP1008, PP1009, PP1011, PP1029, PP1150, PP1162, PP1163, PP1164, PP1341, PP1342, PP1346, PP1364, PP1366, PP1367, PP1368, PP1369, PP1370, PP1371, PP1372, PP1373, PP1374, PP1375, PP1376, PP1377, PP1378, PP1379, PP1380, PP1381, PP1382, PP1383, PP1384, PP1385, PP1386, PP1387, PP1388, PP1389, PP1398, PP1404 and PP1405);

- There is a sufficient supply of new homes in Blairs and Chapelton, brownfield sites in Aberdeen (PP0334).

Five representees have included an Appendix (RD0026.A, RD0027.A, RD0184.A, RD0185.A and RD0187.A) in their representation which provides further detail to support their position (PP0196, PP0197, PP1008, PP1009 and PP1011).

A representee has suggested that road access of site OP46 in the Aberdeen City PLDP 2020 should be taken from the A92 than the B9077 (PP0288).

Non-Allocated Site – New Site N011 – Land at Leggart Brae

A representee has requested the allocation of new site N011 for 100 homes. They have stated there are no technical constraints that would preclude the delivery of this proposal (green belt, visual and landscape impact, flooding, sewage (it would go to Nigg), historic and natural environment, road access, education), would provide amenity greenspace and provide access to high quality natural heritage amenity. They have also suggested that the site will have localised and minimal effects on the Causey Mounth to upgrade a small section of it, rather than developing over the top of it. It is reported that this site does not correspond with bid sites KN069 to KN072, but instead links with site OP46 in the Aberdeen PLDP, and extends an established urban development, which is recognised as a logical development strategy principle in Scottish Planning Policy (SPP). They have stated that this site is deliverable, while development at Blairs and Chapelton have made little progress and there is a need for more housing in the Aberdeen Housing Market Area (AHMA). The representee has provided a Strategic Environmental Appraisal (SEA) of this site and concludes it will have either neutral or positive post mitigation impacts. The representee has also included a number of Appendices (RD0158.A and RD0158.B) in their representation which provides further detail to support their position (PP0868).

Cammachmore

No more homes should be built in Cammachmore to prevent coalescence (PP0880).

Non-Allocated Sites – Bid Site KN132 – Land at Cammachmore

Newtonhill, Muchalls and Cammachmore Community Council has expressed their support to not allocate bid site KN132 for 10 homes and create a settlement boundary, as it would make Cammachmore unsustainable and result in coalescence with Newtonhill. They also add, the LDP has the responsibility to ensure that Chapelton is allowed and encouraged to thrive without undue competition from other allocated sites (PP0556).

Chapelton

Vision

North Kincardine Rural Community Council has sought an additional sentence at the end of

paragraph two to include a sentence stating that Chapelton and Blairs will be the focus for significant development in the rural area of North Kincardine for the duration of the Plan. They have suggested that this will retain the rural character by limiting large scale development whilst helping to support timely delivery at Blairs and Chapelton, and small-scale unallocated development. They are also concerned that adding more large sites could affect delivery of infrastructure and other services, which would negatively impact on residents, and place significant pressure on the limited infrastructure (roads etc.) and services (primary school provision) in this rural ward and have a negative impact overall (PP0775).

It is suggested that development in this area should be prioritised at Chapelton (PP0880).

Services and Infrastructure

Scottish Water has requested amending the 'Strategic drainage and water supply' bullet point to include "Drainage Impact Assessment is required." (PP0272).

The Scottish Government has requested clarification on the nature and scale of the contributions required under the 'Strategic transportation' bullet point. They are not clear if it is referring to the previous Strategic Transport Fund that is no longer applicable or another study/appraisal. They have also stated that the phased development of Chapelton has been dealt with through conditions applied to the planning consent granted and the associated Section 75 Agreement from 2013 (PP0578).

Nestrans has requested amending the 'Local transport infrastructure' bullet point to include "active travel links". Nestrans are considering options for a new rail station at Newtonhill, and small-scale improvements would improve the amenity and functionality of the Park and Choose facility, which is maintained by the developer of Chapelton (RD0227.A) (PP1241).

Site P1 – To protect the proposed Community Wood as an amenity for the settlement

Objection has been made to site P1 (the representee refers to Policy P1 and paragraph PR1.6), as it is inappropriate, and this area can be protected under the terms of the green belt policy. The representee has suggested the Council consults with Elsick Development Company to identify the full extent of any community areas it is seeking to protect. The representee has included an Appendix (RD0128.A) in their representation which provides further detail to support their position (PP0751).

Site R1 – Safeguarded for future public open space as part of the development of Chapelton

The representee seeks the removal of site R1 from the green belt unless Policy R1 Special Rural Areas allows exemptions to enable its development. Adds, Policy R1 reads like a strategic landscape-based policy and it is not clear why this area requires this additional protection. The representee has included an Appendix (RD0128.A) in their representation which provides further detail to support their position (PP0751).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R1 (RD0214.B). No modification sought (PP1219).

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (see RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (see RD0214.B). No modification sought (PP1219).

Site OP1 – Chapelton

Objection has been made to the reduction in scale of site OP1. They have noted that the area of OP1 has been reduced from that shown in the LDP 2017 and excludes the full area for the long-term development of Chapelton, which has been masterplanned. Also notes that this area would come forward beyond the Plan period, but states it is in the interests of positive planning that the LDP recognises this area as providing long-term strategic growth. They have also argued that this is contrary to SPP Paragraph 120 "Beyond year 10 and up to year 20, the Local Development Plan should provide an indication of the possible scale and location of the housing land requirement." The representee has included an Appendix (RD0128.A) in their representation which provides further detail to support their position (PP0751).

It is requested that the allocation is reduced from 4045 homes to 1420 homes to reflect the Housing Land Audit (HLA) 2019 position that shows only 1442 homes are expected to be effective by 31 December 2032. Table 2 in Appendix 6 should be amended from 3881 to 1420 effective sites (PP1081).

A representee is concerned as to when a Gypsy/Travellers site will be delivered on site OP1, as no timescale has been set. They have stated that a halting site for Gypsy/Travellers should be provided within the employment land (PP0866).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (see RD0214.B). No modification sought (PP1219).

Downies

It is queried why there is no mention of Downies in the Settlement Statements in Appendix 7 (PP0124 and PP1226).

The Portlethen and District Community Council has raised the need to upgrade the coastal path around Downies, Findon, Portlethen Village and Portlethen, and that the installation of viewing shelters would be beneficial to watch the dolphins etc. (PP1226).

Non-Allocated Site – New Site N013 – Land at Burn of Daff

A representee has requested the allocation of new site N013 for 10 homes and to identify Downies as a settlement within Kincardine and Mearns. They have stated there is a need for smaller allocations, as promoted in Scottish Planning Policy (SPP) para 19, as the housing land supply in Aberdeen to Laurencekirk SGA is constrained due to heavy reliance upon Chapelton, which the Housing Land Audit (HLA) 2019 shows is delivering homes at a

much slower rate than expected. The site would not result in coalescence with the adjoining settlements and would comply with the Coastal Zone policy. The landscape impact can be mitigated as the site is a natural expansion to the settlement and with strategic planting on the boundaries. The site is suitable for development as there are no technical or infrastructure reasons, as it has two points of road access, it is not at risk from flooding, is not affect coastal processes or habitats, and the schools have capacity (PP0454). The representee has included an Appendix (RD0071.A) in their representation which provides further detail to support their position (PP0454).

Findon

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (see RD0214.B). No modification sought (PP1219).

Services and Infrastructure

The Scottish Environment Protection Agency (SEPA) have requested, for consistency and because all new development in Findon will be required to connect to the waste water network, that a new 'Strategic drainage and water supply' bullet point is added to confirm that the proposed population growth is within the design criteria for the existing waste water infrastructure at Nigg and, if not, the need for an upgrade is highlighted (see RD0214.B) (PP1219).

Site OP1 – Land South of Earnsheugh Terrace

A number of representees have objected to the allocation of site OP1 for 11 homes (PP0026, PP0033, PP0100, PP0129, PP0156, PP0179, PP0192, PP0213, PP0318, PP0320, PP0428, PP0429, PP0481, PP0504, PP0530, PP0565, PP0724, PP0885, PP0888, PP0889, PP0890, PP0993, PP1143, PP1226, PP1362 and PP1406). Concerns raised include:

- Road and pedestrian safety issues as the local roads are narrow and unsuitable, with poor visibility, no pavements or streetlights, no safe route to school, roads cannot be widened to an adoptable standard and/or is already impacted by existing heavy traffic usage (PP0026, PP0033, PP0100, PP0129, PP0156, PP0179, PP0192, PP0213, PP0318, PP0320, PP0428, PP0429, PP0481, PP0504, PP0530, PP0565, PP0724, PP0885, PP0888, PP0889, PP0890, PP0993, PP1143, PP1226 and PP1362)
- The Council's traffic assessment has not taken account of traffic from the Lifeboat factory that use Old Inn Road (west) (PP0504).
- There is no public transport available in Findon (PP0026, PP0179, PP0318, PP0428, PP0429, PP0481, PP0724, PP0885, PP0889, PP0890 and PP1362).
- It will increase the use of private cars (PP0481).
- The gradient of the site means that it would not be possible for pedestrian access to be taken for those with additional needs, wheelchair users or pushchairs (PP0026, PP0192, PP0889, PP0890 and PP0993)
- There is a lack of infrastructure, local amenities, and services to support the development (PP0100, PP0129, PP0213, PP0481, PP0885, PP0888, PP0889, PP0890 and PP1406).

- There is no justification for this site, brownfield sites should be utilised and there are other housing sites nearby (e.g., Chapelton, Newtonhill, Portlethen and Marywell) (PP0100, PP0213, PP0885, PP0889, PP0890, PP0993, PP1143 and PP1406).
- It is a modern housing development that will erode the unique character and historic identity of Findon, alter the density and distribution of houses, and/or bring adverse visual impact (PP0026, PP0033, PP0100, PP0129, PP0213, PP0428, PP0429, PP0481, PP0888, PP0890, PP0993, PP1143, PP1362 and PP1406).
- It would introduce unwanted streetlights, which would change Findon's character (PP0026, PP0129, PP0428, PP0885, PP0889, PP0890, PP993, PP1143 and PP1406).
- It would result in overdevelopment (PP0129, PP0428, PP0429, PP0481, PP0888 and PP1143), and planning permission for 5 homes to the north was refused (APP/2014/1850) for this reason (PP0129).
- The development would have a negative impact on natural heritage, landscape and/or recreational green space. Some representees also note Findon is surrounded by the coastal strip and adjacent to Findon Moor Site of Special Scientific Interest (SSSI) (PP0026, PP0033, PP0100, PP0213, PP0504, PP0889, PP0890, PP0993 and PP1143).
- It is not the right development in the right place (PP0026, PP0033, PP0179, PP0889, PP0890, PP1362 and PP1406).
- It will result in the unnecessary loss of agricultural land, (PP0026, PP0428, PP0429, PP0889, PP0890, PP1362 and PP1406).
- It would remove a green space that is embedded in the village that allows views of the South East Aberdeenshire Coast Special Landscape Area (SLA) from Earnsheugh Terrace and Old Inn Road (PP0033).
- The inclusion of green space within the plan will not enhance the green network (PP0033 and PP0100).
- Development may impact on access to the coastal path used by residents and visitors (PP0192).
- There is limited energy infrastructure, and the waste water system would require a significant upgrade (PP0100, PP0213 and PP0885).
- The field has poor drainage (PP0213).
- Building to the north of Findon would be more appropriate to avoid the narrow streets (PP0481).

Three representees have included a number of Appendices (RD0078.A, RD0078.B and RD0082.A) in their representation which provides further detail to support their position (PP0481 and PP0530).

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation/designation summary for site OP1. No modification sought (RD0214.B) (PP1219).

Non-Allocated Site – Bid Site KN085 – Land at West of Findon Place

A representee has raised concern regarding the impact 30 homes would have on the road network (PP0504).

Marywell

Site BUS1 – Safeguarded for business and class 11 leisure uses

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation/designation summary for site BUS1 (RD0214.B). No modification sought (PP1219).

Site BUS2 – Safeguarded for business uses

SEPA has requested for site BUS2 that the allocation text states a Peat Survey, and a Phase 1 Habitat Survey is required (see RD0214.B) (PP1219).

Flood Risk

SEPA has questioned the need for the second 'Flood Risk' bullet point as they are not aware of any flood risk issues on site OP1. They have suggested if the Council's Flood Prevention Unit (FPU) confirm there is a surface water issue it should be confirmed if this can be addressed through appropriate SuDS, and if not, they confirm a Flood Risk Assessment is required. They have requested additional wording to the second bullet point to state site OP1 is vulnerable to surface water flooding (RD0214.B) (PP1219).

Services and Infrastructure

Scottish Water has requested that under 'Strategic drainage and water supply' a new comment is added to state there is sufficient capacity at Nigg Waste Water Treatment Works and that a Drainage Impact Assessment may be required (PP0272).

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (see RD0214.B). No modification sought (PP1219).

Site OP1 – Land East of Old Stonehaven Road

It is requested that site OP1 for 52 homes is removed from the PLDP and reallocated to Stonehaven or Portlethen where there are existing facilities and services. It is argued that the vision for Marywell is to provide employment land and this site is next to employment land. Marywell lacks amenities and services, making this site contrary to the aims of the PLDP in line with paragraph 3.13 (sustainable development that reduces the need to travel). They also report that the Community Council rejects any further development in Marywell (PP0664).

SEPA have stated that they are not aware of any flood risk issues affecting site OP1 and have suggested this is confirmed with the Council's FPU. They note that if a Flood Risk Assessment is required or if surface water flooding needs to be addressed through SuDS, that this should be highlighted in the allocation summary (RD0214.B) (PP1219).

Muchalls

Services and Infrastructure

It is requested that this entire section is removed as it is unnecessary as no residential allocations have been identified and so no development impacts require to be mitigated by developer obligations (PP1053).

SEPA have requested that a new ‘Strategic drainage and water supply’ bullet point should be added for consistency, as any development in Muchalls will be required to connect to the existing waste water network (see RD0214.B) (PP1219).

Non-Allocated Sites – Bid Site KN059 – Land at Dunnyfell Road

A representee has requested the allocation of new site KN059 for 50 homes in Muchalls. They have stated there is insufficient housing land to meet its Housing Land Requirement HLR. The PLDP relies on historic housing sites that were considered constrained in the 2019 HLA and many of the sites in the existing land supply have been continually delayed in development while still contributing to the effective housing land supply. There have been no allocations of housing land at Muchalls in recent LDPs and one is needed to increase the range of housing and sustain services in the settlement. The site can fit within the conservation area and special landscape setting and its scale is compatible with Muchalls. It could improve the public access network. A Flood Risk Assessment has been carried out. The representee has included a number of Appendices (RD0230.A and RD0230.B) in their representation which provides further detail to support their position (PP1250).

Newtonhill, Muchalls and Cammachmore Community Council has expressed their support to not allocate bid site KN059 for 50 homes, as it would have made the community of Muchalls unsustainable and result in coalescence with Newtonhill. They also highlight it is important to protect the coastal environment of Muchalls as a tourist destination, which will enhance the local economy in the long-term (PP0556).

Another representee also expressed their support to not allocate bid site KN059 as it would increase coalescence with Newtonhill, result in the loss of green belt land, increase pressure on local amenities, includes no employment land, adversely affect Muchalls Conservation Area and result in overdevelopment (PP0880).

Modifications sought by those submitting representations:

Banchory-Devenick

Aberdeen City Proposed Local Development Plan 2020 – Site OP46 – Royal Devenick Park

Modify the PLDP to clarify if any part of the Aberdeen City PLDP site, OP46 Royal Devenick Park for 150 homes is within Aberdeenshire and if so, remove it (PP0196, PP0197, PP0307, PP0328, PP0334, PP0338, PP0339, PP0340, PP0354, PP0355, PP0359, PP0360, PP0378, PP0379, PP0391, PP0432, PP0433, PP0434, PP0439, PP0452, PP0453, PP0461, PP0475, PP0476, PP0486, PP0498, PP0521, PP0541, PP0570, PP0575, PP0649, PP0726, PP0779, PP0780, PP0789, PP0817, PP0839, PP0849, PP0903, PP0922, PP0933, PP0953, PP0979, PP0996, PP1008, PP1009, PP1011, PP1029, PP1150, PP1159, PP1162, PP1163, PP1164, PP1341, PP1342, PP1346, PP1364, PP1365, PP1366, PP1367, PP1368, PP1369, PP1370, PP1371, PP1372, PP1373, PP1374, PP1375, PP1376, PP1377, PP1378, PP1379, PP1380, PP1381, PP1382, PP1383, PP1384, PP1385, PP1386, PP1387, PP1388, PP1389, PP1391, PP1396, PP1398, PP1404 and PP1405).

Modify the PLDP to clarify the location of the new access road in Aberdeenshire to

Aberdeen City site, OP46 Royal Devenick Park for 150 homes (PP0196, PP0197, PP0307, PP0328, PP0338, PP0339, PP0340, PP0354, PP0355, PP0359, PP0360, PP0378, PP0379, PP0391, PP0432, PP0433, PP0434, PP0439, PP0452, PP0453, PP0461, PP0475, PP0476, PP0486, PP0498, PP0521, PP0541, PP0570, PP0575, PP0649, PP0726, PP0779, PP0780, PP0789, PP0817, PP0839, PP0849, PP0903, PP0922, PP0933, PP0979, PP0996, PP1008, PP1009, PP1011, PP1029, PP1150, PP1162, PP1163, PP1164, PP1341, PP1342, PP1346, PP1364, PP1366, PP1367, PP1368, PP1369, PP1370, PP1371, PP1372, PP1373, PP1374, PP1375, PP1376, PP1377, PP1378, PP1379, PP1380, PP1381, PP1382, PP1383, PP1384, PP1385, PP1386, PP1387, PP1388, PP1389, PP1391, PP1398, PP1404 and PP1405).

Modify the PLDP to ensure road access of the proposal adjoining Deeside Brae and running parallel to the A92 [OP46 in the Aberdeen City PLDP 2020] is taken from the A92 rather than the B9077 (PP0288).

Non-Allocated Site – New Site N011 – Land at Leggart Brae

Modify the PLDP to include new site N011 for 100 homes that will be subject to a full masterplan, be accompanied by detailed technical assessment of flood risk, drainage, ecology and transport (road traffic generation), and provide for landscaping to frame the southern settlement edge (PP0868).

Cammachmore

None.

Chapelton

Vision

Modify the PLDP to amend the Vision to include a sentence at the end of paragraph two stating that Chapelton and Blairs will be the focus for significant development within the rural area of the North Kincardine administrative ward for the duration of the Plan (PP0775).

Services and Infrastructure

Modify the PLDP to amend the ‘Strategic drainage and water supply’ bullet point to include at the end, “Drainage Impact Assessment is required.” (PP0272).

Modify the PLDP to clarify what mechanism the “Strategic transportation” bullet point refers to regarding the gathering of contributions, and the nature and scale of such contributions (PP0578).

Modify the PLDP to amend the last sentence in the ‘Local transport infrastructure’ bullet point from, “There is a need to provide excellent public transport links to and from the site.” to “There is a need to provide excellent public transport and active travel links to and from the site.” (PP1241).

Site P1 – To protect the proposed Community Wood as an amenity for the settlement.

Modify the PLDP to remove site P1 (PP0751).

Site R1 – Safeguarded for future public open space as part of the development of Chapelton

Modify the PLDP to remove site R1 unless its uses are allowed as exceptions under Policy R1 Special Rural Areas (i.e., infrastructure, landscape, drainage and other ancillary works essential to the delivery of Chapelton) (PP0751).

Site OP1 – Chapelton

Modify the PLDP to reintroduce the full extent of Chapelton, as set out in the LDP 2017 allocation (OP1) and if necessary, add a caveat that this is separate from the 4,045 units with Planning Permission in Principle (PP0751).

Modify the PLDP to amend site OP1 to reduce the allocation from 4,045 homes to 1,420 homes and amend Appendix 6 accordingly (PP1081).

Modify the PLDP to clarify if the provision of a Gypsy/Traveller site on OP1 in Chapelton, depends on the development of the area/land and provide a timescale for the provision of a Gypsy/Travellers site on OP1 (PP0866).

Downies

Modify the PLDP to include Downies to the Settlement Statements in Appendix 7 (PP0124 and PP1226).

Non-Allocated Site – New Site N013 – Land at Burn of Daff

Modify the PLDP to include new site N013 for 10 homes and identify the village as a settlement (PP0454).

Findon

Services and Infrastructure

Modify the PLDP to amend the 'Services and Infrastructure' section to add a new 'Strategic drainage and water supply' bullet point on waste water drainage after consulting with Scottish Water to confirm that the proposed population growth is within the design criteria for the existing waste water infrastructure at Nigg and if not, the need for an upgrade is highlighted (PP1219).

Site OP1 – Land South of Earnsheugh Terrace

Modify the PLDP to remove site OP1 (PP0026, PP0033, PP0100, PP0129, PP0156, PP0179, PP0192, PP0213, PP0318, PP0320, PP0428, PP0429, PP0481, PP0504, PP0530, PP0565, PP0724, PP0885, PP0888, PP0889, PP0890, PP0993, PP1143, PP1226, PP1362 and PP1406).

Marywell

Site BUS2 – Safeguarded for business uses

Modify the PLDP to amend site BUS2 to add the following text to the allocation text to read, “A Peat Survey is required for the area of possible basin peat and peaty gleys to the southwest part of the site. A Phase 1 Habitat Survey will also be required.” (PP1219).

Flood risk

Modify the PLDP to review the need for the second flood risk bullet point in consultation with the Council’s Flood Prevention Unit, and if they confirm there is an issue, modify the PLDP to change the second bullet point from, “Part of site OP1 ... vulnerable to flooding. A ...” to read, “Part of site OP1 ... vulnerable to surface water flooding. A ...” (PP1219).

Services and Infrastructure

Modify the PLDP to include in the ‘Strategic drainage and water supply’ bullet point additional text, “There is currently sufficient capacity at Nigg Waste Water Treatment Works. A Drainage Impact Assessment may be required.” (PP0272).

Site OP1 – Land East of Old Stonehaven Road

Modify the PLDP to remove site OP1 and reallocate 52 homes in Stonehaven or Portlethen (PP0664).

Modify the PLDP to review if there is a surface water flooding issue and if a Flood Risk Assessment may be required, and if so, modify the PLDP to amend site OP1 to add in the allocation summary, “A Flood Risk Assessment may be required, and any surface water flooding should be addressed with appropriate SuDS measures.” (PP1219).

Muchalls

Services and Infrastructure

Modify the PLDP to remove this section from Muchalls Settlement Statement (PP1053).

Modify the PLDP to insert a new ‘Strategic drainage and water supply’ bullet point, in consultation with Scottish Water, to confirm the capacity of its waste water infrastructure in Muchalls (PP1219).

Non-Allocated Sites – Bid Site KN059 – Land at Dunnyfell Road

Modify the PLDP to include bid site KN059 for 50 homes in Muchalls (PP1250).

Summary of responses (including reasons) by planning authority:

Banchory-Devenick

Non-Allocated Sites – Bid Site KN069 – Land at Tollohill Wood (Phase 1), Bid Site KN070 – Land at Tollohill Wood (Phases 1-2), Bid Site KN071 – Land at Tollohill Wood (Phases 1-3), Bid Site KN072 – Land at Tollohill Wood (Phases 1-4)

The Council does not support allocating bid sites KN069, KN070, KN071 and KN072. Comments on bid sites KN069 to KN072 289 to 1,310 homes, commercial, employment land and school are noted. No change is required.

Aberdeen City Proposed Local Development Plan – Site OP46 – Royal Devenick Park

Comments objecting to Aberdeen City Council's PLDP site OP46 Royal Devenick Park and the road access are noted. However, this site is not within Aberdeenshire and as such, this matter will be subject to a separate LDP examination process if objections have been raised to Aberdeen City Council. It is noted that a planning application has been submitted to Aberdeenshire Council for a residential development and road access next to site OP46 at Banchory-Leggart (APP/2020/2492) (New Site N011). However, this is a matter for the development management process and further comments on this development are discussed below. No change is required.

Non-Allocated Site – New Site N011 – Land at Leggart Brae

The Council does not support allocating new site N011 for 100 homes. This site is within bid sites KN069 to KN072, which were not identified as preferred options in the Main Issues Report 2019 (MIR), see AD0038.F, pages 115-117. This new site was not put forward as a development bid and so was not considered as such at the MIR stage, nor subject to site assessment and public consultation. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. The scale of this proposal could also affect the delivery of developments at Chapelton, and the SDP states, "Allocations should be of a scale which would not inhibit the delivery of current strategic allocations", see AD0016, paragraph 4.19. While the development of Chapelton has been slow, identifying other sites to remedy the shortfall would divert the market demand to other sites and thereby threaten the viability and further delay the implementation of development at Chapelton.

With regards to the site itself, it is situated in the countryside, on the edge of Aberdeen City, and is constrained for a variety of reasons. This area is important in terms of the landscape setting of the City, and the site would have a negative impact on the Aberdeen green belt and the City. There is concern regarding access to the site, as the Causeymouth is a single-track road, and the new access would cut through the green belt and ancient woodland. There will be insufficient capacity at Portlethen Academy for new homes in this location without immediate upgrades, as the School Roll Forecasts 2019 state the academy will be at 103% capacity by 2024, see AD0110, Appendix 1, page 5. With the exception of Banchory Devenick Primary School, over 1km away, there are no other Aberdeenshire based services in the vicinity of the proposal and co-ordination with Aberdeen City would be required. While the site is close to the many facilities offered by Aberdeen City this does not outweigh the significant constraints. No change is required.

Cammachmore

Comments from the representees are noted. No change is required.

Chapelton

Vision

The Council notes the concerns regarding adding larger allocations in the SGA between Stonehaven and Aberdeen but disagrees with adding additional text. The Vision should only relate to Chapelton and it already states Chapelton “will have a major role in delivering development for the strategic housing and employment allowances over the next 20 years” in this SGA. The overall strategy for this SGA, which also mentions Blairs, is set out in para 5.13. No change is required.

Services and Infrastructure

The Council confirms that it intends to address Scottish Water’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council confirms that it intends to address Scottish Government’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications. The Strategic Transport Fund (STF) is no longer referred to in the Aberdeen City and Shire SDP.

The Council confirms that it intends to address Nestran’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site P1 – To protect the proposed Community Wood as an amenity for the settlement

The representee refers to Policy P1 Layout, siting and design and paragraph PR1.6, but this policy does not apply to the proposals maps. The Council does not support the removal of site P1 and notes on page 6 of the representee’s submission that they support site P1 in principle as it is in line with the masterplan, see AD0078, which was agreed in 2012. Site P1 also reflects the planning permission that was approved for a community woodland (see location plan of planning application APP/2015/2078, AD0067), which was submitted by the Elsick Development Company. Part of site P1 is within the green belt, and the Council will be reviewing the green belt as part of its review of the next LDP to take account of the now completed Aberdeen Western Peripheral Route (AWPR). The Council also notes NatureScot’s submission to the Main Issues Report 2019 where they highlighted the importance to retain the open agricultural landscape between Chapelton and Newtonhill and Portlethen to avoid coalescence. No change is required.

Site R1 – Safeguarded for future public open space as part of the development of Chapelton

The Council disagrees with removing site R1. Although the representee refers to Policy R1 Special Rural Areas, it is assumed they are referring to site R1 as they state, “it appears to overlap with the objectives of the Green Belt policy” and they request the removal of “the R1 designation north of Greenlaw Road”. Furthermore, Policy R1 is the Council’s policy on proposals affecting the green belt and the representee comments on the green belt and Policy R1 on page 6 of their representation. It is also noted that on page 6 of the representee’s submission that they support site R1 in principle as it is in line with the masterplan, see AD0078, which was agreed in 2012. With regard to the concerns that this site may prevent future infrastructure or other works associated with Chapelton, this should not be an issue providing they do not prohibit the future use of this site (open space).

Part of site R1 is within the green belt, and the Council will be reviewing the green belt as

part of its review of the next LDP to take account of the now completed Aberdeen Western Peripheral Route (AWPR). The Council also notes NatureScot's submission to the Main Issues Report 2019 where they highlighted the importance to retain the open agricultural landscape between Chapelton and Newtonhill and Portlethen to avoid coalescence, see AD0171 page 29.

In conclusion, no change is required.

Comments from SEPA are noted. No change is required.

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Chapelton

The Council does not support enlarging site OP1 to the area set out in the LDP 2017, see AD0034.H, which reflects the agreed development framework, see AD0074 and wider masterplan, see AD0078. Site OP1 in the PLDP reflects the approved Planning Permission in Principle, APP/2011/3100, which proposes a mix of uses including 4045 homes, up to 11.5ha employment land and 11ha as strategic reserve. It would be inaccurate and premature to include the whole masterplan area, which proposes around 8,000 homes (see also MIR 2019 Issues and Action Papers – Kincardine and Mearns, Bid KN055, (AD0040.F) pages 7 and 8). The Housing Land Audit (2019) does not show this allocation being completed before the next review of the LDP, see AD0022, Aberdeen Housing Market Area, page 20. No change is required.

The Council does not agree with reducing the allocation from 4,045 homes to 1,420 homes. The allocation total of 4,045 homes reflects the approved Planning Permission in Principle, APP/2011/3100. The site boundaries have not been adjusted with the site being carried forward and thereby totals are also representative of completed units within the allocated area. Housing completions are set out within Appendix 6 Housing Land Allocations. Details on the calculation of the housing land supply and contributions to the allowances is provided in the Schedule 4 Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations. No change is required.

Concerns regarding the delivery of the Gypsy/Travellers site on site OP1 are noted, but the Council is unable to provide a timescale on when this will be delivered. The development framework states that the "Newtonhill Employment District will sit outside the phasing sequence and will be delivered as demand requires.", see AD0074, paragraph 6.4. While no reference to a Gypsy/Travellers site is in the development framework or masterplan, it is a requirement in the allocation summary for site OP1. No change is required.

Comments from SEPA are noted. No change is required.

Downies

The Council does not agree to preparing a Settlement Statement for Downies in Appendix 7 as there are no land use allocations or other designations proposed for this settlement. Development in this area would be considered under the relevant policies in the PLDP. No change is required.

In relation to the need to upgrade the coastal path, where relevant the PLDP has referred to the community's desire for new paths (e.g., Muchalls vision statement, paragraph two, Newtonhill vision statement, paragraph two, and Portlethen Village vision statement, paragraph one). No change is required.

Non-Allocated Site – New Site N013 – Land at Burn of Daff

The Council does not support allocating new site N013 for 10 homes. The site was not put forward as a development bid so was not considered as such at the MIR stage, nor subject to site assessment and public consultation. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. It is considered that this site will have an adverse landscape and visual impact, as the site is outwith the village envelope and would change the linear character of Downies, and it is within the South East Coast Special Landscape Area as well as in the Coastal Zone. There will also be insufficient capacity at Portlethen Academy for new homes in this location, as the School Roll Forecasts 2019 state the academy will be at 103% capacity by 2024, AD0110, Appendix 1, page 5. No change is required.

Findon

Services and Infrastructure

Information received from Scottish Water during the PLDP process confirms there is sufficient capacity for site OP1 for 11 homes. The purpose of this section is to highlight where there is a potential shortfall or an LDP requirement for services and infrastructure. The Council is not aware of any strategic drainage and water supply issues affecting Findon. Furthermore, paragraph RD1.11 in the PLDP requires developments to connect to public sewers in the first instance. No change is required.

Site OP1 – Land South of Earnsheugh Terrace

The Council does not support the removal of this site. The allocation summary states any new development must comply with the Council's Roads Standards for road adoption. The site relates well within the settlement and while large in scale, this is the most appropriate way to allow the settlement to grow and not stagnate. It is also an opportunity for planned expansion to the settlement. Findon has a mix of house types, from all periods. The most recent completed development was approved in 2006 for four homes, which is adjacent to site OP1 (reference APP/2005/3017). Issues on design would be considered as part of any planning application to ensure that the development proposed was appropriate for the area. This site is enclosed by single track roads and a track and development on two sides. With regards to planning application APP/2014/1850 for 5 homes, it was allowed at appeal. The Reporter stated this site is within the developed envelope of Findon, is of a similar density, is not overdevelopment as it would not affect the character, environment and amenity of Findon, and would have no adverse landscape impact (see appeal decision for PPA-110-

2244, AD0070). No change is required.

Non-Allocated Site – Bid Site KN085 – Land at West of Findon Place

The comment on this site is noted. This bid site was not included as an opportunity site in the PLDP. No change is required.

Marywell

Site BUS1 – Safeguarded for business and class 11 leisure uses

Comments from SEPA are noted. No change is required.

Site BUS2 – Safeguarded for business uses

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Flood Risk

SEPA's online Flood Maps shows that part of site OP1 is at risk from surface water flooding. As such, a consistent approach should be applied where flooding has been identified on SEPA's flood maps and the possible need for a Flood Risk Assessment should be highlighted. The Council agrees with SEPA's modification. If the Reporter is minded, to make an amendment, then the Council recommend that the second flood risk bullet point is changed to read, "Part of site OP1... vulnerable to surface water flooding. A...".

Services and Infrastructure

The Council confirms that it intends to address Scottish Water's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Comments from SEPA are noted. No change is required.

Site OP1 – Land East of Old Stonehaven Road

The Council does not agree with removing site OP1. While Marywell lacks local facilities and services, it is on a bus route and it is adjacent to significant areas of employment. As such, it is appropriate to allocate land for housing in this area. In terms of potential impact, the new homes could have on businesses in site BUS2, there are houses next to site OP1 that are adjacent to sites BUS1 and BUS2, which have not prejudiced operations, land next to site OP1 is currently undeveloped and the allocation summary requires the developer to ensure it will not constrain developments on site BUS2. No change is required.

SEPA's online flood risk map shows part of this site is at risk from surface water flooding. Therefore, a consistent approach should be applied and the possible need for a Flood Risk Assessment should be inserted into the allocation summary. If the Reporter is minded, to make an amendment, then the Council recommend that the allocation summary could be modified to add at the end of paragraph four, "A Flood Risk Assessment may be required and any surface water flooding should be addressed with appropriate SuDS measures."

Muchalls

Services and Infrastructure

A pumping station takes foul water from Muchalls on to the water treatment plant at Nigg Bay in Aberdeen, which has capacity. The Council confirms that it intends to address SEPA's comment through non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Non-Allocated Sites – Bid Site KN059 – Land at Dunnyfell Road

The Council does not support allocating bid site KN059 for 50 homes. Bid site KN059 was not identified as a preferred option in the MIR 2019, see AD0038.F, page 72). Muchalls contains very few services within walking distance, its landscape is of historic and local importance as this site is within the Muchalls Conservation Area and the South East Aberdeenshire Coast Special Landscape Area. It is considered as overdevelopment as it would affect the character/sense of place of Muchalls. There are accessibility concerns onto the A92, and vehicles would have to cross a dual carriageway.

As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. The scale of this proposal could also affect the delivery of developments at Chapelton, and the SDP 2020 states, "Allocations should be of a scale which would not inhibit the delivery of current strategic allocations", AD0016, paragraph 4.19. While the development of Chapelton has been slow, identifying other sites to remedy the shortfall would divert the market demand to other sites and thereby threaten the viability and further delay the implementation of development at Chapelton. Support for the exclusion of this site in the PLDP is noted. However, this site is not within the green belt.

In conclusion, no change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.
2. The council has indicated that it intends to make what it refers to as "non-notifiable modifications" in relation to the settlement statement matters covered in Issue 47. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Banchory Devenick

Non-Allocated New Site N011

3. Proposal site OP46 – Royal Devenick Park is located within the Aberdeen City boundary. However, land for the formation of an access road, cycle paths and footpath and junction related to proposal OP46 lies within Aberdeenshire. Whilst an application (APP/2020/2492) covering these elements was submitted to Aberdeenshire Council in December 2020, this in itself is not a proposal in the proposed plan. I agree with the council that the determination of this application is a development management matter. It would not be appropriate for this plan to state where road access to proposal site OP46 should be taken. No modification is required.
4. There are no representations promoting the development of non-allocated bid sites KN069 – KN072. No modifications are required in response to the representations which support the exclusion of these sites in the proposed plan. Non-allocated new site N011 covers the eastern part of the much larger bid sites KN070 – KN072. It comprises land on either side of Causey Month; the area to the east of the road is predominantly in agricultural use and the land to the west is grassland with some pockets of trees and shrubs. I note that site N011 was not submitted as a development bid and has not been subject to a separate site assessment or consultation with key agencies or the public. A master plan submitted by The Comer Group shows how site N011 could be developed, in conjunction with the proposals for site OP46.
5. I acknowledge the challenges faced by The Comer Group in seeking to promote a housing allocation which straddles two council areas. However, the scope of this examination only allows me to address matters within the Aberdeenshire Local Development Plan area. As proposal OP46 is identified as a housing allocation in the proposed City of Aberdeen Local Development Plan, representations on this proposal, which were submitted to Aberdeen City Council, would be considered through its examination.
6. The strategic environmental assessment of bid sites KN069 – KN072 identifies some negative effects, which may also apply to site N011. These include water quality, flood risk, biodiversity and landscape setting. The council has also raised concerns regarding the impact of upgrading the existing single-track road on the green belt and ancient woodland. I note that The Comer Group has submitted its own strategic environmental assessment of site N011, which suggests any negative effects can be mitigated. However, this has not been subject to consultation and therefore it is not known whether the key agencies and other relevant parties agree with the assessment.
7. Matters relating to the overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area.
8. In addition to the identified environmental concerns, the delivery of homes on this site is linked to the development of allocation OP46 located within Aberdeen City. At this time, it is not known whether this allocation will be included in the adopted City of Aberdeen Local Development Plan, which may have implications for the deliverability of site N011. Given the availability of other sites to meet the strategic development plan allowance for the Aberdeen Housing Market Area (see Issue 5), there is no requirement to allocate this site. For the reasons outlined above, I conclude that site N011 should not be identified as a

housing allocation. No modification is required.

Chapelton

Vision

9. I agree with the council that it would not be appropriate to use the vision section of the Chapelton settlement statement to limit development in the rural part of North Kincardine. No modification is required.

Site P1 – To protect the proposed Community Wood

10. The representation to protected land designation P1 would appear to be based on a misunderstanding. The P1 on the Chapelton settlement map refers to the table on page 645 in the proposed plan, which states that the purpose of the designation is “to protect the proposed Community Wood as an amenity for the settlement. It does not refer to policy P1 (Layout, Siting and Design). No modification is required.

Site R1 – Safeguard for future public open space

11. The representation to the reserved land designation R1 would also appear to be based on a misunderstanding. The R1 on the Chapelton settlement map refers to the table on page 645 in the proposed plan, which states that site R1 is “safeguarded for future public open space as part of the development of Chapelton”. It does not refer to policy R1 (Special Rural Areas). The representation seeking changes to the green belt boundary at Chapelton is addressed under issue 4. No modification is required.

Services and Infrastructure

12. The strategic transportation bullet point in the proposed plan states that “contributions will be required for cumulative strategic transport improvements including interventions on the A90(T)”. The council has confirmed, in response to Transport Scotland’s representation, that this text refers to the previous strategic transport fund which is no longer being used. It has suggested that this bullet point be removed. I consider that deleting this bullet point may be misleading, as it would suggest that there are no strategic transport matters relevant to Chapelton. Instead the wording should be amended to indicate that strategic transport improvements associated with the phased development at Chapelton have been addressed through conditions attached to the planning permission and its associated legal agreement. A modification to this effect is recommended.

13. The inclusion of a reference to the need for a drainage impact assessment and active travel links to and from the site would provide clarification for developers. Modifications on these matters are recommended.

Allocation OP1 – Chapelton

14. Paragraph 120 in Scottish Planning Policy relates to local development plans outwith city regions. As Aberdeenshire is located within the Aberdeen City Region, it is the strategic development plan which is required to provide an indication of the possible scale and location of housing land beyond year 12 and up to year 20. Paragraph 119 of Scottish Planning Policy states that local development plans in city regions should allocate a range

of sites to meet the housing land requirement of the strategic development plan up to year 10 from the expected year of adoption.

15. The council has explained that the extent of allocation OP1 reflects the approved planning permission in principle. The site is expected to deliver 4045 homes in total. Based on a predicted annual build rate of 60 – 80 (as set out in the 2020 housing land audit), the site will continue to be developed well beyond the plan period. There is no requirement in Scottish Planning Policy or the strategic development plan for further land to be allocated at Chapelton at this time. However, I consider that the allocation summary should explained that the agreed development framework also includes additional land to the north and west of site OP1. A modification to this effect is recommended.

16. As indicated above, the boundaries of allocation OP1 reflect the outline planning permission. It would be misleading to suggest that the capacity of this site is only 1442 homes. The approach taken by the council in appendix 6 of the proposed plan is to refer to the total capacity of each housing allocation not the number of homes expected to be built by 2032. No modification is required.

17. The allocation summary for site OP1 states that a halting site for gypsy/travellers is to be provided within the employment land. In order to address the matters raised in relation to the delivery of this facility, I sought further information from the council (FIR002). It indicates that the legal agreement associated with the planning permission in principle requires the provision of a gypsy/traveller site or contributions in lieu of a site prior to the occupation of the 1745th housing unit. Whilst it is not possible to indicate exactly when this facility will be provided, the council states that the 1745th housing unit is estimated to be delivered during 2039. No modification is required.

Downies

18. The council has explained that settlement statements are only included for those settlements which have a land use allocation or other designation. In this context and given my conclusions below regarding new site N013, I agree that there is no need to provide a settlement statement for Downies. No modification is required.

19. The council has explained that reference to the community's desire for new paths is included in the vision statement for some settlements. However, this doesn't specifically address the request to upgrade the coastal path around Downies, Findon and Old Portlethen and provide viewing shelters.

20. Matters relating to footpath links outwith settlements are also covered in issues 07 and 14. I agree with the council that the request to upgrade the coastal path around Downies, Findon and Old Portlethen and provide viewing shelters is not a matter for the local development plan. I note that there are other council documents, such as the Core Path Plan and the Outdoor Access Strategy which could fulfil this role. No modification is required.

Non-Allocated New Site N013 – Land at Burn of Daff

21. MAK Properties Aberdeen Limited is seeking an allocation of 10 homes on agricultural land to the south of the settlement. Downies is a small village with no local facilities, located in close proximity to both Newtonhill and Portlethen.

22. As the site was not promoted through the early stages of plan preparation, it has not been the subject of a strategic environmental assessment, nor has it been subject to any form of key agency or public consultation. I am therefore unable to fully assess the merits or otherwise of the site at this time. However, I consider that development at this location would potentially have an adverse impact on the coastal zone, South East Aberdeenshire Coast Special Landscape Area and the character of the settlement. No details have been provided to demonstrate whether any negative effects could be mitigated.

23. Matters relating to the overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area.

24. I acknowledge that this site could potentially contribute to meeting this shortfall. However, given the potential adverse environmental impacts, the distance from local facilities and the availability of other suitable sites, I do not consider that site N013 should be identified as a housing allocation. No modification is required.

Findon

25. In response to the representation from the Scottish Environment Protection Agency (SEPA), the council has confirmed that there are no strategic drainage and water supply constraints affecting Findon. I therefore agree that there is no need to add a bullet point on this matter. No modification is required.

26. The proposed plan identifies a new housing allocation (OP1) for 11 homes on an area of open land to the north, east and west of Old Inn Road and within the South East Aberdeenshire Coast Special Landscape Area. Findon is a small village with no local facilities, but located close to Portlethen. Representations objecting to the allocation have raised a number of concerns including transport and access, infrastructure, landscape and visual impact, natural heritage and loss of open space.

27. The strategic environmental assessment of the site identifies no negative environmental effects. The site is not prime agricultural land and is not covered by any natural heritage designations. Whilst existing development borders the site to the east and north, the outlook to the west and south is more open. However, subject to detailed layout and design considerations, development would be unlikely to have a significant effect on the character of the village as a whole or the special landscape area. The site is not designated open space and I note that there is site within the village (P1) which is protected for environmental improvements and in recognition of its contribution to the character of the area.

28. Matters relating to road access are addressed in the allocation summary of the proposed plan and require the capacity of the site to be restricted to 11 homes. I observed from my site visit that the western section of Old Inn Road is narrow with no pavements, and also provides access to the business premises to the south. However, the geometry and character of the road network would discourage speeding traffic and, additional safety measures could be secured at planning application stage, if necessary. I note that there are no local facilities in Findon. However, the site is located close to existing business uses and would contribute to the range of allocations identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area.

29. I conclude, on balance, that the benefits in terms of helping to meet housing need, would outweigh the concerns raised in representations. I therefore consider that the allocation should be retained in the plan. No modification is required.

Marywell

30. I agree that the additional text requested by SEPA should be added to the description for BUS2 to highlight the need for a peat survey and phase 1 habitat survey.

31. The council has confirmed that part of site OP1 is shown as being at risk from surface water flooding on SEPA's online flood maps. I consider that it would be helpful to clarify the nature of the flood risk in the flood risk section and agree that reference to the need to address any flooding issues should be added to the allocation summary for site OP1 (Land East of Old Stonehaven Road). Modifications are recommended to this effect

32. The changes requested by Scottish Water in relation to strategic drainage and water supply would provide clarification on these matters. I agree that a modification is required.

33. The proposed plan includes a new housing site (OP1) on land which currently forms part of a larger business allocation in the existing local development plan. The site is identified as contributing 52 homes towards the strategic development plan allowance for the Aberdeen Housing Market Area.

34. Stewart Milne Homes consider that this allocation should be deleted and sites in Stonehaven or Portlethen allocated instead. Whilst Marywell contains existing and proposed businesses uses, there are existing housing areas, including to the north-east, south-west and north-west of allocation OP1. Notwithstanding the absence of local facilities, the allocation provides the opportunity to provide a more balanced mix of uses in Marywell. Buses run along Old Stonehaven Road and the requirement for a new bus stop is mentioned in the allocation summary. I do not consider there is any justification to delete this allocation. Housing bid proposals for sites in Stonehaven and Portlethen are addressed in Issues 45 and 46. No modification is required.

Muchalls

35. The council has not specifically addressed the representation seeking the removal of the services and infrastructure section in the Muchalls settlement statement. However, it has provided a response to the same matter in relation to the other settlements. I consider that this section is required, as planning applications may be submitted in and adjacent to Muchalls. It is appropriate for the settlement statement to highlight the circumstances in which developer contributions may be required. No modification is recommended.

36. The council has indicated that a pumping station takes foul water from Muchalls to a water treatment plant at Nigg Bay. As this treatment plant has capacity, no contributions would be required to mitigate the impact of development. Consistent with the approach taken in other settlements statements, there is no need to include a bullet point on strategic drainage and water supply in the Muchalls settlement statement. No modification is recommended.

Reporter's recommendations:

Modify the local development plan by:

Chapelton

1. Replacing the strategic transportation bullet point in the Chapelton settlement statement on page 646 with:

“• Strategic transportation: Strategic transport improvements associated with the phased development at Chapelton have been addressed through conditions attached to the planning permission and its associated legal agreement.”

2. Replacing the last sentence of the local transport infrastructure bullet point in the Chapelton settlement statement on page 646 with:

“There is a need to provide excellent public transport and active travel links to and from the site.”

3. Adding the following sentence to the end of the strategic drainage and water supply bullet point in the Chapelton settlement statement on page 646:

“A Drainage Impact Assessment will also be required.”

4. Inserting a new third sentence into the first paragraph of the allocation summary for OP1: Chapelton in the Chapelton settlement statement on page 647:

“The agreed development framework also includes land to the north and west of allocation OP1”.

Marywell

5. Adding the following sentence to the end of the description for BUS2 in the Marywell settlement statement on page 711:

“A Peat Survey is required for the area of possible basin peat and peaty gleys to the southwest part of the site. A Phase 1 Habitat Survey will also be required.”

6. Replacing the second bullet point in the flood risk section of the Marywell settlement statement on page 712 with:

“• Part of site OP1 is in an area potentially vulnerable to surface water flooding. A Flood Risk Assessment may be required.”

7. Inserting the following two sentences at the beginning of the strategic drainage and water supply section of the Marywell settlement statement on page 712:

“There is currently sufficient capacity at Nigg Waste Water Treatment Works. A Drainage Impact Assessment may be required.”

8. Adding the following sentence to the end of the fourth paragraph in the allocation summary for OP1 (Land east of Old Stonehaven Road) in the Marywell settlement statement on page 713:

“A Flood Risk Assessment may be required and any surface water flooding should be addressed with appropriate SuDS measures.”

Issue 48	Other Settlements AHMA (Kincardine and Mearns) South – Catterline, Drumlithie and Mill of Uras	
Development plan reference:	Proposed LDP, Appendix 7E Kincardine and Mearns, Page 643-644 Proposed LDP, Appendix 7E Kincardine and Mearns, Page 651-653 Proposed LDP, Appendix 7E Kincardine and Mearns, Other	Reporter: Alison Kirkwood

Provision of the development plan to which the issue relates:	Drumlithie Settlement Statement Catterline Settlement Statement Other Kincardine and Mearns Settlements	
Planning authority's summary of the representation(s):		
<p>Catterline</p> <p><u>Flood Risk</u></p> <p>The Scottish Environment Protection Agency (SEPA) has confirmed that they have no comment on the 'Flood Risk' section of the Settlement Statement. No modification sought (PP1219).</p> <p><u>Services and Infrastructure</u></p> <p>SEPA has requested that a new 'Strategic drainage and water supply' bullet point is added. It should be confirmed with Scottish Water that the proposed population growth is within the design criteria for the existing waste water infrastructure and if not, the need for an upgrade is highlighted, as all development in Catterline will be required to connect to the waste water network (RD0214.B) (PP1219).</p> <p>A representee has stated that as no residential allocations have been identified there will be no development impacts required to be mitigated by developer obligations and therefore this section is unnecessary (RD0214.B) (PP1091).</p> <p>Drumlithie</p>		

Flood Risk

SEPA has confirmed that they have no comment on the 'Flood Risk' section of the Settlement Statement (see RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no comment to the 'Strategic drainage and water supply' bullet point (see RD0214.B). No modification sought (PP1219).

Site OP1 – Adjacent to Bowling Green

SEPA has confirmed that they have no issues with the allocation text for site OP1 (RD0214.B) (PP1219).

Non-Allocated Site – Bid Site KN001 – Land at Burnside Croft

A representee has requested that bid site KN001 be allocated for 3 homes. They reported that the site was previously considered through the Examination process of the Local Development Plan (LDP) 2017, and although the Reporter believed the site to have some planning merit, they did not support it as no environmental assessment or public engagement had been undertaken. The representee has stated that the site relates well to Drumlithie, it is a modest development that will retain the trees adjacent to the burn, together with the two mature trees on the western boundary of the site and would not compromise the integrity of the P1 designation. It is considered that the site would meet local housing need and that development would improve the character and environment of the settlement and complement the OP1 allocation. They have noted that neither SEPA nor NatureScot object to this site. It is a logical direction for growth of the settlement. The representee has suggested that the allocation summary for KN001 should require the developer to undertake a Flood Risk Assessment, retain a buffer strip along the side of burn and enhance the strip with supplementary tree planting, extend the Tree Preservation Order (TPO), create a cycle/footpath that links to the footpaths in the adjacent OP1 site and the Millennium Path (PP0088).

Mill of Uras

Non-Allocated Site – Site OP1 as identified in the current LDP 2017

One representee has requested the continued allocation of OP1 for 5 homes, as identified in the LDP 2017, which has been removed from the Proposed Aberdeenshire Local Development Plan 2020 (PLDP). They suggested the existing wording for site OP1 in the LDP 2017 should be updated to reflect the planning application that was approved on 1 July 2020 on this site (APP/2019/1703). The short timescale between adoption of the LDP 2017 and the proposed removal of the site is unreasonable and could lead to uncertainty. The Settlement Statement should highlight the need to deliver a small housing development to meet local needs and support the falling school roll at Catterline Primary School as per the current LDP 2017 wording. The Council's Road Service raised no road safety concerns in respect of the junction with the A92 when considering the planning application, nor requested any mitigation. They also noted that the site will be delivered on a plot-by-plot basis and is due to commence in 2020. The representee has included a

number of Appendices (RD0021.A, RD0021.B, RD0021.C and RD0021.D) in their submission which provides further detail to support their position (PP0184).

Settlement Status

One representee has stated that Mill of Uras should be recognised as a settlement and have a Settlement Statement (PP0184).

Modifications sought by those submitting representations:

Catterline

Services and Infrastructure

Modify the PLDP to add a new bullet point for ‘Strategic drainage and water supply’ on waste water drainage after consulting with Scottish Water to confirm that the proposed population growth is within the design criteria for the existing waste water infrastructure and if not, the need for an upgrade is highlighted as all new development in Catterline will be required to connect to the waste water infrastructure (PP1219).

Modify the PLDP to remove the ‘Services and Infrastructure’ section in relation to developer obligations (PP1091).

Drumlithie

Non-Allocated Site – Bid Site KN001 – Land at Burnside Croft

Modify the PLDP to include bid site KN001 for 3 homes (PP0088).

Mill of Uras

Non-Allocated Site – Site OP1 as identified in the current LDP 2017

Modify the PLDP to continue the allocation of OP1 as in the current LDP (PP0184).

Settlement Status

Modify the PLDP to recognise Mill of Uras as a settlement (PP0184).

Summary of responses (including reasons) by planning authority:

Catterline

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

The Council confirms that it intends to address SEPA’s comment through a non-notifiable modification, as set out in the list of Non-Notifiable Modifications.

Whilst there are no allocated sites identified within the settlement boundary, proposals for new development may still be submitted for sites within and adjacent to the settlement, which will require to be appropriately assessed by the Council in accordance with the relevant policies of the LDP. In such instances, developer obligations will require to be sought to ensure that development impacts are mitigated against. No change is required.

Drumlithie

Flood Risk, Service and Infrastructure and Site OP1 – Adjacent to the Bowling Green

Comments from SEPA in respect to sections on Flood Risk, Services and Infrastructure and site OP1 are noted. No change is required.

Non-Allocated Site – Bid Site KN001 – Land at Burnside Croft

The Council does not support allocating bid site KN001 for 3 homes. Bid site KN001 was not identified as a preferred option in the Main Issues Report (MIR), see AD0038.F, pages 16-17). The site is not of sufficient scale to be allocated within the PLDP. Nonetheless, it is worth noting that the site was previously a waste water treatment plant of which some structure remains, but the area has naturalised and would not be considered brownfield land. Trees cover part of the site, some of which are protected by a TPO. Currently, there are trees on both sides of the road that form part of the woodland setting to Drumlithie and the clearance of trees, that are not protected on the site, would have a significant impact on the setting of the village. Furthermore, given the constraints relating to potential contamination and surface water flooding there are concerns as to whether this is a deliverable site and site OP1 opposite, which is allocated for 30 homes, has yet to be developed. In addition, there is no strategic need for further housing in this settlement and it is undesirable to allow development that would result in the loss of trees. The site is located on protected land P1 and it is preferred that this site continues to be safeguarded to protect the setting of the village. No change is required.

Mill of Uras

Non-Allocated Site – Site OP1 as identified in the current LDP 2017

The Council does not support allocating site OP1, as identified in the LDP 2017 for 5 homes. The continued allocation of OP1 was not a preferred option in the MIR, AD0038.F, pages 69-70). There are local concerns that the road junction onto the A92 is unsafe after several incidences in the area and at the time of preparing the PLDP, no planning application had been granted and the Housing Land Audit (HLA) 2019 identified the site as constrained, see AD0022, Aberdeen Housing Market Area, page 22). However, it is noted that planning consent has since been granted on this site (APP/2019/1703), and if implemented, it can be developed regardless of whether the site is allocated in the PLDP. Furthermore, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Settlement Status

The Council does not support adding Mill of Uras to the PLDP. Planning consent on the

LDP 2017 allocation (site OP1) has been granted with development expected to start in 2021. In addition, it is preferred that further housing at this location is restricted to limit the number of cars using the junction with A92, which is considered unsafe. As such, it is not deemed appropriate or necessary to retain the settlement status of Mill of Uras. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.
2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” in relation to the settlement statement matters covered in Issue 48. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Catterline

3. I note that the Catterline settlement statement in the proposed plan does not include any information on strategic drainage and water supply. I agree that the additional text requested by the Scottish Environment Protection Agency (SEPA) be included to address this omission. A modification to this effect is required.
4. Case Consulting Limited considers that the services and infrastructure section in the settlement statement should be deleted because there are no development allocations identified in Catterline. The absence of any allocated sites in the plan would not preclude the submission of planning applications for development on sites in or adjacent to Catterline. The potential need for relevant developer contributions towards services and infrastructure is as applicable to proposals on non-allocated sites as it is for those identified in the plan. I therefore consider the inclusion of this information in the settlement statement to be appropriate. No modification is required.

Drumlithie

Non-Allocated Bid Site KN001 – Land at Burnside Croft

5. This is a small triangular shaped site at the north eastern end of the settlement on the north side of Glenbervie Road. It is located opposite allocation OP1 (for 30 homes and 0.5 hectares of employment land) which lies on the south side of road. The site lies outwith the settlement boundary as shown in in the proposed plan and is included within protected land designation P1.
6. The council has explained that an allocation of three houses is too small to be identified in the local development plan. I note that there are no allocations smaller than five units in appendix 6 of the proposed plan. The 2019 housing land audit only lists sites of

five units or above, with completions on smaller sites recorded collectively. Within this context, I do not consider that the site would make a meaningful contribution to meeting the strategic development plan allowance for the Aberdeen Housing Market Area. I agree with the council that it would not be appropriate to identify an allocation for three homes.

7. The representee also seeks a modification to include the site within the settlement boundary. I observed on my site inspection that the main part of the site is overgrown grassland, with some trees close to its edges. I note from the evidence provided that development would not result in the loss of any trees.

8. I consider the site to be of rural character, which in visual terms blends into the open countryside to the east. I did not find the site to be unkempt or unsightly. The existing properties at Burnside Croft and the straight hedge on the east side of the bowling green, together with the settlement and 30 miles per hour signage, currently create a strong edge to the settlement. I acknowledge that the approach to the village from the east is likely to change once allocation OP1 is developed. However, at this time I do not consider there is any justification to amend the settlement boundary to incorporate site KN001. No modification is required.

Mill of Uras

Non-allocated Bid Site OP1 and Settlement Status

9. Site OP1 is located to the north and west of existing residential properties at Mill of Uras. Some farm buildings lie to the north of the site. The current local development plan allocates the site for five homes and includes a settlement statement for Mill of Uras. As there are no other allocations or designations affecting the settlement, the decision by the council not to carry forward allocation OP1, means that there is no settlement statement in the proposed plan.

10. The reasons given by the council for not carrying the allocation forward relate to concerns regarding the road junction and the effectiveness of the site. However, I note that these concerns would appear to have been resolved as planning permission has since been granted for five homes on the site.

11. I do not consider that Mill of Uras meets the definition of a “settlement” provided in the glossary of the proposed plan. Whilst allocation OP1 may bring the total number of residential addresses to at least 15, there is not a recognised boundary or built up area and it is not urban in character. However, a settlement statement would be required if OP1 was to be identified as a housing allocation.

12. In the absence of up to date information on service and infrastructure matters, it would be difficult to prepare a settlement statement for Mill of Uras through the examination process. I am also conscious that there would be no opportunity for input from local residents and other stakeholders. On the basis that the implementation of the current planning permission would not be prejudiced by the non-allocation of site OP1, I recommend no modifications.

Reporter’s recommendations:

Modify the local development plan by:

Catterline

1. Adding the following new first bullet point under the Services and Infrastructure heading in the Catterline settlement statement on page 643:

“• Strategic drainage and water supply: All development will be required to connect to the waste water treatment works. If there is insufficient capacity, a growth project will be initiated once development meets Scottish Water’s five growth criteria.”

 Durriss Forest Settlement Statement
 Kirkton of Durriss Settlement Statement
 Kirkton of Maryculter Settlement Statement
 Park Settlement Statement
 Woodlands of Durriss Settlement Statement
 Other Kincardine and Mearns settlements

Planning Authority's summary of the representation(s):

Ardoe

Non-Allocated Site – Bid Site KN124 – Land North of Thurcroft House

A representee has requested the allocation of bid site KN124, land at Ardoe, for one house. Small-scale residential developments in the area have been supported and it is requested to allocate this land in the PLDP (PP0956).

Blairs

General

Objection has been made that Blairs is not identified as a settlement, but only a residential

allocation. Therefore, they have requested that a settlement boundary is introduced to reflect the approved planning consents for Blairs. They also noted that in terms of the assessment criteria used to define a settlement in the LDP, it is based on the settlement serving a residential function, having street lighting, reduced road speed and at least 15 homes. They argue all these criteria apply to Blairs, which can be found in the comments in the Main Issues Report for Ladysbridge in Banff and Buchan. They report that a new masterplan is under discussion with Development Management, with no major changes proposed, although a small area of land adjoining the existing proposed housing is likely to be promoted for residential use. In addition, the proposed uses at Blairs College include a hotel, conference centre, holiday accommodation, leisure and retail uses, a community hall, and office/commercial use are all compatible with Blairs as a settlement. Locating the hotel within a settlement boundary improves the possibility of it being delivered. The representee has included a number of Appendices (RD0067.A and RD0067.B) to support their position (PP0445).

Vision

North Kincardine Rural Community Council has requested an additional sentence is added at the end of paragraph two stating that Blairs and Chapelton will be the focus for significant development in the rural area of the North Kincardine administrative ward for the duration of the Local Development Plan (LDP). They suggested this would help to retain the rural character by limiting large scale development whilst helping to support timely delivery at Blairs and Chapelton (which have been impacted by economic downturn), along with small scale unallocated development. They are concerned that adding more large sites could affect delivery of infrastructure and other services, which would negatively impact on residents, and place significant pressure on the limited infrastructure (roads etc.) and services (primary school provision) in this rural ward and have a negative impact overall (PP0774).

Flood Risk

Scottish Environment Protection Agency (SEPA) has requested rewording the first 'Flood Risk' bullet point to remove "Parts of" so that it refers to the whole of the Blairs College Estate (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has requested a new 'Strategic drainage and water supply' bullet point is added to make reference to waste water drainage. They argue that as all development in this settlement will be required to connect to a waste water network, the status of the waste water capacity (network and treatment plant) must be confirmed and the need for any upgrade highlighted (RD0214.B) (PP1219).

Site OP1 – Blairs College Estate

SEPA has confirmed that they have no issues with the allocation summary for site OP1 (RD0214.B) (PP1219).

Scottish Water has requested a new comment to state, "There is currently sufficient capacity at Nigg Waste Water Treatment Works. A Drainage Impact Assessment will be required, may be possible to add to the ongoing Aberdeen Strategic Drainage Impact

Assessment (DIA).” (PP0272).

A representee has expressed their support for this site, but have raised several concerns:

- The current layout omits the house (plot 22) lying immediately to the west of Burnside Cottages.
- The Settlement Statement should state the need for development at Blairs to be in accordance with an updated masterplan being prepared for Blairs in consultation with the Planning Authority. This would also bring this in line with the Housing Land Audit.
- Reference should be made in the Settlement Statement for Blairs for children having the option to attend for secondary education either Mackie Academy or Cults Academy. The school was not designated; therefore, school pupils were unaware to which school they would be going to. This would create a classification system for pupils living in the area.
- The reference made for contributions being required for community facilities in the wider catchment area at Portlethen should be replaced with their commitment to provide a new community hall at Blairs as part of the development.
- The reference made to healthcare contributions being required for Blairs should be removed. An Appendix outlining the approved masterplan has been submitted (RD0067.B) to support their position (PP0445).

Historic Environment Scotland (HES) has requested the Council seeks additional measures to keep the listed Blairs College buildings, most of which have been on the national Buildings at Risk register since 1990, wind and watertight and stem further decay, while the feasibility of restoration and reuse is further explored. They are concerned with the extended timeframe for the enabling development at OP1 and continued lack of a detailed Restoration Scheme for these historic buildings. They have also noted that the site boundary for site OP1 now excludes the listed Blairs College complex (RD0266.A) (PP1343).

NatureScot has requested that the allocation summary for site OP1 includes a requirement for the provision for active travel facilities. They have also noted a potential for routes to link northwards beyond the site and over the proposed footbridge over the River Dee, as this would promote safe and convenient opportunities for active travel in accordance with the Proposed Local Development Plan’s (PLDP) aims (RD0255.B) (PP1300).

NatureScot has requested that the allocation summary for site OP1 clarifies that future planning applications will be subject to a Habitats Regulations Appraisal (HRA), which will allow the Council to consider whether individual proposals are likely to have a significant effect and whether an adequate Construction Method Statement (or Construction Environmental Management Plan) may be required to avoid adverse effects on the integrity of the River Dee Special Area of Conservation (SAC) (RD0255.B) (PP1300).

Non-Allocated Site – Bid Site KN110 – Land at Blairs College Estate, South Deeside Road

A representee has requested extending site OP1 to include bid site KN110 for residential, commercial and leisure developments to reflect the approved planning consents for Blairs, which includes the former Blairs College and associated buildings of historic importance. This would allow some flexibility in terms of appropriate alternative uses and design of the development. They added, this should be considered appropriate for the reasons: 1. The

wider site, including enabling housing development at the hamlet sitting between the B9077 and the River Dee is to create an integrated community with supporting local service; 2. The landscape setting allowed to keep the natural topography and previously built environment and heritage of the former college buildings, along with the continued use of the New Chapel, a category A listed building by the community. They also stated that if the development and existing buildings at Blairs are included within site OP1, it would strengthen the green belt. They argue, applying green belt policies and restrictions to the existing historic buildings at Blairs removes the flexibility required to bring forward timeously, alternative uses for the buildings, which will ensure their retention and beneficial use for the future. The representee has included a number of Appendices (RD0067.A and RD0067.B) to support their position (PP0445).

Cookney

Services and Infrastructure

SEPA has requested that for consistency, a new 'Strategic drainage and water supply' bullet point is added to state that there is no public waste water infrastructure in Cookney (see RD0214.B) (PP1219).

A representee has stated that no residential allocations have been identified so there will be no development impacts required to be mitigated by developer obligations and therefore this section is unnecessary (PP1049).

Durris Forest

Site R1 – Safeguarded for outdoor recreation facilities associated with a sport/adventure centre

Crathes, Drumoak and Durris Community Council support the site as the area needs a sensitive approach to better develop it to become a tourist destination (PP0337).

SEPA has requested text is added to site R1 requiring a Peat Survey and to encourage the restoration of peatland (RD0214.B) (PP1219).

A representee has requested changing the R1 designation to an opportunity site for outdoor recreation facilities associated with a sports/adventure centre. They argue the reserved land designation does not provide the presumption in favour of development as an allocation would. No justification has been provided on why it was not considered appropriate to allocate the site within the Main Issues Report Issues and Actions Papers. The Proposed Aberdeen City and Shire Strategic Development Plan 2020 requires LDPs to consider opportunities to ensure the importance of sustainable tourism to the regional economy are recognised and safeguarded. The representee has included a number of Appendices (RD0011.A and RD0011.B) to support their position (PP0118).

Two representees (PP0276) and (PP0457) have objected to the R1 designation for the following reasons:

- Development would have a serious adverse impact on private water supply affecting health due to the potential for contamination and sustainability of the water supply.
- Concern regarding servitude rights.

- Loss of privacy/being overlooked, noise, disturbance, lack of public transport resulting in traffic issues, impact on wildlife, loss of trees, the layout, design and visual appearance of the development, flood risk and drainage, impact on the River Dee SAC and natural and cultural assets.
- There are a number of similar facilities nearby.
- Other alternative locations have not been given due consideration.
- No assessments have been carried out for site access, traffic impact on local roads, carbon impact assessment or the need for this asset.

A representee has included a drawing (RD0040.A) to support their position (PP0276).

Flood Risk

SEPA has no comment on the 'Flood Risk' bullet point (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has requested for consistency, a new 'Strategic drainage and water supply' bullet point is added to state that there is no public waste water treatment available in Durris Forest and any private waste water treatment will require full authorisation from SEPA (RD0214.B) (PP1219).

Kirkton of Durris

General

Crathes, Drumoak and Durris Community Council support the agreed sites in the PLDP and those not preferred in the Main Issues Report 2019 (PP0337). They state there is no requirement for further development at this stage in this settlement (PP0347). They also note development south of the River Dee does not comply with local and national policies due to the lack of public transport and any development would not provide sufficient demand for a viable service. The community have an interest to protect the sensitive nature of the River Dee and its habitats. Local infrastructure does not support such developments in particular the limited access to Drumoak via Park Bridge. (PP0337).

Site P1 – To protect the area as a significant contribution to the character of the place and forming part of the green-blue network and Site P2 – To protect the cemetery as an amenity for the settlement, for contribution to the character of the place and forming part of the green-blue network

Crathes, Drumoak and Durris Community Council support sites P1 and P2 (PP0347).

Crathes, Drumoak and Durris Community Council has requested a reduction of the current speed limit on the B9077 and the siting of glass recycling adjacent to Kirkton Durris Hall, which would aid strategic recycling and waste infrastructure (PP0347).

Flood Risk

SEPA has requested adding a new 'Flood Risk' section and bullet point to state that parts of Kirkton of Durris are at risk from flooding from the River Dee (not River Don as stated on

the representation) and the Burn of Sheeoch and Flood Risk Assessments may be required (RD0214.B) (PP1219).

Services and Infrastructure

A representee has requested removing this section as no allocations have been identified and there are no development impacts that require to be mitigated (PP1114).

SEPA has requested for consistency, removing reference to SEPA in the 'Strategic drainage' bullet point and to only note there is no public waste water infrastructure in Kirkton of Durris (RD0214.B) (PP1219).

Settlement Map

A representee has expressed their support to extend the settlement boundary to include planning permission APP2014/2859 for two homes and creating a gap site for future housing. However, to prevent multiple points of access off the B9077 and improve road safety, it is suggested extending the settlement boundary northwards to allow any future homes to connect to the new road access that was built as part of planning permission APP/2014/2859. The representee has included a number of Appendices (RD0172.A, RD0172.B, RD0172.C and RD0172.D) to support their position (PP0908).

Non-Allocated Site – Bid Site KN075 – Land North of B9077

A representee has requested the allocation of bid site KN075 for 12 homes as it would ensure the planned, sustainable and balanced growth of Kirkton of Durris, allow for consolidation of the village layout, whilst making a modest contribution to strategic housing targets set by the Aberdeen City and Shire Strategic Development Plan. It is added that the proposal would be sympathetic, unobtrusive, provide affordable housing, allow for several environmental and local quality of life improvements, such as shared waste water treatment works, public open space or a play area to be used as a new focal point for the village and provide further justification for a reduction of the speed limit on the B9077. It is refuted that the proposal would have an adverse impact on the Dee Valley Special Landscape Area as the site is well contained in the landscape, the indicative site layout would reflect the traditional pattern of development and the character of the village, the proposed landscaping would integrate the site with the existing woodland driveway to the west and provide a sense of enclosure to the village and strategic landscaping would form a defensible northern and eastern boundaries that would mitigate the wider visual impact of the development and provide for further visual integration of the development into the existing village. The representee has included a number of Appendices (RD0172.A, RD0172.B, RD0172.C and RD0172.D) to support their position (PP0908).

Non-Allocated Site – New Site N012 – Durris Glebe

A representee has requested that a new site (N012) be allocated for 20 homes, including 50% affordable housing. The site was not submitted as a bid at the call for sites, but a submission was made with a MIR response and does not appear to have been considered. The site is considered to be an effective, viable and deliverable site with existing access and could reflect the scale and density of existing housing to the south and west of the site. The site is well related to the existing settlement and would round-off the settlement and be viewed as a natural and logical expansion of the village. Housing would meet local needs and help sustain and support the limited number of local facilities. There are no known

flood risk or heritage or archaeological constraints. The aspiration for the site would be to provide a high-quality development and provide a variety of housing for house buyers in a settlement which has not benefited from new housing development in recent years. 50% provision of affordable housing would be included and any uplift from the sale of the site would be reinvested back into the community. The allocation would complement existing housing in the area and meet the objective of the settlement by meeting local housing needs, sustaining local services, and enhancing the role and attractiveness of the settlement. The representee has included a number of Appendices (RD0262.A, RD0262.B and RD0262.C) to support their position (PP1309).

Kirkton of Maryculter

Vision

A representee has requested the removal of the reference for the need for a car park for Kirkton of Maryculter as a car park for the community wood now exists and it is sufficiently large enough to ensure there is an appropriate level of public access to the woodland (PP0310).

Services and Infrastructure

SEPA has confirmed that they have no comment on the 'Strategic drainage and water supply' bullet point (RD0214.B). No modification sought (PP1219).

Site OP1 – Land off Polston Road

SEPA has confirmed that they have no issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

Non-Allocated Site – Bid Site KN123 – Land East of Altries Wood

A representee has requested the allocation of bid site KN123 for 10 homes, including rural employment. The site provides a small logical extension to a small rural settlement offering a new sustainable rural lifestyle together with a community growing opportunity that is not generally available under current policy. The proposal would enhance the character of the rural settlement rather than detract from it and offers possibilities for working without the need for travel. The site would help address a lack of housing land to meet the area's housing needs and providing small-scale extensions to rural settlements will help maintain the region's rural population. The site's location in the countryside is not a valid justification to discount it, nor does landscape impact preclude the proposal due to its positioning and design. There is also good access to services and other settlements. The representee has included copies of their bid submission (RD0125.A) to support their position (PP0747).

Netherley

Settlement Status

A representee has suggested that Netherley should be included in the Settlement Statements. Netherley is an established grouping of 13 properties. They note that Cookney is included in the Settlement Statements, but it is smaller than Netherley (PP0189).

Non-Allocated Site – Bid Site KN015 – Land at Netherley House

A representee has requested the allocation of bid site KN015 for 4 homes. They consider that the constraints identified can be overcome. The countryside location of the proposal should not be a reason to prevent development and SPP promotes rural development. The development would create a community that will support local services and business, including the primary school. The site is well connected to transport links and there is a bus stop in close proximity. Capacity exists in the waste water treatment works. It is recognised that the site, when based on the Council's standard density of 25 homes per hectare, would accommodate 20 homes. However, it is intended that the development would be low density to reflect its rural location. It is considered that flood risk can be mitigated. Although no amenities exist within walking distance, there are a range of amenities and facilities in the area, including Lairhillock Inn, Lairhillock Lodge, Lairhillock Primary School and Cookney Hall. The bid site is therefore considered to be well placed in relation to these facilities. The representee has included a number of Appendices (RD0023.A and RD0023.B) to support their position (PP0189).

Park

Services and Infrastructure

SEPA has requested that the last sentence of the 'Strategic drainage and water supply' bullet point that refers to SEPA is removed (RD0214.B) (PP1219).

Site OP1 – Land to the West of Park Village Hall

SEPA has requested that the allocation text for site OP1 states that the public sewer network is 0.5km away from the site (RD0214.B) (PP1219).

NatureScot has suggested that the allocation summary for site OP1 includes a requirement that any proposal will be subject to a Habitats Regulations Appraisal in order to consider potential effects on the qualifying interests of the River Dee SAC. As part of the process, the Council can then consider whether the proposal is likely to have a significant effect and whether an adequate Construction Method Statement (or Construction Environmental Management Plan) may be required to avoid adverse effects on site integrity (RD0255.B) (PP1300).

A representee has suggested that the size of OP1 is not large enough to accommodate the increased allocated housing density of 13 homes and accordingly the site size will need to be increased (PP0957).

Two representees (PP0040 and PP0059) have objected to site OP1 as:

- The site has been allocated in the last two LDPs with no planning application coming forward.
- The scale of the site would double the size of Park and change the nature of the settlement.
- The scale of the development is not sufficient to support the local shop.
- The failure to bring the site forward has frustrated previous LDP's housing targets through an unused allocation.

- Development would have a detrimental impact on the settlement's historic landscape and the former Free Church.
- There is no demonstrated local housing requirement in the settlement and no evidence as to how the development would enhance the village environment or community atmosphere.
- The proposal is contrary to several LDP policies and other supporting Planning Advice notes.
- 20% maximum growth from organic growth guidance is more appropriate if development is permitted in the settlement.

Both representees also considered that development should be directed toward Drumoak, which is better placed to absorb development due to its scale and facilities (PP0040 and PP0059).

Woodlands of Durris

General

Crathes, Drumoak and Durris Community Council has suggested that several planning applications at Upper Balfour, Woodlands of Durris for 18 homes and their impact on the school, services and infrastructure were not taken into account in the Main Issues Report (PP0348).

Settlement Status

One representee has requested the removal of the settlement status for Woodlands of Durris as they consider there is no demand for further housing and further development would have a detrimental impact on residents. There is no capacity available at Banchory Academy and no room for expansion. The water and sewerage works would require upgrading and there is no capacity for further development on local roads and no public transport available (PP0004).

Services and Infrastructure

Crathes, Drumoak and Durris Community Council have stated that no further housing should be considered without upgrades in the waste water treatment works and water supply to prevent repetition of existing issues with temporary waste storage and maintaining adequate supply pressure. They note that current school facilities and resources (indoor/outdoor spaces) are inadequate with a continued need for transportation to Drumoak Primary for physical education. The school roll forecast should be updated including all additional developments in progress. The road to the South Deeside Road requires improvements due to the increased traffic and travel needed as a result of Park Bridge and withdrawal of public transport. The roads need the addition of footways, and improvement at the junction with the South Deeside Road due to safety and visibility issues. Improvements adjacent to the new footpath running to the [Woodlands of Durris] school entrance are still pending (PP0348).

Site OP1 – Land Northwest of Clune Gardens

SEPA have confirmed that they have no issues with the allocation text for site OP1. No modification sought (RD0214.B) (PP1219).

NatureScot has suggested that the allocation summary for site OP1 includes a requirement that any proposal will be subject to a Habitats Regulations Appraisal in order to consider potential effects on the qualifying interests of the River Dee SAC. As part of the process, the Council can then consider whether the proposal is likely to have a significant effect and whether an adequate Construction Method Statement (or Construction Environmental Management Plan) may be required to avoid adverse effects on site integrity (RD0255.B) (PP1300).

NatureScot has suggested that the connection to a public sewer does not need to be specified in the allocation summary for site OP1 as mitigation in order to avoid an adverse effect on integrity of the River Dee SAC, as all development will need to comply with SEPA's policy and supporting guidance on the provision of waste water drainage in settlements (RD0255.B) (PP1300).

There is support for the allocation of 27 homes at OP1 to meet local housing need, while not making any further allocation in this area (PP0077). Further support is given to the allocation and they agree that the mature tree belt to the east of the site provides an effective means of visual mitigation and will allow for the visual integration of the development into the existing landscape setting. It is added that strategic landscaping will be proposed to provide further visual mitigation of the development from the north and west, the site will connect with public sewer network and the local primary school has capacity. The representee has included a number of Appendices (RD0167.A, RD0167.B and RD0167.C) to support their position (PP0901).

Crathes, Drumoak and Durris Community Council supports the agreed sites in the PLDP and those excluded. Development south of the River Dee does not comply with local and national policies due to the lack of public transport and any development would not provide sufficient demand for a viable service. The community have an interest to protect the sensitive nature of the River Dee and its habitats. Local infrastructure does not support such developments in particular the limited access to Drumoak via Park Bridge. (PP0337).

A representee has requested that the preferred points of access referred to in the allocation for site OP1 is removed, to allow this to be assessed and deliberated as part of the planning application process. It is suggested that it is not necessary to specify which point of access should be utilised as the site can be accessed from either the unnamed public road to the east or Clune Gardens, and that access 'tails' have been left along Clune Gardens to facilitate future vehicular and pedestrian access to the site and safeguards linkages between OP1 and the rest of the settlement (PP0901).

Non-Allocated Sites – Bid Site KN136 – Land at Upper Balfour, North of Woodlands of Durris and Bid Site KN138 – Land North West of Woodland of Durris

A representee supports the exclusion of bid sites KN136 for 15 to 20 homes and KN138 for 30 homes and supports the settlement Vision (PP0348).

Modifications sought by those submitting representations:

Ardoe

Non-Allocated Site – Bid Site KN124 – Land North of Thurcroft House

Modify the PLDP to include bid site KN124 for one home (PP0956).

Blairs

General

Modify the PLDP to identify Blairs as a settlement and introduce a settlement boundary to the Settlement Plan that is in line with the approved planning consents, including the former Blairs College and associated buildings (PP0445).

Vision

Modify the PLDP to add a sentence to the end of paragraph two to state that Blairs and Chapelton will be the focus for significant development in the rural area of the North Kincardine administrative ward for the duration of the Plan (PP0774).

Flood Risk

Modify the PLDP to reword the first bullet point on 'Flood Risk' from, "Parts of Blairs College Estate ..." to "Blairs College lies within an area potentially vulnerable to flood risk ..." (PP1219).

Services and Infrastructure

Modify the PLDP to add a new 'Strategic drainage and water supply' bullet point to confirm the status of the waste water capacity (network and treatment plant) and highlight the need for any upgrades (PP1219).

Site OP1 – Blairs College Estate

Modify the PLDP to state, "There is currently sufficient capacity at Nigg Waste Water Treatment Works. A Drainage Impact Assessment will be required, may be possible to add to ongoing Aberdeen Strategic DIA." (PP0272).

Modify the PLDP to amend the Settlement Plan to include plot 22 to the west of Burnside Cottages (PP0445).

Modify the PLDP to include reference for the need for development to be in accordance with an updated masterplan being prepared for the settlement (PP0445).

Modify the PLDP to include reference that children have the option to attend either Mackie Academy or Cults Academy for secondary education (PP0445).

Modify the PLDP to remove reference to contributions being required for community facilities in the wider catchment area at Portlethen and replaced with for a new community hall at Blairs (PP0445).

Modify the PLDP to remove the required for healthcare contributions (PP0445).

Modify the PLDP to ensure additional measures to keep the listed buildings at Blairs College wind and watertight (PP1343).

Modify the PLDP to amend the allocation summary of site OP1 to include, “Provision for active travel is required, in particular noting the potential for paths to link northwards towards the proposed footbridge over the River Dee.” (PP1300).

Modify the PLDP to amend the allocation summary of site OP1 to include a new penultimate sentence in paragraph six that states, “Future planning applications will require to be the subject of a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC.” (PP1300).

Non-Allocated Site – Bid Site KN110 – Land at Blairs College Estate, South Deeside Road

Modify the PLDP to include bid site KN110 for residential, commercial and leisure uses (PP0445).

Modify the PLDP to remove the green belt designation for any land that falls outwith the proposed settlement boundary (as submitted by the representee) so that any area that falls within the designated green belt is removed from the designation (PP0445).

Cookney

Services and Infrastructure

Modify the PLDP to add a new ‘Strategic drainage and water supply’ bullet point to state: “There is no public waste water infrastructure available in Cookney.” (PP1219).

Modify the PLDP to remove the ‘Services and Infrastructure’ section from the Settlement Statement (PP1049).

Durris Forest

Site R1 – Safeguarded for outdoor recreation facilities associated with a sport/adventure centre

Modify the PLDP to amend site R1 to change the second sentence in paragraph one from, “As approximately 50% of the site has Type 5 Peat, a Phase 1 Habitat Survey will be required.” to “As approximately 50% of the site has Type 5 Peat, a Peat Survey and Phase 1 Habitat Survey will be required. Peatland restoration should be considered as part of the proposal. A Construction ...” (PP1219).

Modify the PLDP to change the R1 designation to an opportunity site for outdoor recreation facilities associated with a sports/adventure centre (PP0118).

Modify the PLDP to remove the R1 designation (PP0276 and PP0457).

Services and Infrastructure

Modify the PLDP to add a new ‘Strategic drainage and water supply’ bullet point to state, “There is no public waste water infrastructure available in Durris Forest. Any private waste water treatment will require full authorisation from SEPA.” (PP1219).

Kirkton of Durris

General

Modify the PLDP to seek a reduction of the current speed limit on the B9077 and the siting of the glass recycling adjacent to Kirkton Durris Hall (PP0347).

Flood Risk

Modify the PLDP to add a new 'Flood Risk' section and bullet point to read: "Parts of the settlement are at risk from flooding from the River Dee and Burn of Sheeoch. Flood Risk Assessments may be required." (PP1219).

Services and Infrastructure

Modify the PLDP to amend the 'Strategic drainage and water supply' bullet point from, "There is no public waste water treatment available. The Scottish Environment Protection Agency (SEPA) will need to be consulted and full authorisation sought for relevant licensing of private treatment." to "There is no public waste water infrastructure in Kirkton of Durris." (PP1219).

Modify the PLDP to remove the 'Services and Infrastructure' section (PP1114).

Settlement Map

Modify the PLDP to extend the settlement boundary to include planning permission APP/2014/2859 (PP0908).

Non-Allocated Site – Bid Site KN075 – Land North of B9077

Modify the PLDP to include bid site KN075 for 12 homes (PP0908).

Non-Allocated Site – New Site N012 – Durris Glebe

Modify the PLDP to include site N012 for 20 homes (PP1309).

Kirkton of Maryculter

Vision

Modify the PLDP to remove reference to the need for a car park (PP0310).

Non-Allocated Site – Bid Site KN123 – Land East of Altries Wood

Modify the PLDP to include bid site KN123 for 10 homes (PP0747).

Netherley

Settlement Status

Modify the PLDP to include Netherley in the Settlement Statements (PP0189).

Non-Allocated Site – Bid Site KN015 – Land at Netherley House

Modify the PLDP to include bid site KN015 for 4 homes (PP0189).

Park

Services and Infrastructure

Modify the PLDP to remove the last sentence of the 'Strategic drainage and water supply' bullet point, "Scottish Environment Protection Agency (SEPA) will need to be consulted and full authorisation sought for relevant licensing of any private treatment." (PP1219).

Site OP1 – Land to the West of Park Village Hall

Modify the PLDP to add in the first sentence in paragraph two, "... sought with connection to the public sewer network 0.5km away." (PP1219).

Modify the PLDP to add text at the end of paragraph two, "This proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC." (PP1300).

Modify the PLDP to increase the size of OP1 to accommodate the allocation (PP0957).

Modify the PLDP to remove site OP1 and direct development towards Drumoak (PP0040 and PP0059).

Woodlands of Durris

General

Modify the PLDP to take into account planning applications at Upper Balfour (PP0348).

Settlement Status

Modify the PLDP to remove the settlement status for Woodlands of Durris (PP0004).

Services and Infrastructure

Modify the PLDP to reference that further housing should be considered without upgrades to the waste water treatment works and water supply (PP0348).

Modify the PLDP to make reference to inadequate school facilities and resources (indoor/outdoor spaces) (PP0348).

Modify the PLDP to state improvements are required to the road to the South Deeside Road (PP0348).

Site OP1 – Land Northwest of Clune Gardens

Modify the PLDP to amend the allocation summary of site OP1 to add text after the first

sentence of paragraph three to read, “This proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC.” (PP1300).

Modify the PLDP to amend the allocation summary of site OP1 to remove at the end of paragraph three, “... to mitigate effects on the River Dee SAC.” (PP1300).

Modify the PLDP to remove reference to the preferred points of access to the site (PP0901).

Summary of responses (including reasons) by planning authority:

Ardoe

Non-Allocated Site – Bid Site KN124 – Land North of Thurcroft House

The Council does not support allocating bid site KN124 for a single home. Bid site KN124 was not identified as a preferred option in the MIR 2019, (AD0038.F, page 113). The site is not of sufficient scale to be allocated within the PLDP and it is considered constrained as it is situated within the green belt and ancient woodland. It is also within the former Ardoe House Designed Landscape, would encourage ribbon development and it is not within walking distance of services and would encourage the use of unsustainable modes of transport. This view was taken forward in the Issues and Actions Papers, see AD0040.F, page 153. Furthermore, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Blairs

General

The identification of Blairs as a settlement in the LDP with a settlement boundary is not supported at this time given the lack of progress to build the homes and renovate the former Blairs College. No change is required.

Vision

The Council disagrees with including a sentence on where development will be focused in the north of Kincardine and Mearns, as this is a statement more appropriate in the Spatial Strategy in section 5 of the PLDP than in a Settlement Statement. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

The Council confirms that it intends to address SEPA’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Blairs College Estate

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council agrees that the omitted housing plot number 22 that has extant planning permission (APP/2013/1292) should be included within site OP1. However, as the representee has stated that a revised masterplan is still in development, any modifications to the masterplan would be appropriately assessed and there is no requirement to amend the allocation summary for site OP1. The Council confirms that it intends to address the representee's comment on the missing housing plot through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Regarding comments on the school catchment area, this is not a matter for the PLDP to consider. Site OP1 is currently within the catchments of Lairhillock Primary School and Mackie Academy. Contributions towards community facilities and healthcare are assessed on the current situation in the area. There are currently no community facilities within Blairs due to the lack of progress in the build out. Therefore, contributions are sought on the basis that the future housing would rely on facilities and healthcare in the surrounding area, and appropriate contributions would be sought towards them. No change is required.

It is not a matter for the PLDP to include additional measures to keep the listed buildings at Blairs College wind and watertight, as this can be sought through other legislative means. No change is required.

The Services and Infrastructure section of Blairs states that a footbridge, with cycle path provision, is required. It is considered that this covers provision for active travel. No change is required.

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Non-Allocated Site – Bid Site KN110 – Land at Blairs College Estate

The Council does not support allocating bid site KN110 for a mix of residential, commercial and leisure uses. Bid site KN110 for 325 homes (enabling development), golf course, equestrian centre, hotel and holiday accommodation was identified as a preferred option in the MIR 2019, but only the housing element was supported (as site OP1), see AD0038.F, page 119. Much of bid site KN110 includes white land with no proposed uses. This could result in more development in a sensitive and important landscape, which is currently designated as green belt, and impact on the setting of the listed buildings associated with Blairs College.

While there could be merit in reserving land at Blairs College for commercial and leisure uses that has planning permission, the representee's response illustrates uncertainty with the delivery and proposed uses at Blairs (see point 6 on page 6). Furthermore, Blairs College can come forward as per the approved planning consent without the need to be allocated in the LDP. In addition, the historic buildings that are in the green belt also

benefit from an extant permission, although no progress has been made on these. There is also no requirement to include these historic buildings within an allocation as any future planning application for these buildings would be assessed in accordance with the relevant policies of the LDP.

In conclusion, no change is required.

Cookney

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Whilst there are no allocated sites identified within the settlement boundary, proposals for new development may still be submitted for sites within and adjacent to the settlement which will require to be appropriately assessed by the Council in accordance with the relevant policies of the PLDP. In such instances, developer obligations will require to be sought to ensure that development impacts are mitigated against. No change is required.

Durris Forest

Site R1 – Safeguarded for outdoor recreation facilities associated with a sport/adventure centre

The Settlement Features table has been incorrectly titled as "Protected Land" when it should be called "Reserved Land". The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

As noted in the Issues and Actions paper for Kincardine and Mearns, it is not considered appropriate to allocate a site that is neither residential nor business/employment land, see AD0040.F, page 155. By identifying the site as reserved land for outdoor recreational use only it is maintained that this is appropriate given the conceptual nature of the proposal at this stage and the consent that is being sought. Furthermore, safeguarding the site is in line with SPP by promoting an opportunity for tourism or recreation facilities in the PLDP. No change is required.

The site is considered suitable for this type of development as an opportunity to promote tourism. Technical matters, such as private water supply, traffic impact, flood risk, impact on environment and amenity would be fully assessed through the submission of a detailed planning application. No change is required.

Support is noted for a sensitive approach to better develop the area to become a tourist destination. No change is required.

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Due to the sensitive nature of this area, the Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Kirkton of Durris

General

It is acknowledged that a speed reduction on the B9077 and glass recycling is sought, however this is not a matter which can be addressed through the LDP process. Although, the settlement boundary has been extended to include a gap site to encourage motorists to slow down when approaching the east side of the settlement. No change is required.

Site P1 – To protect the area as a significant contribution to the character of the place and forming part of the green-blue network and Site P2 – To protect the cemetery as an amenity for the settlement, for contribution to the character of the place and forming part of the green-blue network

Support is noted for sites P1 and P2. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Whilst there are no allocated sites identified within the settlement boundary, proposals for new development may still be submitted for sites within and adjacent to the settlement which will require to be appropriately assessed by the Council in accordance with the relevant policies of the PLDP. In such instances, developer obligations will require to be sought to ensure that development impacts are mitigated against. No change is required.

Settlement boundary

Support for the extension of the settlement boundary to include the two homes approved under APP/2014/2859 is noted. However, the proposal to extend the boundary further north is not considered appropriate. The gap site created between the original dwellings in the settlement and the new dwellings is considered sufficient to provide opportunities for infill development, but extension of the settlement further north would not be appropriate. The settlement boundary has been extended to help reduce the speed of motorists on the B9077. No change is required.

Non-Allocated Site – Bid Site KN075 – Land North of Durris

The Council does not support allocating bid site KN075 for 12 homes. Bid site KN057 was not identified as a preferred option in the MIR 2019 see AD0038.F, page 45. As outlined in the Issues and Actions Papers, see AD0040.F, page 50, there were concerns raised from NatureScot (SNH at the time) and other respondents highlighting a number of concerns including proximity to the River Dee SAC, impact on protected species, impact on the Dee Valley Special Landscape Area, lack of infrastructure, over development, and the lack of demand for new housing. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. There is not a strategic need to allocate further development opportunities in Kirkton of Durriss at this time. No change is required.

Non-Allocated Site – New Site N012 – Durriss Glebe

The Council does not support allocating new site N012 for 20 homes. The site was not put forward as a development bid so was not considered as such at the MIR stage, nor subject to site assessment and public consultation. However, the issues affecting bid site KN075, which is immediately south of this site, would be similar for this new site. Although it was noted by the representee that the Church of Scotland only promotes sites for development supported by the local congregation, it cannot be confirmed that this is the view of the wider community. In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area and it is not proposed to allocate this site within the PLDP. No change is required.

Kirkton of Maryculter

Vision

The Council agrees with amending the Vision, as the car park has since been built. If the Reporter is minded, to make an amendment, then the Council recommend removing the last sentence, “However, there is a desire by the local community for a car park at Kirkton of Maryculter Wood to the south of the properties at Rosebank.”

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Land off Polston Road

Comments from SEPA are noted. No change is required.

Non-Allocated Site – Bid Site KN123 – Land East of Altries Wood

The Council does not support allocating bid site KN123 for 10 homes. Bid site KN123 was not identified as a preferred option in the MIR 2019, see AD0038.F, page 55. It is maintained that the development is neither sustainable nor appropriate. The site does not relate well to Maryculter West, and development at this location is considered to erode the structural integrity of the landscape character due to the important role of the adjacent woodland in providing coherence and order. The site is distant from key services and

would encourage car dependency. No change is required.

Netherley

Non-Allocated Site – Bid Site KN015 – Land at Netherley House

The Council does not support allocating bid site KN015 for 4 homes. Bid site KN015 was not identified as a preferred option in the MIR, see AD0038.F, page 57. It is considered that the low-density development would have a negative and irreversible impact on the setting of the Category B listed Netherley House and its designed landscape. This is due to the close proximity of the proposal. The site is in an unsustainable location due to being distant from key services, nor is it in a desirable location being situated in a flood risk zone. Whilst capacity may not be an issue in the waste water treatment works, private drainage arrangements risk environmental harm on the adjacent watercourse, which is part of the River Dee catchment. The priority is to consider where development can be located across the area in relation to where local services exist and can be sustained. It is considered this is not the right development in the right place. In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area and it is not proposed to allocate this site within the PLDP. No change is required.

Settlement Status

Regarding the suggestion that Netherley should be identified as a settlement comparable to Cookney, it should be noted that Cookney remains identified on account of it having land with protected status. Cookney is an identifiable settlement with a community hall, rather than a cluster of houses like those around Netherley House. No change is required.

Park

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Land to the West of Park Village Hall

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

To ensure that the density of existing allocations with no planning history are consistent with Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, which addresses concerns on the scale of development that could take place, the site has been increased from 6 to 13 homes, based on 25 homes per hectare, see AD0040.F, pages 98-99. Accordingly, the site has also been reduced from 0.86 hectares to 0.5 hectares. No change is required.

In response to the objection to the allocation, this site has been brought forward from the existing 2017 LDP. The allocation and development of the site over the Plan period is considered to help maintain the existing services within Park, namely the shop, and at Drumoak. No change is required.

Woodlands of Durris

General

Whilst it has not been mentioned that applications in the surrounding area have been taken into account in the MIR 2019, these sites are outwith the settlement of Woodlands of Durris and as such, are not considered as part of the considerations for this settlement and are not required to be assessed. No change is required.

Settlement Status

Woodlands of Durris is an important settlement in the overall rural area as it is the education provider for a large catchment, therefore maintaining the school is an objective, which the status as a settlement can assist to maintain. The allocation of housing can assist in providing contributions towards appropriate infrastructure. No change is required.

Services and Infrastructure

Upgrades to the existing water infrastructure may be required with further development. This would be initiated once development meets the five growth criteria from Scottish Water in order to qualify for a Growth Project. No change is required.

Site OP1 – Land Northwest of Clune Gardens

Comments in support and those from SEPA are noted. No change is required.

The Council confirms that it intends to address NatureScot's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

In relation to the allocation text for connection to the public sewer, this is considered necessary to identify that private waste water treatment will not be accepted for proposals. No change is required.

The suggestion that the access point should not be specified within the allocation text is acknowledged and referring to two points of access confusing. However, the Council deems it appropriate to state that the preferred route of access into the site is from Clune Gardens, as access from the unnamed road to the east would put a strain on the road network by creating multiple access points to housing. Furthermore, by reducing the number of accesses from this road, this is seen as appropriate in the interests of road safety. The Council confirms that it intends to address this issue through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Non-Allocated Sites – Bid Site KN136 – Land at Upper Balfour, North of Woodlands of Durris and Bid Site KN138 – Land North West of Woodland of Durris

Support for the exclusion of these sites in the PLDP is noted. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” in relation to the settlement statement matters covered in Issue 49. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Ardoe

3. A representation seeks the allocation of a site for a single dwellinghouse on land which is identified as being within the green belt in the proposed plan. Whilst there are other houses in the vicinity of the site, it is not located within or close to a settlement boundary. The allocation of land for a single dwellinghouse would not be justified on the grounds of contributing to strategic housing needs. Furthermore, the council has identified a number of negative environmental effects which would require to be addressed. I conclude that the site should not be allocated for housing development. No modification is required.

Blairs

General

4. A settlement statement is provided for Blairs in the proposed plan. However, it does not show a settlement boundary and allocation OP1 only includes the areas identified for housing development in the approved master plan. I note that a range of other uses are proposed in the masterplan. However, the information provided by Hermiston Securities Limited does not show any detailed proposals.

5. Hermiston Securities Limited has requested that all of the land covered by the approved master plan be identified within the settlement boundary. This includes allocation OP1, the listed college buildings and chapel and the remainder of the college grounds. I observed, on my site visit, that the college grounds include open fields and woodlands, which are essentially rural in character. No evidence has been submitted to indicate that these areas are to be developed in a form which would warrant inclusion in a settlement boundary. The absence of a settlement boundary would not prevent the implementation of any existing planning permissions. I agree with the council that a settlement boundary is not required at this time. No modification is recommended.

Vision

6. I agree with the council that it would not be appropriate to use the vision section of the Blairs settlement statement to limit development in the rural part of North Kincardine. No

modification is required.

Flood Risk

7. The Scottish Environment Protection Agency (SEPA) has indicated that the whole of the Blairs college estate is in an area potentially vulnerable to flood risk. A modification is required in the interest of clarification.

Services and Infrastructure

8. In response to SEPA's representation, the council has indicated that a pumping station takes foul water from Blairs to Nigg waste water treatment works in Aberdeen. As the representation from Scottish Water states that there is currently sufficient capacity at this waste water treatment works, an additional bullet point on strategic drainage and water supply would not be required. It would be more appropriate to address this matter through the amendment requested by Scottish Water to the allocation summary for site OP1 – Blairs College Estate. A modification to this effect is recommended.

9. The community facilities bullet point in the proposed plan indicates that contributions may be required towards facilities in Blairs or in the wider catchment area in Portlethen. This wording would allow the landowner/developer to bring forward a community hall at Blairs. However, as indicated by the council, contributions to facilities in the wider area may also be justified, subject to meeting the tests in Planning Circular 3/2012. No modification is required.

10. I agree with the council that school catchment areas are not a matter for the local development plan. Whilst I note the existing legal agreements do not require healthcare contributions, the site may be the subject of further applications. The inclusion of the bullet point on health and care facilities is consistent with other settlement statements in the proposed plan. However, policy RD2.14 uses the word 'may' rather than 'will', in relation to contributions towards health and care facilities. In the interests of consistency and to recognise that contributions can only be required where the tests of planning Circular 3/2012 are met, I consider that the wording of the health and care facilities bullet point should be amended. A modification is recommended.

Site OP1 – Blairs College Estate

11. The allocation summary in the proposed plan requires the preparation of a master plan. Hermiston Securities Limited has referred to some potential changes from the existing masterplan being considered. However, it would be premature to refer to these in the plan. I agree with the council that the extent of allocation OP1 should be amended to address the omission of housing plot number 22 lying immediately to the west of Burnside Cottages. I note that this would require a consequential amendment to the green belt boundary at this location. A modification to this effect is recommended

12. I agree with the council that measures to keep listed buildings wind and watertight are not matters for the local development plan. No modification is required.

13. With the exception of the footbridge over the River Dee, the allocation summary in the proposed plan does not include any reference to active travel. I consider the additional text requested by NatureScot would be consistent with the intended outcome of the plan

“to promote walking, cycling and public transport”. I also agree that information on Habitats Regulations Appraisal should be included, given the proximity of the site to the River Dee. Modifications on these matters are recommended.

Cookney

14. Planning applications may be submitted for sites in or adjacent to Cookney. It is appropriate for the plan to indicate the services and infrastructure where improvements and/or developer contributions may be required. No modification is recommended.

15. The Cookney settlement statement in the proposed plan does not include any information on strategic drainage and water supply. I agree that the additional bullet point requested by SEPA should be included to address this omission. A modification is recommended.

Durris Forest

16. Designation R1 in the proposed plan safeguards an area of commercial woodland for the purposes of outdoor recreation facilities with a sport/adventure centre. The bid submission proposes an adventure sport development comprising mountain bike trails, dry ski slopes, a hub building, car park and chairlift on the site. I consider that the reserved land designation shows the council’s support in principle for the proposed uses and promotes the opportunity in line with Scottish Planning Policy and the strategic development plan.

17. I agree with the representee that there are no reasons in Scottish Planning Policy or the strategic development plan why the site could not be identified as an allocation rather than a reserved land designation. However, no evidence has been provided in terms of a firm proposal or indicative layout. Given the conceptual nature of the proposal and the size of the site, I do not consider that an allocation in the plan would be appropriate.

18. The strategic environmental assessment undertaken for the proposed plan concludes that any negative effects on water, soil and biodiversity can be mitigated. It also identifies a number of positive effects. However, as highlighted in the matters raised in representations objecting to the reservation, there are potential impacts which would need to be addressed in detailed proposals. I agree with the council that these would be assessed at planning application stage.

19. I consider that the requirement for a peat survey and encouragement of peatland restoration in relation to reserved land designation R1 would be consistent with Scottish Planning Policy. I agree that the allocation summary should be modified, as requested by SEPA. No other modifications in relation to site R1 are required.

20. The settlement statement for Durris Forest in the proposed plan does not provide any information on strategic drainage and water supply. I agree that the wording requested by SEPA should be added to address this omission. A modification is recommended.

Kirkton of Durris

General

21. I agree with the council that the request for a reduction in the speed limit and siting of glass recycling are not matters for the local development plan to address. No modification is required.

Flood Risk

22. I agree with SEPA and the council that a new flood risk section should be added to indicate that parts of the settlement are at risk from flooding. A modification is recommended.

Services and Infrastructure

23. Planning applications may be submitted for sites in or adjacent to Kirkton of Durris. It is appropriate for the plan to indicate the services and infrastructure where improvements and/or developer contributions may be required. No modification is required.

24. I consider that the amendment requested by SEPA in relation to strategic drainage and water supply would provide clarification. A modification to this effect is recommended.

Non-allocated bid site KN075 – Land north of B9077

25. The site occupies flat, grazing land on the north side of the B9077 road. The main issues report indicates that the provision of 12 homes would be a significant increase in size of the settlement. A number of negative environmental effects are identified in the strategic environmental assessment and I note that there are no local services or facilities in the settlement. Whilst it may be possible to mitigate some of the negative effects, I have insufficient information before to reach a conclusion on these matters. Furthermore, I consider an allocation for 12 homes at this location would be likely to increase reliance on car travel.

26. Matters relating to overall housing provision in the Aberdeen Housing Market Area are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. Whilst this site could contribute towards meeting this shortfall if allocated, alternative sites have been identified. The allocation would therefore not be justified on the grounds of meeting housing need. No modification is required.

Non-allocated new site N012 – Durris Glebe

27. The site comprises a gently sloping grass field which lies to the south east of Durris church. I note that a bid submission form for this site was included in a response to the main issues report. However, the site has not been consulted on and is not been subject to strategic environmental assessment.

28. I agree with the council that many of the issues affecting bid site KN075 would also apply to this site. Furthermore, it lies closer to the River Dee than site KN075 which raises concerns in terms of the potential impact on the special area of conservation. Whilst the site is located adjacent to the settlement boundary, it is not well integrated with the main part of the settlement which is clustered around the B9077 road.

29. I note that the bid proposal includes 50% affordable housing. However, as indicated

above, other suitable sites have been identified to address the shortfall in the land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area in the period up to 2032. I conclude that this site should not be identified as a housing allocation. No modification is required.

Settlement Map

30. Given my conclusions in relation to the two non-allocated site, there is no justification to amend the settlement boundary at this time. No modification is required.

Kirkton of Maryculter

31. The vision section in the proposed plan indicates that the local community wishes to see the provision of a car park at Kirkton of Maryculter Wood. As this has already been delivered, I agree that the last sentence in the vision section should be deleted. A modification is recommended.

Non-allocated bid site KN123 – Land east of Altries Wood

32. Drum Property Group seeks the allocation of a 3.4 hectare area of grassland to the east of existing residential properties at West Maryculter. The proposal is for up to 10 houses and rural employment land. West Maryculter comprises two groups of houses positioned on either side of a minor road and framed by areas of ancient woodland. There are no local services or facilities in West Maryculter and the site is bound on all sides by open fields or woodland.

33. The protection of the existing woodland would result in a development which is physically separate from the existing homes in West Maryculter. Whilst additional planting would provide a landscaped framework for the new housing, it would not overcome the poor integration with the existing homes and may detract from the integrity of the existing woodland. I note that the strategic environmental assessment identifies post mitigation negative effects in relation to biodiversity and landscape and potentially water environment.

34. The revised bid seeks to address some of the council 's concerns by including a small-scale rural enterprise opportunity and other interpretations of sustainable living. However, this would not overcome the locational disadvantages of the site. Residents of the homes would rely on travel by private car to access all local services and facilities, which would not be in accordance with the intended outcome of the plan "to reduce the need to travel". Furthermore, paragraph 4.18 of the strategic development plan states that reducing travel distances will be an important consideration, particularly for new greenfield sites. I agree with the council that this is not a suitable location to promote additional housing.

35. Matters relating to overall housing provision in the Aberdeen Housing Market Area are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. Whilst this site could contribute towards meeting this shortfall if allocated, alternative sites have been identified. The allocation would therefore not be justified on the grounds of meeting housing need. No modification is required.

Netherley

36. Bid site KN015 lies within the countryside adjacent to an existing group of houses. The main issues report, issues and actions paper and strategic environmental assessment indicate that a development of four homes would result in a number of adverse impacts, including loss of woodland, risk of flooding and effect on the site and setting of a listed building. Insufficient information has been submitted to demonstrate that these constraints can be overcome.

37. The site is not within walking distance of local services and facilities and I consider that the development would be largely car dependent. Whilst I recognise that there are existing homes in the vicinity of the site, this does not justify the identification of a housing allocation. As indicated above, other suitable sites have been identified to address the shortfall in the land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area in the period up to 2032. I conclude that this site should not be identified as a housing allocation. No modification is required.

38. The council has explained that settlement statements have been provided for other small settlements where there is a development allocation or a protected/reserved land designation. These circumstances do not apply to Netherley and I therefore agree with the council that a settlement statement is not required. A modification on this matter would not be justified.

Park

39. I consider that the amendment requested by SEPA in relation to the strategic drainage and water supply bullet point would provide clarification. A modification to this effect is recommended.

40. Allocation OP1 lies on the western edge of Park, to the north of the A93 road. It is identified in the existing local development plan for six homes. The council has explained that the capacity has been increased to 13 homes, as a result of it applying a standard density of 25 homes per hectare.

41. The site is identified as effective in the 2019 and 2020 housing land audits and no evidence has been submitted to indicate there are any particular constraints. The additional seven homes proposed on the site are identified as contributing towards the strategic development plan allowance for the Aberdeen Housing Market Area. The increase in the indicative capacity is consistent with paragraph 4.8 in the strategic development plan which states that "land brought forward for housing must be used efficiently". I also consider that the allocation would help support the existing local shop. I conclude that the matters raised in representations would not justify the removal of the site from the plan. No modification is required.

42. I agree that the changes requested to the allocation summary by SEPA and NatureScot would provide clarification in relation to drainage matters and habitats regulation appraisal respectively. Modifications on these matters are recommended.

Woodlands of Durris

General and Settlement Status

43. I agree with the council that no change is required to the plan to take account of planning applications at Upper Balfour. Woodland of Durriss has a settlement statement in the existing local development plan. Given the remaining capacity in allocation OP1 still to be developed and protected land designation P1, there would be no reason to remove the settlement statement from this plan. No modifications are required on these matters.

Services and Infrastructure

44. The strategic drainage and water supply bullet point indicates that there is a capacity constraint at Durriss waste water treatment works and identifies a solution in the form of a Scottish Water growth project. Other bullet points in the services and infrastructure section indicates where developer contributions may be required, for example in relation to local transport infrastructure and sports and recreation facilities. I note that Durriss school is operating below capacity. No modifications are required.

Site OP1 – Land northwest of Clune Gardens

45. The additional sentence requested by NatureScot in relation to Habitats Regulations Appraisal would provide clarification on this process. The council has explained that the need for proposals to connect to a public sewer is because private waste water treatment will not be accepted. To address NatureScot's representation on this matter, I consider that the words "to mitigate effects on the River Dee SAC" should be deleted. Modifications on these matters are recommended.

46. The allocation summary in the proposed plan provides unclear and potentially conflicting advice on the preferred access to the site. The council has clarified that access from Clune Gardens, rather than from the unnamed road to the east, is preferred for reasons of road safety. Given the layout of the existing development at Clune Gardens, I can see no reason why an additional access from the unnamed road to the east would be required. I consider it appropriate for the council to indicate its preferred access point. This does not prevent alternative arrangements being considered at planning application stage. A modification is required to remove the sentence which promotes access from the east.

Reporter's recommendations:

Modify the local development plan by:

Blairs

1. Replacing the first sentence of the flood risk bullet point in the Blairs settlement statement on page 640 with:
"Blairs College lies within an area potentially vulnerable to flood risk as identified by the National Flood Risk Assessment."

2. Replacing the health and care facilities bullet point in the Blairs settlement statement on page 641 with
"• Health and care facilities: Residential development may be required to contribute towards the creation of additional capacity at medical facilities serving the locality."

3. Inserting the following sentence before the last sentence in the second paragraph of allocation OP1: Blairs College in the Blairs settlement statement on page 641:

“Provision for active travel is required, in particular noting potential for paths to link northwards towards the proposed footbridge over the River Dee.”

4. Replacing the second sentence in the sixth paragraph of allocation OP1: Blairs College Estate in the Blairs settlement statement on page 641 with:

“There is currently sufficient capacity at Nigg Waste Water Treatment Works. A Drainage Impact Assessment will be required, which may be possible to add to ongoing Aberdeen Strategic Drainage Impact Assessment.”

5. Inserting the following sentence before the last sentence in the sixth paragraph of allocation OP1: Blairs College in the Blairs settlement statement on page 641:

“Future planning applications will require to be the subject of a Habitats Regulations Appraisal in order to consider potential effects on the qualifying interests of the River Dee SAC.”

6. Amending the boundary of site OP1 on the Blairs settlement plan on page 642 to include plot 22 to the west of Burnside Cottages within the boundary of site OP1 – Blair College Estate, and removing this plot from the green belt on the settlement map, the Shaping Development in the Countryside Policy Map (page 37) and Appendix 4 Boundaries of the Green Belt (Map 7 page 123).

Cookney

7. Inserting the following new first bullet point in the services and infrastructure section of the Cookney settlement statement on page 649:

“• Strategic drainage and water supply: There is no public waste water infrastructure available in Cookney.”

Durris Forest

8. Replacing the first paragraph in the description of site R1 in the Durris Forest settlement statement on page 657 with:

“Safeguarded for outdoor recreation facilities associated with a sport/adventure centre. As approximately 50% of the site has Type 5 peat, a peat survey and Phase 1 Habitat Survey will be required. A Construction Method Statement may also be required. Peatland restoration should be considered as part of the proposal. The site is in close proximity to the qualifying site and is likely to disturb the qualifying features through tourism/visits.”

9. Inserting the following new first bullet point in the services and Infrastructure section of the Durris Forest settlement statement on page 657:

“• Strategic drainage and water supply: There is no public waste water infrastructure available in Durris Forest. Any private waste water treatment will require full authorisation from the Scottish Environment Protection Agency.”

Kirkton of Durris

10. Inserting a new flood risk section with the following bullet point in the Kirkton of Durris settlement statement on page 686:

“• Parts of the settlement are at risk from flooding from the River Dee and Burn of

Sheeoch. Flood Risk Assessments may be required.”

11. Replacing the second bullet point in the services and infrastructure section in the Kirkton of Durris settlement statement on page 686 with:
“• Strategic drainage and water supply: There is no public waste water infrastructure in Kirkton of Durris.”

Kirkton of Maryculter

12. Deleting the last sentence in the vision section of the Kirkton of Maryculter settlement statement on page 688.

Park

13. Deleting the final sentence from the strategic drainage and water supply bullet point in the Park settlement statement on page 722.

14. Replacing the second paragraph in allocation OP1 (Land to the west of Park Village Hall) in the Park settlement statement on page 723 with:
“Connection to Drumoak Waste Water Treatment Works should be sought, with connection to the public sewer 0.5 kilometres away. This proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC.”

Woodland of Durris

15. Deleting the last sentence in the second paragraph of the allocation summary for OP1 (Land Northwest of Clune Gardens) in the Woodlands of Durris settlement statement on page 760.

16. Adding the following new second sentence into the third paragraph of the allocation summary for OP1 (Land Northwest of Clune Gardens) in the Woodlands of Durris settlement statement on page 760:
“This proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee Special Area of Conservation (SAC).”

17. Removing the following words from the end of the third paragraph in the allocation summary for OP1 (Land Northwest of Clune Gardens) in the Woodlands of Durris settlement statement on page 760:
“...to mitigate effects on the River Dee SAC.”

<p>Arbuthnott</p> <p><u>Flood Risk</u></p> <p>Scottish Environment Protection Agency (SEPA) has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).</p> <p><u>Services and Infrastructure</u></p> <p>SEPA has requested adding a point on 'Strategic drainage and water supply' to state, "There is no public waste water infrastructure available in Arbuthnott." (RD0214.B) (PP1219).</p> <p>A representee has noted that no residential allocations have been identified so there will be no development impacts required to be mitigated by developer obligations. The representee seeks the removal of the Services and Infrastructure section from the Arbuthnott Settlement Statement (PP1041).</p> <p>Auchenblae</p> <p><u>Flood Risk</u></p> <p>SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).</p> <p><u>Services and Infrastructure</u></p> <p>SEPA has requested that a bullet point regarding a new 'Strategic drainage and water supply' is added to include reference to the status of the waste water drainage in Auchenblae, especially as both Auchenblae and Fordoun pump to Laurencekirk. They suggest this should be done in consultation with Scottish Water to confirm the status of waste water capacity (network and treatment plant) to take additional flow and, if required, the need for an upgrade of waste water infrastructure (RD0214.B) (PP1219).</p> <p><u>Site OP1 – Land South of Mackenzie Avenue</u></p>	

SEPA has requested removal of the second sentence from the first paragraph, “The site is slightly sloping from north to south with the Burnie Shag to the east, which means that a Flood Risk Assessment will be required” and add the following text after the current third sentence, “Should the extant permission elapse a Flood Risk Assessment will be required to assess the risk from the Burnie Shag watercourse along the southern boundary. Consideration should be given to any culvert/bridges which may exacerbate flood risk.” (RD0214.B) (PP1219).

One representee has noted that part of the development site is overgrown and causing a nuisance to the adjoining property. Clarification is sought on whether part of the site would be left unkempt or if homes would border Kintore Cottage and the doctor surgery (PP0165).

Fordoun and Fordoun Aerodrome

Site BUS1 – Safeguarded for business uses

SEPA has confirmed that they have no issues with the allocation text for site BUS1. No modification sought (RD0214.B) (PP1219).

Site BUS2 – Safeguarded for business uses

SEPA has requested a new ‘Flood Risk’ section and bullet point for site BUS2 to assess potential fluvial and surface water flood risk. They note there may be a culverted watercourse on the site, which will require a development buffer along its length. Buffer strips will also be required along all other watercourses and consideration given to their enhancement through re-naturalisation and the removal of manmade features (RD0214.B) (PP1219).

SEPA has requested either adding text noting that private waste water treatment may not be possible in the BUS2 site or added to the ‘Strategic drainage and water supply’ bullet point (RD0214.B) (PP1219).

SEPA has requested that additional text is added on contamination due to the site being located entirely within the former RAF Fordoun (RD0214.B) (PP1219).

A representee has expressed their support for the inclusion of land subject to planning application APP/2014/1943, but objects to the failure to identify land immediately to the south of site BUS2 for business use to meet demand in this location. There is demand for use classes 5 and 6, with ancillary office accommodation and the site benefits from existing infrastructure and proximity to the A90, with easy access to main centres of population and is within a Strategic Growth Area (SGA). They state there is widespread community support for employment development being located at the former airfield and it is considered there will be minimal impact on the landscape. Land to the south of BUS2 should be identified as an ‘opportunity site’ for business use or extend BUS2 to the south. The representee has included a number of Appendices (RD0062.A, RD0062.B and RD0062.C) to support their representation (PP0405).

Services and Infrastructure

SEPA has requested that a new ‘Strategic drainage and water supply’ bullet point is added to include a reference to the status of the waste water drainage in Fordoun, especially as

both Auchenblae and Fordoun pump to Laurencekirk. They add this should be done in consultation with Scottish Water to confirm the status of waste water capacity (network and treatment plant) to take additional flow and, if required, the need for an upgrade of waste water infrastructure (RD0214.B) (PP1219).

Site OP1 – Station Road

SEPA has confirmed that they have no issues with the allocation text for site OP1 (RD0214.B). No modification sought (PP1219).

Non-Allocated Site – Bid Site KN105 – Land West of Toch-Hill Road

A representee has requested the allocation of 45 homes to meet a shortfall in available housing land along the Aberdeen to Laurencekirk SGA and meet a need for affordable housing. They state there are only two new allocations of housing land in the Proposed Local Development Plan (PLDP) along the SGA. The allocation at Fordoun has the advantage of good existing services and facilities for housing and it would enhance the housing market choice in the area. The representee adds that the applicant of the pending planning application on site OP1 in the LDP 2017 does not own the whole site. The representee has included an Appendix (RD0208.A and RD0208.B) to support their representation (PP1183).

Gourdon

Site R1 – Reserved for future cemetery expansion and car park

SEPA has confirmed that they have no issues with the allocation text for site R1 (RD0214.B). No modification sought (PP1219).

Site BUS – Safeguarded for business uses

SEPA has confirmed that they have no issues with the allocation text for site BUS (RD0214.B). No modification sought (PP1219).

Flood Risk

SEPA has requested, for consistency, the second 'Flood Risk' bullet point states that Flood Risk Assessments may be required (RD0214.B) (PP1219).

Infrastructure and Services

SEPA has confirmed that they have no comment on the 'Strategic drainage and water supply' bullet point (RD0214.B). No modification sought (PP1219).

Site OP1 – Land at Braehead

One representee has expressed their support for the allocation of OP1 for 49 homes as there is local demand for housing in Gourdon and landscape and layout concerns can be addressed through a masterplan. It will also provide an effective supply of homes in the rural housing market and land for a cemetery extension and carpark will be provided (PP0923).

SEPA has confirmed that they have no issues with the allocation text for site OP1 (RD0214.B) (PP1219).

NatureScot has requested that the allocation summary for OP1 explains the rationale as to why the site is set back from Brae Road to at least the width of the cemetery (RD0255.B) (PP1300).

NatureScot has requested that the allocation summary for OP1 gives due consideration to the special qualities of the coastal Special Landscape Area (SLA). Concerns were expressed at the Main Issues Report (MIR) stage, stating that site KN135 was poorly located in relation to the historic core of Gourdon, it could significantly detract from the special qualities of the coastal SLA and it would interrupt the experience of arrival to the existing settlement, in the wider context of seaward vistas. It is noted that the Council has sought to address these concerns through a reduced proposal, but concerns remain, and consider the location very challenging and the required masterplan will need to be robust to minimise impacts as far as possible (RD0255.B) (PP1300).

NatureScot has requested that the allocation summary for OP1 includes a requirement for good quality open space and active travel facilities (particularly a link to NCN1) as this would encourage good placemaking and promote safe and convenient opportunities for active travel in accordance with the PLDP's aims (RD0255.B) (PP1300).

One representee has objected to site OP1 and notes the following reasons:

- The site should be designated as protected land or allocated for community facilities such as a gym or café.
- The proposed site has been enjoyed by the local community as a public right of way to reach the scenic coastal views and the current development plans would significantly interfere with this public right of way.
- The proposed site is contrary to the Human Rights Act in that it is “unlawful for a public authority to act in a way which is incompatible with a Convention right” and that there is a “right of respect for private and family life...”.
- The proposal is contrary to planning policy as per *Myton Ltd v Minister of Housing and Local Government* (1963) and similar cases, connected or pre-existing policies, with or without formal approval, are material considerations.
- Contrary to the “Planning Advice” in the recent ‘Built Heritage Appraisal’ by Aberdeenshire Council, the extensive housing development, between the road and the scenic open area and coastline, would contravene the following general principles: “retention of... particular views and vistas through the village [as] important elements in the townscape...”; and “protection and enhancement of existing... open spaces”. So, solely on this ground, it must be a material consideration of Aberdeenshire Council to uphold their pre-existing commitments to the people of Gourdon and not to go ahead with massive disruption to the scenic open spaces and overall unique character of Gourdon.
- As per the Stair Memorial Encyclopaedia, the “Climate Change (Scotland) Act 2009 requires public bodies... to act in a way best calculated to... be most sustainable”; the Scottish Government gives the following objectives for decision making by local authorities: protect and enhance the natural environment, including biodiversity and the landscape; maintain, enhance and promote access to open space; take into account the implications of development for water, air and soil quality. It is quite clear that the developments would, as mentioned above as a contravention of pre-

existing commitments of Aberdeenshire Council to Gourdon, interfere with the local community' access to the scenic, open space.

- With reference to the 'Strategic Environmental Assessment of New Allocated Sites and Alternative Bid Sites – Kincardine and Mearns', it is damnably clear that the proposed 49 homes would have "negative effect" on the natural landscape (long-term), and worse, have "significant negative effect" on the soil. This is clearly unacceptable, and utterly in breach of the sustainability requirements for local authorities as a destruction of precious and irreplaceable prime farmland.
- Per the 'Review of SG Safeguarding 2: Protection and conservation of agricultural land' document: "SG SR2 promotes the retention of prime agricultural land where possible and only allows the permanent loss of such land where it has been allocated within the development plan or it is demonstrated that the proposal has overriding social or economic benefit".
- The social or economic benefits of extensive housing developments over open and scenic natural land (prime farmland) to the local people of Gourdon are absolutely not overriding in the face of the extreme environmental damage, amongst other disruption mentioned on the above grounds. The representee has included an Appendix (RD0081.A) to support their representation (PP0516).

A representee has objected to site OP1, stating it is unwelcomed, would constitute overdevelopment and detract from the amenity of the settlement rather than add to it. The site has previously been dismissed and would merit protected status. They state it is not clear why the site was previously unacceptable but is now supported when nothing has changed. A large-scale housing scheme would not suit a traditional settlement and traffic is already a concern due to volume (PP1361).

Site OP2 – East of Linton Business Park

SEPA has confirmed that they have no issues with the allocation text for site OP2 (RD0214.B). No modification sought (PP1219).

Inverbervie

Flood Risk

SEPA has requested, for consistency, adding text at the end of the 'Flood Risk' bullet point to state that parts of Inverbervie may be at risk of flooding from the Bervie Water and that Flood Risk Assessments may be required (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no comment on the 'Strategic drainage and water supply' bullet point (RD0214.B). No modification sought (PP1219).

Site OP1 – Land to the South of West Park

SEPA has confirmed that they have no issues with the allocation text for site OP1 (RD0214.B). No modification sought (PP1219).

NatureScot has requested that the allocation summary for site OP1 states that any review of the masterplan considers landscape impacts. They state that roughly half of the site to

the west is located on steeper mid slopes of Knox Hill, which significantly contributes to the inland landform setting to Inverbervie. It is suggested development should avoid this western extent of the site to reduce significant adverse landscape and visual impacts (RD0255.B) (PP1300).

NatureScot has requested additional text that requires any review of the masterplan to prevent coalescence between Inverbervie and Gourdon. They state developing on this site will significantly contribute to the experience of coalescence of these settlements and it is suggested areas of open space are retained at the south eastern extent of the site (RD0255.B) (PP1300).

A representee has requested the removal of site OP1. The proposal constitutes overdevelopment and would align with the stated aim to avoid coalescence between Gourdon and Inverbervie. There is no justifiable reason why houses should be built any closer to Gourdon than at present. If more houses do need to be built in the area, then building would be better in the landward area, west of Townhead, where building has already taken place. The Council likes it to be known that it is committed to preserving and protecting small settlements and communities, however promoting large scale development makes a nonsense of such a commitment (PP1363).

One representee recommends that further environmental research and mitigation is undertaken on the long-term effects of the development. The representee has included an Appendix (RD0081.A) to support their representation (PP0516).

Roadside of Kinneff

Services and Infrastructure

SEPA has confirmed that they have no comment on the 'Strategic drainage and water supply' bullet point (RD0214.B). No modification sought (PP1219).

Site OP1 – Land to the West of Roadside of Kinneff

SEPA has confirmed that they have no issues with the allocation text for site OP1 (RD0214.B). No modification sought (PP1219).

A representee has requested reducing the allocation by 16 homes, from 46 to 30 homes, as part of this site, which is allocated in the LDP 2017 for 30 homes, is identified as constrained in the Housing Land Audit (HLA) 2019. They also suggest that the remaining 16 homes should be allocated in the Rural or Aberdeen Housing Market Area. Has noted there are waste water treatment works capacity issues and mains reinforcement that may be required and adding 16 homes to the site will not remove this constraint or increase the likelihood of delivery. Adds, the scale of the allocation is excessive given the scale of the settlement and it is contrary to Scottish Planning Policy as the site is unlikely to be delivered (PP1084).

West Cairnbeg

Site R1 – Reserved for a community space

SEPA has drainage concerns regarding R1, as West Cairnbeg lies within a SEPA Waste

Water Drainage Consultation Area and any further private drainage is unlikely to be authorised by SEPA (RD0214.B) (PP1219).

Two representees (PP0061 and PP0147) object to the allocation of R1. Their concerns are as follows:

- It sits within the Cairngorms National Park and this would have a negative impact on visual landscape (view to Finella Hill).
- The site is designated as prime agricultural land.
- The existing community halls/services are not operating at full potential.
- Unclear on what type of development this is.
- There is no community desire for a community centre.
- Community halls/centres are available in surrounding settlements and serve West Cairnbeg adequately.

Services and Infrastructure

SEPA has requested amending the 'Strategic drainage and water supply' bullet point to state that West Cairnbeg lies within a SEPA Waste Water Drainage Consultation Area and that any further private drainage is unlikely to be authorised by SEPA (RD0214.B) (PP1219).

Modifications sought by those submitting representations:

Arbuthnott

Services and Infrastructure

Modify the PLDP to add new bullet point on 'Strategic drainage and water supply', "There is no public waste water infrastructure available in Arbuthnott" (PP1219).

Modify the PLDP to remove the 'Services and Infrastructure' section from the Arbuthnott Settlement Statement (PP1041).

Auchenblae

Services and Infrastructure

Modify the PLDP to add a new bullet point on 'Strategic drainage and water supply' and make reference to the status of the waste water drainage in Auchenblae, especially as both Auchenblae and Fordoun pump to Laurencekirk. This should be done in consultation with Scottish Water to confirm the status of waste water capacity (network and treatment plant) to take additional flow and, if required, the need for an upgrade of waste water infrastructure (PP1219).

Site OP1 – Land South of Mackenzie Avenue

Modify the PLDP to remove the second sentence from the first paragraph, "The site is slightly sloping from north to south with the Burnie Shag to the east, which means that a Flood Risk Assessment will be required" and add the following text after the current third sentence "Should the extant permission elapse a Flood Risk Assessment will be required

to assess the risk from the Burnie Shag watercourse along the southern boundary. Consideration should be given to any culvert/bridges which may exacerbate flood risk.” (PP1219).

Modify the PLDP to clarify whether part of the site would be left unkempt or if homes would border Kintore Cottage and the doctor surgery (PP0165).

Fordoun and Fordoun Aerodrome

Site BUS2 – Safeguarded for business uses

Modify the PLDP to add a new ‘Flood Risk’ section and bullet point for site BUS2 to assess potential fluvial and surface water flood risk (PP1219).

Modify the PLDP to include the following text for either site BUS2 site or in the ‘Strategic drainage and water supply’ bullet point to read, “This site (BUS 2) is not served by a public waste water system and the receiving water is a small burn with low dilution. Additional development may not be possible with private waste water treatment.” (PP1219).

Modify the PLDP to include additional text to read, “This site is entirely on the former Fordoun Airfield. The site is a former military airfield. Given the site’s former use as a military airfield radium 226 may be present due to its use in aircraft dials during WWII, we request a requirement in the allocation text stating: An assessment of the site for potential radioactive substances is required prior any development.” (PP1219).

Modify the PLDP to identify land immediately to the south of BUS2 for business use, as an ‘opportunity site’ or extend BUS2 to the south (PP0405).

Services and Infrastructure

Modify the PLDP to include a new ‘Strategic drainage and water supply’ bullet point to include reference to the status of the waste water drainage in Fordoun, especially as both Auchenblae and Fordoun pump to Laurencekirk. They add this should be done in consultation with Scottish Water to confirm the status of waste water capacity (network and treatment plant) to take additional flow and, if required, the need for an upgrade of waste water infrastructure (PP1219).

Non-Allocated Site –Bid Site KN105 – Land West of Toch-Hill Road

Modify the PLDP to include bid site KN105 for 45 homes (PP1183).

Gourdon

Flood Risk

Modify the PLDP to add a new ‘Flood Risk’ section bullet point to read, “Flood Risk Assessments may be required.” (PP1219).

Site OP1 – Land at Braehead

Modify the PLDP to amend the allocation summary of site OP1 to add a new third sentence to paragraph one to read, “This will allow for potential future extension to the cemetery,

along with an area for car parking.” (PP1300).

Modify the PLDP to amend the allocation summary of site OP1 add a new penultimate sentence to paragraph one to read, “There should be particular consideration of the special qualities of the coastal Special Landscape Area, and the potential impacts on the experience of arrival to the existing settlement in the wider context of seaward vistas.” (PP1300).

Modify the PLDP to amend the allocation summary of site OP1 to include at the end of the third paragraph, “Good quality open space is required. Provision for active travel is also required and this should seek to connect to existing active travel routes, including the nearby National Cycle Network Route 1 (NCR1).” (PP1300).

Modify the PLDP to remove site OP1 for housing and designate as protected land or allocate for community facilities (PP0516).

Modify the PLDP to remove site OP1 (PP1361).

Inverbervie

Flood Risk

Modify the PLDP to amend the ‘Flood Risk’ bullet point from, “Parts of the settlement may be at risk from coastal flooding.” to “Parts of the settlement may be at risk from coastal flooding and flooding from the Bervie Water. Flood risk Assessments may be required.” (PP1219).

Site OP1 – Land to the South of West Park

Modify the PLDP to amend the allocation summary of site OP1 to add a new last sentence to paragraph two to read, “Any review of the Masterplan should consider the landscape benefits of drawing the development down the slope into the more eastern part of the site, commensurate with existing development. To help minimise coalescence of Inverbervie with Gourdon, adequate open space should also be retained at the south eastern corner of the site.” (PP1300).

Modify the PLDP to remove site OP1 (PP1363).

Modify the PLDP to include the requirement for further environmental research and mitigation to be undertaken on the long-term effects of the development (PP0516).

Roadside of Kinneff

Site OP1 – Land to the West of Roadside of Kinneff

Modify the PLDP to reduce the allocation of site OP1 from 46 to 30 homes and allocate the remaining 16 homes in the Rural or Aberdeen Housing Market Area (PP1084).

West Cairnbeg

Site R1 – Reserved for a community space

Modify the PLDP to note SEPA's drainage concerns regarding R1, as West Cairnbeg lies within a SEPA Waste Water Drainage Consultation Area and any further private drainage is unlikely to be authorised by SEPA (PP1219).

Modify the PLDP to remove site R1 (PP0061 and PP0147).

Services and Infrastructure

Modify the PLDP to amend the 'Strategic drainage and water supply' bullet point from, "Private communal sewerage works is at capacity and ground conditions are poor. Early discussion with the Scottish Environment Protection Agency (SEPA) is required for any proposed future development." to "West Cairnbeg lies within a SEPA Waste Water Drainage Consultation Area and the existing private communal waste water treatment is at capacity. Any further private drainage is unlikely to be authorised by SEPA." (PP1219).

Summary of responses (including reasons) by planning authority:

Arbuthnott

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Whilst there are no allocated sites identified within the settlement boundary, proposals for new development may still be submitted for sites within and adjacent to the settlement, which will require to be appropriately assessed by the Council in accordance with the relevant policies of the PLDP. In such instances, developer obligations will require to be sought to ensure that development impacts are mitigated against. No change is required.

Auchenblae

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Land South of Mackenzie Avenue

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Planning permission has been granted for this site, under application APP/2015/3181 with

approval granted at appeal on 8 June 2018, showing the area in question as a wildlife area (AD0068). Permission would be required to be carried out in accordance with any conditions attached to the decision notice. If conditions are purified and works commence on the application site, the permission would require to be carried out in accordance with the approved scheme or any subsequent approval. No change required.

Fordoun and Fordoun Aerodrome

Site BUS1 – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

Site BUS2 – Safeguarded for business uses

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

There is an existing BUS site to the north of Fordoun, but a number of businesses have developed over the years at the former World War Two airfield. Several applications, over the years, have been granted at the former airfield and as such, it is considered appropriate to identify those areas in the Fordoun Aerodrome that have planning permission as a BUS site, including the narrow strips of land that have planning permission (APP/2014/1943). It is not seen that it is necessary to include the additional land as requested, as that land does not have any planning permissions associated with it (AD0038.F, MIR, page 33-34). It is preferred that business uses develop on land allocated for employment land or on brownfield. No change is required.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Station Road

Comments from SEPA are noted. No change is required.

Non-Allocated Site – Bid Site KN105 – Land West of Toch-Hill Road

The Council does not support allocating bid site KN105 for 45 homes. Bid site KN105 was not identified as a preferred option in the MIR 2019 (AD0038.F, pages 33-34) and this site has several constraints. The flood risk would need to be recognised in the SuDS arrangement and overall layout, the entire site is identified as being prime agricultural land and it is situated within a pipeline consultation zone. There is uncertainty as to the local road network's ability to accommodate the traffic generated and the indicative access arrangement is outwith the site. The site is constrained in terms of education provision at Mearns Academy and the water treatment works has insufficient capacity. It would also be overdevelopment and previous bids made during the 2012 and 2017 LDP Examinations raised concerns over the scale of development, for which this is greater (45 homes compared to the previous 40) (AD0036 Report of the Examination of the LDP 2017, (Bid site KM019), page 796). There are concerns about the development being on prime agricultural land and it is not felt there are overriding reasons for this to occur. There are issues regarding viability of the site using a new section of road and the new BUS2

allocation only safeguards existing businesses or land that has planning permission; it does not allocate any new employment land. Therefore, it was not proposed to include this site within the PLDP (AD0040.F, MIR Issues and Actions Paper, Issue 131 Fordoun, pages 35-38). As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. No change is required.

In reference to the ownership concerns of OP1, land ownership is not a concern for the LDP, and this site has now been granted planning permission in principle for 17 homes under application APP/2019/0497.

In conclusion, no change is required.

Gourdon

Site R1 – Reserved for future cemetery expansion and car park

Comments from SEPA are noted. No change is required.

Site BUS – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Infrastructure and Services

Comments from SEPA are noted. No change is required.

Site OP1 – Land at Braehead

Support expressed for site OP1 is noted along with comments from SEPA. No change is required.

The concerns raised by NatureScot and other representees are noted, but there are limited locations in Gourdon to develop and support local services and facilities. However, if the Reporter is minded, to make an amendment, then the Council recommend that the allocation summary for site OP1 could be modified to read, "This site is located in a prominent location that overlooks the sea, and development should be set back from Brae Road to at least the width of the existing cemetery. This will allow for potential future extension to the cemetery, along with an area for car parking. The design of the homes should also respect the distinctive character of Gourdon and its setting along the coastline. There should be particular consideration of the special qualities of the coastal Special Landscape Area, and the potential impacts on the experience of arrival to the existing settlement in the wider context of seaward vistas. Due to the visual and landscape sensitivity of this site, a masterplan will be required."

The Council confirms that it intends to address NatureScot's comment on open space and

active travel through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Whilst site OP1 was not a preferred option in the MIR 2019 (AD0038.F, page 37) when submitted as bid site KN135 for 69 units, the site was agreed to be included by Kincardine and Mearns Area Committee at a reduced density of 49 homes (AD0153. Page 20). This was agreed at subsequent Infrastructure Services Committee and Full Council meetings as the settled view of the Council. No change is required.

Site OP2 – East of Linton Business Park

Comments from SEPA are noted. No change is required.

Inverbervie

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Land to the South of West Park

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1, which has been carried forward from the LDP 2017, is identified as effective in the HLA 2019 and provides a sufficient supply of housing land (AD0022, Rural Housing Market Area, page 37). Any future planning application would be required to provide appropriate information of environmental surveys where required. However, the site is considered appropriate and the level of development has been considered acceptable and is the settled view of the Council. No change is required.

Roadside of Kinneff

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Land to the West of Roadside of Kinneff

Comments from SEPA are noted. No change is required.

The Council does not support reducing the allocation of site OP1 from 46 to 30 homes and allocating the remaining 16 homes elsewhere. Site OP1 includes land that is allocated in the LDP 2017 for 30 homes and bid site KN033, which was a preferred option in the MIR

2019 for 16 homes and private sewage works, AD0038.F, page 91. SEPA has not objected to the wording in the Settlement Statement under Services and Infrastructure for a private sewage works. It is also noted that the local Waste Water Treatment Works cannot be upgraded until a planning application is approved and Scottish Water initiates a growth project. As such, this issue can be resolved. With regards to the scale of the proposal, while large in scale for the size of the settlement, it does not impact on the setting of Roadside of Kinneff, as it drops away from the settlement and it is screened by existing buildings from the A92. No change is required.

West Cairnbeg

Site R1 – Reserved for a community space

Comments from SEPA are noted and can be addressed through the inclusion of the amended bullet point within the Services and Infrastructure section (see below).

The Council does not support removing this site. It is within the Braes of the Mearns Special Landscape Area and not in the Cairngorms National Park, and any development must not affect the special qualities of this landscape. Site R1 has development on two sides and if well designed, it is unlikely to detract from the special landscape qualities of this area. Prime agricultural land covers most of south Aberdeenshire, and sites are identified in specific circumstances, for example to meet a local or strategic need or to create a more sustainable community. This site was identified as part of a larger bid for 30 homes and community facilities (see location plan of bid site KN097, AD0156) and a reserved site is not the same as an allocation, as it only safeguards land for a specific use, which it can come forward at any time. Although the type of community space is not specified, it is flexible and need not be a hall. Community facilities are defined in the PLDP glossary. No change is required.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Reporter's conclusions:

Preliminary Matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.
2. The council has indicated that it intends to make what it refers to as "non-notifiable modifications" in relation to the settlement statement matters covered in Issue 50. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Arbuthnott

3. There is no information provided on water and drainage infrastructure for Arbuthnott in the proposed plan. I agree that the additional bullet point suggested by the Scottish Environment Protection Agency (SEPA) should be included to address this omission. A modification to this effect is recommended.

4. I agree with the council that planning applications may still be submitted for sites in or adjacent to Arbuthnott. It is therefore appropriate for the plan to indicate the services and infrastructure which are likely to require developer contributions. No modification is recommended.

Auchenblae

Services and Infrastructure

5. No information has been provided on water and drainage infrastructure in Auchenblae. SEPA has asked the council to confirm with Scottish Water that proposed population growth is within the design criteria for the Laurencekirk waste water treatment works. However, I am not aware from the council's suggested response whether this has been done. I consider a modification to be necessary to address this matter.

Site OP1 – Land south of Mackenzie Avenue

6. Planning permission was granted in 2018 for 25 houses on site OP1. I did not see any evidence that development had commenced on my site inspection. I consider that SEPA's advice on the need for a flood risk assessment would be relevant if a further planning application is submitted. I recommend a modification to the first paragraph of the allocation summary for OP1.

7. The council has explained that the land next to Kintore Cottage is shown as a wildlife area in the approved plans for planning application APP/2015/3181. Whilst this may be subject to change if a new planning application is submitted, I do not consider that the detailed layout of the site is a matter for the local development plan. No modification is required.

Fordoun and Fordoun Aerodrome

Site BUS2 – Safeguarded for business uses

8. The representation submitted on behalf of Mr Mitchell includes a copy of the approved plan for application APP/2014/1943. I agree with the council that allocation BUS2 includes the land covered by this planning permission. The additional site which Mr Mitchell wishes to be included in an extension of allocation BUS2 is currently flat, agricultural land, located to the north of the B965 road. Existing business uses in the area are located predominantly on brownfield land associated with the former aerodrome.

9. Figure 5 in the strategic development plan would suggest that Fordoun Aerodrome lies within the Aberdeen to Laurencekirk strategic growth area. Appendix 1 in the proposed plan indicates that there is no shortfall in the employment land allocations in this strategic growth area up to the period 2032. I do not consider the allocation of greenfield land at Fordoun Aerodrome for business purposes to be necessary or justified. No modification is

required on this matter.

10. SEPA has requested that additional text is included under BUS2 to require an assessment of potential radioactive substances, because the site was used as a military airfield. I agree that it would be appropriate to make developers aware of this requirement. SEPA has also requested additional text in relation to waste water treatment. I agree that information on this potential constraint should be included under BUS2. Modifications on these matters are required.

Flood Risk

11. There is no information on flood risk included in the proposed plan. The additional text requested by SEPA relates to site BUS2, which I note already has planning permission. However, I agree that a modification is required on this matter, as further planning applications may be submitted for the site.

Services and Infrastructure

12. No information has been provided on drainage infrastructure in Fordoun and Fordoun Aerodrome. SEPA has asked the council to confirm with Scottish Water that proposed population growth is within the design criteria for the Laurencekirk waste water treatment works. However, I am not aware from the council's suggested response whether this has been done. I consider a modification to be necessary to address this matter.

Non-allocated Bid Site KN105 – Land west of Toch-Hill Road

13. Bid site KN105 lies to the southwest of the Fordoun settlement boundary and is currently in agricultural use. Loss of prime agricultural land, infrastructure requirements, and proximity to a pipeline are identified as negative effects in the environmental report. The council's response above also raises concerns regarding flood risk, impact on the local road network, education provision and capacity of the waste water treatment works.

14. The supporting statement submitted on behalf of Mr and Mrs Mackenzie provides additional information to address these matters. It points out that a number of housing allocations involve development on prime agricultural land and that there are solutions to the identified infrastructure constraints. It states that the number of houses proposed within the pipeline consultation zone would be in line with Health and Safety Executive guidance and that the development would help support local services including the primary school.

15. Fordoun lies within the Aberdeen to Laurencekirk strategic growth area and the Rural Housing Market Area. As indicated in Issue 2, the Strategic Development Plan does not identify a specific housing allowance for the strategic growth areas. Furthermore, it is concluded under issue 5, that there is no shortfall in the allocations identified to meet the strategic development plan allowance for the Rural Housing Market Area.

16. The representees have questioned the deliverability of housing site OP1, which the council has indicated has planning permission for 17 homes. I note that the site is not identified as constrained in the 2020 Housing Land Audit and development is programmed between 2022 and 2025. I have no reason to dispute the effectiveness of site OP1 and would expect it to provide additional housing in Fordoun during the plan period.

17. I find the supporting information provided by the representees helpful in responding to the concerns raised by the council and in the environmental report. However, in the absence of comments from the Roads Authority and the Health and Safety Executive, I am unable to reach a conclusion in relation to matters on access and the pipeline consultation zone.

18. The site would result in a western extension of the village onto relatively flat and open agricultural land. There would appear to be no opportunity to provide convenient pedestrian and cycle connections between the site and the rest of the village. The indicative layout shown in the supporting statement is not well integrated with existing housing, roads or paths and does not provide a strong, defensible edge to the settlement.

19. Given the matters outlined above, I do not consider the allocation of this site would be appropriate. No modification is required.

Gourdon

Flood Risk

20. I agree with SEPA, that in the interests of consistency, the second bullet point should indicate that flood risk assessments may be required. A modification is recommended.

Site OP1 – Land at Braehead

21. Proposal OP1 – Land at Braehead is for 49 homes on the eastern side of Brae Road. It is currently, flat, agricultural land with open views to the sea. The existing business uses located to the north of the site are not visible from Brae Road, due to screen planting. The site lies to the north and east of designation R1, which is reserved for an extension to the cemetery and car parking.

22. The initial bid proposal (KN135) was for a larger site with a capacity of 67 homes, which was included in the main issues report as an option which planning officers did not support. The Issues and Actions paper explains that the proposal was reduced to 49 homes, but was still not recommended by officers for inclusion in the proposed plan. However, the Kincardine and Mains Area Committee agreed to identify the site as a housing allocation for 49 homes. The council has not explained the reason for this decision.

23. The village of Gourdon, including site OP1, is located within the South East Aberdeenshire Coast Special Landscape Area. The statement of importance set out in Appendix 13 of the proposed plan states that this designation “recognises the importance of its rugged scenery of weathered coastal cliffs and atypical raised beach features, which form an important setting to the numerous coastal villages and towns”. It also states that sea views are fundamental to the character of the area. The settlement contains a range of local services, including a primary school. There are bus stops near the site on Brae Road and on the A92.

24. The proposal has been the subject of strategic environmental assessment which includes consideration of a range of environmental effects. The environmental report identifies negative impacts on the landscape, biodiversity and loss of prime agricultural

land. In response to the main issues report, NatureScot commented that “the site was poorly located in relation to the historic core of Gourdon and that development at the site was likely to significantly detract from the special qualities of the coastal special landscape area and would interrupt the experience of arrival to the existing settlement, in the wider context of seaward vistas”.

25. NatureScot has not objected to allocation OP1 in the proposed plan. However, it remains concerned that the location of the site is very challenging and that the required masterplan will need to be robust to minimise impacts, as far as possible. Two representees object to the allocation, mainly on the grounds of visual and environmental impacts.

26. I note that the vision for Gourdon in the proposed plan highlights two potentially competing objectives for the settlement – “maintaining the character of the village in its coastal setting, whilst also allowing further development to meet local needs and sustain the primary school and shop”.

27. I consider that housing development on this site would have a negative effect on the open aspect of the coastal Special Landscape Area and would obstruct seawards views which contribute to the experience of arrival in Gourdon from the north. Furthermore, by setting development back from Brae Road, there is a risk that the housing would be physically separate from and poorly integrated with the rest of settlement. A representee is also concerned that the development would detract from the character of Gordoun.

28. I recognise the benefits that development would bring in terms of providing affordable housing and supporting local services. In particular, I am aware that the roll of the local primary school is predicted to fall from 86 pupils in 2019 to 61 in 2027. I also note that there are limited alternative development opportunities in Gourdon. In addition to the local benefits identified, this allocation would contribute 49 homes towards the strategic development plan allowance for the Rural Housing Market Area in the period up to 2032. I note that the land is in the control of a housebuilder, who is actively promoting the site as a housing allocation.

29. In line with policy PR1 (Protecting Important Resources), I consider that the loss of prime agricultural land would be justified, as the site would contribute towards meeting strategic housing need. The safeguarding resources map on page 78 of the proposed plan indicates that the majority of agricultural land next to settlements in this part of Aberdeenshire is of prime quality and therefore avoiding this important resource would be difficult. As the proposal is being brought forward through the development plan, it would be consistent with paragraph P1.5 in the proposed plan.

30. NatureScot and the council have suggested some additional text be inserted into the allocation summary to help address the matters raised in representations. I agree that these changes would be necessary, given the site’s visual and environmental sensitivity, and to explain the reason why housing development on site OP1 should be set back from Brae Road. I agree with NatureScot that the master plan will have an important role in minimising the visual impacts and integrating the housing development with the rest of the settlement. The preparation of a master plan would also provide the opportunity to address some of the concerns raised by representees, including the interface between housing and the cemetery, access routes and design matters.

31. Given the size of Gordoun and the range of local service services, I consider it an appropriate location for additional housing. No other housing sites have been identified or promoted through the preparation of the local development plan. I consider on balance that the social and economic benefits of the allocation would outweigh the identified adverse environmental effects. I therefore conclude that the allocation should be retained. However, I recommend some modifications to the allocation summary to help mitigate the adverse impacts on the settlement and the coastal special landscape area.

32. Given my conclusions in relation to allocation OP1, I do not consider that the identification of the site for community uses (as suggested by a representee) would be appropriate. Furthermore, no bid proposal for such uses has been submitted for consideration through the preparation of the plan.

Inverbervie

33. The proposed plan states that parts of the settlement may be at risk from coastal flooding. SEPA has indicated that there may also be a risk of fluvial flooding from the Bervie Water. I agree with SEPA that a modification is required to clarify the nature of the flood risk and indicate that flood risk assessments may be required. A modification to the flood risk section is recommended.

34. Site OP1 - Land to the South of West Park for 200 homes was previously allocated in the 2012 and 2017 local development plans. NatureScot is concerned that development on the western part of the site, which is located on the steeper slopes of Knox Hill, would result in adverse landscape and visual impacts.

35. The allocation summary for site OP1 indicates that a master plan was approved for the site in April 2015. However, I note that a review of the master plan would be required if development has not commenced at the date of adoption of this local development plan. The changes requested by NatureScot would require any review of the master plan to consider the landscape benefits of avoiding development on the western part of the site. From my site inspection, I observed that the slopes to the north of Sheep Wash Farm are visibly higher than the remainder of the site, when viewed from the A92. I agree that there would be benefits in considering the visual and landscape impact of development on the western part of the site. A modification is recommended.

36. Land to the south of allocation OP1 is identified as designation P5 on the Inverbervie map in the proposed plan to “protect the landscape buffer as a significant contribution to the character of the place”. I consider that this designation would help provide a degree of separation between Inverbervie and Gourdon. However, I agree with NatureScot that the provision of open space on the south east corner of site OP1 should also be required, to help minimise the coalescence of these two settlements. This would also help address the concerns raised by William Heath. A modification to this effect is recommended.

37. Site OP1 is the only housing allocation in Inverbervie and I do not consider that it represents over-development. In terms of the environmental impact of the proposal, I agree with the council that further information may be required as part of a submission for planning permission. No other modifications are recommended.

Roadside of Kinneff

38. I note that part of the allocation OP1 – Land to the west of Roadside of Kinneff is identified for 30 homes in the existing local development plan. The council has explained that the site has been extended in a north-westerly direction in response to a bid submission for an additional 16 homes. The allocation summary in the proposed plan sets out a way forward to address the current waste water infrastructure constraint. Only 16 of the 46 homes have been identified as contributing towards the strategic development plan allowance for the Rural Housing Market Area in the period up to 2032, which I do not consider to be excessive for a settlement of this size. On the basis of the evidence before me, I am not persuaded that the removal of this site would be justified. No modification is required.

West Cairnbeg

39. Site R1 forms the corner of a flat agricultural field and is bound to the east and south by residential development. As there are currently no local facilities within West Cairnbeg and there do not appear to be any suitable sites within the existing settlement boundary, I consider that the loss of this area of agricultural land would be justified.

40. I note that the two representees do not agree with the reference in the vision section of the West Cairnbeg to a desire for a community centre. The council has drawn attention to the definition of community facilities in the glossary of the proposed plan. However, I note that site R1 is reserved for a community space, which I consider would not necessarily mean a building.

41. I agree with the council that relevant policy considerations to be taken into account in assessing any future proposal would include matters such as landscape impact. Local residents would have the opportunity to submit representations, if a planning application is submitted. No modification is required.

42. I consider the amendment requested by SEPA, in relation to waste water treatment, to be appropriate to reflect their position on this matter. A modification to the services and infrastructure section is recommended.

Reporter's recommendations:

Modify the local development plan by:

Arbuthnott

1. Adding the following new first bullet point in the services and infrastructure section of the Arbuthnott settlement statement on page 634:

“• Strategic drainage and water supply: There is no public waste water infrastructure available in Arbuthnott.”

Auchenblae

2. Adding the following new second bullet point in the services and infrastructure section of the Auchenblae settlement statement on page 637:

“• Strategic drainage and water supply: Waste water in Auchenblae is pumped to Laurencekirk Waste Water Treatment Works (WWTW). A growth project at Laurencekirk WWTW has been completed. An upgrade will be required if the proposed population

growth is beyond the design criteria for the Laurencekirk WWTW. Local water mains reinforcement may be required.”

3. Removing the second sentence from the first paragraph and adding the following sentences to the end of this paragraph in the allocation summary for OP1 (Land south of Mackenzie Avenue) in the Auchenblae settlement statement on page 638:

“If a further planning application is submitted, a Flood Risk Assessment will be required to assess the risk from the Burnie Shag watercourse along the southern boundary. Consideration should be given to any culvert/bridges which may exacerbate flood risk.”

Fordoun and Fordoun Aerodrome

4. Replacing the description of BUS2 in the other designations section of the Fordoun and Fordoun Aerodrome Settlement Statement on page 670 with:

“Safeguarded for business purposes. As the site was used as a military airfield during World War Two, radium 226 may be present. An assessment for potential radioactive substances is required prior to any development. A Transport Assessment may also be required for new developments. “This site is not served by a public waste water system and the receiving water is a small burn with low dilution. Additional development may not be possible with private waste water treatment.”

5. Adding a new sub-heading “Flood Risk” with the following bullet point to the Fordoun and Fordoun Aerodrome settlement statement on page 670:

“• A Flood Risk Assessment may be required for site BUS2 to assess possible fluvial and surface water flood risk. There may be a culverted watercourse on site which will require a development buffer along its length. Buffer strips will be required along all other watercourses and consideration should be given to their enhancement through renaturalisation and the removal of manmade features.”

6. Replacing the second bullet point in the services and infrastructure section of the Fordoun and Fordoun Aerodrome settlement statement on page 671 with:

“• Strategic drainage and water supply: Waste water in Fordoun is pumped to Laurencekirk Waste Water Treatment Works (WWTW). A growth project at Laurencekirk WWTW has been completed. An upgrade will be required if the proposed population growth is beyond the design criteria for the Laurencekirk WWTW. Local water mains reinforcement may be required.”

Gourdon

7. Adding the following sentence to the end of the second bullet point in the flood risk section of the Gourdon settlement statement on page 675:

“Flood Risk Assessments may be required.”

8. Replacing the first paragraph of the allocation summary for OP1 – Land at Braehead with:

“This is a newly allocated site. This site is located in a prominent location that overlooks the sea, and development should be set back from Brae Road to at least the width of the existing cemetery. This will allow for potential future extension to the cemetery, along with an area for car parking. The design of the homes should also respect the distinctive character of Gourdon and its setting along the coastline. There should be particular consideration of the special qualities of the coastal Special Landscape Area, and the

potential impacts on the experience of arrival to the existing settlement in the wider context of seaward vistas. Due to the visual and landscape sensitivity of this site, a masterplan will be required.”

9. Adding the following sentence to the end of the third paragraph of the allocation summary for OP1 – Land at Braehead:

“Good quality open space is required. Provision for active travel is also required and this should seek to connect to existing active travel routes, including the nearby National Cycle Network Route 1 (NCR1).”

Inverbervie

10. Replacing the bullet point in the flood risk section of the Inverbervie settlement statement on page 679 with:

“• Parts of the settlement may be at risk from coastal flooding and flooding from the Bervie Water. Flood Risk Assessments may be required.”

11. Adding the following two sentences to the end of the second paragraph of the allocation summary for site OP1 (Land to the south west of West Park) in the Inverbervie settlement statement on page 680:

“Any review of the Masterplan should consider the landscape benefits of drawing the development down the slope into the more eastern part of the site, commensurate with existing development. To help minimise coalescence of Inverbervie with Gourdon, adequate open space should also be retained at the south eastern corner of the site.”

West Cairnbeg

12. Replacing the first bullet point in the services and infrastructure section of the West Cairnbeg settlement statement on page 757 with:

“• Strategic drainage and water supply: West Cairnbeg lies within a Scottish Environment Protection Agency (SEPA) Waste Water Drainage Consultation Area and the existing private communal waste water treatment is at capacity. Any further private drainage is unlikely to be authorised by SEPA.”

<p>Issue 51</p>	<p>Other Settlements RHMA (Kincardine and Mearns) South – Edzell Woods and Newesk, Fettercairn, Johnshaven, Luthermuir, Marykirk and St Cyrus</p>

<p>Edzell Woods and Newesk</p> <p><u>Flood Risk</u></p> <p>Scottish Environment Protection Agency (SEPA) has requested amending the second bullet point of the 'Flood Risk' section to include the BUS site and OP2 and Flood Risk Assessments will be required (RD0214.B) (PP1219).</p> <p><u>Services and Infrastructure</u></p> <p>SEPA has requested amending the first sentence of the 'Strategic drainage and water supply' bullet point to state that there is no public waste water infrastructure in Edzell Woods, only private treatment and contributions will be required for an upgrade to the existing treatment works or for a new pumping station to connect to the public waste water treatment works in Edzell (RD0214.B) (PP1219).</p> <p><u>Site OP1 – Newesk</u></p> <p>SEPA has requested amending the first sentence of the fifth paragraph to specify that an updated Flood Risk Assessment will be required if the extant permission lapses or if there is a change to the design layout not previously agreed, and to add a new sentence on culverts/ bridges (RD0214.B) (PP1219).</p> <p>Fettercairn</p> <p><u>General</u></p> <p>A representee has noted that whilst they are not against development in Fettercairn, this must be proportionate and in keeping with the character of the settlement (PP0455).</p> <p><u>Vision</u></p> <p>A representee has stated that the wording of the Vision suggests the distillery is a significant employer, but to use this as justification for OP1 is not convincing (PP0455).</p> <p><u>Site R1 – Reserved for a road access into site OP1</u></p>	

SEPA has no issues with the allocation text for site R1 (RD0214.B). No modification sought (PP1219).

Flood Risk

SEPA has requested that the second sentence of the 'Flood Risk' section is moved to its own separate bullet point and reference to P3 is removed (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has no comment on the 'Strategic drainage and water supply' bullet point. No modification sought (RD0214.B) (PP1219).

A representee has suggested that appropriate sewage facilities should be scoped out before any development goes ahead as this has been problematic in the past (PP0455).

A representee has stated that public transport is a necessity rather than a "may be required" (PP0455).

Site OP1 – Land to the Northwest of Fettercairn

SEPA has requested adding text to the allocation text for OP1 to state that enhancements to the burn must be supported in a Flood Risk Assessment (RD0214.B) (PP1219).

SEPA has requested adding text to the allocation text for OP1 requiring a connection to the public sewer network in light of the wording in the 'Strategic drainage and water supply' bullet point in the 'Services and Infrastructure' section (RD0214.B) (PP1219).

While not opposed to new development, a representee has raised concerns over increasing traffic from this and other developments (e.g., at Fasque) and challenges for meeting the safe and pleasant policy objective. There are insufficient pavements causing further safety concerns for school children, and this allocation must not go against the limits set out in the Main Issues Report (MIR) in relation to clusters and groups of housing. They also state site OP1 does not meet the policy principle "well connected" (PP0455).

Two representees have objected to this site (PP0761 and PP1110) for the following reasons:

- Fettercairn has recently had a large new housing development but with no improvements to local infrastructure, and the new allocation would add further strain (PP0761).
- There are school capacity issues, water and drainage issues and there is no public transport, limited employment, it will increase traffic in a small village adding risk to school children, and the settlement has poor connectivity with the A90 North (PP0761).
- It is marketability constrained, entering the Housing Land Audit (HLA) in 2012 (PP1110).
- A second access will be required to the site as it must accommodate existing development of 38 homes to the east of the allocation, but a substantial ransom strip separates the south part of the site from Garrol Place (PP1110).
- The 11 homes that do not require a second access are unlikely to be effective as the

P6 designation contains ransom strips (PP1110).

- Site P6 highlights the allocation is landlocked and physically constrained (PP1110).

Johnshaven

Site R1 – Reserved for educational uses associated with Lathallan School

SEPA has no issues with the allocation text for site R1 (RD0214.B). No modification sought (PP1219).

A representee has objected to the inclusion of site R1 as it is likely to cause damage and/or loss to areas of ancient woodland. They add, removal of woodland is contrary to Scottish Planning Policy (SPP) paragraphs 216 and 218 and also to the Control of Woodland Removal Policy (RD0161.A) (PP0878).

Site R2 – Reserved for a future expansion of the cemetery

SEPA has no issues with the allocation text for site R2 (RD0214.B). No modification sought (PP1219).

Flood Risk

SEPA has requested, for consistency, adding additional text to the 'Flood Risk' bullet point to state that part of the settlement is at risk of coastal, fluvial and/or surface water flooding and that Flood Risk Assessments may be required (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has no comment on the 'Strategic drainage and water supply' bullet point (RD0214.B). No modification sought (PP1219).

Benholm and Johnshaven Community Council has requested that the Settlement Statement states the following:

- The need for a speed limit of 40mph on the A92, north of Lathallan School Main entrance and south of the New Road junction on safety grounds as the A92 has two sharp bends, and the need to improve junction layouts at New Road and Barons Pade, as they have challenging hill access onto the A92.
- That adequate lighting on the railway path, the Community Garden and under the New Road Bridge is required due to concern for pupil safety when walking to the primary school from site OP1.
- The need for a single sewage system for St Cyrus, Johnshaven, Gourdon and Inverbervie given the rising number of new homes and businesses and that the area is a popular tourist destination. There is concern that sewage is currently pumped to common tanks before being screened and then discharged, untreated, into the sea off the Haughs of Benholm and there is a need for a review.
- The development of site OP1 includes the provision of safe access to facilities at Wairds Park. They noted that the plans for site OP1 show a new walkway at the side of the Barons Pade road from the emergency access to the corner with Castle Street at the entrance to Wairds Park playground area. However, to improve pedestrian safety off the old railway walk and to better integrate this development

into the community, it is requested steps are provided on two earth ramps en-route to the football ground via Herd Crescent and the Wairds Park playground entrance (PP0544).

Site OP1 – Golden Acre

SEPA has no issues with the allocation text for site OP1 (RD0214.B). No modification sought (PP1219).

NatureScot has noted that site OP1 comprises a relatively large site located within the existing policy woodlands and historical design landscape of the historical Lathallan Estate and request that this is reflected in the allocation summary to help inform masterplanning and avoid significant landscape and visual impacts (RD0255.B) (PP1300).

Luthermuir

Flood Risk

SEPA has no comment on the 'Flood Risk' bullet point (RD0214.B). No modification sought (PP1219).

Infrastructure and Services

SEPA has no comments on the 'Strategic drainage and water supply' bullet point (RD0214.B). No modification sought (PP1219).

Site OP1 – The Chapel

SEPA has requested rewording the second paragraph in the allocation summary on culverts and to state that enhancement of the watercourse and removal of culverts should be part of a Flood Risk Assessment (RD0214.B) (PP1219).

Several representees (PP0070, PP0123 and PP0265) have requested that OP1 should be removed for the following reasons:

- Concerned how the loss of agricultural land will be replaced when there is an increased demand for food from a growing population.
- Church Lane is in a poor state.
- Existing infrastructure is unable to support the development, e.g. narrow roads and insufficient broadband.
- Noise and emissions pollution.
- Limited local amenities and services.
- Limited job opportunities.
- Loss of prime agricultural land.
- Detrimental impact on the character of the village and its historic environment.
- Impact on natural environment including protected trees and wildlife species.
- Impact on quality of life.

Mearns Community Council has raised concerns on the number of homes proposed for the site. There is a lack of a footpath along School Road and adding a footpath would make it virtually a single-track road (PP0633).

Site OP2 – Land South of Newbigging Cottages

SEPA requests amending the last sentence in the first paragraph to state that a Flood Risk Assessment will be required, no development will be permissible on the culverted watercourse and that enhancement of the watercourse and removal of any redundant features including culverts should be investigated and should be supported in a Flood Risk Assessment (RD0214.B) (PP1219).

A representee notes the following in regard to site OP2:

- The development will impact on neighbouring residents' access and parking.
- Environmental impact should be considered due to the extent of the development, in particular impact on wildlife habitat and protected species and the impact of light pollution caused by increased street lighting.
- The site will cause an increase in traffic through the village, and onto the north bound A90 junction which is small with no merger lane.
- There are insufficient local services to support the development (PP0012).

Mearns Community Council has raised concerns on the number of homes proposed for the site. There is a lack of a footpath along School Road and adding a footpath would make it virtually a single-track road (PP0633).

Site OP3 – Land North of Church Road

SEPA has no issues with the allocation text for site OP3 (RD0214.B). No modification sought (PP1219).

A representee has no issues in principle with the site, but requests that the new homes are no more than single storey in height to protect privacy (PP0097).

A representee objects to site OP3 for the following reasons:

- It is not required to meet housing need.
- It is outwith the Strategic Growth Area (SGA) allowance.
- As per the MIR, it is not required as there is an excess of housing land supply in the Rural Housing Market Area.
- The proposal may not improve marketability of constrained existing supply, 56 units, and undermine the delivery of the two sites already through the planning process.
- It does not contribute to sustainable development due to increase travel requirements/emissions, flooding, impact on trees, prime agricultural land and lack of evidenced housing need.
- The proposal would provide negligible support for the school as 2.73 pupils would be a result of the development.
- It would impact on prime agricultural land of importance for food resilience and limited resource. The loss of this land does not accord with SPP or PLDP Policy PR1.5 as it has not been clearly demonstrated the site is essential to meet a need where no suitable sites are available.
- This site has the potential to exacerbate existing flooding issues, as it is adjacent to an area at high risk of surface water flooding and the Strategic Environmental Assessment (SEA) noted the flood risk at this site as uncertain. They also noted

that the Proposed Delivery Preprogramme 2020 does not state a Flood Risk Assessment is required, which if allocated, it should be.

- There are unresolved access issues as an adoptable standard road is unlikely to be achieved while the Tree Preservation Order (TPO) along the western boundary proposed narrow access track safeguards the trees. Alternative access would be constrained by overhead lines. The reconfigured site from the bid leaves OP3 a pocket of land that will be under increasing development pressure into the future including use of the original unsuitable access. They also noted that the Proposed Delivery Preprogramme 2020 does not address the access into the site. The representee has included a number of Appendices (RD0073.A, RD0073.B, RD0073.C, RD0073.D, RD0073.E and RD0073.F) referred to in their submission (PP0460).

Two representees consider that OP3 should be reallocated as protected land and most people in the settlement do not wish to see housing on the site. The site is classed as ancient woodland and is subject to felling licence conditions stipulating that the site should be restocked by 2021. The site should be protected to preserve protected species found on the site. There is no need for housing on this site as sites OP1 and OP2 are still to be built. The development of OP3 would change the nature of the settlement (PP0525 and PP0526).

A representee has stated that site OP3 is not readily accessible for pedestrian/vehicle access, landlocked and separated from Church Road by third party properties and visibility splays would not be in ownership and therefore not supported by Roads Authority. This replaced a marketability constrained site with one that has a physical constraint, but marketability constraints remain as there is an excess of allocations for a small rural settlement (PP1056).

Marykirk

Site P4 – To protect an area of land as an amenity for the settlement

Mearns Community Council has requested that land that was formally allocated as site EH1 for housing on Kirktonhill Place is protected (PP0634).

Site P2 – To protect the parish church, graveyard and woodland buffer as amenities

Support is expressed for site P2 as it creates a natural green network into Marykirk from the east. This area would be incorporated into any future masterplan for development in the southeast and be maintained and enhanced as an important community open space asset (PP1221).

Flood Risk

SEPA has requested removing the second 'Flood Risk' bullet point referring to site OP1, as there is only a small watercourse to the north that flows away from the site and the allocation site boundary is away from this small watercourse. As such, there is little risk of flooding from this source (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has queried if the 'Strategic drainage and water supply' bullet point is correct about Scottish Water carrying out a growth project to investigate capacity. SEPA recommend this is reworded in consultation with Scottish Water (RD0214.B) (PP1219).

Site OP1 – Land to the West of Marykirk

Support is expressed for site OP1, which benefits from planning permission and is in the process of being completed (PP1221).

SEPA has requested the removal of the third paragraph of the allocation text as there is only a small watercourse to the north that flows away from the site and the allocation site boundary is away from this small watercourse. There is little risk of flooding from this source and any flood risk issues would be surface water related and recommend additional wording to state in agreement with the Council's Flood Prevention Unit on the use of SuDS (RD0214.B) (PP1219).

Non-Allocated Site – Bid Site KN088 – Land West of Napier Place, North of Site OP1

A representee has requested the allocation of land to the north of OP1 (bid site KN088) for residential or mixed-use development. The site is deliverable and appropriate and would ensure a range of choice of new homes as well as an opportunity for limited commercial/community related development. There is an opportunity to link with site OP1 to ensure a coordinated vision for this part of Marykirk and it would not create any unacceptable landscape or transport/road safety impact. The representee has included a masterplan layout (RD0215.B) with their submission (PP1221).

St Cyrus

Settlement boundary

A representee has requested the extension of the settlement boundary to the north. They consider that the comments made by the Council stating that the road to the north of the village is not clear as the proposed extension would not extend the village beyond the undeveloped road from the west of the proposed village boundary extension. The proposal complies with the Vision, the area relates well to St Cyrus and the existing houses form part of St Cyrus. The extension would not extend the built-up area but may allow the possibility of small scale (two homes) infill where there is a gap site. The representee has included a plan (RD0010.A) showing the proposed settlement boundary extension (PP0116).

Flood Risk

SEPA has recommended the removal of the 'Flood Risk' bullet point as construction is now well underway on site OP1, which had a surface water flooding issue that could be addressed by SuDS. In addition, the allocation summary does not state the need for a Flood Risk Assessment which is required (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has requested that the 'Strategic drainage and water supply' bullet point is reviewed to ensure, in consultation with Scottish Water, that the proposed population growth is within

the design criteria for the existing waste water infrastructure and, if not, the need for an infrastructure upgrade is highlighted. SEPA note that St Cyrus waste water pumps to Nether Knox which only treats screened sewage and any further development at St Cyrus will require improved treatment at Nether Knox (RD0214.B) (PP1219).

Site OP1 – Roadside

Phase 2 of OP1 should be reviewed in light of the current economic climate, and due to insufficient consultation on the revised plans. There are concerns in relation to proximity of the new development and its impact on the character and saleability of the representee's house, impact on privacy, natural light, noise and light pollution, and there being environmental impacts on trees and wildlife habitat. There are also concerns about the viability of the development and its completion, so presenting an uncertain future and impact on house values. In addition, the representee seeks modification of the houses labelled on masterplan drawing 19/06/20 as 007, 008, 010 and 011 (PP0321).

A representee is concerned that the environmental impact studies have not been sufficient in relation to the existing soakaway and flood risk from Phase 2 development, with no firm assurances from SEPA (PP0321).

Modifications sought by those submitting representations:

Edzell Woods and Newesk

Flood Risk

Modify the PLDP to amend the second bullet point from, "Sites OP1 and OP2 are at risk from fluvial flooding and there are watercourses on both sites. Flood Risk Assessments may be required." to "Sites OP1, OP2 and BUS are ... Flood Risk Assessments will be required." (PP1219).

Services and Infrastructure

Modify the PLDP to amend the first sentence of the 'Strategic drainage and water supply' bullet point from, "Private waste water treatment works are proposed, and contributions will be required for the upgrade to the sewage works." to "There is no public waste water infrastructure at Edzell Woods, only private treatment. Private waste water treatment works are proposed, and contributions will be required for an upgrade to the existing sewage treatment works or for a new pumping station to connect to the public waste water treatment works at Edzell." (PP1219).

Site OP1 – Newesk

Modify the PLDP to amend the first sentence of the fifth paragraph from, "Flood Risk Assessments may be required, including to assess the risk from Black Burn." to "An updated Flood Risk Assessment will be required to assess the risk from the Black Burn if the extant permission lapses or if there is a change to the design layout not previously agreed. Consideration should be given to any culverts/bridges which may exacerbate flood risk. Any built development over an active culvert will not be acceptable." (PP1219).

Fettercairn

Vision

Modify the PLDP to amend the wording of the Vision to not rely on the distillery being a significant employer to justify OP1 (PP0455).

Flood Risk

Modify the PLDP to move the second sentence of the 'Flood Risk' section to a separate bullet point and remove reference to P3 to read, "Site OP1 is at risk from fluvial flooding. A Flood Risk Assessment will be required." (PP1219).

Services and Infrastructure

Modify the PLDP to clarify the provision for waste water drainage (PP0455).

Modify the PLDP to change the requirement for public transport to "will be required" under 'Local transport infrastructure' (PP0455).

Site OP1 – Land to the Northwest of Fettercairn

Modify the PLDP to amend the third sentence in the fourth paragraph from, "A Flood Risk Assessment will also be required." to "A Flood Risk Assessment will also be required and enhancements to the burn must be supported in this assessment." (PP1219).

Modify the PLDP to add text to the allocation summary to state, "Connection to the public sewer network will be required and early discussion with Scottish Water should be undertaken." (PP1219).

Modify the PLDP to clarify what provision will be made to accommodate increased traffic resulting from new development (PP0455).

Modify the PLDP to remove site OP1 (PP0761 and PP1110).

Johnshaven

Site R1 – Reserved for educational uses associated with Lathallan School

Modify the PLDP to remove site R1 (PP0878).

Flood Risk

Modify the PLDP to add text to state, "Parts of the settlement may be are at risk of coastal, fluvial and/or surface water flooding. Flood risk Assessments may be required." (PP1219).

Services and Infrastructure

Modify the PLDP to amend the first sentence of the local transport infrastructure section from, "Contributions will be required for junction improvements and road upgrade to the local road into Johnshaven." to "Contributions will be required for junction improvements and road upgrade to both of the local roads into Johnshaven, with a Speed Limitation of

40mph along the section of A92 from a safe distance before North of Lathallan School Main entrance to a similar safe distance beyond the New Road Junction.” (PP0544).

Modify the PLDP to amend the second sentence of the local transport infrastructure section from, “Development may be required to contribute to footway extensions, upgrades and crossing facilities, cycle infrastructure and public transport provision.” to “Development will be required to contribute to footway extensions and lighting of all walkways, upgrades including installation of steps/disabled access and crossing facilities, cycle infrastructure and public transport provision.” (PP0544).

Modify the PLDP to amend the first sentence of the ‘Strategic drainage and water supply’ bullet point from, “Sewage pumping stations in St Cyrus and Johnshaven are to be part of a growth project that requires to be delivered.” to “Sewage pumping stations in St Cyrus, Johnshaven, Gourdon and Inverbervie are to be part of a growth project that requires to be delivered. The growth project should include for full Sewage Treatment Plant, prior to discharge from the single outlet from Nether Knox.” (PP0544).

Modify the PLDP to amend the first sentence of the sports and recreation facilities paragraph from, “All residential development may be required to contribute to indoor and outdoor sports and learning facilities in Johnshaven or towards facilities in the wider catchment area at Laurencekirk.” to “All residential development may be required to contribute to indoor and outdoor sports and learning facilities in Johnshaven, including provision of safe access to and development of area P2 for recreational purposes of the local community and towards facilities in the wider catchment area at Laurencekirk. These may be identified in the Community Plan or relevant Community Action Plan.” (PP0544).

Site OP1 – Golden Acre

Modify the PLDP to amend the allocation summary to include after paragraph one, “The site is located within the existing policy woodlands and historical designed landscape of the historical Lathallan Estate, and the proposal and landscape design should be sensitive to this. The full extent of the site should not be developed to avoid significant adverse landscape and visual impacts. Any development should be of a scale, siting and design which appears subservient to the surrounding historical landscape. Further landscape design should reflect the sensitive historical context in terms of layout and species and seek to reinforce and enhance the existing character.” (PP1300).

Luthermuir

Site OP1 – The Chapel

Modify the PLDP to amend the second, third and fourth sentences in the second paragraph from, “Enhancement of the straightened watercourse through re-naturalisation and removal of any redundant features will require to be investigated. There will be no built development over the active culvert nor any additional culverting. A Flood Risk Assessment will also be required.” to “Enhancement of the straightened watercourse through re-naturalisation and removal of any redundant features including culverts should be investigated and should be supported in a Flood Risk Assessment. No built development will be permissible on the culverted part of the watercourse.” (PP1219).

Modify the PLDP to remove site OP1 (PP0123 and PP0265).

Modify the PLDP to reduce the number of homes proposed on site OP1 and require provision of a footpath on School Road, which does not reduce the road to a single-track road (PP0633).

Site OP2 – Land South of Newbigging Cottages

Modify the PLDP to include a new last sentence in the first paragraph to state, “The enhancement of the watercourse through re-naturalisation and the removal of any redundant features including culverts should be investigated and should be supported in a Flood Risk Assessment. No development will be permissible on the culverted part of the watercourse.” (PP1219).

Modify the PLDP to state that parking at the entrance to OP2 should be separate from Newbigging Cottages (PP0012).

Modify the PLDP to include the requirement for an Environmental Impact Assessment (PP0012).

Modify the PLDP to clarify the traffic impact in the village and on the A90 junction (PP0012).

Modify the PLDP to increase provision of local services (PP0012).

Modify the PLDP to reduce the number of homes proposed on site OP2 and require provision of a footpath along School Road that does not reduce the road to a single-track road (PP0633).

Site OP3 – Land North of Church Road

Modify the PLDP to ensure that new homes are no more than single storey in height (PP0097).

Modify the PLDP to remove site OP3 and readjust the settlement boundary to retain OP3 as countryside. If it is not removed, add the requirement for a Flood Risk Assessment (PP0460).

Modify the PLDP to reallocate site OP3 as protected land (PP0525 and PP0526).

Modify the PLDP to remove site OP3 and identify replacement effective allocation in the Rural Housing Market Area or in the Local Growth Area of the Aberdeen Housing Market Area (PP1056).

Marykirk

Site P4 – To protect an area of land as an amenity for the settlement

Modify the PLDP to allocate land formally identified as EH1 (LDP 2012) as protected land (PP0634).

Flood Risk

Modify the PLDP to remove the second bullet point from the 'Flood Risk' section: "Site OP1 has a watercourse on the boundary of the site." (PP1219).

Services and Infrastructure

Modify the PLDP to review, in consultation with Scottish Water and amend accordingly, the second sentence of the 'Strategic drainage and water supply' bullet point, as to whether Scottish Water will carry out a growth project to investigate additional capacity of the Marykirk Waste Water Treatment Works (PP1219).

Site OP1 – Land to the West of Marykirk

Modify the PLDP to remove the third paragraph and, in consultation with the Council's Flood Prevention Unit, replace with, "Any surface water flooding should be addressed with appropriate SuDS measures." (PP1219).

Non-Allocated Site – Bid Site KN088 – Land West of Napier Place, North of Site OP1

Modify the PLDP to allocate bid site KN088 for residential or mixed-use development (PP1221).

St Cyrus

Settlement Boundary

Modify the PLDP to extend the settlement boundary to the north west (PP0116).

Flood Risk

Modify the PLDP to remove the 'Flood Risk' bullet point: "A Flood Risk Assessment will be required for site OP1." (PP1219).

Services and Infrastructure

Modify the PLDP to review the 'Strategic drainage and water supply' bullet point, in consultation with Scottish Water, to confirm that the proposed population growth is within the design criteria for the existing waste water infrastructure and if so, this is confirmed in the bullet point and if not, the need for an infrastructure upgrade is highlighted (PP1219).

OP1 – Roadside

Modify the PLDP to amend Phase 2, to modify or remove houses labelled on masterplan drawing 19/6/20 as 007, 008, 010 and 011 (PP0321).

Modify the PLDP to ensure there is sufficient assessment of flood risk, and impact on the existing owner's private waste water drainage (PP0321).

Summary of responses (including reasons) by planning authority:

Edzell Woods and Newesk

Settlement Features

The Settlement Features table incorrectly includes site BUS as “Protected Land” when it should be included in its own sub-heading called “Other Designations”. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Flood Risk

The Council confirms that it intends to address SEPA’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

The Council confirms that it intends to address SEPA’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Newesk

The Council confirms that it intends to address SEPA’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Fettercairn

General

All new development will be assessed against the LDP policies to ensure they will not adversely affect the character of the settlement, such as Policy P1 Layout, Siting and Design. No change is required.

Vision

The allocation of housing in the settlement is not solely based on the distillery as employment and is assessed on the housing need. No change is required.

Site R1 – Reserved for a road access into site OP1

Comments from SEPA are noted. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

The Settlement Statement states Fettercairn Waste Water Treatment Works (WWTW) is at capacity and the PLDP sets a presumption for new development to connect to a public

WWTW. However, Scottish Water will only initiate a growth project to increase capacity once planning permission has been granted. As such, it is not necessary to scope out sewerage facilities in advance of gaining planning permission. No change is required.

Local transport infrastructure contributions would be sought or were required, depending on the scale of development. The PLDP cannot state that contributions will be sought for all development as this may not be the case and would be appropriately requested in consultation with Legal & People Business Services (Developer Obligations) for Planning applications. No change is required.

Site OP1 – Land to the Northwest of Fettercairn

The Council confirms that it intends to address SEPA's comments through non-notifiable modifications, as set out in the List of Non-Notifiable Modifications.

The Council does not agree with removing this site, most of which is allocated in the current LDP 2017. Site OP1 was a preferred site, as detailed in MIR 2019 (AD0038.F, page 28) as it forms a logical extension to the existing opportunity site for 40 units. The site is well connected to the settlement with good pedestrian access to the primary school, which has capacity and is on the same side of the road as site OP1, and the village centre, which includes a shop, café, hall and public house. As the site is located within the settlement boundary, the development of housing on this site would be applicable to clusters and groups of housing. The density of development has been increased due to the size of the site. Access can be taken from Garrol Place and Gladstone Gardens and no evidence has been provided by the representee that this is not possible. Site R1 reserves land for road access into site OP1 and a planning application for 9 homes, which includes site R1, was granted at appeal that safeguards access into site OP1 (APP/2017/0875). New development would be required to proportionally contribute to local infrastructure where applicable. No change is required.

Johnshaven

Site R1 – Reserved for educational uses associated with Lathallan School

Comments from SEPA are noted. No change is required.

The Council does not support the removal of site R1. The R1 designation has been carried forward from the current LDP and is seen as important to retain for educational uses associated with Lathallan School. Most of the site is designated as ancient woodland and the PLDP has a presumption against woodland removal in policy PR1 Protecting Importance Resources (paragraphs PR1.7 and PR1.8). No change is required.

Site R2 – Reserved for a future expansion of the cemetery

Comments from SEPA are noted. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Reduction of the speed limit on the A92 cannot be amended through the PLDP. This falls within the jurisdiction of the Scottish Government. Improvements to the road junctions on the A92 may require upgrading, should this be required through future development proposals. Improvements to lighting for access to the primary school, may be required as part of a safe routes school, and may be required as part of future development proposals. No change is required.

As noted in the PLDP, sewage pumping stations in St Cyrus and Johnshaven are to be part of a growth project that requires to be delivered and water network investigations may be required. No change is required.

With regards to the Community Council's comments on new residential developments contributing to a safe route to facilities at Wairds Park (site P2) and further development of site P2, this is a matter for consideration at the planning application stage and not the PLDP. Comments from the Council's Transportation Service have been considered during the preparation of the PLDP and the sports and recreation statement applies to all indoor and outdoor sports facilities. No change is required.

Site OP1 – Golden Acre

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council notes that the site is now subject to full planning permission for 71 homes (APP/2019/0753). Whilst not a matter raised by representees, it would be prudent to revise the allocation of site OP1 to reflect the planning permission. If the Reporter is minded, to make an amendment, then the Council recommend that the allocation of site OP1 is amended from 67 to 71 homes and Appendix 6 is amended accordingly.

Luthermuir

Flood Risk

Comments from SEPA are noted. No change is required.

Infrastructure and Services

Comments from SEPA are noted. No change is required.

OP1 – The Chapel

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

OP1 was identified as a preferred option in the MIR 2019 (AD0038.F, page 59). The site

lies within an existing opportunity site, OP1, allocated for 25 homes, small scale retail and employment land. Although site OP1 supports a vision in the Local Development Plan 2017 to provide opportunities for new services in the village, there is justification to support this proposal at the revised allocation, as the viability of a new shop within such a small community is questionable, particularly as the site has not been delivered to date as a mixed-use site. In addition, it is a flat site located on the site of a former school, and it fits within the existing settlement layout, providing development around the P1 open space area and so reinforcing a sense of focal point for the village. Access can be through site OP2 and/or from Church Road, and Church Lane and can be upgraded where it runs parallel to the site. Any local road infrastructure improvements may be required through the processing of a formal planning application. The proposal will also help support Luthermuir Primary School, which is currently only at 58% capacity (AD0110, School Roll Forecast 2019, Appendix 1, page 3). No change is required.

The number of units has increased due to the change from a mixed-use site to a residential development. Therefore, there is scope to increase the density on the site. No change is required.

OP2 – Land South of Newbigging Cottages

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Although the site is identified as constrained in the HLA 2019 (AD0022, Rural Housing Market Area, page 39) it is seen as a more appropriate location for development than the existing OP2 site in the current LDP 2017. The site has planning permission granted for 25 homes (APP/2016/2326). Located on the edge of the settlement, the site is currently used for agriculture so will have minimal environmental impact and streetlights already? run along School Road and Newbigging Cottages. Any local infrastructure improvements may be required through the processing of a formal planning application. No change is required.

OP3 – Land North of Church Road

Comments from SEPA are noted. No change is required.

The design and scale of any future housing on the site would be subject to assessment under a formal planning application and the relevant policies of the PLDP. No change is required.

The Council does not agree to removing this site or that a Flood Risk Assessment is required. While site OP3 was not a preferred option in the MIR, as bid site KN125 (AD0038.F, pages 58 and 61) the Kincardine and Mearns Area Committee agreed to allocate the site for 13 homes (AD0153, page 24). This allocation provides an alternative to sites OP1 and OP2 to the south that have not yet been developed (site OP1 was allocated in the LDP 2017 and site OP2 received planning permission in 2017). Housing surrounds site OP3 on three sides. Access is proposed through land at Rose Cottage in the first instance. The site contains no ancient woodland. SEPA has no flooding issues with this site and SEPA's flood risk map does not show this site being at risk from flooding. The proposal will also help support Luthermuir Primary School, which is currently only at 58% capacity (AD0110, Appendix 1, page 3). The Proposed Delivery Programme follows

what is stated in the PLDP, it is a factual document that is updated annually, and there are regular discussions with Council departments, including the Transportation Service. No change is required.

Marykirk

Site P4 – To protect an area of land as an amenity for the settlement

The Council agrees that the site formally allocated as EH1 in the LDP 2012, should be designated as protected land P4 in the PLDP, to protect as an amenity for the settlement (AD0031.F page 35). Most of the former allocation is within site P4, but it excludes a narrow strip of land. The Council confirms that it intends to address the representee's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site P2 – To protect the parish church, graveyard and woodland buffer as amenities

Support for site P2 is noted. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

The Proposed Delivery Programme 2020 states there is "Insufficient capacity at Marykirk WWTW. A SR21 project will be investigated to look at additional capacity." which is likely to be delivered between 2021 and 2027. This has been reflected in the PLDP. No change is required.

Site OP1 – Land to the West of Marykirk

Support for site OP1 is noted. No change is required.

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Non-Allocated Site – Bid Site KN088 – Land West of Napier Place, North of Site OP1

The Council does not support allocating bid site KN088 for 30 homes or mixed-use development. Bid site KN088 was not a preferred option for immediate development in the MIR 2019 (AD0038.F, page 64). While the MIR identified this site as a reserved site for future development, the reservation of housing sites is not being taken forward through to the PLDP, MIR Issues and Actions Paper (AD0040.F, page 77). The bid submission noted that the site would be delivered in the first half of the LDP, but this would seem unrealistic given that site OP1 is anticipated to take up to 2022 to be completed (AD0022, Rural Housing Market Area, page 39) although this has been extended to 2023 in the HLA 2020 (AD0023, Rural Housing Market Area, page 53). As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of

deliverable housing sites within the Rural Housing Market Area. It is considered that Marykirk has an appropriate amount of land identified for housing to meet local housing needs during the Plan period through the allocation of OP1. It is not considered there is a need for the allocation of additional housing land in Marykirk. No change is required.

St Cyrus

Settlement boundary

The Council does not support extending the settlement boundary, which would allow for infill development and elongate the boundary unnecessarily. There does not seem to be any advantage to moving the boundary to include the few properties to the north of the road as suggested. There is a defensible boundary to the north of the settlement from the properties along Ecclesgreig Gardens. Furthermore, much of the land surrounding St Cyrus is prime agricultural land and it is not considered appropriate to encourage further development on this resource. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

The Council notes SEPA's comments on waste water treatment, but in 2018 planning permission was been granted on the only housing allocation for 125 homes and development has commenced. No change is required.

Site OP1 – Roadside

A planning application for 125 homes has been approved on the site and development has commenced. Any amendments on the site would be appropriately assessed through this process and in accordance with the relevant policies of the Plan. Appropriate consultations will be undertaken in relation to drainage servicing with relevant consultees if required. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as "non-notifiable modifications" in relation to the settlement statement matters covered in Issue 51. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Edzell Woods and Newesk

3. I consider the changes requested by the Scottish Environment Protection Agency (SEPA) in relation to the flood risk and services and infrastructure sections and allocation OP1 (Newesk) would provide clarification on the need for flood risk assessments and contributions to improve waste water infrastructure. Modifications to address these matters are recommended.

Fettercairn

4. I do not consider that the wording of the vision implies that the presence of the distillery provides the justification for housing allocation OP1. No modification is required.

5. The changes requested by SEPA in relation to the flood risk section and allocation OP1 (land to the north west of Fettercairn) would provide clarification on the need for and content of a flood risk assessment and the requirement for a connection to the public sewer network. Modifications to address these matters are recommended.

6. The council's comments above explain why it would not be possible to increase the capacity of the waste water treatment works, in advance of planning permission being granted. The modification to the allocation summary for site OP1 requested by SEPA would provide clarification on this matter. No further modification is required.

7. The services and infrastructure section of the Fettercairn settlement statement identifies the infrastructure items for which financial or other contributions may be sought. The council has undertaken a transport appraisal to support the preparation of the local development plan. However, as this focusses on the trunk road corridors, principal A roads and the rail network, it does not contain any recommendations in relation to roads in and around Fettercairn.

8. However, the allocation summary for site OP1 highlights the transport matters to be addressed, including footpath links to provide safe walking routes to school and vehicular access points. It is recommended in Issue 12 that the council prepares statutory supplementary guidance to provide further detailed information on the infrastructure requirements associated with development allocations and developer contributions. This approach would provide a mechanism for addressing the impact of development on infrastructure and services, including any measures required to mitigate transport impacts. No settlement specific modifications are required on this matter.

9. The majority of site OP1 was allocated for 40 homes in the existing local development plan, but is shown as constrained for marketability reasons in the 2019 housing land audit. The allocation has been extended in a northerly direction and the indicative density increased, which results in a revised capacity of 60 homes. The site is identified as contributing towards the strategic development plan allowance for the Rural Housing Market Area in the period up to 2032.

10. I do not agree that allocation OP1 is subject to infrastructure constraints. The council has explained that access can be taken from two points. Access from Garrol Place is specifically reserved on the Fettercairn settlement map in the proposed plan and I do not consider that the protected land designation P6 would prevent access being taken from

Gladstone Gardens.

11. Paragraph 4.18 in the strategic development plan states that new allocations should attempt to utilise the current 'constrained' supply in the first instance. In response to a request for further information (FIR008), the council has explained the range of measures it has in place to support the delivery of housing where marketability is a concern. These could be used to assist with the delivery of housing on site OP1, if required.

12. There is a range of local facilities including a primary school within walking distance of the site and Fettercairn itself is conveniently located to the north west of rail services at Laurencekirk, and the A90 corridor. Allocation OP1 is the only housing site identified in the settlement. On this basis, I consider it reasonable to expect that the marketability constraint can be overcome and 60 homes would be deliverable in the period to 2032. I consider that allocation OP1 should be retained in the plan. No modification is required.

Johnshaven

13. The proposed plan reserves site R1, which is located at the eastern side of the settlement, for education uses associated with Lathallan School. Areas of woodland occupy part of the site and the Woodland Trust is concerned that the reservation for education purposes may result in damage to ancient woodland.

14. The council has provided a map which shows that all of the site is included in the ancient woodland inventory, with the exception of the playing fields and the buildings in the central area. Policy PR1.7 in the proposed plan establishes a strong presumption in favour of retaining woodland on development sites. However, this is a large site and the presence of ancient woodland would not necessarily preclude some further development for educational purposes. The council has suggested wording to add to the description for site R1 to highlight the need to protect the ancient woodland. I consider that the inclusion of this additional wording would address the matter raised by the Woodland Trust Scotland. A modification to this effect is recommended.

15. I consider the additional text suggested by SEPA in relation to food risk to be appropriate to provide clarification on this matter. A modification is required.

16. The community council has requested a number of modifications to the services and infrastructure section of the settlement statement. The purpose of this section is to indicate the items of infrastructure which may be required to support development. I agree with the council that a reduction in the speed limit on the A92 road is not a matter to be addressed through the local development plan. Furthermore, it is not the role of the local development plan to set out the exact details of mitigation measures such as footpath improvements. The strategic drainage and water supply bullet point addresses the need for improvements to the existing sewage pumping stations. No additional wording is required.

17. Lighting is not currently mentioned under the local transport infrastructure bullet point. However, the council states in its response to the community council's representation that "improvements to lighting for access to the primary school may be required". I therefore consider it appropriate to add "lighting" to the local transport infrastructure bullet point. A modification to this effect is recommended.

18. The council has indicated that planning permission has been granted for 71 homes on site OP1 (Golden Acre). On my site inspection, I observed that ground preparation works have been undertaken for the whole of the site and construction of the houses is well underway. The changes to the allocation summary requested by NatureScot, and agreed by the council, would prevent development on the full extent of the site. As planning permission has already been granted and the full extent of the site is now under construction, it would not be appropriate to make this amendment. There are no unresolved representations seeking a change in the number of homes on site OP1. I have therefore no remit to make the modification suggested by the council. No modifications are required in relation to site OP1.

Luthermuir

Site OP1 – The Chapel

19. Site OP1 (The Chapel) comprises two flat agricultural fields and is allocated as a mixed use opportunity in the current local development plan. Whilst the provision of additional business and retail premises would bring employment and social benefits, there are no representations seeking the retention of these elements in the allocation.

20. The allocation is identified as an effective housing site in the 2019 housing land audit, with the additional six homes contributing towards meeting the strategic development plan allowance for the Rural Housing Market Area.

21. I note that there are limited local amenities and job opportunities in Luthermuir. However, it has a primary school, café and other community meeting places and access to a bus service. The strategic environmental report only identifies one negative environmental effect which cannot be mitigated, that which relates to the loss of agricultural land.

22. I note that all of Luthermuir, including developed land, is shown as prime agricultural land on the map in section 12 (protecting resources) of the proposed plan. Given that site OP1 is already identified for development in the current local development plan and is located within the existing settlement boundary, I do not consider its removal on the grounds of loss of prime agricultural land would be justified.

23. I am not aware of any protected trees on the site and I consider the allocation provides the opportunity to enhance biodiversity. I agree with the council that the allocation would contribute to a sense of place, by providing a western edge to what would become a central area of open space. I consider that the other matters raised in representations relating to impact on infrastructure and design considerations could be addressed at planning application stage. I conclude that allocation OP1 should be retained. No modification is required.

Site OP2 – Land south of Newbigging Cottages

24. Site OP2 lies to the south east of site OP1 and is also located within the settlement boundary in the current local development plan. The council has indicated that planning permission has been granted for 25 homes on the site. No information has been provided to indicate whether this permission has been implemented or has lapsed.

25. As this site is located within the settlement boundary and has a previous planning permission for housing, I do not consider that its removal from the plan would be justified. I also do not consider there is any justification to reduce the indicative capacity from that which was granted planning permission. The requirement for a joint master plan with site OP1 provides the opportunity to create a development which is carefully designed and well integrated with the rest of the settlement. Matters such as impact on neighbouring residents and biodiversity can be addressed further through the master plan. However, impact on private views is not a material planning consideration. The potential for a footway within the site boundary on the northern side of School Road to connect with the existing footway to the east could also be explored. No modifications to the plan are required to address these matters

26. I agree with the changes requested by SEPA in relation to the existing culverts in order to minimise the risk of flooding from the watercourse. A modification to this effect is recommended.

Site OP3 – Land north of Church Road

27. Site OP3 is an agricultural field located to the north of Church Road at the western end of the village. I note that the original bid submission also includes land to the east, with access to be taken from a small tree lined track which is protected by a Tree Preservation order. The allocation summary in the proposed plan identifies an alternative access from Church Road.

28. The strategic environmental assessment report for the proposed plan indicates that, with the exception of the loss of prime agricultural land, any negative environmental effects arising from the development of site OP3 can be mitigated.

29. As I have indicated above, all of Luthermuir, including land within the settlement boundary, is identified as prime agricultural land. The site is a relatively well-contained grass field and development would not impact on the expansive area of agricultural land to the north. I do not consider that impact on prime agricultural land would justify the removal of this allocation. There are no trees on site OP3 and it is not shown as being in the ancient woodland inventory on map 12 in the proposed plan.

30. Allocation OP3 would contribute 13 homes towards meeting the strategic development plan allowance for the Rural Housing Market Area. Matters relating to overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for Issue 5, it is concluded that there is sufficient land identified to meet the required allowance. However, there is not a significant over-allocation to justify the removal of sites on the basis that there is no housing need.

31. SEPA has not raised any flooding concerns and I consider detailed matters relating to access and design can be addressed at planning application stage.

32. Given the smaller size of allocation OP3, I do not consider that it would undermine the deliverability of site OP1 or OP2. Together these three sites would provide a range of housing opportunities and help maintain the local primary school, an objective highlighted in the vision for Luthermuir. No modification is recommended.

Marykirk

33. The site which the community council wishes to be included in protected land P4 lies immediately to the south of the existing allocation and to the north of Kirktonhill Place. The majority of the site is overgrown grassland, but it also includes an access hammerhead which was occupied by a caravan and a van on the day of my site inspection. The council is supportive of this change and I agree that it would be logical to extend site P4 to the northern edge of the road. A modification to this effect is recommended.

34. I agree that the flood risk section and the allocation summary for site OP1 (land to the west of Marykirk) should be modified, in line with SEPA's comments, because there is not a watercourse on the boundary of the site.

35. Non-allocated bid site KN088 (land west of Napier Place) lies to the north of site OP1. The layout of site OP1 includes a vehicular access to site KN088 and I agree that the site would represent a logical extension to the village, if additional land for housing is required.

36. The strategic environmental assessment report identifies a number of negative environmental effects in relation to the loss of prime agricultural land and potential impact on an archaeological asset. Whilst I note, from the main issues report, that matters relating to school capacity, water and waste water treatment and the proximity of the Health and Safety Executive pipeline zone would require to be addressed, these would not necessarily prevent development.

37. The 2020 housing land audit indicates that site OP1 is due to be completed in 2023. Matters relating to housing land provision in general are addressed in Issues 2 and 5. Marykirk lies within the Rural Housing Market Area. Whilst I note that there are no other allocations in Marykirk to provide additional housing in the period 2020 to 2032, it is concluded in Issue 5 that there is sufficient land identified to meet the strategic development plan allowance for the Rural Housing Market Area. There is no requirement for future housing reservations beyond 2032 to be identified in the plan and I conclude that the site is not needed in the period up to 2032. No modification is required.

St Cyrus

38. The representation in relation to the settlement boundary seeks its extension in a northerly direction at Ecclesgreig Road. Whilst I can see some merit in including the three properties immediately to the north of the crossroads within the settlement boundary, I do not consider that the paddock area forms part of the settlement. I note that there are other individual buildings and groups of buildings located beyond the settlement boundaries at St Cyrus. I agree with the council that there is no reason to amend the settlement boundary at this location. No modification is required.

39. I agree with SEPA that the reference in the settlement statement to a flood risk assessment being required for allocation OP1 is superfluous, as the site is under construction. A modification is recommended.

40. The council does not consider it necessary to make the changes sought by SEPA in relation to waste water infrastructure because allocation OP1 is under construction. However, the services and infrastructure section may also apply to future planning applications for sites not identified as allocations in the plan. I am not able through this examination to address SEPA's request that the council consult Scottish Water on this

matter. However, I note that SEPA has not requested a similar change to the settlement statements for Gourdon, Johnshaven and Inverbervie, which also refer to the sewage pumping stations in St Cyrus and Johnshaven. Based on the information before me and in the interest of consistency, I do not consider it necessary to modify the services and infrastructure section in the St Cyrus settlement statement.

41. I agree with the council that, as allocation OP1 has planning permission and is under construction, the matters raised in representations would not justify any changes to the local development plan. Any amendments to the approved plan would be assessed through the planning application process. No modification is required.

Reporter's recommendations:

Modify the local development plan by:

Edzell Woods and Newesk

1. Replacing the second bullet point of the flood risk section in the Edzell Woods and Newesk settlement statement on page 660 with:

“• Sites OP1, OP2 and BUS are at risk from fluvial flooding and there are watercourses on both sites. Flood Risk Assessments will be required.”

2. Replacing the first sentence of the strategic drainage and water supply bullet point in the Edzell Woods and Newesk settlement statement on page 660 with:

“There is no public waste water infrastructure at Edzell Woods, only private treatment. Contributions will be required for an upgrade to the existing treatment works or for a new pumping station to connect to the public waste water treatment works at Edzell.”

3. Replacing the first sentence in the fifth paragraph of the allocation summary for OP1 (Newesk) in the Edzell Woods and Newesk settlement statement on page 661 with:

“An updated Flood Risk Assessment will be required to assess the risk from the Black Burn if the extant permission lapses or if there is a change to the design layout not previously agreed. Consideration should be given to any culverts/bridges that may exacerbate flood risk. Any built development over an active culvert will not be acceptable.”

Fettercairn

4. Deleting the second and third sentences of the flood risk bullet point in the Fettercairn settlement statement on page 664 and inserting the following new second bullet point in the flood risk section:

“Site OP1 is at risk from fluvial flooding. A Flood Risk Assessment will be required.”

5. Replacing the third sentence in the fourth paragraph of the allocation summary for OP1 (land to the north west of Fettercairn) in the Fettercairn settlement statement on page 665 with:

“• A Flood Risk Assessment will also be required and enhancements to the burn must be supported in this assessment.”

6. Adding the following new fifth paragraph to the allocation summary for OP1 (land to the north west of Fettercairn) in the Fettercairn settlement statement on page 665:

“Connection to the public sewer network will be required and early discussion with Scottish Water should be undertaken.”

Johnshaven

7. Adding the following sentence to the end of the description for site R1 in the Johnshaven settlement statement on page 682:

“The ancient woodland site should be protected against any loss or detrimental impact from future development.”

8. Replacing the flood risk bullet point in the Johnshaven settlement statement on page 683 with:

“• Parts of the settlement are at risk of coastal, fluvial and/or surface water flooding. Flood Risk Assessments may be required.”

9. Replacing the second sentence of the local transport infrastructure bullet point in the Johnshaven settlement statement on page 683 with:

“Development may be required to contribute to footway extensions, upgrades, lighting and crossing facilities, cycle infrastructure and public transport provision.”

Luthermuir

10. Replacing the second to fourth sentences of the second paragraph in the allocation summary for OP1 (The Chapel) in the Luthermuir settlement statement on page 705 with:

“Enhancement of the straightened watercourse through re-naturalisation and removal of any redundant features including culverts will require to be investigated and should be supported in a Flood Risk Assessment. No development will be permissible on the culverted part of the watercourse.”

11. Adding the following sentence at the end of the first paragraph in the allocation summary for OP2 (land at Newbigging Cottages) in the Luthermuir settlement statement on page 706:

“The enhancement of the watercourse through re-naturalisation and the removal of any redundant features including culverts should be investigated and should be supported in a Flood Risk Assessment. No development will be permissible on the culverted part of the watercourse.”

Marykirk

12. Removing the second bullet point from the flood risk section of the Marykirk settlement statement on page 708.

13. Replacing the third paragraph in the allocation summary for OP1 (land to the west of Marykirk) in the Marykirk settlement statement on page 709 with:

“Any surface water flooding should be addressed with appropriate SuDS measures. There is a bus stop situated on the north east boundary of the site.”

14. On the Marykirk settlement plan on page 710, extending site P4 to the northern edge of Kirktonhill Place.

St Cyrus

15. Removing the flood risk sub-heading and bullet point from the St Cyrus settlement statement on page 741.

Issue 52	Aboyne	
Development plan reference:	Proposed LDP, Appendix 7F Marr, Page 766-772	Reporter: Alison Kirkwood
Body or person(s) submitting a representation raising the issue (including reference number):		
PP0272 Scottish Water PP0773 Deeside Climate Action Network PP0814 James Malcolm and Marcus Humphrey Educational Trust PP0878 The Woodland Trust Scotland PP1052 c a s e CONSULTING Limited PP1219 Scottish Environment Protection Agency PP1300 NatureScot (Scottish Natural Heritage) PP1402 Marcus Humphrey Educational Trust		
Provision of the development plan to which the issue relates:	Aboyne Settlement Statement	
Planning authority's summary of the representation(s):		
<p><u>Flood Risk</u></p> <p>Scottish Environment Protection Agency (SEPA) has recommended for consistency, adding site OP2 to the second 'Flood Risk' bullet point (RD0214.B) (PP1219).</p> <p><u>Services and Infrastructure</u></p> <p>SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (see RD0214.B). No modification sought (PP1219).</p> <p>Scottish Water has requested inserting after 'Strategic drainage and water supply', 'There is limited capacity at Aboyne Waste Water Treatment Works', "A growth project will be required and Scottish Water can instigate this on receipt of the 5 Growth Criteria from a developer. Recommend early engagement with Scottish Water." (PP0272).</p> <p>A representee has highlighted the need for commitments to improve the multi-use paths between Aboyne, Banchory, Torphins, Lumphanan, and Tarland to support a circular route connecting with the Deeside Way supporting active travel, health and wellbeing and environment but there is nowhere in the Plan that specifically improves this, unless part of a new housing development. There has been a significant increase in the use of e-bikes, which helps meet the need and makes changes to help the Climate Emergency (PP0773).</p> <p><u>Site OP1 – Land to West of Tarland Road</u></p> <p>SEPA has confirmed that that they have no flooding, strategic drainage or water supply issues with the allocation summary for site OP1 (see RD0214.B). No modification sought (PP1219).</p>		

NatureScot has requested that the allocation summary for site OP1 be amended to clarify that future development proposals will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee Special Area of Conservation (SAC), as a Construction Method Statement may be required as part of this process if significant effects are likely (RD0255.B) (PP1300).

A representee has objected to the inclusion of OP1 as it is likely to cause damage and/or loss to areas of ancient woodland. Removal of woodland is contrary to Scottish Planning Policy (SPP) paragraphs 216 and 218. It is also contrary to the Control of Woodland Removal Policy (RD0161.A) (PP0878).

Site OP2 – Tarland Road/ North of Kinord Drive

SEPA has confirmed that that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219).

NatureScot has suggested the removal of wording referring to the River Dee SAC in the allocation summary as this site has planning permission and is under construction. Unless future proposals come forward on site OP2, then they should be subject to a HRA and additional text added accordingly (RD0255.B) (PP1300).

A representee has objected to the inclusion of OP2 as it is likely to cause damage and/or loss to areas of ancient woodland. Removal of woodland is contrary to SPP paragraphs 216 and 218. It is also contrary to the Control of Woodland Removal Policy (RD0161.A) (PP0878).

The consented capacity is 130 homes with 101 homes left as at, 1 January 2019. The site should reflect actual capacity granted rather than notional capacity as per the Housing Land Audit (HLA) 2019. The site capacities carried forward should be revised to the base date of the LDP for consistency and avoid overstatement of the existing effective land supply. The existing effective allocation at the base date of the emerging LDP should not contribute to the allowances to avoid double counting (PP1052).

Non-Allocated Site – New Site N003 – Golf Course Road

A representee has requested the amendment to the settlement boundary and inclusion of an allocated site noting that the site has historically been proposed for development and public engagement would take place before any detailed planning applications are made. The site is suited for mixed-use development (a combination of residential, commercial and leisure use) and is close to existing facilities. The allocation of the site would rebalance the geographical centre of Aboyne by drawing the occupants of the development closer to the cluster of retail outlets around Aboyne Green. The representee has included an Appendix (RD0270.A) in their representation which provides further detail to support their position (PP1402).

Settlement Map

The settlement boundary should be amended to include an area of land south of Cluny Cottage to resolve the unnatural shape, respect the adjacent Deeside Way and provide a

logical line for the boundary to follow. The area has been of residential character and use as it was previously leased as garden ground for Cluny Cottage. The representee has included an Appendix (RD0150.A) in their representation which provides further detail to support their position (PP0814).

The settlement map shows an incorrect route of the Deeside Way core path adjacent to Cluny Cottage (PP0814).

Modifications sought by those submitting representations:

Flood Risk

Modify the PLDP to amend the second 'Flood Risk' bullet point to read, "Small watercourses flow through or adjacent to sites OP1 and OP2. A Flood Risk Assessment may be required." (PP1219)

Services and Infrastructure

Modify the PLDP to amend wording under 'Strategic drainage and water supply' replacing the second sentence with, "A growth project will be required and Scottish Water can instigate this on receipt of the 5 Growth Criteria from a developer. Recommend early engagement with Scottish Water." (PP0272).

Modify the PLDP to provide specific support to enable paths plans to be implemented (PP0773).

Site OP1 – Land to West of Tarland Road

Modify the PLDP to amend the allocation summary to add the following text before the final sentence of the fifth paragraph, "Future development proposals will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC." (PP1300).

Modify the PLDP to amend the allocation summary to remove at the end of the fifth paragraph, "... to take account of the potential impacts to the qualifying interest of the River Dee SAC." (PP1300).

Modify the PLDP to remove site OP1 (PP0878).

Site OP2 – Tarland Road/ North of Kinord Drive

Modify the PLDP to amend the allocation summary removing the last sentence in paragraph two if no further planning applications are anticipated, "A Construction Method Statement may be required to take account of the potential impacts to the qualifying interests of the River Dee SAC." (PP1300).

Modify the PLDP to remove site OP2 (PP0878).

Modify the PLDP to amend site OP2, reducing the allocation to 101 homes (PP1052).

Non-Allocated Site – New Site N003 – Golf Course Road

Modify the PLDP to include N003 as an allocation for a mixed-use development and adjust the settlement boundary accordingly (PP1402).

Settlement Map

Modify the PLDP to include an area of land south of Cluny Cottage within the settlement boundary (PP0814).

Modify the PLDP to ensure the Deeside Way core path is correct on the settlement map (PP0814).

Summary of responses (including reasons) by planning authority:

Flood Risk

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address Scottish Water's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The provision of path networks within identified settlements would be supported through connectivity required as part of a planning application for residential development or if outwith settlements, policy also supports such projects, subject to compliance with relevant policies. However, as noted in Issue 7: Section 9 Shaping Places and Appendix 8, 9 and 10, the PLDP is not a framework or tool to promote footpaths, cycleways, and active travel networks both within communities and between adjacent communities. No change is required.

Site OP1 – Land to West of Tarland Road

Comments from SEPA are noted. No change is required.

The comments in relation to a HRA and Construction Method Statement are noted. The Council confirms that it intends to address NatureScot's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The impact on woodland would be considered with any detailed planning application and the site OP1 has an extant planning permission which leads for it to be appropriate to be maintained as an allocation within the Local Development Plan. No change is required.

Site OP2 – Tarland Road/ North of Kinord Drive

Comments from SEPA are noted. No change is required.

It is not an impossibility that the future alternative proposals could be sought on the

remaining undeveloped parts of site OP2. The Council agree with the removal of the NatureScot's modification but in the event of further planning applications, find it appropriate to replace this with wording that the representee sought for site OP1. The Council confirms that it intends to address NatureScot's comments through a non-notifiable modification replacing the last sentence in paragraph two with "Future development proposals will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.", as set out in the List of Non-Notifiable Modifications.

The impact on woodland would be considered with any detailed planning application and the site OP2 has planning permission which leads for it to be appropriate to remain as an allocation within the Local Development Plan.

The allocation total of 181 homes reflects the planning permissions granted within the OP2 site area. The site boundaries have not been adjusted with the site being carried forward and thereby totals are also representative of completed units within the allocated area. Housing completions are set out within Appendix 6 Housing Land Allocations. Details on the calculation of the housing land supply and contributions to the allowances are provided in the Schedule 4 Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations. No change is required.

Non-Allocated Site – New Site N003 – Golf Course Road

The Council does not support allocating new site N003. The site was not put forward as a development bid in response to the Council's Call for Sites in 2018 so was not considered as such at the MIR stage, nor subject to site assessment and public consultation. This site was proposed as an allocation providing a site location plan in response to the MIR consultation (AD0040.G, page 8). No bid form or supporting information such as an environmental assessment was submitted at that time to allow a detailed evaluation of the suitability of the proposal and had not been the subject of public consultation. No additional supporting information has been submitted by the representee. In addition, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. No change is required.

Settlement Map

The settlement boundary follows an easily discernible boundary to the built-up area of the settlement. Primarily serving as a policy function, the placement of the boundary does not require to be aesthetically pleasing. The uses of the area would not override the need to protect woodland and as such, if the representee's amendment to the boundary was made, the area should form a continuation of protected land P4. The Council maintains that a boundary amendment would be unnecessary as per the MIR response (AD0040.G, page 8). No change is required.

The route of the Deeside Way core path is incorrect and requires to be modified due to a mapping error. The Council confirms that it intends to address this comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” in relation to the settlement statement matters covered in Issue 52. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Flood Risk

3. I agree that in the interests of consistency, a reference to site OP2 should be included in the second bullet point of the flood risk section. A modification is recommended.

Services and Infrastructure

4. The amendment suggested by Scottish Water would provide clarification on the growth project process required to increase the capacity of the waste water treatment works. I recommend a modification to the strategic drainage and water supply bullet point.

5. General representations regarding the protection and promotion of access routes are addressed in Issue 7. We agree with the council that the local development plan is not a framework or tool to promote footpaths, cycleways and active travel networks within and between settlements. There are other council documents, such as the Core Paths Plan and the Outdoor Access Strategy which would fulfil this role. The local development plan can protect existing routes, promote good access from new development to these routes and, where appropriate, promote the enhancement or extension of existing routes as part of development proposals. It is within this context, that planning applications may be able to support the work of local paths development initiatives.

Sites OP1 - Land to west of Tarland Road and OP2 Tarland Road/North of Kinord Drive

6. Site OP2 is identified as a housing allocation in the adopted local development plan. The council states that the various planning permissions covering the site total 181 homes. I note from the 2019 housing land audit, that the figure of 130 homes referred to in the representation from Case Consulting Limited, relates to phase four of the development. Appendix 6 in the proposed plan indicates that 69 of the homes on the site were already completed by January 2019.

7. The council explains that, as the site boundaries have not been amended to exclude the completed homes, the proposed plan refers to the total capacity of the site. I am clear, from the table in Appendix 6, that only five units from this site are identified as contributing towards the strategic development plan allowance for the Rural Housing Market Area. This figure is the difference between the capacity noted in the 2019 audit added to the

homes already built at 2019, and the current anticipated capacity of the site. I am satisfied that there is no double counting and conclude that no modification is required.

8. Site OP1, which lies to the west of site OP2, is also included as an allocation in the adopted local development plan, but remains undeveloped. The Woodland Trust Scotland objects to both allocations on the grounds that development would be likely to cause damage and/or loss to areas of ancient woodland.

9. In response to a further information request (FIR003), the council has provided a map which shows the extent of ancient woodland within sites OP1 and OP2. It shows that there is ancient woodland on the southern part of site OP1. Whilst the allocation summary in the proposed plan indicates that “established woodland to the south and west of the site should be retained”, there is no reference to ancient woodland. The council has indicated that full planning permission has been granted for mixed use development on site OP1 and that consideration of woodland impact would not be revisited unless any alternative proposals come forward.

10. Given that there is a current planning permission on the site, I do not consider there is any justification to remove the allocation. However, as development on this site has not commenced, future planning applications may be submitted for revised proposals. I consider that additional text is required to indicate the presence of ancient woodland, that this should be retained and enhanced where possible and that compensatory planting must be provided for any loss of woodland/trees. A modification to this effect is recommended.

11. The council’s map shows that the western section of site OP2 is included in the ancient woodland inventory. As this site has planning permission and is under construction, there is no justification to remove the allocation from the plan. However, the council has indicated, in its response to the representation from NatureScot that alternative proposals may come forward for the undeveloped part of site OP2, which includes the area of ancient woodland. I therefore consider that additional wording, similar to that proposed for site OP1, should be included in the allocation summary for OP2. A modification is recommended.

12. The text on Habitats Regulations Appraisal requested by NatureScot in relation to site OP1 would provide clarification on the appraisal process. In the interests of clarity and consistency, I agree with the council that this amendment should also apply to site OP2. Modifications are recommended.

Non-allocated new Site N003 – Golf Course Road

13. The site at Golf Course Road forms part of an agricultural field located to the south and west of the golf course. The southern part of the field, which lies next to the existing settlement boundary, is not part of site N003.

14. Whilst I note that the housing allocations in Aboyne are located in the western part of the settlement, I do not consider that development in this location would be justified solely on the grounds that the site is close to existing facilities at the golf club and Aboyne Green.

15. The conclusions reached under Issue 5 indicate that there is no need for additional housing allocations in the Rural Housing Market Area to meet the strategic development

plan allowance for the period up to 2032. The allocation of the site is therefore not required to meet housing need. The environmental impact of development on this site has not been assessed and there has been no opportunity for the public, key agencies or other stakeholders to comment. I therefore have insufficient information before me to fully assess the merits or otherwise of a mixed use development proposal.

16. The existing settlement boundary wraps around the gardens of residential properties and follows the north-south and east-west sections of Golf Course Road, which I consider is clear and logical. There is no justification to extend the boundary to incorporate the agricultural field to the north and west of Golf Course Road.

17. No modification is required to allocate this site or amend the settlement boundary.

Settlement Map

18. The existing settlement boundary at the western end of Aboyne and to the north of the A93 road generally follows the north – south farm track. I consider it appropriate that the boundary should also include Cluny Cottage, which is the only residential property located immediately to the west of the farm track. However, this justification would not apply to the irregular shaped area of woodland located to the south of Cluny Cottage. The site is not urban in character and visually forms part of the woodland belt which extends in a westerly direction. The section of the Deeside Way, which runs along the western edge of the site, provides a path through an area of woodland and I can see no merit in amending the settlement boundary to align with this route. No modification is required.

19. The council has accepted that the route of the Deeside Way core path is shown incorrectly on the maps in the Aboyne settlement statement. I agree that a modification is required to show the correct route to the south of Cluny Cottage, which is located at the western edge of the settlement.

Reporter's recommendations:

Modify the local development plan by:

1. Replacing the first sentence of the second bullet point in the flood risk section page 767 with:

“Small watercourses flow through or adjacent to sites OP1 and OP2.”

2. Replacing the second sentence of the strategic drainage and water supply bullet point on page 767 with:

“A growth project will be required and Scottish Water can instigate this on receipt of the five growth criteria from a developer. Early engagement with Scottish Water is recommended.”

3. Replacing the last sentence of the fifth paragraph in the allocation summary for OP1: Land to West of Tarland Road on page 768 with the following two sentences:

“Future development proposals will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.”

4. Replacing the penultimate paragraph of the allocation summary for OP1: Land to West

of Tarland Road on page 768 with:

“The maintenance and enhancement of wildlife corridors should be integral to the site’s development. The southern part of the site lies within an area included in the Scottish Ancient Woodland Inventory. Where possible, existing woodland should be retained and enhanced. Equivalent compensatory planting must be provided for any loss of woodland/trees.”

5. Replacing the last sentence of the second paragraph of the allocation summary for OP2: Tarland Road/North of Kinord Drive on page 769 with the following two sentences:

“Future development proposals will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.”

6. Adding the following new paragraph to the allocation summary for OP2: Tarland Road/North of Kinord Drive on page 769:

“The western part of the site lies within an area included in the Scottish Ancient Woodland Inventory. Where possible, existing woodland should be retained and enhanced. Equivalent compensatory planting must be provided for any loss of woodland/trees.”

7. Amending the line of the Deeside Way core path on the Aboyne: Key Map and Aboyne: Map 1 on pages 770 and 771 to show the correct route to the south of Cluny Cottage.

Issue 53	Alford	
Development plan reference:	Proposed LDP, Appendix 7F Marr, Page 773-780	Reporter: Alison Kirkwood
Body or person(s) submitting a representation raising the issue (including reference number):

Provision of the development plan to which the issue relates:	Alford Settlement Statement	
Planning authority's summary of the representation(s):		
<p><u>General</u></p> <p>A representee has raised concern about removal of part of the proposed core path network (CPN), specifically the path running from the Pleasure Park to the old military road near Gallow Hill since the path is well used, with a strong local desire for its continued use. There is also a desire for the Cairngorms National Park to be extended, and this provides potential for a 'Paths for All' project providing 'carbon neutral' walking/cycling/riding opportunities in the Vale of Alford (PP0024).</p> <p><u>Natural and Historic Environment</u></p> <p>Specific acknowledgement of Balfluig Castle should be provided to protect the integrity of its rural setting. Additional text should be added to reflect the need to protect Balfluig Castle against the impact of development on its rural setting (PP0619).</p> <p><u>Flood Risk</u></p> <p>Scottish Environment Protection Agency (SEPA) has requested amending the first 'Flood Risk' bullet point to refer to the SEPA flood risk map rather than the National Flood Risk Assessment (FRA) as Alford is not in the National FRA potentially vulnerable areas (RD0214.B) (PP1219).</p>		

SEPA has requested removing site R1 from the second 'Flood Risk' bullet point as there is no watercourse apparent on SEPA's GIS (RD0214.B) (PP1219).

SEPA has requested, for consistency, sites OP3 and OP5 are added to the second 'Flood Risk' bullet point (RD0214.B) (PP1219).

Site R1 – For a cemetery extension and to protect the cemetery/war memorial

SEPA has commented that there are unlikely to be any SEPA issues with this site (RD0214.B). No modification sought (PP1219).

Site R2 – For uses associated with Donside Community Care

SEPA has commented that they have no flooding, strategic drainage or water supply issues with the designation summary for site R2 (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Former School Campus Site

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

The Proposed Local Development Plan (PLDP) includes misinformation regarding the location and ownership of a stream sitting between two 'ransom strips' to the west of the site and on the park side which is not in Council ownership. The only watercourse in the remaining site is ephemeral and is not suitable for re-engineering (PP0023).

There is potential flood risk on the site and the risk on OP1 has been exacerbated by the new community campus building which diverts water to the OP4 site and in turn any soil sealing on the site would increase flood risk significantly unless effective SuDS are developed (PP0023).

Greystone Road is unsuitable for a high volume of traffic and this has been determined by road traffic engineers since the road was previously closed to the new Community Campus and nearby housing development and this should be taken into account (PP0023).

On the southern boundary of the site new homes should be built to ensure they do not overlook existing homes based on roof ridge height in relation to distance from the boundary. The representee has included an Appendix (RD0037.A) in their representation which provides further detail to support their position (PP0268).

Given the location of the site, it is suitable for community uses, rather than the Council seeking a return on the site (PP0023).

NatureScot has requested that the allocation summary is amended to state that an active

travel link should be sought from the town centre through to a core path, as they note the presence of a new proposed core path in woodland that ends adjacent to the west boundary of site OP1 (although it is not shown on the Settlement Statement maps, which only shows existing core paths) and that this would support active travel in accordance with the aims of the PLDP (RD0255.B) (PP1300).

Site OP2 – Land at Wellheads

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219).

Site OP3 – Land at Greystone Road

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP3 (RD0214.B). No modification sought (PP1219).

The base date of the LDP is 1 January 2019 so site capacities should indicate the residual capacities as within the Housing Land Audit (HLA) 2019 to avoid overstatement of the available land supply. The allocation is an amalgamation of earlier allocations in the settlement and requires to be corrected to show the correct capacity (PP1073).

Site OP4 – Land at Kingsford Road

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP4 (RD0214.B). No modification sought (PP1219).

The OP4 site is located within the Battle of Alford Inventory historic battlefield boundary of 1645. Historic Environment Scotland (HES) has noted that the allocation is located in the southeast section of the Inventory boundary, which is not presently considered to have been a key area of battlefield activity/lines of action, and therefore the potential impact on any archaeological remains dating to the battle is likely to be low. Nevertheless, HES note the potential impact on the special qualities of the battlefield should still be assessed further. Although the allocation is located adjacent to existing housing development, given its size and change from what is currently an agricultural field, there is likely to be some impact on the understanding and appreciation of the battlefield landscape. Therefore, any potential impacts on key landscape characteristics and the cumulative impacts should be assessed, with mitigation and enhancement considered in line with HES Battlefield guidance (RD0266.A) (PP1343).

The representee supports the allocation of the site but references to a significant landscape buffer to the west (providing separation from the battlefield) should be revised to make reference to an appropriate buffer, with the size determined through a masterplan or planning application. The current wording 'opens the door' to any future planning application being subject to disproportionate requirements, taking into account there is uncertainty over the location of the battle, and that much of the battlefield has been built on. The buffer shown in the indicative masterplan approved for planning application reference APP/2005/2835 should also be taken into account (PP0037).

Reference to a buffer strip along the watercourse should be removed in accordance with the Issues and Actions Paper which responded to SEPA's recommendation for watercourse enhancements as, "In light of SEPA's comments, a buffer strip for the watercourse has not been requested and will not be a requirement in the allocation summary". The representee has included a number of Appendices (RD0003.A, RD0003.B, RD0003.C) in their representation which provides further detail to support their position (PP0037).

The OP4 site is constrained on physical grounds with road issues being known to the Council since 2009 when options were presented to overcome this constraint. The suggestion of upgrading Kingsford Road is puzzling as it was not a favoured option, the road is narrow and restricted by third party ownership and the junction would be difficult or impossible to bring up to standard for the scale of development proposed. There have been insufficient attempts for this to be resolved and retention of the site would be contrary to SPP (PP1051).

Site OP5 – Land at Wellheads, East of Castle Road

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP5 (RD0214.B). No modification sought (PP1219).

The Examination of the 2017 LDP did not adequately consider impact on the setting of Balfluig Castle. The site impacts on the relationship and character of the connection between Balfluig and Alford with Castle Road now becoming a part of the settlement if OP5 is developed. Landscape mitigation in developments do not provide a robust landscape framework to the south and east of Alford and has resulted in erosion of the wider landscape setting of Balfluig (PP0768).

Site OP6 – Site East of Parkview

SEPA has commented that they have no further flooding, strategic drainage or water supply issues with the allocation summary for site OP6 (RD0214.B). No modification sought (PP1219).

NatureScot requests that the allocation summary for site OP6 in Alford includes text that highlights a potential link to the core path network to the north, as this would support active travel in accordance with the aims of the Proposed Plan (RD0255.B) (PP1300).

The OP6 site is located within the Battle of Alford Inventory historic battlefield boundary (BTL 1) of 1645, in the central section of the Inventory boundary and some of the key areas of battlefield activity/lines of action are located to the northwest and northeast of it. HES has stated that although some development has already taken place within the allocation, there is the potential for archaeological remains dating to the battle to be uncovered and therefore this should be assessed further. They also note that while the allocation is fairly small in scale and located adjacent to small-scale development and a large area of forestry, any potential impacts on key landscape characteristics and the cumulative impacts should be assessed and mitigation and enhancement considered in line with HES Battlefield guidance (RD0266.A) (PP1343).

Non-Allocated Site – Bid Site MR042 – Land at Greystone Farm

The proposed development, MR042, should be allocated on the basis that a strategic reserve of housing is required for Alford. Strategic reserve of housing is supported by the SDP 2020, but the decision to not take forward Future Opportunity sites as identified in the MIR has not been endorsed by Committee. This is a short-term view as strategic reserve/future opportunity sites would provide certainty and for Alford would facilitate comprehensive masterplanning following on from completion of site OP4 (PP0036). The development would deliver on the vision for Alford, supporting vibrancy of the town and encourage social and visual improvements. Westward expansion for the town is logical and is well located to school facilities, supporting local amenities and services whereas eastward growth would be visually prominent, and northwards is constrained by woodland (PP0036).

The identified constraints and reasons why the site was ‘not preferred’ in the MIR and Issues and Actions are disputed. The following can be addressed including traffic impact and landscape/cultural heritage impact on the battlefield. A proportionate approach should be taken given that neither HES nor NatureScot (SNH) objected and appropriate measures can be taken. Waste water treatment could be addressed and there is a new water main. Additionally, there is also school capacity and opposition to the development is also disputed as there appears to have been only one person who has commented on the bid site. The representee has included a number of Appendices (RD0002.A, RD0002.B and RD0002.C) in their representation which provides further detail to support their position (PP0036).

Non-Allocated Site – New Site N026 – Land at Balfluig Castle

The general policy framework is not sufficient to protect the setting of Category A Listed Balfluig Castle. Its setting has been eroded by the expansion of Alford, and by the extension of isolated housing clusters. These pressures have undermined the rural setting, and further development will exacerbate the impact. Protecting, enhancing and promoting cultural heritage are key considerations set out in Scottish Planning Policy (SPP). It would be appropriate to add a further protected area (new ‘P6’) for the specific purpose of protecting the wider landscape setting of Balfluig Castle (PP0619).

Modifications sought by those submitting representations:

General

Modify the PLDP to retain the existing Core Path Network in Alford and state the aspiration for it to be extended through the Vale of Alford (PP0024).

Natural and Historic Environment

Modify the PLDP to add text into the ‘Natural and Historic Environment’ section of the Settlement Statement to reflect the need to protect Balfluig Castle against the impact of development on its rural setting (PP0619).

Flood Risk

Modify the PLDP to replace the first ‘Flood Risk’ bullet point with, “Parts of Alford are shown to be at risk from flooding on the SEPA Indicative Flood Map. Flood Risk

Assessments may be required.” (PP1219).

Modify the PLDP to remove site R1 from the second ‘Flood Risk’ bullet point (PP1219).

Modify the PLDP to amend the second ‘Flood Risk’ bullet point to, “Sites OP1, OP3, OP4 and OP5 have small watercourses flowing through or adjacent to them. Flood Risk Assessments may be required.” (PP1219).

Site OP1 – Former School Campus Site

Modify the PLDP to provide accurate information regarding watercourses on the OP1 site (PP0023).

Modify the PLDP to ensure effective SuDS are required (PP0023).

Modify the PLDP to include within the allocation summary that there should be no access to Greystone Road from the OP1 site (PP0023).

Modify the PLDP to ensure that homes built along the southern boundary avoid overlooking existing properties (PP0268).

Modify the PLDP to ensure engagement with the local community to explore alternative uses for site OP1 (PP0023).

Modify the PLDP allocation summary for site OP1 in Alford, to add the following text after the second sentence of the first paragraph, “Efforts should be made through the layout of the site to link into the new proposed core path in woodland adjacent to the west boundary of the site.” (PP1300).

Site OP3 – Land at Greystone Road

Modify the PLDP to amend the OP3 allocation capacity to 97 homes and correct Appendix 6 LDP2017 allocation to 259 homes (PP1073).

Site OP4 – Land at Kingsford Road

Modify the PLDP to amend the allocation summary wording so that any potential impacts on key landscape characteristics and the cumulative impacts should be assessed, with mitigation and enhancement considered in line with HES Battlefield guidance (PP1343).

Modify the PLDP to amend the allocation summary wording relating to the landscape buffer to the west of the site to either remove this, or the wording should be revised to ensure a more appropriate size buffer is determined through a masterplan or planning application (PP0037).

Modify the PLDP to amend the allocation summary to remove the requirement for a buffer strip along the watercourse (PP0037).

Modify the PLDP to remove the OP4 allocation and identify an alternative effective allocation in the Local Growth Area of the RHMA, or if constrained, in the Local Growth Area of the AHMA (PP1051).

Site OP5 – Land at Wellheads, East of Castle Road

Modify the PLDP to remove the site OP5 (PP0768).

Site OP6 – Site East of Parkview

Modify the PLDP to add the following text at the end of paragraph one of the allocation summary text, “Efforts should be made through the site layout to link into the core path network to the north side of the site.” (PP1300).

Modify the PLDP to amend the allocation summary wording so that any potential impacts on key landscape characteristics and the cumulative impacts should be assessed, with mitigation and enhancement considered in line with HES Battlefield guidance (PP1343).

Non-Allocated Site – Bid Site MR042 – Land at Greystone Farm

Modify the PLDP to allocate bid site MR042 as a future opportunity site for 245 homes (PP0036).

Non-Allocated Site – New Site N026 – Land at Balfluig Castle

Modify the PLDP to add in a new protected site, P6, to safeguard the wider setting of Balfluig Castle (PP0619).

Summary of responses (including reasons) by planning authority:

General

The concerns regarding the core path are noted. The PLDP only shows the existing core paths network around settlements. This means that the areas that are currently only of a proposed status will not feature on the maps. The area will remain under review and should there be a time that this particular part of the path network becomes an established part of the core network then the area could show on future LDPs. No change is required.

Natural and Historic Environment

Reference to Balfluig Castle is currently found within this section of the PLDP where it notes that the Category A-listed building is in close proximity to the southeast of the settlement. This section acknowledges protected features and areas within or adjacent to settlements. It would be under the Historic Environment policy section that any proposal would be assessed for impacts to a listed building including on its character, integrity or setting. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA’s comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site R1 – For a cemetery extension and to protect the cemetery/war memorial

Comments from SEPA are noted. No change is required.

Site R2 – For uses associated with Donside Community Care

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Former School Campus Site

Comments from SEPA are noted. No change is required.

The information relating to the watercourse has been included in the Plan as this information came from one of the statutory consultees, SEPA. This information remains relevant and should remain in the Plan. At this stage, the ownership of the land is not relevant as this would be a matter for the developer to consider when progressing plans for the development. No change is required.

As for issues relating to drainage, SEPA have not raised any additional issues through the consultation which means that the measures highlighted within the allocation summary are sufficient for the site. As highlighted, through the allocation summary a Flood Risk Assessment may be required which would look into the likelihood of the development being affected by flood risk. No change is required.

The Council's Transportation Service has not raised any concerns about the allocation. Any requirement for road improvement work or alternative access options would be a matter for the planning application stage. However, it is noted within the allocation summary for the site that early engagement with the Council's Transportation Service is encouraged.

Any impacts on the amenity of neighbouring properties will be addressed at a planning application stage and assessed against the relevant policies in the LDP. Any neighbouring property within close proximity to the site (within 20 metres) would also be notified of any planning application through the means of neighbour notification.

A representee highlighted that due to the location of the site it would be suited for community uses. Part of the allocation, along with the housing and employment uses, is for community uses. This mixed-use allocation maintains the opportunity for a range of options to be explored within the site. No change is required.

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP2 – Land at Wellheads

Comments from SEPA are noted. No change is required.

Site OP3 – Land at Greystone Road

Comments from SEPA are noted. No change is required.

The allocation total of 259 homes reflects the planning permissions granted within the OP3 site area. The site boundaries have not been adjusted with the site being carried forward and thereby totals are also representative of completed units within the allocated area. Housing completions are set out within Appendix 6 Housing Land Allocations. Details on the calculation of the housing land supply and contributions to the allowances is provided in the Schedule 4 Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations. No change is required.

Site OP4 – Land at Kingsford Road

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address HES's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The request to remove the term 'significant' from the landscape buffer is not seen to be appropriate. The significant landscape buffer has been included within the allocation summary to ensure that this is delivered through any future planning application so that the separation from the core of the battlefield can be maintained. HES's Designation Record and Summary Report for the Battle of Alford (see AD0148) indicates the area west around Gallow Hill as a key location for the battlefield. This is to the west of the site which has relatively low levels of development. The exact design of this buffer strip is something that will be looked at through consultation when a planning application is submitted to ensure that stakeholders are comfortable that the landscape buffer will provide the function intended. No change is required.

Reference to the buffer strip has been included in the PLDP as this is a requirement that has been carried forward from the 2017 LDP. However, it is noted that SEPA no longer require this as highlighted through the Issues and Actions paper (see AD0040.G, page 17). Within the Issues and Actions paper the Council note, due to the comments from SEPA in response to the Main Issues Report, that the buffer strip has not been requested and will not be a requirement in the allocation summary. Therefore, if the Reporter is minded, to make an amendment, then the Council recommend that the third sentence of the third paragraph of the allocation summary be removed.

The delivery of the OP4 allocation is likely to follow the completion of the OP3 site, as noted within the Main Issues Report, see AD0038.G, page 11. It is considered that the marketability constraint is unlikely to hinder the development of the site within the Plan period. As for the issues relating to roads, due to the scale of the development a masterplan would be required. Through completing the masterplan, early discussions would take place with the Council's Transportation Service to work up a solution which would allow the delivery of the allocated site. No change is required.

Site OP5 – Land at Wellheads, East of Castle Road

Comments from SEPA are noted. No change is required.

The OP5 site was allocated in the 2017 LDP through a recommendation by the Reporter. The site has progressed since allocation with a masterplan being agreed by Marr Area Committee in October 2018 (AD0092). Work is currently progressing towards a planning application, with the Proposed Delivery Programme noting that an application was

expected late 2020, see AD0042, page 203. Timescales for this have slightly slipped due to the impacts of Covid-19 but an application is still expected. When an application is submitted for the site matters relating to landscape, impact will be assessed at this stage. No change is required.

Site OP6 – Site East of Parkview

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address NatureScot’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council confirms that it intends to address HES’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Non-Allocated Site – Bid Site MR042 – Land at Greystone Farm

The Council does not support allocating bid site MR042 for 245 homes. The scale of the allocation would result in a significant expansion of the settlement. Due to the scale of the site, it would also result in a number of implications should the development be allocated including, transportation, landscape and cultural heritage impacts. This is supported by HES and NatureScot responses to the MIR (AD038.G, page 12 and AD0040.G, pages 14-15 and 17). It is acknowledged that these concerns have been disputed by the representee however, there remain valid considerations as to why this development should not form a future opportunity site.

Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. Future opportunity sites (strategic reserve for housing) are not included within the PLDP as detailed within Schedule 4 Issue 2: Section 5 – Spatial Strategy. No change is required.

Non-Allocated Site – New Site N026 – Land at Balfluig Castle

The Council does not support allocating new site N026 as a protected site to safeguard the wider setting of Balfluig Castle. Bid site MR022, seeking an area of protection to safeguard the setting of Balfluig Castle, was not identified as a preferred option in the MIR (see AD0038.G, page 12). Balfluig Castle currently sits outwith the settlement boundary for Alford, meaning that any proposals within the area would be considered against the Shaping Development in the Countryside policies, as well as against Policy E2 Landscape and Policy PR1 Protecting Important Resources (proposed paragraph PR1.5). Ultimately, as noted in the response to the MIR consultation, proposals that may affect the setting of a listed building would be subject to assessment against the Historic Environment policies that seek to protect listed buildings including their setting (AD0040.G, page 17). No additional protection is required. No change is required.

Reporter’s conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved

issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” in relation to the settlement statement matters covered in Issue 53. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

General

3. The maps in the Alford settlement statement show the existing core paths network. The council has explained that proposed core paths would be shown in future local development plans if and when these become part of the core paths network. An aspiration to enhance access networks in the Vale of Alford does not require a specific mention in the local development plan. No modification is required.

Natural and Historic Environment

4. Paragraph HE1.1 in policy HE1 states that “we will not allow development which would have a negative effect on the character, integrity or setting of listed buildings”. I agree with the council that this policy would apply to any proposal with the potential to effect the setting of Balfluig Castle. There is no need to repeat this policy within the Alford settlement statement. I also do not consider it appropriate to pre-empt consideration of any future proposals at the Little Endovie cluster. These would be assessed against relevant policies in the plan. No modification is recommended.

Flood Risk

5. I agree that the proposed plan should be modified to address the factual matters raised by the Scottish Environment Protection Agency (SEPA) in relation to the relevance of the national flood risk assessment and the presence of watercourses in or adjacent to individual sites. Modifications to this effect are recommended.

Site OP1 – Former School Campus Site

6. Allocation OP1 relates to the cleared site previously occupied by school buildings and grounds. I consider the uses proposed (housing, employment land and community uses) to be an appropriate mix for the redevelopment of this brownfield site located in the heart of the village. The requirement to consult the council on the proposed community uses would provide the opportunity to take account of the aspirations and needs of local people.

7. The boundary of site OP1, as shown in the existing local development plan and the main issues report, includes a strip of land immediately to the east of the watercourse. This land, which is now occupied by a men’s shed and community growing area, is not included in allocation OP1 in the proposed plan.

8. I note that the wording in the allocation summary in relation to flood risk and the watercourse is taken from SEPA’s response to the main issues report. However, these

comments were based on the original site boundary. In order to address Mr Slee's representation, I sought clarification from the council and SEPA on this matter (FIR012).

9. SEPA's response suggests that the last three sentences in the first paragraph of the allocation summary should be replaced with: "A Flood Risk Assessment may be required to determine whether a wider buffer strip to the watercourse close to the western boundary of the site is necessary to protect the development from flood risk". I agree that this wording would more accurately reflect the relationship between site OP1 and the watercourse. A modification to this effect is recommended.

10. I note that there are two existing accesses to the site from Bank Terrace and School Road. I agree with the council that matters relating to road improvements and access arrangements should be discussed with the Transportation Service, prior to submitting a planning application. I consider that the additional text suggested by NatureScot would be appropriate to ensure good pedestrian connections between the site and the existing path network. A modification is recommended.

11. I agree with the council that other matters relating to site layout, the provision of SuDS and building height would be addressed at planning application stage. No further modifications to OP1 are required.

Site OP3 – Land at Greystone Road

12. There are two entries in the 2019 housing land audit relating to site OP3 – one with a capacity of 218 homes and the other for 41 homes. This is reflected in the allocation for 259 homes in the proposed plan. Consistent with other allocations in the proposed plan, the total capacity of OP3 includes homes already built on the site. The allocation summary states that the site is already under construction and Appendix 6 makes clear that 162 homes were built by January 2019. No modification is necessary.

Site OP4 – Land at Kingsford Road

13. Site OP4 is allocated for 85 homes in the current local development plan. It is identified as constrained for physical and marketability reasons in the 2019 and 2020 housing land audits.

14. The allocation summary in the current local development plan states that "construction is expected to follow on from OP3 in 2017". It is evident that the completion of site OP3 has taken longer than anticipated. According to the 2020 housing land audit, site OP3 is now due to be completed in 2023.

15. The proposed plan also states that site OP4 is expected to follow on from OP3. Allocation OP4 is identified as contributing towards the strategic development plan allowance for the Rural Housing Market Area. I asked the council for further information on the physical constraint affecting the site and to explain why it considers the allocation is deliverable by 2032.

16. The council indicates that the physical constraint relates to access, with reference to a ransom strip. However, the landowner has confirmed that the site can be accessed from Kingsford Road with all necessary land in its ownership. The allocation summary in the proposed plan indicates that upgrading to Kingsford Road is required, including the

provision of footways. I observed from my site visit that upgrading works would require land which currently forms part of individual properties. However, the council and the landowner do not perceive any difficulty in securing the necessary land to allow the upgrading works to be delivered and no evidence has been submitted to suggest otherwise.

17. The 2020 housing land audit anticipates that this site will be the only allocation with remaining capacity in Alford from 2025. The vision section of the settlement statement indicates that “Alford is a popular commuter town and rural service centre”. Within this context, I consider it reasonable to expect the marketability constraint to be resolved. Whilst there is less certainty regarding the timescales involved in resolving the physical constraint, I am satisfied, from the additional information provided, that the site can contribute to meeting the strategic development plan allowance. No modification is required

18. The council has suggested an additional sentence be inserted at the start of the third paragraph of the allocation summary to address concerns raised by Historic Environment Scotland, in relation to potential impact on the Battle of Alford battlefield. I agree that it would be appropriate to highlight the need to assess potential impacts on key landscape characteristics of the battlefield, including cumulative impacts, and consider mitigation and enhancement in line with battlefield guidance. A modification is recommended, with minor amendments to the council’s suggested wording, in the interests of clarity.

19. The landowner is concerned that the requirement for “a significant landscape buffer” may result in future applications being subject to disproportionate requirements. It considers that the extent of the buffer should be determined through a masterplan or planning application.

20. Within the context of the above recommended modification, I consider that it would be premature to indicate what scale of landscaping would be appropriate, until the required assessment has been undertaken. The council has stated that due to its size, a masterplan would be required for this site. However, this is not mentioned in the allocation summary. The need for a masterplan would be consistent with policy P1 (Layout, Siting and Design) and I agree with the landowner that the extent of the landscape buffer should be determined through a masterplan, taking account of Historic Environment Scotland’s battlefield guidance. I recommend a modification to the first paragraph of the allocation summary to state that a masterplan would be required and a modification to the third paragraph to indicate that the extent of the landscape buffer is to be determined through the masterplan.

21. The council has indicated that that it intends to remove the reference to a buffer strip adjacent to the watercourse to reflect SEPA’s response to the Main Issues Report. I agree that if a buffer strip is not required, then the existing third sentence of the third paragraph should be removed. A modification to this effect is recommended.

Site OP5 – Land at Wellheads, East of Castle Road

22. It would not be appropriate for me to respond to comments on the adequacy of the 2017 local development plan examination. Additional information provided by the council indicates that planning permission for 55 homes was granted in January 2022. This suggests that progress is being made on the implementation of the allocation OP5. No

modification is required.

Site OP6 – Site east of Parkview

23. The key map in the Alford settlement statement shows that allocation OP6 lies immediately to the south of the existing core paths network. I agree that the allocation summary should be amended to encourage the provision of links to the core path in the site layout, as suggested by NatureScot. A modification to this effect is recommended.

24. As this allocation is located within the Battle of Alford historic battlefield site, I agree with Historic Environment Scotland and the council that additional text similar to that recommended for allocation OP4 should be provided. A modification is required.

Non-allocated bid site MR042 – Land at Greystone Farm

25. Site MR042 is located to the west of existing allocation OP4. The landowner considers that it should be identified as a strategic reserve for around 245 homes. Representations relating to the provision of a strategic reserve of housing land in general are addressed in Issue 2. In summary, whilst the strategic development plan indicates that local development plans may choose to make provision for additional strategic reserves for the period 2033 – 2040, there is no requirement for them to do so.

26. As concluded in Issue 5, there is no shortfall in the strategic development plan allowance for the Rural Housing Market Area for the period up to 2032. Furthermore, given that allocation OP4 is not expected to commence until after 2023, I consider it unlikely that land to the west of this site would come forward for development within the plan period. No modification is required.

Non-allocated site N026 – Land at Balfluig Castle

27. The owners of Balfluig Castle have suggested that land to the north of the castle and to the east of the Alford settlement boundary be safeguarded, in order to protect the rural setting of this category A listed building. Whilst I recognise the importance of protecting the setting of listed buildings, I do not consider it appropriate to try to identify the extent of the setting in the local development plan. I agree with the council that there are policies in the plan, policy HE1 in particular, which would apply to any proposal with the potential to effect the setting of Balfluig Castle. No modification is recommended.

Reporter's recommendations:

Modify the local development plan by:

1. Replacing the first sentence of the first bullet point in the flood risk section on page 774 with:

“Parts of Alford are shown to be at risk from flooding on the SEPA Indicative Flood Map.”

2. Replacing the second bullet point in the flood risk section on page 774 with:

“• Sites OP1, OP3, OP4 and OP5 have small watercourses flowing through or adjacent to them. Flood Risk Assessments may be required.”

3. Inserting the following text after the second sentence in the first paragraph of the

allocation summary for OP1 (Former School Campus site) on page 775:

“Efforts should be made through the layout of the site to link into the new proposed core path in woodland adjacent to the west boundary of the site.”

4. Replacing the last three sentences in the first paragraph of the allocation summary for OP1 (Former School Campus site) on page 775 should be replaced with:

“A Flood Risk Assessment may be required to determine whether a wider buffer strip to the watercourse close to the western boundary of the site is necessary to protect the development from flood risk”.

5. Inserting a new second sentence into the first paragraph of the allocation summary for OP4 (Land at Kingsford Road) on page 776:

“A Masterplan is required for this site”.

6. Replacing the first sentence in the third paragraph of the allocation summary for OP4 (Land at Kingsford Road) on page 776 with the following:

“Any potential impacts (including cumulative impacts) on key landscape characteristics of the Battle of Alford historic battlefield should be assessed, with mitigation and enhancement considered in line with Historic Environment Scotland’s battlefield guidance. A landscape buffer, the extent of which to be determined through the masterplan, should be provided to the west of the site to separate the development from the core of the Battle of Alford battlefield with further planting throughout the development to integrate the site into the landscape.”

7. Deleting the following sentence from the third paragraph of the allocation summary for OP4 (Land at Kingsford Road) on page 776:

“A buffer strip will be required adjacent to the watercourse and should be integrated as a positive feature of the development”.

8. Adding the following new sentence to the end of the first paragraph of the allocation summary for OP6 (Site East of Parkview) on page 777:

“Efforts should be made through the site layout to link into the core path network to the north side of the site.”

9. Inserting the following new first sentence to the second paragraph of the allocation summary for OP6 (Site East of Parkview) on page 777:

“Any potential impacts (including cumulative impacts) on key landscape characteristics of the Battle of Alford historic battlefield should be assessed, with mitigation and enhancement considered in line with Historic Environment Scotland’s battlefield guidance.”

Provision of the development plan to which the issue	Banchory Settlement Statement	

relates:	
Planning authority's summary of the representation(s):	
<p><u>General</u></p> <p>Two representees have requested that the Tree Preservation Orders at Upper Arbeadie are made permanent (PP0148 and PP0149).</p> <p>Two representees have requested the number of homes allocated in Banchory is reduced (sites OP1 to OP4 and OP6, which comprise of a total of 402 homes) to reduce the carbon footprint from commuting traffic and commuting miles. They state there is very little connectivity to employment centres in Aberdeen (e.g. Dyce and Aberdeen Royal Infirmary) and Aberdeenshire (e.g. Westhill). These issues could be mitigated by a better bus transport system, encouraging car sharing, cycling, improving the Deeside Way, park and ride (by bike or bus) with electric bike charging and buses able to take bikes. Decentralised offices and homeworking are other alternatives (PP0608 and PP0745).</p> <p>Banchory Community Council (BCC) has suggested consolidating the 16 Protected Land designations, which could be amalgamated into a wider green space network protection (RD0136.A) (PP0769).</p> <p>BCC has sought clarity on the need for 'buffer zones' at Loch of Leys Local Nature Conservation Site (LNCS). They noted that Scottish Planning Policy (SPP) supports buffer zones to protect important habitats (paragraph 196). However, they suggested views from NatureScot may be required as the Strategic Environmental Assessment (SEA) stated that bid sites MR038 and MR039 would have little or no impact on habitat and biodiversity (RD0136.A) (PP0769).</p> <p>BCC has highlighted that the core path passing through R3 and links Woodend with Upper Lochton is not shown and needs protection as part of R3 and adjoining allocations. There is a need to update the Core path network at the recycling centre to the former railway at East Mains, and the three missing connections at Corsee Road and the main east/west paths (RD0136.A) (PP0769).</p> <p>BCC has raised concerns with the lack of specialised housing (affordable or sheltered housing) as limited new housing is proposed and queried whether planning law allows for a site specifically for special needs. They noted that the Banchory Community Action Plan (BCAP) identified a need for affordable, sheltered and other special needs housing, but the Inchmarlo Continuing Care development does not meet the need in Banchory itself or in an affordable way (RD0136.A) (PP0769).</p> <p><u>Vision</u></p> <p>A representee has requested that the overall planning strategy should ensure that the north of Banchory does not become a vast urban sprawl, particularly in relation to site OP2, with little or no amenity space (PP0014).</p> <p>BCC has indicated that the Vision remains largely apt but should assume the protection of heritage assets and paths (riverside, Deeside Way, Scolty, Crathes Castle, Corsee and other woods) as a new priority after lockdown has given a greater appreciation of the surrounding environment. The core path network needs updating to make better provision</p>	

to these areas (RD0136.A) (PP0769).

A representee has highlighted the need for commitments to improve the multi-use paths between Aboyne, Banchory, Torphins, Lumphanan, and Tarland to support a circular route connecting with the Deeside Way supporting active travel, health and wellbeing and environment but there is nowhere in the Plan that specifically improves this, unless part of a new housing development. There has been a significant increase in the use of e-bikes, which helps meet the need and makes changes to help the Climate Emergency (PP0773).

BCC has expressed that a permanent plan for regeneration of an already struggling town centre is required as it adapts to a more pedestrian friendly layout and is threatened by job losses. Public projects may lead the way in stimulating recovery but there needs to be a focus on measures that stimulate sustainable economic recovery (RD0136.A) (PP0769).

BCC has suggested replacing, “No additional major new development is proposed.” with “No additional major new housing developments are proposed.” considering the lack of new housing. The provision of a new academy and health centre are major new developments, and the Vision should make a distinction between providing for public services and housing (RD0136.A) (PP0769).

Site P1 – To protect the cricket and sports ground as local amenities and for their contribution towards the green-blue network and character

A representee has expressed support for site P1. No modification sought (PP0440).

Site P2 – To protect the area of woodland for its contribution to the character, as an amenity and forming part of the green-blue network

Two representees have expressed support for site P2. No modification sought (PP0148 and PP0149).

BCC has requested extending site P2 at Upper Arbeadie Road to protect fields omitted from this designation that were subject to bids. They are concerned that despite the countryside policy protection further protection from development is needed (RD0136.A) (PP0769).

BCC suggested a more general description of site P2, such as P4's, which is more appropriate (RD0136.A) (PP0769).

A representee has requested reducing site P2 north of Burnett Road to exclude garages and a playpark, thereby only including woodland. They note that some garages are within the settlement boundary but are classed as ‘white land’ rather than being included in the designation. They suggest a more logical and defensible boundary of the P2 site would be to go by ownership, i.e., the woodland owned by Forestry and Land Scotland and the Leys estate land (see representee's site plan). They argue only the woodland requires to be protected and the other land should just be located within the settlement boundary. The representee has included an Appendix (RD0142) in their representation which provides further detail to support their position (PP0791).

A representee has requested the field to the south side of Upper Lochton (see the representee's plan 1) to be excluded from site P2 and be included within the settlement

boundary as white land. They state it is not woodland and other fields have been excluded from site P2. The representee has included an Appendix (RD0143.A) in their representation, which provides further detail to support their position (PP0792).

Site P16 – To protect the area of woodland as an amenity and forming part of the green-blue network

A representee has requested the removal of site P16 as planning permission has been granted for five homes on this site (APP/2017/1919) and a planning application for Matters Specified in Conditions (MSC) is pending (APP/2020/1399). They add that this site is appropriate for infill development (PP0492).

Site R1 – For potential use as a visitor centre and heritage hub

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R1 (RD0214.B). No modification sought (PP1219).

Site R2 – For a cemetery extension

SEPA has requested that text is added to the allocation summary requiring a detailed groundwater assessment to fully assess the suitability of this site as a cemetery (RD0214.B) (PP1219).

A representee has objected to site R2 on the basis that as sole owners of the site, the representee would not make the site available for the proposed use, thus making the site undeliverable and contrary to SPP. In addition, the representee has concerns regarding impacts on amenity, parking provision and implications on the operations of the food store (PP0389).

Site R3 – For potential educational facilities

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R3 (RD0214.B). No modification sought (PP1219).

Representees, including BCC, have expressed support for site R3. No modification sought (PP0166 and PP0769).

BCC has sought clarification as to the impact of the new learning plaza and the limited future housing in the Plan has on the quality of the school/school roll and potential diminished requirement for a replacement/slippage in terms of the need for a replacement. The Delivery Programme should set out responsibility for and the timetable for delivery of identified projects, including land reserved for public projects (RD0136.A) (PP0769).

A representee has suggested that the northern part of site R3 should be identified as protected land to link site P7 and P9. The removal of well-used woodlands would have an impact on Banchory's open spaces and woodland walks (PP0234).

A representee has objected to site R3 on the basis that development of it is likely to cause damage and/or loss to areas of ancient woodland. Removal of woodland is contrary to SPP paragraphs 216 and 218. It is also contrary to the Control of Woodland Removal Policy (RD0161.A) (PP0878).

A representee has requested removing site R3 and allocating the site for housing for the following reasons:

- Site R3 was also reserved in the 2012 and 2017 LPDs for educational purposes, and it will sterilise the site for 20 years as the Council have made no intentions of acquiring the site and there is no mention of its delivery in the Delivery Programme 2020.
- The site was previously allocated in the Aberdeenshire Local Plan 2006 for 200 homes. Some development has happened on the site leaving capacity for 154 homes. There remains live consent to build a further 17 homes on the site as part of Phase 12 of the Hill of Banchory development.
- No objections were made to change the allocation to a school as land was proposed to be developed at Lochside and there was an understanding that the site would progress in the Plan period rather than sitting for 10 years with no interest.
- Banchory Community Council developed a Community Action Plan in 2015/2016 where improvement of local education facilities was the most important, but there has been no commitment to developing a new Academy.
- The site would need to be bought at residential value from the landowner so alternatives should be looked at including developing on the playing fields then demolishing the Academy or relocating Banchory Primary School, which is next to the Academy to another site and using this space for the Academy.
- The 2019 school roll forecasts show the school close to capacity next year before falling back to 80% capacity in 2027.
- In the 2017 LDP there were 490 new homes allocated but in the 2021 LDP there are only 40 new homes on site OP6.
- The MIR did not support reverting the site back to housing due to the woodland, referring to SPP. This is a coniferous plantation under rotational thinning and SPP paragraph 216 focuses on protecting ancient semi-natural woodland which this site is not, and while paragraph 218 includes a presumption in favour of protecting woodland and notes it will only be permitted when there is a clearly defined public benefit, but it is not noted what this is. It also states that if trees were to be removed, they should be replanted elsewhere which the Council would not have land to, but the landowner would.
- SPP notes that allocations should make efficient use of existing capacities of land, buildings and infrastructure so it would be a waste and not sustainable not to use this land as it is serviced.
- Banchory is a key settlement in the Local Growth area and if housing need is to be met over the next 10 years site OP6 needs to be supplemented.
- The Delivery Programme does not mention how the school site will be delivered despite the legislative requirement to set this out.
- SPP notes that all sites need to be deliverable and this site is largely serviced and within single ownership ready to be delivered.

The representee has included an Appendix (RD0146.A) in their representation which provides further detail to support their position (PP0795).

Site R4 – For potential use as a health centre

NHS Grampian has expressed support for site R4. No modification sought (PP1223).

Flood Risk

SEPA has requested that a separate 'Flood Risk' bullet point is provided for site R4 due to a significant issue with surface water flooding that may be difficult to manage. However, they state a Flood Risk Assessment is not required (RD0214.B) (PP1219).

SEPA has requested that the second 'Flood Risk' bullet point states that a Flood Risk Assessment will be required for site OP4 (RD0214.B) (PP1219).

SEPA has requested that site OP5 be added to the second 'Flood Risk' bullet point and that additional wording added to the third bullet point (RD0214.B) (PP1219).

SEPA has requested that a new sentence is added at the end of the third 'Flood Risk' bullet point on site BUS1 to state that buffer strips will be required alongside the watercourses (RD0214.B) (PP1219).

Services and Infrastructure

In relation to sites OP2, OP3 and OP4, a representee has requested that road safety initiatives are considered to improve pedestrian safety on Raemoir Road between Hill of Banchory West and Upper Lochton roads. They noted the recent reduction in traffic during the Coronavirus showed how Raemoir Road would benefit from a reduction in traffic. They are concerned the current road is too narrow, fast, a danger to pedestrians and very frightening especially when further residential development along this route is included within the PLDP at OP2, OP3 and OP4 (PP0415).

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

BCC has commented that with education suffering during (Covid-19) lockdown there should be a new focus on delivering the range of education estate improvements (RD0136.A) (PP0769).

Site OP1 – East Banchory/Eco village

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

NatureScot has requested that the allocation summary be amended to clarify that future development proposals will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee Special Area of Conservation (SAC), and that a Construction Method Statement (CMS) may only be required, i.e., if significant effects are likely and an adequate CMS is required to avoid adverse effects on integrity of the River Dee SAC (RD0255.B) (PP1300).

A representee has requested removal of reference to a park and ride scheme (PP0014).

Sites OP2 and OP3 – Lochside of Leys

A representee has expressed support for inclusion of site OP2. The allocation supports the existing construction at Phase 1A and the live planning application (at time of writing) at Phase 1B. It also supports the development of the land consented for the wider Lochside

of Leys Masterplan where there has been considerable infrastructure investment by the landowner. Site OP2 is an important component of housing land supply within Banchory which is a key settlement within the identified Local Growth and Diversification part of the Aberdeen Housing Market Area which has sustained a good level of completions throughout challenging conditions. No modification sought (PP0945).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for sites OP2 and OP3 (RD0214.B). No modification sought (PP1219).

NatureScot has suggested removing text in the fifth paragraph of the allocation summary for sites OP2 and OP3 that refers to the River Dee SAC, given that it has planning permission and is under construction, unless future proposals could come forward and then they should be subject to a Habitats Regulations Assessment in the first instance (RD0255.B) (PP1300).

A representee has requested that a clearer statement and map of the Future Distributor Road is provided. They argue the blue dotted line does not represent the line shown in the masterplan for Lochside of Leys and the amendments to the line of the road put forward by the developer (PP0415).

A representee has requested that the proposed distributor road between the two OP2 sites is removed, as it was determined that there is no requirement or support for this link road. They stated it was removed from a revised masterplan, which was agreed by Marr Area Committee on 18 February 2020, and was supported by an up-to-date Transport Assessment (PP0943).

A representee has requested the allocation summary removes the reference to requiring additional Transport Assessments, as these were approved as part of the revised masterplan revision, which was supported by an up-to-date Transport Assessment. Instead, the allocation summary should state that access and connectivity should be via a system of core roads as included within the revised masterplan (PP0943).

A representee has requested the allocation summary is updated to refer to the revised masterplan, which was approved on 18 February 2020 by Marr Area Committee (PP0943).

Several representees have requested reducing the scale and number of homes on site OP2 (PP0493, PP0609 and PP0804). One representee has requested that no development takes place near the Site of Special Scientific Interest (SSSI) to avoid wetlands and loss of habitats and wildlife (PP0493). It is also requested that the wooded area to the west is excluded from site OP2 to avoid loss of habitat, wildlife, including protected species, historic landscape features, and a popular recreation area (PP0609 and PP0804), and to maintain it as a carbon sink (PP0493). One representee argued that the scale of the site is too big when Banchory is not in a Strategic Growth Area, the population is predicted to fall due to the oil and gas downturn, and developers should be re-developing existing housing stock to be more low carbon (PP0493).

A representee has requested, as site OP2 will remove woodland and linkages to Lochton of Leys, that wooded areas to the south and east be designated as protected land. The removal of well used woodlands would have an impact on Banchory's open spaces and woodland walks (PP0234).

Site OP4 – Hill of Banchory

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

NatureScot has requested that the allocation summary is amended to clarify that future development proposals will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC, and that a Construction Method Statement (CMS) may only be required as part of this process, i.e., if significant effects are likely and an adequate CMS is required to avoid adverse effects on the integrity of the River Dee SAC (RD0255.B) (PP1300).

Site OP5 – Hill of Banchory East

A representee has expressed support for the allocation but has requested that the allocation is for both convenience and comparison floorspace, and not just “bulky goods” for the following reasons:

- The original bid site, MR014, was a preferred site in the MIR for both convenience and comparison goods.
- There is no justification for the restriction to bulky goods, it would nullify the benefit of the allocation and not maximise the opportunity to improve retail provision and reduce travel.
- The restriction appears to be based on a desire to appease objectors as opposed to limiting impact on the existing town centre; a blanket bulky goods restriction would not achieve this.
- The 2013 Aberdeen City and Aberdeenshire Retail Study (ACARS) was updated in 2018, which continued the support for the allocation in retail capacity terms (both convenience and comparison).
- The Retail Impact Assessment requirement is irrelevant as the LDP has predetermined the outcome due to the bulky goods restriction.
- The restriction is not appropriate for the LDP process, is premature and unjustified and should be addressed through a planning application.
- The restriction would not pass the 6 tests for conditions set out in Circular 4/1998.
- ACARS indicates the town is not meeting the needs of the town for convenience and has a clear deficiency for general and bulk goods comparison retail.
- The greatest deficiency is in general comparison not bulky goods.
- There will be a rising deficiency in general comparison during the LDP plan period.
- It is not sustainable for rural locations to rely solely on larger settlements for retail.
- A mixed retail development proposal would not have significant impact on the town centre as the convenience retail diversion would focus on Tesco and Morrisons (outwith the centre) and limited floorspace for comparison in the centre and most expenditure is outwith the catchment, not the town centre.
- The original bid submission included provision for some ancillary uses such as restaurant/drive thru uses that would complement the main retail function of the site.
- A mixed retail development would deliver economic benefits, improve retailing facilities, develop long term vacant land and provide employment opportunities.

The representee has included an Appendix (RD0016.A) in their representation which provides further detail to support their position (PP0162).

SEPA has requested that the third sentence in the last paragraph of the allocation summary is removed as the site does not have a watercourse flowing through it (RD0214.B) (PP1219).

NatureScot has requested that the allocation summary is amended to clarify that future development proposals will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC, and that a Construction Method Statement (CMS) may only be required as part of this process, i.e., if significant effects are likely and an adequate CMS is required to avoid adverse effects on the integrity of the River Dee SAC.” (RD0255.B) (PP1300).

Site OP6 – Land at former Glen O’Dee Hospital

BCC has expressed support for the development of OP6 as it is derelict land and a much-visited area of Banchory. The development should not be unrestricted as the access needs improvement and over development should not impact detrimentally on the woodland environment. There is a concern about pollution from the redevelopment of the site (RD0136.A) (PP0769).

A representee has welcomed that site OP6 has been reduced from 100 homes to 40 homes, but the latter number is still in excess of the 29 homes that was approved. They have requested certainty that the numbers are not indicative but, are a maximum (PP0414).

A representee has requested removing reference to Corsee Road and substitute it by stating a suitable access to this site requires to be determined. They stated that Corsee Road from the entrance to Roscobie Park to the hospital is a private road. They suggested access must be determined through the planning process to determine if Corsee Road is suitable given the current volume of traffic to the existing hospital and the lack of public transport (PP0414).

A representee has noted that the narrative does not make reference to the settlement boundary extension to accommodate site OP6 (PP0414).

A representee has requested that clarity is provided that states any woodland loss will be offset in accordance with PLDP paragraph PR1.8 (PP0414).

A representee has welcomed the recognition within the summary text that redevelopment of the site for residential use would assist with the remediation of this fire damaged and contaminated brownfield site. However, the representee has requested the allocation reflect the boundary and number of homes sought through bid site MR061 for the following reasons:

- There is a long history of planning consents associated with the redevelopment of the site, which have allowed up to 54 homes, as part of an ‘enabling’ development for the redevelopment of the former listed hospital building, which has since been completely destroyed by fire.
- The former hospital is now derelict and contaminated (asbestos), lying adjacent to a functioning NHS facility.
- An indicative masterplan for 99 homes has been produced for the site, which is

attached to their representation as Appendix 3. It identifies the boundaries associated with the previous planning consents, thereby demonstrating that the land sought within bid site MR061 broadly aligns with these, without encroaching into surrounding woodland.

- The remediation costs are high as contaminated debris has spread across the site and 100 homes are required to make the development of this site viable.
- The bid site was reduced to land identified as site OP6 due to community concerns regarding road access and impacts to ancient woodland, but they argue there is widespread support within the local community, including BCC, who wish to see Glen O' Dee come forward for development.
- An emergency access is proposed to the west, leading onto Glassel Road, which would adopt a rural design and finish to reflect the surrounding woodland character, and prevent any associated negative visual impacts or amenity concerns.
- Impacts on the surrounding ancient woodland would be negligible and appropriately mitigated.
- Concerns about the risk of the number of homes increasing if the whole bid site is allocated are dismissed as much work has gone in to avoid the ancient woodland, including discussions with the Council's Planning and Environment Service.
- Concerns about designating ancient woodland setting a dangerous precedent are dismissed given the unique circumstances and planning history of this site.

The representee has included a number of Appendices (RD0022.A – RD0022.G) in their representation which provides further detail to support their position (PP0186).

A representee has noted that site OP6 is disconnected from the settlement, surrounded by forestry and would open up the possibility of development of a clear-felled area to the southeast of the site (PP0014).

SEPA has confirmed that a FRA is not required as only surface water issues affect this site. They note the SFRA states the surface water flooding can be addressed through SuDS and recommend the Council's FPU confirm if this is the case or whether a FRA is required. If not, this requirement should be removed, or the allocation summary state that the site is at risk from surface water flooding that should be addressed through appropriate SuDS measures (RD0214.B) (PP1219).

NatureScot has highlighted that site OP6 includes Ancient Woodland Inventory – Long Established Plantation Origin and mixed semi-natural/planted mixed broadleaved/conifer woodland. The allocation summary should emphasise that planting should be sensitive to the local landscape character to help ensure the site retains existing landscape structure and biodiversity of value (RD0255.B) (PP1300).

NatureScot has also requested that the allocation summary is amended to clarify that future development proposals will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC, and that a Construction Method Statement may only be required as part of this process, i.e., if significant effects are likely and an adequate CMS is required to avoid adverse effects on the integrity of the River Dee SAC (RD0255.B) (PP1300).

Settlement Map

A representee has requested that the settlement boundary to the southeast of site OP6

excludes the Forest Scotland land. They stated this area of Forestry Scotland land is outwith the proposed allocated site and should be shown as outwith the settlement boundary to avoid any future applications (PP0414).

A representee is concerned that it is not clear if the west of Burnett Park is within site P1 or site P2 and have requested that the settlement boundary is amended to include the west of Burnett Park. The representee has included an Appendix (RD0145.A) in their representation, which provides further detail to support their position (PP0794).

A representee has requested that the settlement boundary is amended to include land at the Cow Shed Restaurant. They stated the inclusion of this site was discussed at the 2017 LDP Examination where the Reporter recognised the potential of the land and indicated it would be appropriate to include them in the settlement boundary when other planned sites (OP2 and OP3) were progressing. These sites are now under construction. The representee has included an Appendix (RD0144.A) in their representation, which provides further detail to support their position (PP0793).

(Map changes in relation to the distributor road between site OP2 are addressed above under 'Sites OP2 and OP3 – Lochside of Leys' as it relates to this allocation.)

Non-Allocated Site – Bid Site MR029 – North of the B974, Deebank

A representee has requested the allocation of bid site MR029 for 10 homes and to amend the settlement boundary or include the area in the settlement boundary as white land suitable for infill development. They disagree that the proposed scale of development is a substantial extension, nor would the development erode rural character, cause ribbon development, or lead to car dependency. They argue the principle of development has already been accepted in this area. The site is also in an appropriate and popular location providing a modest residential development contributing to meeting the needs of the community and adding choice of location and housing type to meet SPP, paragraph 119. It is accepted that the trees have biodiversity and amenity value, but trees would be retained and enhanced where possible, with mitigations for any tree loss. The representee has included a number of Appendices (RD0060.A and RD0060.B) in their representation which provides further detail to support their position (PP0403).

Non-Allocated Site – Bid Site MR030 – North of the B974, Deebank

A representee has requested including bid site MR030 within the settlement boundary as white land for infill development – either housing or a visitor centre. They argue the PLDP has failed to ensure there is flexibility in the land uses delivered for this site, which should be identified as white land for infill. This modification would allow the potential for either a visitor centre/heritage hub or housing on the site should site R1 not prove viable for a visitor centre. A visitor centre/heritage hub on the site would not erode the character and amenity of the surrounding area, although housing would be the most suitable use. They disagree the location is unsustainable, the principle of development has already been accepted in the area, and an additional small-scale development would not have a significant impact. It is accepted that the trees have biodiversity and amenity value, but trees would be retained and enhanced where possible, with mitigations for any tree loss. The representee has included a number of Appendices (RD0061.A and RD0061.B) in their representation which provides further detail to support their position (PP0404).

Non-Allocated Site – Bid Site MR038 – Site at Lochside of Leys

Representees have welcomed the non-allocation of bid site MR038 to safeguard local biodiversity (PP0609 and PP0804).

A representee has requested the allocation of bid site MR038 for 100 homes. They note that this site was identified as a preferred site in the MIR but was not supported at Committee due to concerns regarding biodiversity impacts and drainage, which they contest. They argue that SPP paragraph 196 states that “buffer zones should not be established around areas designated for their natural heritage importance” and that a Drainage Impact Assessment submitted as part of the revised Masterplan for Lochside of Leys highlighted no issues to development of sites across the area. They also asserted that ongoing growth around the Lochside of Leys area of Banchory is logical given the infrastructure investment to the north of the town in terms of services, retail and business uses and enhancement to the local environment. Furthermore, they expect the existing allocations to be completed within the Plan period and that further housing is required to meet the SDP housing supply allowance in the Aberdeen Housing Market Area (PP0944).

Non-Allocated Site – Bid Site MR039 – Site at Lochside of Leys

A representee has requested the allocation or reservation of bid site MR039 for 100 houses. They note that site MR039 was supported as a reserved site in the MIR to provide longer-term clarity for the Local Authority and developers, but that it was not supported at Committee due to concerns regarding biodiversity impacts, which they contest. They argue that SPP paragraph 196 states that “buffer zones should not be established around areas designated for their natural heritage importance”. They also asserted that ongoing growth around the Lochside of Leys area of Banchory is logical given the infrastructure investment to the north of the town in terms of services, retail and business uses and enhancement to the local environment. Furthermore, they expect the existing allocations to be completed within the plan period and that further housing is required to meet the SDP housing supply allowance in the Aberdeen Housing Market Area (PP0944).

Non-Allocated Site – Bid Site MR040 – Land adjacent to Wood of Arbeadie

Two representees have supported the non-allocation of site MR040 in favour of designating land as part of site P2. No modification sought (PP0148 and PP0149).

A representee has requested the allocation of bid site MR040 for 50 homes for the following reasons:

- Banchory is a key settlement within the identified Local Growth and Diversification part of the Aberdeen Housing Market Area, which sustains good completions.
- Allowing further allocations could support Banchory’s expansion, changing its role from a dormitory town.
- Banchory offers better prospects of housing delivery while sites across Aberdeenshire remain undelivered.
- Tillynarb is well related to the settlement.
- The site meets the test criteria of PAN2/2010.
- Scottish Water investment (water supply and drainage) in Banchory puts the site in good prospects of being delivered.
- Waste water and education constraints are noted, but both primary and secondary

school roll forecasts indicate ongoing spare capacity and Scottish Water are underway with a growth project to be completed by the time of the LDP adoption.

- Development would be contained within the woodland setting and would have regard to TPOs at Arbeadie.
- Retention of the woodland would help the site meet its open space obligations while ensuring any development sits well within the context.
- The site is not isolated but sits within a part of Banchory that has a lower density spread, and the surrounding woodland would help 'square off' this corner of Banchory (PP0946).

Non-Allocated Site – Bid Site MR041 – Land adjacent to Wood of Arbeadie

Two representees have supported the non-allocation of site MR041 in favour of designating land as part of site P2. No modification sought (PP0148 and PP0149).

A representee has requested the allocation of bid site MR041 for 50 homes for the following reasons:

- Banchory is a key settlement within the identified Local Growth and Diversification part of the Aberdeen Housing Market Area which sustains good completions.
- Allowing further allocations could support Banchory's expansion, changing its role from a dormitory town.
- Banchory offers better prospects of housing delivery while sites across Aberdeenshire remain undelivered.
- Wood of Arbeadie is well related to Banchory.
- The site meets the test criteria of PAN2/2010.
- Scottish Water investment (water supply and drainage) in Banchory puts the site in good prospects of being delivered.
- Waste water and education constraints are noted, but both primary and secondary school roll forecasts indicate ongoing spare capacity and Scottish Water are underway with a growth project to be completed by the time of the LDP adoption.
- Development would be contained within woodland setting and in particular have regard to TPOs.
- Retention of woodland would help the site meet its open space obligations while ensuring any development sits well within the context (PP0947).

Non-Allocated Site – Bid Site MR056 – Land at Upper Arbeadie Road

Two representees have supported the non-allocation of site MR056 in favour of designating land as part of site P2. No modification sought (PP0148 and PP0149).

A representee has requested the allocation of bid site MR056 (but reduced to 45 homes), as it is in a highly sustainable location with links to the core path network, town centre and facilities. It is deliverable and it was supported in the MIR 2013 as a suitable housing location. It has been scaled back to retain and enhance existing woodland, and it would assist in meeting the increased SDP housing requirement and local housing need. The representee has included an Appendix (RD0127.A) in their representation, which provides further detail to support their position (PP0750).

Non-Allocated Site – Bid Site MR062 – Land at Hillcroft Road

Two representees have supported the non-allocation of site MR062 in favour of designating

land as part of site P2. No modification sought (PP0148 and PP0149).

Non-Allocated Sites – Bid Site MR077 – Land at Upper Lochton and New Site – N024 Land west of site OP3

A representee has requested the allocation of bid site MR077 and new site N024 for residential development for the following reasons:

- Bid site MR077 was identified in the MIR as a reserved site/having future development potential, but as this approach was abandoned, it means no consideration was given to the site for immediate release. The SEA notes that there would be no significant impact on biodiversity as a result of development on the site. The site is deliverable with no issues with services (water, waste water, education or roads infrastructure). Only one new site is proposed (OP6) for 40 homes and with existing sites under construction there is a demand for housing within Banchory.
- New site N024, as shown in the representee’s plan 2, is a field and scrub woodland and was within the settlement boundary in the LDP 2017. There have been discussions with the Planning and Environment Service to develop the site and planning permission was granted for one house (APP/2016/2276). This site should remain within the settlement boundary and remain as white land or allocated as part of site OP3.
- Site R2 that is allocated in the LDP 2017 for a cemetery (see the representee’s plans 3 and 5) should be retained within the settlement boundary as white land or included as part of site OP3. It was within the settlement boundary in the LDP 2017 and there is no justification to amend the settlement boundary to exclude this site. The Strategic Environmental Assessment (SEA) states there would be no significant impact on biodiversity should the site be developed. With only one new site (OP6), there is a clear need for more housing.

The representee has included five plans in their representation (RD0143.A), which provides further detail to support their position (PP0792).

Non-Allocated Site – New Site N023 – Land at The Mews, Banchory Lodge

The representee has sought clarity as to why the open area to the east of site P5, which was advertised as a development plot, was not included in the development plan (PP0014).

Modifications sought by those submitting representations:

General

Modify the PLDP to confirm TPOs at Upper Arbeadie (PP0148 and PP0149).

Modify the PLDP to reduce housing allocations in Banchory (PP0608 and PP0745).

Modify the PLDP to consider ways to promote sustainable travel, decentralised offices and home working to help address climate change and meet emissions targets (PP0608 and PP0745).

Modify the PLDP to consolidate the Protected Land designations into a wider green space network protection (PP0769).

Modify the PLDP to clarify the need for 'buffer zones' at Loch of Leys LNCS (PP0769).

Modify the PLDP to show the core path passing through site R3 and links Woodend with Upper Lochton and to include additional Core Paths at the recycling centre to the former railway at East Mains, and the three missing connections at Corsee Road and the main east/west paths (PP0769).

Modify the PLDP to review the possibility of allocating land for specialised housing (affordable or sheltered housing) in Banchory (PP0769).

Vision

Modify the PLDP to ensure the overall planning strategy should ensure that the north of Banchory does not become a vast urban sprawl, with little or no amenity space (PP0014).

Modify the PLDP to amend the Vision to recognise natural heritage assets as a new priority and highlight the need to update the core path network (PP0769).

Modify the PLDP to provide specific support to enable paths plans to be implemented (PP0773).

Modify the PLDP to include a plan for the regeneration of Banchory town centre (PP0769).

Modify the PLDP to amend the last sentence in paragraph one from: "No additional major new development is proposed." to "No additional major new housing developments are proposed." (PP0769).

Site P2 – To protect the area of woodland for its contribution to the character, as an amenity and forming part of the green-blue network

Modify the PLDP to extend site P2 at Upper Arbeadie Road to protect omitted fields that were subject to bids (PP0769).

Modify the PLDP to changing the description of site P2 to that like site P4 (PP0769).

Modify the PLDP to reduce site P2 to exclude garages and a playpark to the north of Burnett Road and include them in the settlement boundary (PP0791).

Modify the PLDP to reduce site P2 to exclude the field on the south side of Upper Lochton (PP0792).

Site P16 – To protect the area of woodland as an amenity and forming part of the green-blue network

Modify the PLDP to remove site P16 to allow for infill development (PP0492).

Site R2 – For a cemetery extension

Modify the PLDP to add text to read, "Due to the close proximity and likely hydraulic connectivity of this site to the River Dee, a detailed groundwater assessment will be

required to fully assess the suitability of this site as a cemetery.” (PP1219).

Modify the PLDP to remove site R2 (PP0389).

Site R3 – For potential educational facilities

Modify the PLDP to clarify the impact of the new learning plaza and limited future housing in the Plan has on the quality of the school/school roll and potential diminished requirement for a replacement/slippage in terms of need for a replacement (PP0769).

Modify the PLDP to amend the northern part of site R3 as protected land to link site P7 and P9 (PP0234).

Modify the PLDP to remove site R3 (PP0878).

Modify the PLDP to remove site R3 and allocate for housing (PP0795).

Flood Risk

Modify the PLDP to add a new ‘Flood Risk’ bullet point to read, “Site R4 is at significant risk from surface water flooding. A Flood Risk Assessment will be required to determine how this can be managed.” (PP1219).

Modify the PLDP to add site OP5 to the second ‘Flood Risk’ bullet point to read, “Part of OP1, OP2, OP3, OP4 and OP5 are ... A Flood Risk Assessment ... may be required for OP1, OP3 and OP5.” (PP1219).

Modify the PLDP to amend the second sentence in the second ‘Flood Risk’ bullet point to, “A Flood Risk Assessment ... will be required for OP2 and OP4 ...” (PP1219).

Modify the PLDP to add a new sentence at the end of the third ‘Flood Risk’ bullet point to read, “Buffer strips will be required alongside the watercourses.” (PP1219).

Services and Infrastructure

Modify the PLDP to consider road safety initiatives to improve pedestrian safety on Raemoir Road between Hill of Banchory West and Upper Lochton Roads in relation to sites OP2, OP3 and OP4 (PP0415).

Modify the PLDP to provide a new focus on education estate improvements in Banchory (PP0769).

Site OP1 – East Banchory/Eco village

Modify the PLDP to amend the sixth paragraph of the allocation summary to read, “A Drainage Impact Assessment will be required with a new pumping station or upgrade to the existing station required. Demand for water and waste water capacity for the non-domestic element of this development will depend on the business uses proposed. Early engagement with Scottish Water is encouraged. Proposals will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.”

(PP1300).

Modify the PLDP to remove reference to a park and ride scheme (PP0014).

Sites OP2 and OP3 – Lochside of Leys

Modify the PLDP to amend the fifth paragraph of the allocation summary to read, “A Construction Method Statement may be required.” (PP1300).

Modify the PLDP to provide a clearer statement and route of the Future Distributor Road (PP0415).

Modify the PLDP to remove the proposed distributor road between the two OP2 sites (PP0943).

Modify the PLDP to remove the reference to requiring additional Transport Assessments and replace it with text stating that access and connectivity should be via a system of core roads as included within the revised masterplan (PP0943).

Modify the PLDP to amend the allocation summary to refer to the revised masterplan that was approved on 18 February 2020 (PP0943).

Modify the PLDP to reduce the scale and number of homes on site OP2 (PP0493, PP0609 and PP0804).

Modify the PLDP to designate the wooded areas to the south and east of site OP2 as protected land (PP0234).

Site OP4 – Hill of Banchory

Modify the PLDP to amend the second paragraph of the allocation summary to read, “A Drainage Impact Assessment will be required with a new pumping station or upgrade to the existing station required. A Flood Risk Assessment will be required. A buffer strip will be required adjacent to the watercourse and should be integrated as a positive feature of the development. Enhancement of the watercourse and removal of any redundant features should be investigated. Proposals will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.” (PP1300).

Site OP5 – Hill of Banchory East

Modify the PLDP to amend the second sentence of the first paragraph to read, “It is expected that development would comprise of class 1 retail and ancillary uses with a floorspace of over 6000m² where town centre sites are not available.” (PP0162).

Modify the PLDP to remove the third sentence in the last paragraph, “Enhancement and removal of any redundant features should be investigated.” (PP1219).

Modify the PLDP to amend the third paragraph of the allocation summary to read, “A Flood Risk Assessment may be required. A buffer strip will be required which should allow for no development within the natural river corridor of the Burn of Bennie.

Enhancement and removal of any redundant features should be investigated. Proposals will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.” (PP1300).

Site OP6 – Land at former Glen O’Dee Hospital

Modify the PLDP to restrict development of the site (PP0769).

Modify the PLDP to provide certainty that the numbers are not indicative but, are a maximum (PP0414).

Modify the PLDP to remove the reference to Corsee Road and substitute it by stating a suitable access to this site requires to be determined (PP0414).

Modify the PLDP to acknowledge that the settlement boundary has been extended to include this site (PP0414).

Modify the PLDP to amend the allocation summary for site OP6 to state that any woodland loss will be offset in accordance with PLDP paragraph PR1.8 (PP0414).

Modify the PLDP to amend the allocation boundaries and number of homes to that sought through bid site MR061 for 100 homes. Omit site P2 from the area of bid site MR061 (PP0186).

Modify the PLDP to remove the allocation (PP0014)

Modify the PLDP to investigate if a FRA is required, following confirmation with the Council’s FPU, and if not, amend the first sentence in the last paragraph from, “A Flood Risk Assessment may also be required.” to “This site is at risk from surface water flooding that should be addressed through appropriate SuDS measures.” (PP1219).

Modify the PLDP to add text at the end of the fourth paragraph to read, “Planting as part of a landscape framework should be sensitive to the local landscape character and be proportionate in scale and extent relative to the scale of development.” (PP1300).

Modify the PLDP to amend the fifth paragraph replacing the final sentence with, “Proposals will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.” (PP1300).

Settlement Map

Modify the PLDP to amend the settlement boundary to the southeast of site OP6 to exclude the wooded area in site P2 (PP0414).

Modify the PLDP to amend the settlement boundary to include the west of Burnett Park (site P1) (PP0794).

Modify the PLDP to amend the settlement boundary to include land at the Cow Shed Restaurant (PP0793).

Non-Allocated Site – Bid Site MR029 – North of the B974, Deebank

Modify the PLDP to include bid site MR029 for 10 homes and amend the settlement boundary or amend the settlement boundary to retain the area as white land suitable for infill (PP0403).

Non-Allocated Site – Bid Site MR030 – North of the B974, Deebank

Modify the PLDP to include bid site MR030 within the settlement boundary as white land for infill development – either housing or a visitor centre (PP0404).

Non-Allocated Site – Bid Site MR038 – Site at Lochside of Leys

Modify the PLDP to include bid site MR038 for 100 homes (PP0944).

Non-Allocated Site – Bid Site MR039 – Site at Lochside of Leys

Modify the PLDP to include bid site MR039 for 100 houses either as an allocation or as a reserved site (PP0944).

Non-Allocated Site – Bid Site MR040 – Land adjacent to Wood of Arbeadie

Modify the PLDP to include bid site MR040 for 50 homes (PP0946).

Non-Allocated Site – Bid Site MR041 – Land adjacent to Wood of Arbeadie

Modify the PLDP to include bid site MR041 for 50 homes (PP0947).

Non-Allocated Site – Bid Site MR056 – Land at Upper Arbeadie Road

Modify the PLDP to include bid site MR056 for 45 homes (PP0750).

Non-Allocated Sites – Bid Site MR077 – Land at Upper Lochton and Non-Allocated Site – New Site N024 - Land west of site OP3

Modify the PLDP to include bid site MR077 for residential development (PP0792).

Modify the PLDP to include new site N024 within the settlement boundary as white land or allocated as part of site OP3 (PP0792).

Modify the PLDP to include LDP 2017 site R2 within the settlement boundary as white land or included as part of site OP3 for residential development (PP0792).

Non-Allocated Site – New Site N023 – Site at The Mews, Banchory Lodge

Modify the PLDP to include the area to the east of P5 as an opportunity site (PP0014).

Summary of responses (including reasons) by planning authority:

General

Comments on the TPOs are noted, but this is not a matter for the LDP. No change is required.

The Council does not agree with reducing the number of homes allocated in Banchory. Only one new allocation for 40 homes has been added, with the remaining opportunity sites carried forward from the LDP 2017 progressing. The number of homes allocated in Banchory is appropriate and sufficient to serve the settlement's needs. Banchory is on a regular bus route to Aberdeen, which connects to the wider area and employment land is safeguarded or proposed on sites BUS and OP2. Other active travel and homeworking suggestions are welcomed and are encouraged in various PLDP policies and objectives. No change is required.

The Council does not agree with consolidating the 16 Protected Land designations. Each one has their own unique function, and it allows for easier referencing and identification of the different sites. No change is required.

There is not a requirement for a buffer zone surrounding the Loch of Leys LNCS as the designation represents the identified area requiring protection. Policy E1 Natural Heritage supports its protection. There are no allocations or bid sites within the LNCS. Site OP2, adjacent to the LNCS, also requires planning applications to be accompanied with an updated Habitat and Ecological Survey and Mitigation Plan to assess the potential for impacts on the designation. In response to the PLDP consultation, NatureScot did not raise any concerns regarding this LNCS. No change is required.

The concerns regarding the core path are noted. Core paths are not provided for through the LDP process but through a separate statutory process as part of producing a Core Path Plan. The PLDP only shows the existing core paths network around settlements. This means that the areas that are currently only of a proposed status will not feature on the maps. The area will remain under review and should there be a time that a particular part of the paths network becomes an established part of the core network then the area could show on future LDPs. Development proposals would also be assessed against Policy P2 Open Space and Access in New Developments that seeks to protect access routes and promote walking/cycling means of transport. No change is required.

The Council notes BCC's request for more specialised housing (affordable or sheltered housing), but unless a proposer submits a bid site for this, the PLDP is limited to what a housing opportunity site can be promoted for. However, the allocation summary of these opportunity sites does expect each site to contribute towards affordable housing in line with Policy H2 Affordable Housing. No change is required.

Vision

The concern about developing north of Banchory is noted. The growth of Banchory has been managed through LDP allocations to control its development and policies, such as Policy P2 Open Space and Access in New Development requires new development to be accompanied by adequate public open space appropriate to the standards set out in Appendix 10. The Loch of Leys to the north of Banchory is also recognised as a LNCS and thereby Policy E1 Natural Heritage supports its protection. No change is required.

The Council does not agree with naming specific paths and heritage assets as paragraph

two sufficiently captures the numerous assets within and adjacent to the settlement and highlights how important the natural environment is for conservation and recreation. The 'Natural and Historic Environment' section and protected land designations also identify many of these assets. Other policies in the PLDP also protect important assets such as Policy P2 and policies HE1 and HE2. Updating the core path network is not a matter for the LDP but the Core Paths Plan. No change is required.

The provision of paths networks within identified settlements would be supported through connectivity required as part of a planning application for residential development or if outwith settlements, policy also supports such projects, subject to compliance with relevant policies. However, as noted in Issue 7: Section 9 Shaping Places and Appendix 8, 9 and 10, the PLDP is not a framework or tool to promote footpaths, cycleways, and active travel networks both within communities and between adjacent communities. No change is required.

The Council notes BCC's request to regenerate the town centre, but this is outwith the scope of the PLDP. The PLDP helps to promote the town centre first principle with its sequential test, need for a Retail Impact Assessment and support for active travel in Policy B1 Town Centre Development. No change is required.

The Council agrees that the Vision could specify that no major new housing developments are proposed as the sentence before it relates to housing development. If the Reporter is minded, the Council recommend the representee's modification is made to the Vision.

Site P1 – To protect the cricket and sports ground as local amenities and for their contribution towards the green-blue network and character

Support for this site is noted. No change is required.

Site P2 – To protect the area of woodland for its contribution to the character, as an amenity and forming part of the green-blue network

Support for this site is noted. No change is required.

The P2 designation recognises open space contained within the Open Space Audit 2010 and previously identified as green network within the LDP 2017. Woodland in the west of Banchory is recognised as a key feature for protection, for its contribution to character, amenity and part of the green-blue network. The adjacent areas of land have not been identified as part of the review of open space (AD0162). Bid sites MR041 and MR056 are partly covered by woodland and therefore the P2 designation protects these environment assets. To seek further protection of the surrounding areas from development is not considered necessary as proposals would be subject to Shaping Development in the Countryside policies. Notwithstanding this, whilst allocations are not currently promoted in the Upper Arbeadie area, development within these non-wooded sections of these two bid sites would form a natural extension to the settlement which is acknowledged in the Main Issues Report 2019 (MIR) (AD0038.G, pages 22-25). No change is required.

The Council does not support amending the description of site P2 in light of BCC's comments. However, to provide clarity on what is meant by "character" in the description of site P2, the Council proposes a technical change to state the purpose of this designation is to "To protect the area of woodland for its contribution to the character of place, ...". This correction of "character of place" will also apply to sites P1, P7, P10, P12 and P13. The

Council confirms that it intends to address these through several non-notifiable modifications, as set out in the List of Non-Notifiable Modifications.

The Council disagrees with reducing the area of site P2 at Burnett Road and amending the settlement boundary. Given the scale of the play park and the few standalone garages included, trees cover much of this area therefore it is appropriate to maintain them within the designation. No change is required.

The Council agrees with reducing the area of site P2 to exclude the narrow field on the south side of Upper Lochton as there are no trees or other vegetation on it. However, the Council does not agree with amending the settlement boundary to include it as white land. The area forms part of an unsuccessful bid site MR077 and whilst the MIR recognises the development potential of the site, the LDP promotes development of settlements of this scale through a planned approach. This also allows for a considered approach to resolving site constraints. This field is served only by a single-track road with no footpaths. If the Reporter is minded, to make an amendment, then the Council recommend removing the narrow field to the south of Upper Lochton from site P2 that is within bid site MR077.

Site P16 – To protect the area of woodland as an amenity and forming part of the green-blue network

The Council note this site has planning permission approved in May 2018 (planning application reference APP/2017/1919) establishing the site is appropriate for development. If the Reporter is minded, to make an amendment, then the Council recommend removing site P16 reverting it back to white land status as per the LDP 2017.

Site R1 – For potential use as a visitor centre and heritage hub

Comments from SEPA are noted. No change is required.

Site R2 – For a cemetery extension

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The LDP 2017's reserved land designation for a new cemetery site was no longer considered suitable for such use (AD0038.G, page 20 and AD0040.G, page 56). An alternative option, through bid site MR078 at Crathes, was not preferred in the MIR as it had a number of constraints associated with it (AD0038.G, page 33). It remains prudent for the Proposed LDP to safeguard a site for cemetery provision and at this time, the reserved site R2 is identified as the most appropriate location for cemetery provision. The Council's Landscape Services (RD0128) regards the identification of additional cemetery provision in Banchory as high priority with an extension to the existing site considered a favourable option. Banchory Cemetery is almost full, with only around 3 years of coffin lair availability remaining therefore a new site for the Banchory area is being actively looked into. As it is recommended as a reserved site, rather than an allocation, there is a reduced need for certainty over its delivery. No change is required.

Site R3 – For potential educational facilities

Comments from SEPA and comments in support are noted. No change is required.

The Council does not agree with the removal of site R3, changing part of the site to a protecting land designation or changing the site to housing. Substantial support was received at the MIR consultation for maintaining the reserved status and against bid site MR053 for housing (AD0040.G, page 54).

At the Examination of the LDP 2017 (AD0036, page 835), it was noted that the Annual School Condition and Suitability Return 2014 records the existing academy ranks as poor (showing major problems and/or not operating optimally) for suitability and satisfactory for condition (performing adequately but with minor problems). This was the last Return reported for the school however, the Council's Learning Estates (AD0129) will include the impact on the new Learning Plaza in the Return to the Scottish Government in April/May 2021. They note that the likely impact will only be seen in the gradings for collaborative space and pupil social areas and may not affect the overall ranking of Banchory Academy for suitability. The capacity of the school is yet to be assessed.

It is maintained that the position that it is prudent to continue to safeguard a site for educational purposes, stated in the MIR (AD0038.G, page 22) and as noted by the Reporter at the LDP 2017 Examination (AD0035, page 841), remains an appropriate course of action. No change is required.

As it is recommended as a reserved site, rather than an allocation, there is a reduced need for certainty over its delivery. At present, the Delivery Programme generally does not include reserved sites because these sites are reserved for a particular use in the future as opposed to being specifically allocated for development in the Plan period. The purpose of the reserved land designation is to retain the site for a potential future use rather than any development being actively programmed – the land is safeguarded rather than proposed for development. The Reporter previously recognised this difference (AD0036, page 841). No change is required.

New development must include appropriate opportunities to promote walking/cycling and protect access routes in accordance with Section 9 Shaping Places policies. This would be relevant during the formulation and determination of any detailed proposal. The consideration of land for protection in the LDP would be undertaken at the time of any proposal progressing. No change is required.

SPP paragraph 218 notes the removal of woodland "...should only be permitted where it would achieve significant and clearly defined additional public benefits" (AD0012). This position is also continued by the PLDP Policy E1 Natural Heritage and Policy PR1 Protecting Important Resources. The use of the site for a potential key facility such as an academy may be capable of satisfying this SPP public benefit requirement. It is unlikely the change to housing could satisfy SPP in this regard. There are existing opportunity sites provided to meet housing need for the settlement with the MIR acknowledging alternative preferable development sites which would not result in woodland loss. No change is required.

The Council does not agree that there is a requirement or need to revert the site back to housing use. It is acknowledged that the school site has been reserved since the LDP 2012 in the place of a residential area within the Hill of Banchory Masterplan. At the time of the proposed reservation the land was offered by developers as a potential site for a new Academy with a request that additional replacement residential land was allocated at

Banchory North (site OP2) or North West (site OP3). The Issues and Actions paper for the LDP 2012 (AD0033, page 23, paragraph 3) agreed the housing numbers from this site could be included on the proposed Banchory North site that was subsequently allocated as site M2 in the LDP 2012. The LDP 2012 Supplementary Guidance Marr (AD0031.G, page 13) noted site M2 included the housing from site R3 that was in the previous Local Plan. It is not agreed that the site should revert back to housing land and that sufficient replacement land was allocated directly north at the time of the revision to the reserved land designation. Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area.

The representee highlighted that the 'phase 12' housing on this site has a partially implemented planning permission granted in 2008 (planning application reference APP/2007/5031). However, the eastern part of 'phase 12' was built under a latter permission from 2011 (planning application reference APP/2011/0656) and there is no evidence of the earlier permission itself having been implemented, having not fulfilled pre-commencement conditions. The 2011 permission was a standalone full planning permission and not a variation of the 2007 application. No change is required.

Site R4 – For potential use as a health centre

Support from NHS Grampian is noted. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comments through non-notifiable modifications, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Road safety concerns are noted however this would be a matter to be considered at the planning application stage where proposals would be assessed against Policy Section 14 The Responsibilities of Developers which requires developments to provide appropriate access arrangements for any development. No change is required.

Comments from SEPA are noted. No change is required.

The Settlement Statement sets out where contributions may be sought as part of development proposals and safeguards land through site R3 for potential educational purposes. It would not be a matter for the PLDP to provide further details on the education estate. No change is required.

Site OP1 – East Banchory/Eco village

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council does not agree with the removal of the park and ride element of the allocation.

The bid site MR075 sought the removal of it however, it is an identified project within Nestran's Regional Transport Strategy Refresh 2014 (AD0028, page 10 and 34) and the Council supports maintaining a sustainable transport option within the settlement (AD0040.G, page 56). No change is required.

Sites OP2 and OP3 – Lochside of Leys

Comments from SEPA and comments in support are noted. No change is required.

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in document the List of Non-Notifiable Modifications.

The indicative preferred line of the future distributor road on the Settlement Statement Map reflected the approved 2015 Masterplan for these allocations. Since then, a revised Loch of Leys Masterplan Sites OP2 and OP3 November 2019 was approved in February 2020 which agreed that a full distributor road was no longer required (AD0088, page 34, section 4.9). The Transport Assessment undertaken also included potential future sites (bid sites MR038/MR039) for the access strategy to be 'future proofed'. A future core road link as a result is shown in Appendix G of the Masterplan however, this road does not form part of the agreed Masterplan (AD0159, paragraph 4.5). In light of the agreed revised Masterplan, if the Reporter is minded, to make an amendment, the Council recommend the removal of the indicative preferred line of the future distributor road from the Settlement Statement map.

The Council agrees the third sentence of the allocation summary requires to be updated given the approval of the revised Masterplan and intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council does not agree that reference to the Transport Assessment should be removed. The Council's Transportation Service (AD0135) note that numerous changes to the site have been made since the original permission for development was granted therefore a reference to the Transportation Assessment should be kept. Future applications could be sought to amend proposals on the site that may differ from what is agreed. If the Reporter is minded, to make an amendment, the Council recommend updating the second paragraph to state, "The Transport Assessment detailing the connectivity and infrastructure provision may need to be updated should future phases of development differ from what is contained within the Masterplan or currently consented applications."

The Council does not agree to amend the scale of the allocation or the indicative number of homes stated within the allocation summary. This is a committed site, masterplanned, with planning permission and currently under construction. The site OP2 is considered effective within the Housing Land Audit 2019 (HLA) and will be delivered during the Plan period (AD0022, page 87). No change is required.

In terms of woodland and habitat loss within and surrounding site OP2, protected land designation P7 protects the woodland along the south of the site. For clarity, the Loch of Leys is a LNCS not a SSSI. The Loch of Leys LNCS is protected through Policy E1 Natural Heritage and protected land designation P9 where it lies within the settlement boundary. The allocation summary for site OP2 includes the matter of woodland loss and any planning applications as part of OP2 require to be assessed against Policy E1 Natural

Heritage and Policy PR1 Protecting Important Resources to consider the impact on these environment assets. No change is required.

Site OP4 – Hill of Banchory

Comments from SEPA are noted. No change is required.

Planning permission was approved July 2020 (application reference APP/2018/2493). The Council intends to add an additional sentence to highlight this update through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

There is no way of knowing if future applications will be submitted on the site, to amend the existing approval or require resubmission if it is not implemented. On this basis, the Council confirms that it intends to address NatureScot's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP5 – Hill of Banchory East

Through bid site MR014 this site was a preferred option in the MIR (AD0038.G, pages 18-19). In response to the MIR 2019, concern was raised in relation to the health of the town centre (AD0040.G, page 53). The restriction to bulky goods comparison uses of the site is promoted as a strategy to protect the town centre in line with the PLDP 'town centre first' stance as set out in Section 6 Shaping Business Development and again highlighted in the Settlement Statement Vision.

The representee refers to the ACARS 2018 Aberdeen City Update which was commissioned by Aberdeen City Council to provide an assessment of retail and related floorspace provision within Aberdeen City and this area's potential future demand and supply. Whilst this Study had regard to principal settlements in Aberdeenshire (this included Banchory) located in the Aberdeen Housing Market area, it did not set out recommendations for Aberdeenshire settlements (RD0116.A, paragraphs 1.5 – 1.8, and AD0116.B and AD0116.C).

The ACARS 2013's Executive Summary paragraph 5.2 (AD0094) notes there is limited potential for additional convenience floorspace in Banchory, only from 2022 onwards, but there is potential for additional comparison floorspace (paragraph 5.3). The ACARS 2013 states for convenience goods there is no quantitative retail deficiency identified (AD0094, Final Report Vol 2, paragraphs 3.15 – 3.17). Whilst there is a lack of mid and large-sized retail units (for both comparison goods and also certain convenience) it is unlikely the retail market would support new retail units of this size and the recommended retail strategy proposes no additional floorspace in/near Banchory. The Council consider it appropriate to maintain a precautionary approach to any proposed use in this instance, with additional information required at the planning application stage. No change is required.

The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council confirms that it intends to address NatureScot's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP6 – Land at former Glen O'Dee Hospital

Support for the site is noted.

The number of the homes set out in the allocation summary are indicative as per Policy H1 Housing Land and as such it cannot be set as a maximum or be restricted. It would be through any planning application that the appropriateness of the scale of the proposal would be determined. No change is required.

Any on-going pollution relating to the potential contamination on site would not be a matter for the PLDP. No change is required.

Where amendments are sought to the allocation summary regarding the access arrangement and compensatory planting, the allocation summary provides an appropriate indication of what any proposal would be expected to address through the planning application process. All relevant policies of the PLDP would be used to assess any proposal in addition to the information set out in the allocation summary. No change is required.

The settlement boundary is extended to include this site and adjoining woodland to the south and south-east as through development of the allocation, this area would become integrated through improved connectivity. The woodland and clear-felled areas adjacent to site OP6 that are within the settlement boundary are included within protected land site P2. The Settlement Statement Map provides sufficient clarity to the extent of the settlement boundary. No change is required.

The Council does not support the amendment to site OP6 housing numbers and boundary. Through bid site MR061 this site was a preferred option at the MIR 2019 (AD0038.G, page 20) and agreed as an allocation for 40 homes with a reduced developable area (AD0040.G, pages 55-59). As highlighted in the MIR, the planning history on the site was enabling development related to the Category A Listed Glen O'Dee Hospital. This building was unlisted in 2016 and consequently, proposals would now be considered as the redevelopment of a brownfield site rather than an enabling proposal. Increasing the allocation to 100 homes to align with bid site MR061 was further considered in terms of the impact on woodland at the meeting of Aberdeenshire Council on 5 March 2020 (AD0165, paragraphs 4.15 – 4.20 and AD0104, page 13). The bid site contains Ancient Woodland for which there is a presumption against its removal through SPP paragraph 218 (AD0012). The Council consider that the impact of the development should not outweigh the benefits of the redevelopment of the site and thereby the allocation is reduced to exclude the woodland surrounding the brownfield areas. Allocating Ancient Woodland for development would mark a dangerous precedent for other sites that have not been allocated for very similar reasons. Any potential higher density proposal and its impacts can be assessed as part of any planning application. No change is required.

In response to comments from SEPA, the Council's Flood Risk and Coast Protection (AD0162) confirm flood risk can be addressed by appropriately designed site levels and SuDS, however, a Drainage Impact Assessment (DIA) would be required. The Council confirms that it intends to address SEPA's comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council confirms that it intends to address NatureScot's comments through non-notifiable modifications, as set out in the List of Non-Notifiable Modifications.

Settlement Map

The Council do not agree to remove Forestry Scotland land to outwith the settlement boundary. As noted under OP6 above, this area would become integrated into the settlement through improved connectivity. The woodland and clear-felled areas adjacent to site OP6 that are within the settlement boundary are included within protected land site P2. No change is required.

The Council agrees the adjustment to the settlement boundary at Burnett Park is reasonable. The settlement boundary at Burnett Park was adjusted northwards to incorporate Glen O'Dee however the western boundary was not amended along with the revision of protected land adjoining the park. If the Reporter is minded, the Council recommends the boundary adjustment is made according to the representee's Appendix.

The Council does not agree to the amendment of the settlement boundary to include the Cow Shed Restaurant and adjacent property of 'Woodfield' included with the representee's appendix. The matter was raised through the consultation for the MIR, to which the Council responded that these areas would be more appropriately considered for inclusion once the allocations are built out, when there would be more clarity as to the relationship of these properties with the settlement (AD0040.G, page 51). This is consistent with the position of the Reporter at the Examination of the LDP 2017 (AD0036, page 842). No change is required.

Non-Allocated Site – Bid Site MR029 – North of the B974, Deebank

The Council does not support allocating bid site MR029 for 10 homes or amending the settlement boundary to include it as white land. There are a number of constraints noted within the MIR (AD0038.G, page 21) relating to impact on the rural character, scale, unwelcome ribbon development of Deebank and loss of mature trees. Additionally, the bid site and Deebank are in close proximity to Banchory, which provides sufficient housing opportunity to serve the local area. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site MR030 – North of the B974, Deebank

The Council does not support allocating bid site MR030 or an amendment to the settlement boundary to include it as white land. There are a number of constraints noted within the MIR (AD0038.G, page 21) relating to it being an unsustainable location for a visitor centre which would be more appropriate use in the town centre. There was also concern for impact on the rural character and amenity of Deebank and loss of mature trees. Including the site as white land within the settlement would allow for flexibility in the uses proposed on site, including housing which as discussed above is not supported. No change is required.

Non-Allocated Site – Bid Site MR038 – Site at Lochside of Leys

Support for the non-allocation of the site is noted. No change is required.

The Council does not support allocating bid site MR038 for 100 homes. It was put forward as a preferred site as an extension to site OP2 however, at the Infrastructure Services Committee 3 October 2019 it was agreed to not allocate the site after giving consideration to the Marr Area Committee's request to remove it (AD0151, pages 14 and 15). At the Marr Area Committee on 17 September 2019, it was unanimously agreed to remove the site due to concerns relating to biodiversity impacts, the need to protect local woodlands and concerns regarding drainage issues within the site (AD0158, page 17).

It is considered that there will not be a shortfall in housing development opportunities in Banchory with the exclusion of this site. The HLA 2019 projects a steady rate of development tailing off in 2028 (AD0022, page 38). The new allocation site OP6 will supplement the housing supply. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site MR039 – Site at Lochside of Leys

The Council does not support allocating bid site MR039 for 100 houses. The MIR (AD0038.G, page 19) identified the site as 'reserved' although not preferred for immediate development. The Issues and Actions papers noted the sites in Banchory identified as 'reserved' housing in the MIR would not be brought forward as allocations (AD0040.G, page 51). As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. Future opportunity sites (or strategic reserve for housing) are not included within the PLDP as detailed within Schedule 4 Issue 2: Section 5 - Spatial Strategy. No change is required.

Non-Allocated Site – Bid Site MR040 – Land adjacent to Wood of Arbeadie

Support for the non-allocation of the site is noted. No change is required.

The Council does not support allocating bid site MR040 for 50 homes. The MIR did not identify this as a preferred site as it has a number of constraints, particularly that it does not relate well to the existing settlement and as such would not be a natural extension (AD0038.G, page 22). Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site MR041 – Land adjacent to Wood of Arbeadie

Support for the non-allocation of the site is noted. No change is required.

The Council does not support allocating bid site MR041 for 50 homes. The MIR did not identify this as a preferred site although it was noted in the conclusion that the site could be considered an additional option for sites provided the woodland was excluded (AD0038.G, page 22 and 25). However, Banchory has sufficient housing land identified to meet need and as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is

an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site MR056 – Land at Upper Arbeadie Road

Support for the non-allocation of the site is noted. No change is required.

The Council does not support allocating bid site MR056 for 45 homes. This was not a preferred site in the MIR (AD0038.G, page 23). The Issues and Actions (AD0040.G, page 54) noted the Reporter at the Examination of the LDP 2017 (AD0036, page 839, (Part) site MA058) recognises the development potential of the site. However, Banchory has sufficient housing land identified to meet need and as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site – Bid Site MR062 – Land at Hillcroft Road

Support for the non-allocation of the site is noted. No change is required.

Non-Allocated Sites – Bid Site MR077 – Land at Upper Lochton and New Site – N024 Land west of site OP3

The Council does not support allocating bid site MR077. The MIR (AD0038.G, page 20) identified the site as ‘reserved’ although not preferred for immediate development. The Issues and Actions papers noted the sites in Banchory identified as ‘reserved’ housing in the MIR would not be brought forward as allocations (AD0040.G, page 51). Banchory has sufficient housing land identified to meet need and as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. Future opportunity sites (or strategic reserve for housing) are not included within the PLDP as detailed within Schedule 4 Issue 2: Section 5 Spatial Strategy. No change is required.

The area of new site N024 the representee has sought for inclusion as white land, or part of site OP3, is already included within the settlement boundary as such. The settlement boundary change at Upper Lochton removed the LDP 2017 R2 designation only. No change is required.

The Council does not agree to the amendment of the settlement boundary to include part of the bid site identified as site R2 in the LDP 2017 as white land, or for its inclusion as part of site OP3. The area forms part of the unsuccessful bid as discussed above. The settlement boundary in the LDP 2017 was aligned to include the cemetery site. Given the cemetery site will no longer proceed in this location it is reasonable to adjust the boundary to exclude this area of land. No change is required.

Non-Allocated Site – New Site N023 – Site at The Mews, Banchory Lodge

The Council does not support allocating new site N023 within the PLDP. The site at the Mews has planning permission for 5 homes and a community playing field. It was granted

planning permission in permission under APP/2008/4366 (approved March 2013) and a subsequent application for matters specified in condition APP/2014/0428 (approved July 2014) addressed a number of conditions relating to access, pitch provision and natural heritage. The housing element received planning permission under individual plot application references APP/2019/1170 – 1174 in June 2020. The LDP supports infill proposals such as this through Shaping Places policy however, as this is a relatively small proposal for the settlement, it would be expected to be deliverable within a short period of time and thereby it is not necessary to provide an allocation in the PLDP. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.
2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” in relation to the settlement statement matters covered in Issue 54. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

General

3. I agree with the council that comments made in relation to tree preservation orders and proposed core paths are not matters to be addressed through the local development plan. The council has explained that if proposed core paths are confirmed, these would be shown in future local development plans. No change is required.
4. The comments made by Deeside Climate Action Network about the relationship between additional housing, increased commuting traffic and carbon emissions are valid concerns. One of the challenges of the local development plan is achieving a balance between meeting housing needs and addressing sustainable development and climate change objectives. Banchory is one of the larger settlements in the western part of Aberdeenshire, with a range of retail and other local services and existing and proposed business opportunities. Whilst I note the comments regarding poor interconnectivity with large employment centres, Banchory is located on a regular bus route to central Aberdeen. Within this context, I do not consider there is any justification to reduce the contribution that Banchory makes to meeting the housing land requirements identified through the strategic development plan. No modification is required.
5. I note the comments made by the community council regarding the specific needs of Banchory, including in relation to improved pedestrian and cycle access, open space protection, and local needs housing growth. I consider that these matters are covered in the proposed plan through its policies, allocations and safeguards. Whilst it would be permissible for the plan to identify sites specifically for special needs housing, no such proposals in Banchory are included in unresolved representations. No modifications to the

plan are required in relation to this matter.

6. The table on pages 781 and 782 of the proposed plan describes the particular characteristics of 16 areas of protected land. Whilst a single green space network designation may be more straightforward, I consider the approach taken in the proposed plan provides a clear explanation regarding the value of each area and the reason why it is identified as protected land. Planning circular 6/2013 “Development Planning” indicates that my role is to consider whether the approach taken in the plan is sufficient. In this regard, I conclude that no changes are necessary.

7. Appendix 12 of the proposed plan provides detailed plans of the 113 local natural conservation sites located across the local development plan area, with a short description of the interest of each site. The detailed plan for Loch of Leys is provided on map 102 (page 1024). The community council has referred to paragraph 196 of Scottish Planning Policy. However, this states that “buffer zones should not be established around areas designated for their natural heritage importance”. It also indicates that “plans should set out the factors which will be taken into account in development management”. I consider that the approach taken in the proposed plan to the protection of Loch of Leys local nature conservation site, through policy E1 Natural Heritage and the allocation summary for site OP2, is in accordance with Scottish Planning Policy. No change is required.

Vision

8. The vision section of the settlement statement provides a summary of the current planning issues affecting Banchory, which I note the community council generally supports. It includes reference to the protection of the natural and historic environment, improved footpaths and cycle routes and providing support for the town centre, which cover the matters raised in the unresolved representations, albeit in more general terms. I consider the level of detail provided in the vision to be appropriate and do not consider it necessary to specifically refer to particular routes and areas of growth in this section of the plan.

9. General representations regarding the protection and promotion of access routes are addressed in Issue 7. We agree with the council that the local development plan is not a framework or tool to promote footpaths, cycleways and active travel networks within and between settlements. There are other council documents, such as the Core Path Plan and the Outdoor Access Strategy, which would fulfil this role. The local development plan can protect existing routes, promote good access from new development to these routes and, where appropriate, promote the enhancement or extension of existing routes as part of development proposals. It is within this context, that planning applications may be able to support the work of local paths development initiatives. No modification is required to the proposed plan.

10. I agree with the council that the preparation of a regeneration plan for the town centre is beyond the scope of the local development plan. However, the proposed plan does promote and support the town centre through its policies and allocations.

11. I note that the council supports the community council’s request to refer to major housing development in the last sentence of the first paragraph. I agree that this change would more accurately reflect the wishes of the community in relation to future development. A modification to this effect is recommended.

Protected Land

Site P2

12. A number of representations seek changes to the boundaries of site P2. The table on page 781 of the proposed plan indicates that the purpose of site P2 is “to protect the area of woodland for its contribution to the character, as an amenity and forming part of the green-blue network”.

13. The areas of “white land” to the east and west of Upper Arbeadie Road, which are next to, but not included within, site P2, do not form part of the woodland. Given the stated purpose of site P2 is to protect the area of woodland, it would not be appropriate to include these areas within this designation. For the same reason, I agree with the council that the narrow rectangular field on the south side of Upper Lochton should be removed from the P2 designation. The field is open in character and is clearly distinct from the neighbouring woodland. A modification to this effect is recommended. The comments regarding the development potential of this site and its inclusion within the settlement boundary are covered below under “Non-allocated Bid Site MR077”.

14. The description of site P2 reflects the contribution the extensive woodland area to the north and west of Banchory makes to the setting and character of the settlement. I consider that the reason given for the designation in the proposed plan is clear and readily understood. Reverting to a more general description, as suggested by the community council, would not recognise the importance of the woodland.

15. The P2 designation reflects the characteristics of the site not ownership boundaries. From my site inspection, I observed that some of the garages to the north of Burnett Road are located amongst trees and there is not a definitive boundary on the ground between the woodland and the garages and play area. I agree with the council that, given the scale of the play area and positioning of the garages, it is appropriate for them to be included within the P2 designation.

16. Comments from Forbes Homes in relation to the boundaries between site P2 and allocation OP6 – Land at former Glen O’Dee Hospital are addressed below, alongside other representations to allocation OP6.

Site P16

17. Protected land designation P16 covers land to the east of Provost Black Drive. The council has indicated that planning permission for housing was granted on this site in May 2018. Furthermore, I note that an application for matters specified in conditions was approved in April 2021 (reference APP/2021/0736). I agree with the council that the protected land designation on this site should be removed from the settlement map, with the site reverting to white land within the settlement boundary. The reference to P16 would also require to be removed from the table on page 782. Modifications to this effect are recommended.

Reserved Land

Site R2

18. Site R2 is located to the south east of the cemetery at Banchory Ternan Church Yard and could be served by the existing access road from the A93. The car park for Morrison's supermarket lies to the north east, with the rear gardens of housing on Leys Road to the north west. There are trees within the site, a core path (part of The Deeside Way) to the south and a footpath link to Morrison's running along the north eastern boundary of the site.

19. The council has indicated that the site at Upper Lochton, which was reserved for cemetery use in the adopted local development plan, is no longer considered suitable. The supporting documents referred to in the council's response do not provide any further explanation. However, it is not the role of this examination to assess options for a cemetery site, but instead to consider the matters raised in the representation to site R2.

20. Whilst the site is currently in the ownership of Wm Morrison Supermarkets, this does not preclude it being reserved for cemetery use in the local development plan. The council could potentially gain ownership of the land, either through negotiation or using its compulsory purchase powers, if necessary. I agree with the council that the reservation of a site for a particular use does not imply that it will be delivered within the plan period.

21. Policy RD2 (paragraph PR2.1) in the proposed plan states that alternative development will not be allowed on sites that may reasonably be needed for cemetery use in the future. I consider that this policy would apply to site R2. Whilst Morrisons does not wish to make the site available for cemetery use, its representation does not suggest any alternative use for the land.

22. Concerns have been raised about the suitability of locating a cemetery next to a supermarket car park in terms of noise disturbance from the service yard, potential restrictions on supermarket operations and visitors to the cemetery using the supermarket car park. I recognise the potential for conflict between noise arising from the supermarket service yard and a cemetery use on site R2. However, I consider that any such conflict could be mitigated through site layout and landscaping proposals. Given the residential properties located immediately to the southwest of the supermarket, I do not consider the introduction of a cemetery use would place any additional restrictions on supermarket operations. The management and control of the supermarket car park is not a local development plan matter.

23. Site R2 would form an extension to the existing cemetery, which would bring benefits in terms of a shared access and efficiencies in management and maintenance arrangements. I consider that the potential adverse effects raised by Morrisons could be addressed at detailed design stage. There is no justification to recommend the deletion of this safeguard.

24. I agree that reference should be made in the table on page 782 to the need for a detailed ground water assessment to fully assess the suitability of site R2 for use as a cemetery, as suggested by the Scottish Environment Protection Agency (SEPA). A modification to this effect is recommended.

Site R3

25. Land at Hill of Banchory West was first reserved for educational purposes to

accommodate a replacement for Banchory Academy in the 2012 local development plan. The reservation was continued in the adopted local development plan. The council has indicated that additional housing land was identified through the 2012 local development plan to compensate for the site being reserved for educational purposes. North Banchory Company has queried the council's commitment to deliver a replacement school, whether it is needed and whether it can be delivered given extant consents for housing on part of the site. There may be other options for the provision of a new school which do not require purchasing land at residential value. The site is serviced for residential development and could contribute 154 homes towards meeting housing needs.

26. I note that there is no commitment to deliver a replacement for Banchory Academy in the council's capital plan 2021 – 2036. However, whilst the council is unable to confirm that the site will be required for educational purposes, it still wishes to reserve the site given the importance of balancing the demand for housing with the needs of the community.

27. Matters relating to the delivery programme and acquisition of the site are beyond the scope of this examination. I recognise the contribution that this serviced site could make to meeting housing needs. However, there are other options available to address the shortfall in the housing land provision to meet the strategic development plan allowance for the Aberdeen Housing Market Area. These are identified in Issue 5. Where there are extant permissions for housing, these can be implemented regardless of whether the land is reserved for education purposes.

28. The Main Issues Report (page 23 of appendix G) states that "the site is ideally placed for pedestrian and cycle connectivity with immediate links to the core path network, existing safe routes to school, and for connecting the site to the wider path networks throughout and beyond the Banchory settlement area". Given the relatively central location of the site in relation to existing and proposed housing, I agree that it is well placed to accommodate a replacement secondary school, if required. I also note that the community council and academy parent council support the reservation for educational purposes. If the reservation in the plan was removed, the opportunity to use this site for educational purposes is likely to be lost.

29. The Woodland Trust Scotland has objected to the reservation because the whole site is included in the ancient woodland inventory. The council considers that the loss of woodland on the site would be justified because of the significant public benefit from educational uses, in line with paragraph 218 of Scottish Planning Policy. However, North Banchory Company has indicated that the woodland on the site is a crop of coniferous trees, which are under rotational thinning and management as part of a management plan agreed with Forestry Scotland. It has submitted a certificate of approval for tree felling dated September 2015.

30. Notwithstanding the information provided regarding the existing tree management plan, I agree with the council that the provision of a secondary school would bring significant public benefits, which may justify the loss of trees. Where possible, the impact on existing woodland should be minimised and compensatory planting provided in line with the Scottish Government Control of Woodland Policy and consistent with paragraphs PR1.7 and PR1.8 in policy PR1 (protecting important resources).

31. Based on the information before me, I consider that it would be prudent to continue to

reserve the site for education facilities. However, I recommend a modification to indicate that the impact on the existing woodland should be minimised and compensatory planting provided.

Flood Risk

32. The detailed comments made by SEPA identify some omissions in the information provided in the flood risk section of the Banchory settlement statement. I agree with the modifications sought by SEPA, in order to provide clarification on the risk of flooding for some sites and how this should be addressed in future planning applications.

Services and Infrastructure

33. The allocation summary for sites OP2 and OP3 refers to the need for further transport assessments. This would address the transport implications of development on these sites, including pedestrian safety. The first bullet point under the services and infrastructure section on page 783 of the proposed plan indicates that development may be required to contribute to local transport infrastructure, which could include pedestrian safety measures, if necessary.

34. For site OP4, the need to address the effects of development on the visibility and access for pedestrians to Raemoir Road is specified in the allocation summary. I note that planning permission has now been granted for 15 homes on the site.

35. The proposed plan includes a safeguarded site for potential education facilities (site R3) and indicates that developer contributions may be required towards additional primary and secondary school capacity. I agree with the council that it is not the purpose of the local development plan to set out the details of proposals to improve the existing education estate.

36. I do not consider that any modifications are required to address the representations to the services and infrastructure section of the settlement statement.

Site OP1- East Banchory/Eco village

37. I consider that the amendment requested by NatureScot, in relation to habitats regulations appraisal, would provide clarification on the appraisal process. A modification to this effect is recommended.

38. An area for a park and ride facility is to be reserved within allocation OP1. I consider that this requirement should be retained in line with the Nestrans Regional Transport Strategy Refresh 2014 and the local development plan objective to promote public transport. No modification is required.

Sites OP2 and OP3 – Lochside of Leys

39. Sites OP2 and OP3 are allocated in the current local development plan and a revised masterplan for these sites was approved in February 2020. From my site visit, I observed that the eastern portion of site OP2 is under construction.

40. I agree that the fourth sentence in the allocation summary for sites OP2 and OP3

should be updated to refer to the revised masterplan. On the basis that the revised masterplan indicates that a full distributor road is no longer required, I agree that the hatched blue line which shows the indicative preferred line of the future distributor road should be removed from the settlement statement maps. Modifications to this effect are recommended.

41. The allocation summary in the proposed plan indicates that further transport assessment may be required. I consider the additional text suggested by the council would clarify the circumstances in which this may be necessary. A modification is recommended.

42. According to the 2020 housing land audit, sites OP2 and OP3 have full planning permission or planning permission in principle. There is therefore no reason for me to reduce the scale and number of homes. The council's response provides additional information in relation to the Loch of Leys local nature conservation site and the measures in place to minimise tree loss and provide compensatory planting. No change is required to the proposed plan.

43. NatureScot has indicated, that given the planning status of sites OP2 and OP3, there is no need for further assessment on the impact on the River Dee Special Area of Conservation. On this basis, I agree that the fifth paragraph of the allocation summary should be modified.

Site OP4 – Hill of Banchory

44. Whilst I note that planning permission has now been granted for 15 homes on site OP4, there is no representation requesting that the allocation summary be updated to reflect this permission. The modification suggested by the council is therefore outwith the scope of this examination.

45. I agree with the council that the site may be the subject of further applications. Consistent with other allocations in the plan, the amendment requested by NatureScot would provide clarification on the habitats regulations appraisal process. A modification to this effect is recommended.

Site OP5 – Hill of Banchory East

46. Site OP5 is located at the eastern end of the settlement, immediately to the north of the existing Tesco superstore.

47. The Main Issues Report describes the potential allocation as a retail park, which Ediston Real Estate has indicated comprises a mixed retail development to include both convenience and comparison floorspace. It seeks to address the significant leakage in expenditure from Banchory, identified in the 2013 Aberdeen City and Aberdeenshire Retail Study. A 2018 update of this retail study is now available, which also supports the proposal in retail capacity terms.

48. The council has explained that it has restricted the retail uses on the site to bulky comparison outlets, in response to concerns raised about the impact of the allocation on the town centre.

49. Paragraph 58 of Scottish Planning Policy states: “Town centres are at the heart of their communities and can be hubs for a range of activities. It is important that planning supports the role of town centres to thrive and meet the needs of their residents, businesses and visitors.” The town centre first approach set out in policy B1 (Town Centre Development) of the proposed plan is consistent with paragraph 60 of Scottish Planning Policy. Within this context, I can understand why the council is taking a precautionary approach to retail development on site OP5.

50. However, the information from the 2018 update of the 2013 retail study suggests that there are deficiencies in the convenience and comparison retail provision in Banchory, resulting in shoppers travelling to other locations. I note that the deficiency in relation to bulky goods expenditure is much lower than in these other two categories.

51. The Banchory Key Map in the proposed plan reserves a site for a visitor centre and heritage centre within the town centre. Whilst the vision section of the settlement statement states that “retail /business opportunities should be supported and promoted, particularly within the town centre”, there are no allocations for additional retail floorspace within or adjacent to the town centre. Paragraph 64 of Scottish Planning policy states that: “Local authorities, working with community planning partners, businesses and community groups as appropriate, should prepare a town centre health check.” Its purpose would be to assess the strengths, vitality and viability, weaknesses and resilience of the town centre and would be used to inform development plans and decisions on planning applications. However, no evidence has been provided to indicate that a town centre health check has been undertaken for Banchory.

52. I observed from my visit to Banchory that the town centre comprises mainly traditional, relatively small retail units and a range of other uses located along the A93 road and Bridge Street. I did not see any obvious opportunity sites to provide new larger scale retail units in or on the edge of the town centre.

53. I consider that site OP5 is conveniently located, next to the Tesco superstore and existing bus stops and pedestrian/cycle paths on Hill of Banchory East, to allow for linked trips by sustainable modes of transport. On the basis of the information before me, I consider that there may be a justification for additional convenience and/or comparison floorspace on site OP5. I agree that this would be a matter for a retail impact assessment at planning application stage.

54. I recommend a modification to indicate that the provision of convenience and/or comparison floorspace may be supported, provided a retail impact assessment demonstrates that the proposal accords with policy B1 Town Centre Development. Proposals for ancillary uses to complement the main retail function of the site could be assessed against relevant policies and do not require a further modification to the plan.

55. The deletion requested by SEPA is supported, as there is no watercourse within the site. I consider that the amendment requested by NatureScot in relation to the Habitats Regulation Appraisal would be appropriate in the interests of clarification. Modifications on these matters are recommended.

Site OP6 – Land at former Glen O’Dee Hospital

56. Site OP6 comprises two areas of land with an indicative capacity of 40 homes,

located towards the north western edge of the settlement. The northernmost part of the site was previously occupied by the category A listed Glen O’Dee Hospital. The building was destroyed in a fire in 2016 and subsequently delisted. The smaller, southernmost part of the site relates to land occupied by the former nurses’ home. With the exception of the remaining healthcare facilities at the northern end of Corsee Road, the land surrounding allocation OP6 lies within protected site P2 in the proposed plan.

57. The representation on behalf of Forbes Homes explains the planning history of the site. The 2019 housing land audit refers to 29 homes on the site, which reflects the planning permission and listed building consent granted in 2011. Forbes Homes seeks an increase in the allocation from 40 to 100 homes and to extend the allocation boundary to cover a 4.9 hectare site. It states that an allocation of 100 homes is required to make the development viable, given the extent of contaminated debris.

58. The council indicates that the additional land being promoted for inclusion in the allocation contains ancient woodland. It considers that limiting the allocation to 40 homes would ensure the impact of development does not outweigh the benefits of the redevelopment of the site. In order to address the council’s concerns, Forbes Homes submitted a pre-application enquiry based on an indicative master plan, which shows 99 homes located to the north and south of an area of protected woodland in the central part of the site. It indicates that, whilst development would result in the loss of woodland in the southern section of the site, this is high density commercial conifer woodland, which has the lowest natural heritage value.

59. The council’s response to the pre-application enquiry suggests a level of support from its natural heritage team and NatureScot, subject to further detailed considerations, including retaining as much woodland as possible and compensatory planting.

60. Paragraph 218 of Scottish Planning Policy states that: “The Scottish Government’s Control of Woodland Removal Policy includes a presumption in favour of protecting woodland. Removal should only be permitted where it would achieve significant and clearly defined additional public benefits.” The council is concerned that allocating an area of ancient woodland for development would set a dangerous precedent. However, I note that there are other housing allocations in the proposed plan which coincide with areas of ancient woodland. A key consideration in relation to site OP6 is whether the public benefits associated with the remediation of a derelict brownfield site would justify the loss of woodland.

61. I note that the community council supports allocation OP6, but indicates that overdevelopment should not impact detrimentally on the woodland environment. Similar concerns are raised in other representations. One representee seeks the removal of the allocation from the plan and another requests that the indicative capacity is expressed as a maximum number of homes.

62. Paragraph 4.8 in the strategic development plan states that brownfield sites and regeneration areas should be given priority in bringing forward land for housing. In this regard, the principle of housing on site OP6 is consistent with the strategic development plan. The allocation provides the opportunity to remediate a derelict site and I do not consider its deletion from the plan would be justified. The council has explained that, the site capacities noted in the plan are indicative. I agree that it is only at planning application stage, that the exact number of homes would be known. Proposals would be assessed against relevant policies and, as such, there is no reason to set an upper limit on the

number of homes in the plan.

63. I now turn to the request to increase the size and indicative capacity of the allocation. Forbes Homes has indicated that an allocation of 40 homes would not be deliverable on viability grounds. The responses to the pre-application enquiry suggest that some development on land to the southwest of the southernmost part of allocation OP6 may be supported. However, the loss of ancient woodland would be contrary to Scottish Planning Policy and the community council and others have raised concerns about further development at this location.

64. Based on the evidence before me, I am unable to reach a conclusion on whether a development of 40 homes would be unviable or if the public benefits associated with an increased allocation would support the loss of woodland. I therefore do not consider that a modification to increase the number of homes to 100 or amend the boundaries of sites OP6 and P2 is justified.

65. Some representations have referred to this allocation as one which should not contribute towards the strategic development plan allowance for the Aberdeen Housing Market Area. The site is identified as constrained in the 2019 housing land audit and it remains uncertain whether a development of 40 homes would be deliverable. I therefore do not consider that this allocation should be counted towards meeting the strategic housing requirements in the period up to 2032. No modification to the allocation summary is necessary. However, the relevant tables in appendix 6 should be amended to indicate that site OP6 for 40 homes does not contribute towards the strategic development plan allowance for the Aberdeen Housing Market Area. The implications of this deduction for the overall housing land provision are addressed in issue 5.

66. In response to the concern regarding the proposed access from Corsee Road, I note that some other allocation summaries refer to the need for a transport assessment to provide details on access and connectivity. However, given the location of site OP6 in relation to the local road network, there do not appear to be any reasonable alternatives to taking access from an upgraded Corsee Road. No modification is required.

67. I agree with the council that there is no need for the plan to indicate that the settlement boundary has been amended to include site OP6. This is a reasonable consequence of the allocation being identified in the plan. No modification is required.

68. The representation from SEPA seeks clarification from the council in relation to flooding matters. The council has confirmed that a drainage impact assessment, rather than a flood risk assessment, would be required. It has also suggested additional text in relation to surface water flooding. I agree that these changes would provide clarification on flood matters. A modification to this effect is recommended.

69. I consider the additional text suggested by NatureScot would be appropriate to reflect the presence of ancient woodland and may also help address the concerns raised in other representations. As with other allocations, the amendment requested by NatureScot in relation to the Habitats Regulation Appraisal would be appropriate in the interests of clarification. Modifications on these matters are recommended

Settlement Map

70. The Forestry Scotland land to the south east of the former nurses' home is not included in the bid submission from Forbes Homes and is covered by protected land allocation P2. I note that the areas of open space at Burnett Park and Alexander Park are included within the settlement boundary in the existing and proposed plan. Given the extension of the settlement boundary to include site OP6, I consider it logical to also include the land to the south west of Corsee Road. No modification is required.

71. A representation seeks an amendment of the settlement boundary to include the area of woodland which forms the western part of Burnett Park and the tree lined core path on the west side of Glassel Road. Whilst I agree that there is some ambiguity in the key map as to whether the western part of Burnett Park lies within P1 or P2, clarification is provided by the description of each on page 781 of the proposed plan. Given the wooded nature of the western part, I conclude that it lies within protected designation P2.

72. I note that the council would support the suggested adjustment of the settlement boundary. However, the local community has not been given the opportunity to comment on this suggested change. Given the location and rural character of the woodland and tree lined path, I do not consider that including these areas within the settlement boundary would be appropriate. The adjustment of the settlement boundary to include site OP6 does not require a further westward extension of the settlement boundary. No modification is recommended.

73. The Cow Shed restaurant and adjacent property are located to the north of the settlement boundary which runs along the northern edge of allocations OP2 and OP3 in the existing and proposed plan. As sites OP2 and OP3 have not yet been developed, these properties currently appear physically separate from the built up area. I agree with the council that there is no justification to amend the settlement boundary at this time. No modification is required.

Non-allocated Bid Sites MR029 and MR030 – North of the B974, Deebank

74. The site is located on the eastern edge of Deebank, which lies on the south side of the River Dee. The Banchory settlement boundary at this location runs along the north bank of the river. The representations in relation to this site wish it to be allocated for 10 homes, or a visitor centre/heritage hub (should site R1 not prove viable) or be included in the settlement boundary as white land.

75. This is a wooded greenfield site, which is located within the Dee Valley Special Landscape Area and adjacent to the River Dee Special Area of Conservation. Given the sense of containment provided by existing trees, I do not consider that development would have an adverse landscape impact. However, I note that the strategic environmental assessment identifies post mitigation negative effects on biodiversity and I agree with the council that the development of 10 houses would alter the rural character of the site.

76. I observed on my site visit that there are pockets of residential development on the south side of the River Dee. However, these are physically separate from the main part of the settlement. I do not consider that extending the Banchory settlement boundary to include land to the south of the river would be appropriate.

77. I note that the site is located closer to the town centre than some areas located within the settlement boundary. However, it is not well integrated with the settlement as a whole

and I consider that housing development at this location is likely to be car dependent.

78. Development on this site could contribute to meeting the shortfall the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. However, given the matters raised above and the availability of other suitable sites, the allocation of this site is not justified.

79. I do not consider the site to be a reasonable alternative location for a visitor centre/heritage hub, as such a use would be expected to attract a significant number of people. Paragraph 60 in Scottish Planning Policy indicates that “the planning system should apply a town centre first policy when planning for uses which attract significant numbers of people”. This site is in an out of centre location and would rely on car based travel.

80. No modifications are recommended.

Non-allocated Bid Site MR038 – Site at Lochside of Leys

81. Bid site MR038 lies immediately to the east of the western part of allocation OP2, which forms phases 2a and 2b of the Lochside of Leys masterplan. The site does not form part of the masterplan, but has been included in the associated transport assessment.

82. I note that the site was identified as a preferred option in the Main Issues Report and an allocation of 100 homes was recommended for inclusion in the proposed plan by officers. The reasons given by the Marr Area Committee for not including site MR038 in the proposed plan relate to impact on biodiversity, woodland protection and concerns regarding drainage.

83. The strategic environmental assessment of the site identified negative effects in relation to the loss of woodland and proximity of the site to the Loch of Leys Local Nature Conservation Site. The map in section 12 of the proposed plan indicates that there is protected woodland to the south of the site, but not within its boundary.

84. As pointed out by Bancon Homes, paragraph 196 of Scottish Planning Policy states that: “Buffer zones should not be established around areas designated for their natural heritage importance”. The eastern section of existing allocation OP2 also borders this local nature conservation site which suggests that, subject to a habitat and ecological survey, mitigation of biodiversity impacts may be possible. Bancon Homes has indicated that a drainage impact assessment was undertaken as part of the revised Lochside of Leys masterplan and no concerns were raised in relation to drainage matters in the strategic environmental assessment.

85. Matters relating to overall housing provision in the Aberdeen Housing Market Area are covered in issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area.

86. I recognise that site MR038 could form a logical extension to site OP2 and note that the ongoing growth of the Lochside of Leys area would be supported by recent infrastructure investment in this part of the settlement. However, the 2020 housing land audit indicates that sites OP2 and OP3, which relate to phases 1 and 2 of the Lochside of

Leys masterplan, will not be completed until around 2029 (66 homes are noted as being built in the period after 2027). This would suggest that development on site MR038 would be unlikely to commence until towards the end of the plan period.

87. I consider that it may be possible to mitigate the concerns raised by the council in relation to trees, biodiversity and drainage. However, in the absence of detailed evidence, I am unable to reach a conclusion on these matters. Furthermore, any delay in the completion of sites OP2 and OP3 may limit the contribution site MR038 would make to delivering homes in the period up to 2032. Given the availability of other suitable sites to meet the shortfall in the strategic development plan allowance for the Aberdeen Housing Market Area, I consider that site MR038 should not be included as a housing allocation. No modification is required.

Non-allocated Bid Site MR039 – Site at Lochside of Leys

88. Bancon Homes is also seeking the allocation of site MR039 for 100 homes, either in the period up to 2032 or as a future reserve. The site lies to the north of site MR038 and to the north east and north west of the two areas of land which make up allocation OP2. I note that site MR039 was identified as a future housing reserve in the Main Issues Report. However, the council decided not to include future reserves in the proposed plan and site MR039 was not identified as a housing allocation for the period up to 2032.

89. General representations regarding the identification of future housing opportunity sites are addressed under issue 2. This concludes that, whilst the strategic development plan allows local development plans to identify additional strategic reserves beyond 2032, there is no requirement to do so. The council's decision not to identify future opportunity sites is in accordance with the strategic development plan. There is therefore no justification to identify the site as a future reserve.

90. I also need to consider whether it would be appropriate to allocate site MR039 for development in the period up to 2032. Allocating site MR039, but not site MR038, would result in development which is poorly integrated with the rest of the settlement. I note from the approved master plan that development of site MR039 would require the provision of a core road to link the two parts of allocation OP2. Whilst this would bring connectivity benefits, I have no information regarding the timescales for delivery.

91. The strategic environmental assessment indicates that development of site MR039 would raise similar issues as site MR038, in terms of negative effects on woodland and biodiversity. Whilst it may be possible to mitigate these negative effects, I am unable to reach a conclusion on these matters based on the information before me.

92. As I have already indicated, there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. However, given the identified constraints and road infrastructure requirements, I am unclear whether site MR039 would be deliverable within the plan period. As I have already indicated, there are other sites available to meet strategic housing needs.

93. I conclude that site MR039 should not be identified as a housing allocation or future reserve. No modification is required.

Non-allocated Bid Sites MR040 and MR041 – Land adjacent to Wood of Arbeadie

94. The two sites sit either side of Upper Arbeadie Road, which provides access to existing individual properties, but is not a vehicular route between Woodside Road and Upper Lochton. The strategic environmental assessment of the proposed plan indicates that any negative effects arising from the development of these sites can be mitigated.

95. Bancon Homes considers that these sites should each be allocated for 50 homes. Matters relating to overall housing provision in the Aberdeen Housing Market Area are covered in issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. I consider that these sites could contribute to meeting this shortfall, if allocated.

96. Bid site MR040 comprises two areas of open grassland bisected by a driveway to two houses. The site is not adjacent to the settlement boundary and is surrounded by woodland which is covered by protected land designation P2 in the proposed plan. I consider that housing on this site would not be well integrated with the remainder of the settlement and would introduce urban development into an area of predominantly rural character. No information is provided on the impact that works to upgrade Upper Arbeadie Road would have on protected woodland.

97. Bid site MR041 lies immediately to the west of the existing settlement boundary and housing at Provost Black Drive. There is woodland on the western part of the site which lies within protected land designation P2 in the proposed plan. The remainder of the site is more open in character with some shrubs and trees.

98. Paragraph 218 of Scottish Planning Policy indicates that the Scottish Government's Control of Woodland Removal Policy includes a presumption in favour of protecting woodland. Removal should only be permitted where it would achieve significant and clearly defined additional public benefits. Given the availability of other sites to meet the shortfall in housing land provision in the Aberdeen Housing Market Area, I do not consider the loss of woodland on the western part of the site to be justified.

99. I note that the Main Issues Report concludes that an amended site boundary, which excludes the protected woodland to the west, may be supported. However, this option has not been promoted in any representation to the proposed plan.

100. I conclude that bid sites MR040 and MR041 should not be identified as housing allocations. No modifications are required.

Non-allocated bid site MR056 – Land at Upper Arbeadie Road

101. Bid site MR056 is located to the west of Upper Arbeadie Road, immediately to the north of existing housing at Hillview Road. A core path runs diagonally through the site and most of the land to the south west of the path is included in protected land designation P2 in the proposed plan, due to the presence of woodland. This part of the site is also covered by a tree preservation order. The remainder of the site is flat, open grassland and is not covered by a protected designation in the proposed plan.

102. Mactaggart and Mickel Homes submitted a bid for 61 homes on this 3.5 hectare site. Whilst the main issues report highlighted a number of positive aspects of the proposal, it

also identified some constraints, including the protection of woodland. The Issues and Actions Paper indicates that responses in support and against bid site MR056 were received following the consultation on the main issues report.

103. The concerns raised include the loss of woodland and open space and impact on trees protected by a tree preservation order, impact on biodiversity, impact on amenity and landscape character, overdevelopment, traffic issues, impact on infrastructure and flood risk. NatureScot indicated that if the site was allocated, development should ensure the retention and enhancement of existing woodland. Mactaggart and Mickel Homes' representation to the proposed plan is based on a revised proposal and seeks an allocation for up to 45 homes. However, I note that the revised indicative site layout dated July 2017 shows only 42 homes. The supporting submission dated April 2019 provides information which seeks to address the matters raised by the council and other respondents at Main Issues Report stage.

104. I agree with the council that the site would act as a natural extension to the town, with the potential for access to be taken from Hillview Road and Upper Arbeadie Road. The submitted transport assessment concludes that there is no transport related reason why the site cannot be allocated for residential development. Matters relating to the provision of services and infrastructure, including education and waste water treatment are addressed in the Banchory settlement statement and I am not aware of any other site specific infrastructure constraints.

105. The revised site layout for 42 homes, which has been informed by an updated tree survey, shows the majority of the land to the southwest of the core path retained as managed woodland. It is stated that only six trees would be removed due to their poor health and condition. Of the land included in site P2 in the proposed plan and covered by a tree preservation order, only the south eastern corner is now proposed for built development. I observed, from my site visit and the submitted phase one habitat survey, that the south-eastern corner of the site is semi-improved natural grassland rather than woodland. I found it to be similar in character and appearance to the land immediately to the north east of the core path, which is not included in site P2.

106. Paragraph 216 in Scottish Planning Policy indicates that woodland should be protected from adverse impacts resulting from development. Based on the information before me, including my site inspection, I am satisfied that development in the south eastern corner of site MR056 would be unlikely to have an adverse impact on existing trees. Further detailed assessment would be required at planning application stage, which may have implications for the final site layout.

107. The strategic environmental assessment identified potential negative effects on biodiversity. However, the ecology survey undertaken in 2017 did not identify the presence of any protected species and the proposal would provide the opportunity to increase biodiversity value through the retention and enhancement of existing woodland. The strategic environmental assessment states that the site is not within an identified flood risk area and SEPA did not raise any issues in this regard in response to the main issues report. Furthermore, the proposal would retain and enhance the core path which passes through the site.

108. The only reason given by the council for not including the site in the proposed plan is that sufficient land has been identified to meet housing needs. However, as we have

concluded in issue 5, this is not the case and there is shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area.

109. I consider that the representation submitted by Mactaggart and Mickel Homes addresses the concerns raised by the council at Main Issues Report stage. Subject to the retention and enhancement of the woodland located to the southwest of the core path, I consider that a development of around 42 homes (as shown on the indicative layout) would respect the landscape character and biodiversity value of the site. I consider that development of this site would be well integrated with the neighbouring residential area and would not have an adverse landscape impact. Furthermore, the scale of the allocation would be consistent with the community council's views that no additional major housing development should be proposed.

110. Matters relating to impact on amenity and privacy are more appropriately addressed at planning application stage, when the proposal would be assessed against relevant policies such as P1(Layout Siting and Design). The site is in the control of a housebuilder, who has indicated that development can come forward in the early part of the plan period. Taking account of the above considerations, I conclude that the site should be allocated for housing and identified as contributing towards the strategic development plan allowance for the Aberdeen Housing Market Area. Whilst it may be demonstrated at planning application stage that the site can accommodate 45 homes (as requested in the representation from Mactaggart and Mickel Homes), the indicative layout before me shows only 42. I consider that this figure should be used as the indicative capacity of the allocation.

111. I recommend that the plan be modified to identify bid site MR056 as allocation OP7: Land at Upper Arbeadie Road for 42 homes and include an allocation summary, as set out in the recommendations section below. The allocation summary should include reference to the need to protect and enhance the existing woodland and core path. Further assessments would be required to support a planning application, which provides further opportunity to address the matters raised by respondents at the main issues report stage.

112. As a result of this recommended modification, the settlement maps should be amended to include site MR056 within the settlement boundary and remove the south eastern corner of the site from protected land designation P2. No change is proposed to the core path route or to the remainder of the P2 designation, where it overlaps with site MR056. This new allocation should be included in the revised version of Appendix 6 and shown as contributing 42 homes to the strategic development plan allowance for the Aberdeen Housing Market Area. Modifications to this effect are set out below.

Non-allocated Bid Site MR077 – Land at Upper Lochton and New Site N024 – Land west of site OP3

113. The representation from North Banchory Company comprises four components, three of which relate to individual sites and one which encompasses the other three plus some additional land, all at Upper Lochton. The removal of the agricultural field to the south of Upper Lochton from protected designation P2 has already been addressed.

114. The second component relates to land to the west of allocation OP3 and to the south of the road to the recycling centre (referred to as new site N024). This site is within the settlement boundary in both the existing local development plan and the proposed

plan. It therefore already has the status of “white land” within the settlement. The potential extension of site OP3 has not been the subject of strategic environmental assessment or any consultation with key agencies or the public. I have therefore insufficient information before me to properly assess the effects of including the land within site OP3. I conclude that there is no justification to include new site N024 within allocation OP3. However, such a proposal could be progressed through a planning application. No modification is required.

115. Land to the north of the road to the recycling centre is reserved in the existing local development plan for a cemetery. The proposed plan identifies an alternative site for a cemetery and therefore the reserved designation is no longer required. Given the rural character of the site, I agree with the council that it should not be included within the settlement boundary, unless it is identified for development. No modification is required.

116. North Banchory Company seeks the allocation of all of the above sites plus land to the north west of the settlement boundary for housing. I note that this site (with the exception of new site N024) was proposed as a future reserve for 40 homes in the Main Issues Report. Concerns were raised in relation to loss of woodland and open space, biodiversity and landscape effects and impact on transport and other infrastructure.

117. In response to the points raised regarding the availability of housing sites in Banchory, I note that the strategic development plan identifies housing land requirements by housing market area and not by individual settlement. Banchory lies within the Aberdeen Housing Market Area and the council considers that sufficient land has been identified in the proposed plan to meet the requirements of the strategic development plan. However, as explained in the schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area.

118. The strategic environmental assessment does not identify any negative environmental effects arising from development of the land included in bid site MR077. Whilst I recognise that these sites could contribute towards meeting the shortfall in housing land provision, I consider that their location on the north western edge of the settlement makes them less accessible to local facilities and services than bid site MR056. No information has been provided to show how the layout of the individual parcels of land would relate to each other or integrate with existing and proposed development in the surrounding area. Furthermore, I am concerned that allocation of these sites would result in development which is likely to be car dependent.

119. As there are other suitable sites (including one in Banchory) to meet the shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area, I conclude that sites MR077 and N024 should not be allocated. No modification is required.

Non-allocated New Site N023 – Site at The Mews, Banchory Lodge

120. The council has explained the planning history relating to site N023, which lies within the settlement boundary. An allocation could have been included in the proposed plan to reflect the proposal for five houses. However, there is no requirement to do so and its omission does not affect the implementation of the current permission. No modification is required.

Reporter's recommendations:

Modify the local development plan by:

1. Replacing the last sentence in the first paragraph of the vision section on page 781 with: "No additional major new housing development is proposed."
2. Removing the narrow rectangular field on the south side of Upper Lochton from the P2 designation on the settlement map on pages 788 - 790.
3. Removing protected land designation P16 from the settlement map on pages 788 and 790 and deleting P16 from the protected land table on page 782.
4. Adding the following new second sentence to reserved land R2 in the table on page 782:
"Due to the close proximity and likely hydraulic connectivity of this site to the River Dee, a detailed groundwater assessment will be required to fully assess the suitability of this site as a cemetery."
5. Adding the following new second sentence to reserved land R3 in the table of page 782:
"Proposals should seek to minimise the loss of or damage to existing trees on the site. Compensatory planting may be required in line with the Scottish Government Control of Woodland Policy."
6. Replacing the second flood risk bullet point on page 782 with:
"• Parts of OP1, OP2, OP3, OP4 and OP5 are located adjacent to SEPA's indicative 1 in 200 year flood risk area, or have a small watercourse running through or adjacent to the site. A Flood Risk Assessment is required for OP2 and OP4 and may be required for OP1, OP3 and OP5."
7. Adding the following sentence to the end of third flood risk bullet point on page 782:
"Buffer strips will be required alongside the watercourses."
8. Adding the following new fourth bullet point to the Flood Risk section on page 782:
"• Site R4 is at significant risk from surface water flooding. A Flood Risk Assessment will be required to determine how this can be managed."
9. Replacing the last sentence in the sixth paragraph of the allocation summary for OP1 (East Banchory/Eco village) on page 784 with the following two sentences:
"Proposals will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required."
10. Replacing the fourth sentence of the first paragraph of the allocation summary for OP2 and OP3 (Lochside of Leys) on page 785 with:
"A revised Masterplan for these sites was approved by the Marr Area Committee in February 2020."
11. Deleting the blue hatched line which shows the indicative preferred line of the future distributor road from the settlement maps on page 788 and 790.

12. Replacing the first sentence in the second paragraph of the allocation summary for OP2 and OP3 on page 785 with:

“The Transport Assessment detailing the connectivity and infrastructure provision may need to be updated, should future phases of development differ from what is contained within the masterplan or current planning permissions.”

13. Deleting the words “to take account of the potential impacts to the qualifying interest of the River Dee SAC” from the fifth paragraph of the allocation summary for OP2 and OP3 on page 785.

14. Replacing the last sentence of the second paragraph in the allocation summary for OP4 (Hill of Banchory) on page 786 with the following two sentences:

“Proposals will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.”

15. Inserting the following additional sentence to the end of the first paragraph in the allocation summary for OP5 (Hill of Banchory East) on page 786 with:

“The provision of convenience and/or comparison floorspace may also be supported, provided a retail impact assessment demonstrates that the proposal accords with policy B1 - Town Centre Development.”

16. Deleting the third sentence (Enhancement and removal of any redundant features should be investigated.) from the last paragraph in the allocation summary for OP5 on page 786.

17. Replacing the last sentence of the last paragraph in the allocation summary for OP5 on page 786 with: “Proposals will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.”

18. Adding the following new sentence at the end of the fourth paragraph in the allocation summary for OP6 (Land at former Glen O’Dee Hospital) on page 787:

“Planting as part of a landscape framework should be sensitive to the local landscape character and be proportionate in scale and extent relative to the scale of development.”

19. Replacing the fifth paragraph in the allocation summary for OP6 on page 787 with:

“A Drainage Impact Assessment is required. This site is at risk from surface water flooding that should be addressed through appropriate SuDS measures. Proposals will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.”

20. Amending the entry for Banchory OP6 in the relevant table in Appendix 6 (housing land allocations) to show that the site is not identified as contributing towards the strategic development plan allowance for the Aberdeen Housing Market Area. (Note – a revised version of Appendix 6, incorporating all the recommended modifications, is provided at the end of this report.)

21. Inserting the following new allocation after OP6 on page 787:

“OP7: Land at Upper Arbeadie Road

Allocation: 42 homes

This is a newly allocated site located to the west of Upper Arbeadie Road, close to its junction with Highfield Avenue. The core path which runs diagonally across the site and existing woodland to the south-west of the core path (part of site P2) should be incorporated into the proposals and enhanced.

Early discussions should take place with the council to identify the assessments required to inform and support development proposals. These are expected to include a transport assessment; a drainage impact assessment; a landscape appraisal and tree survey; and a habitat and ecological survey and mitigation plan.

Woodland loss should be avoided unless necessary, with equivalent compensatory planting provided. Suitable landscaping should be undertaken and open space provided within the site.

Proposals will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.

It is expected that the site will contribute towards affordable housing in line with Policy H2 Affordable Housing. This should be delivered as part of the early phases of development and integrated into the design of the development to provide a mix of houses types and sizes to meet local needs.”

22. Amending the Banchory settlement map on pages 788 – 791 (as relevant) to show bid site MR056 as housing allocation OP7; include the site within the settlement boundary; and remove the south eastern corner of the site (the area which is shown as semi-improved natural grassland in Figure 3 of the habitat survey dated March 2017 and incorporates built development on the indicative site layout dated July 2017) from designation P2.

23. Adding Banchory OP7 for 42 homes to the table showing new sites which contribute towards the strategic development plan allowance for the Aberdeen Housing Market Area in Appendix 6. (Note – a revised version of Appendix 6, incorporating all the recommended modifications, is provided at the end of this report).

Provision of the development plan to which the issue relates:	Crathes Settlement Statement Inchmarlo Settlement Statement	
Planning authority’s summary of the representation(s):		
<p>Crathes</p> <p><u>Services and Infrastructure</u></p> <p>Scottish Environment Protection Agency (SEPA) has recommended that the ‘Strategic drainage and water supply’ bullet point be amended to state that any future development will be expected to connect to the public waste water infrastructure in Banchory (RD0214.B) (PP1219).</p> <p>Inchmarlo</p> <p><u>General</u></p> <p>A representee has stated that there is no provision for an increase in the facilities or retail at Inchmarlo House which will lead to a high dependency on private cars. There is also no</p>		

provision for a doctor's surgery which will put pressure on the existing medical practice in Banchory. There should not be a concentration of older people as it is better to have a mix of old and young in the general population. The developments are unlikely to be integrated with Banchory (PP0015).

Vision

A representee requested amending the wording of the Vision as Inchmarlo is not a retirement village, as other homes can be found within the settlement boundary (PP1169).

Site P1 – To protect the setting of Inchmarlo House as a contribution to the character of the place including the specimen trees that form the characteristic element of local design

A representee has sought that the layout, boundary and wording of site P1 is changed back to as it is within the LDP 2017. No justification has been provided regarding this alteration, and existing policies are in place to provide adequate protection to the setting of the listed building, woodland and character of the area (PP1139).

Site P2 – To protect the golf course as part of the green-blue network and provide a setting for the community

A representee has requested that proposed site P2 be removed from the Settlement Statement as no justification has been provided as to why this allocation was made and why it is necessary. The role of the protected land designation and the wording is vague. Policies are in place to protect the continued use of the golf course and other policy provisions are present to ensure active sports uses are not lost to developments. The wording of site P2 may conflict with other policy provisions (PP1140).

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Scottish Water has commented that under 'Strategic drainage and water supply' the wording should be amended to include, "The Inchmarlo retirement community is connected via private network to the Inchmarlo Waste Water Treatment Works which currently has insufficient capacity. Development outwith the retirement community is required to connect direct to Waste Water Treatment Works. A growth project will be initiated once development meets Scottish Water's five growth criteria. Recommend early engagement with Scottish Water." (PP0272).

Site OP1 – Inchmarlo Continuing Care Community

Support has been expressed for the continued allocation of site OP1 as it enables the sustainable delivery of housing programmed for the continuing care retirement community in the context of an aging population. The representee has included an Appendix

(RD0201.A) in their representation which provides further detail to support their position (PP1138).

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

NatureScot has recommended that the allocation summary is amended to clarify that any proposal will be subject to a Habitats Regulations Appraisal (HRA) and that a Construction Method Statement may be required as part of this process (RD0255.B) (PP1300).

Site OP2 – Land Southeast of Glencommon Wood

SEPA has recommended amending the second sentence in the fourth paragraph to state that a small watercourse is adjacent to the site, due to the boundary change from the Main Issues Report (MIR) to the Proposed Local Development Plan (PLDP) stage (RD0214.B) (PP1219).

NatureScot has recommended that the allocation summary be amended to clarify that any proposal will be subject to a HRA and that a Construction Method Statement may be required as part of this process (RD0255.B) (PP1300).

A representee has expressed support for the allocation of site OP2 but has requested that the boundary is amended to allow greater integration with the existing continuing care retirement community and give flexibility to be integrated into the long-term delivery of the extension of the retirement community. A revised boundary would provide choice for secondary access points and the incorporation of landscaped areas as a buffer to new development. The site was a preferred site in the Main Issues Report (MIR), Appendix 6 for 120 homes, however the allocation of 200 homes were sought through bid site MR050. Inclusion was sought for the woodland area on the western part of the site, to incorporate the landscape features. The allocation summary states to exclude the woodland to the west. The area of site OP2 has been altered and reduced significantly in the PLDP, at the western edge of the site and justification was not provided as to why the land south of the woodland area was excluded. The inclusion of a larger site boundary within the PLDP will allow the masterplan process to establish appropriate access and layout. The representee has included a number of Appendices (RD0200.A, RD0200.B and RD0220.C) in their representation which provides further detail to support their position (PP1137).

Site OP3 – Land at East Mains and Auldeer Wood

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP3 (RD0214.B). No modification sought (PP1219).

A representee has expressed support of the allocation of site OP3 but requests the inclusion of additional land for landscaping and land forming the northern boundary. The representee has included an Appendix (RD0210.A) in their representation which provides further detail to support their position (PP1186).

NatureScot has requested that the allocation summary for site OP3 includes additional wording on the landscape to help shape development that fits better within its woodland setting. They also request that it includes additional wording on active travel to promote safe and convenient active travel opportunities to and from Banchory (RD0255.B)

(PP1300).

NatureScot has recommended that the allocation summary is amended to clarify that any proposal will be subject to a HRA and that a Construction Method Statement may be required as part of this process (RD0255.B) (PP1300).

A number of representees have objected to inclusion of site OP3 (PP0013, PP0532, PP0878, PP1169 and PP1415). A range of reasons were cited including:

- The enabling element of the proposal is no longer included and therefore not an economic/tourism development, the project is now unviable (PP0532).
- It was approved on the basis that it was an employment and tourism opportunity with provision for this in the S75 with home building only for financing (PP1169 and PP1415).
- The developer seeks to build more homes than originally approved without building the hotel. Not a single house in excess of that approved should be allowed to be built or any relaxation of the stipulation of occupying homes before the hotel is built and operating. There was never a need for this housing with the approval entirely linked to the hotel given it was on land outwith the Local Plan (PP1415).
- The west side of Banchory lacks the necessary infrastructure, this side should be preserved as amenity space (PP0532).
- Does not offer long-term employment opportunities (PP0532).
- The inclusion of site OP3 as an allocation will have a significant impact on the landscape of the Dee Valley Special Development Area and cannot be mitigated by woodland (PP1169).
- Planning permission has previously been granted, however the site has never progressed and therefore is unlikely to be deliverable (PP1169).
- The site will be dependent on cars as public transport is limited and has poor footpath connections to Banchory, with the development having long-term negative environmental impact (PP0532, PP1169 and PP1415).
- There are no facilities or amenities available at the west side of Banchory other than those associated with care homes, this will increase traffic through Banchory (PP1169 and PP1415).
- There are infrastructure and services constraints including sewage, drainage and healthcare (PP1415).
- There are inadequate roads in the surrounding area, leading to safety concerns, upgrading is required to accommodate more traffic (PP1169 and PP1415).
- There is an education constraint, particularly in Banchory Academy (PP1169 and PP1415).
- The development is a significant departure from the self-contained continuing care facility (PP0013).
- Concerns relate to lack of connectivity with the existing facility at Inchmarlo and Banchory, increasing traffic on Glassell Road (PP0013).
- Site OP3 is 'opportunistic' overdevelopment causing urban sprawl into the countryside (PP0013).
- The Woodland Trust Scotland object as the inclusion will cause damage and/or loss of ancient woodland, contrary to SPP and the Control of Woodland Removal Policy (PP0878).

Representees have included an Appendix (RD0161.A and RD0272.A) in their

representation which provides further detail to support their position (PP0878 and PP1415).

Inclusion of site OP3 should be contingent on the current or any future developer meeting the existing S75 provisions for APP/2015/2262 and consequently should not be relied upon to meet housing targets (PP1169).

Modifications sought by those submitting representations:

Crathes

Services and Infrastructure

Modify the PLDP to add to the end of the 'Strategic drainage and water supply' bullet point, "Any future development will be expected to do the same." (PP1219).

Inchmarlo

General

Modify the PLDP to remove large scale development proposed in this area (PP0015).

Vision

Modify the PLDP to remove the reference to "care retirement village" from the Vision statement (PP1169).

Site P1 – To protect the setting of Inchmarlo House as a contribution to the character of the place including the specimen trees that form the characteristic element of local design

Modify the PLDP to amend the layout of site P1 to the layout adopted within the LDP 2017 and amend the wording of P1 to, "Conserve the setting of Inchmarlo House." (PP1139).

Site P2 – To protect the golf course as part of the green-blue network and provide a setting for the community

Modify the PLDP to remove site P2 (PP1140).

Services and Infrastructure

Modify the PLDP to include under 'Strategic drainage and water supply', "The Inchmarlo retirement community is connected via private network to the Inchmarlo Waste Water Treatment Works which currently has insufficient capacity. Development outwith the retirement community is required to connect direct to Waste Water Treatment Works. A growth project will be initiated once development meets Scottish Water's five growth criteria. Recommend early engagement with Scottish Water." (PP0272).

Site OP1 – Inchmarlo Continuing Care Community

Modify the PLDP allocation summary changing the third paragraph to read, "Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement

may be required. A Flood Risk Assessment may also be required.” (PP1300).

Site OP2 – Land Southeast of Glencommon Wood

Modify the PLDP to amend the second sentence in the fourth paragraph, “A Flood Risk Assessment ... due to a small watercourse adjacent to the site.” (PP1219).

Modify the PLDP allocation summary to replace the first sentence of the fourth paragraph with, “Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.” (PP1300).

Modify the PLDP to increase the boundary of allocated site OP2 (PP1137).

Site OP3 – Land at East Mains and Auldeer Wood

Modify the PLDP to allocate additional land for landscaping and land forming the northern boundary (PP1186).

Modify the PLDP to add a sentence at the end of the second paragraph of the allocation summary, “The existing site has an overriding wooded character, and the woodland/trees should be retained to act as a framework for the hotel and hotel lodges. The scale of any development should be carefully designed to reflect the largely rural and wooded character, with siting and design of the development of a scale that is contained by, rather than dominating this woodland setting. Open space should be biodiverse and native species should be used in landscaping as far as possible.” (PP1300).

Modify the PLDP to add a sentence at the end of the third paragraph of the allocation summary, “The active travel plan should consider provision for links to Banchory.” (PP1300).

Modify the PLDP to replace the fourth paragraph of the allocation summary with, “Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required. Buffer strips will be required adjacent to the watercourses and should be integrated as positive features of the development.” (PP1300).

Modify the PLDP to remove site OP3 from the Inchmarlo Settlement Statement (PP0013, PP0532, PP0878, PP1169 and PP1415).

Summary of responses (including reasons) by planning authority:

Crathes

Services and Infrastructure

The Council confirms that it intends to address SEPA’s comment through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Inchmarlo

General

The Council does not agree with the issues raised by the representee. Appropriate contributions to local infrastructure and services will be sought on the submission of a planning application through consultation with and assessments carried out by Developer Obligations. The Inchmarlo Settlement Statement outlines contributions may be required to secondary education and health and care facilities within Banchory. The continuing care community contains an onsite facility for care although it is acknowledged that residents will likely travel to Banchory for other facilities. However, continuing care communities are supported, and the location is sufficiently accessible. No change is required.

Vision

It is acknowledged that there are residents of Inchmarlo who, are not part of the retirement community. Subsequently, the wording in the Vision states Inchmarlo is a “largely self-continuing care retirement village”, rather than the Vision definitively stating all dwellings are part of the retirement village and therefore, it is not considered necessary to modify this statement. No change is required.

Site P1 – To protect the setting of Inchmarlo House as a contribution to the character of the place including the specimen trees that form the characteristic element of local design

The boundary of site P1 has been extended and the additional wording, which also protects the specimen trees, is considered important to reiterate the need for their protection. Through review of open space, this site has been identified as being an important area of open space that should be identified within the Settlement Statement (AD0162). Planning Advice Note (PAN) 65: Planning and Open Space (AD0007, table 1) sets out the open space typology that has been used to identify areas of protected land. Protected land is primarily included in the PLDP for its contribution to character, amenity or place. The extended area of site P1 is a vital landscape feature for the setting and character of Inchmarlo House and Inchmarlo village. No change is required.

Site P2 – To protect the golf course as part of the green-blue network and provide a setting for the community

As stated above, protected land has been identified as part of a review of open space using PAN 65 open space typologies and included within the PLDP for its contribution to character, amenity or place. Site P2 recognises the golf course’s contribution as part of the green-blue network and setting. No change is required.

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

The Council has confirmed that it intends to address Scottish Water’s comments though a non-notifiable modification, set out in the List of Non-Notifiable Modifications.

Site OP1 – Inchmarlo Continuing Care Community

Comments received in support of site OP1, including from SEPA are noted. No change is required.

The Council has confirmed that it intends to address NatureScot comments through a non-notifiable modification, set out in the List of Non-Notifiable Modifications.

Site OP2 – Land Southeast of Glencommon Wood

The Council has confirmed that it intends to address SEPA's comments through a non-notifiable modification, set out in the List of Non-Notifiable Modifications.

The Council has confirmed that it intends to address NatureScot comments through a non-notifiable modification, set out in the List of Non-Notifiable Modifications.

The area of site OP2 was reduced to exclude the woodland to the west, this is considered appropriate to retain and protect this important landscape feature and the wider environmental benefits this woodland brings to Inchmarlo. The allocation also sets out the initial first three phases indicated by bid MR050, which is of an appropriate scale for the continued delivery of the care community throughout the PLDP Plan period. MR050 indicated two access points are available adjoining these initial phases. No change is required.

Site OP3 – Land at East Mains and Auldeer Wood

Comments received in support of site OP1, including from SEPA the development are noted. No change is required.

The Council has confirmed that it intends to address NatureScot comments through a non-notifiable modification, set out in the List of Non-Notifiable Modifications.

The Council note that there are concerns surrounding this allocation. The site is subject to an extant planning permission (Planning Permission in Principle under APP/2011/2402 with subsequent Matters Specified in Conditions applications). Concerns relating to impact on infrastructure, services, landscaping and the environment will continue to be assessed through subsequent planning applications. The allocation summary sets out a number of requirements relating to these matters to provide clarity. No change is required.

In terms of the enabling development and this element of the planning permission being removed, the allocation of site OP3 has been made to reflect the extant permissions in the Inchmarlo area and therefore sets out to provide clarity to the community over the scale of future development approved. If the Reporter is minded, then the Council recommend at the end of the first paragraph of the allocation summary adding the following text, "Planning permission on this site has been granted as an enabling development proposal. Thereby, the proposal must be delivered in accordance with APP/2011/2402 and its associated S75 to ensure the development in the countryside is outweighed by the economic benefits".

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” in relation to the settlement statement matters covered in Issue 55. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Crathes

3. The Scottish Environment Protection Agency (SEPA) has requested a modification to indicate that future development in Crathes will be expected to connect to waste water infrastructure in Banchory. Whilst there are no sites allocated for development in Crathes in the proposed plan, this advice would apply to any future planning applications. I agree that this change would be appropriate and recommend a modification to that effect.

Inchmarlo

General

4. Concerns have been raised regarding the absence of local facilities within the Inchmarlo retirement village and that the concentration of housing for older people results in a development which is not well integrated with Banchory. I note that the services and infrastructure section of the Inchmarlo settlement statement indicates that developer contributions may be required towards sports and recreation and other community facilities. However, I agree that residents at Inchmarlo are likely to rely on local facilities and services in Banchory.

5. I consider that the comments made by the representee are valid concerns. However, no modifications to the plan have been suggested and I do not consider any to be necessary.

Vision

6. Whilst I note that there is general housing in Inchmarlo, I consider that the predominant use and overall character is a retirement settlement. I agree with the council that the wording of the vision acknowledges that parts of Inchmarlo do not form part of the retirement community. No modification is required.

Protected Land Designation P1

7. The purpose of designation P1 in the proposed plan is “to protect the setting of Inchmarlo House as a contribution to the character of the place including specimen trees that form a characteristic element of local design”. In addition to the parkland area to the south of the house, covered by P1 in the adopted plan, it includes woodland to the north and east.

8. The purpose of designation P1 in the adopted plan is described as “to conserve the setting of Inchmarlo House”, with no reference made to the contribution that the trees make to the character of the place. I agree that policies in the plan provide protection for the setting of listed buildings and the woodland character of the area. However, I consider it entirely appropriate to reflect the implications of these policies for Inchmarlo in the settlement statement. From my site inspection, I observed that the woodland to the north and west of Inchmarlo House contributes to the character of the house and its wider landscape setting. No modification is required

Protected Land Designation P2

9. Policy PR1.6 in the proposed plan states that “development will not normally be permitted on any area of open space” and that “important areas of open space are identified as ‘protected land’ within Appendix 7 settlement statements”. Golf courses are specifically mentioned in Planning Advice Note 65 as an example of sports areas, which are described as “large and generally flat areas of grassland...used primarily for designated sports”.

10. The purpose of designation P2 in the proposed plan is “to protect the golf course as part of the green-blue network and provide a setting for the community”. I disagree that this wording is vague. The definition of green-blue network provided in the glossary of the proposed plan includes reference to green infrastructure and open space functions. I consider that the golf course at Inchmarlo should be shown as protected land in the settlement statement, in recognition of its recreational value and contribution to the landscape setting of the settlement. No modification is required.

Services and Infrastructure

11. I consider that the wording of the strategic drainage and water supply bullet point should be amended to reflect the advice from Scottish Water on this matter. A modification is recommended.

Site OP1 (Inchmarlo Continuing Care Community)

12. I consider that the modification requested by NatureScot, in relation to Habitats Regulations Appraisal, would provide clarification on the appraisal process. A modification to this effect is recommended.

Site OP2 (Land southeast of Glencommon Wood)

13. Similar to site OP1, I consider that the modification requested by NatureScot, in relation to Habitats Regulations Appraisal, would provide clarification on the appraisal process. A modification to this effect is recommended.

14. SEPA has indicated that a small watercourse runs adjacent to the site and not through it as indicated in the proposed plan. I agree that this factual reference should be corrected and a modification is recommended.

15. I note that the bid proposal submitted by Skene Enterprises (Aberdeen) Limited comprises five sub areas, marked as A1 - A5 on their submitted plan. Allocation OP2

only covers sub areas A1 – A3, which represent the first three phases of development. Skene Enterprises request that sub areas A4 and A5 are also included within the OP2 site boundary, to allow a flexible approach to placemaking and landscaping, and provide for access and better connections with existing development. The council's reasons for excluding these areas are, to protect the woodland on the western part of the site, and that sub areas A1 – A3 represent an appropriate scale of development for the plan period.

16. Skene Enterprises state that the majority of area A5 was plantation woodland, which has now been felled. Whilst reference is made to this area having potential for replacement planting, no information has been provided in relation to a specific proposal. I observed on my site inspection that there are trees remaining on the site. Area A4 is an open field which slopes upwards from south to north, with trees along its edges but not within the site itself. I agree with the council that existing trees in areas A4 and A5 should be protected. However, I consider that the retention of trees on these sites would not necessarily preclude development.

17. Allocation OP2 covers an area of 14.2 hectares, compared to the larger bid proposal which extends to 19.3 hectares. The indicative capacity of 120 homes on allocation OP2 represents a density of just over eight homes per hectare, which is already much lower than the 25 homes per hectare sought generally on greenfield sites.

18. The council and Skene Enterprises agree that the delivery of 120 homes would be a realistic achievement in the plan period. The implications of distributing this level of development over the wider 19.3 hectare site would lower the density to around six homes per hectare, which would represent inefficient use of land.

19. Site OP2 has been identified as contributing towards the strategic development plan allowance for the Aberdeen Housing Market Area for the period up to 2032. The proposed plan does not identify any future allocations beyond this period and, as concluded under issue 2, there is no requirement for it to do so. Whilst I accept that the inclusion of areas A4 and A5 would provide more flexibility in relation to access arrangements and landscaping proposals, I do not consider that this would justify a change to the proposed plan. No modification is required.

Site OP3 (Land at East Mains and Auldeer Wood)

20. There are a number of representations seeking the deletion of allocation OP3. However, as the proposal has planning permission which has been implemented but not yet completed, I consider the allocation to be justified.

21. I agree with the council that the plan should be modified to include reference to the enabling relationship between the housing and the hotel elements. The wording initially suggested by the council would require development to comply with a particular planning permission. Given that a more recent permission has now been granted and the site may be the subject of future planning applications, I asked the council if an alternative wording would be appropriate (FIR009). It has suggested that the following sentences be added to the allocation summary for OP3, "Planning permission for housing on this site has been granted as an enabling development proposal to fund the construction of a hotel. The development shall be delivered as approved in relation to the fulfilment of the obligation for the site as an enabling development, unless otherwise agreed." Subject to minor edits, I consider this wording to be appropriate and recommend a modification accordingly.

22. NatureScot has requested some additional text be included in the allocation summary for site OP3 to highlight the need for development to reflect its woodland setting and incorporate biodiverse and native species within areas of open space. It indicates that the active travel plan should consider provision for links to Banchory and suggest text in relation to the Habitats Regulations. I consider that the changes in relation to woodland and open space are consistent with the relevant policies on these matters and the suggested wording in relation to Habitats Regulations Appraisal would provide clarification on the appraisal process. Modifications to this effect are recommended.

23. Kirkwood Homes and Inchmarlo Farms Limited have requested that the boundary of the eastern parcel of allocation OP3 be amended to include a strip of land to the north for landscaping and land forming purposes. In response to a further information request (FIR009), the council has explained that the boundary of site OP3 has been drawn to align with the rear boundaries of the proposed housing as set out in the landscape and infrastructure masterplans approved under application APP/2015/2262. It states that the open space to the rear of the housing will bleed into the woodland without a clear discernible boundary.

24. Based on the information before me, I am unable to assess the environmental impact of extending the site boundary into the area of woodland. Given that the existing boundary is consistent with the approved planning permission, I do not consider an amendment would be justified. No modification is required.

Reporter's recommendations:

Modify the local development plan by:

Crathes

1. Adding the following sentence at the end of the strategic drainage and water supply bullet in the services and infrastructure section of the Crathes settlement statement on page 798:

“Any future development will be expected to do the same.”

Inchmarlo

2. Replacing the second bullet point in the services and infrastructure section of the Inchmarlo settlement statement on page 822 with:

“• Strategic drainage and water supply: The Inchmarlo retirement community is connected via private network to the Inchmarlo Waste Water Treatment Works, which currently has insufficient capacity. Development outwith the retirement community is required to connect directly to the Waste Water Treatment Works. A growth project will be initiated once development meets Scottish Water's five growth criteria. Early engagement with Scottish Water is recommended.”

3. Replacing the third paragraph of the allocation summary for OP1 (Inchmarlo Continuing Care Community) in the Inchmarlo settlement statement on page 823 with:

“Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required. A Flood Risk Assessment may also be required.”

4. Replacing the first two sentences in the fourth paragraph of the allocation summary for OP2 (Land southeast of Glencommon Wood) in the Inchmarlo settlement statement on page 824 with:

“Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required. A Flood Risk Assessment may be required due to a small watercourse adjacent to the site.”

5. Adding the following sentences to the end of the first paragraph of the allocation summary for OP3 (Land at East Mains and Auldeer Wood) on page 825:

“Permission for housing has been granted as an enabling development proposal to fund the construction of a hotel. The development shall be delivered as approved in relation to the fulfilment of the obligation for the site as an enabling development, unless otherwise agreed.”

6. Adding the following sentences to the end of the second paragraph of the allocation summary for OP3 (Land at East Mains and Auldeer Wood) on page 825:

“The existing site has an overriding wooded character and the woodland/trees should be retained to act as a framework for the hotel and hotel lodges. The scale of any development should be carefully designed to reflect the largely rural and wooded character, with siting and design of the development of a scale that is contained by, rather than dominating this woodland setting. Open space should be biodiverse and native species should be used in landscaping as far as possible.”

7. Adding the following sentence to the end of the third paragraph of the allocation summary for OP3 (Land at East Mains and Auldeer Wood) on page 825:

“The active travel plan should consider provision for links to Banchory.”

8. Replacing the fourth paragraph of the allocation summary for OP3 (Land at East Mains and Auldeer Wood) on page 825 with:

“Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on * the qualifying interests of the River Dee SAC. A Construction Method Statement may be required. Buffer strips will be required adjacent to the watercourses and should be integrated as positive features of the development.”

<p>Planning authority's summary of the representation(s):</p>	
<p>Cairnie</p> <p><u>Services and Infrastructure</u></p> <p>Scottish Environment Protection Agency (SEPA) has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).</p> <p><u>Site OP1 – Land Opposite Hall Cottages</u></p> <p>SEPA has highly recommended that the allocation summary for site OP1 includes a requirement for a suitable buffer from the sewage works on the eastern side of the site. SEPA are concerned that the proximity of the existing sewage works may cause odour issues and that the Council's Environmental Health colleagues should advise on a suitable buffer width for the site (RD0214.B) (PP1219).</p> <p>Clatt</p> <p><u>Flood Risk</u></p> <p>SEPA has recommended for consistency that a new 'Flood Risk' section and bullet point is added to state that parts of Clatt are at possible risk from flooding from the Gadie Burn and Flood Risk Assessments may be required (RD0214.B) (PP1219).</p>	

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

A representee has requested that reference to 'Services and Infrastructure' in the Clatt Settlement Statement is deleted, as no residential allocations are identified in the Settlement Statement (PP1118).

Drumblade

Site OP1 – Land to southwest of Drumblade Primary School

SEPA has requested for site OP1, replacement of the last paragraph in the allocation text (RD0214.B) (PP1219).

Forgue

Flood Risk

SEPA has recommended for consistency that a new 'Flood Risk' section and bullet point is added to state that parts of Forgue are at possible risk from flooding from the Burn of Forgue and Flood Risk Assessments may be required (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has requested that the 'Strategic drainage and water supply' bullet point refers to public waste water 'infrastructure' rather than waste water 'treatment' (RD0214.B) (PP1219).

Site OP1 – Land to East of the Rectory

SEPA has requested for site OP1, replacing the second paragraph in the allocation text that refers to consulting with SEPA for a private Waste Water Treatment Works to simply state a single private water treatment plant, built to an adoptable standard, will be required and that one plant should serve sites OP1 and OP2 (RD0214.B) (PP1219).

Site OP2 – Chapelhill (Land to West and South of Forgue school)

SEPA has requested for site OP2, replacing the second paragraph in the allocation text that refers to consulting with SEPA for a private Waste Water Treatment Works to simply state a single private water treatment plant, built to an adoptable standard, will be required and that one plant should serve sites OP1 and OP2 (RD0214.B) (PP1219).

Gartly

Flood Risk

SEPA has recommended for consistency that a new 'Flood Risk' section and bullet point is added to state that parts of Gartly are at possible risk from flooding from the Bogie Water

and Flood Risk Assessments may be required (e RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

A representee has requested that reference to 'Services and Infrastructure' in Gartly Settlement Statement is deleted. No residential allocations have been identified in the settlement, and therefore, there are no impacts arising from development that will need to be mitigated by Developer Obligations. These sections are considered superfluous and unnecessary (PP1408).

Glass

Site R1 – For a community park and car park associated with the community hall

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R1 (RD0214.B). No modification sought (PP1219).

Flood Risk

SEPA has recommended for consistency that a 'Flood Risk' section and bullet point is added to state that parts of Glass are at possible risk from flooding from Markie Water and a Flood Risk Assessment may be required (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

A representee has requested that reference to 'Services and Infrastructure' in Glass Settlement Statement is deleted. There are no impacts arising from development and therefore, will not need to be mitigated by Developer Obligations. These sections are considered superfluous and unnecessary (PP1409).

Huntly

Site R1 – For community use and recreation

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R1 (RD0214.B). No modification sought (PP1219).

Site BUS1 – Safeguarded for business uses

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site BUS1 (RD0214.B). No modification sought (PP1219).

Site BUS2 – Safeguarded for business uses

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site BUS2 (RD0214.B). No modification sought (PP1219).

Site BUS3 – Safeguarded for business uses

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site BUS3 (RD0214.B). No modification sought (PP1219).

A representee has expressed support for the land at Huntly Auction Mart being retained as BUS3 which will enable the scope to expand in the future. No modification sought (PP1228).

Site BUS4 – Safeguarded for business uses

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site BUS4 (RD0214.B). No modification sought (PP1219).

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Nestrans has stated they continue to seek clarity from Transport Scotland regarding the proposed programme for consideration of the A96 dualling options around Huntly. Nestrans is also keen to see further improvements to Huntly's rail service as part of the next phase of Aberdeen to Inverness rail improvements (RD0227.A). No modifications sought (PP1241).

Site OP1 – Land at Steven Road

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

A number of representees object to or are concerned regarding the inclusion of site OP1 (PP0025, PP0069 and PP0127). A range of reasons were cited including:

- The capacity of Huntly's drainage infrastructure for additional housing is a concern, as it does not cope with current housing capacity (PP0025 and PP0127).
- Lack of facilities or local services for new housing, with no increase of education and health care provision (PP0025 and PP0127).
- Insufficient broadband, decline in local businesses, lack of facilities in Huntly town centre to attract people to the area (PP0127).
- Lack of need for more affordable housing in Huntly and there are empty properties/properties for sale in Huntly (PP0025, PP0069 and PP0127).

- Inadequate viable and safe access from Steven Road to accommodate the increase of traffic next to the school/nursery and impact on children's safety. In addition, clarity is sought regarding access as Depot Road/Clashmach View/Forest Way does not cope with the current volume of traffic, with parked cars creating a single lane road access (PP0069 and PP0127).
- Covid-19 has demonstrated the need for green space for mental health benefits and development will result in a loss of recreation land and cause a visual impact, diminishing the view of Clashmach Hill. The development will also affect wildlife (PP0069).

Site OP2 – Deveron Road

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219).

Site OP3 – Land Adjacent to Linnorie

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP3 (RD0214.B). No modification sought (PP1219).

Site OP4 – Land Adjacent to Linnorie Business Park

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP4 (RD0214.B). No modification sought (PP1219).

Site OP5 – The Ward

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP5 (RD0214.B). No modification sought (PP1219).

NatureScot has requested that the allocation summary for OP5 in Huntly includes text to help minimise landscape and visual impacts on the setting of Tullochbeg, which contributes to the wider uplands of Clashmach Hill and forms part of the highly sensitive landscape and visual setting to Huntly to the south and west. They note that it has planning permission, but the site is located on sloping ground on the lower slopes of Tullochbeg (RD0255.B) (PP1300).

Kennethmont

Site R1 – To accommodate a car park for the cemetery

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R1 (RD0214.B). No modification sought (PP1219).

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Land South of B9002

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

A representee has requested the removal of site OP1's contribution to the allowances of 32 homes. It is stated that an alternative effective allocation should be identified in the Local Growth Area (LGA) of the Rural Housing Market Area (RHMA) or, if marketability constraints preclude this, in the LGA of the adjacent Aberdeen Housing Market Area (AHMA). This is on the basis that the site has not been granted permission yet, there is no confirmation that there is capacity in the Kennethmont waste water treatment plant and it remains to be seen that the remote rural settlement can attract market interest for a site this size. The capacity should not contribute to the allowances given that it is marketability constrained at the base date of the Plan with little confidence of its delivery during the Plan period given the modest build rate seen on other sites in the settlement (PP1033).

Site OP2 – Land Opposite the School

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219).

Rhynie

Site BUS – Safeguarded for business uses

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site BUS (RD0214.B). No modification sought (PP1219).

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Land at Essie Road

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

Ruthven

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the

Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – School Road

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

Modifications sought by those submitting representations:

Cairnie

Site OP1 – Land opposite Hall Cottages

Modify the PLDP to include within the allocation summary a requirement to provide a suitable buffer from the sewage works on the east side of the site (PP1219).

Clatt

Flood Risk

Modify the PLDP to add in a 'Flood Risk' section and bullet point, "Parts of Clatt are at possible risk from flooding from the Gadie Burn. Flood Risk Assessments may be required." (PP1219).

Services and Infrastructure

Modify the PLDP to delete the section titled 'Services and Infrastructure' (PP1118).

Drumblade

Site OP1 – Land to southwest of Drumblade Primary School

Modify the PLDP to replace the last paragraph with, "A single private waste water treatment plant, built to an adoptable standard, will be required for this site." (PP1219).

Forgue

Flood Risk

Modify the PLDP to add in a 'Flood Risk' section and bullet point, "Parts of Forgue are at possible risk from flooding from the Burn of Forgue. Flood Risk Assessments may be required." (PP1219).

Services and Infrastructure

Modify the PLDP to amend the 'Strategic drainage and water supply' bullet point to, "There

is no public waste water infrastructure in Forgue.” (PP1219).

Site OP1 – Land to East of the Rectory

Modify the PLDP to replace the second paragraph with, “A single private waste water treatment plant, built to an adoptable standard, will be required for this site. It will be preferable for the provision of one treatment plant to service both OP1 and OP2.” (PP1219).

Site OP2 – Chapelhill (Land to West and South of Forgue school)

Modify the PLDP to replace the last paragraph with, “A single private waste water treatment plant, built to an adoptable standard, will be required for this site. It will be preferable for the provision of one treatment plant to service both OP1 and OP2.” (PP1219).

Gartly

Flood Risk

Modify the PLDP to add in a ‘Flood Risk’ section and bullet point, “Parts of Gartly are at possible risk from flooding from the Bogie Water. Flood Risk Assessments may be required.” (PP1219).

Services and Infrastructure

Modify the PLDP to delete the ‘Services and Infrastructure’ section (PP1408).

Glass

Flood Risk

Modify the PLDP to add in a ‘Flood Risk’ section and bullet point, “Parts of Glass are at possible risk from flooding from the Markie Water. Flood Risk Assessments may be required.” (PP1219).

Services and Infrastructure

Modify the PLDP to delete the reference to ‘Services and Infrastructure’ in the Glass Settlement Statement (PP1409).

Huntly

Site OP1 – Land at Steven Road

Modify the PLDP to remove site OP1 (PP0025, PP0069 and PP0127).

Site OP5 – The Ward

Modify the PLDP to add after the second sentence of the allocation summary for site OP5, “To minimise landscape and visual impacts the development of industrial units typically

requiring larger footprints should be avoided on the majority of this site, especially in the central and southern portions. More scope exists to develop the north of the site, consolidating the existing industrial development.” (PP1300).

Kennethmont

Site OP1 – Land South of B9002

Modify the PLDP to remove site OP1 contribution of 32 homes to the allowances and identify an alternative effective allocation in the LGA of the RHMA or, if marketability constraints preclude this, in the adjacent LGA of the AHMA (PP1033).

Rhynie

No modifications sought.

Ruthven

No modifications sought.

Summary of responses (including reasons) by planning authority:

Cairnie

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Land opposite Hall Cottages

The Council confirms that it intends to address SEPA’s comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Clatt

Flood Risk

The Council confirms that it intends to address SEPA’s comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Whilst there are no allocated sites identified within the settlement boundary, proposals for new development may still be submitted for sites within and adjacent to the settlement which will require to be appropriately assessed by the Council in accordance with the relevant policies of the PLDP. In such instances, developer obligations will require to be sought to ensure that development impacts are mitigated against. No change is required.

Drumblade

Site OP1 – Land to Southwest of Drumblade Primary School

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Forgue

Flood Risk

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Land to East of the Rectory

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP2 – Chapelhill (Land to West and South of Forgue school)

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Gartly

Flood Risk

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Whilst there are no allocated sites identified within the settlement boundary, proposals for new development may still be submitted for sites within and adjacent to the settlement which will require to be appropriately assessed by the Council in accordance with the relevant policies of the PLDP. In such instances, developer obligations will require to be sought to ensure that development impacts are mitigated against. No change is required.

Glass

Site R1 – For a community park and car park associated with the community hall

Comments from SEPA are noted. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Whilst there are no allocated sites identified within the settlement boundary, proposals for new development may still be submitted for sites within and adjacent to the settlement which will require to be appropriately assessed by the Council in accordance with the relevant policies of the PLDP. Site R1 – For community use and recreation

Comments from SEPA are noted. No change is required.

Site BUS1 – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

Site BUS2 – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

Site BUS3 – Safeguarded for business uses

Comments from SEPA and support from a representee are noted. No change is required.

Site BUS4 – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA and Nestrans are noted. No change is required.

Site OP1 – Land at Steven Road

Comments from SEPA are noted. No change is required.

Site OP1 is currently allocated for employment uses within the LDP 2017. This opportunity has not progressed and there is sufficient available employment land elsewhere in the

settlement. The site was not identified as recreational land however, open space is required to be provided as part of any new development. This site provides an opportunity to assist with meeting the high level of affordable housing need, as highlighted in Policy H2 Affordable Housing and fits in with surrounding residential and amenity uses.

The capacity in services and surrounding infrastructure will be assessed on the submission of an application, with developer obligations sought where necessary to offset any impact arising. A Drainage Impact Assessment and Transport Statement will be required to be provided at the application stage as set out in the allocation summary. Consultation with relevant consultees and an assessment will be in accordance with planning policies. No change is required.

Site OP2 – Deveron Road, Site OP3 – Land Adjacent to Linnorie and Site OP4 – Land Adjacent to Linnorie Business Park

Comments from SEPA are noted. No change is required.

Site OP5 – The Ward

Comments from SEPA are noted. No change is required. The Council confirms that it intends to address NatureScot comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Kennethmont

Site R1 – To accommodate a car park for the cemetery, Flood Risk and Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Land South of B9002

Comments from SEPA are noted. No change is required.

The Council does not support the removal of site OP1 or the removal of the 32 homes contribution to the allowances. The site is allocated as site OP1 in the LDP 2017 and bid site MR064 was a preferred option in the MIR (AD0038.G, page 63). As set out in Appendix 6 Housing land allocations, allowances from existing constrained sites have contributed where a bid was submitted indicating delivery within the Plan period. Further to this, planning permission APP/2019/0711 for 32 homes was approved (September 2020) and thereby it would not be appropriate to remove this allocation. A growth project has been initiated by Scottish Water as indicated in the 'Services and Infrastructure' section of the Settlement Statement. As highlighted by the representee, there is housing being built within the settlement, albeit slowly. This is not unexpected for a rural area however it does not equate to the site being undeliverable. No change is required.

In light of the grant of planning permission since the publication of the PLDP, the Council intends to update sentence two of paragraph one, removing "subject to a Legal Agreement" from the allocation summary. The Council confirms that it intends to address this through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP2 – Land Opposite the School

Comments from SEPA are noted. No change is required.

Rhynie

Comments from SEPA are noted. No change is required.

Ruthven

Comments from SEPA are noted. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.
2. The council has indicated that it intends to make what it refers to as “non-notifiable modifications” in relation to the settlement statement matters covered in Issue 56. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Cairnie

3. Allocation OP1 is for eight houses on land to the south of Bin Avenue. The south eastern corner of the site lies adjacent to the Cairnie waste water treatment works. There are no unresolved representations seeking the removal of allocation OP1. However, the Scottish Environment Protection Agency (SEPA) has suggested a modification to require the provision of a suitable buffer next to the treatment works.
4. The allocation summary in the proposed plan states that planning permission has been approved for eight homes on the site. There were no signs of development at my site inspection. If the previous planning permission has lapsed, a new application would be necessary. Given the potential for odour from the treatment works to have an adverse effect on the amenity of future residents, I consider that a reference to the need for a buffer in the allocation summary for site OP1 would be appropriate. A modification is recommended based on the text suggested by the council.

Clatt, Drumblade, Forgue, Gartly, Glass

5. Comments from SEPA identify some omissions in relation to the information provided on flood risk for the settlements of Clatt, Forgue, Gartly and Glass. I agree with the council that the relevant settlement statements should be modified to include the information provided by SEPA.

6. SEPA has also requested some changes to clarify the information provided on waste water and drainage infrastructure in Drumblade (site OP1) and Forgue (in general and for sites OP1 and OP2). The council supports the suggested changes and I agree that these modifications would be appropriate, in order to provide accurate information for any future developers.

7. Case Consulting Limited considers that the services and infrastructure section in the settlement statements for Clatt, Gartly and Glass should be deleted because there are no development allocations identified in these settlements. The absence of any allocated sites in the proposed plan would not preclude the submission of planning applications for development on sites in or adjacent to these settlements. The potential need for relevant developer contributions towards services and infrastructure is as applicable to proposals on non-allocated sites as it is for those identified in the plan. I therefore consider the inclusion of this information in the settlement statements for Clatt, Gartly and Glass to be appropriate. No modification is recommended in relation to this matter.

Huntly

Allocation OP1 (Land at Steven Road)

8. There are only two housing allocations in Huntly identified in the proposed plan, 50 homes on land at Steven Road (OP1) and 52 homes at Deveron Road (OP2). These are new allocations and are identified as contributing towards the strategic development plan allowance in the Rural Housing Market Area for the period up to 2032. A number of housing allocations in the existing local development plan have not been included in the proposed plan, due to infrastructure constraints associated with the proposed dualling of the A96 road.

9. Allocation OP1 sits to the east of the A96 and other neighbouring uses include a Tesco superstore to the northwest, housing to the north and east and an industrial estate to the south. There is a children's nursery located to the south of the site within the Steven Road industrial area. The OP1 site currently forms part of allocation BUS 1 in the adopted local development plan. I note that representations to allocation OP1 do not raise any issues in relation to the loss of employment land.

10. There are general concerns regarding the impact of additional housing on services and infrastructure in Huntly. However, SEPA has raised no strategic drainage or water supply issues. Whilst the strategic environmental assessment report indicates that the local primary school is at capacity, the 2019 School Roll Forecast does not show any education capacity issues in Huntly. On the basis that policy RD2 Developer Contributions provides a mechanism for mitigating impact on education services, if there are issues in relation to school capacity, I consider that these can be overcome.

11. Huntly has a range of shopping, other local facilities and employment opportunities. Compared to the scale of development currently allocated in the adopted local development plan, a proposal for 50 homes would have much less impact on local infrastructure. I note that a drainage impact assessment would be provided at the planning application stage.

12. Representations have questioned the need for more affordable housing in Huntly. The council's response does not provide any information in support of its position that

there is a high level of affordable housing need. However, I note that the local housing strategy identifies Huntly as a medium priority settlement in terms of housing need based on a 2016/17 assessment of waiting list, turnover and stock data.

13. A number of representations raise concerns in relation to the impact of the allocation on traffic and road safety, including in relation to the children's nursery on Steven Road. Given that the site is currently allocated for business uses which would also generate traffic, I do not consider that these concerns would justify the removal of the allocation. Detailed matters relating to the two proposed points of access and footpath/cycleway connectivity would be addressed through the required transport assessment.

14. The Huntly Key Map shows a number of areas of land as protected open space for recreational and amenity purposes. Whilst I acknowledge that site OP1 may be used informally for recreational purposes, it is not currently allocated as open space or recognised for its wildlife value. Matters relating to site layout and impact on key views can be addressed at the planning application stage.

15. Within this context and the need for the plan to identify sites to meet the strategic development plan housing allowances, I consider that housing allocation OP1 should be retained. No modification is required.

Site OP5 – The Ward

16. Site OP5 is located to the southwest of the roundabout which forms the junction between the A96 and A97 roads. There are existing business uses and other business safeguards and allocations in the vicinity of the site. The allocation in the proposed plan reflects that planning permission has been granted for classes 2 and 4 business uses on the site. However, there were no signs of any development at my site inspection. If the previous planning permission has lapsed, a new application would be necessary.

17. NatureScot has requested a modification to the allocation summary to minimise the landscape and visual impacts of development upon the setting of Huntly. The implications of the requested change would be to prevent "the development of large industrial units on the central and southern portions of the site. The council has indicated that it supports this change.

18. I agree that development on site OP5 should seek to minimise landscape and visual impacts on Tullochbeg and the sensitive landscape setting to the south west of Huntly. However, the reason given by NatureScot for the requested modification is that the site "is located on sloping ground on the lower slopes of Tullochbeg". From my site inspection, I observed that site OP5 is relatively flat and that the ground only starts to slope upwards beyond the electricity pylons, which run to the south of the site. An existing wood yard and site OP4 are located closer to the slopes of Tullochbeg than site OP5. I consider that the low lying nature of the site and existing planting along the A96 and A97 would help mitigate the visual impact of development from these main roads. In long range views from the south and west, any development on the site would be likely to be seen within the context of the auction mart and other buildings to the west and the Asda supermarket to the north.

19. The modification sought by NatureScot would potentially reduce the development capacity of site OP5 and may have implications for the viability of the allocation. Given the

characteristics of the site and the nature of neighbouring uses, it may not be necessary to restrict development on parts of the allocation. I therefore do not consider the suggested change to the proposed plan is justified. Instead, I recommend a modification to the allocation summary for site OP5 to indicate that proposals should seek to minimise landscape and visual impacts on Tullochbeg and the sensitive landscape setting to the south west of Huntly. This would allow the landscape and visual impacts of the proposed layout to be assessed and mitigated at planning application stage.

Kennethmont

20. The council has indicated that planning permission has now been granted for 32 homes on site OP1. I note that the site is identified as effective in the 2020 Housing Land Audit, with completions anticipated in the period 2021 – 2023. I consider that the information contained in the 2020 Housing Land Audit provides evidence to justify the site's contribution towards the strategic development plan allowance for the Rural Housing Market Area. To provide clarification, I agree that the words "subject to a legal agreement" should be deleted from the allocation summary for site OP1.

Reporter's recommendations:

Modify the local development plan by:

Cairnie

1. Adding the following new sentence to the end of the allocation summary for site OP1 (Land Opposite Hall Cottages) in the Cairnie settlement statement on page 793:
"Liaison with the Council's Environmental Health Service is required to determine a suitable buffer from the sewage works on the eastern side of the site."

Clatt

2. Adding a new sub-heading "Flood Risk" to the Clatt settlement statement on page 794, with the following new bullet point:
"• Parts of Clatt are at possible risk from flooding from the Gadie Burn. Flood Risk Assessments may be required."

Drumblade

3. Replacing the third paragraph of the allocation summary for OP1 – Land to Southwest of Drumblade Primary School in the Drumblade settlement statement on page 801 with:
"A single private waste water treatment plant, built to an adoptable standard, will be required for this site."

Forgue

4. Adding a new sub-heading "Flood Risk" to the Forgue settlement statement on page 806, with the following new bullet point:
"• Parts of Forgue are at possible risk from flooding from the Burn of Forgue. Flood Risk Assessments may be required."

5. Replacing the second bullet point in the services and infrastructure section of the

Forge settlement statement on page 806 with:

“• Strategic and drainage water supply: There is no public waste water infrastructure in Forge.”

6. Replacing the second paragraph of the allocation summary for OP1 – Land to East of the Rectory and the last paragraph of the allocation summary for OP2 – Chapelhill in the Forge settlement statement on page 807 with the following text:

“A single private waste water treatment plant, built to an adoptable standard, will be required for this site. It will be preferable for the provision of one treatment plant to service both OP1 and OP2.”

Gartly

7. Adding a new sub-heading “Flood Risk” to the Gartly settlement statement on page 809, with the following new bullet point:

“• Parts of Gartly are at possible risk from flooding from the Bogie Water. Flood Risk Assessments may be required.”

Glass

8. Adding a new sub-heading “Flood Risk” to the Glass settlement statement on page 811, with the following new bullet point:

“• Parts of Glass are at possible risk from flooding from the Markie Water. Flood Risk Assessments may be required.”

Huntly

9. Adding the following new eighth sentence (after “...within and along the boundaries of the site.”) to the allocation summary for OP5 (The Ward) in the Huntly settlement statement on page 818:

“Proposals should seek to minimise landscape and visual impacts on Tullochbeg and the sensitive landscape setting to the south west of Huntly.”

Kennethmont

10. Replacing the second sentence of the first paragraph in the allocation summary for site OP1 (Land south of B9002) in the Kennethmont settlement statement on page 831 with:

“Planning permission for 32 homes has been approved.”

Kirkton of Tough Settlement Statement
Lumsden Settlement Statement
Monymusk Settlement Statement
Muir of Fowlis Settlement Statement
Towie Settlement Statement
Whitehouse Settlement Statement
Other Marr (central) Settlements

Planning authority's summary of the representation(s):

Glenkindie

Flood Risk

Scottish Environment Protection Agency (SEPA) has recommended for consistency that a new 'Flood Risk' section and bullet point is added to state that, "Parts of Glenkindie are adjacent to the River Don 1 in 200-year flood area shown on SEPA's Indicative Flood Map. Flood Risk Assessments may be required." (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Land to the West of Glenkindie Bowling Club

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

Keig

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Land North of Braehead

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

Representees have objected to the work being carried out by the same developer, who leaves the site unkept impacting on the amenity of the residents of Keig. There should be a time limit on carrying out the development or enforcement for the developer to tidy the site (PP0777, PP0835, PP1131 and PP1231).

The consented capacity is 13 homes with 3 homes left as at, 1 January 2019. The site should reflect actual position as detailed within the Housing Land Audit (HLA) 2019 as the LDP is based to the 1 January 2019. This is to avoid the perception that the land bank is larger than it actually is (PP1411).

Kirkton of Tough

Services and Infrastructure

SEPA has requested that the 'Strategic drainage and water supply' bullet point refers to public waste water infrastructure rather than waste water treatment (RD0214.B) (PP1219).

A representee has requested that reference to 'Services and Infrastructure' in Kirkton of Tough Settlement Statement is deleted. No residential allocation has been identified so there will be no development impacts required to be mitigated by Developer Obligations. The section is considered unnecessary (PP1063).

Lumsden

Site BUS – Safeguarded for business uses

A representee has requested the removal of site BUS within Lumsden as it negatively impacts on the business at Scottish Sculpture Workshop (SSW), which attracts international visitors and is a meeting space for the local community. The recently granted planning permission for a new workshop within the SSW will be impacted on by any new buildings within the site BUS, it will cause a loss of natural light and diminish site lines (PP0720).

Flood Risk

SEPA has requested amending the 'Flood Risk' bullet point to include the need for buffer strips (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Montgarrie

Settlement Status and Non-Allocated Site – Bid Site MR032 – Land at Montgarrie East

A representee has requested the allocation of bid site MR032 and designation of Montgarrie as a settlement for the following reasons:

- The allocation would provide an appropriate extension on an unconstrained site, providing choice, suitable to local builders, potential self-build opportunity, and ensuring an effective supply.
- A mixed-use development could deliver services and facilities currently missing from the settlement.
- The uptake of 'organic growth' policy to its full capacity demonstrates the demand and desirability of the settlement.
- There are other smaller villages in more remote areas that are defined settlements.
- The PLDP sets out a welcome approach to development in the countryside but policies leave no scope for growth and opportunity to provide additional local services.
- The PLDP strategy appears to favour 'centralisation' by focussing allocations in larger settlements, and this does not allow for measured growth of smaller settlements such as Montgarrie which have more than 14 homes but are not an identified settlement, and therefore caught between policies.

The representee has included an Appendix (RD0239.A) in their representation which provides further detail to support their position (PP1283).

Monymusk

Vision

Monymusk Community Council has stated that there is no reference to Monymusk Church within the Settlement Statement with concern raised that it may be lost as it is not recorded. The Vision should give a more complete sense of place, significance and better recognition of its Historical Environment, particularly in respect of conservation and tourism potential (PP0494).

Flood Risk

SEPA has confirmed that they have no issues with the Flood Risk section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Monymusk Community Council has stated that the most recent housing was built with a SuDS scheme which contributes to surface water drainage to the sewer system and drainage network rather than a collection pond, which joins the Todlachie Burn which can back up. There have been previous incidents of flood water blocking the road during extreme weather. There is an issue with flood risk with Todlachie Burn and any further developments should take this into account and a Flood Risk Assessment may be required (PP0495).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Non-Allocated Site – Bid Site MR074 – Phase 3, Land South of Clyans Wood

A representee has requested the allocation of Phase 3a (46 units) of the Monymusk Masterplan as a reserved/future allocation of land for development within the Plan period. In the MIR the site was identified by Officers as a "reserved" site. The land has been included in the approved Monymusk Masterplan and as an "fh" site in the previous Local Plan. Matters raised at the MIR stage can be addressed through a planning application (sewage treatment capacity, water supply, impact on the River Don, natural habitat, primary school capacity and flood risk). The Masterplan includes provisions for footpath/cycle links to Millennium Wood providing a circular route. The classification of the land as prime agricultural is disputed. The previous phases of this development were both far closer to the Conservation Area and were not considered to have an adverse impact. Whilst the representee acknowledges that there is not perceived to be a need for new housing at this stage, this is a long-term plan, and the applicants are seeking a "reserve allocation" for development in the next Plan period. Nevertheless, if the Reporter decided that additional short-term land was required, this could be facilitated on this site. The representee has included an Appendix (RD0101.A) in their representation which provides further detail to support their position (PP0616).

A representee has objected to any inclusion of bid site MR074 for 46 homes. Concern is raised regarding increased vehicular traffic, preserving community feel by allowing it to absorb the two recent housing developments, concern regarding unsustainable waste water treatment issues, flooding, transportation and road safety, education limitations and the loss of prime agricultural land. No modification sought (PP0055).

Settlement Map

The Settlement Statement map does not show the latest housing within the settlement. There are 5 social houses north of St Andrews Street missing from the map and 6 social houses west of the school rather than 4 shown on the map. This is important for implications for population size and implications on services including water, the Waste Water Treatment Works (WWTW), transport and education (PP0496).

Muir of Fowlis

Flood Risk

SEPA has requested amending the 'Flood Risk' bullet point for BUS site to include the need for buffer strips, as any further development on this site will be required to provide a suitable buffer between the Leochel Burn to mitigate not only against flood risk but also against the possible natural migration of the Burn (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage

and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Land Opposite the Manse

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

Tillyfourie

Settlement Status

A representee has requested that Tillyfourie's settlement status is reinstated from the Local Plan 2006 and included in the Marr Settlement Statements for the following reasons:

- The PLDP advocates a welcoming approach to development in the countryside, promoting different patterns of development within accessible and remote areas, and that rural living can reduce the need to travel.
- Due to changes to the settlement strategy in the PLDP and changes in housing outlook and local economy.
- Tying the definition of a settlement to the specific facilities in a report which is out of date is arbitrary and unreliable, facilities are not viable in settlements these days with the changing economy and facilities were not required for its previous designation as a settlement up to 2012.
- It should be considered a settlement in the broad sense of the LDP definition as it features urban characteristics such as street lighting, would bring environmental and social benefits, help to support the school roll and provide an opportunity for new community facilities.

The representee has included a number of Appendices (RD0121.A – RD0121.D) in their representation which provides further detail to support their position (PP0723).

Non-Allocated Site – New Site N025 – Land at Tillyfourie

A representee has requested the allocation of site N025 (the representee's plan 3) as it would round off a small housing development with public space and landscaping, link to the adjacent woodland and is serviced. It could be sensitively developed with no amenity impact or detrimental impacts upon the character, layout nor building pattern of the existing settlement. Planting on the site would provide a long-term defensible boundary adjacent to the felled woodland. It creates an opportunity for improvement by removing an existing commercial use of the site. It would bring environmental, visual, amenity and social benefits to the area. The representee has included a number of Appendices (RD0121.A – RD0121.D) in their representation which provides further detail to support their position (PP0723).

Towie

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has requested that the 'Strategic drainage and water supply' bullet point refers to public waste water infrastructure rather than waste water treatment (RD0214.B) (PP1219).

Site OP1 – Land Adjacent to the Hall

SEPA has requested, for site OP1, replacing the second paragraph in the allocation text (RD0214.B) (PP1219).

A representee has requested the removal of site OP1's contribution to the allowances of 5 homes. It is stated that an alternative effective allocation should be identified in the Local Growth Area (LGA) of the Rural Housing Market Area (RHMA) or, if marketability constraints preclude this, in the LGA of the adjacent Aberdeen Housing Market Area (AHMA). The site is marketability and ownership constrained with few homes built in the settlement over the past 11 years. There is no guarantee that the housing would be delivered during the Plan period. Given the scale of the settlement it would be more appropriate to accommodate development through organic growth if demand arises (PP1070).

Whitehouse

Site BUS – Safeguarded for business uses

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site BUS (RD0214.B). No modification sought (PP1219).

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has requested that the 'Strategic drainage and water supply' bullet point refers to public waste water infrastructure rather than waste water treatment (RD0214.B) (PP1219).

Modifications sought by those submitting representations:

Glenkindie

Flood Risk

Modify the PLDP to add in a 'Flood Risk' section and bullet point, "Parts of Glenkindie are adjacent to the River Don 1 in 200-year flood area shown on SEPA Indicative Flood Map. Flood Risk Assessments may be required." (PP1219).

Keig

Site OP1 – Land North of Braehead

Modify the PLDP to prohibit the developer who built the existing homes on site OP1 from building the remaining on the site. Seek a guarantee that the developer has the funds to build the remaining homes on site OP1, they will be built in a timely manner and that the site will be cleared of construction waste (PP0777, PP0835 and PP1231).
Modify the PLDP to remove site OP1 (PP1131).

Modify the PLDP to amend the allocation to 3 homes (PP1411).

Kirkton of Tough

Services and Infrastructure

Modify the PLDP to amend the 'Strategic drainage and water supply' bullet point to: "There is no public waste water infrastructure available." (PP1219).

Modify the PLDP to delete reference to 'Services and Infrastructure' in Kirkton of Tough Settlement Statement (PP1063).

Lumsden

Site BUS – Safeguarded for business uses

Modify the PLDP to remove site BUS (PP0720).

Flood Risk

Modify the PLDP to amend the 'Flood Risk' bullet point to read, "A small watercourse flows adjacent to the BUS site and buffer strips will be required alongside it. A Flood Risk Assessment may be required." (PP1219).

Montgarrie

Settlement Status and Non-Allocated Site – Bid Site MR032 – Land at Montgarrie East

Modify the PLDP to recognise Montgarrie as a settlement with a Settlement Statement (PP1283).

Modify the PLDP to include MR032 for 30 homes and community facility and/or retail unit (PP1283).

Monymusk

Vision

Modify the PLDP to amend the second sentence of the Vision to read, "The village has a Conservation Area where the square and historic 12th century church form the central area." (PP0494).

Flood Risk

Modify the PLDP to include a 'Flood Risk' section stating, "The Todlachie Burn runs

through the village and past the sewage works to an outfall at the River Don. There have been incidences of flooding and damage to riparian properties in the village, closure of road access to the village and overwhelming of the sewage works. A Flood Risk Assessment may be required.” (PP0495).

Non-Allocated Site – Bid Site MR074 – Phase 3, Land South of Clyans Wood

Modify the PLDP to include bid site MR074 in the Settlement Statement reflecting the approved Monymusk Masterplan (PP0616).

Settlement Map

Modify the PLDP to update Monymusk Settlement Statement map to show the block of social housing to the north of the street, St Andrews and to show there are six housing units west of the school (PP0496).

Muir of Fowlis

Flood Risk

Modify the PLDP to amend the ‘Flood Risk’ bullet point to, “Sites OP1 and BUS1 are adjacent to the indicative extent of the Leochel Burn. Buffer strips will be required alongside the watercourse. Flood Risk Assessments may be required” (PP1219).

Tillyfourie

Settlement Status

Modify the PLDP to recognise Tillyfourie as a settlement with a Settlement Statement with boundaries according to the 2006 Local Plan including the respresentee’s land, otherwise as a minimum include Plot 7 and its adjacent proposed landscaped area (PP0723)

Non-Allocated Site - New Site N025 – Land at Tillyfourie

Modify the PLDP to include site N025 as a development opportunity (PP0723).

Towie

Services and Infrastructure

Modify the PLDP to amend the ‘Strategic drainage and water supply’ bullet point to, “There is no public waste water infrastructure available.” (PP1219).

Site OP1 – Land Adjacent to the Hall

Modify the PLDP to replace the second paragraph of the allocation summary with, “A single private waste water treatment plant, built to an adoptable standard, will be required for this site.” (PP1219).

Modify the PLDP to remove site OP1, contribution of 5 homes to the allowances and apply the organic growth policy to the settlement (PP1070).

Whitehouse

Services and Infrastructure

Modify the PLDP to amend the 'Strategic drainage and water supply' bullet point to, "There is no public waste water infrastructure available." (PP1219).

Summary of responses (including reasons) by planning authority:

Glenkindie

Flood Risk

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Land to the West of Glenkindie Bowling Club

Comments from SEPA are noted. No change is required.

Keig

Flood Risk and Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Land North of Braehead

Comments from SEPA are noted. No change is required.

Once development has commenced on site, this planning permission remains in perpetuity. It is not possible to control the timescales for implementation and completion, nor the time the developer takes to complete the site, this will be influenced by market demand. This is not an element that can be controlled through planning. No change is required.

Site OP1 was formerly allocated as OP2 within the LDP 2017. Planning permission has already been granted for 13 homes and construction is underway. Although progress on the site is slow, it is coming forward on a plot-by-plot basis. The site remains to be considered appropriate for development. No change is required.

The allocation total of 13 homes reflects the planning permissions granted within the site area. The site boundaries have not been adjusted with the site being carried forward and thereby totals are also representative of completed units within the allocated area. Housing completions are set out within Appendix 6 Housing Land Allocations. Details on the calculation of the housing land supply and contributions to the allowances are provided in the Schedule 4 Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing

Land Allocations. No change is required.

Kirkton of Tough

Services and Infrastructure

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Whilst there are no allocated sites identified within the settlement boundary, proposals for new development may still be submitted for sites within and adjacent to the settlement which will require to be appropriately assessed by the Council in accordance with the relevant policies of the PLDP. In such instances, developer obligations will require to be sought to ensure that development impacts are mitigated against. No change is required.

Lumsden

Site BUS – Safeguarded for business uses

Previously this site was allocated in the LDP 2017 which has been taken forward to the PLDP. It provides potential employment opportunities for Lumsden and its surrounding rural area. It remains to be appropriate to provide an employment opportunity. Matters relating to visual and amenity impacts of any proposal would be assessed at the planning application stage. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Montgarrie

Settlement Status and Non-Allocated Site – Bid Site MR032 – Land at Montgarrie East

The Council does not support allocating bid site MR032 for 30 homes and community facility and/or retail unit or a Montgarrie Settlement Statement within the PLDP. There are a number of constraints noted within the MIR (AD0038.G, page 106) relating to particularly to the overdevelopment of the settlement, impact on its character and issues of car reliance. The nearby settlement of Alford provides sufficient housing opportunity to serve the local area. Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. No change is required.

The matter of Montgarrie being defined as a settlement was raised through the MIR consultation where it was acknowledged as a settlement (AD0040.G, page 148). However, as there are no protected, reserved or opportunity sites identified there is no

need to include Montgarrie within Appendix 7 Settlement Statements. No change is required.

Monymusk

Vision

The Vision states that Monymusk is of historical significance and outlines the protection through its location within a Conservation Area. Any planning application would be required to ensure it is appropriate for the sensitive location and assessed in line with planning policy. However, the Council recognises the Category A-Listed Monymusk Parish Church within its centre forms a part of the sense of place. If the Reporter is minded, the Council recommend the representee's modification is made to the Vision.

Flood Risk

Comments from SEPA are noted. No change is required. SEPA have been consulted on the Settlement Statement and have confirmed that they have no comment in relation to 'Flood Risk' or the 'Strategic drainage and water supply' bullet point. However, on the submission of a planning application, if concern is raised with regard to flooding, relevant consultation will be undertaken and considered in accordance with planning policy. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Non-Allocated Site – Bid Site MR074 – Phase 3, Land South of Clyans Wood

The Council does not support allocating bid site MR074. There are a range of constraints and issues to be addressed if this site was to be brought forward. Following recent significant growth in Monymusk, it is maintained that the village requires time to consolidate (AD0040.G, pages 116-117). As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is also an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Settlement Map

The Council does not agree that the map requires to be updated. Settlement Statement maps cannot be used as a reliable source for any population/household calculations and statistical information given that they are static maps, unable to be maintained. It is anticipated that many Settlement Statement maps may already have altered, for example, through ongoing progress of development sites. The Council periodically receives updates to the Ordnance Survey (OS) basemap, but land use change within settlements are separately recorded and do not rely on this OS basemap. No change is required.

Muir of Fowlis

Flood Risk

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Land Opposite the Manse

Comments from SEPA are noted. No change is required.

Tillyfourie

Settlement Status

The Council does not support the inclusion of a Settlement Statement for Tillyfourie. As raised through the MIR 2019 consultation, Tillyfourie did not meet the definition of "settlement" as it lacks sufficient urban characteristics and facilities (AD0040.G, page 148). Further to this, it has no, allocated, protected or reserved sites therefore, there is no requirement to provide a Settlement Statement with Appendix 7 of the PLDP. It is also not considered necessary to identify opportunity for growth through identifying a settlement boundary thereby providing opportunity for infill development. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Non-Allocated Site - New Site N025 – Land at Tillyfourie

The Council does not support new site N025 as a development opportunity. It was not put forward as a development bid so was not considered as such at the MIR stage, nor subject to site assessment and public consultation. The representation contains site plans but does not include any supporting information such as an environmental assessment to allow a detailed evaluation of the suitability of the proposal. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Aberdeen Housing Market Area. No change is required.

Towie

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Land Adjacent to the Hall

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council does not support the removal of site OP1 or of the 5 homes contribution to the allowances. The site is allocated as site OP1 in the LDP 2017 and bid site MR051 was a preferred option in the MIR (AD0038.G, page 98). As set out in the PLDP Appendix 6: Housing land allocations, allowances from existing constrained sites have contributed where a bid was submitted indicating delivery within the Plan period. As highlighted by the representee, there is housing being built within the settlement, albeit slowly. This is not unexpected for a rural area, however, it does not equate to the site being undeliverable. No change is required.

Whitehouse

Site BUS – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as "non-notifiable modifications" in relation to the settlements statements matters covered in Issue 57. However, where such matters arise from representations made to the proposed plan they require to be considered in the examination. I therefore address these as appropriate below.

Glenkindie

3. There is no information provided on flood risk for Glenkindie in the proposed plan. I agree that the additional bullet point suggested by the Scottish Environment Protection Agency (SEPA) should be included to address this omission. A modification to this effect is recommended.

Keig

4. The council has explained that, whilst the planning system can require development to commence within an identified time period, it cannot control how long it takes to complete construction. Unless there are specific circumstances which would justify a personal consent, planning permission relates to the land not an individual developer. There is nothing further I can add on this matter.

5. I observed on my site inspection that there were 10 houses completed on site OP1. With only three individual plots remaining, the council could have chosen not to show the site as a housing allocation in the proposed plan. However, the allocation summary explains the context for the allocation and there is no reason for me to recommend it be removed from the plan. Matters relating to homes built before 2019 being included in the housing land supply are addressed under Issue 5. No modifications are required.

Kirkton of Tough

6. I consider that the wording of the strategic drainage and water supply bullet point should be amended to reflect the advice from SEPA. A modification is recommended.

7. I agree with the council that the services and infrastructure section should be retained as planning applications may come forward on sites not identified as allocations in the plan. No modification is required.

Lumsden

8. I note that there are no other sites safeguarded for business use in Lumsden. I agree with the council that the safeguarded site at the northern end of the village should be retained to provide for employment opportunities. I also agree that the concerns raised regarding impact on the neighbouring business use can be addressed when detailed proposals come forward. However, I conclude that it would be appropriate to highlight that consideration should be given to potential adverse impacts on neighbouring uses. A modification to this effect is recommended.

9. I agree that the flood risk bullet point should be amended to alert prospective developers of the need for buffer strips next to the watercourse, in line with SEPA's advice.

Montgarrie

Non-Allocated Bid Site MR032 – Land at Montgarrie East

10. Bid site MR028 is an open, agricultural field located to the north east of the village crossroads and to the west of a housing cluster at Whitehouse Farm. The site slopes downwards from north to south, with most of the land sitting higher than the existing housing to the south. The bid proposal is for up to 30 houses and a community facility and/or retail unit. The submitted indicative site layout shows development pockets set within landscaping and a circular road layout. However, the location of the non-residential uses is not shown.

11. Montgarrie is located approximately two kilometres to the north of Alford. The representation on behalf of W & W Mackie indicates that there are over 70 houses in

Montgarrie, including 18 new homes approved as brownfield opportunities or as organic growth proposals. Whilst the majority of houses in Montgarrie are located to the south of the crossroads, there are ribbons of development to the north and east of the crossroads, which the site sits behind. I note that development on this site would close the existing gap between the main built up area and the housing at Whitehouse Farm to the east.

12. The council's assessment of this site is set out in the Main Issues Report, Issues and Actions Paper and the Strategic Environment Assessment environmental report. The environmental report states that: "The site has an overall positive impact due to access to open space and choice of housing. Impacts on cultural heritage, water and infrastructure may be mitigated."

13. Montgarrie lies within the Rural Housing Market Area. It is concluded under issue 5 that there is sufficient housing land in the Rural Housing Market Area to meet the Strategic Development Plan allowance. The allocation of this site can therefore not be justified on the grounds of housing need.

14. I note that some local facilities are now proposed alongside the housing, in response to the concerns raised by the council at main issues report stage. However, I find that I have insufficient detail before me to properly assess this element of the proposal. Even with the provision of a community facility and/or retail unit, I find that residents would have to travel to Alford to access services. Whilst I note that there is a bus service connecting Montgarrie to Alford and a core path, I agree with the council that an allocation of 30 houses in this location would encourage car dependency. This would be contrary to the plan's vision which seeks to promote sustainable development that reduces the need to travel and reduces reliance on private cars.

15. I also consider that development on this sloping site would be visually prominent and would alter the character of this predominantly linear settlement. W & W Mackie states that without an identified allocation, there would be no opportunity for further housing in Montgarrie. However, policy R2.11 states that "small-scale growth of identified settlements may be permitted..." The list of identified settlements is to be provided in a not yet published planning advice document. Whilst this is not matter for the local development plan examination, this list could potentially include Montgarrie.

16. Overall I conclude that the adverse effects of development on this site would outweigh the potential benefits in terms of providing additional housing and local facilities. No modification is required.

17. Due to the absence of any local facilities, I do not consider that Montgarrie meets the definition of "a settlement" provided in the glossary of the proposed plan. However, I note that the use of this definition is not applied consistently in the proposed plan and there are settlement statements for settlements which do not meet this definition. The council has explained that statements are provided where there are allocated, protected or reserved sites to be shown. Given my recommendations in relation to bid site MR032 and the absence of any other allocated, protected or reserved sites in Montgarrie, I do not consider that a settlement statement is required. No modifications are recommended.

Monymusk

Vision

18. I agree with the community council that the church contributes to the sense of place and historic environment in Monymusk. I consider that the vision section should make reference to the church and recommend a modification in line with that suggested by the community council.

Flood Risk

19. There is no flood risk section in the Monymusk settlement statement in the proposed plan. The community council considers that there is a risk of flooding from the Todlachie Burn and has referred to previous incidences of flood damage in the village. Comments regarding potential flood risk are also mentioned in the representation promoting non-allocated bid site MR074. Whilst SEPA has not requested any modification on this matter, I note that where a watercourse runs through other settlements, advice in relation to potential flood risk is provided.

20. In the interests of consistency and to take account of local knowledge provided by the community council, I recommend a modification to include a flood risk section in the Monymusk Settlement Statement.

Non-Allocated Bid site MR074 Land south of Clyans Wood

21. Monymusk Land Company is seeking the identification of site MR074, which forms phase 3 of the Monymusk Master Plan, as a future housing allocation. However, it indicates that the site could be made available to meet any immediate shortfall in housing land. I note that the site was presented as a preferred reserved site in the main issues report.

22. The site is currently a flat agricultural field, located to the north of the primary school and recent housing development at St Thomas. The council's assessment of this site is set out in the Main Issues Report, Issues and Actions Paper and the Strategic Environment Assessment environmental report. The environmental report states that: "The site has a mixed impact with negative impacts due to the proximity to key services and loss of prime agricultural land. Positive impacts include choice of housing and biodiversity. Mitigation would overcome flooding issues and provide a habitat buffer."

23. Following the Main Issues Report stage, the council decided not to reserve future housing sites. I note that there is no requirement in the strategic development plan for them to do so. Matters relating to the overall housing provision in the proposed plan are covered in Issues 2 and 5. Monymusk lies within the Aberdeen Housing Market Area. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. I have therefore considered whether this site should be allocated to help meet this shortfall.

24. The council raised a number of issues in relation to the development of this site in the issues and actions paper. I note that the representation on behalf of Monymusk Land Company seeks to address these. I agree that matters such as sewage treatment capacity, water supply, drainage arrangements, flood risk and school capacity can be addressed when a planning application is submitted.

25. As there is modern housing located between the site and the boundary of the conservation area, I do not consider the allocation of this site would have an adverse impact on the conservation area. However, housing development at this location is likely to be visually prominent from the adjacent road, and would alter the character of the approach to the village from the north. Consideration would need to be given to impact on the adjacent designed landscape. A number of housing allocations in the proposed plan involve development on prime agricultural land. I agree that this may be justified, if required to meet housing need.

26. Whilst I note the concerns regarding the lack of public transport, there is a school and a range of local services in Monymusk, unlike some other settlements where housing allocations are being promoted. However, there has been substantial new housing development in Monymusk in recent years, relative to the size of the settlement and there would appear to be a consensus that a period of consolidation is required. There are other suitable housing sites to meet the identified shortfall in the Aberdeen Housing Market Area and therefore the allocation of this site is not required to meet housing need. No modification is recommended.

Settlement Map

27. The changes to the settlement map sought by the community council relate to the ordnance survey base. The two sites referred to are located within the settlement boundary and I do not consider that the slightly out of date base map has any implications for the local development plan. No modification is required.

Muir of Fowlis

28. SEPA has requested that the flood risk bullet be amended to include reference to the provision of buffer strips along the watercourse. The BUS allocation lies immediately to the south of the Leochel Burn and I agree that a buffer strip would be necessary in line with policy PR1.3 Water Environment. However, site OP1 is located around 75 metres from the Leochel Burn and therefore a buffer strip alongside the watercourse would not be possible within the site boundary. I note that planning permission has already been granted for six houses on the site. In the absence of a relevant unresolved representation, there is no scope for me to amend the text which states that site OP1 is adjacent to the burn. However, I consider that a modification to require a buffer strip should relate to the BUS allocation only.

Tillyfourie

29. Tillyfourie comprises around 20 houses close to the junction of the B993 and A944 roads. Whilst there are no local facilities, I note that bus services provide access to local schools, Alford, Inverurie and Aberdeen. The representation from Mr and Mrs Miller seeks the allocation of site N025 for residential development, open space and landscaping. A single house is proposed along the frontage of the B993 and immediately to the east of the row of existing houses. No further information is provided in relation to the development of the remainder of the site, which sits between the housing along the B993 and the A944. I note that a bid proposal was not submitted for this site prior to the publication of the main issues report and that it has not been included in the council's strategic environmental assessment of alternative proposals or subject to public consultation.

30. Tillyfourie lies within the Aberdeen Housing Market Area. The council considers that the proposed plan identifies sufficient housing land in the required Strategic Development Plan allowances. Matters relating to the overall housing provision in the proposed plan are covered in Issues 2 and 5. For the reasons set out in the schedule 4 for issue 5, it is concluded that there is a shortfall in the housing land identified to meet the strategic development plan allowance for the Aberdeen Housing Market Area. I have therefore considered whether this site should be allocated to help meet this shortfall.

31. I do not have sufficient information before me to fully assess the suitability of site N025. However, I consider that a site of this size would represent overdevelopment, given the existing number of houses in Tillyfourie. In the absence of local facilities, I consider that the development at this location would encourage car dependency. This would be contrary to the plan's vision which seeks to promote sustainable development that reduces the need to travel and reduces reliance on private cars. There are other suitable housing sites to meet the identified shortfall in the Aberdeen Housing Market Area and therefore the allocation of this site is not required to meet housing need. No modification is required.

32. Due to the absence of any local facilities, I do not consider that Tillyfourie meets the definition of "a settlement" provided in the glossary of the proposed plan. However, I note that the use of this definition is not applied consistently in the proposed plan and there are settlement statements for settlements which do not meet this definition. The council has explained that statements are provided where there are allocated, protected or reserved sites to be shown. Given my recommendations in relation to bid site NO25 and the absence of any other allocated, protected or reserved sites in Tillyfourie, I do not consider that a settlement statement is required. The list of "identified settlements" referred to in policy R2.11 will be set out in planning advice and is therefore not a matter of the local development plan examination. No modifications are recommended.

Towie

33. SEPA has requested two changes to the Towie settlement statement. I agree that these are necessary in the interest of clarity and recommend modifications to this effect.

34. Site OP1 for 10 homes is identified in the 2020 Housing Land Audit as having marketability and ownership constraints. I note that a number of sites identified to meet the strategic development plan allowance for the Rural Housing Market Areas, are subject to a marketability constraint. Non-site specific representations on this matter are addressed under Issue 5. In response to a request for further information (FIR008), the council has explained a range of measures that it has in place to help overcome marketability constraints. We conclude that, unless evidence suggests otherwise, it would be reasonable to expect smaller sites (those under 50 homes), to be deliverable by 2032.

35. The representation seeking the removal of this site does not suggest a specific alternative allocation. I consider that the submission of a bid proposal for the site provides evidence that the ownership constraint can be overcome. Allocation OP1 provides an opportunity for additional housing in a settlement with a school, community hall and church. There are no other housing allocations or bid submissions for housing in Towie. I conclude that the site should be retained in the plan and no modification is required in response to this representation.

Whitehouse

36. Similar to its comments in relation to Towie, SEPA has requested that the text under 'strategic drainage and water supply' is amended. In the interests of clarity and consistency, I agree and recommend a modification to this effect.

Reporter's recommendations:

Modify the local development plan by:

Glenkindie

1. Adding a new sub-heading "Flood Risk" with the following bullet point to the Glenkindie settlement statement on page 813:

"• Parts of Glenkindie are adjacent to the River Don 1 in 200 year flood area shown on SEPA Indicative Flood Map. Flood Risk Assessments may be required."

Kirkton of Tough

2. Replacing the word 'treatment' with 'infrastructure' in the strategic drainage and water supply bullet point in the Kirkton of Tough settlement statement on page 837.

Lumsden

3. Replacing the description of the BUS safeguard in the Lumsden settlement statement on page 845 with:

"Safeguarded for business uses. Consideration should be given to potential adverse impacts on neighbouring uses."

4. Replacing the flood risk bullet point in the Lumsden settlement statement on page 845 with:

"• A small watercourse flows adjacent to the BUS site and buffer strips will be required alongside it. A Flood Risk Assessment may be required."

Monymusk

5. Replacing the second sentence in the vision section of the Monymusk settlement statement on page 847 with:

"The village has a Conservation Area where the square and historic 12th century church form the central area."

6. Adding a new sub-heading "Flood Risk" with the following bullet point to the Monymusk settlement statement on page 847:

"• The Todlachie Burn runs through the village and past the sewage works to an outfall at the River Don. A Flood Risk Assessment may be required."

Muir of Fowlis

7. Replacing the flood risk bullet point in the Muir Of Fowlis settlement statement on page 849 with:

"• Sites OP1 and BUS are adjacent to the indicative extent of the Leochel Burn. Flood Risk Assessments may be required. A buffer strip will be required alongside the

watercourse on the BUS site.”

Towie

8. Replacing the second bullet point in the services and infrastructure section of the Towie settlement statement on page 867 with:

“• Strategic drainage and water supply: There is no public waste water infrastructure available.”

9. Replacing the second paragraph in the allocation summary for OP1 (Land adjacent to the Hall) in the Towie settlement statement on page 868 with:

“A single private water treatment plant, built to an adoptable standard, will be required for this site”.

Whitehouse

10. Replacing the second bullet point in the services and infrastructure section of the Whitehouse settlement statement on page 870 with:

“• Strategic drainage and water supply: There is no public waste water infrastructure available.”

Provision of the development plan to which the issue relates:

Craigwell Settlement Statement
 Finzean Settlement Statement
 Kincardine O'Neil Settlement Statement
 Logie Coldstone Settlement Statement
 Lumphanan Settlement Statement
 Strachan Settlement Statement
 Tarland Settlement Statement
 Torphins Settlement Statement
 Other Marr (south) Settlements

Planning authority's summary of the representation(s):

Birsemore

Settlement Status

A representee has stated Birse should be recognised as a settlement and have a Settlement Statement as it is distinctly separate and detached from Aboyne. It has urban characteristics, at least 15 homes and should have its own settlement boundary similar to the approach taken to similarly sized hamlets elsewhere with rural characteristics (PP0900).

Non-Allocated Site – Bid Site MR028 – Land South of Birsemore

A representee has requested the allocation of bid site MR028 for 13 homes or as reserved future development land. It will have minimal visual impact, have a consolidated form in a location dominated by ribbon development, it will be contained by mature woodland, will not affect local amenity or natural environment, there is capacity at the waste water treatment works and drainage concerns including River Dee Special Area of Conservation (SAC) impacts would be addressed through a planning application. There is education capacity in primary and secondary schools and concerns with access would be assisted by having the opportunity to be addressed by Birsemore being identified as a settlement. The site would provide for sustainable growth of the settlement. The representee has included a number of Appendices (RD0166.A – RD0166.D) in their representation which provides further detail to support their position (PP0900).

Craigwell

General

A representee has stated that the isolated Council Depot should not be given the status of a settlement, when other settlements have housing, employment uses and other amenities. Other places have been excluded from these policies (e.g., Bridge of Alford) (PP1108).

Site R1 – For the provision of a community recycling facility

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R1 (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on ‘Strategic drainage and water supply’ (RD0214.B). No modification sought (PP1219).

Finzean

Site OP1 – Site to the East of Finzean Village Hall

SEPA has requested for site OP1, replacement of the last paragraph in the allocation text (RD0214.B) (PP1219).

NatureScot has requested that the allocation summary of site OP1 in Finzean includes the requirement for active travel links to the town, as the site is physically and visually divorced from the main settlement and there is a need to reconnect the development with the village centre. They also consider the site to be visually sensitive on the eastern edge, which contributes to ribbon development along the B976, eroding the existing settlement form (RD0255.B) (PP1300).

NatureScot has requested that the allocation summary for site OP1 is amended to clarify that future development proposals will be subject to a Habitats Regulation Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC, and that a Construction Method Statement (CMS) may be required as part of this process, i.e., if significant effects are likely and an adequate CMS is required to avoid adverse effects on the integrity of the River Dee SAC (RD0255.B) (PP1300).

Kincardine O'Neil

Site P2 – To protect the bowling green and tennis court as amenities for the settlement

Two representees have stated that site P2 is unnecessarily prescriptive about what amenities the village should have. There has been agreement that a tennis court on this site is no longer appropriate or a safe use for the site. Site P2 wording should be changed to allow for 'sports and recreation' use. The Council have previously acknowledged that a tennis court in the current location is not appropriate through planning approval of a 2m high fence round the court (planning application reference APP/2019/0161). The restoration costs of bringing the disused court into use and likely demand for tennis was not a good use of resources. There is tennis provision nearby at Aboyne and Torphins. This change in wording is supported by the Village Hall Committee, Bowling Club and Kincardine Estate (PP0450 and PP0741).

Site BUS – Safeguarded for business uses

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site BUS (RD0214.B). No modification sought (PP1219).

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

NHS Grampian has supported the identification of the requirement for contributions towards healthcare for developments within Kincardine O'Neil. However, the wording needs to be amended for contributions to Aboyne to allow for additional capacity rather than Banchory (PP1223).

Site OP1 – Land at Haugh Farm

SEPA has stated that for site OP1, a Flood Risk Assessment (FRA) is not required by SEPA as only surface water issues affect this site. They note the Strategic FRA states the surface water flooding can be addressed through SuDS and recommend the Council's Flood Prevention Unit confirm if this is the case or whether a FRA is required. If not, this requirement should be removed, or the allocation summary altered to state, "This site is at risk from surface water flooding that should be addressed through appropriate SuDS measures". If a FRA is required, it should be added to the settlement 'Flood Risk' bullet point (RD0214.B) (PP1219).

NatureScot has requested that the allocation summary for site OP1 is amended to clarify that any proposal will be subject to a HRA and that a CMS may be required as part of this process, i.e., if significant effects are likely and an adequate CMS is required to avoid adverse effects on the integrity of the River Dee SAC (RD0255.B) (PP1300).

Site OP2 – Cook School/Passing Trade Site

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP2 (RD0214.B). No modification sought (PP1219).

NatureScot has requested that the allocation summary for site OP2 is amended to clarify that any proposal will be subject to a HRA and that a CMS may be required as part of this process, i.e., if significant effects are likely and an adequate CMS is required to avoid adverse effects on the integrity of the River Dee SAC (RD0255.B) (PP1300).

Site OP3 – Land at Gallowhill Road

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP3 (RD0214.B). No modification sought (PP1219).

A representee has provided support for the allocation of site OP3 stating the site is available, effective, viable and deliverable and capable of development within the Plan period. The site is expected to be marketed later this year. The site does not present any challenges in terms of topography or gradient and the site would follow and reflect the pattern of development in the surrounding area. The development would be in keeping with the surrounding environment and support local facilities and services. The continued allocation of the site will result in the creation of a sustainable and high-quality development. No modification sought (PP1318).

NatureScot has requested that the allocation summary for site OP3 is amended to clarify that any proposal will be subject to a HRA and that a CMS may be required as part of this process, i.e., if significant effects are likely and an adequate CMS is required to avoid adverse effects on the integrity of the River Dee SAC (RD0255.B) (PP1300).

A representee has requested the removal of site OP3. It is stated that an alternative effective allocation in the Local Growth Area (LGA) of the Rural Housing Market Area (RHMA) should be identified to meet the allowances. If marketability constraints preclude this, then a replacement allocation should be identified in the adjacent LGA of the Aberdeen Housing Market Area (AHMA). This is a constrained site allocated for three Plan periods without delivery. The site has ownership constraints and market issues are false in this location with another allocation delivering 20 homes in 3 years. The site has not been adequately promoted and there is no basis to support confidence in its delivery (PP1034).

Non-Allocated Site – Bid Site MR019 – A93-Pitmurchie Road

A representee has requested bid site MR019 for 84 homes is identified as a future opportunity site (i.e., beyond the PLDP's 2021-2031 period), which was identified as an Officer's preference in the MIR 2019. The PLDP only identifies one site for housing in the settlement and does not give reference to any longer-term development (PP0499).

Logie Coldstone

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the

Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Land Adjacent to Diamond Jubilee Hall

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

NatureScot has requested that the allocation summary for site OP1 is amended to clarify that any proposal will be subject to a HRA and that a CMS may be required as part of this process, i.e., if significant effects are likely and an adequate CMS is required to avoid adverse effects on the integrity of the River Dee SAC (RD0255.B) (PP1300).

A representee has requested the removal of site OP1's contribution to the allowances of 10 homes. It is stated that an alternative effective allocation should be identified in the LGA of the RHMA or, if marketability constraints preclude this, in the LGA of the adjacent AHMA. The site has attracted no developer interest or planning applications to test viability, is excessive in size and the suitability for self-build plots is compromised by the need for the developer to deliver infrastructure necessary for the whole site. There is no evidence of sufficient demand and is unlikely to be economically viable. It is constrained with no confidence that it can or will deliver housing sufficient to satisfy Scottish Planning Policy (PP1061).

Lumphanan

Site R1 – For community facilities

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R1 (RD0214.B). No modification sought (PP1219).

Flood Risk

SEPA has requested, for consistency, rewording of the bullet point as site OP1 has the same watercourse adjacent to it as site R1 (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Scottish Water has requested that the 'Strategic drainage and water supply' bullet point is reworded (PP0272).

A representee has highlighted the need for commitments to improve the multi-use paths between Banchory, Torphins, Lumphanan, and Tarland to support a circular route connecting with the Deeside Way supporting active travel, health and wellbeing and environment but there is nowhere in the Plan that specifically improves this, unless part of a new housing development. There has been a significant increase in the use of e-bikes,

which helps meet the need and makes changes to help the Climate Emergency (PP0773).

Site OP1 – Land at Milan Park

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

NatureScot has requested that the Council considers including advice in the allocation summary for site OP1 in Lumphanan on the need for a project level HRA and the potential need for a CMS in relation to the River Dee SAC, as this allocation sits within the River Dee catchment, and to be consistent with other similar sites. They note that planning permission has been granted for 26 homes, but that no progress has been made and the Council may wish to be take this planning status into account (RD0255.B) (PP1300).

Strachan

Flood Risk

SEPA has confirmed that they have no issues with the 'Flood Risk' section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Site OP1 – Land at Gateside Cottage

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

NatureScot has suggested the removal of wording referring to the River Dee SAC and possible need for a CMS in the allocation summary for site OP1 as this site has planning permission and its completion is anticipated early in the Plan period, unless future proposals may come forward, then these should be subject to a HRA and additional text added accordingly (RD0255.B) (PP1300).

Tarland

Site R1 – For a cemetery extension

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the designation summary for site R1 as they have previously seen it through planning application APP/2017/3107 (RD0214.B). No modification sought (PP1219).

A representee has objected to the inclusion of site R1 as it is likely to cause damage and/or loss to areas of ancient woodland. Removal of woodland is contrary to SPP paragraphs 216 and 218. It is also contrary to the Control of Woodland Removal Policy (RD0161.A) (PP0878).

Flood Risk

SEPA has requested that, for consistency, the second 'Flood Risk' bullet point includes site OP2 to highlight that a FRA may be required (RD0214.B) (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

A representee has highlighted the need for commitments to improve the multi-use paths between Banchory, Torphins, Lumphanan, and Tarland to support a circular route connecting with the Deeside Way supporting active travel, health and wellbeing and environment but there is nowhere in the Plan that specifically improves this, unless part of a new housing development. There has been a significant increase in the use of e-bikes, which helps meet the need and makes changes to help the Climate Emergency (PP0773).

Site OP1 – Land at MacRobert Trust Estate Yard

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP1 (RD0214.B). No modification sought (PP1219).

NatureScot has requested that the allocation summary for site OP1 includes a requirement to take account of woodland protection (i.e., minimal tree loss and compensatory planting) in a similar way to other allocation summaries, as woodland is present on up to a quarter of the site (at least based on aerial photos) (RD0255.B) (PP1300).

NatureScot has requested that the allocation summary for site OP1 includes advice on the need for a HRA and the potential need for a CMS in relation to the River Dee SAC, as this allocation sits within the River Dee catchment, and to be consistent with other similar sites, noting the Council's precautionary approach to this issue (RD0255.B) (PP1300).

A representee has noted that the detail within the allocation for site OP1 is vague. The site contains a number of mature trees which should be retained and protected in the interest of amenity (noise screening) and visual screening. The site should utilise the existing access (PP0170).

A representee has stated that the Plan changed the LDP 2017 BUS designation for employment to 10 live/work units without consultation. The Council has not identified an alternative site for employment use, but any new site proposed by the landowner would require community consultation. The representee has been advised that despite the new allocation, there is no guarantee that a detailed planning application will gain permission and if it does, planning conditions may make it uneconomic to develop. This is the likely outcome of the work the landowner is doing to develop business units at the moment, there are concerns about noise issues for adjoining housing which may be too expensive to resolve and therefore make business units uneconomic. This could also be the case for the proposed live/work units (PP1284).

Site OP2 – Land Adjacent to Alastrean House

SEPA has requested for site OP2 that due to this site having an existing private waste water treatment facility, that its allocation summary states that should the existing private waste water drainage system not have capacity for the additional population growth, an

upgrade to the existing system or connection to the Scottish Water system will be required (RD0214.B) (PP1219).

NatureScot has requested that the allocation summary for site OP2 is amended to clarify that any proposal will be subject to a HRA and that a CMS may be required as part of this process, i.e., if significant effects are likely and an adequate CMS is required to avoid adverse effects on integrity of the River Dee SAC (RD0255.B) (PP1300).

A representee has objected to the inclusion of site OP2 as it is likely to cause damage and/or loss to areas of ancient woodland. Removal of woodland is contrary to SPP paragraphs 216 and 218. It is also contrary to the Control of Woodland Removal Policy (RD0161.A) (PP0878).

Site OP3 – Village Farm

SEPA has confirmed that they have no flooding, strategic drainage, or water supply issues with the allocation summary for site OP3 (RD0214.B). No modification sought (PP1219).

NatureScot has suggested the removal of the wording referring to the River Dee SAC and possible need for a CMS in the allocation summary for site OP3, as this site has Full Planning Permission, unless future proposals may come forward, then additional text should be added stating the need for a HRA (RD0255.B) (PP1300).

A representee has requested the removal of site OP3's contribution to the allowances of 36 homes. It is stated that an alternative effective allocation should be identified in the LGA of the RHMA, preferably in Tarland, otherwise if marketability constraints preclude this, in the LGA of the AHMA. The site is long-term constrained, planning permission has lapsed and the other allocations in the same ownership in the settlement have also failed to deliver housing and are constrained. The site could remain in the settlement (as constrained or in the settlement boundary) but as it has not delivered in over 25 years it should not count towards the allowances. There is insufficient confidence in its delivery, contrary to SPP (PP1069).

Non-Allocated Site – Bid Site MR071 – Glendeskry

A representee has requested the retention of bid site MR071 which is identified as site OP1 LDP 2017 stating that marketability appears to mean that a developer is not interested in the site. They consider the LDP process to be flawed in that it does not assess the need for housing in communities such as Tarland. There is more than enough need, with houses for sale on site OP3 to make that site economically viable. The representee considered that site OP1 LDP 2017 should be retained so that the site is available for future development and to meet additional need. New modes of development need to come forward to allow housing to be provided in rural communities. The recent Savills Report of Rural Housing makes it clear that there are other ways of bringing forward development that do not depend on the conventional model of development and allows the needs of the communities to be met. The LDP process needs to change its way of assessment for residential development so that rural communities can be sustainable rather than wither away (PP1284).

Torphins

Site R1 – For the extension of Learney Hall

SEPA notes that while the SFRA requires an FRA for site R1, they confirm they have no issue with flood risk for this site (RD0214.B). No modification sought (PP1219).

Site R2 – For a cemetery extension

SEPA has requested that for site R2 that due to the close proximity of the Beltie Burn to this site, this allocation text should state that a detailed groundwater assessment will be required to fully assess the suitability of this site as a cemetery (RD0214.B) (PP1219).

Concern has been expressed that the proposed cemetery extension would impact on their property's views, value and privacy. Also, the privacy for bereaving families using the cemetery. The site immediately behind the hall and behind site R1 would be more appropriate for this use (PP0020).

A representee has raised concerns that site R2 lies on the edge of the Beltie Burn flood plain and that this might constrain the site. An extension to the cemetery would require a high boundary wall affecting the properties of Kinnardy Close. A more appropriate location is considered to be the land between the existing cemetery and site R1 reserved for the extension of Learney Hall. The representee has included an Appendix (RD0001.A) in their representation which provides further detail to support their position (PP0031).

Flood Risk

SEPA has confirmed that they have no issues with the Flood Risk section of the Settlement Statement (RD0214.B). No modification sought (PP1219).

Services and Infrastructure

SEPA has confirmed that they have no issues with the statement on 'Strategic drainage and water supply' (RD0214.B). No modification sought (PP1219).

Two representees have highlighted the need for commitments to improve the multi-use paths between Banchory, Torphins, Lumphanan, and Tarland to support a circular route connecting with the Deeside Way supporting active travel, health and wellbeing and environment but there is nowhere in the Plan that specifically improves this, unless part of a new housing development. There has been a significant increase in the use of e-bikes, which helps meet the need and makes changes to help the Climate Emergency. Torphins has a path group which has worked on walking/cycling paths and support of this should be noted in the LDP (PP0773 and PP1023).

Torphins Community Council has requested that under the Community facilities bullet point, it should be included that Learney Hall is needing modernised (PP0039).

In addition, under Sports and recreation the Torphins Park requires drainage improvements to enable the local team to play on the football pitch and the pavilion is in need of refurbishment (PP0039).

Scottish Water has requested that under 'Strategic drainage and water supply', insert additional text on residential development in close proximity to the WWTW and potential for

issues arising from this operational site (PP0272).

Site OP1 – Station Garage

Torphins Community Council have agreed that the changes during the process of the LDP have been incorporated into the Torphins Settlement Statement by limiting housing development to allocated site OP1. No modification sought (PP0039).

NatureScot has suggested reviewing the need for wording referring to the River Dee SAC and possible need for a Construction Method Statement in the allocation summary, as this site has Planning Permission in Principle, unless future proposals may come forward, then additional text should be added stating the need for a HRA (RD0255.B) (PP1300).

Non-Allocated Sites – Bid Sites MR034 and MR035 – Phase 1 and 2, Land South of Beltie Road

Bid sites MR034 and MR035 were preferred sites and were considered the most suitable and deliverable growth solutions for the settlement. They are considered by the representee to not have constraints, are under the same ownership, with no capacity issues in terms of education, water, road network, with the proposed scale appropriate for Torphins. Only one allocation has been taken forward for the PLDP, given the scale of the settlement, this is not considered sufficient to meet local demand or provide opportunity for choice. The representee has included a number of Appendices (RD0098.A – RD0098.D) in their representation which provides further detail to support their position (PP0604).

Non-Allocated Site – Bid Site MR005 – Annesley Farm

The representee has requested bid site MR005 to be allocated in the PLDP for 50 homes. Torphins has suffered a lack of substantial development for 20 years, the site would provide the opportunity to reinforce the settlement pattern of the village and bolster the wide range of services and amenities. It is assumed that Officers considered that the village could accommodate growth without presenting significant impacts on education capacity or available drainage infrastructure. The three Officer's preferences have been removed from the Proposed LDP, thereby resulting in the existing OP1 allocation, for a mixed-use redevelopment of the Station Garage as the only identified growth of the village planned over the 10-year life cycle of the next LDP. The site was omitted from the 2012 Proposed LDP due to a perceived flood risk affecting said southern portion of the site. Flood risk was again highlighted as a primary concern when the site was promoted through the preparation of the extant 2017 LDP. Crucially however, in considering the site at Examination Stage, the Reporter noted that only the southern extent of the site was at risk of flooding and given the extent of built development would be outwith this area, therefore flood risk should not be considered as a total constraint. Additionally, it was acknowledged that the scale of development would be proportionate to meeting local, rather than strategic needs in consistency with the provisions of the Strategic Development Plan (SDP). However, given there was an adequate land supply identified through the proposed LDP at the time, perceived landscape impacts outweighed the benefits. Visual impact has been overstated. A planning application would provide an assessment of landscape and visual impact, transportation and flooding to the satisfaction of the Planning Service and relevant consultees, thereby allaying any local concerns regarding such matters. Development would support the primary school which has a falling school roll and would also help sustain wider services and amenities in the settlement. The Issues and Action papers

suggests there is insufficient demand for development however this assertion is unsubstantiated. Allocation of the site would broaden the range of available housing, including affordable homes. The representee has included a number of Appendices (RD0120.A, RD0120.B and RD0120.C) in their representation which provides further detail to support their position (PP0712).

Non-Allocated Site – Bid Site MR069 – Land at Wester Beltie, South West of Torphins Golf Club

A representee has requested the allocation of bid site MR069 for 12 homes for the following reasons:

- It was a preferred housing site within the MIR and there is continued support from Learney Estate to develop the site with there being clear demand for countryside plots.
- The Strategic Environmental Assessment identified the site as having neutral effects post-mitigation and potential for positive effects.
- The proposed site would achieve the six qualities of successful places and also meet the proposed LDP's Vision with potential for self-build plots, development by a small-scale developer which provides variety to the housing market and good connectivity to Torphins and services.
- The site shows good alignment with the type of development promoted with the Spatial Strategy.
- There are no capacity issues with the site and there is potential for a small district heating scheme.
- While the boundaries of remote rural areas have been rationalised, it is not understood why this should have impacted on Wester Beltie's ability for further housing development, either as an allocated site or as an organic growth settlement.

The representee has included a number of Appendices (RD0096.A, RD0096.B and RD0096.C) in their representation which provides further detail to support their position (PP0601).

Modifications sought by those submitting representations:

Birsemore

Settlement Status

Modify the PLPD to recognise Birse as a settlement with a settlement boundary through a Settlement Statement (PP0900).

Non-Allocated Site – Bid Site MR028 – Land South of Birsemore

Modify the PLDP to allocate bid site MR028 for 13 homes or reserved as future development land (PP0900).

Craigwell

General

Modify the PLPD to remove the Craigwell Settlement Statement (PP1108).

Finzean

Site OP1 – Site to the East of Finzean Village Hall

Modify the PLDP to replace the last paragraph with, “A single private waste water treatment plant, built to an adoptable standard, will be required for this site.” (PP1219)

Modify the PLDP to add at the end of the second paragraph of the allocation summary, “Provision for active travel is required, with an aim of seeking to improve links between the site and the settlement.” (PP1300).

Modify the PLDP to replace the third paragraph of the allocation summary to read, “The proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.” (PP1300).

Kincardine O’Neil

Site P2 – To protect the bowling green and tennis court as amenities for the settlement

Modify the PLDP to amend site P2 to read, “To protect this area for use as sport and recreational space for the community.” (PP0450 and PP0741).

Services and Infrastructure

Modify the PLDP to amend ‘Heath and Care Facilities’ bullet point to read, “All residential development must contribute towards the creation of additional capacity at health facilities in Aboyne to allow for additional capacity.” (PP1223).

Site OP1 – Land at Haugh Farm

Modify the PLDP to confirm if an FRA is required, and if not, amend the second sentence in the second paragraph to, “This site is at risk from surface water flooding that should be addressed through appropriate SuDS measures”, otherwise add a bullet point to the ‘Flood Risk’ bullet point (PP1219).

Modify the PLDP to replace the second paragraph of the allocation summary to read, “A Transport Statement is required for the site. A Flood Risk Assessment may be required. Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.” (PP1300).

Site OP2 – Cook School/Passing Trade Site

Modify the PLDP to amend the final paragraph of the allocation summary to read, “A Hydromorphological Assessment will be required to determine the likelihood of the River Dee adjusting its course at this location. Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.”

(PP1300).

Site OP3 – Land at Gallowhill Road

Modify the PLDP to amend the second paragraph of the allocation summary to read, “A Flood Risk Assessment will be required. A buffer strip will be required adjacent to the watercourse and should be integrated as a positive feature of the development. The buffer strip will need to allow sufficient space for restoration of the Neil Burn. Enhancement of the straightened watercourse and removal of any redundant features will be required to be investigated. Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.” (PP1300).

Modify the PLDP to remove site OP3 and identify an alternative effective allocation in the LGA of the RHMA, or if constrained by marketability, in the adjacent LGA of the AHMA (PP1034).

Non-Allocated Site – Bid Site MR019 – A93-Pitmurchie Road

Modify the PLDP to allocate bid site MR019 for 84 homes as a future opportunity site (i.e., post 2031) (PP0499).

Logie Coldstone

Site OP1 – Land Adjacent to Diamond Jubilee Hall

Modify the PLDP to amend the final paragraph of the allocation summary to, “A Flood Risk Assessment may be required. Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.” (PP1300).

Modify the PLDP to remove site OP1’s contribution to the allowances and identify an alternative effective allocation in the LGA of the RHMA, or if constrained by marketability, in the adjacent LGA of the AHMA (PP1061).

Lumphanan

Flood Risk

Modify the PLDP to reword the ‘Flood Risk’ bullet point to, “A small watercourse flows adjacent to site OP1 and R1. A Flood Risk Assessment may be required.” (PP1219).

Services and Infrastructure

Modify the PLDP to amend ‘Strategic drainage and water supply’ bullet point to read, “There is currently limited capacity available at Lumphanan Waste Water Treatment Works and a growth project may be required depending on development proposals. Recommend early engagement with Scottish Water.” (PP0272).

Modify the PLDP to provide specific support to enable paths plans to be implemented (PP0773).

Site OP1 – Land at Milan Park

Modify the PLDP to consider the addition of the following text to the allocation summary, “Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.” (PP1300).

Strachan

Site OP1 – Land at Gateside Cottage

Modify the PLDP to remove the last sentence in paragraph three of the allocation summary, if no further planning applications are anticipated, to, “A Construction Method Statement may be required to take account of the potential impacts to the qualifying interests of the River Dee SAC.”, otherwise add the following in its place, “Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.” (PP1300).

Tarland

Site R1 – For a cemetery extension

Modify the PLDP to remove site R1 (PP0878).

Flood Risk

Modify the PLDP to add site ‘OP2’ to the second ‘Flood Risk’ bullet point (PP1219).

Services and Infrastructure

Modify the PLDP to provide specific support to enable paths plans to be implemented (PP0773).

Site OP1 – Land at MacRobert Trust Estate Yard

Modify the PLDP to include a new sentence after the second sentence in paragraph one of the allocation summary, “There must be minimal tree loss as a result of development and compensatory planning will be sought for any trees felled.” (PP1300).

Modify the PLDP to add a new sentence in the final paragraph of the allocation summary, “Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.” (PP1300).

Modify the PLDP to clarify the allocation, in particular the mix of uses. The areas of mature trees should be removed from the allocation and specify the use of the existing access only (PP0170).

Modify the PLDP to allocate an alternative site for employment use for Tarland (PP1284).

Site OP2 – Land Adjacent to Alastrean House

Modify the PLDP to add to the allocation summary, “Should the existing private waste water drainage system not have capacity for this additional population growth, an upgrade to the existing system or connection to the Scottish Water system will be required.” (PP1219).

Modify the PLDP to add the following text after the third sentence in the final paragraph of the allocation summary and amend the last sentence to, “Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.” (PP1300).

Modify the PLDP to remove site OP2 (PP0878).

Site OP3 – Village Farm

Modify the PLDP to remove the last sentence in paragraph two of the allocation summary, “A Construction Method Statement may be required to take account of the potential impacts to the qualifying interests of the River Dee SAC.”. Otherwise, add the following, “Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.” (PP1300).

Modify the PLDP to remove the contribution to the allowances for site OP3 and identify an alternative effective allocation in the Local Growth Area of the RHMA preferably in Tarland. If the area is marketability constrained, identify an allocation in the Local Growth Area of the AHMA (PP1069).

Non-Allocated Site – Bid Site MR071 – Glendeskry

Modify the PLDP to allocate bid site/retain the allocation site OP1 in the 2017 LDP (PP1284).

Torphins

Site R2 – For a cemetery extension

Modify the PLDP to add to its designation summary, “Due to the likely hydraulic connectivity of this site to the Beltie Burn, a detailed groundwater assessment will be required to fully assess the suitability of this site as a cemetery.” (PP1219).

Modify the PLDP to relocate the cemetery extension to the site immediately behind the village hall and behind R1 (PP0020 and PP0031).

Services and Infrastructure

Modify the PLDP to provide specific support to enable paths plans to be implemented (PP0773 and PP1023).

Modify the PLDP to include reference under Community facilities that there is a need to modernise the Learney Hall (PP0039).

Modify the PLDP to include reference under Sports and recreation, the need to improve drainage at Torphins Park (PP0039).

Modify the PLDP to include under 'Strategic drainage and water supply', "Any plans to develop land for residential housing in close proximity to Scottish Water's existing WWTW is strongly discouraged and must be discussed directly with Scottish Water as early as possible. The location of this development poses significant long-term challenges with the potential for odour and noise complaints from residents. These assets are operational sites that require 24/7/365 access and articulated vehicle movements. Prior to any development being technically approved by Scottish Water an Odour Assessment will be required for development adjacent to the WWTW and any developer led, and funded mitigation measures will require sign off by Scottish Water." (PP0272).

Site OP1 – Station Garage

Modify the PLDP to remove the last sentence in the final paragraph of the allocation summary, if no further planning applications are anticipated, "A Construction Method Statement will be required to take account of the potential impacts of the qualifying interests of the River Dee SAC.". Otherwise, add the following, "Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required." (PP1300).

Non-Allocated Sites – Bid Sites MR034 and MR035 – Phase 1 and 2, Land South of Beltie Road

Modify the PLDP to allocate bid sites MR034 and MR035 for 50 homes (PP0604).

Non-Allocated Site – Bid Site MR005 – Annesley Farm

Modify the PLDP to allocate bid site MR005 for 50 homes (PP0712).

Non-Allocated Site – Bid Site MR069 – Land at Wester Beltie, South West of Torphins Golf Club

Modify the PLDP to allocate bid site MR069 for 12 homes with a suggested allocation summary as follows, "OP1: Land at Wester Beltie Allocation: 12 homes. The proposed site is self-contained, and sensitively extends the existing hamlet with good links to Torphins and the railway footpath link avoiding coalescence.

A generous provision of planting is required on the site within which houses reflecting the existing settlement pattern can be situated. A stronger woodland buffer screen with permeable access points for the adjacent railway path is also required." (PP0601).

Summary of responses (including reasons) by planning authority:

Birsemore

Settlement Status

Settlement Statement's are typically used where allocations or designations for protected/reserved land have been identified or where infill development may be considered appropriate to support by way of defining a settlement boundary. It has no allocated, protected or reserved sites therefore, there is no requirement to provide a Settlement Statement. It is not considered necessary, or appropriate to identify opportunity for growth through this method, given its close proximity to Aboyne which has available housing opportunities (AD0038.G, page 7).

Non-Allocated Site – Bid Site MR028 – Land South of Birsemore

The Council does not support allocating bid site MR028. There are a range of constraints and issues to be addressed if this site was to be brought forward. However, the bid site and Birsemore are in close proximity to Aboyne, which provides sufficient housing opportunity to serve the local area (AD0040.G, page 7). As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. Future opportunity sites (or strategic reserve for housing) are not included within the PLDP as detailed within Schedule 4 Issue 5. No change is required.

Craigwell

General

The site is reserved for a recycling facility within the LDP 2017 and this has been brought forward to the PLDP. The site serves as an essential service depot for Aberdeenshire Council, in a central location which provides services to the surrounding area. Settlement Statements are required where allocations, or designations for protected/reserved land have been identified. No change is required.

Site R1 – For the provision of a community recycling facility

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Finzean

Site OP1 – Site to the East of Finzean Village Hall

The Council confirms that it intends to address SEPA's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council confirms that it intends to address NatureScot comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Kincardine O'Neil

Site P2 – To protect the bowling green and tennis court as amenities for the settlement

The representees have set out a reasonable modification that would assist in the continuation of the use of the site as an amenity for the settlement. If the Reporter is minded, the Council recommend the representee's modification is made to site P2.

Site BUS – Safeguarded for business uses

Comments from SEPA are noted. No change is required.

Flood Risk

Comments from SEPA are noted. The Council, in response to SEPA comments for site OP1, confirms that it intends to update the 'Flood Risk' section with an additional bullet point through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address NHS Grampian's comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Land at Haugh Farm

In response to SEPA's comments, the Council's Flood Risk and Coast Protection request the retention of the FRA requirement as a precautionary approach (AD0126). Subsequently, the Council confirms that it intends to update the 'Flood Risk' section with an additional bullet point through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council confirms that it intends to address NatureScot comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP2 – Cook School/Passing Trade Site

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address NatureScot comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP3 – Land at Gallowhill Road

Comments from SEPA and the comments received in support of the allocation are noted. No change is required.

The Council confirms that it intends to address NatureScot comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council does not support the removal of site OP3 and its 8 homes contribution to the allowances. The site is allocated as site OP3 in the LDP 2017 and bid site MR057 was a preferred option in the MIR (AD0038.G, pages 66 - 67). As set out in the PLDP Appendix 6 Housing land allocations, allowances from existing constrained sites have contributed where a bid was submitted indicating delivery within the Plan period. It is considered capable of being delivered. The site continues to be considered as appropriate to its location, be of an appropriate scale and will fit in with the settlement pattern, within walking distance of amenities and community facilities. No change is required.

Non-Allocated Site – Bid Site MR019 – A93-Pitmurchie Road

The Council does not support allocating bid site MR019. It is considered that Kincardine O'Neil would benefit from a period of time to consolidate and react to recent and ongoing growth. The existing OP3 site maintains an appropriately small opportunity for housing development during the Plan period (AD0040.G, page 102). As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the RHMA. Future opportunity sites (or strategic reserve for housing) are not included within the PLDP as detailed within Schedule 4 Issue 5. No change is required.

Logie Coldstone

Flood Risk and Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 – Land Adjacent to Diamond Jubilee Hall

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address NatureScot comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council does not support the removal of site OP1 or of the 10 homes contribution to the allowances. The site is allocated as site OP1 in the LDP 2017 and promoted through representations to the MIR to deliver a mix of uses (AD0040.G, page 108). As set out in the PLDP Appendix 6 Housing land allocations, allowances from existing constrained sites have contributed where a bid was submitted indicating delivery within the Plan period. Representation to the MIR, by the Logie Coldstone Trust, included a bid with confirmation that they were progressing the site with its owner (AD0160). It is considered capable of being delivered. No change is required.

Lumphanan

Site R1 – For community facilities

Comments from SEPA are noted. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address Scottish Water comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The provision of path networks within identified settlements would be supported through connectivity required as part of a planning application for residential development or if outwith settlements, policy also supports such projects, subject to compliance with relevant policies. However, as noted in Schedule 4 Issue 7: Section 9 Shaping Places and Appendix 8, 9 and 10, the PLDP is not a framework or tool to promote footpaths, cycleways, and active travel networks both within communities and between adjacent communities. No change is required.

Site OP1 – Land at Milan Park

Comments from SEPA are noted. No change is required.

Planning permission for 26 homes covering the whole site expired without implementation, however, 3 homes have been recently approved in December 2020 (planning application reference APP/2020/1919). If the Reporter is minded, the Council recommend modification to the second sentence of the first paragraph of the allocation summary to state, "Planning permission has been approved for 3 homes on part of the site." The Council confirms that it intends to address NatureScot comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Strachan

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

Site OP1 - Land at Gateside Cottage

Comments from SEPA are noted. No change is required.

There is no way of knowing if future applications will be submitted on the site, to amend the existing approval or require resubmission if it is not implemented. On this basis, the Council confirms that it intends to address NatureScot comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Tarland

Site R1 – For a cemetery extension

Comments from SEPA are noted. No change is required.

Site R1 has planning permission under reference APP/2017/3107 (approved February 2018) for its proposed cemetery use. The site also has approval (October 2015) for tree felling under reference TRE/2015/0066 in light of a previous planning permission (APP/2012/2840). The retention of site R1 remains appropriate. No change is required.

Flood Risk

The Council confirms that it intends to address SEPA comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

The provision of path networks within identified settlements would be supported through connectivity required as part of a planning application for residential development or if out with settlements, policy also supports such projects, subject to compliance with relevant policies. However, as noted in Schedule 4 Issue 7: Section 9 Shaping Places and Appendix 8, 9 and 10, the PLDP is not a framework or tool to promote footpaths, cycleways, and active travel networks both within communities and between adjacent communities. No change is required.

Site OP1 – Land at MacRobert Trust Estate Yard

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address NatureScot comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Through the assessment of a planning application the appropriateness of a use and its potential to impact on the amenity of neighbours will be assessed. Furthermore, at the planning application stage a tree survey or relevant supporting documents will be required to be submitted to assess the potential impact on the trees and how development impact can be mitigated against. The Council's Roads Development will be consulted on the suitability of any access arrangement. No change is required.

The MIR was the consultation stage for this proposed allocation having been put forward as an Officers' preferred option. Bid site MR070 essentially sought to retain the site for employment use (i.e. retaining its designation as BUS). The Council considered that it was appropriate in the MIR to highlight that its existing use in the LDP 2017 was safeguarded for business uses, however Officers chose to promote a revised proposal for the site in the MIR (the MIR representing Officers' ideas for future development with the 'Call for Sites' not being a legislative requirement). This change from the BUS designation promoted an opportunity for feedback on both uses through the MIR consultation (AD0038.G, page 89). It was considered that the Officers' preference presented a more compatible use for the site.

The allocation of site OP1 for mixed use development does not exclude it from being considered for employment uses. Live/work units would be a less intrusive form of development whereby a house is promoted and designed in such a way to allow live/work to take place within a single unit, or a house with an ancillary building to function as a workshop and/office. This site description provides flexibility to deliver development in light of issues such as noise that the representee has identified. No change is required.

Site OP2 – Land Adjacent to Alastrean House

The Council confirms that it intends to address SEPA comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council confirms that it intends to address NatureScot comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP2 was previously allocated in the LDP 2017 and LDP 2012, with retention sought through bid site MR072, therefore, it has been brought forward to continue to cater to a particular market associated with the Continuing Care Community. It is considered appropriate to retain the site in the LDP and consider means to deliver this allocation. Set in woodland the site would not result in any landscape impact on the Howe of Cromar Special Landscape Area. The position to the north of Alastrean House would limit the effect on the listed building's setting and compensatory planting would be necessary to offset the loss of trees (AD0040.G, 130 and AD0038.G, page 90). No change is required.

Site OP3 – Village Farm

Comments from SEPA are noted. No change is required.

The Council confirms that it intends to address NatureScot comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

The Council does not support the removal of site OP3 or its 36 homes contribution to the allowances. The site is allocated as site OP3 in the LDP 2017 and bid site MR073 was a preferred option in the MIR (AD0038.G, page 90). As set out in the PLDP Appendix 6: Housing land allocations, allowances from existing constrained sites have contributed where a bid was submitted indicating delivery within the Plan period. It is considered capable of being delivered. The site is subject to an extant permission and it is appropriate to retain the site until such a time as development is complete (AD0040.G, page 130). No change is required.

Non-Allocated Site – Bid Site MR071 – Glendeskry

The Council does not support allocating bid site MR071. Significant concerns are continued regarding the deliverability of the site due in most part to flood risk. Even if the site area was to be amended to exclude the areas at risk from flooding the existing public road bordering the site regularly floods to a substantial depth and flow preventing safe access to and from the site. Development of this site could also significantly jeopardise future mitigation works to remove flood risk. Until such a time that this issue can be resolved, the site cannot be supported (AD0040.G, page 130). No change is required.

Torphins

Site R1 – For the extension of Learney Hall

Comments from SEPA are noted. No change is required.

Site R2 – For a cemetery extension

The Council confirms that it intends to address SEPA comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

At this time, the reserved site is identified as the most appropriate location for this cemetery provision. Planning permission would require to be sought for the cemetery extension where its suitability or otherwise would be assessed. The issues raised by the representees would be assessed at the time of any planning application. It should be noted that issues regarding value of property and loss view cannot be considered as material to any planning assessment. No change is required.

Flood Risk

Comments from SEPA are noted. No change is required.

Services and Infrastructure

Comments from SEPA are noted. No change is required.

The provision of path networks within identified settlements would be supported through connectivity required as part of a planning application for residential development or if out with settlements, policy also supports such projects, subject to compliance with relevant policies. However, as noted in Issue 7: Section 9 Shaping Places and Appendix 8, 9 and 10, the PLDP is not a framework or tool to promote footpaths, cycleways, and active travel networks both within communities and between adjacent communities. No change is required.

Site R1 is identified as 'reserved land' within the PLDP for the extension of Learney Hall, therefore, there is an ambition to improve the facilities within the settlement. The requirement to modernise the existing hall is not controlled through planning legislation. The hall is not a listed building, therefore internal alterations would not require planning permission. No change is required.

Drainage considerations within Torphins Park would be taken into account on the submission of a planning application for development works. No change is required.

The Council confirms that it intends to address Scottish Water comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Site OP1 – Station Garage

Comments in support of the scale of housing development set out within the settlement are noted. No change is required.

There is no way of knowing if future applications will be submitted on the site either to

amend the existing approval or by way of resubmission if not implemented. On this basis, the Council confirms that it intends to address NatureScot comments through a non-notifiable modification, as set out in the List of Non-Notifiable Modifications.

Non-Allocated Sites – Bid Sites MR034 and MR035 – Phase 1 and 2, Land South of Beltie Road

The Council does not support allocating bid sites MR034 and MR035 for 50 homes. At the Committee meeting of 17 September 2019, the Marr Area Committee did not agree with Officers' recommendation to allocate bid sites MR034 and MR035 (AD0040.G, page 140). The Council considers the existing allocation site OP1 provides sufficient housing opportunity for the settlement. As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the RHMA. No change is required.

Non-Allocated Site – Bid Site MR005 – Annesley Farm

The Council does not support allocating bid site MR005 for 50 homes. This site is considered to impact on the setting of Torphins. In order to avoid the areas at risk of flooding any development would need to be sited on the elevated parts of the site. There is currently a strong boundary to the settlement on the south side of Torphins and weakening this would be detrimental to its setting (AD0038.G, page 96). As demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the RHMA. No change is required.

Non-Allocated Site – Bid Site MR069 – Land at Wester Beltie, South West of Torphins Golf Club

The Council does not support allocating bid site MR069. It was put forward as a preferred site however, in response to the MIR it was removed to continue the focus of development within Torphins itself. Site OP1 is considered to provide a sufficient level of housing for the settlement (AD0040.G, page 139). Additionally, as demonstrated in the Schedule 4 Issue 2: Section 5 – Spatial Strategy and Issue 5: Section 8 Shaping Homes and Housing and Appendix 6 Housing Land Allocations, there is an appropriate and sufficient supply of deliverable housing sites within the Rural Housing Market Area. No change is required.

Reporter's conclusions:

Preliminary matters

1. My examination of the plan is limited by regulations to addressing only the unresolved issues which have been raised in representations. The council has listed above a number of matters raised in representations which are in support of the plan or which simply make comments and do not seek modifications to the plan. Therefore, unless these relate to an issue which is unresolved, they will not be addressed in my conclusions.

2. The council has indicated that it intends to make what it refers to as "non-notifiable modifications" in relation to the settlement statement matters covered in Issue 58. However, where such matters arise from representations made to the proposed plan they

require to be considered in the examination. I therefore address these as appropriate below.

General

3. Deeside Climate Action Network is seeking support for the work of local paths groups to create and improve walking and cycling routes between settlements, including Lumphanan, Tarland and Torphins. General representations regarding the protection and promotion of access routes are addressed in Issue 7. We agree with the council that the local development plan is not a framework or tool to promote footpaths, cycleways and active travel networks within and between settlements. There are other council documents, such as the Core Paths Plan and the Outdoor Access Strategy which would fulfil this role. The local development plan can protect existing routes, promote good access from new development to these routes and, where appropriate, promote the enhancement or extension of existing routes as part of development proposals. It is within this context, that planning applications may be able to support the work of local paths groups. No modification is required.

Birsemore

Non-Allocated Bid Site MR028 – Land south of Birsemore

4. Bid site MR028 is an open, grass field which covers three hectares and is surrounded on three sides by trees. On the day of my site visit, there were sheep grazing in the field. The site is located on the south side of a narrow road serving existing residential properties and cannot be seen from the main road network. Birsemore itself comprises a ribbon of residential development mainly to the south of the B976 road. It is physically separated from the southern edge of Aboyne, which is located at distance of around 400 metres.

5. The bid proposal is for 13 detached houses. The submitted indicative site layout shows the houses arranged around an area of open space and set within a landscape framework. The council's assessment of this site is set out in the Main Issues Report, Issues and Actions Paper and the Strategic Environment Assessment Report. I note that the environmental report states that: "The site has an overall positive impact due to access to open space and choice of housing. Impacts on cultural heritage, water and infrastructure may be mitigated."

6. The council does not support allocating this site because of a range of unspecified constraints and issues to be addressed and the availability of housing opportunity sites in nearby Aboyne. It also considers that there is no requirement to allocate further sites in the Rural Housing Market Area.

7. Whilst I appreciate that the site currently contributes to the visual amenity of Birsemore, its development would result in minimal wider landscape and visual impacts due to its secluded position and strong landscape framework. Based on the information provided in the bid submission and the environmental report, I consider that there is a reasonable prospect that many of the infrastructure constraints could be overcome. However insufficient information has been provided regarding access to the site. The bid submission refers to access being taken from the existing private road, but no discussions appear to have taken place with the roads authority. I am unclear whether the road would

require to be brought up to adoptable standard and if so, whether this would require land in third party ownership.

8. There are no local facilities in Birsemore and no bus services to shopping, education and health facilities in Aboyne. I therefore consider it likely that residents would rely on a private car to access local services.

9. The conclusions reached under Issue 5 indicate that there is no need for additional housing allocations in the Rural Housing Market Area to meet the strategic development plan allowance for the period up to 2032. I do not consider that the benefits the site would bring in providing additional housing land would outweigh the concerns regarding access to the site and accessibility to local services. No modification is recommended.

Settlement Status

10. Due to the absence of any local facilities, I do not consider that Birsemore meets the definition of “a settlement” provided in the glossary of the proposed plan. However, I note that the use of this definition is not applied consistently in the proposed plan and there are settlement statements for groups of buildings which do not meet this definition. The council has explained that statements are provided where there are allocated, protected or reserved sites to be shown. Given my recommendations in relation to bid site MR028 and the absence of any other allocated, protected or reserved sites in Birsemore, I do not consider that a settlement statement is required. No modification is required.

Craigwell

11. The council service depot at Craigwell does not meet the definition of a “settlement” provided in the glossary of the proposed plan. However, the format of the proposed plan requires the inclusion of a settlement statement for Craigwell in order to show the site reserved for a community recycling facility. I consider this approach to be a reasonable way of addressing this matter. No modification is required.

Finzean

12. There are no representations objecting to allocation OP1 for eight homes on land to the east of Finzean village hall. However, NatureScot and the Scottish Environment Protection Agency (SEPA) have requested modifications to the allocation summary, which the council supports. I consider that the modification suggested by NatureScot, in relation to improving active travel links between the site and the rest of the settlement, would be appropriate within the context of policy P1 (Layout, Siting and Design). I also agree that the text on Habitats Regulations Appraisal should be amended to provide clarification on the appraisal process.

13. I consider that the modification requested by SEPA would provide clarification on waste water treatment requirements for allocation OP1.

14. Modifications on these matters are recommended.

Kincardine O’Neil

Protected Land

15. The council supports the alternative wording suggested by Kincardine O'Neil Community Association in relation to protected land designation P2, which covers the existing bowling green and tennis court to the west of The Spailings. I note the comments made regarding the suitability of the site for tennis, restoration costs and likely demand for this use. I agree that "protecting the land for sport and recreational space" would provide more flexibility to meet the needs of the community. A modification is recommended.

Flood Risk

16. The council has confirmed that a flood risk assessment may be required for housing allocation OP1 (Land at Haugh Farm) as the site lies adjacent to the indicative fluvial floodplain. On this basis, I agree that a bullet point relating to site OP1 should be added to the flood risk section, as requested by SEPA. A modification is recommended.

Services and Infrastructure

17. NHS Grampian has indicated that the reference to contributions towards "a new health centre in Banchory" should be amended to refer to creating additional capacity at health facilities in Aboyne instead. NHS Grampian has not provided any additional information in relation to the catchment areas for health facilities in Banchory and Aboyne. However, as Aboyne is located closer to Kincardine O'Neil than Banchory, I consider it reasonable that residents of new development in Kincardine O'Neil would use facilities in Aboyne. I recommend a modification on this matter.

Sites OP1 – Land at Haugh Farm and OP2 – Cook School/Passing Trade Site

18. I consider that the modifications requested by NatureScot, in relation to Habitats Regulations Appraisal, would provide clarification on the appraisal process. Modifications to this effect are recommended.

Site OP3 – Land at Gallowhill Road

19. The representation seeking the removal of this site does not suggest a specific alternative allocation. Whilst site OP3 is not currently in the ownership of a developer, the representation from the Church of Scotland General Trustees (the current owner) indicates an intention to market the site for development. On the basis of this evidence, I consider it reasonable to conclude that the existing ownership constraint can be overcome to allow eight homes to be delivered in the period up to 2032. No modification is required.

20. I consider that the modification requested by NatureScot, in relation to Habitats Regulations Appraisal, would provide clarification on the appraisal process. A modification to this effect is recommended.

Non-Allocated Bid Site MR019 – A93 Pitmurchie Road

21. Bid proposal MR019 is for 84 homes on land at the western end of the settlement, to the north of the A93 road. I note that it was promoted as a future opportunity site in the Main Issues Report and the representation from Kincardine Estates seeks the identification of the site as such in the plan. Non-site specific representations relating to the identification of land with potential for future long term development are addressed under

Issue 2. This concludes that there is no requirement for the local development plan to identify sites for the period beyond 2032. Furthermore, in issue 5 we conclude that there is no need for further sites to be allocated in the Rural Housing Market Area in the period up to 2032. Therefore, even if the site could be developed before 2032, there is no justification to allocate it at this time. No modification is required.

Logie Coldstone

Site OP1 – Land adjacent to Diamond Jubilee Hall

22. Site OP1 is identified as constrained for marketability reasons in the 2020 housing land audit. I note that a number of sites identified to meet the strategic development plan allowance for the Rural Housing Market Areas, are subject to a marketability constraint. Non-site specific representations on this matter are addressed under Issue 5. In response to a further information request in relation to issues 2 and 5 (FIR008), the council has explained that a range of measures are being used to support housing development, particularly in the Rural Housing Market Area.

23. The representation seeking the removal of this site does not suggest a specific alternative allocation. There is a requirement for advance infrastructure if the land is developed for self-build plots, which I agree may affect viability. However, this is not the only form of development which could come forward on the site.

24. I consider that the bid submission from the local community trust, supported by the site owner, provides evidence of a will to deliver housing and other uses on the site. Allocation OP1 provides a suitable opportunity for additional housing in a settlement with a primary school, which the local community wishes to sustain. There are no other housing allocations or bid submissions for housing in Logie Coldstone and, as this is a relatively small site, I consider it reasonable to assume that 10 units would be deliverable by 2032. I conclude that the site should be retained in the plan and no modification is recommended in response to this representation.

25. I consider that the modification requested by NatureScot, in relation to Habitats Regulations Appraisal, would provide clarification on the appraisal process. A modification to this effect is recommended.

Lumphanan

Flood Risk

26. I agree with the council that the flood risk bullet point should be amended to include reference to site OP1, to reflect SEPA's comments that the watercourse runs next to both R1 and OP1. A modification is recommended

Services and Infrastructure

27. I agree that the strategic drainage and water supply bullet point should be amended to reflect the advice from Scottish Water. A modification is recommended

Site OP1 – Land at Milan Park

28. NatureScot has indicated that this site lies within the River Dee catchment. Whilst planning permission has already been granted for 26 homes, future applications may be submitted. I agree that, in the interests of consistency, reference should be made to the Habitats Regulations Appraisal process in the allocation summary. A modification is required on this matter.

Strachan

29. Whilst planning permission has been granted for housing development on site OP1, future applications may be submitted. Similar to my recommendation in relation to the Lumphanan settlement statement, I agree that reference should be made to the Habitats Regulations Appraisal process, as requested by NatureScot.

Tarland

Reserved Land Designations

30. The council has indicated that planning permission has been granted for a cemetery use on site R1 and that a tree felling licence has been granted. No modification is required.

Flood Risk

31. As SEPA has indicated that a flood risk assessment may also be required for site OP2, I agree that the second bullet point should be amended as requested.

Site OP1 – Land at MacRobert Trust Estate Yard

32. The majority of site OP1 is occupied by an estate yard and associated buildings. There are mature trees along the road frontage which forms its northern boundary and a tree belt in the southern part of the site next to residential properties at Morven View. From my site inspection, I observed that these trees make a positive contribution to local identity and a sense of place.

33. I find that the additional sentence requested by NatureScot in relation to the protection of the trees is consistent with paragraph PR1.8 Trees and Woodlands in policy PR1 (Protecting Important Resources). I agree with the council that a modification would be appropriate. I note that the site boundary has not changed from that shown in the existing local development plan. Subject to the modification requested by NatureScot, I do not consider it necessary to amend the boundary to exclude the trees.

34. I consider that the modification requested by NatureScot, in relation to Habitats Regulations Appraisal, would provide clarification on the appraisal process. A modification to this effect is recommended.

35. I note, from the Issues and Actions Paper, that the proposal to change the business allocation on this site to a mixed use opportunity, incorporating live/work units, was supported by Cromar Community Council. The MacRobert Trust (the site owner) also commented on the Main Issues Report. I therefore disagree with the statement that this allocation has been changed without consultation with the community.

36. I agree that there is lack of detail regarding the nature of development proposed on site OP1. However, this is not a criticism of the plan. I consider that the allocation summary provides a balance between promoting a flexible approach to the future use of the site and highlighting detailed matters to be addressed, including compatibility with neighbouring uses. As the allocation still includes employment use, I do not consider there is a need for an alternative business allocation to be identified in Tarland. No modification is required in respect of this matter.

Site OP2 – Land adjacent to Alastrean House

37. The additional text suggested by SEPA in relation to waste water treatment would provide useful information for future development proposals. I agree that a modification is required.

38. I consider that the modification requested by NatureScot, in relation to Habitats Regulations Appraisal, would provide clarification on the appraisal process. A modification to this effect is recommended.

39. National policy on woodland is provided in paragraph 216 – 218 of Scottish Planning Policy and the Control of Woodland Removal Policy. These documents highlight that ancient semi-natural woodland is an irreplaceable resource and include a presumption in favour of protecting woodland. Where the removal of woodland is permitted, compensatory planting will normally be required.

40. In response to a further information request (FIR003), the council has provided a plan which shows that the majority of allocation OP2 lies within a site included in the Scottish Ancient Woodland Inventory. It has suggested that the following wording be included in the allocation summary: "Existing woodland on and adjacent to the site should be retained and enhanced, and incorporated as public open space within the site layout. Equivalent compensatory planting must be provided should there be woodland/tree loss."

41. The council has also indicated that any proposal for development on the site would be subject to relevant policies which protect the woodland - Policy E1 Natural Heritage, Nature Conservation Sites (paragraph E1.4) and Policy PR1 Protecting Important Resources, Trees and Development, paragraphs PR1.7 and PR1.8.

42. The Woodland Trust Scotland considers that allocation OP2 should be removed from the plan. It did not respond to the request for further information on this matter.

43. The inclusion of a site within the inventory of ancient woodland would not in itself preclude development in principle and I note that part of the existing house and ancillary buildings sit amongst existing mature trees. From my site inspection, I observed that site OP2 sits within an area of relatively dense woodland. As such, I consider it unlikely that the proposed development could be accommodated with no resultant loss of trees.

44. I note that site OP2 is a continuation of an existing allocation in the adopted local development plan. Given the site specific nature of the proposal as part of continuing care in the community facilities, I consider, on balance, that its retention in the plan is justified. However, a modification to the allocation summary is required to draw attention to the presence of the ancient woodland and some of the key requirements of relevant woodland protection policies, including the need for compensatory planting.

Site OP3 – Village Farm

45. I consider that the modification requested by NatureScot, in relation to Habitats Regulations Appraisal, would provide clarification on the appraisal process. A modification to this effect is recommended.

46. Site OP3 is identified as constrained for funding and marketability reasons in the 2020 housing land audit. The representation seeking the removal of this site does not suggest a specific alternative allocation. I note, from the Issues and Actions Paper, that Cromar Community Council supports the retention of this allocation.

47. In response to a further information request (FIR008), the council has explained that the site is progressing as a community led housing project with the use of grants available to community groups. The council's Strategic Housing Investment Plan 2021-2026 indicates that 26 affordable housing units are programmed to be developed between 2022-2024. Based on the evidence provided by the council, I consider it likely that the current funding and marketability constraint can be overcome and conclude that allocation OP3 would be deliverable within the period up to 2032. No modification is required.

Non-Allocated Bid Site MR071 - Glendeskry

48. Bid site MR071 forms part of allocation OP1 for 50 homes and employment land in the existing local development plan. It is one of a number of constrained housing sites which the council has decided not to carry forward into the proposed plan. I note that the 2020 housing land audit indicates that the site is subject to marketability and funding constraints, similar to allocation OP3 in the proposed plan. However, the council has indicated that its main concern regarding the deliverability of the site relates to flood risk.

49. From my site inspection, I observed the relatively flat nature of bid site MR071 which is located to the south of Burnside Road, and the watercourse which runs along the north side of the road. I note that the council is concerned about flooding within the site boundary and also along the public road, which would prevent safe access to and from the site.

50. Consideration of housing need is undertaken through the Housing Needs and Demand Assessment which has informed the strategic development plan allowances. Tarland lies within the Rural Housing Market Area and it is concluded under issue 5 that no additional allocations are required to meet the strategic development plan allowance in the period up to 2032.

51. I do not consider that a marketability constraint in itself would necessarily justify the removal of a housing allocation from the plan. However, in this case, concerns regarding flood risk would need to be addressed. In the absence of a flood risk assessment which shows that bid site MR071 can be safely developed, I do not consider that it should be identified for housing purposes. No modification is required.

Torphins

Reserved Land

52. Site R2 lies immediately to the south west of the existing cemetery in Torphins and to the north west of residential properties in Kinnairdy Close. This is a continuation of a reservation in the existing local development plan. I note the concerns raised regarding the impact of the reserved use on the properties in Kinnairdy Close. However, I observed on my site inspection that the existing cemetery lies adjacent to homes in Kinnairdy Terrace. I find no obvious reasons why its extension onto site R2 would have an adverse impact on the amenity of neighbouring properties or users of the cemetery. Detailed matters such as the layout of the site and landscaping requirements would be addressed at planning application stage, when interested parties would have the opportunity to comment. It is not the purpose of this examination to consider, if a better alternative site exists. I am therefore unable to comment on the suggestion put forward in representations.

53. I agree that additional text should be included to indicate that a detailed groundwater assessment will be required due to the proximity of the Beltie Burn. The outcome of this assessment may indicate that the site is not suitable for use as a cemetery. However, this does not prevent it being reserved for a cemetery at this time.

Services and Infrastructure

54. The council has explained that it is not the purpose of the bullet points on community facilities and sports and recreation to identify the facilities to be provided through developer contributions. These would be assessed at the time of a planning application.

55. I consider that the modifications requested by the community council, in relation to the modernisation of Learney Hall and improvements to the sports pitch and pavilion at Torphins Park, should instead be included in the vision section of the Torphins settlement statement. A modification is recommended to include reference to these facilities, as specific examples of spaces and buildings where improvement is encouraged.

56. The strategic drainage and water supply bullet point provides information relating to the capacity of Torphins Waste Water Treatment Works. Scottish Water has requested that additional text be added to indicate its concerns regarding noise and odour complaints, should residential development be proposed next to the waste water treatment works.

57. I note that the council has indicated its support for the wording suggested by Scottish Water. However, I do not consider this additional text to be appropriate in the 'Services and Infrastructure' section given that it relates to matters of residential amenity rather than infrastructure. The only allocation located close to the waste water treatment works is OP1 Station Garage which has planning permission for a mix of uses, including housing and a business park. Reference is made in the allocation summary to the need to consult the Council's Environmental Health due to the close proximity of the sewage works. Should a planning application for residential development be submitted on any other site next to the waste water treatment works, matters relating to noise and odour would be assessed in terms of relevant policies in the plan, such as policy P4 Hazardous and Potentially Polluting Developments and Contaminated Land. No modification is required.

Site OP1 Station Garage

58. Whilst planning permission has been granted for housing development on site OP1,

future applications may be submitted. I consider that the modification requested by NatureScot, in relation to Habitats Regulations Appraisal, would provide clarification on the appraisal process. A modification to this effect is recommended.

Non allocated Bid Sites MR034 and MR035 Land south of Beltie Road (50 houses in total)

59. These sites were included in the Main Issues Report and recommended for inclusion in the proposed plan by officers. The environmental report identifies no negative environmental effects, subject to mitigation to address impacts on flooding and conservation. However, I note that Torphins Community Council opposes any further housing allocations and concerns were raised in relation to landscape and visual impact, effects on transport and other infrastructure, environmental impacts and lack of demand.

60. I consider that together these sites would form a logical extension to the settlement and that adverse impacts could be addressed through the preparation of a master plan and developer obligations, where necessary. However, Torphins is within the Rural Housing Market Area and it is concluded under issue 5 that no additional housing sites are required to meet the strategic development plan allowance to 2032. I therefore do not consider that the allocation of these sites is justified at this time. No modification is required.

Non-allocated Bid Site MR005 Annesley Farm

61. The proposal would provide 50 homes on a 12.5 hectare site on the southern fringes of Torphins. The environmental report indicates that flooding, conservation and infrastructure constraints could be mitigated. However, there would be significant negative landscape effects. I note that to avoid areas at risk of flooding, development would need to be located on the elevated, more visually prominent parts of the site. As a result, I consider that there would be limited scope to mitigate the visual impact of the proposal from the B993 to the south of the village.

62. The site is located within the northern boundary of the Dee Valley Special Landscape Area. The statement of importance contained in Appendix 13 of the proposed plan identifies pressure of residential development as one of the forces for change in the special landscape area. It recommends that development should be focussed on lower slopes or the floor of the river valley. I do not consider that the principle of development on this site would be consistent with the guidance provided in Appendix 13.

63. As the eastern edge of the site is located next to the waste water treatment works, the comments made by Scottish Water in relation to the services and infrastructure section would apply. However, I consider that any potential noise and odour impacts could be addressed at planning application stage.

64. I note that the site is in the ownership of a house builder who has indicated that the proposed development is viable and deliverable. However, taking account of the landscape and visual impact that development would have on the setting of Torphins and the Dee Valley Special Landscape Area and that there is no requirement for additional housing sites in the Rural Housing Market Area, I do not support the allocation of this site. No modification is required.

Non-allocated Bid site MR069 Land at Wester Beltie

65. This proposal is for around 12 homes on a 1.5 hectare site and is being promoted for self-build plots or development by a small to medium scale builder. Wester Beltie is a hamlet comprising approximately 12 homes and agricultural buildings located around 400 metres from the western boundary of Torphins.

66. I note that the site was identified as a preferred site in the Main Issues Report, albeit for six homes. A proposal for 12 homes would double the size of Wester Beltie, which I consider to be overdevelopment of a hamlet which has no local facilities. I have not assessed the impact of six homes as set out in the Main Issues Report, as the representation before me relates to 12 homes.

67. The environmental report indicates that the site has an overall positive impact due to its habitat creation, housing choice and path connections. I consider the potential to extend the Torphins Railway path to provide an active travel route to the village to be beneficial. However, the site is located around one kilometre from local services which may encourage car based travel. I agree that the site is well contained and would not result in adverse landscape impacts. The landowner has indicated that the development is not reliant on external finance and could be delivered within the plan period.

68. It is concluded under issue 5 that no additional housing sites are required to meet the strategic development plan allowance for the Rural Housing Market Area. There is no justification to allocate the site on the grounds of housing need and I do not consider the benefits of the proposal would outweigh the concerns in relation to the scale of development and distance from local facilities. No modification is recommended.

Reporter's recommendations:

Modify the local development plan by:

Finzean

1. Adding the following sentence at the end of the second paragraph of the allocation summary for OP1 (site to East of Finzean Village Hall) in the Finzean settlement statement on page 804:

“Provision for active travel is required, with an aim of seeking to improve links between the site and the rest of the settlement.”

2. Replacing the third paragraph of the allocation summary for OP1 (site to East of Finzean Village Hall) in the Finzean settlement statement on page 804 with:

“The proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.”

3. Replacing the last paragraph of the allocation summary for OP1 (site to East of Finzean Village Hall) in the Finzean settlement statement on page 804 with:

“A single private waste water treatment plant, built to an adoptable standard, will be required for this site.”

Kincardine O'Neil

4. Replacing the description of protected land designation P2 in the Kincardine O'Neil settlement statement on page 833 with:

"To protect this area for use as sport and recreational space for the community."

5. Inserting the following new first bullet point into the flood risk section of the Kincardine O'Neil settlement statement on page 833:

"• Site OP1 is located adjacent to the indicative fluvial floodplain associated with the Neil Burn and River Dee. A Flood Risk Assessment may be required."

6. Replacing the last bullet point of the services and infrastructure section in the Kincardine O'Neil settlement statement on page 834 with:

"• Health and care facilities: All residential development must contribute towards the creation of additional capacity at health facilities in Aboyne".

7. Replacing the last sentence in the second paragraph of the allocation summary for OP1 (Land at Haugh Farm) in the Kincardine O'Neil settlement statement on page 834 with:

"Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required."

8. Replacing the last sentence in the last paragraph of the allocation summary for OP2 (Cook School/Passing Trade Site) in the Kincardine O'Neil settlement statement on page 835 with:

"Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required."

9. Replacing the last sentence in the second paragraph of the allocation summary for OP3 (Land at Gallowhill Road) in the Kincardine O'Neil settlement statement on page 835 with:

"Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required."

Logie Coldstone

10. Replacing the last sentence in the fifth paragraph of the allocation summary for OP1 (Land adjacent to Diamond Jubilee Hall) in the Logie Coldstone settlement statement on page 840 with:

"Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required."

Lumphanan

11. Replacing the bullet point in the flood risk section of the Lumphanan settlement statement on page 842 with:

"• A small watercourse flows adjacent to sites OP1 and R1. A Flood Risk Assessment may be required."

12. Replacing the second bullet point in the services and infrastructure section of the

Lumphanan settlement statement on page 842 with:

“• Strategic drainage and water supply: There is currently limited capacity available at Lumphanan Waste Water Treatment Works and a growth project may be required depending on development proposals. Early engagement with Scottish Water is recommended.”

13. Adding a new third paragraph to the allocation summary for OP1 (Land at Milan Park) in the Lumphanan settlement statement on page 842 to read :

“Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.”

Strachan

14. Replacing the final sentence in the third paragraph of the allocation summary for OP1 (Land at Gateside Cottage) in the Strachan settlement statement on page 856 with:

“Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.”

Tarland

15. Replacing the second bullet point of the flood risk section in the Tarland settlement statement on page 859 with:

“• Parts of sites OP2 and OP3 lie within SEPA’s indicative 1 in 200 year flood risk area, or are known to flood from other sources.”

16. Inserting the following new third sentence into the first paragraph (after ...the village) of the allocation summary for OP1 (Land at MacRobert Trust Estate Yard) in the Tarland settlement statement on page 860:

“There must be minimal tree loss as a result of development and compensatory planting will be sought for any trees felled.”

17. Adding the following new sentences to the last paragraph in the allocation summary for OP1 (Land at MacRobert Trust Estate Yard) in the Tarland settlement statement on page 860:

“Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.”

18. Adding the following new paragraph to the allocation summary for OP2 (Land adjacent to Alastrean House) in the Tarland settlement statement on page 861:

“Should the existing private waste water drainage system not have capacity for this additional population growth, an upgrade to the existing system or connection to the Scottish Water system will be required.”

19. Replacing the last sentence in the last paragraph of the allocation summary for OP2 (Land adjacent to Alastrean House) in the Tarland settlement statement on page 861 with:

“Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.”

20. Deleting the last two sentences in the first paragraph of the allocation summary for OP2 (Land adjacent to Alastrean House) in the Tarland settlement statement on page 861 and inserting the following new second paragraph:

“The majority of the site lies within an area included in the Scottish Ancient Woodland Inventory. A tree survey to BS 5837 will be required and there must be minimal tree loss as a result of the development. Statutory consultees may request for certain trees not to be felled and the developer should integrate this into the design following discussions with Aberdeenshire Council and Scottish Forestry. Where possible, existing woodland on and adjacent to the site should be retained and enhanced, and incorporated as public open space within the site layout. Equivalent compensatory planting must be provided for any loss of woodland/trees.”

21. Replacing the last sentence in the second paragraph of the allocation summary for OP3 (Village Farm) in the Tarland settlement statement on page 861 with:

“Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.”

Torphins

22. Replacing the fifth sentence in the vision section of the Torphins settlement statement on page 863 with:

“Improvements to open spaces, streets and buildings are encouraged, including the modernisation of Learney Hall and upgrading of the sports pitch and pavilion at Torphins Park.”

23. Replacing the description of reserved land designation R2 in the Torphins settlement statement on page 863 with:

“For a cemetery extension. Due to the likely hydraulic connectivity of this site to the Beltie Burn, a detailed groundwater assessment will be required to fully assess the suitability of this site as a cemetery.”

24. Replacing the last sentence in the fourth paragraph of the allocation summary for OP1 (Station Garage) in the Torphins settlement statement on page 865 with:

“Any proposal will be subject to a Habitats Regulations Appraisal (HRA) in order to consider potential effects on the qualifying interests of the River Dee SAC. A Construction Method Statement may be required.”

Revised version of Appendix 6 HOUSING LAND ALLOCATIONS (incorporating recommended modifications)

Tables 1 and 2 provide an overview of the housing supply target and housing land requirement figures up to 2032 for the Local Development Plan Area as a whole, the Rural Housing Market Area and the Aberdeenshire part of the Aberdeen Housing Market Area. The information in these tables is taken from Tables 1 and 2 in the Strategic Development Plan.

Table 1: Housing Supply Targets by Housing Market Area and Tenure

	2016 - 2019			2020 - 2032			2016 - 2032
	Affordable	Market	total	Affordable	Market	total	Total
Aberdeenshire part of the Aberdeen Housing Market Area*	685	1265	1950	3003	5577	8580	10530
Rural Housing Market Area	680	1270	1950	2002	3718	5720	7670
Aberdeenshire Council Area	1365	2535	3900	5005	9295	14300	18200

Table 2 Housing Land Requirement by Housing Market Area and Tenure Mix

	2016 – 2019**			2020 – 2032***			2016 - 2032
	Affordable	Market	total	Affordable	Market	total	Total
Aberdeenshire part of part of the Aberdeen Housing Market Area*	754	1392	2146	3604	6692	10296	12442
Rural Housing Market Area	748	1396	2144	2402	4462	6864	9008
Aberdeenshire Council Area	1502	2788	4290	6006	11154	17160	21450

* The figures for the Aberdeenshire part of the Aberdeen Housing Market Area have been calculated as the difference between the figures for the Rural Housing Market Area and the figures for the Aberdeenshire Council area as a whole.

** The housing land requirements for the period 2016 - 2019 have been calculated by applying a 10% generosity allowance to the equivalent housing supply target figures.

*** The housing land requirements for the period 2020 - 2032 have been calculated by applying a 20% generosity allowance to the equivalent housing supply target figures.

Table 3 provides an overview of the housing land supply that contributes to the Strategic Development Plan's "allowances" for the period 2020-2032 (as identified in Table 3 of the Strategic Development Plan).

Tables 4 – 7 show all allocated housing sites within the Local Development Plan and the indicative number of homes for each site. Table 4 lists the sites which have been identified to meet the Strategic Development Plan allowance for the Aberdeen Housing Market Area and Table 6 lists the sites which have been identified to meet the Strategic Development Plan allowance for the Rural Housing Market Area. These sites fall into one of the following categories:

- New Allocations which were not in the Aberdeenshire Local Development Plan 2017
- Where there is a difference in the allocated site total and the Housing Land Audit total
- Extensions to existing sites or increased densities on existing effective sites resulting in an increase in numbers;
- Existing constrained sites where a bid has been submitted indicating that they will come forward within the Plan period.

Tables 5 and 7 show all other housing allocations in the Aberdeen Housing Market Area and the Rural Housing Market Area. The majority of these sites were included in the previous local development plan and form part of the effective housing land supply in 2019. Some of these sites will not be completed until after 2032.

The Settlement Statements in Appendix 7 provide details of the full housing provision for each of the identified towns and villages within Aberdeenshire.

Table 3: Summary of Housing Land Allocations

Area	SDP Allowance	LDP Contribution to Allowance	Difference	LDP Total Housing Land Supply ¹
Aberdeen to Peterhead	Undefined	tbc	-	tbc
Aberdeen to Huntly	Undefined	tbc	-	tbc
Aberdeen to Laurencekirk	Undefined	tbc	-	tbc
Local Growth Area (AHMA)	Undefined	1341	-	tbc
Local Growth (RHMA)	Undefined	1933	-	tbc
Total AHMA	3065	3107	+ 42	15100
Total RHMA	2042	2174	+ 132	10672

¹ The figures in this column may include homes built before 2019 and/or homes that are not anticipated to be built until after 2032.
